Many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition. For example, part of Newark Lane which was resurfaced for the 2014 Olympics cycle route and has been used subsequently for other cycling events, has had to have regular “fixes” to crumbling road surfaces and recurring potholes due to traffic volumes far in excess of the road surface quality used. I object to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

1. **Poor air quality concerns**

Further congestion, particularly in built up residential areas will only lead to greater levels of air pollution. I object to further development, which will result a fall in the air quality.

1. **Parking issues in local villages caused by larger population**
Many of the affected villages, such as Ripley, already suffer from parking problems. Further development around these villages will only result in more traffic and more parking problems, to which I object.

1. **Local healthcare facilities will be overwhelmed**

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. I object to the further stress it will put upon existing overstretched health services.

1. **Local schooling facilities will be overwhelmed**

Without proper planning and a commitment to fund new schooling, existing schools will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. I object to the further stress it will put upon existing overstretched schools.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

Attached documents:
I have personal experience of what happens when the sewage systems are unable to cope and an unsustainable increase in houses will only exacerbate this problem.

The proposed developments will put even more pressure on local schools and healthcare services, which are already stretched.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

My objection is due to the following:

- Infrastructure is not discussed as being a key issue for the rest of the plan or as a pre condition for development.
- Excessive house building in the countryside will not be supported by any funding or provision for infrastructure.
- Large developments on green field sites require heavy infrastructure investment which will be more expensive for the public to fund.
- The plan does not set out provision of adequate infrastructure as a pre condition of sustainable development. It is put in as an afterthought buried in this policy. In all aspects it is giving priority to green field development over urban and brownfield regeneration. This creates a huge burden in terms of providing all the changes needed in new roads, redesigning traffic, transport and many other services to support the necessary infrastructure. It needs major investment and CIL receipts cannot guarantee this being achieved.
- Draft CIL (Community Infrastructure Levy) scale encourages use of greenfield rather than brownfield land first.
- The Council is not planning the roads before allowing thousands of houses to be built and it lacks common sense. Traffic congestion which exists now is not being dealt with and planned for never mind looking at what happens if vast housing estates are built across the borough.
- Large roads may be in the pipeline but there is no thought for the smaller local roads which have to support the new ones.
- It ignores the vital fact that the GBC is not in control of highways and permission has to be obtained by either Surrey County Council or England Highways.
- It is in short a disastrous policy for the borough and its population.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
Policy 11: Infrastructure and delivery.

Development in the Green Belt and wider countryside, should that actually be either necessary or desirable (which it is not) would have to be supported by the current infrastructure. There are no credible infrastructure funding provisions for additional development. The CILS are hardly sufficient as they are vague and lacking in scale and teeth and moreover they arrive after the event. It is necessary to build infrastructure before development takes place not as an afterthought. The whole plan must be underpinned with new or repaired: roads, water and flooding provisions, power, sewage, gas, telecommunications, bridges, schools, railway and bus services health services and so on.

The entire infrastructure is well past breaking point today. New and large developments of thousands of houses in Horsley and all the other villages with all the cumulative traffic and pollution increases would cause complete and utter collapse. In Horsley the lack of footways for example together with poor sightlines and dark and winding roads, will cause walking, motoring and cycling fatalities.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Fourthly, the quantum of additional dwellings proposed for the Horsleys will place an intolerable burden on local amenities – even with the current level of housing we were unable to obtain places in the local schools for our children when we returned from a period working abroad and it is routinely impossible to park at local shops. Only in the last week there was a serious car accident in East Horsley in the narrow road that traffic uses when exiting from the shops, and accessing the village hall, medical centre and playing fields. Frequently the latter area has so many cars parked on pavements etc. that disabled people are unable to pass along pavements with their small vehicles.

I object. The Plan is imbalanced. The significant numbers of housing estates, particularly in rural areas are unsupported by a commensurate infrastructure investment. For the Plan to work and to prevent isolated populations overstretched existing strained resources in transport, educational, medical, energy, water, sanitation and communications, there needs to be significant further consideration of the supporting infrastructure.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object to the lack of proper infrastructure planning for sites (A43 and A42)

The Foreword to the plan by Paul Spooner includes on page 5:

“We recognise that significant infrastructure upgrades are required to support existing communities and the planned growth of the borough. The delivery of sites allocated in this plan is contingent upon the provision of new infrastructure, which is a key theme of our Local Plan”.

The lack of any plan for either physical or green infrastructure improvement clearly contradicts this in respect of both A43 Garlicks Arch and A42 Clockbarn Nursery, Tannery Lane, Send. Development of these sites without the contingent infrastructure would therefore be contrary to the stated aims and themes of the Plan, and should not go ahead.

Having lived in Send Marsh with my family since 1972, I have seen first hand how the schools, doctors and roads, have gradually become overloaded over the years, to the point of bursting. It is inconceivable that as a Planning Team, none of the infrastructure issues have been addressed, even though national guidelines state that development must be proportional to its locality.

1. I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy II)

5,036 houses are proposed between the M25 and Burpham (about 5 miles) which will obviously lead to a merging urbanisation of identities the villages. There is too much traffic in our villages already and this plan will cause more congestion in West Horsley, East Horsley, Normandy, Ockham, Ripley, Send and Clandon, with no plan to improve that. The rural roads in this area are narrow, in poor condition and have no footpaths. 5000 more houses in such a small area means dangerous and unsustainable traffic.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

1. DRAINS, WATER SUPPLY, FLOOD RISK, CONGESTION

Our drains, our water supply, our medical facilities and our roads cannot cope with the proposed number of new homes. Building this number of homes will lead to flood risk here and downstream (along the Wey and Thames). The planned development on Green Belt is therefore unsustainable. I must ask you to revise the housing number, and to amend the Local Plan to utilise brownfield land rather than green fields sites.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to this policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the Plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.
With some 5,000 houses being proposed close to the villages of Ripley, Send and West Clandon, the roads serving the villages will become even more congested. Cycling has become an ever popular past time, particularly at weekends when hundreds of cyclists pass through the villages on their way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the villages and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians. The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury to the public. In the case of West Clandon, the Street often only has a narrow footpath on one (alternating) side of the road making it very dangerous, especially when vehicles mount the pavements as some have to do in places in order to pass.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this Plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the Plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local Plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This Plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. Implementation is critically dependent on providers outside the Council’s control and Community Infrastructure Levy income. Instead of recognizing this as a key constraint, the Plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as many local doctors’ surgeries will have their services stretched and overwhelmed. Many of these services are already at capacity with waiting times of 2 weeks to see a GP. Any further development without funding will place further stress upon existing health services. There is no provision for increasing the capacity of the Royal Surrey County Hospital, Guildford. Where is this to be assessed and remedied?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Policy ID1 Infrastructure – Objections

- Our residents are being asked to accept very large amounts of development with little or no detail being provided on measures which would relieve existing congestion and limit future
- Much is made of the need for new infrastructure to support developments and for this to be in place as needed (listed in Appx. C to the Plan). Even if this happens the Plan admits …”we forecast that there will also be an absolute increase in overall traffic volumes”. This will be most acutely felt at junctions but these effects have apparently not been analysed so that we don’t know the location or impact.
- We can be sure however that the cumulative effects of the developments in the north east of Guildford will have a devastating impact on the A247 through our village (and of course on Send). It is hard to see how any of the infrastructure proposals in the Plan (Appx. C) will do anything to mitigate this impact. GBC has little or no control over the plans of Surrey County Council as the local highways authority and it is freely admitted by SCC that they have little money available.
The Plan now calls for nearly all infrastructure to be funded by developers (see C). We question how realistic it is to expect developers not only to pay for all the infrastructure but also to have it in place in a timely fashion. The Plan says that planning permission will be refused if timely provision of infrastructure cannot be secured. Such refusals will almost certainly be challenged in the courts. Developers’ business models are based on building and selling houses to create the cash required to provide infrastructure. People will be living on the sites well before infrastructure is complete, even assuming there are funds to provide it.

If development were to be refused the land would still have been removed from the Green Belt and its future rendered uncertain.

All of these developments will draw very large amounts of additional traffic to the A247 through the village. It would be naïve to think that the employment sites and schools will serve only the developments themselves. Apart from the normal movements of residents to and from the new sites there will be considerable additional traffic on the A247 generated by:

- children from elsewhere being delivered to Gosden Hill schools and collected
- the employees of the offices and industrial sites getting to work and returning home
- the vehicle movements generated by distribution and storage activities
- traffic from Wisley wishing to travel south and returning
- traffic from Gosden Hill wishing to travel south and returning
- traffic from Slyfield wishing to travel south and returning
- private and commercial traffic originating in the south and accessing Gosden Hill, Burnt Common or the A3 and returning (including traffic from Dunsfold)
- SCC’s business plan for Newlands Corner

We point out that although the A247 is classified as an A road, it has none of the characteristics because it:

- is less than 2 vehicles wide in places. Larger vehicles routinely mount the only pavement.
- does not have continuous footpaths
- has several sharp bends
- has a hump-backed bridge over the railway, with poor site lines
- has a dangerous junction to access the station
- has a dangerous and unlit junction with the southbound A3 on-slip road
- has a primary school accessed by narrow pavements
- is largely unlit
- is already very congested at times, more so when delays on the A3 are severe

**EXAMPLE OF FREQUENT CONGESTION ON A247**

These pictures were all taken on the same morning (attached)
In summary, the A247 is quite unsuited to coping with additional traffic and it is very clear that the developments proposed in the 2017 Local Plan will increase the amount of traffic on this road over and above that in the 2016 draft to which residents strongly objected. There is nothing in the Infrastructure Schedule which addresses this issue. Indeed several of the infrastructure proposals will themselves lead to significant increases in traffic on the A247.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents: lp.jpg (299 KB)
village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

10. I OBJECT to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

Comments on the Proposed Submission Local Plan

I have read the proposed submission local plan which GBC have now published for local consultation. I would like to say that I support many of the objectives within the document and fully recognise the need to build additional housing and to share this across the Borough.

However I have three specific areas that I have concerns about where I feel that the document does not address particular local issues or that it makes decisions based on misleading assumptions.
Infrastructure – the proposals do not address in any way the current backlog of needs within the Borough and specifically East Horsley and similar villages and seem to assume that development money will fund the major investment in infrastructure (medical centres, schools, roads, drainage etc.) that is required for the new housing planned.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Infrastructure Policies

The section in the Proposed Submission Local Plan sets out a range of infrastructure policies.

A number of these give me cause for concern both generally across GBC where extensive housing development is proposed, but also specifically to East Horsley (and similar local villages). I am the chair of both the East Horsley Neighbourhood Plan Steering Group and the lead for Infrastructure. It is evident that:

• The Medical Centre is at capacity in terms of numbers of patients and difficulty in booking appointment. This is included in HSC5 but is not prioritised within the timescale of the Local Plan and I would support that this be brought within a 0 – 5 year timescale;

• The Raleigh Primary School which is the state school that most East Horsley children attend is currently oversubscribed and has waiting lists for all years. This is not mentioned within the draft Local Plan although currently the school is proposing that it could move to a different site within West Horsley which would permit expansion. I would support that this be included within the Local Plan.

In terms of roads, pavements, and flooding there are regular major problems in terms of:

• Managing the current volume of traffic, especially the HGVs that increasingly use the roads to access the M3 and M25;
• Living with the poor quality and maintenance of current drains that regularly become blocked and flood; and
• Using pavements that are narrow and uneven or damaged so that people in wheelchairs, or pushing pushchairs are unable to safely use them to access facilities.

Appendix C includes one other proposal for East Horsley. LPN25 a traffic management and environmental improvement scheme with no details and the assumption that this will be funded at least partly from developer contribution. This uncertainty about funding means that there will remain uncertainty and difficulty with any forward planning for issues that need to be addressed within a shorter time frame.

An added issue is that the Local Plan does not take account of the impact on a currently overstretched infrastructure of the housing developments within both East and West Horsley and potentially Wisley, as many commuters will use the two railways stations within the village with a consequent impact on roads usage and demand on other facilities.

I would call your attention to a report by McKinsey Global Institute (The Times 27th June 2016) which concluded that Britain has a 0.4% gap between its estimated requirement for infrastructure needs before 2030 and its current spending.

GBC’s Local Plan has a fifteen year timeframe and it seems imperative that it fully addresses the need for investment in infrastructure both to meet the current shortfall and to support further development.
I accordingly object to the infrastructure proposals on the grounds that they do not address the current need to meet deficiencies in infrastructure. I also object to the proposals in that they do not meet the stated objective of providing infrastructure to support the proposed developments.

1. **POLICY I1**

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get
worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

**Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )**

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.
Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. POLICY I1

The density of housing proposed cannot be supported by the existing infrastructure, and no provision has been made for the increased pressure on services. In particular the schools which are already over subscribed, and medical provision which can barely accommodate the existing population.

It is regarded as a necessity for households in rural areas to have two cars, more so in an area with a limited public transport provision, the resulting increase in traffic would place an unreasonable burden on narrow country roads, and exacerbate existing problems experienced by residents. The area is promoted as a location for the increasingly popular activity of cycling, which already causes frustration to current residents trying to go about their business.

New development is required to respect the character and density of housing in the area, and be limited by the availability if infrastructure and local facilities, the plan fails to do so.

Services

Horsley’s services are at breaking point already. Getting a prompt appointment at our medical centre can be difficult and their drop-in clinics always seem to be oversubscribed. The village primary school is oversubscribed, with many village children having to travel to other villages already. The proposed number of new houses/residents will have a knock on effect for the Howard of Effingham secondary school which has outgrown its current sight and plans to expand it seem to be being blocked. Such a huge number of new residents cannot be sustained without significant investment in these and other local services.

Infrastructure

Our roads are in an appalling condition already. I have young children and like to walk around the village with a pushchair as much as possible. This is already a hazardous occupation as the pavements are so narrow and letting my children walk, scoot or ride bikes is out of the question in some parts of the village. More people on our roads and pavements will be dangerous and cause accidents.

Whilst parking at our local conveniences is currently adequate, with more local residents this would become a problem. I understand that you have been advised by Thames Water that our waste water drainage system is already under strain and this can be seen each time we have heavy rainfall. Localised flooding is common as the drainage system is not able to cope.

Huge investment is already required in these areas, before even small housing developments can possibly be considered.

Pollution

My husband and I moved to West Horsley from London in order to escape the pollution levels, we specifically chose a small village for this reason. I object to this small village being turned into a town, being taken out of the Green Belt, and the levels of pollution which would thus ensue

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Just because the villages in Surrey have relatively good transport links to London does not mean they should now try to support significantly more people than the infrastructure can handle, at the end of the day we know this is about making money and not about providing affordable housing for the youngsters of tomorrow. Do we want to live in a country like the USA where the ecological consequences of low-density suburban living are becoming more obvious year on year (The House of commons briefing paper Number 00934, 5 January 2016) Tristan Hunt stated that economic factors are significantly depleted by uncontrolled urban sprawl and really is this the legacy we want to give to Surrey in the future?

The Raleigh school has just posted a letter through my door stating that they wish to move to a Greenfield site on East lane, replacing the existing school so that housing can replace the old site. Currently I live adjacent to this school, it is currently a great school on a nice plot that has access to open areas for children to play at break time, and Weston Lea for
sports days etc. If this proposed plan goes ahead it will mean the selling off of Weston Lea, so no school sports day facilities, and the site proposed for the new school would mean the whole of East lane would be blocked to traffic during school pick up and drop off times, just like Glenesk school, rendering the whole village a no go zone for all concerned. At least currently it’s only outside of my house on Northcote Crescent that is a real burden on the community. It is true that the school is at capacity and has been for many years, the plan mentions providing additional classes each year to accommodate the influx of pupils by the new housing developments, which the current school cannot accommodate in its current state. If the new houses were given planning permission it would impact both the Raleigh and the Howard of Effingham. There are no details of how traffic will be managed in the plan, improvements to existing roads which are atrocious currently, or any increase in local infrastructure such as doctors surgeries, improvements to water drainage, internet improvement, or mobile phone facilities.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Transport

The rural location of these sites necessitates the use of a car.

Public transport links within the two villages rely on a very infrequent bus service, and the train line.

The train station has no step-free access for trains running London bound, or returning from Guildford, limiting accessibility to those who find a bridge restrictive (such as the frail or elderly) and preventing access for those in wheelchairs or with small children who require prams and buggies. The advertised step free access route per national rail requires getting off a stop early (or late) and 'catching a taxi from Clandon'.

Access to private transport, such as a car, is therefore a necessity for anyone in these groups.

Even for those who walking over a bridge is no impediment, the lack of sufficient amenities within the village mean that frequent travel out of the village is required (for food, leisure etc) which undoubtedly will require a car.

Even more significant is the development on Wisley airfield. The site is largely isolated from public transport, without any pedestrian or dedicated cycle routes to the train station. The significant majority of residents would need access to a car.

The volume of additional cars from these planned developments will increase road usage and the following infrastructure improvements would be required as a minimum:

Access to the villages is through two routes: ‘The Street’ through West Horsley and B2039 through East Horsley. Both of these roads have stretches where the road narrows to such an extent that there is not sufficient space for two highway lanes, and road markings disappear. In order to allow the higher volumes of cars pass one-another, the roads will need to be widened to accommodate the increased volume of traffic.
A3 junction. During rush hour (between roughly 7am to 9am Monday to Thursday during term time), the stretch of the A3 northbound between the Wisley junction and the M25 exit frequently ceases to a halt under the weight of traffic. This has a knock-on effect to the northbound side of the A3, with traffic extending south beyond Burpham. Cars joining at this junction and not wishing to join the M25 have to filter across the traffic looking to exit, which contributes to the congestion. The additional high volume of traffic joining as a result of the proposed developments will result in further delays. This junction will need major improvement works to prevent sever disruption to the highways.

**Drainage / Sewerage**

The sewerage within the village already experiences problems, and investment will be required to accommodate additional discharge from the high density developments. Some improvement works are scheduled but will not commence before the proposed housing development is in place. The proposed plans do not address this issue or how they will prevent any nuisance before or during the improvement works have taken place.

**Flooding**

There are areas within the village which are within flood zones 2 and 3, measures are required to ensure current housing does not become more prone to flooding, and water can drain freely (see drainage above).

**Car parking**

Car parking is restricted in the village, often resulting in difficulty to find a space outside the village shops. The extension of an additional 35% housing will require corresponding increases in the car parking provisions within the village (see also the point made earlier that due to limited pavement and transport one has to rely on a car in the villages).

**Medical facilities**

There are only possible proposals to extend the Kingston Avenue Medical Centre. This medical facility is already extremely busy, and an extension at least in proportion to the increase in residents is required to ensure that all village residents have access to essential healthcare services.

Due to proposed additional residents served by the Royal Surrey County Hospital, a major extension would be required.

**Schools**

The local plan does not address the additional expansion of educational services required to meet the needs of the extra residents. Currently schools and educational services already experience waiting lists. There is one comprehensive school (Raleigh) within the village which is already full. This will need corresponding investment to enable extension to accommodate the significant number of additional residents.

Given the main secondary school within the area, Howard of Effingham, will have a significant volume of additional houses within its wider catchment area (which is not just limited to East and West Horsley), provisions desperately need to be increased to ensure that sufficient education is available for the larger population.

---

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Attached documents:**
The plan in my opinion fails to deal with the following infrastructure issues:

- **Schools**: The Raleigh school is the main state primary in the area and is already oversubscribed for every year. Currently this means that many children have to travel significantly further to access a state primary school, despite living in walking distance to The Raleigh School. It was only a few years ago that the school had to build additional classrooms to meet the demand for places. The school is already fully enclosed by houses on all sides, so further development is not an option. The Howard of Effingham Secondary School is also at full capacity.

- **Roads and pavements**: With the proposed number of new houses to be built, this makes for a huge increase in traffic, particularly as most households have 2 cars. All roads running through East and West Horsley already experience high levels of traffic, which results in speeding being a safety concern through the villages. Major congestion is also already seen around the three schools (Raleigh, Glenesk and Cranmore), at both drop off and pick up times. The condition of the roads is currently unacceptable, with major potholes and defects in all of the village’s roads. More cars are only going to exaggerate the situation. The pavements are unfortunately in poor condition too, making walking for the elderly and people with children and buggies quite dangerous at times. The roads around the village are already narrow, so widening is just not an option. Therefore any major population increase is just not compatible with the current roads and pavements.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

Attached documents:
around the shops. The current condition of the roads is far from desirable and although I understand council budgets are under extreme pressure, significant increases in traffic is not going to help this situation.

Like the roads, the village pavements are in disrepair and can be difficult (and dangerous at night) to use with pushchairs. Although the pavements could be repaired, there is no room for them to be widened in order to handle the increased footfall.

During periods of heavy rain, many of the roads within the village become flooded. This problem would be a lot worse if there weren’t adjacent fields for the water to run-off onto. Building on a number of these fields could potentially lead to significant flooding within the village. The existing waste water system struggles even now and Thames Water has already said that it would not be able to cope with any additional demand.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

As far as I can see the changes, so far as they affect West Horsley, while to be welcomed, are very minor and do not materially change the situation regarding the sheer number of houses to be built in the village, and also in the surrounding villages. he very obvious consideration of the complete overload of all the infrastructure in this area remains a clear and total block to the plans. It is quite clear to everyone I discuss this with that shops, schools, medical facilities and all the other amenities which manage to cope with the current population density will become swamped to the detriment of everyone.

[One or more sections of this comment have been removed because they did not relate to a change to the plan.]

Disproportionate housing development would cause chaos to already oversubscribed schools and railway station car parks. There is already a problem with pedestrian and cyclist safety on crowded roads with no pavements or paths. The cycle lanes are just a joke, far too narrow and peter out just as they are most needed at junctions and roundabouts.

There is a lack of local buses and the infrastructure is simply not there.

I appreciate that there should be housing but not to the extent proposed. Our village infrastructure can not cope with the volume suggested.

137 houses on Manor farm of 16% density. Ridiculous.

Same for another large site on Waterloo farm.

Some appreciation for the dramatic impact on schools, roads resources needs thinking about and reevaluating.

I object to this plan

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment...
without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

OBJECTION TO POLICY I1 (INFRASTRUCTURE & DELIVERY) AND POLICY I2 (SUPPORTING DTP’S ROAD STRATEGY): - the Council have failed to consider and take proper account of existing and increased pressures on infrastructure in setting out its development plans. The proposed and excessive housebuilding in our rural communities and countryside / green belt land is not supported by any funding or provision for infrastructure which is a key flaw in the Plan. The Council have failed to provide any plan for organic increase in existing traffic congestion, let alone capacity to accommodate the huge increase in demand / burden once thousands of houses are built across the countryside.

1. POLICY I1

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.
The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I am concerned about the impact this will have on Traffic - The Horsleys are semi-rural, spring-line villages with rural road systems dating back to 14th Century property boundaries - just after the Black Death. The roads are narrow, winding and flood regularly. Assuming that every new house has at least 2 cars, this means potentially more 1100 more cars within the villages, and 6000 new vehicles within a three mile radius of the villages. New residents of Wisley, Ockham and Ripley will need to travel into the middle of East Horsley or to Effingham for train connections. The impact of this increase in traffic on our local road infrastructure will be unsustainable.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I am concerned about the impact this will have on our Schools - Local primary schools are already at capacity and, if news reports are to be believed, there will be a severe shortage of places over the coming decade, even before there is any new development. Only three years ago, pupils from Horsley were told that there were no places for them at the local senior school so special provision had to be made. According to the new plan, despite the large increase in the number of households, no extra school places are planned in the Horsleys. Where are the children of these households supposed to go to school? The primary school places proposed at Wisley Airfield will not be available until years into the project and, as yet, there is no plan for a new secondary school.

I am concerned about the impact this will have on our Medical facilities - We have a very good medical centre where it is, unfortunately, not unusual to have to wait three weeks to see a named GP. The addition of 500+ new households will only exacerbate this problem.
I have already stated that I do not object to development in itself but the current proposals are out of all proportion to the current communities.

Implementation of these proposals would irrevocably alter the nature of the communities.

Implementation of these proposals would overburden the community infrastructure.

Implementation of these proposals would not address the real areas of housing need.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I strongly object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

There is too much traffic in our villages already and this plan will cause more congestion in Ripley, Send and Clandon, with no plan to improve that other than a slip road onto the A3 at Burnt Common – to which I object as it will attract more traffic to this area and cause more congestion (although it might reduce traffic going through Ripley towards the A3 junction at Wisley. You are simply moving the problem around not fixing it.

The rural roads in this area are often very narrow, in poor condition and often have no footpaths. It is madness to risk pedestrians lives or health with all these new homes – I believe it means dangerous and unsustainable traffic. I have not seen detailed modelling of the affect of this development on the road infrastructure - how can you proceed without sufficient systematic and scientific evidence and good modelling going through the entire development plan and through to 5 years after completion?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I strongly object to the lack of proper infrastructure planning for sites (Policy I1)

The Plan does not identify adequate infrastructure improvements to support the huge scale of development, especially at Garlick’s Arch (A43) which has no infrastructure projects in the Infrastructure Schedule to support it. Local services, utilities and sewerage, doctors etc. are at or close to capacity.

There are no plans to improve the capability of the medical and police/emergency services to cover the 5000+ houses in the north east of the borough. Surely someone must have considered that this might be necessary and should therefore be
I have previously objected to the proposed development at Wisley and this new Plan does not address the issues raised.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Policy ID1 – The transport aspects of the Plan cannot be regarded as sound. The Plan provides a vivid description of the conditions on the network today and the evidence is that these will be as poor, and in some cases worse, at the end of the plan period, even with the mitigation measures. The evidence provided indicates that congestion will be widespread on much of the highway network in peak periods, even with the proposed highway schemes and with the measures to encourage the use of public transport in place.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

The local infrastructure is overstretched and the enormity of the proposed developments are infeasible. Projecting a potential future of poorer and few resources for those living in the area.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

5. POLICY I1

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1).
Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems. With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan. The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians. The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon, The Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements. The bends and narrow width of the road in West Clandon make the road difficult to access from some of the 100 or so houses, businesses and amenities with entrances onto the road (e.g. Onslow Arms pub, Clandon railway station). The same difficulty is experienced by pedestrians and the fact that there is only a footpath on one side of the road makes it impossible to improve safety for pedestrians crossing the road in many places. These problems will become worse with increased traffic.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways. Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.
Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable. There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: pslp171/2420  Respondent: 11070113 / Alison Hague  Agent:

Document: Proposed Submission Local Plan: strategy and sites 2017 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? (), is Sound? (), is Legally Compliant? ( )

• Residents are being asked to accept very large amounts of development with little or no detail being provided on measures which would relieve existing congestion and limit future

• Much is made of the need for new infrastructure to support developments and for this to be in place as needed (listed in Appx. C to the Plan). Even if this happens the Plan admits …“we forecast that there will also be an absolute increase in overall traffic volumes”. This will be most acutely felt at junctions but these effects have apparently not been analysed so that we don’t know the location or impact.

• We can be sure however that the cumulative effects of the developments in the north east of Guildford will have a devastating impact on the A247 through the village of West Clandon (and of course on Send). It is hard to see how any of the infrastructure proposals in the Plan (Appx. C) will do anything to mitigate this impact. GBC has little or no control over the plans of Surrey County Council as the local highways authority and it is freely admitted by SCC that they have little or no money available.

• The Plan now calls for nearly all infrastructure to be funded by developers (see C). I question how realistic it is to expect developers not only to pay for all the infrastructure but also to have it in place in a timely fashion. The Plan says that planning permission will be refused if timely provision of infrastructure cannot be secured. Such refusals will almost certainly be challenged in the courts. Developers’ business models are based on building and selling houses to create the cash required to provide infrastructure. People will be living on the sites well before infrastructure is complete, even assuming there are funds to provide it.

• If development were to be refused the land would still have been removed from the Green Belt and its future rendered uncertain.

• All of these developments will draw very large amounts of additional traffic to the A247 through the village. It would be naïve to think that the employment sites and schools will serve only the developments themselves. Apart from the normal movements of residents to and from the new sites there will be considerable additional traffic on the A247 generated by:

- children from elsewhere being delivered to Gosden Hill schools and collected
- the employees of the offices and industrial sites getting to work and returning home
- the vehicle movements generated by distribution and storage activities
- traffic from Wisley wishing to travel south and returning
- traffic from Gosden Hill wishing to travel south and returning
- traffic from Slyfield wishing to travel south and returning
- private and commercial traffic originating in the south and accessing Gosden Hill, Burnt Common or the A3 and returning (including traffic from Dunsfold)
- SCC’s business plan for Newlands Corner
I would like to point out that although the A247 is classified as an A road, it has none of the characteristics because it:

- is less than 2 vehicles wide in places. Larger vehicles routinely mount the only pavement.
- does not have continuous footpaths
- has a footpath only on one side of the road in long sections, including sections with pub, care home and church car park
- has several sharp bends
- has a hump-backed bridge over the railway, with poor sight lines
- has other entrances with poor sight lines (eg Onslow Arms, church car park)
- has a dangerous junction to access the station
- has a dangerous and unlit junction with the southbound A3 on-slip road
- has a primary school accessed by narrow pavements
- is largely unlit
- is already very congested at times, more so when delays on the A3 are severe

The A247 is in reality a residential road with numerous bends, narrow sections and side-entrances. The road through West Clandon already has numerous accident black spots, such as: (I) the exit from Clandon station which has extremely poor sight lines due to a humped back bridge where numerous accidents have occurred; (ii) the exit from the Onslow Arms pub which is almost blind due to the pub building being adjacent the road - a vehicle has recently ended up in the garden of the cottage opposite; (iii) the narrow section outside “Summers” which is regularly littered with the wing mirrors of cars which have made contact, as well as being a dangerous area for pedestrians due to vehicles mounting the pavement to try to pass; (iv) the winding section outside Clandon Regis and near the primary school which regularly suffers from demolition of gate posts and fences as vehicles leave the road; (v) the bend near West Clandon church which has seen damage caused to the flint wall in recent years.

In summary, the A247 is quite unsuited to coping with additional traffic and it is very clear that the developments proposed in the 2017 Local Plan will increase the amount of traffic on this road over and above that in the 2016 draft to which residents strongly objected. There is nothing in the Infrastructure Schedule which addresses this issue. Indeed several of the infrastructure proposals will themselves lead to significant increases in traffic on the A247.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
- children from elsewhere being delivered to schools and collected
- the employees of the offices and industrial sites getting to work and returning home
- the vehicle movements generated by distribution and storage activities
- traffic from Wisley wishing to travel south and returning
- traffic from Gosden Hill wishing to travel south and returning
- traffic from Slyfield wishing to travel south and returning
- private and commercial traffic originating in the south and accessing Gosden Hill, Burnt Common or the A3 and returning (including traffic from Dunsfold)

The A247 although an A road:

-is less than 2 vehicle wide in places. Larger vehicles routinely mount the (only) pavement to pass one another in the narrow sections.

-does not have continuous footpaths

- has a footpath only on one side of the road in long sections, including sections with pub, care home and church car park
- has several sharp bends
- has a hump-backed bridge with poor sight lines
- has other entrances with poor sight lines (eg Onslow Arms, church car park)
- has a very difficult junction to access the station
- is largely unlit
- has a primary school

-is already very congested at times, more so when delays on the A3 are severe, which is common in the evening rush hours (4pm to 630pm) and summer weekends

-cuts through the Conservation Area of West Clandon within which 19 listed buildings are located with road frontage. A further 9 listed buildings are located on the A247 in West Clandon north of the Conservation Area.

The A247 is in reality a residential road with numerous bends, narrow sections and side-entrances. The road through West Clandon already has numerous accident black spots, such as: (I) the exit from Clandon station which has extremely poor sight lines due to a humped back bridge where numerous accidents have occurred; (ii) the exit from the Onslow Arms pub which is almost blind due to the pub building being adjacent the road - a vehicle has recently ended up in the garden of the cottage opposite; (iii) the narrow section outside “Summers” which is regularly littered with the wing mirrors of cars which have made contact, as well as being a dangerous area for pedestrians due to vehicles mounting the pavement to try to pass; (iv) the winding section outside Clandon Regis and near the primary school which regularly suffers from demolition of gate posts and fences as vehicles leave the road; (v) the bend near West Clandon church which has seen damage caused to the flint wall in recent years.

Increased traffic through West Clandon would make it difficult for people to move around the village both as pedestrians and in cars, a problem exacerbated by the many bends in the A247 in the village and by the long sections where there is only room for a footpath on one side of the road.
In short the A247 is too narrow and has too many bends to cope with increased traffic without compromising safety of cars, pedestrians and cyclists.

I OBJECT TO POLICY I1 (INFRASTRUCTURE & DELIVERY) – I object. Adequate infrastructure should be a precondition of the whole plan, not a footnote buried away deep in the plan as it is here. This policy can’t hide that there are no funds of plans for the infrastructure needed to support the overambitious plans for big housing estates spread across the Guildford Green Belt.

Why not spare the countryside and build in town instead? I just don’t believe that not enough brownfield urban sites exist. First of all because the council hasn’t bothered to catalogue it. Secondly because this policy does nothing to prioritise its use through the CIL structure.

Developing brownfield sites is so much easier and cheaper for the public because much of the infrastructure already exists. But this policy kow-tows to developers who find green fields cheaper.

There are no contingency plans here for the traffic increase caused by the planned thousands of houses across the countryside. Because housing and road planning are sequenced back to front, Green Belt will be lost before road are improved – if indeed they ever are, since there is no funding.

I am fully supportive of the responses submitted by the Guildford Residents Association about the above.

I wish to emphasise my concern about:

the lack of suitable infrastructure for the massive increase in housing and town expansion proposed. Current infrastructure is already woefully inadequate, and the provision of new should be binding and phased in advance of expansion. I strongly support the concept and full investigation of the GVG’s additional bridge over river and railway. Any new station development must address this.

the risk of flooding in a large number of key areas of the Borough

Protected wildlife areas

1. **POLICY II**

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon, The Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements, as they have to do to pass at narrow sections.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green Belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.
Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritising greenfield over urban, brownfield regeneration, the Plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This Plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognising this as a key constraint, the Plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways. Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send, will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to policy I1 Infrastructure and delivery Most of the borough’s infrastructure is antiquated, congested and straining to accommodate even current needs and organic growth. Yet this plan’s commitment to building housing estates across the Guildford countryside will mean either major infrastructure investment that no-one is prepared to pay for or else a catastrophic and simultaneous collapse in transport, educational, medical, energy, water and communications services. The plan targets greenfield sites – requiring heavy infrastructure investment – in order to generate CIL income necessary to meet an infrastructure shortfall that is already serious. The current draft CIL scale also encourages development on greenfield sites rather than brownfield and will reduce or negate developer's obligation to sell a percentage of homes at 20% below market value. The policy wording says nothing about roads and traffic. The Council’s methodology for assessing infrastructure needs in this area is inadequate, identifying only the tip of an iceberg of existing congestion. Compton Village is already close to tipping point, yet it will see a significant increase in traffic volume, will be completely congested and yet no plans exist to mitigate the problem. The schemes referred to in this policy barely solve existing congestion and are inadequate when development takes place. The full impact on local road networks has not been fully considered. Some proposed development locations would require highway schemes that involve demolishing property and road-widening in residential areas to solve the resultant congestion. The A3 improvements are not guaranteed to take place but they are being used to justify removing large areas from the Green Belt before detailed traffic assessments have taken place. These detailed investigations are being deferred until the planning application stage and will be left to developers to prepare. If a site then proves to be unsustainable its Green Belt protection will have been lost for no reason and unsuitable development will take place by a more insidious process. Compton Village will actually incur increased traffic flow as a consequence of A3 widening according to the study, yet as was pointed out above, no solutions are in place to improve the situation. Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritising greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor
development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognising this as a key issue, the plan makes too many assumptions, not least being the verbal promise that development will not take place without infrastructure preceeding it. It is not clear how this will happen and is not in the Plan, as it should be, if it is achievable. The highways network is under stress at peak times in many parts of the borough. Queuing is the daily experience of drivers going to and from work. The local plan recognises the problems in para 2.14. Much of the road network is single-carriageway, and junctions act as constraints. The key evidence on future traffic conditions is provided in the Strategic Highway Assessment Report (SHAR) which summarises the results of the tests carried out by Surrey County Council at the request of GBC. Five scenarios were examined using SCC’s strategic traffic model. Scenario 1 contains all developments and planning permissions from 2009 to date. As such it corresponds to today’s circumstances, and describes the current unsatisfactory traffic conditions in peak periods. Scenario 5 represents the position at the end of the plan period, including all development and highways schemes in the local plan. The results of the analysis show that there will be widespread congestion in the morning peak hour across the network. The key strategic routes, the A3 through Guildford NE bound, and the M25 between Junctions 10 and 11, are shown to be at or over capacity. The summary network statistics presented in the SHAR, while useful, require some interpretation because the analysis of vehicle-hours is derived from link speeds only, and does not reflect junction delays and queues. The tables that show the ratio of flow to capacity and level of service are especially helpful to gaining an understanding of the conditions on the network in the forecast. Where the forecast traffic volume is above or close to capacity, flow becomes unstable and there is congestion. The SHA results provide evidence that, in 2031, congestion will be worse than it is today on much of the network. It is the case that the traffic modelling does not take into account the potential for increased use of other modes, but the trip rates used for developments already have built in the typical level of use of other modes, and services will be required to meet that need. It is also the case that the model does not allow for park and ride, which would improve matters in the town centre, as discussed below. In order to gain an insight into conditions across the network, it is necessary to combine information from several tables in the SHAR. Table 4.5 shows that the M25 and A3 will be at capacity in Scenario 5. The other roads that will have poor levels of service include those in Table 4.5 but also those in 4.12 (except the A3) and those in Tables 4.3 and 4.4 with levels of service E and F that will not be given some relief by improvement of the A3 in Scenario 5. Paras 4.10.3, 4 and 5 point out that there will be increased congestion. Given that the starting point is unsatisfactory, there can be no expectation that the schemes in the Infrastructure Development Plan will provide an overall improvement. There will be some local benefits, such as the Ash rail bridge for example, but in general conditions will be as bad and in many places, such as Compton Village, worse. So the statement in the SHAR para 4.2.5 that ‘the combined mitigation as reflected in Scenario5..indicates that at the strategic level it accommodates the additional PSLP demand’ needs qualifying – ‘at the cost of a lot of queuing’ and makes no mention of the impact this will have on pollution, which is already a known problem at the A3 end of Compton. The cumulative effect of the additional traffic generated by the developments in the local plan will be to increase congestion, even with the proposed highway schemes in place. More detailed analysis of the junctions and queuing is required. So we question the conclusion that the developments would have “an acceptable impact on the capacity of the highway networks in terms of the policy test set in paragraph 32 of NPPF”. Appendix 3 of the Transport Topic Paper shows the phasing of housing development and transport infrastructure. The major scheme being considered for the A3 between the A31 and the A320 is scheduled for delivery in the period 2023/24 to 2027/28. The strategic developments at Blackwell Farm and Gosden Hill Farm are shown as being phased in from 2021/22 onwards. The Garlick’s Arch development is shown as starting in 2019/20. Therefore, there will be a period in which the existing A3 has to cope with the additional demand arising from those developments before extra capacity is provided. The following comments regarding the strategic sites are taken from the SHAR: Blackwell Farm – there will be congestion at the A31 junction, and the problems at the Tesco junction, and the Egerton road/Gill Avenue junction (para 4.9.5). Traffic is likely to access the Surrey research park and the RSCH through the development (para 4.7.3) Gosden Hill Farm – there will be an increase in traffic through Burpham. There will be pressure on the A3100/B2234 roundabout (para 4.7.6, 4.7.7 and 4.7.8). Wisley – traffic will increase on minor roads to gain access to the A3 (N and S bound) and other routes (para 4.7.11). The development will add more traffic to the A3. The Burnt Common slips help alleviate the traffic through Ripley according to the model, but queuing on the A3 could mean this does not happen (para 4.7.14) Normandy/Flexford – the report has little to say about the impact of this large development. The increase in flow on Westwood Lane is noted (para 4.5.7). Tables 4.10 and 4.11 show junction delay reducing at the Westwood Land, B3000 junction, but an increasing at the Puttenham Hill/Millbrook junction. Ash – development in Ash is not specifically addressed, but there are major increases in traffic on a number of roads. The new rail bridge will bring relief (but traffic will move to the next junction). Slyfield – there are no remark relating to SARP, and as there are no additional trips shown in and out of the Slyfield residential zone in Tables 3.3 and 3.4, it is possible that this development has been omitted. There is a significant increase in trips to and from the Slyfield industrial zone, which will impact on the A320 and Clay Lane. Town Centre – the report has very little to say
about the town centre. It is evident that the model is forecasting severe congestion on the approaches to the town centre, such as the A281, the A31 Farnham Road, and Woodbridge Road for example. No mitigation measures are planned. And in the Transport Strategy, GBC states that the intention is to adopt Allies & Morrison’s Scenario 2 which would have the effect of significantly reducing the capacity of the town centre road system. The implications have not been examined, but traffic using the A281 from Waverley, for example, would be affected.

The B3000 will be severely affected by development schemes and will not benefit from road improvements. It is essential that the impact of all change to road networks are looked at in conjunction with one another for any survey to be meaningful. The local plan does not state an objective for congestion. The two strategic objectives that are included for infrastructure refer to supporting sustainable development and delivering a balanced system. However, in para 2.15 there is an aspiration expressed about opportunities ‘to improve the performance of the road networks through transport infrastructure and service improvements’, which taken with the previous paragraph includes reducing congestion. The evidence so far shows that this will not happen. The mitigation proposed is not sufficient to overcome the problems that will be caused by the level of growth in the local plan. Congestion will worsen. The network will lack resilience and be vulnerable to disruption due to incidents. Minor roads will have to cope with a lot more traffic, for which they are unsuitable.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

6) I object to the detrimental impact on transport, local roads and road safety. I specifically object to:

1. The assertion that the development will result in a meaningful shift to cycling and walking. The development is too isolated, and even within the development itself too spread out to anticipate a reduced reliance on private cars
2. The increased volume of car traffic. A proposed development of 2,068 homes would result in an estimated 4,000 additional cars on the roads
3. The congestion this traffic will cause on the narrow rural roads in Ockham and the surrounding areas, exacerbated by wide vehicles including increased bus and HGV movements
4. The danger this traffic will be to local cyclists and pedestrians, due to the absence of any cycling paths and the lack of pedestrian footpaths (and the space to provide them)
5. The increase in the already severe congestion on the Strategic Road Network of the A3 and M25. A further planning application at RHS Wisley (with a significant increase in visitor traffic) and a proposed 600 pupil secondary school on the site would add additional congestion at the M25/A3 junction as well as local roads. No development can proceed without significant infrastructure enhancements to the A3 and M25. Partial improvement works on the A3 south of the site are not due to start until 2019 at the earliest
6. The lack of suitable public transport. The local rail stations of Effingham and Horsley cannot cope with the proposed increase in passenger traffic and car parking is already at capacity

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Any development in and around Send will need to take into account the lack of public transport at commuting times of day and allow for multiple vehicles for each house or development- leading to an exponential increase in traffic in an already busy and over stretched road area and would lead to further instances of gridlock.

There is no provision for schools, road improvement or other services such as GP services in the Send area where such services are already at breaking point. Until the services are improved there should be no further development.

Surface flooding is already a problem in the Send area. While much of the village is slightly above the current flood plain, this is marginal and roads are subject to surface flooding as a result of existing development. Any further development in and around the village will increase both the flooding and surface water flooding risks.

We have recently received notification from the local water supplier that water supplies are under pressure after a drier than usual winter. That is with current levels of building. Any further building and development in the area will both increase the demand for water while increasing the flood risk and decreasing the amount of water entering the ground and thus leading to aquifer depletion and drought risk.

Overall, the changes to the Local Plan are disproportionately increasing development in Send and the surrounding area at the expense of the Green Belt while ignoring the large stock of brownfield sites within Guildford itself. Those sites should be used before any development on Green Belt or before removing areas from the Green Belt for development.

We strongly object to these changes to the Local Plan and urge that they be rejected and the development moved to brownfield sites, of which the borough has an ample sufficiency.

A further worry with all sites is that if the plan goes ahead there is unlikely to be much in the way of affordable housing, and consequently there will be an influx of high earning commuters which will continue to change the nature of the villages. This will add to the local traffic problem and on a wider scale the A3 and M25 roads will be subjected to increasing congestion at a time when for parts of the day both of these roads are unable to cope comfortably with traffic volumes. There will be further problems with other amenities. The area is not blessed with unlimited school places, the Medical Centre in East Horsley is fully stretched and it will be necessary to massively improve the drainage system.

The Hotel site (A36) is very near to Horsley Towers and is likely to be extremely visible. The roadway around is potentially dangerous.

The four sites clustered around the Raleigh School area (A38, A39, A40 and A41) would be a total of 445 homes. This would constitute an enormous increase in the size of the village.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Comment ID: pslp171/299  Respondent: 11096897 / Rob Workman  Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Being connected with West Horsley for over 60 years and living in the village since the year 2000, seeing what is proposed fills me with concern. My grandparents, who actually owned and ran the village newagents in the 1940s, would be dismayed to find that our local shops have dwindled and no longer is it easy to visit a post office or buy essential groceries.

The residents of the 40 new homes lined up for the Bell and Colvill site (A37) adjacent to the old village parade of shops will no longer have the convenience of shopping facilities on their doorstep.

East Horsley would increase massively should the 445 homes clustered around the Raleigh School area (A38, A39, A40 and A41) be built. The infrastructure to cope is certainly not in place.

Difficulties ahead continue to mount if the Draft Plan for the Horsleys is implemented. Local roads are already overcrowded and at peak times the congestion is so bad that an increase in traffic, which will certainly result if the Plan for the Horsleys and other developments in the offing come to fruition, will bring local roads and the A3 to a standstill. Furthermore, the Horsley Medical Practice, which is already under strain, will have to increase its waiting times for an appointment and local schools will quickly fill, resulting in long treks to alternative suitable schools, if any can be found. The entire drainage system will be swamped.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

WE OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)
Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads. Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

WE OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

WE OBJECT to the lack of proper infrastructure planning for sites (Policy I1).

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. We have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
It already takes between 7 and 14 days to obtain an appointment at the Horsley Medical Centre. With no additional medical facilities planned, this will create completely unsustainable pressure on already stretched facilities.

Local Road Network:

It seems that the Plan is proposing a strategic site at Wisley Airfield without even knowing what improvements to the local road infrastructure will be required. If that is the case for Wisley Airfield, then it is almost inevitably true for the proposed developments in East and West Horsley as well. The local roads and parking at facilities such as Horsley station are already under significant pressure.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1).

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads. Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems. With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians. The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon, The Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements. The bends and narrow width of the road in West Clandon make the road difficult to access from some of the 100 or so houses, businesses and amenities with entrances onto the road (e.g. Onslow Arms pub, Clandon railway station). The same difficulty is experienced by pedestrians and the fact that there is only a footpath on one side of the road makes it impossible to improve safety for pedestrians crossing the road in many places. These problems will become worse with increased traffic.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: pslp171/2366   Respondent: 11104033 / David Dutton   Agent:
Document: Proposed Submission Local Plan: strategy and sites 2017 / Policy ID1
1. Residents are being asked to accept very large amounts of development with little or no detail being provided on measures which would relieve existing congestion and limit future measures.

2. Much is made of the need for new infrastructure to support developments and for this to be in place as needed (listed in Appx. C to the Plan). Even if this happens the Plan admits …”we forecast that there will also be an absolute increase in overall traffic volumes”. This will be most acutely felt at junctions but these effects have apparently not been analysed so that we don’t know the location or impact.

3. We can be sure however that the cumulative effects of the developments in the north east of Guildford will have a devastating impact on the A247 through the village of West Clandon (and of course on Send). It is hard to see how any of the infrastructure proposals in the Plan (Appx. C) will do anything to mitigate this impact. GBC has little or no control over the plans of Surrey County Council as the local highways authority and it is freely admitted by SCC that they have little money available.

4. The Plan now calls for nearly all infrastructure to be funded by developers (see C). I question how realistic it is to expect developers not only to pay for all the infrastructure but also to have it in place in a timely fashion. The Plan says that planning permission will be refused if timely provision of infrastructure cannot be secured. Such refusals will almost certainly be challenged in the courts. Developers’ business models are based on building and selling houses to create the cash required to provide infrastructure. People will be living on the sites well before infrastructure is complete, even assuming there are funds to provide it.

5. If development were to be refused the land would still have been removed from the Green Belt and its future rendered uncertain.

6. All of these developments will draw very large amounts of additional traffic to the A247 through the village. It would be naïve to think that the employment sites and schools will serve only the developments themselves. Apart from the normal movements of residents to and from the new sites there will be considerable additional traffic on the A247 generated by:

- children from elsewhere being delivered to Gosden Hill schools and collected
- the employees of the offices and industrial sites getting to work and returning home
- the vehicle movements generated by distribution and storage activities
- traffic from Wisley wishing to travel south and returning
- traffic from Gosden Hill wishing to travel south and returning
- traffic from Slyfield wishing to travel south and returning
- private and commercial traffic originating in the south and accessing Gosden Hill, Burnt Common or the A3 and returning (including traffic from Dunsfold)
- SCC’s business plan for Newlands Corner

I would like to point out that although the A247 is classified as an A road, it has none of the characteristics because it:

- is less than 2 vehicles wide in places. Larger vehicles routinely mount the only pavement.
- does not have continuous footpaths
- has a footpath only on one side of the road in long sections, including sections with pub, care home and church car park
- has several sharp bends
- has a hump-backed bridge over the railway, with poor sight lines
- has other entrances with poor sight lines (eg Onslow Arms, church car park)
- has a dangerous junction to access the station
- has a dangerous and unlit junction with the southbound A3 on-slip road
- has a primary school accessed by narrow pavements
- is largely unlit
- is already very congested at times, more so when delays on the A3 are severe

The A247 may be an A-road on the map but in reality it is a residential road with numerous bends, narrow sections and side-entrances. The road through West Clandon already has numerous accident black spots, such as: (I) the exit from Clandon station which has extremely poor sight lines due to a humped back bridge where numerous accidents have occurred; (ii) the exit from the Onslow Arms pub which is almost blind due to the pub building being adjacent the road - a vehicle has recently ended up in the garden of the cottage opposite; (iii) the narrow section outside “Summers” which is regularly littered with the wing mirrors of cars which have made contact, as well as being a dangerous area for pedestrians due to vehicles mounting the pavement to try to pass; (iv) the winding section outside Clandon Regis and near the primary school which regularly suffers from demolition of gate posts and fences as vehicles leave the road; (v) the bend near West Clandon church which has seen damage caused to the flint wall in recent years.

In summary, the A247 is quite unsuited to coping with additional traffic and it is very clear that the developments proposed in the 2017 Local Plan will increase the amount of traffic on this road over and above that in the 2016 draft to which residents strongly objected. There is nothing in the Infrastructure Schedule which addresses this issue. Indeed several of the infrastructure proposals will themselves lead to significant increases in traffic on the A247.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Cladon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Cladon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Cladon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

1. I OBJECT to the lack of proper infrastructure planning for sites (Policy II)

Policy II requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
Traffic volume, the roads in the above mentioned areas already struggle with the burden of traffic, the roads being in a state of disrepair.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local
Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. 1. I object to the lack of proper infrastructure planning for sites (Policy I1)

The Plan does not identify adequate infrastructure improvements to support the huge scale of development, especially at Garlick’s Arch (A43) which has no infrastructure projects in the Infrastructure Schedule to support it. Local services, utilities and sewerage, doctors etc. are at or close to capacity.

There are no plans to improve the capability of the medical and police/emergency services to cover the 5000+ houses in the north east of the borough.

Please take into account the following comments on the local plan.

At the local meeting I went to, Paul Spooner emphasised that all the major strategic development was contingent on major infrastructure improvement. This is not sufficiently clear in his forward to the plan. Paragraph 4, for instance, it should be unequivocal and say something like the existing infrastructure in the borough is under severe pressure: traffic congestion is 12 highest in Europe and there is very little capacity for increased electricity consumption. In order not to exacerbate the current shortcomings no significant new development will be permitted until the necessary finance for increasing the capacity of local roads including in particular the A3 and Guildford town centre one-way system has been secured and implementation timetabled.
This will ensure that the developers have realistic expectations as to when sites can be brought forward and avoid the risk that the proviso to plan gets overlooked in the future.

Paragraph 2.15 is a statement of the obvious. It can take two hours to cross from one side of Guildford to the other which is totally unacceptable and imposes huge diseconomies, social costs and additional pollution. It should be amended to read: “There is an urgent requirement to increase the proportion of trips undertaken on a sustainable basis notwithstanding the anticipated increase in population. The council will encourage cycling, walking and the use of public transport and discourage inefficient use of the private motorcar by all means possible including consideration of congestion charging, encouraging car sharing, discouraging single occupancy use and working with local schools to substantially reduce the number of children dropped off by car, and to explore the possibility of specific school-related traffic management initiatives and, particularly in the morning rush hour, such as short-term one way streets or temporary closure to through traffic of critical residential roads used for the “school run”.

Similarly, 2.22. To say that the infrastructure is experiencing additional stress in no way conveys how overloaded the road system in particular is. There must be sufficient quantitative data to demonstrate just how unacceptable the existing situation is nevermind the possibility of adding to it.

Other terms of the size understanding of Guildford had bypasses created in the 1970’s, 1980s and 1990s. Guilford was introduced in the 1930s since when traffic volumes have increased beyond all expectations. On any objective Analysis Guildford is in need of an additional bypass. In normal circumstances this would take the form of a southern loop to create a circle around the urban area but this is not possible given the attractive and protected nature of the countryside. The idea of the tunnel therefore beneath the existing A3 could be an excellent solution. The notion of simply widening the existing A3 Will have a lot of detrimental environmental impacts. For example, living here we are 2 miles from the A3 but we can still hear the roar of the traffic from the out of town section which lacks sound absorbing tarmac and due to the prevailing wind direction.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Comment ID: PSLPP16/2405  Respondent: 11157345 / John Harrison  Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

The housing table in the appendix sets out clear housing targets but the fact that these are dependent upon prior infrastructure improvements is not equally clear. It seems to me that there is every possibility that the numbers in the table will be seized upon and the proviso will be forgotten. There is also a very real risk that construction of the houses will be commenced in anticipation of the improved infrastructure which will subsequently be cancelled. This cannot be allowed to happen and this risk must be totally eradicated in the way the plan is written.

1. I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

1. I OBJECT to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

We act for Crimson Project Management. This representation relates to the

**INFRASTRUCTURE AND DELIVERY - Policy 11 and INFRASTRUCTURE SCHEDULE - Appendix C.**

The Consultation Draft Guildford Borough Local Plan July 2014 identified a need for a new five form entry secondary school to the north of Guildford. A site for the school was proposed to be allocated at Salt Box Road, Guildford.

The Regulation 19 Submission Draft has deleted this proposed allocation. Instead, Item SED3 of Appendix C identifies a seven form entry secondary school allocation at a strategic site at Normandy/Flexford. The proposed new secondary school is to be located close to Wanborough Railway Station. It is stated that only one form of entry would be required to serve the strategic development itself, with the remaining capacity serving the wider area, including the Blackwell Farm strategic site.

Crimson Project Management has recently submitted a planning application for a mixed use development which would include a new five form entry secondary school as part of a sustainable urban extension to Fairlands which is in a significantly more sustainable location to serve the needs of north Guildford, the wider area and any further development that may take place at Blackwell Farm and/or Normandy/Flexford.

Attached to this letter is a comparative analysis of the sustainability merits of the respective proposed locations for both the new school and new housing of the Rokers/Fairlands development and the Normandy/Flexford development. The conclusions of the analysis demonstrate that the Rokers/Fairlands site is a significantly more sustainable location for the new secondary school than Normandy/Flexford.

The results of the analysis show that a substantial portion of the catchment for the new school would be from northern Guildford. In those circumstances, the proximity of Wanborough Station to the Normandy/Flexford site would be of little or no benefit in that pupils would need to travel into central Guildford to get the train back out. Equally, for those pupils travelling on the KITE service, it would make no sense for them to have to travel past the Rokers site on the A323 for several miles to get to the Normandy/Flexford school site.

The Infrastructure Schedule contained at Appendix C should be amended, therefore, to include provision of a new five form entry secondary school on the Rokers site as part of a new mixed use development to include housing, community uses and sporting facilities.
Transport Planning & Infrastructure Ltd has been instructed by Crimson Project Management Ltd to prepare Transport Representations in respect of the Guildford Borough Council Proposed Submission Local Plan.

These transport representation focus on the exclusion of the Rokers site at Fairlands Farm, Holly Lane from the Draft Local Plan and seek to justify its The site is currently subject to an outline planning application (reference 16/P/01397) for the construction of up to 370 residential dwellings and a new school/educational facility.

In addition, these representations seek to provide a comparison of the Rokers site against the Normandy/Flexford allocated site A46, demonstrating how the Rokers site benefits from being located in a more sustainable location than Normandy/Flexford.

Location

This site is located to the south of Normandy, linking the villages of Flexford and It is located within a parcel of land, broadly bound by the A323 Guildford Road to the north, the Guildford - Ash railway line to the south, Westwood Lane to the west and Glaziers Lane to the east. It should be noted that the allocated site does not comprise all of this area, though these broad boundaries constrain the site location. The portion of land is reduced due to residential properties being located along Glaziers Lane, which are outside of the site ownership boundary.

Local Highway Network

The following paragraphs provide a description of the key local roads in the vicinity of the site.

A323 Guildford Road

• The A323 is part of the distributor road network, linking Guildford to the east with Ash and Aldershot to the The A323 is a single carriageway road along its length, with a 30 miles per hour speed limit along the length of the A323 through Normandy. The speed varies between 30 mph and 40 mph to the west of the site, and includes a section of SOmph carriageway to the east of Normandy.

• The A323 is subject to high traffic flows, especially in the peak The route represents a key route into Guildford, avoiding the A3 or A31.

Pedestrian footways are located along the southern side of the A323 carriageway through Normandy in the vicinity of the site.

Westwood Lane

• Westwood Lane is a 'C' class route (C16) providing a link on a predominantly north south axis between Normandy and the A31 to the south, in

• Westwood Lane is subject to a 30 mile per hour speed limit through Flexford, with sections subject to a 40 mph speed limit to the north and south of

• The route is subject to a width and height restriction by way of a bridge under the railway line, which restricts vehicles below 14 feet and 3 inches This bridge is also restricted to a single lane of traffic, with priority given to southbound traffic movements.

• Pedestrian footways are provided on both sides of the carriageway through Flexford, with only one footway provided between Flexford and Normandy, along the eastern side of the carriageway .

Glaziers Lane

• Glaziers Lane is subject to a 30 mile per hour speed limit, and routes from the A323 in Normandy to Westwood Lane in Flexford, via Wanborough railway This road is unclassified (060), and is lightly trafficked.
Along the northern section of Glaziers Lane, between the A323 and Normandy Village Hall, footways are provided along both sides of the carriageway. To the south, footways are provided on one side of the carriageway, with the footpath altering each side of the carriageway on numerous occasions.

**Proximity to Bus Services**

- The A323 Guildford Road is a bus corridor for the frequent KITE service, linking Guildford and Aldershot at 15 minute intervals in each
- This service would be accessible to the northern portion of the Flexford/Normandy site, with bus stops located in the vicinity of the Guildford Road/Westwood Lane/School Lane crossroads junction and in the vicinity of the Guildford Road/Glaziers Lane/Hunts Hill Road crossroad. Figure 1 provides an indication of the extent of the site that can access these bus stops based on a 400 metre walk distance using the existing road and footpath network. This Figure indicates that only a minimal portion of the site is accessible by bus.
- Additional bus services route along Westwood Lane and Glaziers Lane, with the PT5 bus providing a link to St Peters School in the morning and an additional school service, the 694, operates towards Broadwater School.
- The 520 bus service is a variation of the KITE bus service, which includes a loop along Westwood Lane and Glaziers. The timetable for this service is included in Appendix A. There are just two services operating daily towards Guildford and Woking (Woking service operates on Wednesday only), and four services operating (reduces to three on Wednesdays) towards Aldershot.

**Proximity to Rail Services**

- The site is located immediately north of the Guildford - Ash railway line, with Wanborough railway station located in the southeastern corner of the A summary of services available from this station is provided in Table 1 below.

<table>
<thead>
<tr>

Table 1 indicates that Wanborough station is served by three rail services routing westbound in the weekday morning peak hour and two services routing In the weekday evening peak hour, three services route eastbound and two services route westbound.

- Summary
To summarise the accessibility of the site, Figure 2 provides a public transport travel time plan from the site, highlighting areas that are accessible within 15, 30 and 60 minutes' public transport travel time. This Figure is produced based on public transport options available between 07:00 and 09:00 on a weekday. This Figure indicates that Guildford town centre, in the vicinity of the bus and train stations, is accessible within a 30 minutes' travel time from the site. However, the majority of locations surrounding Guildford are located within 60 minutes' travel.

ROKERS SITE

- The Rokers site has been excluded from the Proposed Submission Local Plan, but is subject to a live planning application (reference 16/P/01397). This application seeks outline planning permission for:
  - Up to 370 residential dwellings;
  - A new school/education facility (proposed at this stage to be a secondary school);
  - A new community hub with children's nursery, community offices, children's play centre and commercial units;
  - Highway improvements to the A323;
  - Landscaped open space; and
  - A provision of SANGS

With this application being a live planning application, it would be considered that if this application is approved, a school at the Normandy/Flexford site would not be required.

The Rokers site was put forward for inclusion within the Local Plan, but has not been suggested as a draft allocation by the Council. In terms of location and accessibility, it is considered that the Rokers site represents a more sustainable location for a school and residential development than others suggested in the plan.

Location

The Rokers site is located on the eastern side of the A323 Aldershot Road, to the east of Fairlands Village. The site is bound to the north-west by Holly Lane, a link between the A323 Aldershot Road and the A322 Worplesdon Road, and to the west by the A323 Aldershot Road.

- Merrist Wood College is located to the north-west of the site, across Holly The Rokers site therefore provides the potential for an educational hub to be created in the area, with a bus interchange facility provided within the application site to enable bus services to serve both educational sites.

Local Highway Network

- A description of the key vehicle routes in the vicinity of the application site is provided in the following paragraphs. Where relevant, reference is made to a number of automatic traffic counters (ATC) that have been placed on the carriageway in order to record traffic volumes by Each ATC recorded data for a 7-day period between 1't and 7'th March 2016.

A323 Aldershot Road

- The A323 Aldershot Road routes on a north-west to south-east axis along the site At the roundabout junction with Holly Lane, the A323 routes west towards Aldershot. The A323 is an important transport corridor as a county distributor road providing access between Guildford and Aldershot and to the A331 in the vicinity of Ash.

Along the site frontage, the A323 Aldershot Road is subject to a 40 miles per hour speed limit with a pedestrian footway provided along the eastern side of the Through the residential areas within the Guildford boundary, Aldershot Road is subject to a 30 mph speed limit and has footways along both sides of the carriageway.
An ATC placed along the A323 between the Holly Lane roundabout junction and Fairlands access junction recorded a two-way average annual daily traffic flow (AADT) of 13,109. This was split 52% westbound/48% eastbound.

**Holly Lane**

- Holly Lane routes on a north-east to south-west axis to the north-west of the Holly Lane is subject to a 40 miles per hour speed limit and has a shared foot and cycleway along the southern side of the carriageway. This shared foot/cycleway extends along the existing Rakers access road onto Aldershot Road.

An ATC placed along Holly Lane between the existing Rakers access and the Worplesdon Road roundabout junction recorded AADT traffic flows of 10,325 vehicles. This traffic is evenly distributed, 50%/50% between north east and south west bound vehicle movements.

**Accessibility to Existing Infrastructure**

**Proximity to Bus Services**

The KITE service routes along the A323 in the vicinity of the site, with services provided between Guildford and Aldershot at 15 minute intervals.

- The closest bus stops to the site are located in the vicinity of the Fairlands Avenue/A323 Aldershot Road priority junction, with the bus stop for northbound services located to the north of the junction and the southbound bus stop located to the south of this.

- Figure 3 provides a 400 metre walking isochrone to indicate areas that are located within 400 metres walk of these bus stops. Figure 3 indicates that the majority of the site is accessible within 400 metres walk, based on the existing infrastructure and walking routes, with only the corners of the site located outside of this walk distance.

In comparison, only a small portion of the Normandy/Flexford site is located within walking distance of a bus stop servicing the frequent KITE service, indicating that the Rakers site is more accessible by bus services based on existing infrastructure. This is beneficial as it negates the need for any re-routing of existing bus services or any new bus services to be created, instead increasing the patronage on the profitable KITE service.

In addition, the 17 service provides additional services between Fairlands and Guildford, though less frequent than the KITE service.

**Proximity to Rail Services**

- Whilst the nearest railway station to the site is Worplesdon station, the easiest station to access from the site is Guildford railway. The KITE service can be used to access Guildford town centre, with no public transport links available to Worplesdon station.

- Worplesdon station is located on the mainline London Waterloo - Portsmouth railway line and is served every 20 minutes towards London Waterloo and half hourly towards Haslemere and Portsmouth in the weekday morning peak hour. During the evening peak hour, services operate every 20 minutes towards Haslemere and Portsmouth and half hourly to London Waterloo.

Guildford railway station is located on the North Downs Line, in addition to the London Waterloo mainline, providing additional services between Reading and Gatwick Airport. Table 2 below summarises the rail services accessible from Guildford station.

<see attachments for table 2>

- Table 2 indicates that Guildford station is well served by rail services, especially in comparison to Wanborough station served by the Flexford/Normandy.

Summary
To summarise the accessibility of the Rokers site, Figure 4 provides public transport travel time isochrones detailing areas that are accessible within 15, 30 and 60 minutes' travel time from the site. It should be noted that Guildford town centre is accessible within a 30-minute travel time from the site, with Woking also accessible within this timeframe.

**RESIDENTIAL AND SCHOOL COMPARISON**

Whilst the above sections detail information on the location and accessibility of the two potential sites, this section will provide more of a direct comparison in respect of access by public transport for the residential and school aspects of each site.

**Residential Accessibility**

- For the residential development, accessibility to the local towns is vital, as these are the areas where the majority of residents will work and head for shopping and leisure trips.

- Figures 2 and 4 provide travel time isochrones from each site and enable the allocated Flexford/Normandy site and the proposed Rokers site to be directly compared.

- Figure 2 indicates that the Flexford/Normandy site enables Ash, Wanborough station and Fairlands to be accessed within 15 minutes' travel time from the site. In comparison, Figure 4 indicates that Guildford bus station is accessible within 15 minutes' travel from the Rokers site, along with Ash railway station, and sections along the A323 and A322 Worplesdon Road.

- In terms of accessibility to local towns, Figure 4 indicates that the Rakers site can access much of Guildford town centre within 30 minutes' travel time, along with Ash and a section of Aldershot. In addition, areas of Mayford are also accessible within a 30 minutes' travel time from the site. Woking is accessible within 60 minutes' travel time alongside Godalming, Clandon, Farnham, Farnborough and areas to the south of Guildford.

In contrast, Figure 2 indicates that the Flexford/Normandy site can access Ash within 15 minutes, and sections of Aldershot and Guildford within 30 minutes' travel time. Within 60 minutes' travel, Woking, Farnborough, Godalming and areas to the south and east of Guildford are accessible.

- To compare the two locations, the areas accessible within a 60-minute travel time are broadly similar, as expected from the relatively short distance between the sites along the A322. The key difference between the sites is the proximity to Guildford town centre, with Rakers accessible to the majority of the town centre within 30 minutes and the bus station within 15 minutes. This indicates that the Rakers site is more sustainably located to residents commuting to work by sustainable modes, with more key locations located within a shorter commuting distance.

**School Accessibility**

- To assess the accessibility of the school, assumptions need to be made regarding the likely school catchment. This information is not publicly accessible, and therefore assumptions have been based on existing school catchment areas and the stated need for a school to the north and west of Guildford.

- As the Rakers site has already been submitted as a planning application, this comparative assessment will make use of the assumptions undertaken within the Transport Assessment for this development. This utilised a gravity model approach to assess the likely school catchment.

- It is assumed that demand for school places would be mostly driven from northern Guildford and surrounding rural area locations towards Ash and Aldershot and north to Mayford and Given the difference in residential population between Ash and Guildford, the majority of students are expected to come from the north Guildford area.

- By assessing the locations of the nearest secondary schools to the site and their indicative catchment based on school acceptance criteria for distance from the school, it can be seen that Ash is served by Ash Manor The...
north west area of Guildford is served only by small school catchments in Bellfields (Christ's College) and Park Barn (King's College). On this basis, a 65% to 10% split will be assessed between Guildford and Ash for the purposes of this gravity model, with the remaining trips from the outlying areas between Ash and Guildford.

• Census data relating to the number of children per ward has been investigated to provide a more detailed gravity model, with Figure 6.6 of the Transport Assessment included at Appendix B providing the gravity model plan used within this. This indicates that the north Guildford area, and in particular the wards of Westborough, Stoughton and Stoke would represent the key catchment area for the school.

• Figures 2 and 4 provide an indication of the likely travel times from each site in the weekday morning peak hour and these provide an indication of the accessibility of the school catchment area to each.

Figure 2 indicates that Westborough ward and a portion of the Stoughton ward are accessible within 30 minutes' travel time from the Flexford/Normandy site, whilst the whole catchment is accessible within a 60 minutes' travel time. Figure 4 indicates that the Rakers site can access portions of the Westborough and Stoughton wards in 15 minutes, with the entirety of these wards and a portion of the Stoke ward accessible within 30 minutes' travel time to the Rakers site. Again, as with the Flexford/Normandy site, the full catchment is located within a 60 minutes' travel time of the site.

• In terms of accessibility towards Ash and the outlying areas, there is little difference between the two sites, with a large part of the outlying areas accessible within 15 minutes' travel Ash railway station is accessible within 15 minutes' travel time with the remainder of Ash accessible within 30 minutes of the Rokers site. In comparison, the Flexford/Normandy site provides access to a larger area of Ash within a 30 minutes' travel time, with areas along the route to Aldershot more accessible.

• It can be seen that the Rokers site represents a more sustainable location for the school based on its proximity to the residential areas.

Summary

• In summary, it is considered that the Rokers site is clearly better in terms of accessibility and location to the Flexford/Normandy allocated. This is due to key areas including the potential school catchment area and workplace areas within Guildford being more accessible from the site, with larger areas accessible within a 15 and 30-minute travel time from the site.

• SUMMARY AND CONCLUSION

  ° Transport Planning & Infrastructure Ltd has been instructed by Crimson Project Management Ltd to prepare these Transport Representations against the Guildford Borough Council Proposed Submission Local Plan.

  ° These representations provide a comparison between the Flexford/Normandy allocated site and the Rokers. The Flexford/Normandy site is included as allocation A46, with the Rokers site excluded from the Proposed Submission Local Plan.

  ° The Rokers site is subject to a live planning application for an educational facility and residential development on land to the east of Fairlands.

  ° In summary, these representations have identified that the Rokers site is ideally located to key infrastructure, with the majority of the site located within a 400 metre walk distance to the frequent KITE bus. In contrast, the Flexford/Normandy site is poorly located to existing public transport infrastructure, despite the location of Wanborough station in the south eastern corner of the site.

  ° In terms of accessibility, the Rokers site is more conveniently located in terms of travel times to local towns and the potential school catchment area, with more key areas accessible within 15 and 30 minutes' travel time compared to the Flexford/Normandy.

On this basis, it is considered that the Rokers site provides a significantly more sustainable location for an educational facility and residential development than the draft allocations.
What changes (2016)/further amendments (2017) do you suggest should be made to the document?

We do not believe the maths support developer funding the infrastructure and the affordable housing requirements via any method, including CIL. Indeed it is doubtful they would they would add up to a significant part of either infrastructure OR affordable housing costs required. On this point alone the proposed plan fails.

We note that since the previous plan, Guildford has been identified as the 4th most congested town in England.

I'm afraid I do not have time to trawl through the multitude of documents that have been produced but I wanted to comment on the planned development in Flexford/Normandy. Whilst I appreciate the need for more housing in Surrey, the scale of this development will not work. The infrastructure (in particular roads and drainage) will not be able to handle that many more homes. The idea that a new school is needed in the area is questionable at best and feels like a way of justifying the scale of the development.

We need road and public transport improvements, a proper bus and train interchange and key infrastructure works carried out along sections of the A3 to help remove traffic from the town centre.

For these reasons, I support the aspirations of the Local Plan

We wish to respond with our comments to the Draft Local Plan as follows:
Generally we support the views of the Guildford Residents Association.

We oppose Guildford expanding by a quarter without full and proper consideration being given to increases and drastic improvements to the infrastructure that is required and a full commitment to implement them ahead of any new development taking place.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/2485  Respondent: 14181313 / Vision for Guildford Ltd - GVG (William Stokoe)  Agent: 

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( No ), is Legally Compliant? ( )

The single, most significant omission regarding the town centre and its infrastructure is a cohesive plan to redirect traffic away from the centre via a new East/West link as proposed by GVG. This was mentioned in our previous Local Plan 2014 submission. A sketch of the link is reproduced here with the new rail/river bridge arrowed:

[see attached file 'GVG bridge route.jpeg']

Such a link would instantly enable wider pedestrianisation of the town centre – specifically Bridge and Onslow Streets – bringing a safer, less polluted environment. The bridge would also enable the reinvigoration of the riverside on both sides, below the bottom of North and High Streets, and the demolition of the ugly four lane concrete Friary Bridge that blights the character of our historic gap town at its very centre.

There is no attempt in the Local Plan to safeguard any potential route for such a new East/West link.

There has been no new town centre East/West link across the railway and river since the building of the Farnham Road Bridge in the 1840s. The Farnham Road bridge capacity is constrained, is rapidly approaching the end of its safe life and is too low for modern rail freight traffic (as set out in the rail ‘Wessex Plan”).

The level and importance of development to the West of the town since 1840 should surely suggest a need for another link. The town centre and Guildford’s health and economy is at a disadvantage from inadequate and imperfect links to key sites such as the Royal Surrey Hospital, Surrey University, the Research Park with its world class and world leading facilities and activities. If large housing development is to be accommodated to the West of the town then there should be adequate provision for the inevitable increase in consequent vehicular traffic from such development, irrespective of the impact of modal shift and sustainable movement policies. Guildford is a gap town, with topographic constraints on solutions such as a ring road. The beauty of its setting also provides constraints.

Within a wider pedestrianisation in the town centre there should be provision for better pedestrian routes to the Cathedral and University. The Local Plan makes no attempt to achieve that, to the detriment of the town and its sense of community.

GVG is pro—growth and supports good, well designed development. Guildford Town Centre is about to undergo a sustained period of significant development, including creation of an additional 48,000sq m of retail and related space, principally via the redevelopment of North Street. It is hard, if not impossible, to discern from the Local Plan how such considerable development will be served by appropriate infrastructure. It is not clear what public benefits will accrue in the shape of new public space and better public realm. There is no sense of an overarching plan or design ethos that will support and enhance the historic core of the town that makes it so attractive to its residents and to a wide range of visitors.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
Taking this into account with Cil projected @ £500 per meter how are you going to get any housing built!!! Every other borough is £125. I would recommend you review this or you will never get any houses built.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I'd like to have it on record that I, Christopher James Heath, a resident of Send Village in Surrey, strongly object to the proposed plan in the revised local plan from guildford Borough Council of 400 homes and a factory of 7000 sq m for industrial purpose.

My reasons.

1) Infrastructure

I have spoken to Matt Furness about what or not there are any plans in place to increase the existing infrastructure of effected areas and have been told that there is not. When I say infrastructure I mean everything from transport (both the roads and the public options like busses and trains) to the already collapsing victorian sewers, to the medical facilities and schools. The phone net works, broadband, mobile masts, electoral supplies, road widening, shops, pubs etc..

It seems that thousands of buildings across this borough are going to be 'thrown up' with out any consideration for infrastructure. Surly this needs to be addressed before any plans can even start to be consulted on? I would have thought that the first logical step!?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

**Document:** Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I am writing to register my objections to the New Local Plan.

The Plan does not seem to have a clear design for the whole area. It if does it certainly is not making it clear. Firstly the Transport Plan has been produced very late in the day (only released on the day of publication) and without this infrastructure, none of the developments should take place. It seems that Guildford Borough Council is planning a series of large developments along the A3 corridor but has not thoroughly looked at the impact of this for the surrounding villages. The villages on both sides of the A3 have very inadequate roads to cope with the anticipated amount of traffic and the roads available cannot be improved to the point that will ease the expected congestion. There are many other worries as well, such as environmental concerns, noise pollution, air pollution, flood risks, the sheer quantity of housing and industrial units supposedly required, the list goes on.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT to the fact that infrastructure requirements have not been properly considered at any point in this proposed Local Plan, and are inadequate to deal with proposed increase in housing levels. Roads, public transport, availability at doctor’s surgery and places within schools will be unable to cope with the increase in housing and population.

**Document:** Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT to the fact that infrastructure requirements have not been properly considered at any point in this proposed Local Plan, and are inadequate to deal with proposed increase in housing levels. Roads, public transport, availability at doctor’s surgery and places within schools will be unable to cope with the increase in housing and population.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

Attached documents:
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

With reference to my e-mails of 7 June and 16 June below, I wish to record further objections based on additional aspects which have come to my attention:

I object to the fact that, I understand, sites in or adjacent to Send could deliver almost half the number of houses planned to be delivered for the next 15 years in the GBC Spatial Strategy. If true, this is a totally unfair and disproportionate burden to be imposed on the residents of this modest village, involving heavy increases in traffic on the Burnt Common Roundabout and Send Road, which would only be further increased if the new slip roads are created in connection with the Garlick’s Arch development application. Why cannot a system of fair burden-sharing of new development be applied to the existing settlements across the Borough, in proportion to size? Particularly as the developments will lead to vastly increased car use, congestion, overstretched social infrastructure and more greenhouse gas emission, noise and light pollution to affect this community so badly?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

32   POLICY I1 INFRASTRUCTURE AND DELIVERY

32.1   I object to policy I1 Infrastructure and delivery

32.2   Most of the borough’s infrastructure is antiquated, congested and straining to accommodate even current needs and organic growth. Yet this plan’s commitment to building housing estates across the Guildford countryside will mean either major infrastructure investment that no-one is prepared to pay for or else a catastrophic and simultaneous collapse in transport, educational, medical, energy, water and communications services.

32.3   The plan targets greenfield sites – requiring heavy infrastructure investment – in order to generate CIL income necessary to meet an infrastructure shortfall that is already serious. This is not sensible. The current draft CIL scale also encourages development on greenfield sites rather than brownfield.

32.4   The policy wording says nothing about roads and traffic. The Council’s methodology for assessing infrastructure needs in this area is inadequate, identifying only the tip of an iceberg of existing congestion. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that involve demolishing property and road-widening in residential areas to solve the resultant congestion. The A3 improvements are not guaranteed to take place but they are being used to justify removing large areas from the Green Belt before detailed traffic assessments have taken place. These detailed investigations are being deferred until the planning application stage and will be left to developers to prepare. If a site then proves to be unsustainable its Green Belt protection will have been lost for no reason and unsuitable development will take place by a more insidious process.

32.5   Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritising greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly.
32.6 This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognising this as a key issue, the plan is based on a wing and a prayer.

32.7 The highways network is under stress at peak times in many parts of the borough. Queuing is the daily experience of drivers going to and from work. The local plan recognises the problems in para 2.14. Much of the road network is single-carriageway, and junctions act as constraints.

32.8 The key evidence on future traffic conditions is provided in the Strategic Highway Assessment Report (SHAR) which summarises the results of the tests carried out by Surrey County Council at the request of GBC. Five scenarios were examined using SCC’s strategic traffic model.

32.9 Scenario 1 contains all developments and planning permissions from 2009 to date. As such it corresponds to today’s circumstances, and describes the current unsatisfactory traffic conditions in peak periods.

32.10 Scenario 5 represents the position at the end of the plan period, including all development and highways schemes in the local plan.

32.11 The results of the analysis show that there will be widespread congestion in the morning peak hour across the network. The key strategic routes, the A3 through Guildford NE bound, and the M25 between Junctions 10 and 11, are shown to be at or over capacity. The summary network statistics presented in the SHAR, while useful, require some interpretation because the analysis of vehicle-hours is derived from link speeds only, and does not reflect junction delays and queues. The tables that show the ratio of flow to capacity and level of service are especially helpful to gaining an understanding of the conditions on the network in the forecast. Where the forecast traffic volume is above or close to capacity, flow becomes unstable and there is congestion. The SHA results provide evidence that, in 2031, congestion will be worse than it is today on much of the network.

32.12 It is the case that the traffic modelling does not take into account the potential for increased use of other modes, but the trip rates used for developments already have built in the typical level of use of other modes, and services will be required to meet that need. It is also the case that the model does not allow for park and ride, which would improve matters in the town centre, as discussed below.

32.13 In order to gain an insight into conditions across the network, it is necessary to combine information from several tables in the SHAR. Table 4.5 shows that the M25 and A3 will be at capacity in Scenario 5. The other roads that will have poor levels of service include those in Table 4.5 but also those in 4.12 (except the A3) and those in Tables 4.3 and 4.4 with levels of service E and F that will not be given some relief by improvement of the A3 in Scenario 5. Paras 4.10.3, 4 and 5 point out that there will be increased congestion. Given that the starting point is unsatisfactory, there can be no expectation that the schemes in the Infrastructure Development Plan will provide an overall improvement. There will be some local benefits, such as the Ash rail bridge for example, but in general conditions will be as bad and in many places worse. So the statement in the SHAR para 4.2.5 that ‘the combined mitigation as reflected in Scenario5..indicates that at the strategic level it accommodates the additional PSLP demand’ needs qualifying – ‘at the cost of a lot of queuing’.

32.14 The cumulative effect of the additional traffic generated by the developments in the local plan will be to increase congestion, even with the proposed highway schemes in place. More detailed analysis of the junctions and queuing is required. So we question the conclusion that the developments would have “an acceptable impact on the capacity of the highway networks in terms of the policy test set in paragraph 32 of NPPF”.

32.15 Appendix 3 of the Transport Topic Paper shows the phasing of housing development and transport infrastructure. The major scheme being considered for the A3 between the A31 and the A320 is scheduled for delivery in the period 2023/24 to 2027/28. The strategic developments at Blackwell Farm and Gosden Hill Farm are shown as being phased in from 2021/22 onwards. The Garlick’s Arch development is shown as starting in 2019/20. Therefore, there will be a period in which the existing A3 has to cope with the additional demand arising from those developments before extra capacity is provided.

32.16 The following comments regarding the strategic sites are taken from the SHAR:
32.16.1 Blackwell Farm – there will be congestion at the A31 junction, and the problems at the Tesco junction, and the Egerton road /Gill Avenue junction (para 4.9.5). Traffic is likely to access the Surrey research park and the RSCH through the development (para 4.7.3)

32.16.2 Gosden Hill Farm – there will be an increase in traffic through Burpham. There will be pressure on the A3100/ B2234 roundabout (paras 4.7.6, 4.7.7 and 4.7.8).

32.16.3 Wisley – traffic will increase on minor roads to gain access to the A3 (N and S bound) and other routes (para 4.7.11). The development will add more traffic to the A3. The Burnt Common slips help alleviate the traffic through Ripley according to the model, but queuing on the A3 could mean this does not happen (para 4.7.14)

32.16.4 Normandy/Flexford – the report has little to say about the impact of this large development. The increase in flow on Westwood Lane is noted (para 4.5.7). Tables 4.10 and 4.11 show junction delay reducing at the Westwood Land, B3000 junction, but an increasing at the Puttenham Hill/Millbrook junction.

32.16.5 Ash – development in Ash is not specifically addressed, but there are major increases in traffic on a number of roads. The new rail bridge will bring relief (but traffic will move to the next junction).

32.16.6 Slyfield – there are no remark relating to SARP, and as there are no additional trips shown in and out of the Slyfield residential zone in Tables 3.3 and 3.4, it is possible that this development has been omitted. There is a significant increase in trips to and from the Slyfield industrial zone, which will impact on the A320 and Clay Lane.

32.16.7 Town Centre – the report has very little to say about the town centre. It is evident that the model is forecasting severe congestion on the approaches to the town centre, such as the A281, the A31 Farnham Road, and Woodbridge Road for example. No mitigation measures are planned. And in the Transport Strategy, GBC states that the intention is to adopt Allies & Morrison’s Scenario 2 which would have the effect of significantly reducing the capacity of the town centre road system. The implications have not been examined, but traffic using the A281 from Waverley, for example, would be affected.

32.17 The local plan does not state an objective for congestion. The two strategic objectives that are included for infrastructure refer to supporting sustainable development and delivering a balanced system. However, in para 2.15 there is an aspiration expressed about opportunities ‘to improve the performance of the road networks through transport infrastructure and service improvements’, which taken with the previous paragraph includes reducing congestion. The evidence so far shows that this will not happen.

32.18 The mitigation proposed is not sufficient to overcome the problems that will be caused by the level of growth in the local plan. Congestion will worsen. The network will lack resilience and be vulnerable to disruption due to incidents. Minor roads will have to cope with a lot more traffic, for which they are unsuitable.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: pslp171/709  Respondent: 15084897 / Save Send Action Group (Andrew Procter)  Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1.1 I object to the new Guildford Borough Council Transport Strategy 2017.

1.2 I object to ASP 3 new A3/A3100/B2215/A247 Burpham-Burnt common all-movements junction, formed by a new connector road linking between new A3/A3100 Burpham junction (SRN4) and the B2215 London Road, in combination with the new A3 northbound on-slip (SRN9) and the new A3 southbound off-slip (SRN10) under Infrastructure and Delivery.
1.3 If development gets the go ahead for the strategic site at Gosden Hill it would be logical to construct a 4 way A3 interchange at Burpham. It is not feasible to pass the problem down the line to Send which will already be bearing the brunt of traffic generated from a planned 4,000 homes. The A247 link road to Woking already at capacity will become gridlocked.

1.4 I object to SRN4 New A3/A3100 Burpham junction with relocated A3 southbound off-slip and new A3 southbound on-slip. This will place an unbearable problem onto the A247 whereby traffic will be passing directly through Send from the A3 and M25 and the proposed new development at Wisley.

1.5 I object to SRN9 A3 northbound on-slip at A247 Clandon Road (Burnt Common) and SRN10 A3 southbound off-slip at A247 Clandon Road (Burnt Common). This will place an unbearable problem onto the A247 which is already at capacity.

Comment ID: PSLPP16/50  **Respondent:** 15099265 / Andrew Crawford  **Agent:**

**Document:** Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1. **Congestion on the trunk roads, A3/M25**
   
   I object to the development of the strategic sites due to A3 and M25 already being at capacity during peak hours. In the morning it regularly already takes 40 minutes or more to travel the three miles from my home to join the M25. Highways England has no plans to look at improving the A3 before 2020 and even then it is doubtful if those plans will be sufficient. It is therefore not sustainable to identify sites for further development which will worsen the congestion on these motorways and trunk roads.

2. **Congestion on the local village roads and lanes**

   Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. Send Marsh Road is already a rat run with constant traffic using it as a cut through. I object to further development which will cause greater congestion in and around our villages.

3. **Unsuitability of our local roads for heavy vehicles and more traffic**

   Many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition. I object to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.
4. **Lack of proper infrastructure planning for sites**
   I object to the lack of planning and implementation of infrastructure. For example at Garlick’s Arch. Without improvements to the infrastructure prior to development, the existing residents’ quality of life will significantly deteriorate in many ways. We already struggle to get doctors appointments and the local schools are already struggling.

5. **Lack of Utilities Capacity**
   Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. I object to the development of Garlick’s Arch on the ground that there is little capacity in these networks.

6. **Sites being planned in unsustainable locations**
   Many of the strategic sites e.g. Wisley Airfield and Garlick’s Arch, are in unsustainable locations. They do not benefit from railway stations within easy walking distance and bus services across rural villages are forever reducing. Residents will have few options, but to be reliant on motor vehicles. I object on the grounds that these sites are not sustainable.

7. **Parking issues in local villages caused by larger population**
   Many of the affected villages, such as Ripley, already suffer from parking problems. Further development around these villages will only result in more traffic and more parking problems. To which I object.

8. **Local healthcare facilities will be overwhelmed**
   Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. I object due to the further stress it will put upon existing health services.

9. **Local policing facilities will be overwhelmed**
   Police services are seeing funding reduced. The development of the likes of Garlick’s Arch and Wisley Airfield will stretch the police services further and I object.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Do you consider this section of the document; complies with the Duty to Cooperate? ( )**, **is Sound? ( )**, **is Legally Compliant? ( )**

Unambitious proposals:

1) No provision for international airport to supplement Heathrow and Gatwick;

2) No rapid rail link to airports and city centres;

3) Increase lanes on M25 and A3 to six in each direction;

4) Provision of nuclear power station for recharging of battery powered vehicles;

5) Build a city in the sky: skyscraper homes.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Attached documents:**

---

**Comment ID:** PSLPP16/120  **Respondent:** 15106689 / Joseph Hine  **Agent:**

---
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1. I object the development of the strategic sites at Wisley Airfield, Garlicks arch and Gosden Hill as the road infrastructure does not have capacity to cope with large developments of the proposed scale. As a daily commuter i see that the A3/M25 junction is congested by 07:00 hours daily and in the evenings the entire M25 is congested between J16 and J10. Both the M25 and the A3 would need significant increase in capacity prior to the inclusion of the proposed strategic sites in any local plan.

2. I object to the inclusion of the Wisley airfield site and Garlicks Arch as strategic sites due to the congestion on local roads at all times of day. For instance it is often hard to pull out of my home onto the main road in Ripley due to a continual flow of traffic, adding more residents to the local area will result in a large increase in the number of accidents, especially as the roads are narrow.

3. I object to the Strategic sites as the road network that currently exists is barley maintained by the council, an increase in the traffic and number of HGVs using the roads will result in further deterioration. Many roads have large potholes on their perimeters meaning it is dangerous for two vehicles to pass in some places. Additionally there are limited cycle lanes and footpaths making it dangerous for pedestrians and cyclists on the roadways in the area.

4. I object to the inclusion of Wisley airfield and Garlicks Arch in the local plan due to them being in unsustainable locations regarding public transport. Neither location has a suitable train station located within realistic walking or cycling distance, this means only bus services and cars are feasible. Due to the large size of the sites its unrealistic to assume everyone will use the bus as it will not have capacity for the 200 homes at peak times unless 50 buses are to arrive in convoys to transport commuters. TO make these sites sustainable you must build a station and a branch line, or an overground tram similar to those used in Wimbledon at the developers cost, this would then also benefit existing local communities.

5. I object to the lack of immediate provision for any new schools. My wife is currently expecting our first child and with a proposed extra 6,500 houses to be built between the M25 and Burpham, our local primary schools will be placed under even more pressure for places. Our children will potentially have to travel long distances to go to school which will affect their quality of life and add more traffic to our already congested roads.
I object to further development as it will cause further congestion on our roads in and around our villages. The A3 and M25 are already at saturation point when I try and get to work during rush hour, our villages have long queues through them and parking spaces are virtually non-existent in Send and Ripley. Extra homes in the area will put further pressure on our roads and cause even more pollution in our area.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

---

The access road to Send Hill from Potters Lane is a narrow single track road and not suitable for 40 houses and 2 travellers sites. This junction is treacherous with no clear vision if you are coming from Send Hill into Potters Lane. With speeding motorists using Potters Lane as a cut through to and from the A3, any additional traffic will make this junction even more hazardous. Myself and my daughter narrowly missed being involved in an accident today on the bend heading from Potters Lane to the Send Hill turning – a large lorry and a Fiat 500 had been involved in an incident where the Fiat had been damaged by the lorry where the road is very narrow. The previous week I was nearly involved in a head on collision on the same bend with a lorry in the middle of the road as the lorry was too large for the narrow lane, resulting in the lorry leaving tyre skid marks which can be seen on the road. My daughter’s car has been damaged by a passing car coming from Send Hill, where her wing mirror was broken, and I have had the same experience, these are not isolated incidents as Send Hill and Potters lane are too narrow for the traffic using them. The proposed development would not be in keeping with the beautiful and peaceful surroundings of the area including the cemetery and the adjoining properties in Send Hill. I understand that the Send Hill Development was not part of any previous consultations and I am concerned about the impact of this level of development on residents and cemetery users.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

---

I also object to the plans for the land at Garlick’s Arch, Send Marsh/Burnt Common and Ripley, land for new north facing slip roads to/from A3 at Send Marsh/Burnt Common and Clockbarn Nursery, Tannery Lane. The infrastructure of Send Village is not able to cope with the existing daily traffic as it is, especially at peak times with commuters and school runs. Most days there is congestion along Send Road. My daughter worked in Ripley for six years and it regularly took her 50 minutes to travel from her house in Westfield to work during peak travel times. This was one of the reasons she chose to move jobs. There are no realistic alternative routes for motorists to take from Send Road and many cars chose to cut through Potters Lane to avoid sitting in traffic, many of which are large lorries who are too big for the road or speeding commuters in cars, which pose daily danger to the residents of Potters Lane, any increase in traffic will only add to the danger.

I would be grateful if you could pass my comments onto the Planning Inspector and confirm safe receipt of this email. I do hope you will take on board my feedback and the feedback of the residents of Send who very much care about the village and its surroundings and who have lived in the village for many years.

I OBJECT TO POLICY I1 (INFRASTRUCTURE & DELIVERY)

- Infrastructure considered here as an afterthought, rather than pre-condition of development. Should be a key issue for the rest of the plan.
- Excessive housebuilding in countryside not supported by any funding or provision for infrastructure.
• Heavy focus on building on greenfield sites inefficient and unnecessary: cheap for developers but much more expensive for the public who have to fund the infrastructure.
• Draft CIL scale discourages use of brownfield land first.
• No plan for organic increase in existing traffic congestion, let alone once thousands of houses are built across the countryside. Local roads hardly considered. Green Belt being eroded before road widening/improvement plans certain, encouraging over-development of greenfield sites.

I have lived in this village for over 40 years, understand the limitations of the infrastructure and the high cost of putting them right, and strongly object to any further housing development and urbanisation which have no evidence to back up their necessity.

The programme is being driven by remote central interests and ambitions and take no account of any objective approach to planning which should rightfully include consideration of and concentration on existing urban areas and brownfield sites, not open countryside and villages.

I also object to the disproportionate amount of development in several areas of the Borough, including the Garlick's Arch site at Burnt Common which will add to the already heavy traffic using the local roads and local services.

Finally may I point out that Ripley already has a look of a giant car park during the day, with the High Street looking like a "drive through zone" due to the already huge amount of traffic using the village to get to the A3/M25, and back.

To build the amount of housing included in the Local Plan will be a complete step in the wrong direction for the local community and environmentally a disaster.

None of these villages has the roads to sustain the construction traffic during the building of these small towns, let alone the increase in traffic once complete. There is also a distinct lack of detail surrounding the provision of schools, doctors and other services required to support the increase in population to these areas.

Please do not pass this Local Plan as it put an even bigger burden on the already overstretched local services in these villages.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

1. Congestion on the trunk roads, A3/M25
   I object to the development of the strategic sites due to A3 and M25 already being at capacity during peak hours. In the morning it regularly already takes 40 minutes or more to travel the three miles from my home to join the M25. Highways England has no plans to look at improving the A3 before 2020 and even then it is doubtful if those plans will be sufficient. It is therefore not sustainable to identify sites for further development which will worsen the congestion on these motorways and trunk roads.

2. Congestion on the local village roads and lanes
   Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. Send Marsh Road is already a rat run with constant traffic using it as a cut through. I object to further development which will cause greater congestion in and around our villages.

3. Unsuitability of our local roads for heavy vehicles and more traffic
   Many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition. I object to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

4. Lack of proper infrastructure planning for sites
   I object to the lack of planning and implementation of infrastructure. For example at Garlick’s Arch. Without improvements to the infrastructure prior to development, the existing residents’ quality of life will significantly deteriorate in many ways. We already struggle to get doctors appointments and the local schools are already struggling.

5. Lack of Utilities Capacity
   Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. I object to the development of Garlick’s Arch on the ground that there is little capacity in these networks.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
1. **Sites being planned in unsustainable locations**
   Many of the strategic sites e.g. Wisley Airfield and Garlick’s Arch, are in unsustainable locations. They do not benefit from railway stations within easy walking distance and bus services across rural villages are forever reducing. Residents will have few options, but to be reliant on motor vehicles. I object on the grounds that these sites are not sustainable.

2. **Parking issues in local villages caused by larger population**
   Many of the affected villages, such as Ripley, already suffer from parking problems. Further development around these villages will only result in more traffic and more parking problems. To which I object.

3. **Local healthcare facilities will be overwhelmed**
   Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. I object due to the further stress it will put upon existing health services.

4. **Local policing facilities will be overwhelmed**
   Police services are seeing funding reduced. The development of the likes of Garlick’s Arch and Wisley Airfield will stretch the police services further and I object.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Attached documents:**

**Document:** Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

**Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

6) I object to the detrimental impact on transport, local roads and road safety. I specifically object to:

1. The assertion that the development will result in a meaningful shift to cycling and walking. The development is too isolated, and even within the development itself too spread out to anticipate a reduced reliance on private cars
2. The increased volume of car traffic. A proposed development of 2,068 homes would result in an estimated 4,000 additional cars on the roads
3. The congestion this traffic will cause on the narrow rural roads in Ockham and the surrounding areas, exacerbated by wide vehicles including increased bus and HGV movements
4. The danger this traffic will be to local cyclists and pedestrians, due to the absence of any cycling paths and the lack of pedestrian footpaths (and the space to provide them)
5. The increase in the already severe congestion on the Strategic Road Network of the A3 and M25. A further planning application at RHS Wisley (with a significant increase in visitor traffic) and a proposed 600 pupil secondary school on the site would add additional congestion at the M25/A3 junction as well as local roads. No development can proceed without significant infrastructure enhancements to the A3 and M25. Partial improvement works on the A3 south of the site are not due to start until 2019 at the earliest
6. The lack of suitable public transport. The local rail stations of Effingham and Horsley cannot cope with the proposed increase in passenger traffic and car parking is already at capacity

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

4) I object to the fact that these sites will give more congestion to the M25 and A3. There is already traffic congestion most days of the week trying to get passed Guildford.

5) I object to the fact that these developments will cause more parking problems – it is virtually impossible to park in Ripley as it is.

6) I object to the fact that residents in the new developments would be reliant on motor cars etc. as there are no railway stations near and the bus service is being reduced all the time.

Please give the above your urgent consideration.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the proposed development at Garlicks Arch on the Ripley and Send border and Gosden Hill Clandon. This will have an impact on the services to these areas such as Health and Education. The Villages Medical Centre is already stretched and there is a wait for appointments and the local schools will be oversubscribed resulting in local people not being offered a place for their children, this putting a strain on transport.

The added developments will mean an increase in traffic which is already severely contested in peak times. Rose Lane and Newark Lane being worst hit.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
Comment ID: PSLPP16/195  Respondent: 15112257 / Richard Winzor  Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I wish to register my objection to the above plans on the following grounds:

1) The communications in the local area are totally inadequate for such large-scale developments. As there is no rail link nearby, this will inevitably mean that local roads will bear the brunt of the large extra influx of residents/workers. The local roads cannot cope currently with the flow of vehicles at rush hours and school runs and the A3 is often near saturation point in the proximity of the M25 Interchange. The situation is bound to become considerably worse with the proposed plans.

2) What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/197  Respondent: 15112257 / Richard Winzor  Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

4) Other facilities such such as local businesses, shops and restaurants could be strained or overwhelmed with many more vehicles chasing already non-existent parking places. Indeed the largest supermarket in the area, Budgen in Ripley village, is actually closing down this week!

In summary, the proposals will place an intolerable strain for existing residents, and those who need to use the local infrastructures, and should therefore not be permitted to go ahead.

3) What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/204  Respondent: 15112769 / Gordon Laidlaw  Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I strongly object to the draft Local Plan with its proposed developments in Ripley, Send and Clandon.

As a resident living off the Portsmouth Road I am already blighted with traffic noise and pollution from this road. This proposed change would further exacerbate these problems. Traffic flows through these three villages are already reaching crisis point as the road systems were never planned for these volumes of traffic - especially regarding Ripley and Clandon.

To bring forward a proposal of this size without adequate discussion with local residents is extremely dictatorial and unacceptable. Local amenities such as doctors’ surgeries and schools are already stretched.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
Attached documents:

Comment ID: PSLPP16/216  Respondent:  15112769 / Gordon Laidlaw   Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Apart from this, the flow of traffic through Ripley and Clandon are already causing extreme problems with large articulated lorries attempting to negotiate the narrow stretches of roads these villages offer.

I have seen many blockages there caused by these lorries unable to pass each other on the narrow bends and even causing accidents. The A3 into Guildford from Clandon already becomes severely blocked too at certain times of the day and one can imagine the extra vehicles from these houses would cause further and more frequent chaos for these poor travellers.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

2) Size and Location of the Proposed Development at Garlick’s Arch -

We strongly object to the development, which is large for the area, with over 400 houses proposed, which would have a massive impact on the local villages infrastructure as follows:

a) Traffic / Congestion – Send and Ripley are massively impacted by their location to the A3/M25. it is almost impossible some mornings to get out of the top of our road (we live in Chestnut Close) – trying to turn right onto Portsmouth Road is not only difficult it is also dangerous during rush hour. From 7.30 onwards during morning rush hour there is a queue of traffic from the junction of Portsmouth Road and Send Marsh Road, going down past Linden Way and all the way back past the Saddlers Arms, often as far as the green. It also queues at Mays Corner / Send Crossroads, up past Send First School to the roundabout, and going the other way towards Woking This is the situation on a normal day. If there is an accident on the A3 or the M25 or roadworks or any kind of adverse weather or other problem the situation is ten times worse! (we suggest a traffic survey team would be advised to monitor for themselves). If you build 400 houses and an industrial site, in this area, the congestion it would cause with at least 400 extra cars + on the road would be phenomenal. Further to this the detrimental impact of pollution in this area. And not to mention the impact of these extra cars speeding up and down Send Barns Lane past the school – which already is dangerous as there is no crossing. If you factor in a further 2000 homes still proposed in the local plan at Wisley (despite earlier rejection by Guildford Borough Council), along with proposals for 2200 homes at Clandon/Burpham – these proposals will create further traffic problems and congestion.

b) Infrastructure – There are not enough primary and secondary school places as it is for the residents of Send and Ripley. What proposals are in place for school paces for an extra 400 + children at least, not just for the immediate future but the next 5/10 years.? If this proposal is pushed through then schools should be built concurrent to the housing, otherwise there will be serious issues for residents. It is also virtually impossible to get to see a doctor at The Villages Medical Centre – not only can you never get through on the phone, but when you can you not get an appointment. They cannot cope with the volume of residents – much of which is an ageing population – without several hundred extra residents – and their children etc. I agree that there is a chronic shortage of housing in the Borough – especially affordable housing –
we appreciate that provision needs to be made for more housing (our children are 17 and 15 and they will never be able to afford a home in this area – that’s if there are even any available!) but you cannot just continue putting up massive housing developments without putting in the infrastructure alongside the housing, to support the residents.

We strongly object to these proposed developments and also to the lack of consideration given to the residents and their concerns, the limited consultation period and the lack of planning for the adverse effects on infrastructure these developments will have on the surrounding area.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
In the second place, as I wrote when I objected to the earlier proposal in the 2014 consultation, the area simply does not have the infrastructure, services and amenities to handle such a large increase in population. It is not a case of having land available to build on (itself debateable), but how the villages themselves will actually absorb the increase in population. Roads, schools, shops, parking spaces, I could go on because the list is a long one - all are simply not available in the capacity required to handle the increase in population that would accompany such housebuilding.

The local plan proposed would be a disaster for existing AND FUTURE residents for the reasons I cite.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object to the fact that we purchased a house on Burnt Common Lane with views over fields and now the local plan want to remove this view and replace with 400 houses, industrial units and slip roads.

I object to the planned A3 junction changes at Burnt Common due to the negative effect on the surrounding villages which will not be able to handle the additional traffic in an already busy area.

I object to all the additional houses when the local schools are already overwhelmed with new applicants. The school in Send where my children attend is currently being rebuilt, with no further capacity to take additional children and has no desire to do so.

I object to all the additional houses as the local doctors surgery is already at its full capacity and this will put additional pressure the services impacting local services.

I object to the additional amount of cars that will be on the road in the immediate and surrounding areas, causing further risk to our children as they travel to and from school.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
1. I object to the lack of provision to improve the current infrastructure which is currently inadequate.
2. I object to the lack of additional parking provisions in the villages – again which are currently inadequate.
3. I object to the 4 way junction to the A3 which will force more traffic through the already overloaded roads, which incidentally are in a very poor state of repair.

1. I object to the Garlick’s Arch development as it does not provide for sufficient Utilities capacity which is currently almost at capacity.
2. I object to the designated 400 houses at Garlick’s Arch as this is in addition to the 13,000 odd already proposed for the Borough.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/234  Respondent: 15114529 / Phil Vowels  Agent:
Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I live in this part of Surrey precisely because it’s not a London over-spill (like grubby Croydon or Sutton). Reading your Local Plan, 5.3 in the Policy Approach will ensure the permanent destruction of the beauty of this area by building all over not only Ripley, but nearby West Horsley, Send and Effingham. How on earth do you imagine the infrastructure of this area will cope with thousands of new homes?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the lack of proper infrastructure planning for sites (A43 and A42)

The Foreword to the plan by Paul Spooner includes on page 5:

“We recognise that significant infrastructure upgrades are required to support existing communities and the planned growth of the borough. The delivery of sites allocated in this plan is contingent upon the provision of new infrastructure, which is a key theme of our Local Plan”.

The lack of any plan for either physical or green infrastructure improvement clearly contradicts this in respect of both A43 Garlicks Arch and A42 Clockbarn Nursery, Tannery Lane, Send. Development of these sites without the contingent infrastructure would therefore be contrary to the stated aims and themes of the Plan, and should not go ahead.

| 1. **Congestion on the trunk roads, A3/M25**
   I object to the development of the strategic sites due to A3 and M25 already being at capacity during peak hours. Highways England has no plans to look at improving the A3 before 2020. It is therefore not sustainable to identify sites for further development which will worsen the congestion on these motorways and trunk roads.  
2. **Congestion on the local village roads and lanes**
   Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. I object to further development which will cause greater congestion in and around our villages.  
3. **Unsuitability of our local roads for heavy vehicles and more traffic**
   Many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition. I object to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces. |
4. **Poor air quality concerns**
   Further congestion, particularly in built up residential areas will only lead to greater levels of air pollution. I object to further development, which will result a fall in the air quality.

5. **Lack of proper infrastructure planning for sites**
   I object to the lack of planning and implementation of infrastructure. For example at Garlick’s Arch. Without improvements to the infrastructure prior to development, the existing residents’ quality of life will significantly deteriorate in many ways. How will the local services such as doctors and schools cope?

6. **Lack of Utilities Capacity**
   Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. I object to the development of Garlick’s Arch on the ground that there is little capacity in these networks.

7. **Sites being planned in unsustainable locations**
   Many of the strategic sites e.g. Wisley Airfield and Garlick’s Arch, are in unsustainable locations. They do not benefit from railway stations within easy walking distance and bus services across rural villages are forever reducing. Residents will have few options, but to be reliant on motor vehicles. I object on the grounds that these sites are not sustainable.

8. **Parked issues in local villages caused by larger population**
   Many of the affected villages, such as Ripley, already suffer from parking problems. Further development around these villages will only result in more traffic and more parking problems. To which I object.

9. **Local healthcare facilities will be overwhelmed**
   Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. I object due to the further stress it will put upon existing health services.

10. **Local policing facilities will be overwhelmed**
    Police services are seeing funding reduced. The development of the likes of Garlick’s Arch and Wisley Airfield will stretch the police services further and I object.

11. **Local social welfare facilities will be overwhelmed**

12. **Local shops/restaurant facilities will be overwhelmed**

13. **No protection of heritage assets**

14. **No protection of the environment**

15. **Overdevelopment of sites**

16. **Not meeting the needs of local communities**

17. **Insufficient affordable housing**

18. **Poor quality of layout and housing design**

19. **Insufficient consideration of SPA, SSI and Conservation Area issues**

20. **Lack of proper cycle lanes on local roads**

21. **Lack of proper pedestrian footpaths on local roads**

22. **Current SHMA figure of 693 p.a. too high**

Personally, I drive down a lot of these roads everyday on my commute to work. They already suffer from huge amounts of congestion and also large vehicles using narrow lanes to the point they almost bully smaller vehicles off the road. Therefore I strongly object to this proposal.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Attached documents:**
I would like to raise an objection to the proposed quantity of new housing planned for Horsley.

I live on Ockham road North and have extreme difficulty trying to get my 2 children to different schools. There is no parking at the Raleigh school and no pavements so the children take their life in their hands dodging cars whilst they have to walk on the road.

My elder daughter went to the Howard and her bus picked her up once again on a road with no pavement so the children were standing on the dirt in a dangerous position. The space for parking at the doctors and the village is also inadequate.

Where are all these people going to go to school and Doctors etc?

There is just no structure in place for this increase in numbers.

I do not object to affordable housing in small amounts but not this many.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
Primary and Secondary School and the order of build

We live a few hundred metres from The Raleigh School. When we moved here in 2011 there was not a place at The Raleigh for our daughter. There was also not place available at any Primary school in the area, which meant (fortunately for us) that The Raleigh then had to take our daughter, plus 2 other children in her year that had moved into the area at the same time. So in 2011, in my daughter’s year, every single primary school was up to full capacity and exceeding their numbers.

As is very well known, a similar issue exists with The Howard of Effingham Secondary School. The school is at full capacity. Similarly George Abbot, our nearest alternative school, is also at full capacity and consequently its catchment area never reaches Horsley.

So where do the children go to school if 533 new houses are built in East Horsley and West Horsley?

When I raised this issue with GBC officers at one of the open days I was told that the new schools at the Wisley site would provide the extra capacity. I challenged that on the basis that it seemed reasonable to assume that the Wisley Development would take some time, in particular with the infrastructure issues and not least the A3 access, and that some or all of the Horsley sites (and sites around other nearby villages) would be completed first. The officers agreed this would be the case.

So again I asked “Where do the children go to school?” I received no answer other than a shrug of the shoulders!

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/4521   Respondent: 15127777 / Keith Hammond   Agent:

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Further future expansion

It is hard not to assume that the increase in housing proposed in West Horsley and East Horsley will then require significant additional ‘facilitating’ development to support it, resulting in yet another ‘exceptional’ need to build in the new Green Belt areas again. Obvious examples are:

Primary school: As mentioned above The Raleigh School will not be able to cope if the proposed residential development goes ahead as proposed and there isn’t room for expansion so a new school will be needed. Where?

Roads: All the roads in West Horsley are in fact lanes containing at most one pavement and therefore unsuitable for a 35% increase in housing. How will this be addressed?

Station car park: In addition to the village car park the Station car park also won’t cope. The station car park is at full capacity so certainly won’t cope with increased numbers. Where will the commuters go?

Doctor’s surgery: Is also close to, if not at, full capacity. How will this be resolved?

Where and how are these issues to be resolved?

It is hard not to come to the conclusion that we will then be into another round of ‘Exceptional’ need to expand again into the Green Belt, which is unacceptable.

Following your letter welcoming feedback, I am emailing with regards the proposed development at Foreman Road, Ash.

As local residents we have major concerns regarding the proposed development of “up to 115” new homes which “will include a mix of 2, 3, 4 and 5 bedroom detached, semi-detached and terraced houses”. Whilst we understand the requirement for new homes, particularly affordable housing, the impact this number of properties would have on our village would be enormous – even if it was half this amount and the majority of properties being smaller. Our local amenities are stretched and can’t cope as things currently stand.

To give you a real life example; I tried to get an emergency doctor’s appointment a couple of weeks ago and was unsuccessful. After negotiating with the surgery support staff I managed a call with a doctor some hours later. The Doctors response? – “we need to see you”!

This being the Friday before the bank holiday there were no appointments until the following week. Unable to wait I had to email the doctor some photos (!!!). He was great, made a diagnosis and prescribed medication. I am not in any way criticising the Health Centre, they bent over backwards to help me, they are just bursting at the seams.

Taking it one step further, I went to collect aforementioned prescription – it was a nightmare. The road to the surgery was obstructed all the way along by parked cars (Wharf Road), when I managed to get to the surgery the car park was full including surrounding roads. The road obstruction is an accident waiting to happen. I was then unable to take the prescription to my local pharmacy as again, there was no parking at all in the vicinity. I ended up driving to a local supermarket some miles away (whilst not feeling well) and getting it from there. How are the local roads, local parking provision and doctors surgery supposed to cope with any amount of new houses?? The example above is not a one off. This is a regular thing, access to the shops on Wharf Road is chaos, so much so that we avoid shopping there. How can that be right?

It’s not just the obvious things like getting a doctor’s appointment. The council are great and provide recycling facilities, one such one being in the car park on Ash Hill Road. These facilities are often full to the brim – again I am not criticising the council but I am asking you how a development of “up to 115” houses expects a local community to continue to function when already under such pressure? Let’s not forget the local schools as well, it is not realistic to think they could accept more children.

Traffic – DON’T GET ME STARTED ON TRAFFIC. The local roads during rush hour (which is in fact rush morning and rush afternoon – it is not restricted to an hour) is hideous. The area comes to a standstill. Often the longest part of my commute is getting in and out of Ash (and I don’t need to get through the level crossing). Local roads simply can’t cope with any more traffic. I only travel 12 miles to work but due to local traffic I leave before 7am, far earlier than needed just to compensate.

If any development is to go ahead the local road infrastructure needs review and improvement beforehand, the traffic lights at the junction of the Guildford road and the Pirbright road on the A323 along with the level crossing on the A323 need addressing as these are both severe bottlenecks. Additionally cars currently park along Foreman Road causing a width restriction - this road and the surrounding village roads (e.g Grange road) are unlikely to be able to manage increased traffic, and any increase will severely impact the people who currently reside there.

In an ideal world people would use more public transport HOWEVER, when we used our local railway station (Ash) to travel we paid a fortune for seats, only for there to be standing room only and an uncomfortable, expensive, potentially dangerous journey. It’s hardly encouraging and not a suitable alternative if the services aren’t able to cope either. This is not speculation, this is a real example. We would need more train carriages added to services passing through Ash.

I am not aware of the flooding issues in the area but I am aware that when it rains the water pours off the Ash Ranges, down Brackendene (private road) and towards the area you are referring to. We can literally watch it washing the road away. If our village open space is built on where will the surface water go? With flooding on the increase in places it has not flooded before how will the area (the new development and beyond) be protected? This is a very real concern.
I will leave my comments there, it would have been easy to send you a list of bullet points with the usual traffic, doctors, schools etc. but I wanted to relate the information to real situations. We live here, we experience the actual frustrations on a daily basis. All I can see at the moment is that this proposed development would have a negative impact. Unfortunately we have looked at your website https://www.sites.google.com/site/foremanroadash/home but it lacks proper detail which would help us make more meaningful comments or see a better side. What detail is provided is frustrating E.G. you can’t zoom in on the maps, the key is totally unreadable. Statements like “up to 115” and “Each home will be provided with car parking” are far too vague. How many parking spaces would a property with 5 bedrooms have for example? If I was being cynical I would say that the website is there to “tick a box” rather than to provide any meaningful content or attract any helpful suggestions!

Please listen to the comments made and offer real, actual solutions to the real, actual problems that exist and will be made worse. Comments such as “There is the future ability to put in place a pedestrian crossing over the railway line, should the Council decide to deliver this facility.” are laughable. What does that actually mean in real terms?..NOTHING.. This would need to happen.. and before the houses are built. Not years afterwards if at all..

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
The traffic problem in Guildford is huge. The slightest problem on the A3 or any other approach road means the whole town can and does come to a standstill. This is not just about people sitting in their cars going nowhere, it's about the health and wellbeing of those of us, and our children, who already live, work and go to school on the congested roads, breathing the fumes and particulates that are generated by the ever increasing traffic.

It is about our lives. This town cannot take another 20,000 or more cars trying to get into and out of it and the infrastructure cannot cope.

Please stop this nonsense now.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
Specific Issues

Traffic and parking: Assuming that every new house has at least 2 cars, this means potentially 6,000 more cars within a three mile radius of the villages. The impact on local roads will be tremendous. Parking at Horsley & Effingham junction stations (which are already full), at the shops, at the medical centre and at the village hall will all be affected.

Local Road Network: In respect of the proposals for development at Wisley Airfield and for an upgrade the current A3 junction at Burntcommon to a full 4-way junction, SCC traffic modelling anticipates increased use of Guileshall Lane, Hungry Hill Lane and Tithebarns Lane for traffic accessing the A3 at Burntcommon in order to travel to Guildford and beyond. The SCC report states that "consequently, it indicates that further thought may have to be given to managing traffic in this area as part of a transport assessment should the development be progressed". It appears that the Plan is proposing a strategic site at Wisley Airfield without even knowing what improvements to the local road infrastructure will be required. If that is the case for Wisley Airfield, then it is almost inevitably true for the proposed developments in East and West Horsley as well.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Schools: Local schools are already at capacity – where will newcomers go to school? No extra places are planned in the Horsleys, and the school places proposed at Wisley Airfield will not planned until many years into the project.

Medical facilities: Similar situation to the schools.

I feel that the local services, such as education, council and health services will be put under undue pressure and will suffer, meaning local residents will also suffer.

The previous proposal was rejected before because the local environment could not cope with the pressure that would be put on it. Nothing has changed .... We should not made to go through the process again -the decision should remain 'NO'.

I write to confirm my total opposition to your local plan for the area surrounding Send, Send Marsh and Burnt Common. The proposed increase in population of approximately 25%, without any significant improvements in the local infrastructure, is totally unacceptable. It is over 30 years since any reasonable improvements were made to the local roads, schools or the hospital. Our one and only surgery is now at maximum capacity.

Road Network  The present roads in the area are already suffering from heavy traffic. The proposed housing developments will considerably increase the problem - especially if the Wisley development goes ahead. It appears that little attention has been directed at the management of traffic in this area. How will the road system be able to deal with the problem?

Parking  If one assumes that every new house proposed has at least two cars, this will mean that the villages will have to cope with 6000 more cars. Think of the impact on local traffic and the need for car parking areas.

Facilities  Local schools are already full - where will all the extra children be taught? The present medical facilities are at full capacity, and we know the great pressure there is at the moment on GPs. How is this problem to be addressed?

Transport  How will the stations at Horsley and Effingham cope with a passenger load which now results in packed trains at commuting times?

This is a summary of my main concerns over The Plan. In essence, I, and my neighbours consider that the problems being presented have not been given the serious attention that they really deserve and there appears to be an unstoppable force behind it all!

This will make the A247 almost impossible to use safely for crossing and the pollution will be increased dramatically. We seem to be selected because we are at the north end of the borough and other parts will not be affected by the fumes, or inconvenienced by the extra traffic which will come through the village to get to and from Woking.

I object to Send being taken out of the Green Belt. This will increase the potential for even more new housing than the existing proposals and and the rebuilt school will not have enough capacity for all the children who will move into, or will be born in the village. (policy P2 page 48)

I object to a new junction for the A3 being built at Send. (policy A43a page 223) Again this will increase traffic which wants to go to London coming through the village.

I feel that the other parts of Guildford should take up a larger part of the new development, which as the plans stand will swamp our village.

I wish my comments to be seen by the inspector.

Just emailing my protest at all the houses you want to build in send marsh and the surrounding areas, not only is this area already over populated and trying to get from home to work in rush hour is manic as it is, and you want to add more congestion and add the the problems, it's crazy! We also have a hard enough time trying to get an appointment at the doctors surgery so adding more people to this area will be making matters worse than what they already are, same goes with the schools, this is an increasing problem

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I am writing to lodge my objection to the Draft Local Plan.

I recognise that more housing is needed but the plans for the Lovelace Ward are entirely impractical - as recently evidenced by the unanimous rejection of the plans by Guildford Borough Council planners.

The reasons for my objection are many but are dominated by concerns over traffic in this area. Already, at all times of the day, the roads are at maximum capacity. A short time spent at both the A3/M25 junction and Ripley High Street would immediately prove the point.

The principal grounds for my objection are:

1. DAILY TRAFFIC CHAOS would inevitably ensue on roads that are already overloaded and frequently subject to long queues and traffic jams. Indeed, Junction 10 of the M25 features frequently on national traffic reports.
2. OVERLOADING OF PUBLIC TRANSPORT, SCHOOLS, HEALTH SERVICES and PUBLIC SERVICES, all of which are already at maximum capacity and subject to lengthy waiting times.
3. AIR POLLUTION from thousands more cars. Why consider creating the same problems with which London is currently having to contend?

If there is any concern at all in the council for the quality of life of residents and our environment, this plan will be rejected forthwith.

I am writing with reference to the New Local Plan 2016. It would unthinkable to allow these developments to happen. The roads around Horsley cannot cope with the influx of new homes in the villages. Schools are already oversubscribed and this would put added pressure on them. The village cannot withstand another 533 homes being built. It is just not possible. The infrastructure is just not there.

I am writing to express my concern and opposition at the prospect of you building more properties on the area surrounding the Hog's Back.

Guildford itself is already unable to cope with the amount of traffic it already suffers. Building a further 1800 homes, with, presumably, an average of 2 cars per household, this will only make matters considerably worse. I drive across the Hog's Back every day and it is unbearable as it is.

The removal of East and West Horsley from the Green Belt and the proposition that 533 new houses be built in these crowded villages is excessive and unreasonable. The infrastructure and amenities are insufficient to support anything other than modest infill housing consistent with the existing status of these villages in the Green Belt. Roads are already busy and car parking facilities at the village shops and station would be overwhelmed.

I object to the number of houses proposed, the infrastructure limits cannot be ignored.
The scale of the home building project proposed is my biggest concern. The current infrastructure is already stretched with schools at full capacity, medical facilities are much the same with appointments impossible to get, the impact on the local road network which will have unthinkably high levels of traffic and a severe lack of parking. Everyday life will be impacted and even the usually pleasant commuting to London will be a misery with nowhere to park and fuller trains. These problems will only be enhanced by the proposed developments and they cannot be ignored.

I object to the number of houses proposed, the infrastructure is already limited.
The amount of houses proposed in the building programme is far too many for the current and proposed infrastructure. Medical facilities and schools are at full capacity, the local road network will suffer even higher levels of traffic and
there will not be sufficient parking. People will struggle to find a space at the station and even if they do, trains into London and other transport will become over crowded.

My husband and I chose to raise a family in a peaceful and green environment, this proposed plan contradicts everything good about East and West Horsley.

I object to the proposed Local Plan which Guildford Borough Council published and this email outlines my reasons.

I object to the number of homes proposed.
Quite simply there are too many houses proposed in this plan.
We haven't got the infrastructure in place nor will the proposed infrastructure adequately satisfy the number of people the added homes will bring. With an average of 2-3 cars per family that could be 6,000 extra cars on the road, the local road network couldn't cope with the high levels of traffic and the current insufficient parking means finding a space at the doctors, shops or train station would be impossible. The transport overcrowding would make local and London commuting uncomfortable. The medical facilities and schools are at full capacity and these extra homes would only create a larger problem for everyone, the proposal doesn't enrich the community in any way.

Policy A44 - I object to the proposed development for housing and travellers pitches in Send Hill for the following reasons.

This is again a newly identified site and was not included in the Regulation 18 draft; it has not previously been consulted on and is therefore inappropriate to include it in this consultation.

Send Hill is a quiet residential road surrounded by countryside. There is insufficient access to the proposed site, it is inappropriate for the proposed purposes and not in keeping with the area. Indeed other private local planning applications have been turned down for this reason. The subsoil of the site contains documented unsafe landfill waste which is currently vented. The road is narrow, single track in places, with no footpaths and as the road is straight it is already used as a rat run for some vehicles to cut through to the A3.

The road is used by the George Abbott school bus and many school children walk along Send Hill to meet the bus at the junction with the A247. Additionally younger children walk with families to attend the primary school currently in Bush Lane at the end of Send Hill. Even when the school moves to its new site the children will still be walking along Send Hill to attend it. Increased housing and the resulting traffic will place these children at added risk. Indeed rather than building more homes Send Hill should be subjected to traffic calming measures to protect the children who walk to school and other residents.

Send Hill is home to a number of bats who require protection from development and there are native bluebells in the woodland which also need to be protected.

To conclude my objection to the plan I would like to mention the local services such as health centres and schools which are already under a huge burden.

Lack of proper infrastructure
As with all large housing developments, no thought is ever given to the current infrastructure. Schools and doctors surgeries, to give just 2 important examples, are already at breaking point so how will building the amount of houses proposed in the Local Plan alleviate this? Put simply, it won’t. Much more thought has to be given to the local existing residents and impact on their quality of life. For these reasons, I STRONGLY OBJECT to the development proposed in the Local Plan.

Impact on utilities
The villages that surround these strategic sites are already close to capacity in terms of the electrical network and sewers so building a development such as Garlick’s Arch will have a catastrophic effect on these essential utilities. For this reason, I STRONGLY OBJECT to the development proposed in the Local Plan.

Lack of public transport
The sites at Wisley Airfield and Garlick’s Arch are in totally unsustainable locations as they are not close to railway stations. Our bus timetable between Woking and Guildford is being reduced even further this year so that in turn means residents are going to be more reliant on their cars. For this reason, I STRONGLY OBJECT to the development proposed in the Local Plan.

Impact on local policing services
With funding being cut to police services, how will building large developments, such as Garlick’s Arch and Wisley
Airfield help? Put simply, it won’t. For this reason, I STRONGLY OBJECT to the development proposed in the Local Plan.

1. Insufficient pedestrian footpaths/cycle lanes on local roads

With increased congestion which will be caused by building large sites, such as Wisley Airfield or Garlick’s Arch, this will have major ramifications for existing residents. Our footpaths are insufficient now so increasing the amount of vehicles on the roads will increase the danger to pedestrians. There are many cyclists who like to use the local roads, for which we don’t have cycle lanes. Is it worth risking human life to build such unsuitable developments? For this reason, I STRONGLY OBJECT to the development proposed in the Local Plan.

I also have grave concerns over the community should the development proceed, in particular in relation to schools, medical facilities and local roads, all of which are already under immense strain.

School places are already at a premium and any additional development would decrease availability.

I have attempted to make medical appointments recently and have only been successful on two occasions, any development may reduce that success further.

I wish to register my opposition to the local plan re: the Horsleys.
The boundaries of our villages will be greatly enlarged. The village areas inside these boundaries will be removed from the Green Belt. The Horsleys are likely to have more than 533 new houses - we do not have the facilities or infrastructure to support this growth. Our local schools, roads and doctors are already at breaking point!

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Policy 11 ‘Infrastructure and Delivery’

5.19 It is acknowledged and accepted that development should provide for the infrastructure requirements that arise from it. Priority should be given to those sites that can support the provision of infrastructure in key urban locations, where they benefit most people.

5.20 It is of significant concern that the development of the housing needed and the related employment and other facilities is in effect held back in terms of the housing trajectory, by the rate at which infrastructure can be delivered. We are also concerned that this may not be effective given the size of the funding gap that has been identified in the background to the Local Plan and will in effect, prevent delivery of the Local Plan’s housing and other commitments.

5.21 While the size of the funding gap is a concern and may undermine the effectiveness and soundness of the Local Plan, it is also the case that the reliance on CIL for part of this, detaches delivery of infrastructure from the delivery of housing. In effect, housing would be consented under the terms of CIL and a resultant payment made, without there being a commitment to the timing and delivery of the related infrastructure. While there is a clear intention and link, no guarantee exists and it is not considered possible to delay permission or condition this on the actions of a third party providing the relevant infrastructure. This is an issue for the plan to resolve.

5.22 Ultimately, sites should be identified that focus the support for and investment in essential infrastructure within and around the urban area of Guildford. This maximises the potential that the infrastructure will come forward, will benefit the most people within the Borough and any funding gaps are minimised.

5.23 Contributions should clearly only be sought where they are (i) necessary to make a development acceptable in planning terms; (ii) directly related to the development; and (iii) fairly and reasonably related in scale and kind to the development proposed. In this respect they have to be compliant with the CIL regulations.

5.24 Consideration also needs to be had to the viability of providing for infrastructure, which needs to be weighed against the very real need for housing and employment in the Borough. To this end any future policy documents in relation to infrastructure should have full consideration of paragraph 173 of the NPPF which states that that sites and the scale of development identified in a plan should not be subject to such a scale of obligations and policy burdens where their ability to be developed viably is threatened. This also relates to affordable housing requirements sought from allocations.

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1
1. **Inadequate consideration given to Infrastructure Delivery.** I reaffirm my objections to the revised plan for the Former Wisley Airfield/Three Farms Meadow site at Ockham. Despite having been previously unanimously rejected by Guildford Borough Council planners, it has not only been included, but enlarged on the new draft plan. Inadequate consideration is being given to supporting services, including schools, medical centres, public transport including rail capacity and railway station parking, which are already overloading. Housing growth needs to be organic and sustainable in the context of other resources; this development is not. The viability of the proposal also relies upon the Road Investment Strategy by the UK Highways Agency to develop the A3/M25 interchange. These have not been finalised, and do not consider the additional burden created by the Wisley Airfield, Garlick’s Arch and Gosden Hill developments which are explicitly designed to empty their traffic burden onto that interchange. Four thousand or more extra cars using this intersection every morning and evening will cause chaos. The natural consequence of this overloading will be the overspill onto trunk roads and minor lanes, which not only are not designed for such heavy use. There will be increased risk to vulnerable road users such as pedestrians, riders and cyclists on crowded routes with no footway and few cycle tracks.

I'm in my 70's, so I have to use the doctors surgery in Normandy. At present I have to wait 3-5 days for an appointment. What will happen when upwards of 3,000 people move to the area?

My next door neighbour is a school teacher as is my daughter and they both tell me their schools do not have enough children in them and worry they could lose their jobs, or worse still close down. A school in this housing estate would be very foolish knowing there are vacancies in all parts of Guildford and a total waste of money.

I believe those that have drawn-up the Local Plan have not taken into account the demographics of the proposed land in Normandy and have chosen for what ever reason to over-look roads, flooding and the basic infrastructure of this area.

Policy ID1 – Infrastructure and delivery

Clarification is sort as to the interaction of points 3, 4 and 4 of this Policy. Points 3 and 5 relate specifically to planning applications with Point 3 stating that if the provision of infrastructure necessary to support new development cannot be secured, planning permission will be refused. However, this appears to be contradicted in Point 5 where it is suggested that regard will be had to the delivery and timing of delivery of the key infrastructure but does not necessarily constitute a refusal. The difference appears to be reference to ‘key infrastructure’. However, given the significance of the timely delivery of key infrastructure this point is considered to be even more pertinent.
It is also considered that the Policy would read better if the planning application and Local Plan elements were more clearly distinguished.

In addition I object to Policy A43 Garlick’s Arch, as the proposal to build at least 400 homes and industrial facilities will not only put impossible pressure on the existing road network, but other infrastructure such as schools and medical facilities will be insufficient to support this development. The Villages Medical Centre in Send is already at capacity and there is no secondary school proposed for Ripley and Send which even now causes problems for many children who are unable to get in to the already oversubscribed closest secondary school George Abbot in Burpham.

b) Proposed creation of new north & southbound slip roads to and from the A3 to the A247 Clandon Road (Policy A43A) at Burnt Common. This is totally unacceptable and will destroy the village, surrounding area and quality of life.

c) Infrastructure – There are not enough primary and secondary school places as it is for the residents of Send and Ripley. What proposals are in place for school paces for an extra 400 + children at least, not just for the immediate future but the next 5/10/15 years? If this proposal is pushed through then new schools will need to be built concurrent to the proposed
housing, otherwise there will be serious issues for residents. It is also virtually impossible to get to see a doctor at The Villages Medical Centre – not only can you never get through on the phone, but when you can you not get an appointment. They cannot cope with the volume of residents without hundreds or potentially thousands of additional residents – and their children etc.

I strongly object to these proposed developments and also to the lack of consideration given to the residents and their concerns, the limited consultation period and the lack of planning for the adverse effects on infrastructure these developments will have on the surrounding area. Please take on board the fears and concerns of your local residents, these proposals will kill our village and the wider area. If these proposals are followed through there is no hope for this area or our county as a whole, little by little the green belt will be destroyed and we will eventually become a suburb of London with no country side, no wildlife and no way of ever getting back what we have lost.

**Attached documents:** |

The failure of GBC to provide sound evidence in terms of the Employment Land Needs Assessment 2015 (ELNA) which shows an 80% reduction in employment space from the previous ELNA carried out by GBC in 2013. This means that industrial space at Burnt Common is no longer needed. Housing numbers from the Strategic Housing Market Assessment 2015 (SHMA) are highly questionable. The number of foreign students has been wrongly used to inflate the need. The required 13,860 houses in the Local Plan is exaggerated. If the population is to grow by some 20,000 in the Plan period, 8,000 homes would be needed based on an average of 2.5 persons per home. The Green Belt does not need to be built over and half of new homes could be built on brownfield sites. It appears that GBC’s Transport Assessment was not even available to councillors for the vote taken on 24th May and this was only published on 6th June with infrastructure overload receiving scant attention. None of these proposals are in the best interests of Send and its residents and any change to its Green Belt status would greatly diminish the character and identity of the village. In addition, the general strain on the infrastructure of the village in terms of roads, schooling and medical services would be overwhelming. Already in Send, traffic is heavy at certain times of day, schools over-subscribed and The Villages Medical Centre struggles to provide timely appointments for the residents currently registered. I trust these objections are received and noted in accordance with procedure and look forward to news arising from the reassessment which will surely be necessary once the full extent of the resistance of local residents to the Local Plan proposals is known to GBC.

</tr>
<tr>
<td>Our villages are already suffering from severe congestion for much of the day, for example the Newark Road &amp; Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition. I object to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as Ripley, already suffer from parking problems. Further development around these villages will only result in more traffic and more parking problems.

With some 5000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists pass through the village on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1. I object to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

1. I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy II)

There is too much traffic in our villages already (ever tried driving from Pyrford into Ripley and onto Portsmouth road without scratching up your car?) and this plan will cause more congestion in Ripley, Send and Clandon, with no plan to improve that.

The rural roads in this area are narrow, in poor condition and have no footpaths.

It is already hard to get a GP appointment, to get your child a place at the school locally, to travel around the area because of so much traffic, so why make things worse within these local villages? The roads are already too dangerous for me to cycle on because there are so many cars, without adding to these by building lots of smaller developments all over the place - why not concentrate on the bigger brownfield sites?

Please ensure that my comments are available for the Independent Inspector.

</table>
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( No ), is Legally Compliant? ( )

Roads and Drainage in East & West Horsley are in very poor condition and severely under pressure in our current environment. I fear the dramatic increase in housing will cause even further problems as the Council have failed to resolve the existing issues therefore I do not see an evidence to show this will be improved in the future.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( No ), is Legally Compliant? ( )

In addition to poor roads and drainage the current infrastructure in East & West Horsley does not support the plan. Although the Council mentioned a new primary and secondary school and even if these were built our roads, rail and public transport wouldn't be able to support the impact causing gridlock throughout the village. Our medical centre in East Horsley is severely under pressure as it is and therefore further extensions would be required however this would only follow in 5-10 year time after massive development has taken place showing a complete lack of support to the community.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( No ), is Legally Compliant? ( )

7) lack of immediate provision needed for new schools
8) lack of any immediate provision for doctors surgery
10) increased traffic that would be cause in which a village such as Ripley already cannot sustain its current demand without long tailback and
11) dangerous size vehicals manoeuvring in roads that has little or no pedestrian path way due to increased traffic
12) lack of parking in the village for the present day users let alone if more were to be housed

I object strongly to the ill-conceived plans for East and West Horsley, effectively making them into small towns.

**Infrastructure**

East Road/The Street and Ockham Road around the station and shops are busy all the time, backing up repeatedly during rush hours and school runs making them unsafe for cyclists, especially children. Few children are now able to cycle to school.

A considerable number of roads in the villages are ill-repaired and can only suffer further with increased traffic. We don't have many buses through the villages so each new house is likely to have at least one car, probably two.

The junction with the A3 at the Wisley roundabout is already stretched and backs up much of the day, but particularly between 6am and 9.30am.

Parking by the shops and village halls in both villages, and by the surgery and the station are already over-subscribed at most times of day.

**Drainage**

Recently built houses in West Horsley have had trouble the disposal of surface water. This will get increasingly bad as more and more foundations are dug. It is also possible that the existing drainage systems will not cope.

**Services**

The Raleigh School is still over subscribed, as it has been for twenty years. Are plans in place to increase local schooling? I think not. Nearby secondary schools are also over-subscribed leading to long journeys for 11+ children and additional traffic.

It is difficult to get an appointment with a preferred GP.

East and West Horsley are in danger of being turned into off-shoots of Cobham and Guildford. There are all too few villages left on the outskirts of London. We should be saving those we have left.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Comment ID:** PSLPP16/1114  **Respondent:** 15195969 / Carrie Wheeler  **Agent:**

**Document:**  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

**Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )**

I object therefore to the number of developments planned in such a relatively small area, the infrastructure in around Send and Ripley, can only just about cope at present! An appointment at our local Doctors surgery can mean a wait of well over a week, the local schools are stretched to find places for the local children and then there's the traffic! The roads in the morning are jam packed queues common place and the roadways themselves damaged through volume of traffic and lack of maintenance. So how on earth are we going to accommodate another several hundred homes!
I object to the council viewing our villages as the answer to the housing needs of the area. The transport links from Send and Ripley are poor to say the least. The buses run once an hour, so without a car to get to a railway station or towns such as Woking or Guildford would be very difficult. So how are all these new home owners going to get to work as with the increased traffic no one would get anywhere there'd be total gridlock!

I object to the lack of foresight given to the infrastructure required to accommodate all these additional families, where would the children go to school? How would you ever get a Doctors appointment? The roads would be permanently blocked and therefore become damaged, local shops could not provide for the demand, and as I mentioned earlier there is a very limited bus service.

1. I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

5,036 houses are proposed between the M25 and Burpham (about 5 miles) which will obviously lead to a merging urbanisation of identities the villages. There is too much traffic in our villages already and this plan will cause more congestion in West Horsley, East Horsley, Normandy, Ockham, Ripley, Send and Clandon, with no plan to improve that. The rural roads in this area are narrow, in poor condition and have no footpaths. 5000 more houses in such a small area means dangerous and unsustainable traffic.

• Lack of essential infrastructure. Where are the schools going to be built to accommodate the instant growth in the population? Our schools in and around Burpham are already stretched to breaking point, with most of them having taken extra form intake for the past few years. Burpham Primary is a prime example. There was obviously no thought given to the extra traffic a further form intake would cause across the board. What was a lovely village primary school is now an impersonal business venture that over the past 4 years has gained 120+ students, and will gain virtually 100 more over the coming years. Boxgrove has also increased in size as well as other primary schools. Where will the children go when the move up to senior school? Bus routes have also been adjusted/reduced making parents drive their children to school thus creating more traffic.
• Also, where are the new doctors? Increasing new housing by 693 pa, which incidentally is double that of the 322 put forward in the 2012 plan is not sustainable. Why has this number doubled and where will the influx of people come from that this extra 371 houses per annum suggests is necessary?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Having moved to West Horsley 38 years ago to escape the urban sprawl of suburbia, the exact same thing seems to be about to happen in the Horsleys if the new local plan is implemented. There are already problems with parking at East Horsley medical centre, Horsley railway station and the local shops

The roads adjoining the Raleigh school get choked up twice a day with school traffic already. With the inevitable increase in traffic that 533 new houses will bring, this is another situation that can only get worse.

The amount of heavy goods traffic using Ockham Road South and Ockham Road North as a short cut between the A246 and the A3 at Wisley has increased quite significantly and there are sections of Ockham Road South that are too narrow
for this kind of traffic. There is also a problem on this road with the surface water not draining away efficiently, resulting in any pedestrians who are trying to get to Horsley station, the medical centre and the local shops having to run the gauntlet of being splashed and soaked by the passing traffic.

It would appear that the existing drainage infrastructure is not capable of dealing with the current surface and waste water problem. This situation will not be improved by concreting over large areas of green belt land and replacing it with high density housing.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
Attended documents:
1. I object to the lack of proper infrastructure planning for sites (Policy II)

The Plan does not identify adequate infrastructure improvements to support the huge scale of development, especially at Garlick’s Arch (A43) which has no infrastructure projects in the Infrastructure Schedule to support it. Local services, utilities and sewerage, doctors etc. are at or close to capacity.

There are no plans to improve the capability of the medical and police/emergency services to cover the 5000+ houses in the north east of the borough.

I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy 11)

There is too much traffic in our villages already and this plan will cause more congestion in Ripley, Send and Glandon, with no plan to improve that.

The rural roads in this area are narrow, in poor condition and have no footpaths. 5000 more houses means dangerous and unsustainable traffic.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

---

Comment ID: PSLPP16/1223  Respondent: 15205729 / John Walker  Agent:
I object to the lack of proper infrastructure planning for sites (Policy 11)

The Plan does not identify adequate infrastructure improvements to support the huge scale of development, especially at Garlick's Arch (A43) which has no infrastructure projects in the Infrastructure Schedule to support it. Local services, utilities and sewerage, doctors etc. are at or close to capacity.

There are no plans to improve the capability of the medical and police/emergency services to cover the 5000+ houses in the north east of the borough.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

1. I object to the detrimental impact on transport, local roads and road safety. I specifically object to:
   1. The assertion that the development will result in a meaningful shift to cycling and walking. The development is too isolated, and even within the development itself too spread out to anticipate a reduced reliance on private cars
   2. The increased volume of car traffic. A proposed development of 2,068 homes would result in an estimated 4,000 additional cars on the roads
   3. The congestion this traffic will cause on the narrow rural roads in Ockham and the surrounding areas, exacerbated by wide vehicles including increased bus and HGV movements
   4. The danger this traffic will be to local cyclists and pedestrians, due to the absence of any cycling paths and the lack of pedestrian footpaths (and the space to provide them)
   5. The increase in the already severe congestion on the Strategic Road Network of the A3 and M25. A further planning application at RHS Wisley (with a significant increase in visitor traffic) and a proposed 600 pupil secondary school on the site would add additional congestion at the M25/A3 junction as well as local roads. No development can proceed without significant infrastructure enhancements to the A3 and M25. Partial improvement works on the A3 south of the site are not due to start until 2019 at the earliest
   6. The lack of suitable public transport. The local rail stations of Effingham and Horsley cannot cope with the proposed increase in passenger traffic and car parking is already at capacity

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
I object to the congestion that such development of this magnitude would cause to local village roads (Policy 11) There is too much traffic in the villages of Ripley, Send and Clandon already and the rural roads are narrow, in need of repair and without footpaths in many places. More houses will mean dangerous traffic conditions. Pity the poor cyclists as well as other road users.

I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy 11)

There is too much traffic in our villages already and this plan will cause more congestion in Ripley, Send and Clandon, with no plan to improve that. The rural roads in this area are narrow, in poor condition and have no footpaths. 5000 more houses means dangerous traffic.
I object to the lack of proper infrastructure planning for sites (Policy I1)

The Plan does not identify adequate infrastructure improvements to support the huge scale of development, especially at Garlick’s Arch (A43) which has no infrastructure projects in the Infrastructure Schedule to support it. Local services, utilities and sewerage, doctors etc. are at or close to capacity.

There are no plans to improve the capability of the medical and police/emergency services to cover the 5000+ houses in the north east of the borough.

I object to the lack of proper infrastructure planning for sites (Policy I1)

The Plan does not identify adequate infrastructure improvements to support the huge scale of development envisaged in the plan. Local services, utilities and sewerage, doctors etc. are at or close to capacity.

There are no plans to improve the capability of the medical and police/emergency services to cover the huge scale of development envisaged in the plan

1. Congestion on the local village roads and lanes

Our villages are already suffering from severe congestion for much of the day. For example the Newark Lane and Rose Lane junction in the center of Ripley, which at peak hours, is regularly gridlocked due to the volume of traffic, made
worse when Ripley High Street (B2215) is used as a detour/slip road when the A3 is jammed. I object to further development which will cause even greater congestion in and around our villages.

1. **Unsuitability of our local roads for heavy vehicles and more traffic**

Many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. Furthermore, the road surfaces are in a poor condition.

1. **Poor air quality concerns**

Further congestion, particularly in built up residential areas will only lead to greater levels of air pollution. I object to further development, which will result a fall in the air quality.

1. **Sites being planned in unsustainable locations**

Many of the strategic sites e.g. Wisley Airfield and Garlick’s Arch, are in unsustainable locations. They do not benefit from railway stations within easy walking distance and bus services across rural villages are forever reducing. Residents will have few options, but to be reliant on cars. I object on the grounds that these sites are not sustainable.

1. **Parking issues in local villages caused by larger population**

Many of the affected villages, such as Ripley, already suffer from parking problems. Further development around these villages will only result in more traffic and more parking problems, to which I object.

1. **Local healthcare facilities will be overwhelmed**

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. I object to the further stress it will put upon existing overstretched health services.

1. **Local schooling facilities will be overwhelmed**

Without proper planning and a commitment to fund new schooling, existing schools will have their services stretched and overwhelmed. Many of these services are already at capacity.

9. We object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition. I object to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as Ripley, already suffer from parking problems. Further development around these villages will only result in more traffic and more parking problems.

With some 5000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the village on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

10. We object to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. We have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Attached documents:**
I object to the detrimental impact on transport, local roads and road safety. I specifically object to:

1. The assertion that the development will result in a meaningful shift to cycling and walking. The development is too isolated, and even within the development itself too spread out to anticipate a reduced reliance on private cars;
2. The increased volume of car traffic. A proposed development of 2,068 homes would result in an estimated 4,000 additional cars on the roads;
3. The congestion this traffic will cause on the narrow rural roads in Ockham and the surrounding areas, exacerbated by wide vehicles including increased bus and HGV movements;
4. The danger this traffic will be to local cyclists and pedestrians, due to the absence of any cycling paths and the lack of pedestrian footpaths (and the space to provide them);
5. The increase in the already severe congestion on the Strategic Road Network of the A3 and M25. A further planning application at RHS Wisley (with a significant increase in visitor traffic) and a proposed 600 pupil secondary school on the site would add additional congestion at the M25/A3 junction as well as local roads. No development can proceed without significant infrastructure enhancements to the A3 and M25. Partial improvement works on the A3 south of the site are not due to start until 2019 at the earliest;
6. The lack of suitable public transport. The local rail stations of Effingham and Horsley cannot cope with the proposed increase in passenger traffic and car parking is already at capacity.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I OBJECT TO POLICY I1 (INFRASTRUCTURE & DELIVERY)

• Infrastructure considered here as an afterthought, rather than pre-condition of development. Should be a key issue for the rest of the plan.
• Excessive housebuilding in countryside not supported by any funding or provision for infrastructure.
• Heavy focus on building on greenfield sites inefficient and unnecessary: cheap for developers but much more expensive for the public who have to fund the infrastructure.
• Draft CIL scale discourages use of brownfield land first.
• No plan for organic increase in existing traffic congestion, let alone once thousands of houses are built across the countryside. Local roads hardly considered. Green Belt being eroded before road widening/improvement plans certain, encouraging over-development of greenfield sites.
There has been insufficient or no thought or planning for improved infrastructure to sustain normal living requirements. It is unreasonable to believe that unless there is a radical change to road and transport services, education facilities, medical services, drainage and water supply the planned increase in house density will not be sustainable.

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Infrastructure:

Glaziers Lane and Westwood Lane, which on the Plan are either side of the proposed project are totally incapable of taking the construction and subsequent residential traffic.

Westwood Lane has an irrevocable, narrow one way system under the railway bridge and on Glaziers Lane the bridge has a bend and blind spot.

The A323, the fundamental service and main traffic route through the village is extremely busy, speed limits are ignored and the main junctions are both potentially and actually dangerous.

There is no opportunity, without significant housing demolition to improve these routes and junctions which would be essential to attempt to accommodate an additional 2000 domestic and service vehicles.

Much of the proposed site is low lying and subject to flooding, the large increase in hard surfaces and the inability of the current surface and foul drainage systems to cope threatens a major disaster.

School:

Research by our County Councillor indicates that there is no fundamental need for a secondary school on the site and any calculation as to secondary education need will have to be revised downwards as a result of the Brexit decision.

The linkage of school need to Green Belt development is most definitely not proven.
Amenities:
Normandy is almost totally devoid of local amenities.
There is a perimeter bus and rail service, an overloaded doctors surgery, 2 churches and a well appointed village hall.
There are no services for the every day supply of food or drink.
All the latter needs are serviced outside the village requiring travel to access them

Clearly Guildford has a commitment to provide housing for an increasing population but there are two fundamentals that have not been addressed:-

What is the demand for housing going to be when immigration is brought under control, an area for recalculation of demand.

Secondly housing in Guildford is extremely expensive and likely to remain so, as a construction professional, I doubt if low cost housing can be built (if resources are available) that is truly affordable.

I urge that any significant development in Normandy is not implemented as the fundamentally flawed logic for a secondary school on Green Belt is not proved and therefore the surrounding development does not need to go ahead.

There is no provision for improved road traffic access/facilities. The road conditions in East Lane reflect those of an undeveloped country!

There is no viable provision for additional infrastructure to accommodate the proposal; no references are made to mitigate for increased needs for improved public transport (bus and rail/rail parking), medical and educational needs (Primary & Secondary).

The increase in demand on existing shopping and parking facilities would prove highly detrimental to all those using them.

Waste water and sewage requirements are not adequately provisioned for and the inclusion of proposed builds in FRZ 2/3 are not suitably mitigated.

Please do not proceed with this ill conceived plan!

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

POLICY 11 -Infrastructure and delivery

I OBJECT. Most of the borough's infrastructure is antiquated, congested and straining to accommodate even current needs and organic growth. Yet this plan's commitment to building housing estates across the Guildford countryside will mean either major infrastructure investment that no-one is prepared to pay for or else a catastrophic and simultaneous collapse in transport, educational, medical, energy, water and communications services.

The plan targets greenfield sites-requiring heavy infrastructure investment-in order to generate CIL income necessary to meet an infrastructure shortfall that is already serious. This is not sensible. The current draft CIL scale also encourages development on greenfield sites rather than brownfield.

The policy wording says nothing about roads and traffic. The Council's methodology for assessing infrastructure needs in this area is inadequate, identifying only the tip of an iceberg of existing congestion. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that involve demolishing property and road-widening in residential areas to solve the resultant congestion. The A3 improvements are not guaranteed to take place but they are being used to justify removing large areas from the Green Belt before detailed traffic assessments have taken place. These detailed investigations are being deferred until the planning application stage and will be left to developers to prepare. If a site then proves to be unsustainable its Green Belt protection will have been lost for no reason and unsuitable development will take place by a more insidious process.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy 11. By prioritising greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough's infrastructure capacity for sustainable development, and then tailor development accordingly. 12 This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council's control and on the vagaries of CIL income. Instead of recognising this as a key issue, the plan is based on a wing and a prayer.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
1. INFRASTRUCTURE POLICIES

This section of the Proposed Submission Local Plan sets out details covering a range of infrastructure policies.

POLICIES I1, I2 & I3

These three policies cover Infrastructure & Delivery, Supporting the Department of Transport’s ‘Road Investment Strategy’ and Sustainable Transport. Whilst I support the general policy statements as presented in each case, it is the detailed infrastructure proposals for Guildford Borough which give me cause for concern.

I believe there are serious deficiencies and shortcomings in the infrastructure of Guildford Borough as it is today and that the aggressive housing policy as proposed by GBC in the Proposed Submission Local Plan will exacerbate this problem.

I would make the following comments specifically about infrastructure in East Horsley today:
• Roads across the parish are in poor condition with many potholes. Many roads are unable to sustain their current levels of traffic, particularly the increasing levels of HGV traffic;
• The principal through roads traversing East Horsley are narrow and winding, have a series of pinch points, have sections without any pavements and are generally unlit. As a senior SCC councillor remarked at a recent public meeting in the village hall: “East Horsley has lanes, not roads.” East Horsley’s ‘lanes’ are totally unsuitable for high volumes of traffic, in particular for the volume of HGV’s now using them;
• Many of the drains are blocked or otherwise in poor condition giving rise to frequent surface water flooding when it rains;
• The pavements are in poor condition. As well as being narrow, they are often uneven and/or cracked making it difficult, for example, for people with pushchairs or prams or in wheelchairs;
• There are insufficient school spaces for the number of local children needing them, with the result that children are often allocated to schools a significant distance away such as Dorking or Woking; and
• The Medical Centre in East Horsley is already at capacity in terms of its number of patients.

It is recognised that, as stated in the Proposed Submission Local Plan, the maintenance of adequate infrastructure and its expansion to meet growing needs is the responsibility of the relevant infrastructure provider. This is often not GBC itself but rather, for example, Surrey County Council or utility companies.

In respect of East Horsley, there are only two specific proposals in Appendix C:

LRN 25 - East Horsley and West Horsley traffic management and environmental improvement scheme. It is not clear what is proposed here, and its timing and funding have to be considered uncertain. It is stated that funding will, at least in part, come from developer contribution. However, it is not at all clear what development is likely to give rise to such a contribution, but it certainly implies that funding could only come if there were a development; and

HSC 5 - Expansion of East Horsley Medical Centre to provide additional capacity and services for future population in years 5 – 15 of the plan.

There are no proposals in respect of all the existing problems with for example roads, pavements, drainage, and schools.

Furthermore, it is inevitable that the proposed developments in East Horsley itself and nearby, particularly in West Horsley and the proposals for Wisley, will put further strain on the existing infrastructure. There are no proposals at all to cater for this.

Although an expansion of the Medical centre is proposed in the Infrastructure Schedule, this is not until years 5 – 15 of the Plan. Given that it is already at capacity, EHPC believes that this needs to be done earlier.

Local primary schooling is also a very pertinent issue. There are 11 housing development sites identified in the LAA for East and West Horsley, which taken together would result in the building of 593 new houses in the two parishes that are today served by a single primary school - The Raleigh, in West Horsley. Planning guidance suggest that this number of new homes will require the provision of around 150 additional primary school places to accommodate such an increase in population. Today there is no spare capacity at The Raleigh, yet no proposals are made in the Proposed Submission Local Plan to provide for any more schooling in the Horsley’s.

I believe that the failure to address the inadequacies of the existing infrastructure to meet the needs of what is there already is a serious deficiency in the Proposed Submission Local Plan.

I accordingly OBJECT to the infrastructure proposals on these grounds. I further OBJECT to the proposals for infrastructure in that they do not meet the stated objective of providing infrastructure to support the proposed developments.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Attached documents:**
1. INFRASTRUCTURE POLICIES

This section of the Proposed Submission Local Plan sets out details covering a range of infrastructure policies.

POLICIES I1, I2 & I3

These three policies cover Infrastructure & Delivery, Supporting the Department of Transport’s ‘Road Investment Strategy’ and Sustainable Transport. Whilst I support the general policy statements as presented in each case, it is the detailed infrastructure proposals for Guildford Borough which give me cause for concern.

I believe there are serious deficiencies and shortcomings in the infrastructure of Guildford Borough as it is today and that the aggressive housing policy as proposed by GBC in the Proposed Submission Local Plan will exacerbate this problem.

I would make the following comments specifically about infrastructure in East Horsley today:

- Roads across the parish are in poor condition with many potholes. Many roads are unable to sustain their current levels of traffic, particularly the increasing levels of HGV traffic;
- The principal through roads traversing East Horsley are narrow and winding, have a series of pinch points, have sections without any pavements and are generally unlit. As a senior SCC councillor remarked at a recent public meeting in the village hall: “East Horsley has lanes, not roads.” East Horsley’s ‘lanes’ are totally unsuitable for high volumes of traffic, in particular for the volume of HGV’s now using them;
- Many of the drains are blocked or otherwise in poor condition giving rise to frequent surface water flooding when it rains;
- The pavements are in poor condition. As well as being narrow, they are often uneven and/or cracked making it difficult, for example, for people with pushchairs or prams or in wheelchairs;
- There are insufficient school spaces for the number of local children needing them, with the result that children are often allocated to schools a significant distance away such as Dorking or Woking; and
- The Medical Centre in East Horsley is already at capacity in terms of its number of patients.

It is recognised that, as stated in the Proposed Submission Local Plan, the maintenance of adequate infrastructure and its expansion to meet growing needs is the responsibility of the relevant infrastructure provider. This is often not GBC itself but rather, for example, Surrey County Council or utility companies.

In respect of East Horsley, there are only two specific proposals in Appendix C:

LRN 25 - East Horsley and West Horsley traffic management and environmental improvement scheme. It is not clear what is proposed here, and its timing and funding have to be considered uncertain. It is stated that funding will, at least in part, come from developer contribution. However, it is not at all clear what development is likely to give rise to such a contribution, but it certainly implies that funding could only come if there were a development; and

HSC 5 - Expansion of East Horsley Medical Centre to provide additional capacity and services for future population in years 5 – 15 of the plan.

There are no proposals in respect of all the existing problems with for example roads, pavements, drainage, and schools.

Furthermore, it is inevitable that the proposed developments in East Horsley itself and nearby, particularly in West Horsley and the proposals for Wisley, will put further strain on the existing infrastructure. There are no proposals at all to cater for this.

Although an expansion of the Medical centre is proposed in the Infrastructure Schedule, this is not until years 5 – 15 of the Plan. Given that it is already at capacity, EHPC believes that this needs to be done earlier.
Local primary schooling is also a very pertinent issue. There are 11 housing development sites identified in the LAA for East and West Horsley, which taken together would result in the building of 593 new houses in the two parishes that are today served by a single primary school - The Raleigh, in West Horsley. Planning guidance suggest that this number of new homes will require the provision of around 150 additional primary school places to accommodate such an increase in population. Today there is no spare capacity at The Raleigh, yet no proposals are made in the Proposed Submission Local Plan to provide for any more schooling in the Horsley’s.

I believe that the failure to address the inadequacies of the existing infrastructure to meet the needs of what is there already is a serious deficiency in the Proposed Submission Local Plan.

I accordingly OBJECT to the infrastructure proposals on these grounds. I further OBJECT to the proposals for infrastructure in that they do not meet the stated objective of providing infrastructure to support the proposed developments.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1. I object that all this development will crush our local infrastructure in terms of housing, doctors’ surgeries, hospitals, and all other local amenities. How will we cope with all this additional pressure on services?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/1846  Respondent: 15248321 / Gordon Pipe  Agent:
Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

6) I object to the detrimental impact on transport, local roads and road safety. I specifically object to:

1. The assertion that the development will result in a meaningful shift to cycling and walking. The development is too isolated, and even within the development itself too spread out to anticipate a reduced reliance on private cars
2. The increased volume of car traffic. A proposed development of 2,068 homes would result in an estimated 4,000 additional cars on the roads
3. The congestion this traffic will cause on the narrow rural roads in Ockham and the surrounding areas, exacerbated by wide vehicles including increased bus and HGV movements
4. The danger this traffic will be to local cyclists and pedestrians, due to the absence of any cycling paths and the lack of pedestrian footpaths (and the space to provide them)
5. The increase in the already severe congestion on the Strategic Road Network of the A3 and M25. A further planning application at RHS Wisley (with a significant increase in visitor traffic) and a proposed 600 pupil secondary school on the site would add additional congestion at the M25/A3 junction as well as local roads. No
Development can proceed without significant infrastructure enhancements to the A3 and M25. Partial improvement works on the A3 south of the site are not due to start until 2019 at the earliest.

6. The lack of suitable public transport. The local rail stations of Effingham and Horsley cannot cope with the proposed increase in passenger traffic and car parking is already at capacity.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

3. I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

There is too much traffic in our villages already and this plan will cause more congestion in Ripley, Send and Clandon, with no plan to improve that.

The rural roads in this area are narrow, in poor condition and have no footpaths. 5000 more houses means dangerous and unsustainable traffic.
How would Send, Send Marsh and Ripley cope with the extra traffic?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

13. I object to the lack of proper infrastructure planning for sites (Policy II)
The Plan does not identify adequate infrastructure improvements to support the huge scale of development, especially at Garlick’s Arch (A43) which has no infrastructure projects in the Infrastructure Schedule to support it. Local services, utilities and sewerage, doctors etc. are at or close to capacity.

There are no plans to improve the capability of the medical and police/emergency services to cover the 5000+ houses in the north east of the borough.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object to the lack of proper infrastructure planning for sites (A43 and A42)
The Foreword to the plan by Paul Spooner includes on page 5:

“We recognise that significant infrastructure upgrades are required to support existing communities and the planned growth of the borough. The delivery of sites allocated in this plan is contingent upon the provision of new infrastructure, which is a key theme of our Local Plan”.

The lack of any plan for either physical or green infrastructure improvement clearly contradicts this in respect of both A43 Garlicks Arch and A42 Clockbarn Nursery, Tannery Lane, Send. Development of these sites without the contingent infrastructure would therefore be contrary to the stated aims and themes of the Plan, and should not go ahead.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/1897  Respondent: 15253217 / W Orchard  Agent:
Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )
I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages.
The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition. I object to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces. Many of the affected villages, such as Ripley, already suffer from parking problems. Further development around these villages will only result in more traffic and more parking problems.

With some 5000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the village on the way to the Surrey Hills. With no proper cycle Lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick's Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents' in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick's Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.
Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

   Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

   Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

   Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity
and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1. I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

1. I OBJECT to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.
Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. **Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )**

1. **DRAINS, WATER SUPPLY, FLOOD RISK, CONGESTION**

   Our drainage system, our water supply, our medical facilities and our roads cannot cope with the proposed number of new homes West Horsley nor the extra homes on the Wisley airfield site.

   To increase the number of houses in West Horsley by 35% will change the character of the village. Building this number of homes will lead to flood risk here and downstream (along the Wey and Thames). The planned development on Green Belt is therefore unsustainable.

   East Lane and Manor Farm in West Horsley have been flooded and inpassable several times over the last few years, so further building on Green Belt in the area will result less farmland/woodland areas to for the water to soak away.

1. **LACK OF INFRASTRUCTURE**

   The current local amenities of West and East Horsley, car parking, doctors surgery, primary school, station car park are full to bursting and struggle to cope with the existing demand.

   The Local Plan makes no reference to providing increased infrastructure to compensate for the extra cars, children and people.

   East Lane in particular is a country road with few road markings and gets very congested at school run times, especially where the road narrows to a single lane. Also, there are many children walking, scootering and cycling to school. To increase the number of cars in this area can only endanger children’s lives.

   Therefore I ask GBC to revise the housing number, and to amend the Local Plan to utilise brownfield/previously used land rather than green field sites – of which there are significant amounts of the former within the Borough.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

Therefore I ask GBC to revise the housing number, and to amend the Local Plan to utilise brownfield/previously used land rather than green field sites – of which there are significant amounts of the former within the Borough.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
Our local schools are full to capacity as it is, our dentists, doctors and of course the R.S.C.H is breaking under the strain. Our local amenities will not be able to cope with the large increase of population and traffic.

If the proposed increase of houses goes ahead we all loose the quality of life that so far the village of Horsley give us.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

**Document:** Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Ref: Proposed Planning For East Horsley Etc,

I am writing to place on record my objections to the above proposals as detailed below:-

1. **TRAFFIC AND PARKING**

The level of traffic on Ockham Road South/North is already excessive, particularly with heavy vehicles who use it as a short cut to the A3 and the M25. Parking in the centre of the village (ie Station Parade) is already at full capacity and there is no space for building further shops.

2. **SCHOOLS AND MEDICAL FACILITIES**

These are both under full strain and would be unable to stand up to a large influx of houses (over 500 and 2,068 on Wisley airfield)

3. **GENERAL COMMENT**

In common with all others in this village we strongly object to the loss of Green Belt status. We came East Horsley in 1971 as shopkeepers and would be against any plans which would change the character of one of Surrey's best villages. Surely there must be other Green Belt areas in Surrey which would be more suited to the plans proposed.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
I object to the fact that the Local Plan takes no account of schools, doctors surgeries and roads that are already operating at full capacity. Another 4000 houses in this area with a conservative estimate of a further 8000 cars would be catastrophic.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

9.I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

10.1 OBJECT to the lack of proper infrastructure planning for sites (Policy I1)
Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
infrastructure plans are being used to justify taking rural areas out of the Green Belt for developments which could well prove to be unsustainable. This is unacceptable: sustainability should be proven first, with an appropriate timetable.

FRR5: Please see my comments on Policy P4.

SED3: I object to the proposal for a secondary school near Wanborough Station. Please see my comments objecting to Site A46.

Additional: Due to the volume and speed of traffic on the A31, there is already a need to provide safe crossings where footpaths and bridle ways theoretically connect the north and south slopes. The communities of Normandy, Wanborough, Puttenham, Seale, Compton and Wood Street Village used to be well connected, but the north / south links are now almost unusable. If site A26 does go ahead, we will lose a huge amount of countryside on which many of us walk, cycle and ride every day. The developers should be required to provide significant funding for safe access to the southern slopes of the Hogs Back to partially mitigate our loss, with some local government and highways funding also being made available to make our rights of way viable again and to reconnect communities rent asunder by traffic.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: pslp171/1057  Respondent: 15264065 / Roshan Bailey  Agent:

Document: Proposed Submission Local Plan: strategy and sites 2017 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I welcome the clearer wording regarding timing, phasing and application of planning conditions and obligations. It is imperative that no developments should be approved without clear, acceptable and funded plans in place to provide adequate and effective infrastructure of all types and that even where approval has been given, development must follow provision of infrastructure and not proceed without such infrastructure.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

This will cause more congestion to the villages of Ripley, Send and Clandon, which have poor condition narrow roads and no footpaths, which are dangerous. More houses will increase this danger and unsustainable volumes of traffic

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
I object to the lack of proper infrastructure planning for sites (Policy I1)

The current and existing services are over-stretched now, so where are the infrastructure improvements to support the enormous proposed developments, including medical, public transport, schools?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

There is too much traffic in our villages already and this plan will cause more congestion in Ripley, Send and Clandon, with no plan to improve that.

The rural roads in this area are narrow, in poor condition and have no footpaths. 5000 more houses means dangerous and unsustainable traffic.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object to the lack of proper infrastructure planning for sites (Policy I1)

The Plan does not identify adequate infrastructure improvements to support the huge scale of development, especially at Garlick’s Arch (A43) which has no infrastructure projects in the Infrastructure Schedule to support it. Local services, utilities and sewerage, doctors etc. are at or close to capacity.

There are no plans to improve the capability of the medical and police/emergency services to cover the 5000+ houses in the north east of the borough.

Access to essential facilities – NO MENTION IN WRITTEN POLICIES.

Vague statements within Infrastructure Polices section.

The small grocery store at the southern end of the village may close later this year as the shop owner is retiring. There are no plans to keep this in place and will go the way of the Post Office we lost from there next door recently.

Even if commercial outlets such as these would remain, there has always been very limited parking outside this store and such congestion as there has been in the past would get far worse.

People using East Horsley’s shops and Public Library in 2016 experience more and more difficulty in parking their cars at most times of the day. The proposed large increase in population of West and East Horsley will make parking and movement into and through the village considerably more difficult and time consuming.

Schools – the word ‘schools’ is mentioned in Definitions under Policy 11 Infrastructure and Delivery.

There is a continuing lack of state primary school places in the village. The Raleigh school which serves both East and West Horsley is full every year and this has been the situation for many years. Secondary school places are limited in number at the Howard of Effingham School and other secondary schools involve a much longer journey of time and distance from the village to reach them. This alone is not environmentally acceptable, especially in the current climate where we are encouraged to be more “green”.

Page 797 of 1294
Glenesk and Cranmore private schools are well supported by many families living in Guildford and other villages up to 14 miles away. Each of these private schools during term time, receives high volumes of traffic going to and from each school at each end of the school day, on Ockham Road North and the A246 respectively.

Medical facilities – possible extension to Kingston Avenue Medical Centre mentioned in Infrastructure Delivery Plan (IDP)

Kingston Avenue Medical Centre, serving all of East and West Horsley and areas beyond, is always extremely busy and residents experience difficulty in making appointments. The planned population increase (in excess of Government ONS forecasts) for the Borough will require a major extension of the Royal Surrey Hospital to cope.

Roads and Transport Infrastructure – these words are mentioned in Definitions under Policy I1 Infrastructure and Delivery.

No detail for West Horsley has been found in any of the Local Plan documents, including the Infrastructure Delivery Plan.

Whilst Horsley station has frequent trains to London and Guildford 7 days a week, the station car park is normally full on weekdays. An increase in village population will increase pressure on station parking and traffic movements to / from Horsley station to drop off/ collect travellers to London and school children going to Guildford and Leatherhead.

Traffic generation from the proposed new housing estates will be considerable. Most households in rural areas as a necessity have 2 cars, many having 3. Journey times on local roads will increase significantly.

Finally:

Waste water Infrastructure – these words receive a mention in Reasoned Justification under Policy I1.

No detail for West Horsley has been found in any of the Local Plan documents, including the Infrastructure Delivery Plan.

There are known sewage overflow problems in the Ockham Road North / Green Lane area. Thames Water has advised Guildford Borough that the area’s wastewater network is unlikely to be able to support the demand anticipated from all the proposed developments.

The foul drainage system from West Horsley to the treatment works north of Ripley, will need to be upgraded to cope. Thames Water advise a 2 to 3 years lead-in period to install the necessary waste water network and treatment capacity after planning permission for a development is granted.

It is blatantly obvious that the proposed development on the scale suggested is unreasonable, impractical and unacceptable to all that will be affected – directly through the villages and further afield

I ask that the appropriate and responsible authorities seek all opportunities to developing brown field sites – through the Guildford Borough Council area, before even considering such drastic and environmentally damaging options which seem to have been ill-thought out.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1  
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )
4. Flood Risk & Congestion

Our drains, our water supply, our medical facilities, state primary school, and our roads cannot cope with the proposed number of new homes. Building this number of homes will lead to flood risk here and downstream (along the Wey and Thames). The planned development on Green Belt is therefore unsustainable.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

We object to policy I1 Infrastructure and delivery. Most of the borough’s infrastructure is straining to accommodate current needs and organic growth, yet this plan’s commitment to building housing estates across the Guildford countryside will mean either major infrastructure investment that massively under-funded or an implosion as transport, educational, medical, energy, water and communications services become simultaneously overloaded. The plan targets greenfield sites – requiring heavy infrastructure investment – in order to generate CIL income necessary to meet an infrastructure shortfall that is already serious. The current draft CIL scale also encourages development on greenfield sites rather than brownfield and will reduce or negate developer's obligation to sell a percentage of homes at 20% below market value. The policy wording says nothing about roads and traffic. The Council’s methodology for assessing infrastructure needs in this area is inadequate, identifying only the tip of an iceberg of existing congestion. Compton Village is already close to tipping point, yet it will see a significant increase in traffic volume, will be completely congested and yet no plans exist to mitigate the problem. The schemes referred to in this policy barely solve existing congestion and are inadequate when development takes place. The full impact on local road networks has not been fully considered. Some proposed development locations would require highway schemes that involve demolishing property and road-widening in residential areas to solve the resultant congestion. The A3 improvements are not guaranteed to take place but they are being used to justify removing large areas from the Green Belt before detailed traffic assessments have taken place. These detailed investigations are being deferred until the planning application stage and will be left to developers to prepare. If a site then proves to be unsustainable its Green Belt protection will have been lost for no reason and unsuitable development will take place by a more insidious process. Compton Village will actually incur increased traffic flow as a consequence of A3 widening according to the study, yet as was pointed out above, no solutions are in place to improve the situation. Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritising greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself.

Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognising this as a key issue, the plan makes too many assumptions, not least being the verbal promise that development will not take place without infrastructure preceeding it. It is not clear how this will happen and is not in the Plan, as it should be, if it is achievable. The highways network is under stress at peak times in many parts of the borough. Queuing is the daily experience of drivers going to and from work. The local plan recognises the problems in para 2.14. Much of the road network is single-carriageway, and junctions act as constraints. The key evidence on future traffic conditions is provided in the Strategic Highway Assessment Report (SHAR) which summarises the results of the tests carried out by Surrey County Council at the request of GBC. Five scenarios were examined using SCC’s strategic traffic model. Scenario 1 contains all developments and planning permissions from 2009 to date. As such it corresponds to today’s circumstances, and describes the current unsatisfactory traffic conditions in peak periods. Scenario 5 represents the position at the end of the plan period, including all development and highways schemes in the local plan. The results of the analysis show that there will be widespread congestion in the morning peak hour across the network. The key strategic routes, the A3 through Guildford NE bound, and the M25 between Junctions 10 and 11,
are shown to be at or over capacity. The summary network statistics presented in the SHAR, while useful, require some 
interpretation because the analysis of vehicle-hours is derived from link speeds only, and does not reflect junction delays 
and queues. The tables that show the ratio of flow to capacity and level of service are especially helpful to gaining an 
derstanding of the conditions on the network in the forecast. Where the forecast traffic volume is above or close to 
capacity, flow becomes unstable and there is congestion. The SHA results provide evidence that, in 2031, congestion will 
be worse than it is today on much of the network. It is the case that the traffic modelling does not take into account the 
potential for increased use of other modes, but the trip rates used for developments already have built in the typical level 
of use of other modes, and services will be required to meet that need. It is also the case that the model does not allow for 
park and ride, which would improve matters in the town centre, as discussed below. In order to gain an insight into 
conditions across the network, it is necessary to combine information from several tables in the SHAR. Table 4.5 shows 
that the M25 and A3 will be at capacity in Scenario 5. The other roads that will have poor levels of service include those 
in Table 4.5 but also those in 4.12 (except the A3) and those in Tables 4.3 and 4.4 with levels of service E and F that will 
not be given some relief by improvement of the A3 in Scenario 5. Paras 4.10.3, 4 and 5 point out that there will be 
increased congestion. Given that the starting point is unsatisfactory, there can be no expectation that the schemes in the Infrastructure Development Plan will provide an overall improvement. There will be some local benefits, such as the Ash rail bridge for example, but in general conditions will be as bad and in many places, such as Compton Village, worse. So the statement in the SHAR para 4.2.5 that ‘the combined mitigation as reflected in Scenario 5...indicates that at the 
strategic level it accommodates the additional PSLP demand’ needs qualifying – ‘at the cost of a lot of queuing’ and makes no mention of the impact this will have on pollution, which is already a known problem at the A3 end of Compton. The cumulative effect of the additional traffic generated by the developments in the local plan will be to increase congestion, even with the proposed highway schemes in place. More detailed analysis of the junctions and queuing is required. So we question the conclusion that the developments would have “an acceptable impact on the capacity of the highway networks in terms of the policy test set in paragraph 32 of NPPF”. Appendix 3 of the Transport Topic Paper shows the phasing of housing development and transport infrastructure. The major scheme being considered for the A3 between the A31 and the A320 is scheduled for delivery in the period 2023/24 to 2027/28. The strategic developments at Blackwell Farm and Gosden Hill Farm are shown as being phased in from 2021/22 onwards. The Garlick’s Arch development is shown as starting in 2019/20. Therefore, there will be a period in which the existing A3 has to cope with the additional demand arising from those developments before extra capacity is provided. The following comments regarding the strategic sites are taken from the SHAR: Blackwell Farm – there will be congestion at the A31 junction, and the problems at the Tesco junction, and the Egerton road / Gill Avenue junction (para 4.9.5). Traffic is likely to access the Surrey research park and the RSC through the development (para 4.7.3) (see annex 4) Gosden Hill Farm – there will be an increase in traffic through Burpham. There will be pressure on the A3100/B2234 roundabout (paras 4.7.6, 4.7.7 and 4.7.8), Wisley – traffic will increase on minor roads to gain access to the A3 (N and S bound) and other routes (para 4.7.11). The development will add more traffic to the A3. The Burnt Common slips help alleviate the traffic through Ripley according to the model, but queuing on the A3 could mean this does not happen (para 4.7.14) Normandy/Flexford – the report has little to say about the impact of this large development. The increase in flow on Westwood Lane is noted (para 4.5.7). Tables 4.10 and 4.11 show junction delay reducing at the Westwood Land, B3000 junction, but an increasing at the Puttenham Hill/Millbrook junction. Ash – development in Ash is not specifically addressed, but there are major increases in traffic on a number of roads. The new rail bridge will bring relief (but traffic will move to the next junction). Slyfield – there are no remark relating to SARP, and as there are no additional trips shown in and out of the Slyfield residential zone in Tables 3.3 and 3.4, it is possible that this development has been omitted. There is a significant increase in trips to and from the Slyfield industrial zone, which will impact on the A320 and Clay Lane. Town Centre – the report has very little to say about the town centre. It is evident that the model is forecasting severe congestion on the approaches to the town centre, such as the A281, the A31 Farnham Road, and Woodbridge Road for example. No mitigation measures are planned. And in the Transport Strategy, GBC states that the intention is to adopt Allies & Morrison’s Scenario 2 which would have the effect of significantly reducing the capacity of the town centre road system. The implications have not been examined, but traffic using the A281 from Waverley, for example, would be affected.

The B3000 will be severely affected by development schemes and will not benefit from road improvements. It is essential that the impact of all change to road networks are looked at in conjunction with one another for any survey to be meaningful. The local plan does not state an objective for congestion. The two strategic objectives that are included for infrastructure refer to supporting sustainable development and delivering a balanced system. However, in para 2.15 there is an aspiration expressed about opportunities ‘to improve the performance of the road networks through transport infrastructure and service improvements’, which taken with the previous paragraph includes reducing congestion. The evidence so far shows that this will not happen. The mitigation proposed is not sufficient to overcome the problems that will be caused by the level of growth in the local plan. Congestion will worsen. The
network will lack resilience and be vulnerable to disruption due to incidents. Minor roads will have to cope with a lot more traffic, for which they are unsuitable.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents: Independent Traffic report annex 3.pdf (2.5 MB)
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I do not think that the infrastructure development proposals are sufficiently robust to support the plan. To say that the development will not go ahead until infrastructure is in place is unenforceable and unaccountable. I just don't believe or trust this assertion. You only need to consider the unresolved issues such as another river crossing, a central and integrated bus facility. GRA's comments all apply here in my view absence of a clear and workable plan for an integrated bus interchange and incorporating plans for the demand and capacity of rail services are tow good examples. The plan also needs to provide more convincing data and assumptions on town centre traffic, buses and parking. The nature of Guildford's geography contained by the river and the railway means that the road system is particularly susceptible to congestion.

I fundamentally disagree with a plan that seeks to expand the size of the town by a quarter and therefore register my objection to it.

I object to the 2016 Draft a local Plan for the following reasons.

Who are these ridiculous people who make these decisions. Are they lacking in common sense.

Guildford town centre and the existing traffics routes are vastly over subscribed. These new measures would make it impossible to shop there.

The rd structure through Burpham is a narrow rd of one lane in either direction.

The local hospital is also oversubscribed already without adding more capacity.

School and local GP services are inadequate already.

Development of this capacity in such a small area would bring unsatisfactory living standards to the area, as people live on top of one another, possibly generating a raised crime rate.

Sly fields depot is under pressure dealing with the refuse generated now. How much more refuse will be generated by all these extra dwelling.

Where will the people living in these homes find employment. The area isn't suitable for industry and further business buildings who will be able to afford to rent them.

Industry being at an all time low in this country anyway.

We already have a railway site at merrow pk which has been closed for years when opening it would benefit the existing population when merrow pk est Wyelea farm and bowyer farms estates were built. It was t feasible because of the lack of infrastructure To deal with it then. So why add to it know.

The existing park and ride is undersubscribed already so why add another site.
With existing population increased by the university why would we need 2000 thousand homes with it inmates swelling it even further.

Finally we would have to take turns to shop in Guildford and use the roads on rota basis. How much unused business capacity is there already in Guildford.

The sports centre is also oversubscribed where would all the extra children go.

How many children would this exercise add to the area existing and to be born.

Infrastructure, Policies I1, I2 and I3

As residents of the village of East Horsley, we are all only too aware of the deficiencies and dangers summarised by East Horsley Parish Council in its specific comments on these Policies. Whilst most would, very reluctantly, accept the status quo, a deteriorating picture would meet with very strong objections and opposition. Given the housing plans, a significant deterioration is would be inevitable.

Infrastructure problems are not limited to highways. New homes need schools, health, and other services which are not available in the local area. If these facilities are provided in the rural area, the intensification of activity will contribute to urbanisation of the rural area.

33. The full consequences of this approach is likely to include:

- Erosion of the Green Belt, harm to the landscape and historic character of some of the most attractive historic villages
- Large numbers of houses in places poorly serviced by public transport and local services, employment and retail facilities; resulting in
- Substantial increases in car borne commuting; resulting in
- Increased pressure on the existing unsuitable highway network, particularly the smaller unsuitable rural roads which will serve new or expanded settlements in the countryside north of Guildford, including Ripley, Send and Clandon, Ockham and East/West Horsleys
• Inappropriate highway works to increase junction capacities or to provide improved visibility splays; resulting in
• Loss of rural character and
• The creation of larger isolated communities with few services and harm to community cohesion.

1. I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

1. I OBJECT to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.
Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

**Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )**

I object to the 2016 Draft Local Plan. With around 6000 of the proposed 14,000 new homes to be built within a few miles of the Burpham area, I find this a disproportionate level of development in one part of the Borough. Furthermore, much of this is on the green belt, there is no apparent provision for appropriate improvements to either the A3 or local roads, and there is a distinct lack of details of essential infrastructure required to support such developments.

It is deeply concerning that developments on such a scale are being proposed without specific infrastructure details or indeed the evidence for such housing requirements in the Borough.

I sincerely hope that you will reconsider the Local Plan.

**Comment ID:** PSLPP16/2522  **Respondent:** 15280737 / Miller Developments (David Milloy)  **Agent:**

**Document:** Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

**Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( No )**

The plan notes at paragraph 4.6.1 that infrastructure provision and upgrading has not always kept pace with population growth, employment and transport demands and that in parts of the Borough some infrastructure is currently at or near to capacity, or of poor quality.

Miller is of the opinion that this is particularly true of the radial routes in to Guildford that will be the principal transport...
corridors between the strategic allocations and the county town. With the exception of Wisley Airfield, whilst the
strategic highway network, notably the A3, provides the main link more distant employment centres, if the sustainable
transport objectives of the Council are to be achieved it is the local network that must have the capacity to accommodate
the level of housing growth proposed.

Of particular concern are the links between Gosden Hill Farm and Guildford town centre and the link between Blackwell
Farm and the town centre. Miller is of the opinion that the Council has not adequately demonstrated that these routes have
the capacity to accommodate the anticipated levels of traffic that will be generated by these developments at the peak
period on the highway network. Furthermore, Miller questions whether the proposed Sustainable Transport Corridors
envisaged are deliverable within either a reasonable timescale or at a cost that can be funded by the developments they
primarily serve. When contributions to the cost of improvements to the strategic highway network and rail services are
fully taken into account the viability of these schemes could well be threatened or their delivery significantly delayed.

In relation to Blackwell Farm, the Council and Highways England are yet to identify how the physical improvements
linking to the A3 and A31 can be physically provided and in the absence of this link Miller does not see how the existing
network of roads (which serve the Science Park, Sport Park, university campus, County Hospital and the Tesco foodstore
could be used as a ‘secondary’ through route from the A31. This part of the highway network is clearly at, or already
exceeding, its design capacity at peak times as is evidenced by the queuing back of traffic through Park Barn and the
Tesco roundabout / A3 junction at peak periods; these being parts of the network that should be clearly kept free flowing
for emergency vehicles.

Whilst Policy I1 indicates that infrastructure needed to support development, to be secured through planning obligations
and other funding, ‘should be provided and available when first needed to serve the occupants and users of the
development’, Miller is concerned about the reference to the word ‘should’; especially when the policy goes onto state
that ‘where necessary supporting infrastructure is not secured, development may be phased to reflect infrastructure
delivery, or will be refused’.

It is considered that this caveat is not surprising in circumstances where the proposed infrastructure improvements have
not been agreed between the relevant authorities and have certainly not been costed accurately. Miller therefore maintains
that there is no certainty that the strategic allocations can be delivered in a timely manner and that it is extremely possible
that housing delivery could be postponed beyond the end of the plan period.

We note also that despite the Plan relying on rail improvements and the provision of two new stations there appears to be
no funding committed to deliver these improvements. The recently published Invitation To Tender (ITT) for the next
South Western Rail Franchise (due to commence in 2017 for a period of at least ten years) makes no provision or
reference to the next franchisee being required to make or enable such improvements, and on this basis it is difficult to
see how such aspirations will come to fruition.

Finally, Policy I1 confirms that the Community Infrastructure Levy (CIL) will be used to secure additional financial
contributions from developers and that such money will be supplemented by diverting 25% of the CIL receipts
originating from each Parish and from Guildford. It is not clear if this additional income for ‘highway’ improvements will
be sufficient in the event of a shortfall from developer contributions and a shortfall in other funding streams.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
**I OBJECT TO POLICY I1 (INFRASTRUCTURE & DELIVERY)**

- Infrastructure considered here as an afterthought, rather than pre-condition of development. Should be a key issue for the rest of the plan.
- Excessive housebuilding in countryside not supported by any funding or provision for infrastructure.
- Heavy focus on building on greenfield sites inefficient and unnecessary: cheap for developers but much more expensive for the public who have to fund the infrastructure.
- Draft CIL scale discourages use of brownfield land first.
- No plan for organic increase in existing traffic congestion, let alone once thousands of houses are built across the countryside. Local roads hardly considered. Green Belt being eroded before road widening/improvement plans certain, encouraging over-development of greenfield sites.

<td>I object. The plan relies on outside funding to make sites acceptable. I do not believe that the plan can deliver housing and infrastructure in a timely fashion as the outside funding is not guaranteed. For example, if funding is not made available or is delayed for junction 10, the wisely, godston hill and send are simply unacceptable. Why have over half of the plans sites been allocated in the north of the borough all requiring the A3 and M25 to be improved with funding from outside and none guaranteed sources. In fact this plan can not deliver in the short to medium term. I object. Moreover, it would seem to me that the send site at Garrick arch is only included as a site to make the Wisley site acceptable in transport term:</td>

**Comment ID:** PSLPP16/4627  **Respondent:** 15284385 / T.W. Turnill  **Agent:**

**Document:** Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I refer primarily to the effect 1100 extra houses, each with a probable two cars, will have on the local traffic situation, which is already creaking. Both Westwood Lane and Glaziers Lane are country roads, each having dangerous bridges associated with the railway line. These roads are on the borders of the planned development, while the northern edge is bordered by the A323, which is already extremely busy at peak times. The addition of a 1100 pupil Secondary School on that road will increase the traffic intolerably, when taken in addition to the cars from the new development trying to reach Guildford or Aldershot.

Whenever there is an accident on the Hogs Back or A3, traffic tries to exit via Wanborough Hill to use either of the two lanes, neither of which is capable or designed to take that volume of traffic. Anyone who tries to access the A31 at peak traffic times from either the Puttenham or Wanborough directions will know how long the queues are, and the potential for accidents for traffic leaving the A31 at the Puttenham turn off. This could severely jeopardise emergency traffic trying to access the new development, whose road structure might well be not capable of allowing Fire and Ambulance vehicles to attend an emergency, especially during peak traffic times.

Further development would cause even more strain on the local infrastructure of schools, Doctors Surgerys and indeed the Royal Surrey County Hospital. If continued development occurs, soon there will be NO differentiation between this area and London.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

**Document:** Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1. I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy II)
Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition. I object to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as Ripley, already suffer from parking problems. Further development around these villages will only result in more traffic and more parking problems.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

1. I object to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. There are no plans to improve these services. There is also no commitment to improve / expand the Villages Medical Centre or provide additional and acceptable school places. This should mean no development of the Garlick’s Arch site.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/2579  Respondent: 15285121 / Audrey Boughton  Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1. I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)
Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. Without proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

1. I OBJECT to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

The ensuing increase in traffic along wholly unsuitable narrow lanes will lead to a increased likelihood of accidents with the many cyclists enjoying this area.

Huge demand will be placed on local services which are already stretched.

It will turn this part of Surrey into another anonymous urban sprawl.

With greater creativity and thought, I am sure a balance can be achieved between the needs for housing and preserving the countryside for future generations.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

The local infrastructure is woefully inadequate at the present time it would collapse under any the slightest increased pressure

Please take note of my views. I have been a resident in the Ripley area for all of my 50 years, and I have seen it systematically encroach and the infrastructure put under such a great strain

I object to any of the local plan development as I don’t think that enough planning and thought has gone into what the affect will have the roads, schools, doctors, parking and the local people who already live in the local area. We would lose the green belt forever as well the increase pollution it will cause having more traffic in the local area.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Attached documents:**

- **SCHOOLS** - there appears to be no provision within the Council proposals for any immediate provision for any new schools or extension to existing schools, most of which are already under extreme pressure through oversized classes and lack of funding.

- **HEALTH SERVICES** - there appears to be no provision in the Council proposals for any immediate provision for any new medical facilities such as Doctors Surgeries or extensions to existing facilities.

- **TRANSPORT** - the introduction of a proposed 14,000 homes in the Borough will put an unacceptable and unsustainable pressure on public services that are already failing the public due to cut backs and lack of investment. Many residents will prefer to use their own vehicles to go even short distances and suffer the inevitable traffic jams, rather than use a public transport system that simply does not not encourage its use.

I trust that the above points are clear and that my objection will be recorded along with the many thousands of others the Council will undoubtedly receive as a result of their unworkable and highly unpopular development plan.

As it is at present, the traffic during the 'rush hours' is almost continuous with long tailbacks at every junction, the parking in the village is becoming beyond a joke and to get a local doctor's appointment when you need one is just a matter of luck!!

I would therefore like to register my strong objection to removal of the Green Belt status of this and surrounding villages.

I object due to the increased traffic and congestion that development will cause to the village roads.

In Ripley, Send and Glandon, there is already far too much traffic. The proposals will cause more traffic and congestion. 5000 more houses in this area of narrow rural roads, which are not planned to be improved is dangerous as many are bad condition and have no facilities for pedestrians or cyclists

The rural roads in this area are narrow, in poor condition and have no footpaths. 5000 more houses means dangerous and unsustainable traffic.

I object to the inadequate infrastructure planning for sites.

The huge scale of development proposed is not supported by adequate infrastructure improvements, especially at Garlick's Arch (A43) which has no infrastructure proposals at all.

The local Plan does not provide for improvements of the medical and police/emergency services to cover the 5000+ houses in the north east of the borough.

I live in Woking but reside in West Horsley each weekend as my father lives in the village, and I wish to object to the proposed plan.

The intended proposal is not appropriate as it will seriously impact on the local infrastructure of the village and the quality of life of the local residents. I strongly object to this development.

It is already extremely difficult to park at Horsley station and the shops and during the week these areas are full with cars and traffic, and any increase would make these areas impossible for local residents to use.

The current medical centre is extremely busy and it takes several weeks to get an appointment and the planned population increase would not be sustainable. The current medical provision in the village would be unable to cope with extra demand.

The waste water network is also unlikely to be able to cope with the demand created by the proposed developments.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/2753  Respondent: 15298017 / Margaret Cousins  Agent:

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT in the strongest possible terms to the Guildford Borough Proposed Submission Local Plan (June 2016). This Plan is unsustainable, unworkable and, in many provisions, unnecessary.

I set out below my objections to specific policies and matters within the Plan.

1. I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)
Our villages are already suffering from severe congestion for much of the day, for example The Street in West Clandon and Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and West Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from severe traffic congestion. Much of West Clandon is deemed by Guildford Borough Council to be a Conservation Area and we residents are required to abide by those rules. Is not GBC also duty bound to protect and conserve the area? Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon, The Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles have, of necessity, to mount the pavement. With a primary school, two pubs and a children’s playground, quite clearly the village should be protected from, and not be forced to take yet more, traffic.

...  

10. I OBJECT to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

**INFRASTRUCTURE POLICIES**

**POLICIES II, I2 & I3**
I object to these policies as there are serious deficiencies and shortcomings in the infrastructure of Guildford Borough as it is today and that the aggressive housing policy as proposed by GBC in the Proposed Submission Local Plan will exacerbate this problem.

Roads across the Horsleys are in poor condition with many potholes. Many roads are unable to sustain their current levels of traffic, particularly the increasing levels of HGV traffic.

The principal through roads are narrow and winding, have a series of pinch points, have sections without any pavements and are generally unlit. They are really lanes not roads at all.

Many of the drains are blocked or otherwise in poor condition giving rise to frequent surface water flooding when it rains.

The pavements are in poor condition. As well as being narrow, they are often uneven and/or cracked making it difficult, for example, for people with pushchairs or prams or in wheelchairs.

There are insufficient school spaces for the number of local children needing them, with the result that children are often allocated to schools a significant distance away such as Dorking or Woking.

The Medical Centre in East Horsley is already at capacity in terms of its number of patients.

The Horsleys are served by a single primary school, The Raleigh, in West Horsley. Planning guidance suggest that this number of new homes will require the provision of around 150 additional primary school places to accommodate such an increase in population. Today there is no spare capacity at The Raleigh, yet no proposals are made in the Proposed Submission Local Plan to provide for any more schooling in the Horsleys.

I believe that the failure to address the inadequacies of the existing infrastructure to meet the needs of what is there already is a serious deficiency in the Proposed Submission Local Plan.

I therefore object to the infrastructure proposals on these grounds

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )
I object to policy I1 Infrastructure and delivery Most of the borough’s infrastructure is antiquated, congested and straining to accommodate even current needs and organic growth. Yet this plan’s commitment to building housing estates across the Guildford countryside will mean either major infrastructure investment that no-one is prepared to pay for or else a catastrophic and simultaneous collapse in transport, educational, medical, energy, water and communications services. The plan targets greenfield sites – requiring heavy infrastructure investment – in order to generate CIL income necessary to meet an infrastructure shortfall that is already serious. The current draft CIL scale also encourages development on greenfield sites rather than brownfield and will reduce or negate developer's obligation to sell a percentage of homes at 20% below market value. The policy wording says nothing about roads and traffic. The Council’s methodology for assessing infrastructure needs in this area is inadequate, identifying only the tip of an iceberg of existing congestion. Compton Village is already close to tipping point, yet it will see a significant increase in traffic volume, will be completely congested and yet no plans exist to mitigate the problem. The schemes referred to in this policy barely solve existing congestion and are inadequate when development takes place. The full impact on local road networks has not been fully considered. Some proposed development locations would require highway schemes that involve demolishing property and road-widening in residential areas to solve the resultant congestion. The A3 improvements are not guaranteed to take place but they are being used to justify removing large areas from the Green Belt before detailed traffic assessments have taken place. These detailed investigations are being deferred until the planning application stage and will be left to developers to prepare. If a site then proves to be unsustainable its Green Belt protection will have been lost for no reason and unsuitable development will take place by a more insidious process. Compton Village will actually incur increased traffic flow as a consequence of A3 widening according to the study, yet as was pointed out above, no solutions are in place to improve the situation. Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritising greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognising this as a key issue, the plan makes too many assumptions, not least being the verbal promise that development will not take place without infrastructure preceeding it. It is not clear how this will happen and is not in the Plan, as it should be, if it is achievable. The highways network is under stress at peak times in many parts of the borough. Queuing is the daily experience of drivers going to and from work. The local plan recognises the problems in para 2.14. Much of the road network is single-carriageway, and junctions act as constraints. The key evidence on future traffic conditions is provided in the Strategic Highway Assessment Report (SHAR) which summarises the results of the tests carried out by Surrey County Council at the request of GBC. Five scenarios were examined using SCC’s strategic traffic model. Scenario 1 contains all developments and planning permissions from 2009 to date. As such it corresponds to today’s circumstances, and describes the current unsatisfactory traffic conditions in peak periods. Scenario 5 represents the position at the end of the plan period, including all development and highways schemes in the local plan. The results of the analysis show that there will be widespread congestion in the morning peak hour across the network. The key strategic routes, the A3 through Guildford NE bound, and the M25 between Junctions 10 and 11, are shown to be at or over capacity. The summary network statistics presented in the SHAR, while useful, require some interpretation because the analysis of vehicle-hours is derived from link speeds only, and does not reflect junction delays and queues. The tables that show the ratio of flow to capacity and level of service are especially helpful to gaining an understanding of the conditions on the network in the forecast. Where the forecast traffic volume is above or close to capacity, flow becomes unstable and there is congestion. The SHA results provide evidence that, in 2031, congestion will be worse than it is today on much of the network. It is the case that the traffic modelling does not take into account the potential for increased use of other modes, but the trip rates used for developments already have built in the typical level of use of other modes, and services will be required to meet that need. It is also the case that the model does not allow for parks and ride, which would improve matters in the town centre, as discussed below. In order to gain an insight into conditions across the network, it is necessary to combine information from several tables in the SHAR. Table 4.5 shows that the M25 and A3 will be at capacity in Scenario 5. The other roads that will have poor levels of service include those in Table 4.5 but also those in 4.12 (except the A3) and those in Tables 4.3 and 4.4 with levels of service E and F that will not be given some relief by improvement of the A3 in Scenario 5. Paras 4.10.3, 4 and 5 point out that there will be increased congestion. Given that the starting point is unsatisfactory, there can be no expectation that the schemes in the Infrastructure Development Plan will provide an overall improvement. There will be some local benefits, such as the Ash rail bridge for example, but in general conditions will be as bad and in many places, such as Compton Village, worse. So the statement in the SHAR para 4.2.5 that ‘the combined mitigation as reflected in Scenario 5...indicates that at the strategic level it accommodates the additional PSLP demand’ needs qualifying – ‘at the cost of a lot of queuing’ and makes no mention of the impact this will have on pollution, which is already a known problem at the A3 end of Compton. The
cumulative effect of the additional traffic generated by the developments in the local plan will be to increase congestion, even with the proposed highway schemes in place. More detailed analysis of the junctions and queuing is required. So we question the conclusion that the developments would have “an acceptable impact on the capacity of the highway networks in terms of the policy test set in paragraph 32 of NPPF”. Appendix 3 of the Transport Topic Paper shows the phasing of housing development and transport infrastructure. The major scheme being considered for the A3 between the A31 and the A320 is scheduled for delivery in the period 2023/24 to 2027/28. The strategic developments at Blackwell Farm and Gosden Hill Farm are shown as being phased in from 2021/22 onwards. The Garlick’s Arch development is shown as starting in 2019/20. Therefore, there will be a period in which the existing A3 has to cope with the additional demand arising from those developments before extra capacity is provided. The following comments regarding the strategic sites are taken from the SHAR: Blackwell Farm – there will be congestion at the A31 junction, and the problems at the Tesco junction, and the Egerton road/Gill Avenue junction (para 4.9.5). Traffic is likely to access the Surrey research park and the RSCH through the development (para 4.7.3) Gosden Hill Farm – there will be an increase in traffic through Burpham. There will be pressure on the A3100/B2234 roundabout (paras 4.7.6, 4.7.7 and 4.7.8). Wisley – traffic will increase on minor roads to gain access to the A3 (N and S bound) and other routes (para 4.7.11). The development will add more traffic to the A3. The Burnt Common slips help alleviate the traffic through Ripley according to the model, but queuing on the A3 could mean this does not happen (para 4.7.14) Normandy/Flexford – the report has little to say about the impact of this large development. The increase in flow on Westwood Lane is noted (para 4.5.7). Tables 4.10 and 4.11 show junction delay reducing at the Westwood Land, B3000 junction, but an increasing at the Puttenham Hill/Millbrook junction. Ash – development in Ash is not specifically addressed, but there are major increases in traffic on a number of roads. The new rail bridge will bring relief (but traffic will move to the next junction). Slyfield – there are no remark relating to SARP, and as there are no additional trips shown in and out of the Slyfield residential zone in Tables 3.3 and 3.4, it is possible that this development has been omitted. There is a significant increase in trips to and from the Slyfield industrial zone, which will impact on the A320 and Clay Lane. Town Centre – the report has very little to say about the town centre. It is evident that the model is forecasting severe congestion on the approaches to the town centre, such as the A281, the A31 Farnham Road, and Woodbridge Road for example. No mitigation measures are planned. And in the Transport Strategy, GBC states that the intention is to adopt Allies & Morrison’s Scenario 2 which would have the effect of significantly reducing the capacity of the town centre road system. The implications have not been examined, but traffic using the A281 from Waverley, for example, would be affected.

The B3000 will be severely affected by development schemes and will not benefit from road improvements. It is essential that the impact of all change to road networks are looked at in conjunction with one another for any survey to be meaningful. The local plan does not state an objective for congestion. The two strategic objectives that are included for infrastructure refer to supporting sustainable development and delivering a balanced system. However, in para 2.15 there is an aspiration expressed about opportunities ‘to improve the performance of the road networks through transport infrastructure and service improvements’, which taken with the previous paragraph includes reducing congestion. The evidence so far shows that this will not happen. The mitigation proposed is not sufficient to overcome the problems that will be caused by the level of growth in the local plan. Congestion will worsen. The network will lack resilience and be vulnerable to disruption due to incidents. Minor roads will have to cope with a lot more traffic, for which they are unsuitable.

I object most strongly to the traffic congestion any additional development will cause to our local villages due to inadequate road infrastructure.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
**POLICY I1 - Infrastructure and delivery**

We object to this policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number. The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

1. I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.
Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

1. I OBJECT to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision for the increased capacity of Guildford hospital, where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
The traffic on Forest Road from early morning to late evening is already so heavy that one has to wait and wait to cross to visit or shop or get to Surrey gardens. The car park at Effingham Junction station is already full each day. Motorists even parking on the common road. East Horsely station car park would not be able to cope with an influx of commuters.

Understanding that development will be required in the future, I feel that the numbers cited are beyond reality. Little thought seems to have been given to the load on old infrastructure and drainage, school populations, transport or medical services. There seems to be no understanding of existing facilities in the villages or what might be required in the future.

Hoping that more careful thought and planning will be given to the future of these areas and the concerns of the residents.

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1
Policy II: Infrastructure and delivery

I OBJECT to this policy.

- Various aspects of Infrastructure are acknowledged as congested, inadequate for the existing population and not able to accommodate much growth. However, greenfield sites – requiring heavy infrastructure investment – are targeted in order to generate CIL income for the council. This is not sensible. The current draft CIL scale also encourages development on greenfield sites rather than brownfield.

- The methodology commissioned by the Council to assess traffic and the corresponding roads infrastructure needs is inadequate for the purpose of the Local Plan and identifies only the tip of the iceberg in terms of existing congestion. Looking at local traffic situations around the Borough it becomes clear that the schemes proposed will not solve congestion and the local road network has not been given sufficient consideration. Under the growth proposed some locations would require highway schemes that involve demolition of property and road-widening in residential areas to solve the resultant congestion. Even the A3 improvements are not guaranteed to take place but they are being used to justify removing large areas from the Green Belt before detailed traffic assessments have taken place. These detailed investigations are being deferred until the planning application stage and will be left to developers to prepare. If a site then proves to be unsustainable its Green Belt protection will have been lost for no reason and unsuitable development will take place by a more insidious process.

- SCHOOLS - there appears to be no provision within the Council proposals for any immediate provision for any new schools or extension to existing schools, most of which are already under extreme pressure through oversized classes and lack of funding.
• **HEALTH SERVICES** - there appears to be no provision in the Council proposals for any immediate provision for any new medical facilities such as Doctors Surgeries or extensions to existing facilities.

• **TRANSPORT** the introduction of a proposed 14,000 homes in the Borough will put an unacceptable and unsustainable pressure on public services that are already failing the public due to cut backs and lack of investment. Many residents will prefer to use their own vehicles to go even short distances and suffer the inevitable traffic jams, rather than use a public transport system that simply does not not encourage its use.

I trust that the above points are clear and that my objection will be recorded along with the many thousands of others the Council will undoubtedly receive as a result of their unworkable and highly unpopular development plan.

This road is dangerous in particularly when trying to access it from the station, a side road or a property.

At its narrowest Ifor one have been forced to mount the pavement to avoid collision from oncoming trucks none of which should be using a road like this.
There have been several accidents due to excessive speed. Some while ago speeds of up to 60mph by cars were recorded. Nothing has been done to sort out this problem. Any development which added more vehicles to the road would only make the problem worse.

I appreciate that the responsibility for the state of the roads is not your problem but the junction at the traffic lights where the A246 meets the A247 is a national disgrace. Perhaps you should spend more time pressing for this junction to be repaired properly rather than bodged.

**Document:** Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

**Do you consider this section of the document; complies with the Duty to Coordinate?** ( ), **is Sound?** ( ), **is Legally Compliant?** ( )

I strongly object to the lack of immediate provision for new schools.

I strongly object to the lack of any immediate provision for Doctors Surgeries.

I strongly object to the lack of any immediate provision for a new hospital. The Royal Surrey hospital already serves a vast length of the A3 road as the next hospital going south is Portsmouth. The Royal Surrey hospital and other major hospitals situated in the county of Surrey are already stretched to the ultimate limits.

I strongly object to the lack of any immediate provision for new roads to link local and neighbouring towns. The existing roads are already grid locked not only at peak times but now throughout the day with the slightest incident that brings chaos to the local roads.

Junction 10 of the M25 the main hub for Heathrow and Gatwick airports is now regularly at a standstill throughout the day. The proposed 2016 Draft Local Plan would result in many thousands more vehicles (ie cars and commercial vehicles) attempting to get on the M25 at junction 10 and also using the local roads that link towns.

I strongly object to the lack of any immediate provision for new transport links. With grid locked roads new railway tracks will have to be laid. The London underground system will now need to expand into the Guildford Borough especially with a link to the airports also local towns and neighbouring borough towns as all of the current road structure will become impossible to use.

**Do you consider this section of the document; complies with the Duty to Coordinate?** ( ), **is Sound?** ( ), **is Legally Compliant?** ( )

I object to the 2016 Draft Local Plan as below:
Roads the traffic is already terrible here in the morning to the A3 and from 4pm to 7pm constant queues both to the A3 and from it through Burpham and as each house may have two cars chaos will ensue.

It’s no good having 2000 new homes (hopefully affordable not £800,000 to £1,000,000) until you have built schools first. There are no school places in Guildford, also need other infrastructure such as shops, church, parks etc.

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure.

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the K2.47 through West Glandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Glandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems. With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Glandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough's infrastructure is already heavily strained. However the plan's determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council's methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy 11. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough's infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic.

It makes implementation critically dependent on providers outside the Council's control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

### Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

**Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )**

1. **I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy II)**

There is too much traffic in our villages already and this plan will cause more congestion in Ripley, Send and Clandon, with no plan to improve that.

The rural roads in this area are narrow, in poor condition and have no footpaths. 5000 more houses means dangerous and unsustainable traffic. Every time there is an accident on the A3 or the M25 the local roads become gridlocked. In the morning and evening the traffic queues through Ripley, along the A3 and onto the M25, more housing with thousands more cars will make the roads impassable.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

The air pollution levels are already unacceptable and I would be annoyed if the GBC should legally sanction new houses being built, let alone a school putting further strain on pollution levels and the physical safety of the occupants.

This area is near the most built up traffic hot spot area in the county. Junction 10 of the M25 is a traffic black spot which has a clear adverse affect on important routes into the city and to two major airports.

The local roads cannot cope safely with the increase if traffic there is no room for lorries cars and cyclists as it is. There have been numerous accidents recently on local roads and the GBC will be sanctioning the dangerous road usage that will lead to deaths of road users.

Page 836 of 1294
These three policies cover Infrastructure & Delivery. Whilst we support the general policy statements as presented, it is the detailed infrastructure proposals for Guildford Borough which give me cause for concern.

I believe there are serious deficiencies and shortcomings in the infrastructure of Guildford Borough as it is today and that the aggressive housing policy as proposed by GBC in the Proposed Submission Local Plan will exacerbate this problem.

I would make the following comments specifically about infrastructure in East Horsley today:

- Roads across the parish are in poor condition with many pothole Many roads are unable to sustain their current levels of traffic, particularly the increasing levels of HGV traffic;

- The principal through roads traversing East Horsley are narrow and winding, have a series of pinch points, have sections without any pavements and are generally As a senior sec councillor remarked at a recent public meeting in the village hall: "East Horsley has lanes, not roads." East Horsley's 'lanes' are totally unsuitable for high volumes of traffic, in particular for the volume of HGV's now using them;

- Many of the drains are blocked or otherwise in poor condition giving rise to frequent surface water flooding when it rains;

- The pavements are in poor As well as being narrow, they are often uneven and/or cracked making it difficult, for example, for people with pushchairs or prams or in wheelchairs;

- There are insufficient school spaces for the number of local children needing them, with the result that children are often allocated to schools a significant distance away such as Darking or Woking; and

- The Medical Centre in East Horsley is already at capacity in terms of its number of

Furthermore, I would observe that the traffic at the A3/M25 Interchange (Junction 10 of the M25) is already at a point where significant delays and congestion occur every morning. My personal experience is that this congestion has worsened significantly over the past few years. Whilst the plan references improvement to this junction, these may ease the current issues, but adding the housing proposed for the Horsleys, Wisley Airfield, Ripley and Send will likely result in no improvement, but rather worsening of an already unacceptable situation.

In respect of East Horsley, there are only two specific proposals in Appendix C:

LRN 25 - East Horsley and West Horsley traffic management and environmental improvement scheme. It is not clear what is proposed here, and its timing and funding have to be considered uncertain. It is stated that funding will, at least in
part, come from developer contribution. However, it is not at all clear what development is likely to give rise to such a contribution, but it certainly implies that funding could only come if there were a development; and

HSC 5 - Expansion of East Horsley Medical Centre to provide additional capacity and services for future population in years 5 - 15 of the plan.

There are no proposals in respect of all the existing problems with for example roads, pavements, drainage, and schools.

Furthermore, it is inevitable that the proposed developments in East Horsley itself and nearby, particularly in West Horsley and the proposals for Wisley, will put further strain on the existing infrastructure. There are no proposals at all to cater for this.

Although an expansion of the Medical centre is proposed in the Infrastructure Schedule, this is not until years 5 - 15 of the Plan. Given that it is already at capacity, EHPC believes that this needs to be done earlier.

Local primary schooling is also a very pertinent issue. There are 11 housing development sites identified in the LAA for East and West Horsley, which taken together would result in the building of 593 new houses in the two parishes that are today served by a single primary school - The Raleigh, in West Horsley. Planning guidance suggest that this number of new homes will require the provision of around 150 additional primary school places to accommodate such an increase in population. Today there is no spare capacity at The Raleigh, yet no proposals are made in the Proposed Submission Local Plan to provide for any more schooling in the Horsley's.

I believe that the failure to address the inadequacies of the existing infrastructure to meet the needs of what is there already is a serious deficiency in the Proposed Submission Local Plan.

I accordingly OBJECT to the infrastructure proposals on these grounds. I further OBJECT to the proposals for infrastructure in that they do not meet the stated objective of providing infrastructure to support the proposed developments.

POLICY 14 Green and blue infrastructure Isupport this policy.

I am writing to register my feedback on the Guildford Local Plan. I support the Guildford Residents Association (GRA) response and oppose Guildford expanding by a quarter.

Whilst I accept that there is a need in the UK to build more housing, I feel that the proposals outlined in the Local Plan for Guildford are excessively large - simply put, the volume of building outlined is too large for the town's infrastructure.

The infrastructure in Guildford is not ready to support such a large-scale development - before adding even one quarter of the number of properties proposed in the Plan Guildford needs:

- vastly increased capacity on the trains to London for everyone who has to commute to London to work (there are not enough jobs in Guildford to support the current population, let alone a massively expanded one);

- a remedy to the issues caused by the A3 (splitting the town in half, with commensurate social effects, causing gridlock in the town at rush hour and whenever there is frequently an accident);

- increased crossing points over the river, railway and A3 to make transport easier and unite the town (ideally the A3 and the railway should run below ground);

- integrated rail and bus services - there is currently not one single bus running from the mainline station, the main entry point for visitors and commuters;

- bus passes which enable local residents to use buses cost effectively, and encourage people not to drive into the centre of Guildford;

- proper cycle lanes to and from the station and other key destinations to encourage people out of the cars and reduce the volume of traffic on the roads.

I see no progress on any of these items - they should be the number one priority of the council. **Any approval of new housing schemes should be dependent on these issues being addressed. No properly thought through infrastructure - no houses!** The proposed infrastructure additions in the plan - adding stations at Park Barn and Merrow - will exacerbate the problems experienced by the rest of the existing infrastructure.

And I have not mentioned the issues around unjustified Green Belt development - squandering our greenfield sites in a single Plan, robbing future generations and destroying one of the main things that makes Guildford unique and attracts people to live here in the first place.

I expect our councillors to defend Guildford against these plans and to fight for improvements which will benefit existing and future residents, and make our town a UK leader, not a concrete backwater.

POLICY I1 - Infrastructure and delivery

I OBJECT. Most of the borough’s infrastructure is antiquated, congested and straining to accommodate even current needs and organic growth. Yet this plan’s commitment to building housing estates across the Guildford countryside will mean either major infrastructure investment that no-one is prepared to pay for or else a catastrophic and simultaneous collapse in transport, educational, medical, energy, water and communications services.

The plan targets greenfield sites – requiring heavy infrastructure investment – in order to generate CIL income necessary to meet an infrastructure shortfall that is already serious. This is not sensible. The current draft CIL scale also encourages development on greenfield sites rather than brownfield.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing infrastructure needs in this area is inadequate, identifying only the tip of an iceberg of existing congestion. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that involve demolishing property and road-widening in residential areas to solve the resultant congestion. The A3 improvements are not guaranteed to take place but they are being used to justify removing large areas from the Green Belt before detailed traffic assessments have taken place. These detailed investigations are being deferred until the planning application stage and will be left to developers to prepare. If a site then proves to be unsustainable its Green Belt protection will have been lost for no reason and unsuitable development will take place by a more insidious process.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritising greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognising this as a key issue, the plan is based on a wing and a prayer.

I object to a totally unrealistic number of houses for the country lanes to absorb.

I object to the 2016 Draft Local Plan as it has had no regard to schools required, additional medical or hospital facilities which would make a plan sustainable.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

1. I OBJECT to the lack of infrastructure planning for sites (Policy I1) specifically for site A43 Garlick's Arch, which is allocated as a strategic site. There is no provision for improvements to the basic utilities such as power and sewerage and indeed the Garlick's Arch site has 3 electricity pylons directly running through the entire site. The local health service provided by The Villages Medical Centre in Send is already at capacity and serves the combined local communities of Ripley and Send. There is no provision to address this key issue.

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.
With some 5000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

1. I OBJECT to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Doctors Surgeries, Schools and Transport are already struggling and when the cyclists are using the roads one might as well stay in doors.

My wife and family moved here 40 years ago to get relief from an area (Laleham) where similar problems were starting to show. Look at it now. It has completely lost it village status and has become attached to Staines which is pure suburbia. Do you know this area?

I suggest you and your colleagues reconsider the proposed development before it gets out of hand.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
As residents of East Horsley we know how difficult it is to get an appointment at the Medical Centre without a few days wait and even longer if wanting to see a specific doctor. With the current shortage of general practitioners how guaranteed is it that additional doctors will be found to staff the medical centre? We both have to travel to London currently for medical reasons and know how difficult it is to get a parking space after 10.30am. How will the car park cope with the extra commuter cars from the proposed developments? How do you plan to enlarge Horsley Station car park? We do not have the problem of worrying about local schools but one of our sons has that problem and has no option but to send his children to private school because of the over-subscribing of places.

The roads around the area are in an appalling state numerous pot holes. Drainage is poor in many places. A couple of years back we had such flooded roads that it was impossible to get to Cobham whichever route was taken due to flooding. Wear and tear on the road will increase and certainly with huge haulage vehicles backwards and forwards in the development stages residents lives can only get worse and accidents will occur. The narrow roads in the area are already congested and the large number of cyclists together with haulage vehicles should be a cause for concern.

Station parade has been designated a "District Centre" - when did this come about and what does it mean for future development?

The development of 2,000 houses at Ockham (Wisley Airfield) would have an enormous impact on the facilities available in Schools, medical centre, parking all will be affected. The total number of houses which GBC proposes to be allowed in their plan is far greater than those that should be needed according to official national estimates for population growth in the Borough. How did GBC arrive at a figure that is 70% higher than the official national estimate?

Overall the proposed plan is over-ambitious and badly thought through and does not take into account the unique area in which we live. We accept that more houses need to be built to cater for the demand but a very large housing estate will only badly affect the environment and facilities of which there are problems already with the current number of residents. The planners need to rethink this before they destroy this lovely area.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
Increasing the population of the local area by up 35% would require more schools, medical centres and drainage to name a few. Nothing about these developments have been mentioned in the plans. The schools are already full and the medical facilities are stretched with the current population.

To summarise my objections, I have serious worries for the following with the proposed building plans:

- Detrimental effects on already full public transportation, roads, and local car parks
- Detrimental effects on wildlife
- Detrimental effects on the village community

Air pollution becoming worse in the local area.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/3657  Respondent: 15344065 / Ian Hills  Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Apparently the villages around Guildford are to be removed from green belt status allowing for the possibility of new housing to be built around them. Apart from the desecration of the beautiful countryside that Surrey is famous for, the road system around here of narrow lanes (incidently still full of potholes) simply cannot cope with the increase in traffic that further large scale development will bring. Developers are allowed to build, take their large profits and leave the Council to sort out the resulting infrastructure mess - which the Council never does.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/3686  Respondent: 15345025 / John Weaver  Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

The Raleigh school is the only state primary school that serves both East and West Horsley and it is full and over subscribed every year. So, where are the increasing number of young children going to attend school or do you expect the school to absorb the extra pupils in much larger class sizes or portacabins?

I serve on the committee of the Kingston Avenue Medical Centre Patient Participation Group which is the only NHS GP surgery that serves both villages. It is currently working above capacity, is finding it difficult to recruit and retain Doctors, and could not absorb the population increase from the proposed developments.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/3709  Respondent: 15345249 / Mark Lewis  Agent:
In my opinion the plan does not have any regard for the current infrastructure within the area, which cannot cope with the current traffic conditions and the requirements of the current population, with the current facilities over stretched from schools to the local doctors surgeries. It is a plan that will profit a number of developers who have no regard for the area or the local population and this is wrong and immoral.

I would therefore like this email to be logged as an objection to the proposed plan and await the acknowledgement for my records.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?
Schools: Local schools are already at capacity – where will newcomers go to school? No extra places are planned in the Horsleys, and the school places proposed at Wisley Airfield will not be planned until many years into the project.

Medical facilities: Similar situation to the schools.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I have just received notice of a proposed development of 154 houses by Copperwood Developments on land adjacent to Ash train station. Recently I received notice of a proposed development of 115 houses by Persimmon on land off Foreman Road. These are in addition to 450 houses currently being built behind Ash Manor School off Manor Road.

If these proposals are passed that will be an extra 729 houses in Ash. That means over 2000 extra people including 700 to 800 children not to mention over 1500 extra cars!!

1. Where will the people go for their health care? It already takes over a week to get a routine appointment at Ash Vale Health Centre.
2. Where will all the extra children go to school? Several schools in Ash have been closed over the past years and the land sold, ironically, for housing!!
3. Where will all the extra cars go? Ash is already very busy with traffic, especially at commuter times. With an extra 1500 cars we can expect gridlock!! Car parking at the shopping areas in Ash is also beyond its capability. Further cars will make daytime parking in the village intolerable.

Additionally the two areas proposed are both to the south of the A325 Ash to Guildford Road which has been a natural southern boundary of the village and designated as land bordering the Green Belt. Where will development stop – when it reaches the Hogs Back road??

All this in addition to a proposed development of 1100 house a mile away in Normandy. I sincerely hope that all three proposed developments are turned down otherwise this currently rural area will become yet another urban jungle with an infrastructure that cannot cope.

These three new proposals for Ash & Normandy are ludicrous and must be rejected.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

3. Where will all the extra cars go? Ash is already very busy with traffic, especially at commuter times. With an extra 1500 cars we can expect gridlock!! Car parking at the shopping areas in Ash is also beyond its capability. Further cars will make daytime parking in the village intolerable.

Additionally the two areas proposed are both to the south of the A325 Ash to Guildford Road which has been a natural southern boundary of the village and designated as land bordering the Green Belt. Where will development stop – when it reaches the Hogs Back road??

All this in addition to a proposed development of 1100 house a mile away in Normandy. I sincerely hope that all three proposed developments are turned down otherwise this currently rural area will become yet another urban jungle with an infrastructure that cannot cope.

These three new proposals for Ash & Normandy are ludicrous and must be rejected.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

---

4. The plumbing and drainage systems cannot cope with heavy rainfall now. Water bubbles up and road flooding is rampant.

   1. The Doctor’s surgery in east Horsley is over-stretched currently and patients have to wait weeks for an appointment. Even the emergency sessions are forced to limit the number of patients they can deal with.

6. The school is always full and there is no room for an extension to the building.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**
I may be naive but I am not being disrespectful but I have always understood, and voted accordingly, that the local councillors are there to protect the interests of the ratepayers and if the answer is that this is a Government instruction, surely no Government Minister intends that a council should destroy an entire village to meet a doubtful planning target.

2. On the same theme, this plan will encourage more pollution in this area due to the massive influx of cars. The Government is supposed to be reducing pollution to protect public health.

10. The public is constantly inundated with the needs of OTHER people but what is happening to the needs of the West Horsley population? Do they deserve to have their whole standard of life as they know it destroyed and that of their families.

All these objections also apply to East Horsley and any possible development at the Wisley airport site. The majority of people in this area commute to London. More trains can possibly be laid on but where will the commuters’ cars park? Not in the railway station car parks. They are already full to capacity.

Finally if the plan goes ahead the developers will come, build their houses, walk away with enormous profits and the villagers will have to pick up the pieces.

Please reconsider this plan for all our sakes.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I wish to OBJECT in the strongest possible terms to the above plan as it effects the Green Belt villages of East and particularly West Horsley. The proposal that would increase the size of West Horsley by something like a third – adding 385 dwellings – provides more problems than it offers solutions and poses a host of unanswered questions such as:

O The green belt can only be built on in exceptional circumstances and – regardless of the insetting smokescreen – what are the the exceptional circumstances for Guildford Borough Council’s decision to abandon the Belt and change the character of West Horsley for ever? Especially as there are exceptional reasons why the scale of the envisaged changes is completely and utterly unsupportable. Vital infrastructure such as medical services, education and retail outlets are already mostly unavailable for the current rate-paying population of the village. The residents have to share with neighbouring East Horsley for the still inadequate facilities provided there.

O A basic environmental requirement is adequate drainage. Thames water have advised in no uncertain terms that the current wastewater network for West Horsley is unlikely to support the anticipated demand from the number of planned extra dwellings. What is GBC proposing to do about it?
What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Comment ID: PSLPP16/3788  Respondent: 15348033 / Peter Nicholas  Agent:

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1).

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time; particularly at weekends, hundreds of cyclists pass through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments, there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk of injury to the public. In the case of West Clandon, the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

1. I OBJECT to the lack of proper infrastructure planning for sites (Policy I1).

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity...
and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further.

There is no provision for increased capacity of Guildford hospital.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
On infrastructure, the revised plan proposals do not address the additional strain on despite the overwhelming objections on subject in response to the previous consultation.

In particular the wording of Policy ID1 has been amended to give the impression that provision of adequate infrastructure will be enforced. However, this is not within the gift of GBC. but, in the case of the road network, by Surrey Highways and Highways England both of whom will be influenced by budgetary constraints elsewhere within their jurisdiction. Equally traffic Impact assessments will be prepared, and paid for, by applicants and not by GBC and will therefore present a biased outcome in support of any development.

I object to the inclusion of all sites other than brownfield sites on the basis that that GBC will be unable to secure or enforce the provision of the requisite infrastructure provisions either by negotiation with developers or through other government agencies. Any development must be in current urban or brownfield site areas where there is already an appropriate infrastructure provision.

**Document:** Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

**Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )**

The proposed 35% increase in Horsley households as the result of the proposed 533 houses (plus smaller developments) seems completely disproportionate and cannot fail to impact on our already overstretched medical facilities, schools and roads.

Public parking in the small commercial areas for shopping etc is already very tight and the increase in household numbers would result in extreme under provision.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )**

The impact of the proposed development would have a hugely adverse impact on the quality of the environment in the two villages, radically altering their character. The proposals would effectively turn the two villages into a new town midway between the existing settlements of Guildford and Leatherhead, eroding the open spaces that are such an important feature in the identity of the Horsleys.D1

The proposals take no account of the inability of local infrastructure to cope with such a large scale of development. Already the roads through the villages carry much more traffic than they were designed for and are bedevilled by inappropriate commuter traffic and lorry use. The local surgery and schools are oversubscribed, and the Horsley station car park has no spare capacity. Parking in East Horsley village is also under pressure.

**Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )**

4. The existing infrastructure in terms of roads, drainage, schools, and medical services, cannot sustain the additional need arising from such extensive housing. The roads around the village are already very busy and the car park at Horsley station is invariably full during the week. There are known sewage overflow problems in the Ockham Road North and Green lane areas. The Raleigh primary school, serving both East and West Horsley, is full every year, and the Howard of Effingham, the only secondary school with reasonable distance is oversubscribed every year. Kingston Avenue Medical Centre, which serves both Horsley villages, is struggling to cope with existing demand.

I should be grateful if you would take my views into account in this matter.

**Objections to Guildford Borough Proposed Submission Local Plan (June 2016)**

I OBJECT in the strongest possible terms to the Guildford Borough Proposed Submission Local Plan (June 2016). This Plan is unsustainable, unworkable and, in many provisions, unnecessary.

I set out below my objection to specific policies and matters within the Plan. Please ensure that I receive written confirmation that you have received this correspondence by emailing me your acknowledgement.
Please also ensure that my objections are seen by the relevant Planning Inspector.

I have itemised my objections below but also wish to support some of my points by recalling personal experience and other observations (A-C)

A. FLOODING: The Garlick’s Arch area is a catchment area for The East Clandon. This stream poses a significant flood risk to parts of Send Marsh, especially when there is heavy rainfall in a short time period. Any development of the Garlick’s Arch area will significantly increase the rate of “run off” and this is likely to overwhelm the capacity of the stream though Send Marsh.

B. Increased traffic congestion. Traffic levels in the area are already high. The road infrastructure cannot cope with more. This is highlighted when there is a problem on the A3 or M25. Traffic diverts through the Ripley / Burnt Common area and there is gridlock.

I respectfully remind Guildford Borough Council that it has a duty of care to residents and this must be taken into consideration when evaluating the impact of traffic in the area.

I respectfully remind Guildford Borough Council that it has a duty of care to residents and this must be taken into consideration when evaluating the impact of traffic in the area.

As a regular visitor to Ripley I object to the local plan on the grounds of its bad effect on traffic in Ripley and Send, congestion,

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

The planned addition of over 500 houses (probably housing in the order of another 1500 to 2000 people) in the Horsley's would have huge negative impact on the local community and would overload the already stretched infrastructure with significant deficiencies in the potential provision of additional Healthcare and parking in either of the Railway Stations. There is little or no Public transport, so this does not provide alternates. Schooling in particular is already oversubscribed and adding up to 1000 more children to the area would be catastrophic.

Infrastructure - There is little detail on the Infrastructure required to support the proposed housing development. There is already an overload on East Horsley facilities such as Medical, schooling, parking and the narrow roads of this rural The usual suggestion is that the infrastructure will follow the developments but this is always years behind. The pressure on East Horsley from increased housing in East and West Horsley, as well as the prospect of a major (2000 homes) site at Wisley is frightening to those living in the Horsleys.

Create a new area with its own holistic health clinic, school, shops and everything for a new community, including cycle tracks and maybe some stables for horses to be used on the land and for transport too.

This is a practical and fair way forward we think.

I have lived in Horsley since a child in the 60's and attended local schools in that time i have seen a massive change in the facilities and infrastructure of the village and local area.

Already the roads around Horsley are pot holed and in bad repair the A3 is now bottled necked everyday around Junction 10 M25.

The waiting time to get an appointment at the local doctors is now over 2 weeks and there are no places at the local schools.

All this is before any of the proposed 593 houses in the Horsley as well as the possible 2000 at Wisley i strongly feel that Horsley cannot support this level of development.
With all these projects it will be a few developers and land owners who will make a massive profit and the local community who will once more suffer.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

3) The impact on our local services will be highly detrimental. Already, the stress of getting into the local doctors surgery at a suitable time or even just finding a suitable place to park can be very stressful to a large number of older residents in particular. Parking in the village is already poor especially at the weekend where even a minor event such as a wedding can make it extremely difficult. How will schooling cope? You are already adding to a county wide crisis of building more new homes with ever decreasing neighbourhood facilities.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I would like to object in the strongest possible terms to the proposed increase in the number of dwellings in the Horsley area. The schools are already full. It is almost impossible to get a Doctor’s appointment without a week or two’s delay. It is difficult to park for the shops and the volumes of traffic are already equivalent to that of a busy town rather than 2 villages. Please reconsider!

| Comment ID: PSLPP16/4162 | Respondent: 15356801 / Clare Harlow | Agent: |
9. I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming even more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

10. I OBJECT to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**
Comment ID: PSLPP16/4204  Respondent: 15357217 / Camilla Cressy  Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

The Drs surgery is already impossible to get appointments at so more people living in the area would cause a massive strain on that.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I strongly believe that any development plan should go hand in hand with other social infrastructure, hence if you plan to build more houses, people also need roads to get access, schools, shops, etc. alongside them.

Thank you very much for your attention and I hope you make a wise and sensible decision about the plan.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Comment ID: PSLPP16/4217  Respondent: 15357697 / Ros Reeves  Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I am writing to object most strongly to the latest 2016 Local Plan as it is not sustainable. The plan involves more houses, more industrial buildings, more lorries, more traffic congestion, more pressure on medical surgeries and more pressure on school places as well as open spaces being a thing of the past.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )
Education

I have two young sons, my eldest is 3 years old and we hope that he manages to get a place at Burpham Foundation Primary School for the 2017 intake and then on to the George Abbott when he is 11. Schools in the local area are heavily oversubscribed and adding 2,000 homes to the local area will obviously make the situation much worse. There is insufficient details about schooling and who will be providing additional school places for the Gosden Hill Farm development, as such the Local Plan should be considered unsound. I am very concerned that my children’s education will suffer due to this unnecessary development at Gosden Hill Farm.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
At present there is already very bad parking anywhere in Horsley village for visiting shopping areas, doctors surgeries and schools. The developments will change the whole character of the area and will no longer be the area which everyone has bought into and loved.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

In addition the infrastructure of the area including roads, local facilities such as they are, as well as services for water and drainage are already stretched and in the latter case clearly insufficient. Ockham Road North and South have significant pinch points and the junction by Station Approach is dangerous without introducing more traffic with another junction close by to accommodate more housing by the station.

I understand that the local schools are also full and the medical facilities stretched, I must therefore object to the designation of this area as a District Centre, which clearly it is not nor could be.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Existing village boundaries reflect the ability of the local infrastructure to provide reasonably for the current population. However, the local infrastructure is already overloaded and at times struggles to cope: there are not enough school places, our medical facilities are stretched, the roads and car parks have reached their capacity and the trains are frequently full. We cannot accommodate a significant increase in the local population without people’s quality of life being seriously affected. To increase housing in the Horsleys by over 30% would put a completely unreasonable strain on these villages. Extension of the village boundaries now is a precursor to even more potential development which would be even more detrimental to the environment for existing and new residents.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Policies I1,I2,I3,

I further object to: in a nut-shell, the roads and infrastructure pose a limit to the enforced growth which GBC want to implement; the roads simply could not cope with major increases in vehicles that will derive from increased development and foul waste / rain water drainage are at full capacity already.

Ripley is a good example of the every day build up in traffic congestion: infilling within the Parish boundary and use of the High St. as an ad hoc by-pass for the A3, has pushed levels to saturation at certain times. With greater than 5,000 houses planned close to Ripley, this will inevitably lead to massive grid lock and higher levels of pollution they already registered. This latter point contradicts the intention stipulated within I3, in regard to mitigation of detrimental impact on air quality and public health.

I would also add that to date none of the developments within Ripley's boundary have been charged with improving the community's local road network or foul waste systems. As a matter of common sense IMO that situation will soon become unsustainable in the face of increases in housing and vehicles, unless there are major improvements in infrastructure, paid for by the developers.

The local infrastructure is patently unable to cope with the growth assumed in the Plan as doctors’ surgeries, schools and particularly roads, are currently struggling to cope with the needs of the existing population. Specifically, there is an omission to the Plan as it excludes the Town Centre Master Plan and the effect this could have on the infrastructure, specifically traffic in the outlying villages.

1. POLICY I1

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get
worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

**NFRASTRUCTURE POLICIES**

This section of the Proposed Submission Local Plan sets out details covering a range of infrastructure policies.

**POLICIES I1 Infrastructure & Delivery**

I2, Supporting the Department of Transport’s ‘Road Investment Strategy’

I3 Sustainable Transport.

I support the general policy statements in each area but the detailed infrastructure proposals appear inadequate. There are serious deficiencies in the infrastructure of Guildford Borough as it is today and GBC’s aggressive housing policy in the Proposed Submission Local Plan will make this worse. There appears to be no strategic plan for additional capacity in schooling and health care and for the narrow and already busy roads in the Horsley area.

If every new house has at least 2 cars, this means potentially 6,000 more cars within a three mile radius of the villages. The impact on local roads and transport facilities will be enormous. Parking at Horsley & Effingham junction stations, which are currently at capacity, at the shops, at the medical centre and at the village hall will all be affected. Local schools are already at capacity and no extra places are planned in the Horsleys.

The proposals for development at Wisley Airfield and for an upgrade the current A3 junction at Burntcommon to a full 4-way junction, SCC traffic modelling anticipates increased use of Guilesall Lane (single track with passing places!), Hungry Hill Lane and Tithebarns Lane for traffic accessing the A3 at Burntcommon in order to travel to Guildford and beyond. Traffic approaching Guildford from the M25 at peak times is already queuing back as the A3 goes from 3 to 2 lanes at the Guildford junction. The SCC report states that “consequently, it indicates that further thought may have to be given to managing traffic in this area as part of a transport assessment should the development be progressed”. The Plan is proposing a strategic site at Wisley Airfield without identifying what improvements to the local road infrastructure will be required.

I **OBJECT** to the proposals for infrastructure because they are inadequate to support the proposed developments

**POLICYA39: Land behind Ockham Road North, near Horsley railway station**
Policy A39 proposes a housing development of some 100 dwellings on a 5.7acre green-field Green Belt site behind the houses on the western side of Ockham Road North. I believe that the proposed western movement of the settlement boundary needed to bring this site within the settlement area is unjustified and contrary to NPPF rules. If this boundary movement is invalid then this site remains a part of the Metropolitan Green Belt.

I OBJECT to Policy A39.

1. POLICY I

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.
Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.
There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

**Document:** Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )
I OBJECT to the lack of proper infrastructure planning for sites.

I object to lack of infrastructure for the sites in and around Send. Many of the utilities in the area are at or very close to their maximum capacity, such as the electrical network and main drainage/sewers. No plans to improve these services should mean no developments in this village. The local Send Medical Centre is now operating at full capacity, are they any plans to increase this service?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Other Basic Infrastructure - There are no detailed plans for other essential infrastructure, power lines, sewerage, drainage, medical facilities, education and other transport options such as park and ride facility and rail station. The plan is again unsound.

The Royal Surrey County Hospital can barely cope with the population it serves now. There are no details as to how it will cope with potential 25% population increase. The Plan is again flawed and unsound.

Other Basic Infrastructure continued - The current water supply is barely sufficient for the current population as evident when Clandon House (built 1720s) burnt to a shell in April 2015 due to lack of water supply available to extinguish flames effectively. Currently the water supply for the Guildford area runs out in 4 hrs. The Plan is therefore unsound on this basis as it has no detail of how further supply would be achieved.

There is no capacity in the current sewerage system for expansion. The Plan is therefore unsound on this basis.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object to the fact that infrastructure has not been properly assessed and is inadequate to deal with current housing levels—roads, doctors, schools will not be able to cope;

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object to the lack of proper infrastructure planning for sites.
I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1).

5,036 houses are proposed between the M25 and Burpham (about 5 miles) which will obviously lead to a merging urbanisation of the identities of the villages. There is too much traffic in our villages already and this plan will cause more congestion in West Horsley, East Horsley, Normandy, Ockham, Ripley, Send and Clandon, with no plan to improve that. The rural roads in this area are narrow, in poor condition and have no footpaths. 5000 more houses in such a small area means dangerous and unsustainable traffic.

POLICY II Infrastructure and delivery

GROUNDS FOR OBJECTION Various aspects of Infrastructure are acknowledged as congested, inadequate for the existing population and not able to accommodate much growth. However, greenfield sites – requiring heavy infrastructure investment – are targeted in order to generate CIL income for the council. This is not sensible. The current draft CIL scale also encourages development on greenfield sites rather than brownfield.

The Council’s methodology assessing traffic and roads infrastructure needs is inadequate. It identifies only the tip of the iceberg in terms of existing congestion. Looking at local traffic situations around the Borough it becomes clear that the schemes proposed will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed locations would require highway schemes that involve demolition of property and road-widening in residential areas to solve the resultant congestion. The A3 improvements are not guaranteed to take place but they are being used to justify removing large areas from the Green Belt before detailed traffic assessments have taken place. These detailed investigations are being deferred until the planning application stage and will be left to developers to prepare. If a site then proves to be unsustainable its Green Belt protection will have been lost for no reason and unsuitable development will take place by a more insidious process.

1. POLICY II
I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.
Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable. 1. POLICY I

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.
Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
The amount of new housing outlined is disproportionate to that proposed elsewhere in the Borough and will swamp this rural area, changing its character and appearance forever. No infrastructure is proposed to support the development, which is contrary to National Planning Policy. The existing infrastructure: schools, roads, medical centre, sewage etc can not cope now. In addition a number of the sites regularly flood.

9. POLICY I1

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.
I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists pass through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

Adequate infrastructure provision is a precondition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development nonviable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

1. **POLICY I1**

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.
The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. 1. POLICY II

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy II)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.
The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

3. I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

There is no actual confirmed provision for any major road infrastructure to improve the current congestion, let alone cope with an additional 10000 car movements on the local roads around Ripley as a result of sites A43, A25 and A35 which are an allocation of nearly 4500 homes along a short stretch of the A3. It is extremely unlikely that many journeys will be anything other than by car given the location of these 3 sites. The A3 is already at capacity according to Highways England and they have no intention of even looking at this section of the A3 until at least 2020, with an earliest estimate of any further works unlikely until at least 2027. The local road network is made up of a significant proportion of narrow, poorly maintained, unlit country lanes with no possibility of mitigation. In addition, these lanes are frequently flooded after heavy rainfall and suffer from significant water runoff from surrounding agricultural land. This traffic congestion is clearly already a significant problem for the current residents of Ripley, Send, Horsleys and Clandon who cannot be expected to endure further traffic chaos with the suggested locations of these huge new sites.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

13. I object to the lack of proper infrastructure planning for sites (Policy I1)

The Plan does not identify adequate infrastructure improvements to support the huge scale of development, especially at Garlick’s Arch (A43) which has no infrastructure projects in the Infrastructure Schedule to support it. Local services, utilities and sewerage, medical facilities etc. are at or close to capacity in this area of the borough and will not therefore be capable of coping with such high numbers of additional housing and industrial employment space.

There are no plans to improve or make provision to increase the capacity of the medical and police/emergency services to cover the 5000+ houses in the north east of the borough.

The site at Garlick's Arch is also traversed by high voltage electricity pylons with no provision for either removal, burial or re-siting and it is unclear as to who will meet the substantial costs involved.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

1. I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure
There is no actual confirmed provision for any major road infrastructure to improve the current congestion, let alone cope with an additional 10000 car movements on the local roads around Ripley as a result of sites A43, A25 and A35 which are an allocation of nearly 4500 homes along a short stretch of the A3. It is extremely unlikely that many journeys will be anything other than by cargo. The location of these 3 sites. The A3 is already at capacity according to Highways England and they have no intention of even looking at this section of the A3 until at least 2020, with an earliest estimate of any further works unlikely until at least 2027. The local road network is made up of a significant proportion of narrow, poorly maintained, unlit country lanes with no possibility of mitigation. In addition, these lanes are frequently flooded after heavy rainfall and suffer from significant water runoff from surrounding agricultural land. This traffic congestion is clearly already a significant problem for the current residents of Ripley, Send, Horselys and Clandon who cannot be expected to endure further traffic chaos with the suggested locations of these huge new sites.

I object to the large proposed development at of 2,000 houses at Wisley Airfield, 2,000 houses at Gosden Hill and 1,850 houses at Blackwell Farm because it will destroy large areas of Green Belt and agricultural land and again produce congestion on the A3 and surrounding roads including Send. The local infrastructure is completely inadequate to deal with the proposed housing levels. These are massive areas of lovely countryside and protected Green Belt that is just being turned into urban areas. Roads, doctors and schools will be unable to cope. I also object to the fact that 70% of the proposed 13,860 houses are targeted at the Green Belt strung along the A3 which will have a massive impact on the open amenity of the borough and produce gridlock on the A3 and surrounding roads including the A247 which as I have...
already mentioned is already well above full capacity. The A3 is already massively gridlocked both northbound onto the M25 and southbound as it passes Guildford!

1. **POLICY I1**

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritising greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the Borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognising this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.
Policy 11 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

The present transport links and infrastructure is completely unable to sustain the level of development proposed and the increased traffic flows which will result. The proposed Sustainable Movement Corridor (SMC) is unsound and will result in gridlock and terminal congestion in the Burpham area particularly if the proposed Clay Lane link to Slyfield goes ahead which at present proposes to use the same corridor and northbound slip road onto the A3.

The plan does not address the strategic problem of the A3 which is critical to the area; additional slip roads and roundabouts will only add to the volume of traffic and the ensuing congestion that is being created at present and another route or link to the M25 needs to be considered or other alternatives explored such as widening the A3 or the creation of a tunnel to ease Guildford's traffic problems and the increasing volume of traffic that is being generated on the A3.

It needs radical change before any of the proposed schemes can go ahead as the transport infrastructure is a major constraint on any future schemes and this problem should be addressed before and not after development goes ahead.

There ought to be an alternative to the A3. Consideration should be given to widening and improving the A25/A246 to provide an improved route to the M25 via Fetcham and Leatherhead to the A24 and J9 of the M25.

Any future developments could then be orientated to the A25/A246 rather than cascading yet more traffic onto the A3 and thereby compromising the identities and centres of the existing 'spring line' villages and Burpham in particular which is just not designed to cope with the volume of traffic that will be generated by these proposals.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

Attached documents:
2. All the new housing developments: It is true we need more houses, but then we also need the wider roads, the transport, the parking places, the schooling as well the clinic and health department. All the talking is about so many houses, but not one word if you planning a new station, etc.

The roads in East Horsley or the Horsley are terribly narrow. These enormous trucks taking the right away the bigger family cars this is asking for many accidents. Then there will be no facility for medical dealing with it, the parking at the stations are not big enough. So start with the essential construction to create a new village such as shops, schooling, medical place, station, electricity, gas, telephone lines and sewer system.

When that is in place, then think of all the heavy trucks going using the short cut in our village, so narrow the entrance into our roads from the A3, 246, and Cobham.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy II. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy II requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable. There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy II)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I object to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular pastime, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians. The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements. There is the local school with young children walking along the road on a Monday to Friday basis, which is dangerous with the current level of traffic prior to any increased traffic that would result from further housing on the proposed scale.

<td>I write to note my objections to the Proposed Local Plan. That the Local Borough could propose such a plan, with total disregard for the necessary infrastructure for it to be in any way viable is nothing short of ludicrous. My main objections, which echo the sentiments of almost the entire village, are as follows:</td>
</tr>
</tbody>
</table>

1. **Schools & Medical Facilities/Local Amenities** -

   Local schools are already at capacity - where will newcomers go to school? No extra places are planned in the Horsleys. We specifically moved to the area as a family so that our daughter could be schooled at the local school. Already bursting at the seams, there is no provision for the extra potential 1000 children to be educated. WHERE WILL THESE CHILDREN GO TO SCHOOL? The same problem exists with the local health centre. There is again no provision whatsoever. There is similarly no plan for the necessary local amenities for the additional homes. Where are we to shop? It seems the ‘plan’ is to throw up as many houses as possible, ignore the Green Belt and hope for the best.

2. **Increased Traffic and Lack of Parking Facilities** -

   On the assumption that every new house has at least 2 cars, this means potentially 6,000 more cars within a 3-mile radius of the Horsleys. The impact on local roads will be awful. The roads are already in a terrible state, continually crumbling due to the strain of existing traffic and poor drainage causing flooding. Parking at Horsley & Effingham Junction stations (which are already full), at the shops, at the medical centre and at the village hall will all be untenable.

I object to the lack of proper infrastructure planning for sites (A43 and A42)

The Foreword to the plan by Paul Spooner includes on page 5:

"We recognise that significant infrastructure upgrades are required to support existing communities and the planned growth of the borough. The delivery of sites allocated in this plan is contingent upon the provision of new infrastructure, which is a key theme of our Local Plan”.

The lack of any plan for either physical or green infrastructure improvement clearly contradicts this in respect of both A43 Garlicks Arch and A42 Clockbarn Nursery, Tannery Lane, Send. Development of these sites without the contingent infrastructure would therefore be contrary to the stated aims and themes of the Plan, and should not go ahead.

Although I live in Cobham. This plan would severely impact on our area. One of our main objects is the fact that Cobham is the nearest shopping centre to the proposed development. Cobham cannot possible cope with any increase in traffic - let alone some 5000 additional occupiers.
Also, there has been a suggestion that Cobham & Stoke d'Abernon station could be used as an alternative station to Effingham and Horsley. It is almost impossible to find a parking space in Cobham station carpark already. Any additional passengers would make the situation intolerable.

These are only two of many objections - but ones which would impact on our lives in Cobham.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.
Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
We are writing to object strongly to the proposed New Local Plan published by the Guildford Borough Council on 6th June, 2016. As a resident of East Horsley for 18 years we are concerned that the proposed developments will irreversibly alter the nature of the Horsley villages by over-burdening an already stretched infrastructure, the consequence of which will be a material degradation in the quality of the village community and the surrounding environment, itself an area of outstanding natural beauty. It is also clear that there are no adequate plans to cater for the increased infrastructure requirements were the plans to be approved in terms of sufficient additional community facilities for example, medical facilities, increased road traffic management and community and railway car parks.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

We simply do not have the infrastructure to support even this infill development never mind the proposals contained in the local plan. Dr's Surgeries are very busy and appointments increasingly difficult to make.

Roads are totally inadequate with big lorries screaming through the village (there should be a weight limit).

Parking is very difficult most of the time and impossible some of the time. The flooding issue is not contained. Whenever there is heavy rainfall there is excessive surface water and flooding on the main roads. The main arterial road A3 is frequently blocked and the fact that we have the research Park, the university, the cathedral, and the hospital all pouring on to it at the same junction make it a no go area at certain times. This situation is not going to be helped by the proposals to build thousands of houses in the area.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

I object to a totally unrealistic number of houses for the country lanes to absorb.

Facilities

The huge additional housing both in numbers and percentage terms will have a significant impact on the infrastructure. Specifically:

- **Doctors Surgery** – I have an 88 year old mother and making an appointment at the surgery is very difficult. If an additional 533 houses are built in the Horsleys, which is a huge percentage increase it will become impossible.
- **Parking** – Is at its limit at both the station and at the East Horsley shops and there is no obvious way of extending this to cope with the additional cars from 533 extra houses.
- **Roads** – All the local roads are country lanes either without pavements or single sided pavements. Again the area will not be able to cope and there is no scope for improvement.
- **Schools** – Are at full capacity so there is no where for additional children to go to school at either primary or secondary level.
- **Surface water flooding** – Is particularly serious in East Lane and elsewhere in the villages of West Horsley and East Horsley. East Lane is flooded every year during storms. The development either side of East Lane will make this worse as will the developments elsewhere in the Horsley villages
- **Water supply** – Is very weak.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
vehicle traffic being generated from these developments there is a real danger that there will be an increase in road traffic accidents involving cyclists as a result of the development proposed under the local plan. This comes at a time when many of the local schools are trying to encourage cycling within their School's Travel Plans (STP's).

Most of the local rural roads also do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians. To example, in Clandon, where footpaths do exist, they are often very narrow in places with construction lorries mounting pavements in order to pass, and this has been already well documented by West Clandon Parish Council.

10. I object to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick's Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, I share the view that my family and I along with all other existing residents' in the locality will see our quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick's Arch site. The farm land around the South bound extension, floods regularly. Should this development go ahead, I expect that the flood waters will be pushed close to my property and will present greater risk of flooding.

I also note that without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and very likely be overwhelmed. It is well documented that many local services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

I am also concerned with the general reduction in future Police funding (Surrey Police identified that it needed to save £28.4m over the four years of the spending review between March 2011 and March 2015). Savings have been made, but their scope with new developments will increase, creating extra pressure. This will have further impact to all local residents as local Police will have 13,860 new homes during the plan period.

The road infrastructure is inadequate to cope with any further development in the area. The A247 running through West Clandon is narrow and dangerous and is overloaded with traffic, before any major housing or business developments take place in the area. Traffic is always congested at peak times and many other times heading north on the A3 with cars trying to access the M25. Regularly the M25 is closed and all the traffic comes through the Clandons. Also Stag Hill is congested each night.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1. Infrastructure issues:

There are, as the consultation documentation recognises, important infrastructure requirements if there is to be any further housing development in the Guildford area. With regard to Shalford the A281 needs relief and not more traffic joining an already congested road. If, as is widely anticipated, the Broadford brown site development in Shalford proceeds this will test the stretched infrastructure and should not be compounded by development on the fields behind the Village Hall. Chinthurst Lane is a rural lane without footways. Many residents, including children, those with pushchairs, walkers and runners are forced to use the carriageway. The traffic generated by additional houses would aggravate the current vehicle/pedestrian conflict in the lane and be at odds with its attractive semi rural character. Since land adjoining the carriageway is in part in private ownership, in part registered common land and the provision of footways would spoil the lane's character, the absence of footways will continue to exist. The Society objects to the fact that the infrastructure has not been properly assessed and is inadequate to deal with current housing levels - roads, doctors, schools will not be able to cope if there is development before suitable infrastructure arrangements are in hand.

At the present time there are understood to be some 2808 houses in East and West Horsley combined and if the present Local Plan is adopted it would add 533 houses on 'large' sites and 60 houses on 'small' sites within these two villages - a 21% increase! As Horsley residents, we think it is excessive and objectionable.

This increase, moreover, should be viewed against the proposed developments within a 5 mile radius of Horsley, in particular 2000 houses on the Wisley Airfield site, 400 on Burnt Common, and 2000 at Gosden Hill Farm, making in all 4993 houses, a staggering total which will, in our opinion, completely ruin the current attractive rural character of the area.

It is thought that the inflated number of new proposed houses arises from a 'Strategic Housing Market Assessment' that was generated by a consultant's mathematical model - not revealed in the Plan. That housing number has been increased by GBC to give a population increase which is almost 70% higher than the official national estimates for population growth in the Borough, which thus leads to alarming results.

It is not just the increase in housing which is relevant, but all the changes that come with it - for example, the increase in population and household cars, demands for school, medical practitioners and hospital places, and transport facilities, which have to be considered against the existing positions. In the Horsleys, the local schools are full, medical facilities stretched, roads are overloaded and drainage inadequate.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the road's serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

1. **POLICY I1**

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.
This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1. I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)
   In our short time here, we have already noted there is too much traffic in our villages already and this plan will cause more congestion in Ripley, Send and Clandon, with no apparent plan to improve that. The rural roads in this area are narrow, in poor condition and have no footpaths. 5000 more houses means dangerous and unsustainable traffic.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

1. I object to the lack of proper infrastructure planning for sites (Policy I1)
   The Plan does not identify adequate infrastructure improvements to support the huge scale of development, especially at Garlick’s Arch (A43) which has no infrastructure projects in the Infrastructure Schedule to support it. Local services, utilities and sewerage, doctors etc. are at or close to capacity. There are no plans to improve the capability of the medical and police/emergency services to cover the 5000+ houses in the north east of the borough.

School facilities

I object to the plan on the grounds of the impact to local schools, which are already at capacity and with an extensive waiting list. There are no extra places are planned in the Horsleys, and the school places proposed at Wisley Airfield will not planned until many years into the project.

Traffic & parking

I object to the plan on the grounds of the additional vehicles and impact this will have on local parking and local roads. Assuming that every new house has at least 2 cars, this means potentially 6,000 more cars within a three mile radius of the Horsley villages. Parking at the, already full, stations, local shops and amenities will all be seriously affected.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Do you consider this section of the document; complies with the Duty to Cooperate? (), is Sound? (), is Legally Compliant? ()

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure.

The proposed development under the plan will cause greater congestion in and around our villages. Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The A247 through West Clandon is a real issue of concern as an "A" road with inadequate width, inadequate lighting and inadequate speed control.

Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists pass through the villages on the way to the Surrey Hills. There are no proper cycle lanes on the narrow local roads surrounding the villages and with greater vehicle traffic being generated from the proposed developments there is a real danger that there will be an increase in road accidents involving cyclists directly as a result of the development proposed under the local plan.

The Plan does not provide an achievable strategy for improving capacity on these local roads. To wilfully add traffic load would be quite irresponsible.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon, The Street (A247) generally only has a narrow footpath on one
side of the road making it very dangerous, especially when vehicles mount the pavements as has happened most recently on 12th July 2016.

We note that the local road strategy allows for 30 electric car charging points, but we would suggest that this is likely to be an underestimate in the coming 20 years, given the rapid increase in acceptance and adoption of electric/hybrid cars in recent years.

POLICY I1 - Infrastructure and delivery

I object to this policy:

1. The Council’s methodology for assessing traffic congestion - averaging it over periods of 3hrs and ignoring the effects of junctions - simply hides the problems which will be caused by the proposed scale of development. The borough’s infrastructure is already heavily strained particularly with respect to local roads, existing congestion and public transport. The planned housing will make this far worse but CIL money cannot in general be used to address existing shortfalls but only for enabling infrastructure. The local road network has not been given sufficient consideration and bus services are being cut.

2. The Plan assumes that infrastructure is not a constraint and will be in place as needed. However this provision is critically dependent on funders and decision makers outside the Council’s control and is in no way guaranteed.

3. It is highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

4. A key element of infrastructure seems to be the so called “snake” across the town. The evidence that this will cause the benefits claimed for it is very skimpy and sections of it have not yet been shown to be feasible.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Policy ID1 Infrastructure – Objections

1. Even if all the infrastructure listed in App C to the Plan is provided in a timely fashion, the Plan admits “we forecast that there will also be an absolute increase in overall traffic volumes” and also that congestion at junctions will increase (but this is not modelled so we don’t know by how much or where). Residents are being asked to accept very large amounts of development but to take it on faith that Highways England’s as yet unformed plans will solve the problem of the A3.

2. The cumulative effects of the developments in the north east of Guildford are certain to have a devastating impact on the A247 through West Clandon (and of course on Send) and it is hard to see how any of the infrastructure proposals in the Plan (App. C) will do anything to mitigate this impact. GBC has little or no control over the plans of Surrey County Council as the local highways authority and it is well known that they have no money available.

3. Developers are now expected to fund nearly all of the infrastructure elements and planning permission will be refused if timely provision of infrastructure cannot be secured. I question how realistic it is to expect developers not only to pay for all the infrastructure but also to have it in place in a timely fashion. It is very likely that each refusal on those grounds will be appealed and it is unlikely that the courts will come down on the council’s side in all cases. Developers’ business models are based on building and selling houses to create the cash required to provide infrastructure. Problems will have arisen before infrastructure will be put in place.

4. If development were to be refused the land would still have been removed from the green belt and its future rendered uncertain.

5. The developments in the north east will draw very large amounts of additional traffic to the A247 through the village of West Clandon and there is no reference to this in the Plan. The employment sites and schools will cause considerable additional traffic on the A247 generated by:

- residents moving around the area

- children from elsewhere being delivered to Gosden Hill schools and collected
- the employees of the offices and industrial sites getting to work and returning home

- the vehicle movements generated by distribution and storage activities

- traffic from Wisley wishing to travel south and returning

- traffic from Gosden Hill wishing to travel south and returning

- traffic from Slyfield wishing to travel south and returning

- private and commercial traffic originating in the south and accessing Gosden Hill, Burnt Common or the A3 and returning (including traffic from Dunsfold)

- SCC’s business plan for Newlands Corner

The A247 through West Clandon is classified as an A road but it has none of the characteristics and should be downgraded. The road is a well-known problem (to Surrey Highways for example) and a number of domestic planning applications have been turned down on highways objections. It is quite unsatisfactory to even consider putting more traffic on a road that:

- is less than 2 vehicles wide in places

- does not have continuous footpaths

- has several very sharp bends

- has a hump-backed bridge with poor sight lines

- has many properties with very poor exit sight lines

- has a very difficult and dangerous junction with the station access road

- has a dangerous junction with the southbound A3 on-slip road

- is largely unlit

- has a primary school

- is already very congested at times

1. it is very clear that the developments proposed in the 2017 Local Plan will increase the amount of traffic on the A247 over and above that in the 2016 draft to which residents strongly objected. The A247 is quite unsuited to coping with additional traffic and there is nothing in the Infrastructure Schedule which addresses this issue. Indeed several of the infrastructure proposals will themselves lead to significant increases in traffic on the A247.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages.

Also, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. The road surfaces are in a poor condition with many potholes. I object to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as Ripley, already suffer from parking problems. Further development around these villages will only result in more traffic and more parking problems.

With some 5000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the village on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths and are unlit at night. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

I object to the lack of proper infrastructure planning for sites

I have serious concerns over the planning of the infrastructure requirements and wonder that any will be put in place at all.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. I know as I live there. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

9. POLICY II

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy II).

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads. Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow: wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever more popular past-time, particularly at weekends when hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding
the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road traffic accidents involving cyclists as a result of the development proposed under the local plan. The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring additional accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The Borough’s infrastructure is already heavily strained. However the Plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The council has a statutory obligation to protect the public and the additional traffic flows will bring additional accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problems, which will get worse as development proceeds. The schemes referred to in this Policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this Plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the Plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the Borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This Plan, however, assumes infrastructure will follow the needs of housebuilding. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of Community Infrastructure Levy (CIL) income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to, capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision for increased capacity of Guildford's hospitals: where is this assessed and remedied?

INFRASTRUCTURE AND DELIVERY. Policy I1
I OBJECT, infrastructure is already hopelessly congested and cannot cope with even organic growth. The policy does not seem to mention roads and traffic which is the major cause of congestion, anyone who drives either up or down the A3 at any time of day will tell you how congested it is. Adequate infrastructure MUST be a pre condition of sustainable development. Greenfield sites present huge infrastructure problems and brownfield sites already have it in place, so it is much more sensible to use brownfield sites.

Policy 11 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

I am a retired SECAMB Paramedic who used the hospitals in and around Surrey. Over the years I have have seen these hospitals struggle against the increase in the numbers of patients being treated. Even when I retired 6 years ago, the ambulances had to wait excessive lengths of time waiting for spaces to become available in A&E, from what I am told by my colleagues who are still working, the situation has got much worse.

There is also a strain on the local GP's, with the numbers of doctors not going into General Practice, it is a situation that will only get worse over time.
There are insufficient places in local schools, any increase in demand will again only exacerbate the problem.

Our roads are even now grid locked, the traffic on A3 and M25 is often reduced to a crawl at all times of the day and obviously worse during the rush hour and school run.

The Guildford Borough Council plan to build over 14,000 houses is madness, even 10% of this figure would create problem.

The villages in around Guildford are currently delightful places to live, PLEASE DO NOT RUIN THEM, IF YOU DO, IT WILL BE YOUR LEGACY

As a regular commuter with a young family we moved to the area for space and to enjoy the green spaces. I am dismayed to find that the plans propose to remove Horsley from the Green Belt, ruining the villages and their surrounds. The knock on impact of additional housing is of great consequence to schools, medical facilities, parking and over crowded trains. No distinction will be discernible between Horsley and any other suburb of Greater London if this building and development work is permitted to continue on the scale proposed. Our creaking drainage systems and busy roads with well known pinch points will deteriorate further with untold consequences.

I implore you to reconsider the options available, but at all costs protect the Green Belt for generations to come.

Having recently reviewed the proposed developments within the GBC boundaries, I feel I must object to all of the proposals due to:-

An inadequate road network that could not cope with any additional traffic.

The utilities cannot meet current demands yet alone an increase in demand for their services.

The impact of thousands of proposed properties would have a huge detrimental effect on the villages (Ockham, Send, Ripley and The Clandons in particular) affected.
The local Health Centres struggle at this time to meet demand both from trying to recruit trained staff and the demand of the current population. Additional demands would see staff moral dropping and therefore the quality of Health Services will diminish further.

I would suggest that you have received many similar objections to the proposed developments.

Therefore please reject all planning applications until at least the above concerns are rectified.

The M25, A3, A247 and other local roads are busy roads with daily traffic jams occurring - the roads can not take anymore traffic. The infrastructure is not in place to facilitate any more houses.

To increase a village population by over 30% without any thought to the additional strain placed on already strained local services, roads, schools/education, transport, drainage is misguided to say the least. The impact of 450 + new homes and the 900 additional cars that will add to the village roads, will seriously change the character of the village and will put local children who cycle or walking to school - something quite rightly encouraged by the local primary school- in a very position indeed.

I object to the lack of proper infrastructure planning for sites (A43 and A42)
We recognise that significant infrastructure upgrades are required to support existing communities and the planned growth of the borough. The delivery of sites allocated in this plan is contingent upon the provision of new infrastructure, which is a key theme of our Local Plan.

The lack of any plan for either physical or green infrastructure improvement clearly contradicts this in respect of both A43 Garlicks Arch and A42 Clockbarn Nursery, Tannery Lane, Send. Development of these sites without the contingent infrastructure would therefore be contrary to the stated aims and themes of the Plan, and should not go ahead.

The Garlich Arch, Burnt common, Send & Wisley proposals will have a devastating affect on the quality of life, and pollution from the traffic it would generate, as all these developments will necessitate their traffic to be directed through Ripley. Ripley has already become a by pass for the A3, which on a daily basis has problems.

I object to building on the Green Belt in any of the designated areas, including Wisley Airfield, Burnt Common and in Send.

I object to the proposed number of new houses in an area where residents experience traffic congestion every single day, where I have to drive my husband to the station at Effingham Junction as there are no parking spaces for his car by the time he leaves after 9.30am, where it already takes two or three days before a doctor's appointment is available in East Horsley, and the Waitrose car park in Cobham already has a daily queue for entry which blocks the approach road. Cobham, Ockham, the Horsleys and Ripley are already at capacity for the road and support infrastructure.

In the meantime if we choose to go to Guildford to support the Farmer's Market the traffic getting in and out is painful. Last weekend I had to complete my weekend meat order by calling in at the butcher's in Bramley. The A281 back to Guildford was solid so I went via Godalming and there was a roadworks diversion on the Charterhouse road. I sat in traffic for an hour trying to get home to Cobham. Compton was at a standstill. There are already too many people here!
I have lived in Ockham for 37 years and the quality of life has diminished here in that time along with the air quality due to the increase in traffic jams on the A3. Your local plan does not make life better for the residents who have been paying GBC Council Taxes for many years - we get less for more money.

In the meantime Guildford Town centre has great capacity for residential development in the hideous and dirty car parks around the cinema for example. I went there when the cinema in Esher was being refurbished and had the worst cinematic evening out in my life. To have a drink before the film we crossed a three lane road to the nearest hostelry on an earsplitting roundabout, and the pub floor literally squelched with spilt alcohol and stank. I was embarrassed to have brought foreign guests to the "City" of Guildford which seemed as poor and shabby as a Third World country. North Street is like Belfast in the 1970's. Spend our money on smartening up your town before you concrete over our Green Belt!

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

The local infrastructure is already under great strain. The schools are full and medical facilities are sorely stretched. The volume of traffic is extremely heavy and way beyond what a rural village shroud be expected to bear. The roads are totally inadequate for the volume of traffic and numbers of heavy lorries which use the B2037. Existing pavements are too narrow and pedestrians are constantly at risk from vehicles which are far too big for the local roads or from vehicles which travel much too fast through the Horsleys. There is little or no scope for expansion of the current infrastructure.

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.
Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

I OBJECT to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

**Document:** Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

**Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )**

I object strongly to the G.B.C. proposed new local plan.

Whilst I appreciate that there is a need for some development there is also a need to protect East Horsley village. The greenbelt is vital for this and any "exceptional circumstances" need to be clearly explained and demonstrated which is not the case. P2

Also, the area cannot cope with a new development at Wisley. Already, the roads are, at times gridlocked, the schools are full and cannot expand, the medical facilities are stretched and the shops and parking are barely adequate now and as for air quality and drainage they would only worsen.

The former Wisley Airfield should NOT be on the draft local plan and I strongly object that, after it has been thrown out by the Guildford Council, that it is still included.

I object to the methodology of drawing up the plan. Guildford Borough employs consultants who allegedly have planning expertise but have done so without taking account of Surrey County Council highway planners' views, or the costs involved in improving the infrastructure, currently out side their financial capability.

I object to the 2016 Draft Local Plan as it has had no regard to schools required, additional medical or hospital facilities which would make a plan sustainable.

The reason we moved to this area was due to the Green Belt area, and these additional homes will virtually make one large new town between Aldershot and Guildford. I don't believe sufficient plans have been made for infrastructure to support this increase, not only for traffic but also for vital services such as doctors and hospital. Local surgeries are already under strain with waiting times of up to 2 weeks for non urgent appointments, this can only get worse. Issues with being able to park in Ash Vale to shop already demonstrate how quickly a trouble free trip to the shops can become a nightmare as it has been impossible to park on some occasions since the opening of the Co Op in place of Budgens, there will be far greater requirements for this type of shopping, and no plans for appropriate additional shops or parking.

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1. I object to the proposals as many of these sites do not reflect the level of infrastructure in place to support such a volume of housing, from schools to medical facilities, shops, bus services, train station parking and We have seen how many villages in the area have been blighted by the bolt on Council Estates of the post war years - dumped on village back land with no regard to the architectural merits of the development, the local amenities on offer or the employment of the proposed residents. Each site should be considered on its own i ndi vidual
merits under the existing planning regime which has been designed to protect the environment of our rural life and given its particular circumstances.

2. I object to the proposal to build 100 houses on site A39 in East Horsley as it is fundamentally flawed. The plan already recognises that the site is in a flood plain and notes that the flood risk needs to be reduced and that accordingly there is to be no greater flood risk to anywhere else. Surely by interfering with the flood plain in this location can only transfer the flood plain impact somewhere else? That may be downstream of the site or onto adjoining properties. If there is no interference with the flood plain at the site doesn’t become viable for 100 houses. The existing proposal by Cateby Land to develop 100 affordable homes here simply does not sit comfortably with any sustainable, accessible or employment rationale. It is building the wrong types of houses in the wrong place.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
I live in Heath View East Horsley and although for reasons best known to the boundary dept I am technically in the parish of Effingham, I am very much a Horsley person having lived and participated in the village for the past 65 years.

The planned development sites will ruin the village. The wider infrastructure of roads, drains, schools and medical facilities will be completely inadequate. These issues are only addressed by a few short sentences in the a 250+ page report giving the strong impression the council does not care about the impact and consequences on the lives of the people already in the village.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the inclusion of Site Policies A42 Clockbarn Nursery, Tannery Lane, Send, A43 Land at Garlick's Arch Send Marsh, Burntcommon and Ripley, A44 Land west of Winds Ridge and Send Hill, Send, A45 Land at the rear of the Talbot, High Street, Ripley and A57 The Paddocks, Rose Lane, Ripley as there is already a very significant problem with parking in shopping areas locally and this would only be exacerbated by the addition of a further 507 local families. Ripley is particularly bad for parking with it often being impossible to find a free space. Send is not much better.

I object to inclusion of Site Policies A25 Gosden Hill Farm, Merrow Lane, A35 Land at former Wisley airfield Ockham, A42 Clockbarn Nursery, Tannery Lane, Send, A43 Land at Garlick's Arch Send Marsh, Burntcommon and Ripley, A44 Land west of Winds Ridge and Send Hill, Send, A45 Land at the rear of the Talbot, High Street, Ripley, A57 The Paddocks, Rose Lane, Ripley and the numerous Site Policies in East and West Horsley as together these would add more than 5000 new homes and probably 10000 cars to an area within 3 miles of Send.

This huge increase in local car traffic, which would be bound to have a major impact on the local villages of Ripley, Send Marsh/Burntcommon and Send, would significantly increase traffic congestion in the whole area to an unacceptable level.

It would also make the roads more dangerous for children going to/from school.

6) I object to the detrimental impact on transport, local roads and road safety. I specifically object to:

1. The assertion that the development will result in a meaningful shift to cycling and walking. The development is too isolated, and even within the development itself too spread out to anticipate a reduced reliance on private cars
2. The increased volume of car traffic. A proposed development of 2,068 homes would result in an estimated 4,000 additional cars on the roads
3. The congestion this traffic will cause on the narrow rural roads in Ockham and the surrounding areas, exacerbated by wide vehicles including increased bus and HGV movements
4. *The danger this traffic will be to local cyclists and pedestrians, due to the absence of any cycling paths and the lack of pedestrian footpaths (and the space to provide them)
5. *The increase in the already severe congestion on the Strategic Road Network of the A3 and M25. A further planning application at RHS Wisley (with a significant increase in visitor traffic) and a proposed 600 pupil secondary school on the site would add additional congestion at the M25/A3 junction as well as local roads. No
development can proceed without significant infrastructure enhancements to the A3 and M25. Partial improvement works on the A3 south of the site are not due to start until 2019 at the earliest.

6. The lack of suitable public transport. The local rail stations of Effingham and Horsley cannot cope with the proposed increase in passenger traffic and car parking is already at capacity.

*I would further object on the likelihood that such development in said or similar areas would eventually lead to the necessity of added facilities, amenities and infrastructure that could only serve in the destruction of our villages, rural areas and general way of life - envied by most of the rest of the world and thereby giving us one of the strongest tourist industries (and therefore large financial income) in Europe; damaging that would damage far more than just this borough’s income!*

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

These villages are currently severely congested throughout the day and parking in villages such as Ripley is already a real problem, further development in these villages will only result in more traffic and parking problems. The Plan does not provide an adequate or achievable strategy for improving capacity on these local roads which in many of the villages
particularly Ripley Send and Clandon are narrow and only wide enough for one vehicle at a time. Additionally many of these narrow roads do not have pedestrian footpaths and are both totally unsuitable and extremely dangerous for pedestrians. Bringing an addition of some 5000 houses being proposed close to the village of Ripley will exasperate this already congested area.

There is no proposed expansion of local facilities and infrastructure in line with the proposed addition to the total housing numbers. The village schools are full and there is no mention in the local plan about new schools to cater for the likely increased demand.

The roads in the Horsley’s are already very busy, very badly maintained, mostly unlit and with very poor drainage, which is in dire need of maintenance. There are blocked drains all over the village which have not been cleaned out in years – there is one in School Lane which is full of silt and has been for many years. The addition of more homes with drives and paved areas will only exacerbate the problem and result in greater water run off every time there is rain. Ripley Lane is impassable after any heavy rain, so how is more traffic in the area going to be able to use it?

The medical centre is in East Horsley and is already at capacity. There is a very limited bus service through the village on weekdays only and nothing at weekends. There is now no Newsagent or Post Office, and the only other village shop is due to close in the autumn. Existing residents must therefore use their cars to travel to East Horsley for the shops or railway station. This is without the massive increase in housing numbers planned.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Comment ID: PSLPP16/6921  Respondent: 15440705 / Jane Martin  Agent:
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

The one village shop in West Horsley may close when the current owners retire. The shop is small and as such has limited stock. There is also very little parking. Other ‘shops’ in the parade are a dentist and a chiropractor, neither of which ‘useful’ on a daily basis to the vast majority of the population of the village. The old post office shop as recently been converted into housing excluding any future ‘useful’ businesses to take occupancy. Residents of West Horsley regularly use the facilities (shops, library, doctors etc.) in East Horsley. The infrastructure, including parking in East Horsley is under increasing strain with the free parking behind Station Parade regularly being close to full.

The Raleigh school serves both East and West Horsley and is full every year with a waiting list. There are already village residents each year which are unable to secure a place. Additional housing will only exacerbate this situation. There are suggestions to relocate the school to increase places but these additional places do not account for the additional housing proposed.

Horsley does not have a secondary school meaning that places are already limited in number at the closest secondary - Howard of Effingham School. Other schools are not feasible for village children due to their distance from home.

There is suggestion that Horsley Medical Centre would be expanded. However it is already in need of expansion to serve the current community as appointments are hard to book, parking is limited. Will the Royal Surrey also be expanded to accommodate the additional 13,000 homes across the borough?

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.
Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular pastime, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy 11. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy 11 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.
Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally
Compliant? ( )

My objection is on the grounds that traffic in the area (particularly along the A323) is already bad particularly in rush
hour, and an increase by more than 2400 houses will only worsen this congestion.

The reason we moved to this area was due to the Green Belt area, and these additional homes will virtually make one
large new town between Aldershot and Guildford. I don't believe sufficient plans have been made for infrastructure to
support this increase, not only for traffic but also for vital services such as doctors and hospital. Local surgeries are
already under strain with waiting times of up to 2 weeks for non urgent appointments, this can only get worse. Issues with
being able to park in Ash Vale to shop already demonstrate how quickly a trouble free trip to the shops can become a
nightmare as it has been impossible to park on some occasions since the opening of the Co Op in place of Budgens, there
will be far greater requirements for this type of shopping, and no plans for appropriate additional shops or parking.

Guildford Borough Council Local Plan

This Local Plan appears to be very similar to the previous one which was described as not suitable for its purpose.

I object to the proposed Local Plan:

I cannot understand how anyone can expect residents to agree with a plan that is only half written. How can you suggest the building of hundreds of properties without detailed mention of the infrastructure. The infrastructure in East Horsley is already under great stress – full roads, full schools, full medical centre, full car parks and poor water supply and drainage. Main roads are not the total infrastructure of the community. I am particularly concerned at the proposal to build 100 houses beside the railway on Ockham Rd North. This road is already overcrowded and the new junction is very close to a small local school and near a junction leading to the station and Village Hall where only last week there was an accident writing off two cars.

The Local junior school is already oversubscribed, the site is tight and building more temporary classrooms will lead to serious overcrowding.

I OBJECT because of the lack of “total” infrastructure.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Comment ID: PSLPP16/7203  Respondent: 15445729 / Daren Aris  Agent:

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT to the lack of school places for all the new proposed houses.

I OBJECT to the lack of doctors surgeries in the area that are already stretched.
I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

1. We are particularly concerned about the winding narrow and dangerous route via the A247 through West Clandon which also results in vehicles using a cut through along the even narrower rural road. Ripley Road, through East Clandon from the A3. The Ripley Road is already dangerous and there are potentially many conflicts between vehicles, pedestrians and bicycles, particularly as this is on the Surrey Hills cycle route. The dramatic increase in houses in the area will only exacerbate the problem and we can for-see serious consequences, possibly resulting in injury or death as a result of the increased use. We would hope that the Borough would be held to account if this occurs.

I OBJECT TO POLICY I1 (INFRASTRUCTURE & DELIVERY)

- Infrastructure considered here as an afterthought, rather than pre-condition of development. Should be a key issue for the rest of the plan.
- Excessive housebuilding in countryside not supported by any funding or provision for infrastructure.
- Heavy focus on building on greenfield sites inefficient and unnecessary: cheap for developers but much more expensive for the public who have to fund the infrastructure.
- Draft CIL scale discourages use of brownfield land first.
- No plan for organic increase in existing traffic congestion, let alone once thousands of houses are built across the countryside. Local roads hardly considered. Green Belt being eroded before road widening/improvement plans certain, encouraging over-development of greenfield sites.

Schools:

I understand that the schools in West Horsley have no spare capacity to deal with increased demand for places. The present proposals will lead to a large increase in demand for places at the local schools. How do you propose to deal with that? Is there a proposed building programme for schools in the area? I don’t believe there is. So the inevitable solution will be ‘temporary’ classrooms installed on school sites. As a former County Councillor in Warwickshire and a governor of many schools there I know from experience that ‘temporary’ classrooms have a great tendency to become permanent classrooms as the budget never seems to be able to accommodate a proper building programme for schools. This sells short the children, the teachers and parents who deserve to have satisfactory conditions in which the children are educated. I therefore object to the proposals on these grounds.

As a relatively recent newcomer to Surrey from the Midlands I have always been impressed by the environment in the County and particularly in the villages of Surrey. These proposals would alter the nature of the village and the way of life enjoyed by villagers in negative way and I object to that.

7. I object due to the congestion that the development will cause to the local village road. (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition. I object to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as Ripley, already suffer from parking problems. Further development around these villages will only result in more traffic and more parking problems.

With 5000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become a popular past time, particularly at weekends and hundreds of cyclists pass through the village on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater traffic being generated from these developments, there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy II)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

Roads through West Clandon are extremely busy at rush hour and peak commuter periods. The development will only result in additional traffic through these routes, posing serious threats to life and health of villagers using the pavements and paths in the village. Heavy vehicles frequently mount the curbs and pavements at speed in these areas. Traffic is so heavy Station users in Clandon can wait for more than 10 minutes to pull out in busy periods, causing massive congestion in the village.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy II. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however,
assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Infrastructure. We already face a significant deficit in all aspects of infrastructure. Roads are congested, GP's surgeries and schools are at more than capacity. I do not believe that Guildford town centre, in particular, can handle increased pressure in any of these areas. So infrastructure planning must precede development.

The too small gyratory with its surfeit of traffic lights needs to be done away with. I totally support the idea of an additional road crossing over the river and railway in the area of the courts, and I believe the land which would be required for this should be safeguarded in the Local Plan.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
This will cause more congestion to the villages of Ripley, Send and Clandon, which have poor condition narrow roads and no footpaths, which are dangerous. More houses will increase this danger and unsustainable volumes of traffic.

The current and existing services are over-stretched now, so where are the infrastructure improvements to support the enormous proposed developments, including medical, public transport, schools?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/7610  Respondent: 15450785 / Georgina Love  Agent:
Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

The plan will cause greater congestion in Ripley, Send and Clandon. There appears not to be any plan to improve the infrastructure. The village roads are in poor condition and narrow and will be unable to sustain the volume of additional traffic. It will be unnecessarily dangerous and as a mother of two young children is a cause for serious concern.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object due to the congestion that development will cause to the trunk roads, A3/M25 (Policy I2)
The A3 or M25 would have to be improved before any development could be completed. Highways England do not have plans to look and consider improvements to the A3 until 2020. Clearly no real improvements are possible in the timeframe of this Plan so the developments at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25) are not viable.

I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition. I object to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as Ripley, already suffer from parking problems. Further development around these villages will only result in more traffic and more parking problems.

With some 5000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the village on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.
What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I OBJECT to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

**Do you consider this section of the document: complies with the Duty to Cooperate?** ( ), is Sound? ( ), is Legally Compliant? ( )

On infrastructure, the revised plan proposals do not address the additional strain on infrastructure despite the overwhelming objections on this subject in response to the previous consultation. In particular the wording of Policy I1 has been amended to give the impression that provision of adequate infrastructure will be enforced. However, this is not within the gift of GBC. but, in the case of the road network, by Surrey Highways and Highways England both of whom will be influenced by budgetary constraints elsewhere within their jurisdiction. Equally traffic impact assessments will be
prepared, and paid for, by applicants and not by GBC and will therefore present a biased outcome in support of any development. I object to the inclusion of all sites other than brownfield sites on the basis that GBC will be unable to secure or enforce the provision of the requisite infrastructure provisions either by negotiation with developers or through other government agencies. Any development must be in current urban or brownfield site areas where there is already an appropriate infrastructure provision.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested.

These narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians AND you have given no consideration to this point.

I walk my 3 children to Clandon School (along The Street in West Clandon - the A427) every day and have recently stopped doing this as the footpath is so narrow in places it is too dangerous. Lorries frequently mount the curb to pass one another with no consideration for pedestrians. Just this week (Tuesday 12th July) 2 cars collided on The Street in West Clandon and both ended up across the footpath. Fortunately noone was hurt this time. It is not safe now. Further increase in traffic will result in more accidents and certainly fatalities.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

The immediate shortage of suitable facilities for the increase in population alone is reason to be wary of this plan that seems ill thought out at best; but the damage this will do to our village, the environment, the birds and endangered bees; the increase in air, light and noise pollution, and the impact all this will have on our future has to be reason enough to halt the plans and reconsider.

<td>Current infrastructure surely couldn't support further housing and transport needs - very few of the local roads have pavements which enhances our rural aspect to the village, but will surely make the roads even more of a risk if the number of cars on the roads is increased. The few pavements that we do have are very narrow and we are often at risk of being hit by wing mirrors from lorries that pass by, as the roads are too narrow for two vehicles to pass each other and give room to pedestrians.</td>

<tr>
<td>The Impact of Additional Residential Housing and Population Increase on Local Facilities</td>
<td>I strongly disagree with the premise in the GBC Local Plan 2016 that Okham and the Horsleys are a suitable location for a large number of additional new houses. The housing numbers proposed for Guildford Borough are for 13040 homes over 15 years from 2016 to 2031. This number is too high. The number is based on a Strategic Housing Market Assessment (SHMA), which the council required to be amended by the Head of Planning. This amendment has not taken place and therefore the number of new builds proposed in the Draft Local Plan has no basis. I object to Guildford Council proposing a Draft Local Plan on the basis of flawed evidence.</td>
<td>As an inhabitant of West Horsley I know at first hand the existing population pressure on local facilities. The primary school in our neighbourhood (The Raleigh) is oversubscribed, in common with the local secondary school, the Howard of Effingham. The local medical centre is also filled to capacity. Residents of adjacent villages e.g., Ripley, East and West Clandon also use the centre. As a consequence, new residents to the village are known to register with alternative practices e.g., Bookham. In conclusion, the village services that currently exist in the Horsleys are already filled to capacity and do not have the facilities to accommodate the large number of new residents which would result from the increase in residential housing proposed in the Local Plan.</td>
</tr>
</tbody>
</table>
Impact of Increased Residential Population on Transport

An increase in the number of residents would result in a heavy increase in both construction related traffic and subsequent traffic arising from an increase in local population.

Most residents of the Horsleys work outside the villages. They either commute into London or Guildford by train, or travel by road to places of work and education. There are very few indigenous employment opportunities in the Horsleys. Essentially they are commuter dormitories. The residents of proposed additional housing are unlikely to be employed in the immediate vicinity of the Horsleys. They will therefore join existing commuters travelling either by road or rail. Horsley station car park is already filled to capacity, and there is no option to extend the car parking facilities for the station. The land is not available for expansion. Likewise, at Effingham Junction, there is little land to spare for additional parking facilities. I would conclude, therefore, there is limited potential for additional commuters to park at the local stations and commute by train. I might add, that Horsley station already serves as a rail hub for adjacent villages (e.g., Shere and Ripley), resulting in heavy road usage at peak commuting time. The housing development proposed in the Local Plan will increase the traffic volume through the village, resulting in additional air and noise pollution.

Key road links to the Horsleys focus on the A246, from Leatherhead to Guildford, and additional rural (narrow and winding) roads linking the villages to Ripley, Cobham and the A3/M25. The A246 currently carries a very high volume of commuter traffic at peak periods creating bottle necks and traffic congestion at both the Givons Grove roundabout on the Leatherhead bypass, and the Merrow roundabout on the outskirts of Guildford. The A3 likewise carries a heavy flow of traffic both into Guildford and north to the M25 at peak hours, with stationary traffic a frequent occurrence. The construction of additional housing in a rural area, which by its location and nature, requires inhabitants to travel predominantly by car, will exacerbate an already congested road network. This will clearly have safety implications, as more congested narrow, rural roads will result in a greater frequency of road traffic accidents and undoubted loss of life. It will also increase traffic congestion in local employment hotspots such as Guildford, and Leatherhead.

It makes much more sense to redevelop brownfield sites in Guildford and Woking to accommodate additional housing needs. This would have the advantage of providing new residents with the option of using the existing public transport network, or walking or cycling to work or school. They would also have a full range of urban facilities on their doorstep.

In conclusion, I strongly object to the new housing proposals outlined in the Draft Local Plan.

There is no plan to tackle the inevitable increase in traffic as a result of the developments. The local villages already suffer heavy traffic an increase in dwellings will only compound this problem.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

There has been no consideration given to the increase in traffic as a result of the proposed developments. The increase in the number of residences will further impact negatively on local villages already suffering as a consequence of heavy traffic and traffic congestion, particularly at peak times.

1. I object to the enormous amount of proposed housing causing huge increases in traffic, problems with finding school places for children in already over subscribed schools, problems for commuters in already over crowded trains, problems parking at the station and shops, pressure on local medical services. All these will ruin the lives of the residents of Ockham, the Horsleys and Effingham.

Not only that, the infrastructure simply does not exist, certainly not in the Guildford Borough where roads are already inadequate, hospitals and doctors surgeries are not coping, transport systems are under severe pressure as are the schools. The plan makes no provision for putting this right, just feeble remarks suggesting each development will have to look into available possibilities.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I further object on the grounds that the roads in the proposed areas are totally inadequate and already in a poor state of repair.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

You are ignoring all our objections. We do not wish our village lives to change. The infrastructure is not capable.

Building on this type of scale puts pressure on facilities, schools, medical centers which are all overstretched. Where money is involved, it is persuasive and services are shimped. In the past development has been gradual and on the whole well planned. Now everyone is getting on the bandwagon on infilling and developing any part of the greenbelt the council will allow, stop changing our lives and our area.

Traffic, already difficult, will increase dramatically especially where tannery lane meets the A247 junction. Which is highly restrictive. Our local roads are not designed for the increase in traffic for both the building part and then the residents once finished.

What the building of these properties in Tannery lane, Garlick Arch, Burnt Common, Wisley is proposing is the destruction of our village, our sacred greenbelt.

With the ancient woodland and our current way of life. Traffic will be increased to such an extent to be problematic. The effect of building on the flood zone always avoided will now effect local residents and its the everyday people who will suffer. By infilling in this way, the occupant will need to travel; out to work, increasing gridlock. Most houses have at least two cars per household and the majority have 4.

There is no circumstances that can warrant the destruction of our green belt and once its gone its gone, please take our objections seriously.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads. Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even...
more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan. The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians. The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a

Policy ID1 – The transport aspects of the Plan cannot be regarded as sound. The Plan provides a vivid description of the conditions on the network today and the evidence is that these will be as poor, and in some cases worse, at the end of the plan period, even with the mitigation measures. The evidence provided indicates that congestion will be widespread on much of the highway network in peak periods, even with the proposed highway schemes and with the measures to encourage the use of public transport in place.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )
I object to the lack of proper infrastructure planning for sites (Policy I1)
The Plan does not identify adequate infrastructure improvements to support the huge scale of development, especially at Garlick’s Arch (A43) which has no infrastructure projects in the Infrastructure Schedule to support it. Local services, utilities and sewerage, doctors etc. are at or close to capacity.
There are no plans to improve the capability of the medical and police/emergency services to cover the 5000+ houses in the north east of the borough.

This has been reviewed in detail by Richard Jarvis, a qualified civil engineer and expert in transport planning. His reports of the transport modelling and non road proposals are attached in Appendix 2. Also see comments on questions 1 to 3.
The transport infrastructure proposals are best summed up by “too little, too late”.
The Sustainable Movement Corridor is only shown as a concept. Its reliance on existing roads means its impact will need to be assessed and we do not have any indication of use. For example, will London Road traffic be deflected along Epsom Road and what will happen to queuing time at junctions for traffic that is not prioritised?
An appropriate site for a central bus interchange, so you can go in any direction from one point, has not been allocated.
There is no additional road bridge over the river and railway for our physically divided town.
We strongly welcome the Leader’s clear call that development should be contingent on infrastructure delivery and the policy that infrastructure should be available “when first needed”. However, policy I1 needs to be considered alongside
the infrastructure proposals in Site Allocation policies A24, A25, A26 and A35 184-192, 211-212 for strategic sites. These are discussed here to avoid duplication.

The following wording is of concern: “regard will be had to the delivery and timing of delivery of the key infrastructure requirements on which the delivery of the plan depends, set out in the Infrastructure Schedule in the latest Infrastructure Delivery Plan, or otherwise alternative interventions which provide comparable mitigation.”

We believe the weak wording “have regard to”, on which this policy hinges, needs to be tightened. Also the option of alternative mitigation could be used to justify a sticking plaster approach and to kick infrastructure provision into the long grass. We refer to our letter in Appendix 4 and the positive reply from the Council leader.

We are delighted to see reference to an A3 tunnel beyond the Plan period but we are concerned that land is not safeguarded for entrances or works areas. Even for projects within the Plan, it is not clear that all requisite land has been safeguarded (eg railways stations and sustainable movement corridor).

Object: Inadequate

<td>Because there are few buses, people living in the new development will need to use cars to get to work. They will either drive to work or to a station. In order to get to Woking station most will need to use the A247 through Send. The A247 is already heavily used. It turns sharply over the bridge across the Wey Canal into Broadmead, which is flood meadow land. At the end of Broadmead the A247 comes to a mini roundabout where it splits the traffic into Woking in two directions. Any blockage to the road, by delivery lorries, road works, traffic lights or the frequent accidents that occur, results already in paralysis of both roads into and out of Woking, and also to traffic through Send. The road is not designed to take the current volume of traffic, let alone the huge traffic increase which will result from the development. Drivers trying to avoid the jams find that the rural roads in this area are narrow, single lane for the most part, in poor condition and have no footpaths. More houses means more dangerous and unsustainable traffic.</td>

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

There is concern about the inability of current infrastructure to meet current and future needs. The policy recognises that the “Infrastructure provider” will maintain infrastructure in more cases, and developers can only offer a contribution via Community Infrastructure Levy. Until the current infrastructure can meet existing needs adequately, further development should be very targeted to meet only absolute essentials.

3. I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

At present the rural roads which service Ripley, Send & Clandon are narrow are in poor condition and have no footpath access. If developed with 5000 new homes, serious congestion would be incurred making the roads unsustainable for traffic.
There is too much traffic in our villages already and this plan will cause more congestion in Ripley, Send and Clandon, with no plan to improve that.

9.I OBJECT due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages already suffer from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on local roads.

Many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, West Clandon included, already suffer from traffic congestion. Development around these villages will result in more traffic and more parking problems.

With some 5000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become ever popular, particularly at weekends with hundreds of cyclists passing through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements, as they often need to.

10.I OBJECT to the lack of proper infrastructure planning for sites (Policy I1) Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being significant for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents will see their quality of life significantly deteriorate.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send, will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.
Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is not sustainable.

There is no provision for the increased capacity of Guildford hospital, where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Comment ID: PSLPP16/8269  Respondent: 15463713 / Tracey Broadhurst-Jones  Agent:

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the detrimental impact on transport, local roads and road safety. I specifically object to:

1. The assertion that the development will result in a meaningful shift to cycling and walking. The development is too isolated, and even within the development itself too spread out to anticipate a reduced reliance on private cars
2. The increased volume of car traffic. A proposed development of 2,068 homes would result in an estimated 4,000 additional cars on the roads
3. The congestion this traffic will cause on the narrow rural roads in Ockham and the surrounding areas, exacerbated by wide vehicles including increased bus and HGV movements
4. The danger this traffic will be to local cyclists and pedestrians, due to the absence of any cycling paths and the lack of pedestrian footpaths (and the space to provide them)
5. The increase in the already severe congestion on the Strategic Road Network of the A3 and M25. A further planning application at RHS Wisley (with a significant increase in visitor traffic) and a proposed 600 pupil secondary school on the site would add additional congestion at the M25/A3 junction as well as local roads. No development can proceed without significant infrastructure enhancements to the A3 and M25. Partial improvement works on the A3 south of the site are not due to start until 2019 at the earliest
6. The lack of suitable public transport. The local rail stations of Effingham and Horsley cannot cope with the proposed increase in passenger traffic and car parking is already at capacity

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object to the detrimental impact on transport, local roads and road safety. I specifically object to:

1. The assertion that the development will result in a meaningful shift to cycling and walking. The development is too isolated, and even within the development itself too spread out to anticipate a reduced reliance on private cars
2. The increased volume of car traffic. A proposed development of 2,068 homes would result in an estimated 4,000 additional cars on the roads.
3. The congestion this traffic will cause on the narrow rural roads in Ockham and the surrounding areas, exacerbated by wide vehicles including increased bus and HGV movements.
4. The danger this traffic will be to local cyclists and pedestrians, due to the absence of any cycling paths and the lack of pedestrian footpaths (and the space to provide them).
5. The increase in the already severe congestion on the Strategic Road Network of the A3 and M25. A further planning application at RHS Wisley (with a significant increase in visitor traffic) and a proposed 600 pupil secondary school on the site would add additional congestion at the M25/A3 junction as well as local roads. No development can proceed without significant infrastructure enhancements to the A3 and M25. Partial improvement works on the A3 south of the site are not due to start until 2019 at the earliest.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**
On infrastructure, the revised plan proposals do not address the additional strain on infrastructure despite the overwhelming objections on this subject in response to the previous consultation. In particular the wording of Policy ID has been amended to give the impression that provision of adequate infrastructure will be enforced. However, this is not within the gift of GBC but, in the case of the road network, by Surrey Highways and Highways England both of whom will be influenced by budgetary constraints elsewhere within their jurisdiction. Equally traffic impact assessments will be prepared, and paid for, by applicants and not by GBC and will therefore present a biased outcome in support of any development.

I object to the inclusion of all sites other than brownfield sites on the basis that that GBC will be unable to secure or enforce the provision of the requisite infrastructure provisions either by negotiation with developers or through other government agencies. Any development must be in current urban or brownfield site areas where there is already an appropriate infrastructure provision.

9. POLICY I1

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will
cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen. Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) bstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.
Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable. There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

1. There would be a massive increase in both industrial and private traffic. The existing roads and traffic are a nightmare now with the current flow.
2. The constant diversions & roadworks already create a huge buildup of traffic. Any extra work needed -more traffic lights, laying of electrical & gas cables, sewage pipes etc would mean increased massive hold ups for any traffic now plus the extra cars & other traffic that comes with new houses & building works.
3. The proposal means huge amounts of extra people, houses, traffic with accompanying shops, pubs, leisure facilities, public transport, new parking areas, the laying of cables, pipes, extra sewage works, refuse collection, schools, school transport, school parking areas, car parking, public lavatories, buses, doctors’ surgeries with their parking requirements etc. The existing surgery in Send is at breaking point already there is no room there for expansion.

**Document:** Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

**Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )**

I OBJECT TO POLICY I1 (INFRASTRUCTURE & DELIVERY)

- Infrastructure considered here as an afterthought, rather than pre-condition of Should be a key issue for the rest of the plan.
- Excessive housebuilding in countryside not supported by any funding or provision for
- Heavy focus on building on greenfield sites inefficient and unnecessary: cheap for developers but much more expensive for the public who have to fund the infrast
- Draft CIL scale discourages use of brownfield land
- No plan for organic increase in existing traffic congestion, let alone once thousands of houses are built across the cou Local roads hardly considered. Green Belt being eroded before road widening/improvement plans certain, encouraging over-development of greenfield sites.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Attached documents:**

---

**Comment ID:** PSLPP16/8431  **Respondent:** 15466209 / Janet Parry-Morris  **Agent:**

**Document:** Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

**Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )**

1. Overloading local healthcare facilities.
   I object to the additional pressure on local healthcare facilities should the plan be implemented. Local health services, like the Villages Medical Centre, Send, are already over-stretched. Delays in seeing doctors and nurses would be much worse if the local plan be approved.
2. Local roads unsuitable for heavy vehicles and additional traffic

Local roads around villages like Ripley, Send, and Clandon are narrow and unsuitable for additional heavy traffic. The additional housing, industrial and warehousing elements on sites like the Garlick's Arch proposal will make the situation much worse. I object to the proposed local plan development because local roads would be unable to cope with the additional traffic.

3. Congestion on village roads and lanes

Many local villages suffer from long traffic delays and congestion. Junctions like Newark Road and Rose Lane in Ripley, and the Shell roundabout at Burnt Common often have long traffic queues, which are likely to be significantly worse should the local plan be implemented. I object to the further congestion in and around our villages the development would cause.

4. Congestion on local trunk roads

Local trunk roads such as the A3 and M25 already suffer severe congestion during the rush hour. I object to the development of sites in the vicinity of trunk roads where there are current issues with rush-hour congestion.

5. Parking issues in local villages

Parking in local villages such as Ripley is already an issue. It's frequently impossible to find parking in the village for longer than two-hour periods. I object to the proposals as further development around our villages and an increased population would make parking even more difficult.

6. Lack of infrastructure planning for proposed sites

I object to the lack of proper infrastructure planning of local services such as dentists, doctors and schools. The local infrastructure is already stretched, and planning for the implementation of improvements to infrastructure does not appear to have been adequately considered. This is particularly relevant to Garlick's Arch.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Overloading local healthcare facilities

I object to the additional pressure on local healthcare facilities should the plan be implemented. Local health services, like the Villages Medical Centre, Send, are already over-stretched. Delays in seeing doctors and nurses would be much worse if the local plan be approved.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/9817  Respondent: 15466209 / Janet Parry-Morris  Agent:
Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1
Lack of infrastructure planning for proposed sites

I object to the lack of proper infrastructure planning of local services such as dentists, doctors and schools. The local infrastructure is already stretched, and planning for the implementation of improvements to infrastructure does not appear to have been adequately considered. This is particularly relevant to Garlick’s Arch.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/8455  Respondent: 15466337 / J.R. Lake  Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the proposed developments. The infrastructure at present is groaning under the weight it has to bear and little or no thought has been given to the further needs that will be created by this plan. Small villages have small and narrow roads which were not designed to accommodate the high volume of traffic which will undoubtedly follow if this plan were to go ahead.

I wish these comments to be seen by the inspector

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

PROPOSED HOUSING DEVELOPMENTS

In my experience here and overseas requisite infrastructural requirements must be established before any new housing developments are undertaken. Anyone who cares to get up early enough to look at traffic congestion in this area will observe that the A3 is practically gridlocked each side of the M25 intersection at least twice per day and I would estimate that the A3 now operates at something very close to its maximum capacity. In consequence, the additional housing proposed in your plan will produce a catastrophic effect upon local traffic movements. Ripley High Street itself is extremely congested during peak periods and the proposed Wisley Airfield Housing Development will make this situation intolerable. There appears to be no provision for education facilities to serve the new developments: already Ripley children are being taken by taxi to schools as far away as Addlestone as secondary schooling in the area can no longer cope.

I could go on and on but will leave it there in the hope that the point will be taken that in addition to environmental concerns, the current infrastructure is at full capacity (or worse) and cannot possibly cope with the developments reflected in your plan.

<td>I have lived in Burpham since March 1988 (over 28 years) and there have been a number of new builds more recently, the Aldi store all of which have led to the over loading of the roads making communications problematic to say the least. At peak times (morning and evening), the roads are gridlocked and congestion throughout the day is apparent, particularly since Aldi opened in November 2015. Burpham Lane is used as a 'short cut' by traffic accessing the A3. With a primary school situated just off Burpham Lane and children/young mothers walking to and from the school; this creates risks and makes accidents waiting to happen even more likely. The roads around the village area of Burpham are narrow and there is no space to alter the access roads. Already Burpham is no longer the pleasant rural area it was and crossing the road on foot is positively dangerous for all ages.</td>

There have been no sound reasons given for the proposed changes which seem to be aimed solely at increasing land available within the settlements for future additional development. The local schools are already full and if there are any spaces available it would be one or to not 1000 or more! The Medical facilities are stretched. Drainage is inadequate and roads and car parks are overloaded with little or no scope for improvements.

without a doubt your proposed plans are going to ruin the local villages, the infrastructure on’t be able to cope and the scale of increase has alarming results (up to 35% in existing west Horsley households - greater than any other single area in the Borough).

I sincerely hope you ill reconsider your plans that are going to have a detrimental effect on the hole borough.

Ash and Tongham (policies A27 A28 A29) Normandy (policy A46)

I am writing to object to the above mentioned policies.

I live in Upper Pinewood Road Ash which is betwix both mentioned plans.

The roads in the area are already struggling to cope with traffic which in the rush hour back up in both directions. There have been accidents requiring air ambulances at Harper’s Road which is heavily used. Many houses along the Aldershot Road do not have parking with our Road an unadopted unmade road heavily used by persons not living in it causing congestion and at least 2 dumped cars are present at the moment. The rail crossing backs up heavily at peak times.

I drive a Half hour journey to and from work and the only place I get held up is five minutes from my home between the lights at the junction of the Aldershot/Pirbright Roads and my home due to traffic and the level crossing.

Our water supply struggles with low pressure and with more houses in the area I believe south east water do not have the infrastructure to supply more homes.

3. The lack of proper infrastructure planning for sites (Policy I1)

There are no adequate infrastructure improvements to support the huge scale of development, especially at Garlick’s Arch (A43). There are no plans to improve the capability of the medical, emergency and other services to cover the proposed developments.

I wish the above objections to be fully taken into consideration and that the Plan is amended accordingly.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

1. I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)
Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

1. I OBJECT to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

I strongly object to Guildford councils plans because of the lack of infrastructure. I travel on the A3 London bound every morning and already have to allow extra time on my journey, leaving at 6.30am, to join the A3 at the Ockham Park junction due to an excessive weight of traffic for the M25 and A3. The proposal will substantially increase the number of cars to this already congested local road system.

1. I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure

Because there are few buses, people living in the new development will need to use cars to get to work. They will either drive to work or to a station. In order to get to Woking station most will need to use the A247 through Send. The A247 is already heavily used. It turns sharply over the bridge across the Wey Canal into Broadmead, which is flood meadow land. At the end of Broadmead the A247 comes to a mini roundabout where it splits the traffic into Woking in two directions.

Any blockage to the road, by delivery lorries, road works, traffic lights or the frequent accidents that occur, results already in paralysis of both roads into and out of Woking, and also to traffic through Send. The road is not designed to take the current volume of traffic, let alone the huge traffic increase which will result from the development. Drivers trying to avoid the jams find that the rural roads in this area are narrow, single lane for the most part, in poor condition and have no footpaths. More houses will mean more dangerous and unsustainable traffic. It should also be noted that there is an antiquated main sewer running below the A247 which has collapsed in the past causing road closures and associated traffic chaos, any additional traffic will only increase loadings and vibration on this old sewer system leading to future blockages.

I have real concerns and object strongly to guildford BC’s local housing plan 2016

My reasoning is this has been badly thought out. I do not think that the local infrastructure has been properly considered and am concerned that the houses will be built quickly and the roads, sewage and local environment will have secondary importance and will only be dealt with after the houses have been built and the additional populous has arrived with their increase in traffic, and the new locals’ educational needs and health issues only considered after the event.

All the proposed additional plans will not fit into the limited area without major upheaval to the current population. It takes me half an hour longer to travel to work than it did 10 years ago how much longer will it take in the future. The A3 is not just busy during rush hours filling up one way in the morning and the other way in the evening it is continuous both ways and the additional traffic will make it worse getting into Guildford at Ladymead or exiting at Burpham.

I live in Burpham and have to queue following 25-30 cars in the morning to get out of ’New Inn Lane, how much worse will it be with all the additional houses you plan to build in the vicinity.

My doctors surgery Merrow Park is full to overflowing. It takes 2 weeks to get a doctor’s appointment currently. How much longer will it take in the future until you get a new clinic, if you ever do.

Utilities

The sewage, water and electricity systems are at capacity in Burpham and these basic systems need to updated and improved in order to take the greater demand placed on it by more households.
It is not acceptable to do this once planning permission is approved it needs to be carried out beforehand to ensure that the existing residents of Burpham are not having to accept a reduction in services.

The Horsley village infrastructure is already over loaded. For example, the local school is over capacity, as is the Doctors. The roads through the village are already so dangerous - Ockham Road, for example, has so many lorries, vans and cars that it has become too dangerous for me to walk, scoot or cycle the children to school. I see commuters, families and elderly stuck, waiting, in people's driveways on wet days - unable to make progress along the road as they get soaked by passing vehicles driving so close to the pavement and the overloaded gutters. The knock on effect on Ripley will also be disastrous - it's already very difficult to get through to Pyrford at peak times, with queues up Ripley High Street and down Ripley Lane. Similarly, getting onto Cobham High Street, the A3 at Cobham and Ockham and the M25 at peak times is incredibly hard already, and daily I see dangerous driving as people take risks to try and speed up their journey. More homes, more families, more elderly will further stretch these services and the infrastructure.

Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan. The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians. The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon...
the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough's infrastructure is already heavily strained. However the plan's determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council's methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen. Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy 11. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough's infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council's control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy 11 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick's Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents' in the locality will see their quality of life significantly deteriorate in many ways. Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick's Arch site. Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services. Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable. There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
I believe there are serious deficiencies and shortcomings in the infrastructure of Guildford Borough as it is today and that the aggressive housing policy as proposed by GBC in the Proposed Submission Local Plan will exacerbate this problem.

I would make the following comments specifically about infrastructure in East Horsley today:

- Roads across the parish are in poor condition with many potholes. Many roads are unable to sustain their current levels of traffic, particularly the increasing levels of HGV traffic;
- The principal through roads traversing East Horsley are narrow and winding, have a series of pinch points, have sections without any pavements and are generally unlit. As a senior SCC councillor remarked at a recent public meeting in the village hall: “East Horsley has lanes, not roads.” East Horsley’s ‘lanes’ are totally unsuitable for high volumes of traffic, in particular for the volume of HGV’s now using them;
- Many of the drains are blocked or otherwise in poor condition giving rise to frequent surface water flooding when it rains;
- The pavements are in poor condition. As well as being narrow, they are often uneven and/or cracked making it difficult, for example, for people with pushchairs or prams or in wheelchairs;
- There are insufficient school spaces for the number of local children needing them, with the result that children are often allocated to schools a significant distance away such as Dorking or Woking; and
- The Medical Centre in East Horsley is already at capacity in terms of its number of

It is recognised that, as stated in the Proposed Submission Local Plan, the maintenance of adequate infrastructure and its expansion to meet growing needs is the responsibility of the relevant infrastructure provider. This is often not GBC itself but rather, for example, Surrey County Council or utility companies.

In respect of East Horsley, there are only two specific proposals in Appendix C:

LRN 25 - East Horsley and West Horsley traffic management and environmental improvement scheme. It is not clear what is proposed here, and its timing and funding have to be considered uncertain. It is stated that funding will, at least in part, come from developer contribution. However, it

is not at all clear what development is likely to give rise to such a contribution, but it certainly implies that funding could only come if there were a development; and

HSC 5 - Expansion of East Horsley Medical Centre to provide additional capacity and services for future population in years 5 – 15 of the plan.

There are no proposals in respect of all the existing problems with for example roads, pavements, drainage, and schools.

Furthermore, it is inevitable that the proposed developments in East Horsley itself and nearby, particularly in West Horsley and the proposals for Wisley, will put further strain on the existing infrastructure. There are no proposals at all to cater for this.

Although an expansion of the Medical centre is proposed in the Infrastructure Schedule, this is not until years 5 – 15 of the Plan. Given that it is already at capacity, EHPC believes that this needs to be done earlier.

Local primary schooling is also a very pertinent issue. There are 11 housing development sites identified in the LAA for East and West Horsley, which taken together would result in the building of 593 new houses in the two parishes that are today served by a single primary school - The Raleigh, in West Horsley. Planning guidance suggest that this number of new homes will require the provision of around 150 additional primary school places to accommodate such an increase in population. Today there is no spare capacity at The Raleigh, yet no proposals are made in the Proposed Submission Local Plan to provide for any more schooling in the Horsley’s.
I believe that the failure to address the inadequacies of the existing infrastructure to meet the needs of what is there already is a serious deficiency in the Proposed Submission Local Plan.

I accordingly object to the infrastructure proposals on these grounds. I further object to the proposals for infrastructure in that they do not meet the stated objective of providing infrastructure to support the proposed developments.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

I OBJECT to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.
Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

**Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )**

**I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)**

This plan will cause more congestion in Ripley, Send and Clandon, with no plan to improve the local situation

**I object to the lack of proper infrastructure planning for sites (Policy I1)**

The Plan does not identify adequate infrastructure improvements to support the huge scale of development, especially at Garlick’s Arch (A43) which has no infrastructure projects in the Infrastructure Schedule to support it. Local services, utilities and sewerage, doctors etc. are at or close to capacity.

There are no plans to improve the capability of the medical and police/emergency services to cover the 5000+ houses in the north east of the borough.

**I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)**

5,036 houses are proposed between the M25 and Burpham (about 5 miles) which will obviously lead to a merging urbanisation of identities the villages. There is too much traffic in our villages already and this plan will cause more
congestion in West Horsley, East Horsley, Normandy, Ockham, Ripley, Send and Clandon, with no plan to improve that. The rural roads in this area are narrow, in poor condition and have no footpaths. 5000 more houses in such a small area means dangerous and unsustainable traffic.

**Do you consider this section of the document; complies with the Duty to Cooperate?** ( ), **is Sound?** ( ), **is Legally Compliant?** ( )

The local primary school is already full and there are no additional places and building expenditure planned. There is no local secondary school and the Howard of Effingham, which is the nearest state secondary school, is at full capacity with no plans for expansion. Therefore there will be no available school places for newcomers. There is nothing in the local plan to address this issue.

Horsley Medical Centre barely manages to cope with current demands for its services. There is nothing in the local plan about expanding this provision. 533 new houses in the Horsleys will severely affect the ability of the Medical Centre to provide a satisfactory service to residents.

Including the development at Wisley, there would be upwards of 6,000 additional cars within a three mile radius of the Horsleys. Apart from the obvious impact on traffic volumes which are already high during the rush hour on the A246, Ockham Rd South and Ockham Rd North, parking will become a major issue. Both Effingham Junction and Horsley Station car parks are at full capacity and parking at the shops, the medical centre and the village hall will be under huge pressure. The local plan completely fails to take account of these issues.

Commuter trains to London from Horsley and Effingham are almost full by the time they arrive in Horsley. How will the commuters from the 2,000 new houses at Wisley and the 533 new houses in the Horsleys get to London? There is nothing in the local plan about either additional trains or additional station parking.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

I object to the draft local plan as it will severely affect the quality of life for the residents of both East and West Horsley, including the lives of the newcomers who would be living in the additional planned houses. My objections largely focus on the apparent lack of infrastructure planning and the number of houses planned. Please see below:

The local primary school is already full and there are no additional places and building expenditure planned. There is no local secondary school and the Howard of Effingham, which is the nearest state secondary school, is at full capacity with no plans for expansion. Therefore there will be no available school places for newcomers. There is nothing in the local plan to address this issue.
Horsley Medical Centre barely manages to cope with current demands for its services. There is nothing in the local plan about expanding this provision. 533 new houses in the Horsleys will severely affect the ability of the Medical Centre to provide a satisfactory service to residents.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

We are fortunate enough now that we are elderly to live on Ockham Road South, close to all amenities. However, although the village remains largely unchanged, the traffic situation has worsened immeasurably with many heavy lorries thundering through and more and more cars cutting through to access the A3. Should any of the proposed developments take place this could only exacerbate the problem given that most households appear to have at least 2 cars and there is little or no scope for improvement - the infrastructure is already almost at breaking point.

Ockham Road North and South is a narrow road, not constructed as a major route and with very bad drainage as any unfortunate pedestrian will attest to after heavy rain when waders are required to avoid getting splashed by passing vehicles. Accidents in the area around Station Parade are frequent with too high a volume of traffic using the Parade slip road, Kingston Avenue for the Medical Centre and Railway Station branching onto Ockham Road South. The Drift has also become a rat run for many vehicles with the benefit of Satnav and your plans would be detrimental to the woodland environment and wildlife with increased traffic.

At the weekend especially, the surrounding narrow roads are very busy with cyclists touring the Surrey Villages and motor vehicles have to share the roads with a number of horse riders too. Surely any increase in volume of traffic is highly undesirable.

The Wisley interchange on the M25 is already one of the most congested junctions. A development of 2000 homes close by is sheer madness in the circumstances and would add to traffic chaos through Ripley village and more traffic on all the small local lanes which in many cases are single track with passing places.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT TO POLICY I1 (INFRASTRUCTURE & DELIVERY)
• Infrastructure considered here as an afterthought, rather than pre-condition of development. Should be a key issue for the rest of the plan.
• Excessive housebuilding in countryside not supported by any funding or provision for infrastructure.
• Heavy focus on building on greenfield sites inefficient and unnecessary: cheap for developers but much more expensive for the public who have to fund the infrastructure.
• Draft CIL scale discourages use of brownfield land first.
• No plan for organic increase in existing traffic congestion, let alone once thousands of houses are built across the countryside. Local roads hardly considered. Green Belt being eroded before road widening/improvement plans certain, encouraging over-development of greenfield sites.

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition. This will increase the risk of serious accidents.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon where my parents live, already suffer from intolerable traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.
The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements. As I say above, as an electric wheelchair who often visits, the danger is already substantial and would only worsen if the proposed developments were to go ahead.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy 11. What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
Although much is made of the need for new infrastructure to support these developments and for this to be in place as needed, the Plan admits … “we forecast that there will also be an absolute increase in overall traffic volumes” and this is assuming all the infrastructure (listed in App. C to the Plan) is in place in a timely fashion. GBC has little or no control over the plans of Surrey County Council as the local highways authority and Highways England for trunk roads. Worryingly, the Plan now has even less substantive information about improvements to the A3 South of the M25 from Highways England and it appears that their plans are not yet formed (Policy ID2). In the absence of such information, the infrastructure proposed is specific to each proposed development and does not address cumulative effects. What would be the case with regard to planning approval if SCC and /or HE do not provide timely infrastructure? It is clearly impossible to go head with the proposed developments absent guarantees that appropriate infrastructure is in place.

The Plan now calls for nearly all infrastructure to be funded by developers (see APP. C). We question how realistic it is to expect developers not only to pay for all the infrastructure but also to have it in place in a timely fashion. The Plan says that planning permission will be refused if timely provision of infrastructure cannot be secured. Such refusals will almost certainly be settled in the courts. Developers’ business models are based on building and selling houses to create the cash to provide infrastructure. People will be living on the sites well before infrastructure is complete. Will GBC prevent development of Gosden Hill until slip roads etc. are provided off and onto the A3? Again, the infrastructure is site specific and does not address cumulative effects.

If development were to be refused the land would still have been removed from the green belt and its future rendered uncertain.

Residents are being asked to accept very large amounts of development with little or no detail being provided on measures which would relieve existing congestion and limit future problems. The cumulative effects of the developments listed below are certain to have a devastating effect on the A247 through our village (and of course on Send) and it is hard to see how any of the infrastructure proposed in the Plan (App. C) will do anything to mitigate the effects of these developments on the A247 and hence our village.

Summary of the Impacts on the A247 – My Objections

All of these developments will draw additional traffic to the A247 through the village. It would be naïve to think that the employment sites and schools will serve only the developments themselves. Apart from the normal movements of residents to and from the new sites there will be considerable additional traffic on the A247 generated by:

- children from elsewhere being delivered to schools and collected
- the employees of the offices and industrial sites getting to work and returning home
- the vehicle movements generated by distribution and storage activities
- traffic from Wisley wishing to travel South and returning
- traffic from Gosden Hill wishing to travel South and returning
- traffic from Slyfield wishing to travel South and returning
- private and commercial traffic originating in the South and accessing Gosden Hill, Burnt Common or the A3 and returning (including traffic from Dunsfold)

The A247 although an A road:
- is less than 2 vehicle wide in places
- does not have continuous footpaths
- has several sharp bends
- has a hump-backed bridge with poor site lines
- has a very difficult junction to access the station
- is largely unlit
- has a primary school
- is already very congested at times

You will recall that in prior responses I explained that my wheelchair-bound disabled daughter often visits us and travels from Clandon station to our home along the A247 and that any increase in traffic ill increase the danger to her in making that journey. I see no attempt to deal with this point.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Attached documents:**
The lack of any plan for either physical or green infrastructure improvement clearly contradicts this in respect of both A43 Garlicks Arch and A42 Clockbarn Nursery, Tannery Lane, Send. Development of these sites without the contingent infrastructure would therefore be contrary to the stated aims and themes of the Plan, and should not go ahead.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I would be pleased to see a revision to the Local Plan which preserves the Green Belt and results in proportionate development on suitable sites, supported by infrastructure improvements.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.
Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

- lack of specific details as to how the existing infrastructure is to be improved to cope with all the additional planned development.

** What changes (2016)/further amendments (2017) do you suggest should be made to the document?
I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)
There is too much traffic in our villages already and this plan will cause more congestion in Ripley, Send and Clandon, with no plan to improve that.

The rural roads in this area are narrow, in poor condition and have no footpaths. 5000 more houses means dangerous and unsustainable traffic.

I object to the lack of proper infrastructure planning for sites (Policy I1)
The Plan does not identify adequate infrastructure improvements to support the huge scale of development, especially at Garlick’s Arch (A43) which has no infrastructure projects in the Infrastructure Schedule to support it. Local services, utilities and sewerage, doctors etc. are at or close to capacity.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Lack of Utilities Capacity

The utilities won’t be able to cope

I could continue but there are so many issues with the plans that they are fundamental.

Please review them urgently

Lack of proper infrastructure planning for sites

I object to the lack of infrastructure for sites like Garlicks’ Arch. Where are the residents going to school and what GP surgery will they belong to?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

---

The local schools are already full. The Medical facilities are stretched. Drainage is inadequate and roads and car parks are overloaded with little or no scope for improvements. Traffic around the area is generally getting heavier and the villages have not been built with such a high density of housing or population in mind.

Without a doubt your proposed plans are going to ruin the local villages, the infrastructure won’t be able to cope and the scale of increase has alarming results (up to 35% in existing west Horsley households - greater than any other single area in the Borough).

I sincerely hope you will reconsider your plans that are going to have a detrimental effect on the whole borough.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I have concerns over the strain the additional proposals will place on local resources. The roads in the surrounding area will not be able to cope with the addition of some 800 vehicles of local traffic. It is also my belief that the current local surgery will be overstretched with the addition of houses proposed causing a backlash for current residents.

I OBJECT to the fact that the Local Plan takes no account of schools, doctors surgeries and roads that are already operating at full capacity. Another 4000 houses in this area with a conservative estimate of a further 8000 cars would be catastrophic.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

---

I object to the lack of road infrastructure and the congestion that this development will cause to the local village roads (Policy I1)

These villages are currently severely congested throughout the day and parking in villages such as Ripley is already a real problem, further development in these villages will only result in more traffic and parking problems. The Plan does not provide an adequate or achievable strategy for improving capacity on these local roads which in many of the villages particularly Ripley, Send and Clandon are narrow and only wide enough for one vehicle at a time. Additionally many of these narrow roads do not have pedestrian footpaths and are both totally unsuitable and extremely dangerous for pedestrians. Bringing an addition of some 5000 houses being proposed close to the village of Ripley will exasperate this already congested area.

I object to the lack of proper infrastructure planning for sites (Policy I1)

There are no plans to improve the capability of the medical and police/emergency services to cover the 5000+ houses in the north east of the borough and the Plan does not identify adequate infrastructure improvements to support the huge scale of development, especially at Garlick’s Arch (A43) which has no infrastructure projects in the Infrastructure Schedule to support it. Local services, utilities and sewerage, doctors etc. are already at or close to capacity.

To build hundreds of houses in the Horsleys is out of all proportion as there is no infrastructure in place to support this. Already Raleigh School is oversubscribed as is the medical centre - impossible to get urgent appointments now. Our busy narrow potholed roads cannot cope

Infrastructure and Delivery

I object to any development without the necessary infrastructure being put in place prior to development. I object to developments not providing their planned infrastructure, i.e. schools, health centres, prior to the first properties being sold.

East & West Horsley are two very different villages. Long may they remain so. Yes, we do need more houses, but the local infrastructure is already overloaded - more houses mean more people, thus more pressure on the overloaded infrastructure. More thought should be given to this problem. But it never is.

My main concern is the impact that such a considerable increase in housing will have on the roads around the villages of East and West Horsley and Ockham. The roads, frequently narrow and already poorly maintained will become much more congested. Cyclists (encouraged to use the local roads by SCC and GBC) and pedestrians will surely be put at risk.

Parking is very limited at Horsley Railway Station and Bus Services are unlikely to be increased to accommodate such a large increase in population.

The proposed developments will surely place a great strain on schooling. Even if extra places can be found at local schools on their small sites there will again be problems accessing the sites.

Clearly I have not been made aware of all the detailed plans for local amenities and services. But it is impossible to believe that sewage, telephone, medical, libraries, broadband, shops and policing will be increased to a level that can sustain such a large increase in population. Indeed, many of these services have been reduced in recent years.

**Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )**

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.
Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

I OBJECT to the lack of proper infrastructure planning for sites.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick's Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents' in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick's Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/10185  Respondent: 15497857 / Elisabeth A Hawkey  Agent:
I object to the number of homes you propose to build will inevitably put strain on the current infra-structure including highways, schools and GP surgeries. I understand that there are not enough secondary school places for the current number of young people and GP Practices do not have the resources to expand.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Policy 11 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick's Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, I (and other residents) will see our quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick's Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. I use this centre when I need to, and I know it is difficult to get an appointment already. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable. In recent years we have lost our local police presence and it is unrealistic to expect that will improve.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
I OBJECT to the local plan making East and West Horsley less sustainable. This is breach of para 7 and 9 NPPF and policy S1 of the proposed local plan. Failing to provide essential health, education and community facilities forces residents to use private vehicles to reach these when at present the majority can walk. The Infrastructure survey suggests that primary and junior school aged children will have to travel to Ripley and Clandon to attend school. No provision is made for any other facilities including health, dental, community and sport.

I OBJECT to the fact that the Local plan does not effectively demonstrate proposals to improve road networks to accommodate the additional vehicles likely to travel through East and West Horsley. The majority of through roads are narrow, have pinch points and are subject to closure through flooding on a regular basis.

LRN7 intends to introduce interventions to address potential highway performance issues resulting from the development of Wisley airfield. If these are those put forward by the developers they are likely to have a significant negative impact on East and West Horsley, or any traffic travelling to or through even without additional housing.

LRN22 East and West Horsley traffic management and environmental improvement scheme is non specific and the suggested £1m is insufficient to make sufficient improvements to deal with the substantial traffic increase likely if all aspects of the local plan are allowed.

I OBJECT to the council failing to deliver sufficient infrastructure to cope with the proposed development within this area of the borough. The bus network is almost non-existent and new buses are linked only to the Wisley development. The train station car-parks at Horsley and Effingham junction are always full and there is no space to enlarge them. The roads are not suitable for commuters to cycle any distance due to the narrowness of the roads, speed of traffic and lack of space to build cycle paths.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough's infrastructure is already heavily strained. However the plan's determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council's methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough's infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council's control and on the vagaries of CII income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

**Infrastructure concerns** - Despite living in East Horsley only a short distance from the Raleigh school, my oldest son was ineligible for a place in reception, as the school was filled from a catchment less than a mile from the school. If we have an additional 600 houses, or roughly 600-1200 children, the pressure on places will be even more extreme. My other major concern is the pressure on the road system. Ockham Road south, the major thoroughfare of East Horsley is already overloaded and leads to significant queues at rush hour to get through the village and onto the A246. This leads to people taking huge risks to get onto the 246, as they are so fed up they pull out just in front of oncoming traffic. It is a major accident waiting to happen. Also, the road is so narrow that when a bus and a lorry meet on this road, it all comes to a grinding halt which results in significant congestion and pollution in the village. The plan aims to build an additional 3000 homes within a 3 mile radius of the Horsley’s and the current road system is just not able to cope with this additional load. There is no indication of how construction would occur (how many additional lorries)! Finally, our trains station car parks are already full and cannot deal with increased numbers.

It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

Submitted on behalf of Kitewood Estates Ltd

PolicyI1: Infrastructure and delivery
• As noted above, Policy I1 should take account of the PPG in acknowledging that planning obligations should not result in a development proposal becoming unviable

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/10625  Respondent: 15504609 / Ian Little  Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

In addition I object to the proposed major development sites across the Horsleys and at Okham. This objection is based on the fact that the local infrastructure is already overloaded and any further major developments in this area would seriously affect the safety and quality of life of the current residents. The local schools are full, medical services stretched and in particular from a safety and environment point of view the local roads are totally inadequate for any potential increased traffic. The quantity and speed of traffic through Forrest Road and Ockham Road are currently a major issue.

Schools

There is only ONE state primary school in West Horsley and NO state secondary schools. The Raleigh School is already oversubscribed and many children living in West Horsley were NOT offered places at their local school in the last few years. There is already a problem here with a lack of places and this already needs resolving WITHOUT adding another 533 homes. How do you propose to deal with this??

Medical services

It is already difficult to get an appointment at Kingston Avenue Medical Centre, the ONLY surgery in East and West Horsley. You cannot dilute this service any more.

Drainage and Flooding

There are known sewage overflow problems in Ockham Road North and Green Lane. There will be serious capacity issues with the sewer network in the village going right through to the treatment works if the large numbers of dwellings proposed are constructed.

The amount of flooding experienced a couple of years ago meant many main roads were closed for weeks on end. We were forced to use small lanes to exit the village. By doubling the number of cars in the village, this issue will be exacerbated.
I am disappointed that, despite the many objections to your plans, you STILL continue to ignore the overwhelming feedback from local residents. It is us, the current residents, who will have to live alongside these new developments and put up with the vast increase in local traffic and demand for public transport, schools, medical facilities and parking, etc.

Your plans will have a HUGELY negative impact on our day-to-day lives.

I trust that you will finally listen and review your plans substantially.

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1  

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley.

The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Glandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition. I object to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as Ripley, already suffer from parking problems. Further development around these villages will only result in more traffic and more parking problems.

With some 5000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists pass through the village on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan. As somebody who relies on their bike to get around I object to this being even more dangerous!

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

I object to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.
Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, I (and other residents) will see our quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

policing. I object to the new sites because with so many new properties being proposed, can the local police force deal with the rising work load they may receive.

In conclusion I object to the proposed plans for the areas of Ripley, send and clandon as the areas just do not have the adequate infrastructure to deal with such a large number of new properties, and the families that come with it. There isn't enough schools in the area forcing any new children to the area to look further afield. Which will only add to the traffic problems in the morning. The local villages don't have the facilities to cater for all the new homes. So any families moving to the area have to travel by car to the supermarkets etc and the village roads can not handle the rise in car traffic.

I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

There is too much traffic in our villages already and this plan will cause more congestion in Ripley, Send and Clandon, with no plan to improve that.
The rural roads in this area are narrow, in poor condition and have no footpaths. 5000 more houses means dangerous and unsustainable traffic.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the lack of proper infrastructure planning for sites (Policy I1)

The Plan does not identify adequate infrastructure improvements to support the huge scale of development, especially at Garlick’s Arch (A43) which has no infrastructure projects in the Infrastructure Schedule to support it. Local services, utilities and sewerage, doctors etc. are at or close to capacity.

There are no plans to improve the capability of the medical and police/emergency services to cover the 5000+ houses in the north east of the borough.

You should be looking at rerouting the A3 around Guildford, even in a tunnel under Guildford. Three lanes into two lanes as currently through Guildford causes gridlock most days and when there is an accident all that traffic goes through Burpham. That is just crazy and dangerous and seriously harms our health.

<td><strong>Infrastructure and delivery I2 Supporting the D.O.T. “Road Investment Strategy”</strong></td>
<td><strong>I OBJECT. Most of the borough’s infrastructure is antiquated, congested and straining to accommodate even current needs and organic growth. Yet this plan’s commitment to building housing estates across the Guildford countryside will mean either major infrastructure investment that no-one is prepared to pay for or else a catastrophic and simultaneous collapse in transport, educational, medical, energy, water and communications services. The plan targets greenfield sites – requiring heavy infrastructure investment Public Transport in the form of buses are being cut bus operators require a profit or subsidy to run a service and the council s are withdrawing the subsidy so the service is withdrawn. The chance of getting new stations on the rail network is very remote they cost an out of this world figure and slow the overall service down. The dwell time of modern stock at stations is high due to the time it takes to open and close the doors. Most of the proposed improvements to the major roads will take year’s take Send at the moment the A247 Send Road comes to a standstill during the peak period adding a minimum of 480 houses which will be around 960 cars to the roads will cause grid lock this excludes the the HGV to the industrial units. Most people will use private cars as they are always have a time deficiency and buses are always slow and never there when they should be. Surrey is the most congested county in</strong></td>
<td></td>
</tr>
</tbody>
</table>
England with 683, people per square kilometer compared to an average of 413. With massive disruption during construction and a huge increase in the number of cars on the local roads, gridlock awaits?

The need for Infrastructure

Even with a much smaller percentage increase in housing major issues need to be incorporated into the a plan; underinvested public transport, gridlock at certain point at peak times, crumbling roads (without heavy construction lorries thundering down them), schools at capacity, struggling medical services, and even simple things like a needing to add footpaths (for which there is no space) or to add crossings that are currently not needed. The plan does not seem sustainable.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**
Policy I1 - Infrastructure and Delivery

I object to any development without the necessary infrastructure being put in place prior to development. I object to developments not providing their planned infrastructure, i.e. schools, health centres, prior to the first properties being sold.

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.
Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy II requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )
I OBJECT TO POLICY I1 (INFRASTRUCTURE & DELIVERY)

- Infrastructure considered here as an afterthought, rather than pre-condition of development. Should be a key issue for the rest of the plan.
- Excessive housebuilding in countryside not supported by any funding or provision for infrastructure.
- Heavy focus on building on greenfield sites inefficient and unnecessary: cheap for developers but much more expensive for the public who have to fund the infrastructure.
- Draft CIL scale discourages use of brownfield land first.
- No plan for organic increase in existing traffic congestion, let alone once thousands of houses are built across the countryside. Local roads hardly considered. Green Belt being eroded before road widening/improvement plans certain, encouraging over-development of greenfield sites.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

POLICY I1 - Infrastructure and delivery - I OBJECT.

Most of the borough’s infrastructure is antiquated, congested and straining to accommodate even current needs and organic growth. However, this plan’s commitment to building housing estates across the Guildford countryside will mean either major infrastructure investment that no-one is prepared to pay for. The plan targets greenfield sites – requiring heavy infrastructure investment, not a good or clever idea. Some proposed development locations would require highway schemes that involve demolishing property and road-widening in residential areas to solve the resultant congestion. The A3 improvements are not guaranteed to take place but they are being used to justify removing large areas from the Green Belt before detailed traffic assessments have taken place.

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

POLICY I1 - Infrastructure and delivery

I object to this policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the Plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

With some 5,000 houses being proposed close to the villages of Ripley, Send and West Clandon, the roads serving the villages will become even more congested. Cycling has become an ever popular past time, particularly at weekends when hundreds of cyclists pass through the villages on their way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the villages and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians. The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury to the public. In the case of West Clandon, the Street often only has a narrow footpath on one (alternating) side of the road making it very dangerous, especially when vehicles mount the pavements as some have to do in places in order to pass.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this Plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the Plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local Plan should first assess the borough’s
infrastructure capacity for sustainable development, and then tailor development accordingly. This Plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. Implementation is critically dependent on providers outside the Council’s control and Community Infrastructure Levy income. This should be recognized as a key constraint but is not adequately taken into account. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as many local doctors’ surgeries will have their services stretched and overwhelmed. Many of these services are already at capacity with waiting times of 2 weeks to see a GP. Any further development without funding will place further stress upon existing health services. There is no provision for increasing the capacity of the Royal Surrey County Hospital, Guildford. Where is this to be assessed and remedied?

Document:   Proposed Submission Local Plan: strategy and sites 2017 / Policy ID1
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object that the Plan does not consider the overall and cumulative implications for the A247 of the large number of revised developments which have the potential to generate traffic on it, namely Gosden Hill, Slyfield, Garlick’s Arch, Burnt Common Industrial, Wisley and interchange changes at Burnt Common. This list should also include Surrey CC plans for the development of Newlands Corner but these don’t even appear in the revised Plan, despite the fact they are currently progressing through the planning process.

The A247, although historically classified as an A road, is already deficient in many respects having less than 2 vehicle width in places, no continuous footpaths, sharp bends, a hump-backed bridge with poor sight lines, dangerous junctions with the Station access and with the A3 southbound access slip-road and a primary school located in one of the narrowest parts.

In summary, the A247 is currently unsuitable for the current levels of traffic and quite clearly cannot cope with the additional traffic. It is very clear that the developments proposed in the 2017 Local Plan will increase the amount of traffic on this road over and above that in the 2016 draft to which residents strongly objected.. Despite the previous objections, there is still nothing in the Infrastructure Schedule which addresses this issue. Indeed several of the infrastructure proposals will themselves lead to significant increases in traffic on the A247. I object that this deficiency
makes many of the above proposed development unsustainable.

I object regarding policies ID1 and ID2 (Infrastructure)

Although much more is made in the revised plan about the need for new infrastructure to support the various developments and for this to be in place when needed, little real detail is provided as to what will be done and how it will be funded.

The Plan admits “…we forecast that there will also be an absolute increase in overall traffic volumes…” and this is assuming all the infrastructure (listed in App C to the Plan) is in place in a timely fashion.

GBC has little or no control over the plans of Surrey County Council as the local highways authority and Highways England for trunk roads. Worryingly, the Plan now has less substantive information about improvements to the A3 South of the M25 from Highways England and it appears that their plans are not yet formed. In the absence of such information, the infrastructure proposed is specific to each proposed development and does not address cumulative effects. What would be the case with regard to planning approval if SCC and/or HE do not provide timely infrastructure?

The Plan now calls for nearly all infrastructure to be funded by developers. I question how realistic it is to expect developers not only to pay for all the infrastructure but also to have it in place in a timely fashion. The Plan says that planning permission will be refused if timely provision of infrastructure cannot be secured. Such refusals will almost certainly be settled in the courts. Developers’ business models are based on building and selling houses to create the cash to provide infrastructure. People will be living on the sites well before infrastructure is complete.

Will GBC prevent development of Gosden Hill until slip roads etc. are provided off and onto the A3? Again, the infrastructure is site specific and does not address cumulative effects. If development were to be refused the land would still have been removed from the green belt and its future rendered uncertain.

I object that residents are being asked to accept very large amounts of development with little or no detail being provided on measures which would relieve existing congestion and limit future problems.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the lack of proper infrastructure planning for sites (Policy I1)
The Plan does not identify adequate infrastructure improvements to support the huge scale of development, especially at Garlick’s Arch (A43) which has no infrastructure projects in the Infrastructure Schedule to support it. Local services, utilities and sewerage, doctors etc. are at or close to capacity.

There are no plans to improve the capability of the medical and police/emergency services to cover the 5000+ houses in the north east of the borough.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/11534  Respondent: 15571745 / Hazel Thompson  Agent:
I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time such as Polesden Lane. In addition, the road surfaces are in a poor condition. I object to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as Ripley, already suffer from parking problems. Further development around these villages will only result in more traffic and more parking problems.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/11535  Respondent: 15571745 / Hazel Thompson  Agent:

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

1. **I OBJECT** to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity
and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied.

1. **I OBJECT** to Gosden Hill development being in the Local Plan. The land in Gosden Hill does exactly what the Greenbelt was designed to achieve. It provides a green buffer between the Guildford Urban Area and West Clandon, gives Burpham a defined green boundary and breathing space and it hides Guildford town from visitors until they pass the off-slip to Burpham.

No exceptional circumstances have been demonstrated for building on this site and therefore it does not comply with paragraphs 87-89 of the NPPF. It stops the sprawl of Guildford town, assists in safeguarding the countryside from encroachment and assists in urban regeneration by encouraging the recycling of derelict and other urban land. All requirements of the NPPF.

The scale of Gosden Hill is out of proportion to West Clandon. It would have four times the amount of housing plus shops, offices/factories, GP surgery, schools. Development on this scale would blight a historic village with a history going back to the doomsday book and beyond.

The development will generate in the region of 6,000 vehicles which will pour on to the A3 which is stationary every day during rush hours. The linking of the A3100, B2215 and A247 would channel thousands of cars through the narrow, winding road through West Clandon, a road where large lorries mount the pavement virtually every day and through Send and Ripley which are also severely constrained.

Again the infrastructure required does not seem to have been addressed in the plan.

The wording of the Local Plan with regard to Gosden Hill is so loose that the developer could virtually do whatever it wants. The remaining agricultural land between Gosden Hill and West Clandon is so small that it is highly likely to be uneconomic and therefore a prime candidate for further development which would roll the Guildford Urban Area over West Clandon towards East Clandon and Wisley.

Gosden Hill already has surface water problems. Merrow Stream crosses the site. No hydrological survey has been carried out to assess the implications. Electricity pylons run through the centre of Gosden Hill which have health and safety issues.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Attached documents:**
**Air quality:** The air quality figures are based on an unreliable transport assessment.

- The applicant has not used the DEFRA modelling statistics as required and rather appears to have used numbers from an unrecognised (and unreliable source)
- Poor air quality is exacerbated in the area by temperature inversions which trap the air. Young and old are extremely susceptible to poor air quality.
- Air quality is not improving as fast as expected, partly due to the excessive emissions (VW et al)
- The impact of poor air quality on RHS Gardens at Wisley and the Thames Basin Heath Special Protection Area (SPA) is already in excess of legal limits.
- The Medical facilities in the area are already over stretched and adding more people whose lives and health are likely to be impaired by pollution will add to the inadequacies that already exist and create more problems for residents.
- The current NHS waiting lists and A&E waiting times at the Royal Surrey will be made even worse by adding to the population and creating a situation where there will be more cars on the A3 and M25 and narrow local roads.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Transport:** The transport assessment makes a number of erroneous assumptions and is not credible.

- It is completely unrealistic to assume that there will be a decrease in vehicle movements.
- There is no impact on traffic for the recently added secondary school, nor from the fact that prior to the school being built the children will have to be transported to the nearest available school in Leatherhead – adding to congestion.
- There appears to be no impact shown for the 270 daily bus movements or for the waste lorries or HGV deliveries to the site.
- The TRICS data used for comparison is not a relevant measure: site not comparable with a site in Guildford, nor a site 400m from the centre of Redhill, nor one on the edge of Staines.
- The traffic counts bear no relation whatsoever with counts submitted to Guildford or to Woking borough councils in support of other large development projects.
- The modelling in the Transport Assessment at 7 junctions close to the site bear no relationship to the daily experience of residents, evidencing flawed modelling.
- The number of daily trips is understated in the region of 1000 vehicle movements.
- Additional traffic will have a negative impact and cause irreparable damage to historic houses and other buildings in Ockham/Ripley/Downside and further afield.
- If allowed, the impact of the additional traffic may prohibit other developments further south on the A3 or indeed those needed by the RHS.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Attached documents:**
Impact on the local area: The additional 5,000 residents is the equivalent of almost doubling the population of East and West Horsley combined. This increase in local population will impact:

- Light pollution, noise, traffic and infrastructure which has been gravely underestimated and proposed mitigation measures are totally inadequate
- The cumulative development in the borough and in the neighbouring boroughs of Woking, Waverley and Elmbridge per the objections from both Elmbridge Borough Council and Woking BC
- The water table and flooding in the area. It appears that no impact assessment has been done relating to the loss of agricultural land which currently soaks up a significant volume of rainwater.
- Listed buildings adjacent to it such as Yarne, Bridge End House and Upton Farm
- Via closure of a number of local roads coupled with an increase in traffic will affect a large number of road users from Cranleigh to Cobham and everywhere in between

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.
The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements. There is the local school with young children walking along the road on a Monday to Friday basis, which is dangerous with the current level of traffic prior to any increased traffic that would result from further housing on the proposed scale.

1. I OBJECT to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied? In summary the health and safety of existing communities are detrimentally impacted.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I object to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The 2016 Plan is completely unacceptable. The Council has totally ignored the comments and suggestions of residents and proceeded with an outrageous assault on the Green Belt for which they have absolutely no mandate - in fact, the very opposite. The housing target is excessive and needs to be seriously reviewed, especially in light of Brexit, and a new plan needs to emerge based on actual housing needs with the right kind of accommodation in the right places, and a plan that requires the least amount of infrastructure developments. If the current Plan proceeds, it will lead to massively increased traffic congestion and pollution levels, require a huge amount of public expenditure, and destroy the character and beauty of an attractive and much-loved area.

Above all, we need a Plan that supports local needs and not the balance sheets of developers

I object to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

This will cause more congestion to the villages of Ripley, Send and Clandon, which have poor condition narrow roads and no footpaths, which are dangerous. More houses will increase this danger and unsustainable volumes of traffic

Policy I1: Infrastructure and delivery

Do you consider this section of the plan is legally compliant? Yes

Do you consider this section of the plan is sound? Yes

Do you consider this section of the document complies with the Duty to cooperate? Yes
RSPB Comment:

The RSPB welcomes the clear commitment within the policy to prioritise CIL expenditure on the delivery of mitigation and avoidance measures for the Thames Basin Heaths SPA. Since the introduction of CIL the former clear link between individual developments and the provision of SANG along with the “ring fencing” that was provided by the section 106 mechanism has been lost. This statement should help to provide legal certainty as to the delivery of this mitigation measure that is required by the Conservation of Habitats and Species Regulations 2010 (as amended). However, the RSPB notes that whilst the legal obligation is clearly stated, the Plan does not currently make clear the long-term benefits that pursuing this policy will have for the Borough.

What changes do you suggest should be made to the document?

To address the concern we highlighted above, the RSPB recommends the provision of some additional text which explains clearly what SANG are, and explaining why it is being prioritised over other infrastructure. It would be particularly beneficial to highlight what proportion of the “over 250ha” of new accessible public open space across the borough (referred to on page 21 of the Plan) is being provided by this contribution. On the RSPB’s calculations if mitigation is to be delivered on the basis of 8ha per 1,000 new residents, with an average of 2.3 residents per new dwelling a total of 255ha of SANG will be delivered over the Plan period. Making an explicit link is likely to make the prioritisation of CIL expenditure more publicly acceptable.

through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy II. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy II requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network, phone and broadband and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital; where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition. This will increase the risk of serious accidents.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon where I live, already suffer from intolerable traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure
requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

In addition, little or no provision has been made to improve the transport infrastructure in circumstances where our local roads and the A3 are already hugely congested and expensive public transport is neither reliable nor adequate. It is reasonable to assume that 13,000 extra homes will generate at least 20,000 extra cars leading to increased pollution.

1. I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy II)  
   There is far too much traffic in our villages now and this plan will cause more congestion in Ripley, Send and Clandon, with no plan to improve that.

   The rural roads in this area are for the most part narrow, in poor condition and have no footpaths. 5000 more houses means dangerous and unsustainable traffic.

**Schools:** Schools in West Horsley are full every year, and this has been the situation for many years.

Secondary school places are limited in number at the Howard of Effingham School and other secondary schools involve a much longer journey of time and distance from the village to reach them. Glensk and Cranmore private schools are well supported by many families living in Guildford and other villages up to 14 miles away. Each of these private schools during term time, receives high volumes of traffic going to and from each school at each end of the school day, on Ockham Road North and the A246 respectively, leading to severe congestion on these and surrounding roads.

If a further 385 homes are built in West Horsley, the children in East Horsley will never find a place locally, and as suggested by SCC, children even in our own village will need to fill places in Clandon and Ripley. There is simply not enough school places available locally to meet the needs of our village, and we cannot rely on a new school at Wisley, as this is site has been refused outline planning consent on over 14 separate counts by GBC, so is a long way off from being realised, if ever.

There is no new provision made within the Draft Local Plan and its supporting evidence to address this, which as a parent I find totally unacceptable.

**Medical facilities:** It is already extremely difficult to get an appointment at the Doctor’s surgery, let alone be able to park in the limited number of spaces available (approx. 10 spaces). The doctors are working flat out, have tried to accommodate residents by opening at different times, and are doing all that they can. But with the level of development proposed they will no longer be able to operate effectively and we will see more and more people having to attend the Royal Surrey and Woking Hospitals walk in clinics. What plans to expand these hospitals have been put forward by GBC? None.

**Other facilities:** There is one small grocery store at the southern end West Horsley, which will close later this year due to retirement of the owner. Many people use the shops and library in East Horsley that has been designated in the plan as a ‘District Centre’. This is a complete misreading of the facilities in the village centre. Parking has already become increasingly difficult and these facilities will be woefully inadequate to support the proposed increase in population. It is worth considering that if every new house has 2 cars, this will mean potentially 6000 more cars within a three mile radius of the Horsley Villages. This will have a severe impact on our local roads. This increased volume of traffic will also lead to an increase in pollution, notable in nitrogen dioxide particles being released into the environment – already a cause for concern in several areas within the Borough, which GBC are failing to monitor!

Waste Water Infrastructure: This is inadequate in West Horsley and the surrounding area, with frequent flooding of gardens and roads. You have only to look at the GBC Surface Water management Plan, 2014 to see how terribly the Horsley’s are affected. The map within this document clearly illustrates that the Horsley’s are the largest area within the Borough to be called a surface flooding ‘Hot Spot’. However, no provision is made within the Draft Local Plan to address this, and this area is not even mentioned as a cause for concern – why is this? Surely GBC has a responsibility to direct development away from areas affected by flooding, and also to protect the natural flood plain?

In addition, Thames Water has advised Guildford Borough Council that the area’s wastewater network is unlikely to be able to support the demand anticipated from all the proposed developments. The foul drainage system from West Horsley to the treatment works north of Ripley will need to be upgraded to cope. Thames Water advises ‘a 2 to 3 years lead-in period’ to install the necessary wastewater network and treatment capacity after planning permission for a development is granted.

**Infrastructure**

I object to most of GBC’s plans as they have proposed no realistic infrastructure improvements.

The A3/M25 interchange will cause even more air pollution than already exists, which is well above permitted levels for development.

It will swallow up huge amounts of common land.

It will direct Wisley Garden traffic onto an already over-used junction (Ripley/East Horsley), which, it is suggested will also be the exit and entrance point for the proposed development of Three Farms Meadows, (erroneously re-named Wisley airfield).

The congestion will result in tailbacks even further West in a London-bound direction, along the A3, than there are at present. (often 2 miles before the A3/M25 junction)

Ripley is threatened with ALL the traffic from Wisley, heading West on the A3, going through the village, which was by-passed in order to reduce the traffic.

I object to the plans to close roads around Wisley or to make some one way only. This will be very disruptive to traffic from other places trying to get through Ripley, or on to the A3 or from Ockham to Cobham.

A3: There are no proposals for meaningful improvements to the A3 around Guildford. At present one may be stuck in heavy traffic for 45 minutes on a daily basis, as one covers no more than 2 miles travelling Westwards. A tunnel might help but is there any realistic prospect of that being completed in the Plan period?

Roads: There are no proposals to widen or improve the surface of poor roads in and around Guildford. Many roads cannot be widened, therefore the increased traffic from the planned 12,426 new houses (approximately 24,000 extra cars) will cause grid-locks and serious congestion, within the town and in the small rural roads in and around villages.

Surgeries: There are no proposals for new surgeries in most of the areas GBC proposes to develop.

At present, most surgeries are managing at the limit of their capabilities. Many surgeries have no room to expand, even if they could find sufficient doctors, nor to expand their car-parks.

Schools: Most schools are at full capacity. Not enough new schools have been proposed.

Water and sewage: Many of the sites proposed will have difficulty in bringing in sufficient water supplies. New sewage farms would need to be built at most of the sites. At Wisley, proposals suggest that the Ripley sewage works could accommodate the waste from an extra 2000 houses. It cannot.

Trains: a new station at Burpham is a good idea. It might take the pressure off Horsley and Effingham.

Buses: Suggestions by the Wisley developers that buses might run every 10 minutes to Woking station are ludicrous. It is also unrealistic to run buses to Effingham as the road is too narrow and unsafe.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Attached documents:**
I object to the congestion that the development will cause to local village roads and the lack of road infrastructure in the Local Plan. The local roads in the centre of Ripley and Send are completely overloaded as it is. The proposed development will cause even greater congestion and this Plan does not provide provision for improving the roads. Side roads are single or narrow track, poor quality with no pavements so are not suitable for increased traffic.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/12563  Respondent: 15584161 / Alexandra Elson  Agent:

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.
The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1. POLICY I1

I object to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1) Many villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. Many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time with road surfaces are in a very poor condition. The proposed development under the plan will cause greater congestion in and around many villages. The Plan does not provide an achievable strategy for improving capacity on these local roads. I object to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village and neighbouring villages will become even more congested. Every week thousands of cyclists pass through these villages following the promotion of the area in the 2012 Olympic cycle road trials. The narrow rural roads do not have cycle lanes or even proper pedestrian footpaths. In West Clandon much of the length of The Street has a narrow footpath on only one side of the road making it very dangerous, especially when vehicles mount the pavements. The proposed significant levels of development will result in the roads becoming ever more dangerous for pedestrians and cyclists.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure, as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure
capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income instead of recognising this as a key constraint.

It is highly likely that developers faced with large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development unviable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I am concerned about the lack of planning for infrastructure requirements and whether the projects identified will be implemented when required, if at all. Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents in the locality will see their quality of life significantly deteriorate as utilities and services, such as the electrical network, sewers, Doctors’ Practice and Police, in the Ripley and Send area are at, or very close to capacity. The lack of plans to improve these services should be bar to development of the Garlick’s Arch site.

I object to the lack of proper infrastructure planning for sites (A43 and A42)

The Foreword to the plan by Paul Spooner includes on page 5:
"We recognise that significant infrastructure upgrades are required to support existing communities and the planned growth of the borough. The delivery of sites allocated in this plan is contingent upon the provision of new infrastructure, which is a key theme of our Local Plan."

The lack of any plan for either physical or green infrastructure improvement clearly contradicts this in respect of both A43 Garlicks Arch and A42 Clockbarn Nursery, Tannery Lane, Send. Development of these sites without the contingent infrastructure would therefore be contrary to the stated aims and themes of the Plan, and should not go ahead.

POLICY I1 INFRASTRUCTURE AND DELIVERY

I object to policy I1 Infrastructure and delivery.

Most of the borough’s infrastructure is antiquated, congested and straining to accommodate even current needs and organic growth. Yet this plan’s commitment to building housing estates across the Guildford countryside will mean either major infrastructure investment that no-one is prepared to pay for or else a catastrophic and simultaneous collapse in transport, educational, medical, energy, water and communications services.

The plan targets greenfield sites – requiring heavy infrastructure investment – in order to generate CIL income necessary to meet an infrastructure shortfall that is already serious. The current draft CIL scale also encourages development on greenfield sites rather than brownfield and will reduce or negate developer's obligation to sell a percentage of homes at 20% below market value.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing infrastructure needs in this area is inadequate, identifying only the tip of an iceberg of existing congestion. Compton Village is already close to tipping point, yet it will see a significant increase in traffic volume, will be completely congested and yet no plans exist to mitigate the problem.

The schemes referred to in this policy barely solve existing congestion and are inadequate when development takes place. The full impact on local road networks has not been fully considered. Some proposed development locations would require highway schemes that involve demolishing property and road-widening in residential areas to solve the resultant congestion. The A3 improvements are not guaranteed to take place but they are being used to justify removing large areas from the Green Belt before detailed traffic assessments have taken place. These detailed investigations are being deferred until the planning application stage and will be left to developers to prepare. If a site then proves to be unsustainable its Green Belt protection will have been lost for no reason and unsuitable development will take place by a more insidious process. Compton Village will actually incur increased traffic flow as a consequence of A3 widening according to the study, yet as was pointed out above, no solutions are in place to improve the situation.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritising greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly.

This plan, however, assumes infrastructure will follow on the heels of housebuilding. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognising this as a
key issue, the plan makes too many assumptions, not least being the verbal promise that development will not take place without infrastructure preceding it. It is not clear how this will happen and is not in the Plan, as it should be, if it is achievable.

The highways network is under stress at peak times in many parts of the borough. Queuing is the daily experience of drivers going to and from work. The local plan recognises the problems in para 2.14. Much of the road network is single-carriageway, and junctions act as constraints.

The key evidence on future traffic conditions is provided in the Strategic Highway Assessment Report (SHAR) which summarises the results of the tests carried out by Surrey County Council at the request of GBC. Five scenarios were examined using SCC’s strategic traffic model.

Scenario 1 contains all developments and planning permissions from 2009 to date. As such it corresponds to today’s circumstances, and describes the current unsatisfactory traffic conditions in peak periods.

Scenario 5 represents the position at the end of the plan period, including all development and highways schemes in the local plan.

The results of the analysis show that there will be widespread congestion in the morning peak hour across the network. The key strategic routes, the A3 through Guildford NE bound, and the M25 between Junctions 10 and 11, are shown to be at or over capacity. The summary network statistics presented in the SHAR, while useful, require some interpretation because the analysis of vehicle-hours is derived from link speeds only, and does not reflect junction delays and queues. The tables that show the ratio of flow to capacity and level of service are especially helpful to gaining an understanding of the conditions on the network in the forecast. Where the forecast traffic volume is above or close to capacity, flow becomes unstable and there is congestion. The SHA results provide evidence that, in 2031, congestion will be worse than it is today on much of the network.

It is the case that the traffic modelling does not take into account the potential for increased use of other modes, but the trip rates used for developments already have built in the typical level of use of other modes, and services will be required to meet that need. It is also the case that the model does not allow for park and ride, which would improve matters in the town centre, as discussed below.

In order to gain an insight into conditions across the network, it is necessary to combine information from several tables in the SHAR. Table 4.5 shows that the M25 and A3 will be at capacity in Scenario 5. The other roads that will have poor levels of service include those in Table 4.5 but also those in 4.12 (except the A3) and those in Tables 4.3 and 4.4 with levels of service E and F that will not be given some relief by improvement of the A3 in Scenario 5. Paras 4.10.3, 4 and 5 point out that there will be increased congestion. Given that the starting point is unsatisfactory, there can be no expectation that the schemes in the Infrastructure Development Plan will provide an overall improvement. There will be some local benefits, such as the Ash rail bridge for example, but in general conditions will be as bad and in many places, such as Compton Village, worse. So the statement in the SHAR para 4.2.5 that ‘the combined mitigation as reflected in Scenario5...indicates that at the strategic level it accommodates the additional PSLP demand’ needs qualifying – ‘at the cost of a lot of queuing’ and makes no mention of the impact this will have on pollution, which is already a known problem at the A3 end of Compton.

The cumulative effect of the additional traffic generated by the developments in the local plan will be to increase congestion, even with the proposed highway schemes in place. More detailed analysis of the junctions and queuing is required. So we question the conclusion that the developments would have ‘an acceptable impact on the capacity of the highway networks in terms of the policy test set in paragraph 32 of NPPF’.

Appendix 3 of the Transport Topic Paper shows the phasing of housing development and transport infrastructure. The major scheme being considered for the A3 between the A31 and the A320 is scheduled for delivery in the period 2023/24 to 2027/28. The strategic developments at Blackwell Farm and Gosden Hill Farm are shown as being phased in from 2021/22 onwards. The Garlick’s Arch development is shown as starting in 2019/20. Therefore, there will be a period in which the existing A3 has to cope with the additional demand arising from those developments before extra capacity is provided.
The following comments regarding the strategic sites are taken from the SHAR:

Blackwell Farm – there will be congestion at the A31 junction, and the problems at the Tesco junction, and the Egerton road /Gill Avenue junction (para 4.9.5). Traffic is likely to access the Surrey research park and the RSCH through the development (para 4.7.3).

Gosden Hill Farm – there will be an increase in traffic through Burpham. There will be pressure on the A3100/B2234 roundabout (paras 4.7.6, 4.7.7 and 4.7.8).

Wisley – traffic will increase on minor roads to gain access to the A3 (N and S bound) and other routes (para 4.7.11). The development will add more traffic to the A3. The Burnt Common slips help alleviate the traffic through Ripley according to the model, but queuing on the A3 could mean this does not happen (para 4.7.14).

Normandy/Flexford – the report has little to say about the impact of this large development. The increase in flow on Westwood Lane is noted (para 4.5.7). Tables 4.10 and 4.11 show junction delay reducing at the Westwood Land, B3000 junction, but an increasing at the Puttenham Hill/Millbrook junction.

Ash – development in Ash is not specifically addressed, but there are major increases in traffic on a number of roads. The new rail bridge will bring relief (but traffic will move to the next junction).

Slyfield – there are no remark relating to SARP, and as there are no additional trips shown in and out of the Slyfield residential zone in Tables 3.3 and 3.4, it is possible that this development has been omitted. There is a significant increase in trips to and from the Slyfield industrial zone, which will impact on the A320 and Clay Lane.

Town Centre – the report has very little to say about the town centre. It is evident that the model is forecasting severe congestion on the approaches to the town centre, such as the A281, the A31 Farnham Road, and Woodbridge Road for example. No mitigation measures are planned. And in the Transport Strategy, GBC states that the intention is to adopt Allies & Morrison’s Scenario 2 which would have the effect of significantly reducing the capacity of the town centre road system. The implications have not been examined, but traffic using the A281 from Waverley, for example, would be affected.

The B3000 will be severely affected by development schemes and will not benefit from road improvements. It is essential that the impact of all change to road networks are looked at in conjunction with one another for any survey to be meaningful. The local plan does not state an objective for congestion. The two strategic objectives that are included for infrastructure refer to supporting sustainable development and delivering a balanced system. However, in para 2.15 there is an aspiration expressed about opportunities ‘to improve the performance of the road networks through transport infrastructure and service improvements’, which taken with the previous paragraph includes reducing congestion. The evidence so far shows that this will not happen. The mitigation proposed is not sufficient to overcome the problems that will be caused by the level of growth in the local plan. Congestion will worsen. The network will lack resilience and be vulnerable to disruption due to incidents. Minor roads will have to cope with a lot more traffic, for which they are unsuitable.

Guildford desperately needs a local plan which meets a vision of, amongst other things, providing much-needed, additional housing and the infrastructure to cope with the consequent increased demand, not only from within the borough but from outside. The plan is also an opportunity to restructure the transport element of the town’s infrastructure in a way that efficiently meets current and future needs.

I do not underestimate the task that this represents and would like to be able to support the proposed Submission Plan. However, I find that omissions of information, lack of firm commitment to, or clarity about, particular infrastructure issues and a fundamental shift towards the reshaping of our town mean that I cannot do so.

Policy I1

The need to meet the infrastructure demands of the present and the future, in terms of any Plan submitted to the Secretary of State, are critical. The Plan does not give sufficient assurances that the water, sewage, electricity, roads, medical and teaching needs will be met. For example, unless a four-way interchange is developed just north of Potters Lane on the A3, Burpham will reach crisis point in terms of congestion. Congestion equals pollution, i.e. reduced air quality. Air quality will also be an important issue for any development at Gosden Hill and needs to be properly assessed.

Policy I1
The need to meet the infrastructure demands of the present and the future, in terms of any Plan submitted to the Secretary of State, are critical. The Plan does not give sufficient assurances that the water, sewage, electricity, roads, medical and teaching needs will be met. For example, unless a four-way interchange is developed just north of Potters Lane on the A3, Burpham will reach crisis point in terms of congestion. Congestion equals pollution, i.e. reduced air quality. Air quality will also be an important issue for any development at Gosden Hill and needs to be properly assessed.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

There is too much traffic in our villages already and this plan will cause more congestion in Ripley, Send and Clandon, with no plan to improve that.

The rural roads in this area are narrow, in poor condition and have no footpaths. 5000 more houses means dangerous and unsustainable traffic.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

---

Comment ID: PSLPP16/12994  Respondent: 15587233 / Jane Clark  Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the lack of proper infrastructure planning for sites (Policy I1)

The Plan does not identify adequate infrastructure improvements to support the huge scale of development, especially at Garlick’s Arch (A43) which has no infrastructure projects in the Infrastructure Schedule to support it. Local services, utilities and sewerage, doctors etc. are at or close to capacity.

There are no plans to improve the capability of the medical and police/emergency services to cover the 5000+ houses in the north east of the borough.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

I OBJECT to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital; where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
** I object to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

This will cause more congestion to the villages of Ripley, Send and Clandon, which have poor condition narrow roads and no footpaths, which are dangerous. More houses will increase this danger and unsustainable volumes of traffic

There is no detail about improvements in infrastructure. The ill-advised Aldi development further compromised inadequate infrastructure in Burpham (queues of traffic on the main London road mid-week and outside rush hour). Roads which are lanes (Burpham Lane, New Inn Lane etc) were never intended to support the volume of traffic they carry at present. Further development of this area, without addressing the infrastructure deficit, will exacerbate the existing problems and bring gridlock to our neighbourhood.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
Infrastructure

Over the last 30 years, Burpham has seen 2 large housing developments and one major supermarket built, with adequate car parking.

The recent addition of the Aldi supermarket, with a car park entrance in a residential lane, has exacerbated the congestion in this area.

Our present roads are incapable of supporting more traffic which would be generated by i) the proposed housing development at Gosden Hill, and ii) the two-way proposed junction at the A3.

In conclusion, the plan is no more credible than the last, with only unsupported minor changes to the housing need figures, and no consideration for the inadequate infrastructure in the area to support the plan. I write to formally register my objection.

**Policies 11, 12 and 13**

There are serious deficiencies and shortcomings in the current infrastructure of East and West Horsley. This includes schools, roads, medical facilities. There have been complaints made to both county and local councils and it is a common subject on the local social media site.

GBC’s proposed housing policy in the Local Plan (see my comments on Policy S1 above) can only make this problem worse.

Specific current problems are:

- Potholed roads.
- The principal through roads are narrow with a number of pinch points where it is difficult for vehicles to pass one another. This is exacerbated by the increasing numbers of large vehicles such as HGVs using them.
- The principal roads struggle to cope with current levels of traffic at times. particularly:
- The roads are used by schoolchildren to cycle to & from school. Any increase in traffic volumes without improvement in the infrastructure will increasingly put them at risk.
- The pavements are in poor condition. As well as being narrow, they are often uneven and/or cracked making it difficult, for example, for people with pushchairs or prams or in wheelchairs. Once again schoolchildren walk along these narrow pavements and as for cycling above they will be in increased danger.
- There are also sections with no or narrow pavements and which are poorly lit.
- Drainage is in poor condition with blocked drains giving rise to streams of water running down the roads and frequent surface water flooding when it rains.
- There are insufficient school spaces for the number of local children needing them.
- The Medical Centre in East Horsley is already at capacity in terms of its number of patients.

Regarding East Horsley I could find only two specific proposals in Appendix C:
LRN 25 - East Horsley and West Horsley traffic management and environmental improvement scheme. This says that funding will, at least in part, come from developer contribution. Funding is needed now to sort out the current problems. Any words about future funds from as yet to be agreed developments is, quite frankly, pie in the sky.

HSC 5 - Expansion of East Horsley Medical Centre to provide additional capacity and services for future population in years 5 – 15 of the plan. The centre is already at capacity. There are a large number of retired & elderly people in The Horsleys. Therefore this problem will only get worse. Expansion is therefore needed now!

Local primary schooling is also a major issue. There is only one primary school in The Horsleys which is, I believe, operating at or near capacity. East Horsley Parish Council has raised this with you in its objections. The developments proposed in the plan will increase the number of children in the area but there is no provision for any more schooling in The Horsleys.

The proposed developments in The Horsleys and Wisley will put further strain on the other parts of the existing infrastructure, increasing traffic, patient numbers, and so on. Thus existing problems will be exacerbated. There are no proposals to solve these or at least to improve the situation.

I OBJECT to the infrastructure proposals as they fail to address the existing problems with the infrastructure.

I OBJECT to the infrastructure proposals because they do not meet the stated objective of providing infrastructure to support the proposed developments set out in the Site Policies.

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1. I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

There is already too much traffic in our villages. At present the morning traffic can back up the Portsmouth Road for over a mile from the centre of Ripley Village, simply because a school bus is trying to turn left into Newark Priory Avenue. This then has a knock on effect of tail backs down Send Marsh Road as far as the Saddler’s Arms and beyond. Further, congestion on the A3 often causes drivers to use the Portsmouth Road as a ‘rat run’, resulting in additional tail backs. The proposed housing plan for this area could put at least another 5000 cars on the road in the morning, which is simply not sustainable. Without adequate plans for improving road and transport infrastructure, the area is simply going to become gridlocked.

The A3 and M25 need to be improved before any development is considered. Highways England has no plans to even start considering improving the A3 before 2020. The recent opening of the Hindhead Tunnel on the A3 has noticeably increased the flow of traffic in this area, which now daily backs up from the M25 towards Guildford. So the area is already highly congested. Clearly no real improvements are possible in the timeframe of this Plan so the developments at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), should not take place until they are.

1. I object on the grounds of poor air quality

The increased congestion that will result from the plan will inevitably reduce air quality. I am an asthmatic and suffer from severe chest infections about twice a year, which I am now suspecting is related to poor air quality in this area, which is not helped by living close to the A3 and M25. As mentioned, the huge developments being proposed,
particularly in the north east of the borough, will inevitably lead to considerable further congestion and to even greater levels of air pollution, which can only have a detrimental effect on local residents and their health.

**POLICY I1**

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local
road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

**Document:** Proposed Submission Local Plan: strategy and sites 2016 / Policy 1

**Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )**

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1).

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

I OBJECT to the lack of proper infrastructure planning for sites (Policy I1).

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.
Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

**Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )**

**We object to the 2016 Draft Local Plan** by Guildford Borough Council (GBC) to remove Ripley, Send and Clandon from the Green Belt.

- Traffic in the area is already ridiculous at peak times

- The health infrastructure is already being challenges as our family recently experienced a 6 month wait time for an important appointment

- The quality of air is very important and it is crucial to have sufficient green land in a place so close to London, which has already got plenty of environmental challenges.

The addition of 385 homes on sites A37, A38, A39, A40 and A 41 in the timeframe of 2018-2022 would be an unbearable strain on the local infrastructure.

The Plan does not address the provision or even consider the need for expanding local services. The Raleigh Junior School is full with no room for expansion and the Howard of Effingham Secondary School is also operating at full capacity. The drainage systems would not be able to cope and would have to be completely upgraded. The infrastructure including the roads, public transport and medical provision are totally inadequate for this housing proposal and would not be able to support this level of development. The impact on the residents of these villages must be considered.

I object to the lack of proper infrastructure planning for sites (Policy 11) policy 11

There are insufficient infrastructure details in the plan to support the enormous development that is planned. Many sites, including Garlick's Arch (A43), do not have any infrastructure improvements identified. Policy 11 requires the delivery of improvements to infrastructure in conjunction with development.

I do not believe that we can add thousands more homes into the Borough as the infrastructure will not support this. Last year my eldest daughter was going to Secondary School and due to the lack of places was first allocated a school in Addlestone which was impossible to get to. Additionally, in the 15 years that I've lived in the Borough I have sometimes worked in London and had to commute by train, either from Clandon or Woking - Woking is already impossible to get a seat on the train, and the Clandon trains are almost at capacity now (at Clandon, which is only 2 stops along the slow line to London), despite additional carriages, whereas there used to be spaces on the trains.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1) We already experience massive congestion in the villages and this plan will cause even more traffic congestion in Ripley, Send and Clandon, with no plan to improve that.

The rural roads in this area are narrow, in poor condition and have no footpaths. An additional 5,000 more houses would create dangerous and unsustainable traffic. There would need to be a clear plan in place to ensure congestion is not further increased in these villages.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
Another issue is that the local area would not be able to cope with the increase in traffic as there will be a huge rise in the amount of cars on the road meaning more pollution to the area and making the roads more dangerous. Also the noise levels will increase in a peaceful area where everyone gets on and lives without any conflict but by having more people in the area there is more of a chance that this will change. I don't think that the station or the local parade of shops will be able to cope with the high demands that will be brought upon by having such a huge increase of population.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

POLICY II

1. I object to the scale of the development at Wisley, Garlicks Arch and Merrow because there is no provision for appropriate timely investment in infrastructure (roads, schools, hospitals etc). Anyone living locally would confirm that the road infrastructure is inadequate now, never mind having to cope with the extra volumes resulting from the Proposed Plan.

I object to in particular to the scale of development at Garlicks Arch and Merrow which will produce significant extra traffic volumes into and from Woking via Send Road and Potters Lane. Neither of these roads can safely or effectively handle increased traffic flows.

The Objections above demonstrate, Democratic deficit between the views of the local population and the unjustified scale of development in the Proposed Plan which places now value on existing amenity (i.e Green Belt) and contains no practical plans for infrastructure enhancement.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
You expect us to read through the acres of material on these issues, but nowhere do you give proposals for the Guildford Borough Council will solve the congestions problems at Burnt Common, how the doctor’s surgery will cope and where children will be educated.

<td>I am 16 and have lived in West Horsley all my life. I went to the Raleigh school and live nearby. I like living in the countryside as I enjoy taking my dogs for a walk nearby and seeing the deer, foxes, rabbits and other animals and insects. I don’t like that the Raleigh is always overcrowded and always has been with classes of at least 30 as the school needs to raise money. This won’t change if it moves it will just become a giant school and the terrible traffic problems and fumes that have been around Northcote Crescent and Nightingale Crescent will be moved into East Lane. Maybe this will make me happier except it will use up a field full of wildlife which is now part of the Green Belt. Please put this where there are old ugly buildings. If there are new houses will I be able to afford one or will I be a chosen first? Is this about money and numbers rather than about people? There won’t be enough doctors or parking or school places or good enough roads because this is not in the plan. It will mean that people like me will lose out and people like you will be happy. Surely the young should decide their future and the residents rather than parents at the Raleigh who are not resident and probably live in other villages or Guildford as they don’t care about us. <strong>What changes (2016)/further amendments (2017) do you suggest should be made to the document?</strong> <strong>Attached documents:</strong></td>

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object due to the congestion that this development will cause to the local village roads and the lack of road infrastructure - (Policy I1)

There is already too much traffic in our villages - Ripley is a point in case - traffic cutting through Ripley from Junction 10/A3 to get across towards Pyford/Woking via Newark Lane (B367) means tailbacks already stretch back along the Portsmouth Road (B2215) to the roundabout under the Ripley Bypass (A3). There are no plans to improve issues like this. Rural roads in this area are narrow, in poor condition and have no footpaths - with 5000 more homes this means dangerous conditions particularly for cyclists, pedestrians/walkers and children in the area.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I Object to the lack of proper infrastructure for sites - (Policy I1)

The Plan does not identify adequate infrastructure improvements that support the huge scale of the proposed development, particularly at Garlick's Arch (A43) - it has no infrastructure projects within the Infrastructure Schedule to support this.

Having lived in the area for 17 years, I can vouch for the fact that Local Services, Utilities & Sewerage, Doctors and medical facilities are all at, or very near capacity - a further influx of residents on the scale proposed would place incredible strain on these already-stretched services.

I also further understand that there are no plans to improve the capability of the medical and Police/Emergency services to cover this additional influx of residents in some 5,000+ houses.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

The amenities and infra structure of the Horsleys are all ready either under pressure or at capacity.

The Raleigh school is full with no room for expansion. In a high birth rate entry year not all children in the Horsleys can be accommodated at the school.

In view of the building of a new Howard of Effingham school being rejected and the existing school being full to capacity, there will not be enough local secondary school places for local children if the plan goes ahead.

The roads are already busy in the Horsleys with queues developing on the A246 and along Ockham Road South where it joins the A246 in peak periods. The proposed development at the hotel site, adjacent to dangerous bends on the A246, particularly concerns me. An additional junction here at an already busy and dangerous location will only exacerbate the situation.

Parking at East Horsley village shops is already congested and at times it is impossible to find a parking space. Increased inhabitants in the Horsleys will increase pressure on parking still more.

The medical centre seems routinely unable to offer an appointment for up to a fortnight, so an increased population will no doubt extend waiting times.

Based on these points I object to the proposed Guildford local plan 2016.

Not only that, the infrastructure simply does not exist, certainly not in the Guildford Borough where roads are already inadequate, hospitals and doctors surgeries are not coping, transport systems are under severe pressure as are the schools. The plan makes no provision for putting this right, just feeble remarks suggesting each development will have to look into available possibilities. It is a joke!!!

At the present time it takes two to three weeks to see a doctor at the local doctors surgery, we don’t need any additional housing of this scale in our villages. I object to Guildford council alleged housing need numbers when they fail to produce any undeniable evidence.

I would like to register my objection to this proposal as it would ruin the local environment. Having studied at school the impact of large numbers of people on the areas such as the ones in the proposed villages this plan is not sustainable and would cause a lot of congestion on the roads, trains and emergency services.

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.
The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the lack of foresight given to the infrastructure required to accommodate all these additional families, where would the children go to school? How would you ever get a Doctors appointment? The roads would be permanently blocked and therefore become even more damaged and dangerous and as I mentioned earlier there is a very limited bus service.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to policy I1 Infrastructure and delivery Most of the borough’s infrastructure is antiquated, congested and strained to accommodate even current needs and organic growth. Yet this plan’s commitment to building housing estates across the Guildford countryside will mean either major infrastructure investment that no-one is prepared to pay for or else a catastrophic and simultaneous collapse in transport, educational, medical, energy, water and communications services. The plan targets greenfield sites – requiring heavy infrastructure investment – in order to generate CIL income necessary to meet an infrastructure shortfall that is already serious. The current draft CIL scale also encourages development on greenfield sites rather than brownfield and will reduce or negate developer's obligation to sell a percentage of homes at 20% below market value. The policy wording says nothing about roads and traffic. The Council’s methodology for assessing infrastructure needs in this area is inadequate, identifying only the tip of an iceberg of existing congestion. Compton Village is already close to tipping point, yet it will see a significant increase in traffic volume, will be completely congested and yet no plans exist to mitigate the problem. The schemes referred to in this policy barely solve existing congestion and are inadequate when development takes place. The full impact on local road networks has not been fully considered. Some proposed development locations would require highway schemes that involve demolishing property and road-widening in residential areas to solve the resultant congestion. The A3 improvements are not guaranteed to take place but they are being used to justify removing large areas from the Green Belt before detailed traffic assessments have taken place. These detailed investigations are being deferred until the planning application stage and will be left to developers to prepare. If a site then proves to be unsustainable its Green Belt protection will have been lost for no reason and unsuitable development will take place by a more insidious process. Compton Village will actually incur increased traffic flow as a consequence of A3 widening according to the study, yet as was pointed out above, no solutions are in place to improve the situation. Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritising greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognising this as a key issue, the plan makes too many assumptions, not least being the verbal promise that development will not take place without infrastructure preceeding it. It is not clear how this will happen and is not in the Plan, as it should be, if it is achievable. The highways network is under stress at peak times in many parts of the borough. Queuing is the daily experience of drivers going to and from work. The local plan recognises the problems in para 2.14. Much of the road network is single-carriageway, and junctions act as constraints. The key evidence on future traffic conditions is provided in the Strategic Highway Assessment Report (SHAR) which summarises the results of the tests carried out by Surrey County Council at the request of GBC. Five scenarios were examined using SCC’s strategic traffic model. Scenario 1 contains all developments and planning permissions from 2009 to date. As such it corresponds to today’s circumstances, and describes the current unsatisfactory traffic conditions in peak periods. Scenario 5 represents the position at the end of the plan period, including all development and highways schemes in the local plan. The results of the analysis show that there will be widespread congestion in the morning peak hour across the network. The key strategic routes, the A3 through Guildford NE bound, and the M25 between Junctions 10 and 11, are shown to be at or over capacity. The summary network statistics presented in the SHAR, while useful, require some interpretation because the analysis of vehicle-hours is derived from link speeds only, and does not reflect junction delays and queues. The tables that show the ratio of flow to capacity and level of service are especially helpful to gaining an understanding of the conditions on the network in the forecast. Where the forecast traffic volume is above or close to capacity, flow becomes unstable and there is congestion. The SHA results provide evidence that, in 2031, congestion will be worse than it is today on much of the network. It is the case that the traffic modelling does not take into account the potential for increased use of other modes, but the trip rates used for developments already have built in the typical level of use of other modes, and services will be required to meet that need. It is also the case that the model does not allow for park and ride, which would improve matters in the town centre, as discussed below. In order to gain an insight into conditions across the network, it is necessary to combine information from several tables in the SHAR. Table 4.5 shows that the M25 and A3 will be at capacity in Scenario 5. The other roads that will have poor levels of service include those in Table 4.5 but also those in 4.12 (except the A3) and those in Tables 4.3 and 4.4 with levels of service E and F that will not be given some relief by improvement of the A3 in Scenario 5. Paras 4.10.3, 4 and 5 point out that there will be increased congestion. Given that the starting point is unsatisfactory, there can be no expectation that the schemes in the Infrastructure Development Plan will provide an overall improvement. There will be some local benefits, such as the Ash rail bridge for example, but in general conditions will be as bad and in many places, such as Compton Village, worse. So the
The B3000 will be severely affected by development schemes and will not benefit from road improvements. It is essential that the impact of all change to road networks are looked at in conjunction with one another for any survey to be meaningful. The local plan does not state an objective for congestion. The two strategic objectives that are included for infrastructure refer to supporting sustainable development and delivering a balanced system. However, in para 2.15 there is an aspiration expressed about opportunities ‘to improve the performance of the road networks through transport infrastructure and service improvements’, which taken with the previous paragraph includes reducing congestion. The evidence so far shows that this will not happen. The mitigation proposed is not sufficient to overcome the problems that will be caused by the level of growth in the local plan. Congestion will worsen. The network will lack resilience and be vulnerable to disruption due to incidents. Minor roads will have to cope with a lot more traffic, for which they are unsuitable.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
Fourthly, the infrastructure is already overloaded and no consideration has been given to already overstretched medical and educational facilities nor to the reality of what the extra housing and cars means for the existing community - in terms of congestion, pollution and quality of life - all of which would be degraded by these plans. On this basis too I object to the proposals.

The Plan does not identify adequate infrastructure improvements to support the huge scale of development, especially at Garlick’s Arch (A43) which has no infrastructure projects in the Infrastructure Schedule to support it. Local services, utilities and sewerage, doctors etc. are at or close to capacity.

There are no plans to improve the capability of the medical and police/emergency services to cover the 5000+ houses in the north east of the borough.

I object to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1).

This will cause more congestion to the villages of Ripley, Send and Clandon, which have poor condition narrow roads and no footpaths, which are dangerous. More houses will increase this danger and unsustainable volumes of traffic.

- I object to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1). There is no question that this will cause more congestion to the villages of Ripley and Send, which have poor condition narrow roads and no footpaths, which are dangerous. More houses will increase this danger and unsustainable volumes of traffic. This is a massive concern as today I live off Ripley and am already concerned about the level of traffic, in particular at peak hours. The traffic queues are already unacceptable.

I OBJECT TO POLICY I1 (INFRASTRUCTURE & DELIVERY) • Infrastructure considered here as an afterthought, rather than pre-condition of development. Should be a key issue for the rest of the plan. • Excessive housebuilding in countryside not supported by any funding or provision for infrastructure. • Heavy focus on building on greenfield sites inefficient and unnecessary: cheap for developers but much more expensive for the public who have to fund the infrastructure. • Draft CIL scale discourages use of brownfield land first. • No plan for organic increase in existing traffic congestion, let alone once thousands of houses are built across the countryside. Local roads hardly 5 considered. Green Belt being eroded before road widening/improvement plans certain, encouraging over-development of greenfield sites.

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.
Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

There is only a vague mention of schools in the Definitions under Policy I1 Infrastructure and Delivery

- We already have a lack of state primary school places in the village. For example, our daughter was on a waiting list to get into The Raleigh primary school until the very last moment when someone else decided to send their child to Glenesk. We were very close to having to drive our daughter from West Horsley to a different town for a school place, which when both parents have to work would have been a life damaging inconvenience. The new developments would be putting any new families that could actually afford to live there into this awful situation. The Raleigh - which serves children from West and East Horsley - has been full every year for many years

- Howard of Effingham secondary school places are already limited and other secondary schools mean much longer commutes (in terms of both time and distance) from West Horsley village. We moved here on the basis that our children would be able to attend the local schools, and have made huge sacrifices to do this. We barely managed for our daughter to get accepted into The Raleigh, and can only hope she will make it to Howard. The proposed increase in housing in West Horsley (and East Horsley) simply does not address the already acute shortage of local school places for existing residents/housing.

- Glenesk and Cranmore private schools situation in East and West Horsley are also at or very near full capacity each year. Pupils attending there travel for up to 14miles to attend, adding to a high volume of traffic to and from each school twice a day on Ockham Road North and the A246 respectively. A large increase in other road users in the area will aggravate this situation considerably.

Medical facilities

- Whilst we live in West Horsley, we can’t even use the local Kingston Avenue Medical Centre and have to travel to Send. As far as we understand, Kingston Avenue Medical Centre is already at capacity and can’t even serve existing local residents such as ourselves. Only a possible extension to Kingston Avenue is mentioned, it doesn’t sound sufficient given the existing situation.
• The planned population increase for the Borough (in excess of Government ONS forecasts) will require a major extension of the Royal Surrey Hospital to cope as well.

Waste Water Infrastructure

• Sewage overflow problems already exist in the Ockham Road North/Green Lane area. Guildford Borough Council has already been advised that the area’s wastewater network is unlikely to be able to support the demand from the proposed developments. The foul drainage system from West Horsley to the treatment works north of Ripley will need to be upgraded to handle this demand. Advice from Thames Water is that they need a 2 to 3 year lead-in period to install necessary wastewater network and treatment capacity after planning permission for a development is granted.

Access to essential facilities

• The small shop in West Horsley village already has very poor access and parking. A large increase in village population will make this problem even worse.

• Parking is already challenging when travelling to East Horsley shops and library. The proposed increase in development/population will exacerbate this issue.

The Plan does not identify adequate infrastructure improvements that support the huge scale of the proposed development, particularly at Garlick's Arch (A43) - it has no infrastructure projects within the Infrastructure Schedule to support this. Having lived in the area for 17years, I can vouch for the fact that Local Services, Utilities & Sewerage, Doctors and medical facilities are all at, or very near capacity - a further influx of residents on the scale proposed would place incredible strain on these already-stretched services.

There is already too much traffic in our villages - Ripley is a point in case - traffic cutting through Ripley from Junction 10/A3 to get across towards Pyford/Woking via Newark Lane (B367) means tailbacks already stretch back along the Portsmouth Road (B2215) to the roundabout under the Ripley Bypass (A3). There are no plans to improve issues like this. Rural roads in this area are narrow, in poor condition and have no footpaths - with 5000 more homes this means dangerous conditions particularly for cyclists, pedestrians/walkers and children in the area.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the narrow A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and West Clandon are narrow and wide enough for only one vehicle at a time. In the latter, where we live there are stretches of the main road without any pavements at all which makes it especially dangerous for pedestrians already. Access onto the road from the junior school, the church, vicarage, garden centre, Clandon Park, village hall, British Legion Club, the 2 pubs, nursing home and golf course are poor and potentially dangerous.

In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills.

It was part of the Olympic cycling route which has made it even more popular. With not any proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.
The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. I repeat that. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

The consultation does not deal adequately with infrastructure demands. Roads (especially the A3) in and around Guildford are increasingly congested as are commuter trains. Parking in Guildford and at stations is increasingly difficult and expensive. Parking at The Royal Surrey Hospital is now at the stage where outpatients need to allow 20 minutes just to find a space. This reflects the excellence of the services the hospital provides and it will need to be extended to serve the residents of 14,000 new homes.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

5,036 houses are proposed between the M25 and Burpham (about 5 miles) which will obviously lead to a merging urbanisation of identities the villages. There is too much traffic in our villages already and this plan will cause more congestion in West Horsley, East Horsley, Normandy, Ockham, Ripley, Send and Clandon, with no plan to improve that. The rural roads in this area are narrow, in poor condition and have no footpaths. 5000 more houses in such a small area means dangerous and unsustainable traffic.

There is too much traffic in our villages already. The roads are busy throughout the day and not just at rush hour. This plan will cause more congestion in Ripley, Send and Clandon, with no plan to improve that.

The rural roads in this area are narrow, in poor condition and have no footpaths.

Instead of building 5000 more houses which means dangerous and unsustainable traffic. The money would be better improving those roads so local communities can use them safely.

The Plan does not identify adequate infrastructure improvements to support the huge scale of development, especially at Garlick’s Arch (A43) which has no infrastructure projects in the Infrastructure Schedule to support it. Local services, utilities and sewerage, doctors etc. are at or close to capacity.

There are no plans to improve the capability of the medical and police/emergency services to cover the 5000+ houses in the north east of the borough.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

The Raleigh School in Horsley is full every year and secondary school places are limited at the Howard of Effingham. Further development in surrounding area would result in families who have lived in the village for a number of years not being able to send their children to the local school which is totally against the ethos of a village community.

The villages of Horsley offer a small Post office and library to the local residents. Any significant increase in the local population would put extensive pressure on these facilities. Parking is also very difficult at all times of the day and around the villages. Again, an increase in people wanting to use the village presents parking challenges as there is no obvious area of where extensions can take place and will also increase congestion. There are a lot of elderly people and children who visit both of the East Horsley village parades and an increase in traffic poses significant safety risks.

The Horsley medical centre in Kingston Avenue already services a large number of patients but it is extremely busy and it is often difficult to get appointments. An increase in the local population would further exacerbate this issue and also put additional pressure on the wider health service and the Royal Surrey County Hospital.

In conclusion, although I appreciate a need for housing within Surrey, the quota that has been identified for the Horsleys, Ockham and surrounding areas is a significantly unfair proportion. As I have mentioned in my correspondence, the proposals will have a significant degrading to the well being of the residents of the area and destroy the habitat, charm and character of the villages.

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will
cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy II. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy II requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.
Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/16561  Respondent: 15610913 / Gillian Hague  Agent:

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1. I STRONGLY OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. Please refer to the key points highlighted at the beginning of this letter. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion and difficulties/danger in accessing, crossing or simply walking along the road. Further development around these villages will only result in more traffic, more parking problems and significantly greater danger to pedestrians, car users, residents and visitors trying to access the road and the numerous cyclists now using the roads as routes in to the Surrey Hills as a result of the Olympic legacy.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the
road making it very dangerous, especially when vehicles mount the pavements or when pedestrians need to cross from one side of the road to the other (for example at the station entrance).

1. I OBJECT to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of The Royal Surrey Hospital in Guildford, how is this to be assessed and remedied?

I object to the fact that infrastructure has not been properly assessed and is inadequate to deal with current housing levels – roads, doctors, schools will not be able to cope.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
Already, with no additional building, we are constantly flooded (even in the months of June and July 2016), as the drainage in the area is inadequate.

Other services in the local area are also inadequate for the number of homes and business which are already here - e.g. drainage, gas mains, electricity and water services.

Our schools are already over-crowded.

Our doctors surgeries are at "bursting-point". It takes several days to get to see a doctor at our local surgeries.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Attached documents:**
• Howard of Effingham secondary school places are already limited and other secondary schools mean much longer commutes (in terms of both time and distance) from West Horsley village. The proposed increase in housing in West Horsley (and East Horsley) simply does not address the already acute shortage of local school places for existing residents/housing.

• Glenesk and Cranmore private schools situation in East and West Horsley are also at or very near full capacity each year. There is already a high volume of traffic to and from each school twice a day on Ockham Road North and the A246 respectively, from families that live outside of the area. This traffic added to the additional traffic as a result of the new housing, would result in gridlock.

Medical facilities

• Whilst we live in West Horsley, we can’t even use the local Medical Centre and have to travel to The Villagers Medical Centre in Send. Kingston Avenue Medical Centre in East Horsley already can’t serve existing local residents such as ourselves. Only a possible extension to Kingston Avenue is mentioned, it doesn’t sound sufficient given the existing situation.

• The planned population increase for the Borough (in excess of Government ONS forecasts) will require a major extension of the Royal Surrey Hospital to cope. Again, I know the hospital is fit to burst and has had requests for additional parking and amendments to the exit/entrance to the A3 denied.

Waste Water Infrastructure

• Roads surrounding West Horsley, leading into the village centre/towards school/station etc, regularly flood (at least 3 times a year). The road to Ripley (Ripley Lane/Rose Lane) also floods on a regular basis.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.
There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

Road infrastructure represents a major constraint that should have been applied to the housing target at a much earlier stage in the plan process and not left as an unresolved difficulty in the draft plan.

There is no certainty that either the A3 or M25 in the borough will be improved to increase capacity and reduce congestion during the Plan period. Highways England has no plans to even examine improving the A3 before 2020. I have considerable concerns that development of the large residential sites identified at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), will take place before any improvements are made to the trunk road network. The A3 & M25 are already at capacity during peak hours and any development prior to improvement of these roads will only make the situations worse.

Finally, I would like to highlight that some parts of the villages are already in disrepair as a result of current usage (roads, pavements, drains) and I do not see how these will be improved with the addition of hundreds more houses in the immediate area. This must be recognised and addressed. There is frequent flooding on the roads from blocked drains and the roads are very dangerous at certain points due to being narrow and without road markings.

In conclusion, I understand the need for future development and forward planning for the area but the proposed plans are too wide-ranging, too large and do not adequately take into account how existing infrastructure will cope. I wholeheartedly believe the proposed plans will have a detrimental impact on what I consider to be two of the most beautiful and historically important villages the country.

** I object to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

This will cause more congestion to the villages of Ripley, Send and Clandon, which have poor condition narrow roads and no footpaths, which are dangerous. More houses will increase this danger and unsustainable volumes of traffic

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
**I object to the lack of proper infrastructure planning for sites (Policy I1)**

The current and existing services are over-stretched now, so where are the infrastructure improvements to support the enormous proposed developments, including medical, public transport, schools?

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

Attached documents:
I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular pastime, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.
Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.
The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
The plans are incomplete in respect of the necessary infrastructure:

1. Schooling, at all levels;
2. Healthcare, in all its forms;
3. Transportation has not been thought through adequately. Deferring to a later assessment, or just awaiting the unintended consequences, will not do.

   1. Redesigning Burpham junction to allow A3 Southbound access/exit, even with unconfirmed reports to widen the A3 through Guildford, will have unforeseen consequences on traffic flows across the area.
   2. Similarly, while noting the 2 extra stations, I do not believe that the full impact of these has been considered. For example, it is as if Merrow East will serve Gosden Hill, but the new station will draw in other traffic, which will disrupt the local area if not adequately considered.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Comment ID: PSLPP16/15680  Respondent: 15618881 / Jayne Barmby  Agent: 

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT. Most of the borough’s infrastructure is antiquated, congested and straining to accommodate even current needs and organic growth. Yet this plan’s commitment to building housing estates across the Guildford countryside will mean either major infrastructure investment that no-one is prepared to pay for or else a catastrophic and simultaneous collapse in transport, educational, medical, energy, water and communication services. The plan targets greenfield sites – requiring heavy infrastructure investment – in order to generate CIL income necessary to meet an infrastructure shortfall that is already serious. This is not sensible. The current draft CIL scale also encourages development on greenfield sites rather than brownfield.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing infrastructure needs in this area is inadequate, identifying only the tip of an iceberg of existing congestion. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that involve demolishing property and road-widening in residential areas to solve the resultant congestion. The A3 improvements are not guaranteed to take place but they are being used to justify removing large areas from the Green Belt before detailed traffic assessments have taken place. These detailed investigations are being deferred until the planning application stage and will be left to developers to prepare. If a site then proves to be unsustainable its Green Belt protection will have been lost for no reason and unsuitable development will take place by a more insidious process.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritising greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. (Residents have been incredulous at the Council’s failure to apply infrastructure constraints to housing numbers, in response first to the 2013, There were 20,000 responses each time.)

This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognising this as a key issue, the plan is based on a wing and a prayer.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Comment ID: PSLPP16/15689  Respondent: 15618977 / Chris Marles  Agent: 
Burpham already has significant problems with road traffic. Adding thousands of extra vehicles onto these roads would only help to ensure gridlock.

The priority ought to be that the infrastructure is first put in place with 4 way A3 access and the tunnel.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Policy I1 - Infrastructure and Delivery

I object to any development without the necessary infrastructure being put in place prior to development.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

The INFRASTRUCTURE does not start to be addressed until the housing is well under way.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object to policy I1 Infrastructure and delivery Most of the borough’s infrastructure is antiquated, congested and straining to accommodate even current needs and organic growth. Yet this plan’s commitment to building housing estates across the Guildford countryside will mean either major infrastructure investment that no-one is prepared to pay for or else a catastrophic and simultaneous collapse in transport, educational, medical, energy, water and communications services. The plan targets greenfield sites – requiring heavy infrastructure investment – in order to generate CIL income
necessary to meet an infrastructure shortfall that is already serious. The current draft CIL scale also encourages development on greenfield sites rather than brownfield and will reduce or negate developer's obligation to sell a percentage of homes at 20% below market value. The policy wording says nothing about roads and traffic. The Council’s methodology for assessing infrastructure needs in this area is inadequate, identifying only the tip of an iceberg of existing congestion. Compton Village is already close to tipping point, yet it will see a significant increase in traffic volume, will be completely congested and yet no plans exist to mitigate the problem. The schemes referred to in this policy barely solve existing congestion and are inadequate when development takes place. The full impact on local road networks has not been fully considered. Some proposed development locations would require highway schemes that involve demolishing property and road-widening in residential areas to solve the resultant congestion. The A3 improvements are not guaranteed to take place but they are being used to justify removing large areas from the Green Belt before detailed traffic assessments have taken place. These detailed investigations are being deferred until the planning application stage and will be left to developers to prepare. If a site then proves to be unsustainable its Green Belt protection will have been lost for no reason and unsustainable development will take place by a more insidious process. Compton Village will actually incur increased traffic flow as a consequence of A3 widening according to the study, yet as was pointed out above, no solutions are in place to improve the situation. Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritising greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognising this as a key issue, the plan makes too many assumptions, not least being the verbal promise that development will not take place without infrastructure preceeding it. It is not clear how this will happen and is not in the Plan, as it should be, if it is achievable. The highways network is under stress at peak times in many parts of the borough. Queuing is the daily experience of drivers going to and from work. The local plan recognises the problems in para 2.14. Much of the road network is single-carriageway, and junctions act as constraints. The key evidence on future traffic conditions is provided in the Strategic Highway Assessment Report (SHAR) which summarises the results of the tests carried out by Surrey County Council at the request of GBC. Five scenarios were examined using SCC’s strategic traffic model. Scenario 1 contains all developments and planning permissions from 2009 to date. As such it corresponds to today’s circumstances, and describes the current unsatisfactory traffic conditions in peak periods. Scenario 5 represents the position at the end of the plan period, including all development and highways schemes in the local plan. The results of the analysis show that there will be widespread congestion in the morning peak hour across the network. The key strategic routes, the A3 through Guildford NE bound, and the M25 between Junctions 10 and 11, are shown to be at or over capacity. The summary network statistics presented in the SHAR, while useful, require some interpretation because the analysis of vehicle-hours is derived from link speeds only, and does not reflect junction delays and queues. The tables that show the ratio of flow to capacity and level of service are especially helpful to gaining an understanding of the conditions on the network in the forecast. Where the forecast traffic volume is above or close to capacity, flow becomes unstable and there is congestion. The SHA results provide evidence that, in 2031, congestion will be worse than it is today on much of the network. It is the case that the traffic modelling does not take into account the potential for increased use of other modes, but the trip rates used for developments already have built in the typical level of use of other modes, and services will be required to meet that need. It is also the case that the model does not allow for park and ride, which would improve matters in the town centre, as discussed below. In order to gain an insight into conditions across the network, it is necessary to combine information from several tables in the SHAR. Table 4.5 shows that the M25 and A3 will be at capacity in Scenario 5. The other roads that will have poor levels of service include those in Table 4.5 but also those in 4.12 (except the A3) and those in Tables 4.3 and 4.4 with levels of service E and F that will not be given some relief by improvement of the A3 in Scenario 5. Para 4.10.3, 4 and 5 point out that there will be increased congestion. Given that the starting point is unsatisfactory, there can be no expectation that the schemes in the Infrastructure Development Plan will provide an overall improvement. There will be some local benefits, such as the Ash rail bridge for example, but in general conditions will be as bad and in many places, such as Compton Village, worse. So the statement in the SHAR para 4.2.5 that ‘the combined mitigation as reflected in Scenario 5...indicates that at the strategic level it accommodates the additional PSLP demand’ needs qualifying – ‘at the cost of a lot of queuing’ and makes no mention of the impact this will have on pollution, which is already a known problem at the A3 end of Compton. The cumulative effect of the additional traffic generated by the developments in the local plan will be to increase congestion, even with the proposed highway schemes in place. More detailed analysis of the junctions and queuing is required. So we question the conclusion that the developments would have “an acceptable impact on the capacity of the highway networks in terms of the policy test set in paragraph 32 of NPPF”. Appendix 3 of the Transport Topic Paper shows the phasing of housing development and transport infrastructure. The major scheme being considered for the A3 between the...
A31 and the A320 is scheduled for delivery in the period 2023/24 to 2027/28. The strategic developments at Blackwell Farm and Gosden Hill Farm are shown as being phased in from 2021/22 onwards. The Garlick’s Arch development is shown as starting in 2019/20. Therefore, there will be a period in which the existing A3 has to cope with the additional demand arising from those developments before extra capacity is provided. The following comments regarding the strategic sites are taken from the SHAR: Blackwell Farm – there will be congestion at the A31 junction, and the problems at the Tesco junction, and the Egerton road / Gill Avenue junction (para 4.9.5). Traffic is likely to access the Surrey research park and the RSCH through the development (para 4.7.3). Gosden Hill Farm – there will be an increase in traffic through Burpham. There will be pressure on the A3100/B2234 roundabout (paras 4.7.6, 4.7.7 and 4.7.8). Wisley – traffic will increase on minor roads to gain access to the A3 (N and S bound) and other routes (para 4.7.11). The development will add more traffic to the A3. The Burnt Common slips help alleviate the traffic through Ripley according to the model, but queuing on the A3 could mean this does not happen (para 4.7.14). Normandy/Flexford – the report has little to say about the impact of this large development. The increase in flow on Westwood Lane is noted (para 4.5.7). Tables 4.10 and 4.11 show junction delay reducing at the Westwood Land, B3000 junction, but an increasing at the Puttenham Hill/Millbrook junction. Ash – development in Ash is not specifically addressed, but there are major increases in traffic on a number of roads. The new rail bridge will bring relief (but traffic will move to the next junction). Slyfield – there are no remarks relating to SARP, and as there are no additional trips shown in and out of the Slyfield residential zone in Tables 3.3 and 3.4, it is possible that this development has been omitted. There is a significant increase in trips to and from the Slyfield industrial zone, which will impact the A320 and Clay Lane. Town Centre – the report has very little to say about the town centre. It is evident that the model is forecasting severe congestion on the approaches to the town centre, such as the A281, the A31 Farnham Road, and Woodbridge Road for example. No mitigation measures are planned. And in the Transport Strategy, GBC states that the intention is to adopt Allies & Morrison’s Scenario 2 which would have the effect of significantly reducing the capacity of the town centre road system. The implications have not been examined, but traffic using the A281 from Waverley, for example, would be affected.

The B3000 will be severely affected by development schemes and will not benefit from road improvements. It is essential that the impact of all change to road networks are looked at in conjunction with one another for any survey to be meaningful. The local plan does not state an objective for congestion. The two strategic objectives that are included for infrastructure refer to supporting sustainable development and delivering a balanced system. However, in para 2.15 there is an aspiration expressed about opportunities ‘to improve the performance of the road networks through transport infrastructure and service improvements’, which taken with the previous paragraph includes reducing congestion. The evidence so far shows that this will not happen. The mitigation proposed is not sufficient to overcome the problems that will be caused by the level of growth in the local plan. Congestion will worsen. The network will lack resilience and be vulnerable to disruption due to incidents. Minor roads will have to cope with a lot more traffic, for which they are unsuitable.

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.
Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.
Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the lack of coherent proposals relating to schools and medical facilities for the Horsleys.

There is a continuing lack of state primary school places in the Horsleys. The Raleigh School which serves both East and West Horsley is full every year and this has been the situation for many years. Secondary school places are limited in number at the Howard of Effingham School and other secondary schools involve a much longer journey of time and distance from the Horsleys to reach them. Glenesk and Cranmore private schools are well supported by many families living in Guildford and other villages up to 14 miles away. Each of these private schools during term time, receives high volumes of traffic going to and from each school at each end of the school day, on Ockham Road North and the A246 respectively.

Kingston Avenue Medical Centre, serving all of East and West Horsley and areas beyond, is always extremely busy and residents experience difficulty in making appointments. The planned population increase (in excess of Government ONS forecasts) for the borough will require a major extension of the Royal Surrey Hospital to cope.

I object to the lack of coherent proposals relating to waste water infrastructure for the Horsleys. These words receive a mention in Reasoned Justification under Policy 11, but no detail for West Horsley has been found in any of the Local Plan documents, including the Infrastructure Delivery Plan.

There are known sewage overflow problems in the Ockham Road North / Green Lane area.
Thames Water has advised Guildford Borough that the area’s wastewater network is unlikely to be able to support the demand anticipated from all the proposed developments. The foul drainage system from West Horsley to the treatment works north of Ripley will need to be upgraded to cope. Thames Water advises ‘a 2 to 3 years lead-in period’ to install the necessary waste water network and treatment capacity after planning permission for a development is granted.

Minerals and Waste Planning
The county council supports the references to minerals and waste safeguarding and the inclusion of safeguarded areas and sites on the Policies Map. This supports the implementation of policies in the Surrey Waste Plan 2008 (SWP) and the Surrey Minerals Plan 2011 (SMP).

There are no significant implications in terms of the safeguarding of mineral resources. The proposed new settlement at the former Wisley Airfield (A35) is located within a minerals safeguarding area but it is considered very unlikely that the underlying sharp sand and gravel resource will be worked in future. Nevertheless, should the site be allocated in the Local Plan, the applicant should be required to investigate the potential for prior working before any planning application being submitted.

The county council seeks to encourage the recycling of construction and demolition waste and the use of recycled aggregate as both minimise the use of valuable land won aggregate. As such, we strongly support Policy D2: Sustainable design, construction and energy.

The provision of waste management infrastructure is essential to support a modern economy and needs to be considered alongside housing and employment growth (National Planning Policy for Waste (NPPW) Paragraph 1). It is important, therefore, that the borough council acknowledges in the Plan that waste management facilities are essential infrastructure to support new housing and industry.

The Local Plan should acknowledge that many waste management activities fall within the general industrial class in the Use Classes Order and can be considered to be a B1c, B2 or B8 use and can be located within modern, purpose-designed buildings on industrial estates. This accords with SWP Policy WD2, which states that "planning permission for development involving the recycling, storage, transfer, materials recovery and processing of waste will be granted on land that is, or has been used, or is allocated in a Local Plan or DPD or has planning permission for industrial or storage purposes." The SWP specifically identifies a number of urban sites and industrial estates in Guildford borough as being potential areas for accommodating waste management facilities, but this list is not meant to be exhaustive. We would additionally like to see Policy E2 of the Proposed Submission Local Plan under the heading of, "Industrial, warehousing and storage," make reference to the inclusion of suitable waste management facilities to reinforce the principle of directing waste facilities first to industrial/employment sites in urban areas in accordance with SWP Policy CW5.

An issue of concern for the county council which is not resolved in this version of the Local Plan relates to the potential loss of the allocated waste management site at the former airfield at Wisley. In our response, dated 18 September 2014, to the consultation on the previous Draft Local Plan, we pointed to the SWP allocation of the former airfield for waste management use and also an existing planning permission for a waste management facility. The proposals for Wisley effectively prejudice the implementation of Surrey’s waste strategy as set out in the SWP. We therefore object to this proposed policy and consider the Plan to be unsound in terms of being positively prepared in that it does not take account of the acknowledged requirement for waste management facilities and the SWP allocation.

In addition to these concerns, we have a number of comments relating to specific policies and supporting text as set out in the consultation document and these are included in the Appendix attached to this letter.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object to the lack of proper infrastructure planning for sites (policy I1).

Local sewerage, services, utilities, doctors etc. are already close to capacity. There are inadequate infrastructure improvements planned and none planned for Garlick's Arch (A43). There are also no plans to improve the medical, police and emergency services to cover the extra 5000 houses planned in the north east of the borough.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Infrastructure in Send, Ripley and Send Marsh and Clandon is already overloaded and even now the smallest disruptions cause gridlock over much of our essentially rural roads network. Please also note that:

• I object to an expanded A3 interchange at Burnt Common,
• I object to housing and business development proposed for land described as Garlick’s Arch,
• I object to housing development at Clockbarn Nursery,
• I object to housing development at Send Hill,

all of these sites being unsuitable and in the Green Belt.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT TO POLICY I1 (INFRASTRUCTURE & DELIVERY) • Infrastructure considered here as an afterthought, rather than pre-condition of development. Should be a key issue for the rest of the plan. • Excessive
housebuilding in countryside not supported by any funding or provision for infrastructure. • Heavy focus on building on greenfield sites inefficient and unnecessary: cheap for developers but much more expensive for the public who have to fund the infrastructure. • Draft CIL scale discourages use of brownfield land first. • No plan for organic increase in existing traffic congestion, let alone once thousands of houses are built across the countryside. Local roads hardly 5 considered. Green Belt being eroded before road widening/improvement plans certain, encouraging over-development of greenfield sites.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Funding for Police services is being. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object to the fact that infrastructure requirements have not been properly considered and are inadequate to deal with proposed housing levels. Roads, doctors and schools will be unable to cope.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
Sewage and water provision risks.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

1. INFRASTRUCTURE

There is no credible plan to ensure that the local infrastructure can cope with the proposed population increases. Schools, medical and dental services are already at full capacity. The rail network is at capacity at peak times - station car parks are full with no alternative parking available.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

1. I OBJECT to the fact that there is no provision for a larger primary school within East or West Horsley despite the fact that Para 38 NPPF states that for large developments a primary school should be built within walking distance. Over 500 houses within East and West Horsley is large development when considering the size of the villages. The Surrey infrastructure review does not state that a new school is necessary despite the fact that the school is already oversubscribed causing children to be driven to other villages. (They do state the school may in the future identify a suitable site through infill opportunities). Surrey have suggested that children from the Horsleys can be accommodated either in Ripley or Clandon; both of which would necessitate parents driving, and in the case of Ripley travelling through a traffic blackspot.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
Pressure on drainage infrastructure

There already sewage overflow problems in the village such as the Ockham Road North/Green Lane area. An increase in the number of houses and users of the system is highly likely to cause a serious capacity issue with the existing sewer network in the village going right through to the treatment works.

Pressure on facilities

Key local facilities, such as the medical centre, dentists and chemists which are already busy (I have experienced waiting a few weeks for a non-urgent appointment) will suffer from an increase in demand and are not equipped or prepared to deal with a significant increase in population.

Pressure on local schools

Places at the local schools are increasingly difficult to come by and no extra schools are planned for the Horsleys, whilst school places proposed at Wisley Airfield are not planned until many years into the project. This causes me to be concerned that newcomers will struggle to find schools close to home and that the plans overall have not taken knowledge of the local area into account.

Thank you for the opportunity to comment on the Draft Local Plan, I hope that some of my comments and observations are of value to your discussion surrounding the Local Plan and look forward to hearing the outcome of these discussions.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

---

• Transport evidence is not yet fit for use and major transport issues are unresolved, e.g. another river crossing, a central bus facility.

• Even if all the proposed highway improvements in the Plan were built, congestion would not improve. There would simply be a lot more people stuck in traffic. Traffic would get a great deal worse with more traffic from the major development sites coming in on the Epsom Road and London Road.

• Central routes being closed to through traffic, pedestrianised or used for development would make central roads busier than ever.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

**POLICY I1 - Infrastructure and delivery**

I object to this policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the Plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

With some 5,000 houses being proposed close to the villages of Ripley, Send and West Clandon, the roads serving the villages will become even more congested. Cycling has become an ever popular past time, particularly at weekends when hundreds of cyclists pass through the villages on their way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the villages and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians. The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury to the public. In the case of West Clandon, the Street often only has a narrow footpath on one (alternating) side of the road making it very dangerous, especially when vehicles mount the pavements as some have to do in places in order to pass.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this Plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the Plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local Plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This Plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic, with very little evident thought or planning as to how this is to be achieved, and how it will be funded. Implementation is critically dependent on providers outside the Council’s control and Community Infrastructure Levy income. Instead of recognizing this as a key constraint, the Plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as many local doctors’ surgeries will have their services stretched and overwhelmed. Many of these services are already at capacity with waiting times of 2 weeks to see a GP. Any further development without funding will place further stress upon existing health services. There is no provision for increasing the capacity of the Royal Surrey County Hospital, Guildford. Where is this to be assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists pass through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

I OBJECT to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.
Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

There is no credible infrastructure for the plans you have set forth. The local surgeries are already at breaking point with the amount of people that use there dwindling services, there is no way that the roads can take the increase in traffic that this development will create. The A3 and M25 will turn into car parks on a daily basis, while the local roads of the villages will come to a continuous stand still. Two thousand homes means more families living in the area. We don't have the schools to take in their children. You will take a green community and turn it into a smog filled hell hole which will sit on the door steps of Guildford. You are creating an abhorrent abomination that will not solve or remedy any current or underlying issue.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Infrastructure

The level of development proposed within East and West Horsley represents an increase by 35% and is such that the village cannot accommodate that level of development without major investment in infrastructure and other local provisions, especially schools, medical facilities and sewage facilities.

Public Transport

Public transport links East and West Horsley are the train line and infrequent bus service.

The north-bound platform of the train station is not accessible to the frail, disabled, or those with young children as there is no step-free access. Any one travelling London bound, or returning from Guildford who is unable to use the bridge cannot use the Horsley train station and is advised by national rail to get off a stop early (or late) and catch a taxi from Clandon. The provision of a step-free pedestrian bridge over the railway would be required for a sustainable development.
Car parking in the station will also need to be extended to accommodate the additional volume of cars expected from the new sites within the village and Wisely airfield.

**Highways**

No details have been given on what is planned for the “East Horsley and West Horsley traffic management and environmental improvement scheme between 2019 and 2023”.

The road network into and around the villages will require significant investment to take the higher volumes of traffic.

Access to the villages is through two routes: ‘The Street’ through West Horsley and B2039 through East Horsley. Both narrow to such an extent that there is not sufficient space for two highway lanes, and road markings disappear. In order to allow the higher volumes of cars pass one-another, the roads will need to be widened to accommodate the increased volume of traffic.

A3 northbound junction at Wisley. Due to the proximity to the M25 junction, there is a conflict between road users travelling London bound from Guildford moving into the A3 exit slip lane to join the M25, and joining the A3 at this junction. The additional volume of traffic joining at this junction will exacerbate current congestion and is likely to lead to more accidents without major investment and re-routing of this junction.

**Drainage / Sewerage**

The sewerage network within the village is unable to cope with the additional demand from the proposed developments, and will require significant investment to meet this additional load.

**Flooding**

There are areas within the village which are within flood zones 2 and 3, measures are required to ensure current housing does not become more prone to flooding, and water can drain freely (see drainage above).

**Medical facilities**

There are possible proposals to extend the Kingston Avenue Medical Centre. This medical facility is already extremely busy, and an extension at least in proportion to the increase in residents is required to ensure that all village residents have access to essential healthcare services.

Due to proposed additional residents within the Guildford area, major investment will be required within the Royal Surrey County Hospital to accommodate this.

**Schools**

The local plan does not address the additional expansion of educational services required to meet the needs of the extra residents. Currently schools and educational services already experience waiting lists. There is one comprehensive school (Raleigh) within the village which is already full. This will need investment to accommodate the significant number of additional residents.

Given the main secondary school within the area, Howard of Effingham, will have a significant volume of additional houses within its wider catchment area (which is not just limited to East and West Horsley), provisions desperately need to be increased to ensure that sufficient education is available for the larger population.

I object to the damaging of the local environment. People buy homes in these villages because they like living in a village environment with less traffic and less people. I object to villages being grown into each other so you have mass urbanisation and I object to it more so as the area is supposed to be protected from this development because it is green belt! There is no exceptional circumstances for Ripley, Send and Clandon to be removed as per National Planning Policy. You need instead to concentrate on developing the existing brown field site at Burnt Common whilst also considering the impact of this volume of housing and making provision for healthcare facilities and schools on the site to at least alleviate some of the pressures you will cause as a result of this impact in other surrounding areas and the local roads.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
Aside from the disregard for the Green Belt, there seems to be absolutely no consideration as to the impact that the construction of thousands of new homes (and the subsequent significant increase in the local population) will have on communities and in particular local infrastructure.

The Street in West Clandon, may for historic reasons be deemed an A road, but in reality is nothing more than a local B road. Traffic is already very heavy and the road in some parts too narrow which leads to large lorries and or coaches having to mount the pavement (in many cases at inappropriate speeds) to avoid the oncoming traffic. I have lost count of the number of occasions we have had to repair our fence over the past 12 years owing to cars that have lost control and driven through it. We have had to do so twice in the past 12 months alone. The significant increase in traffic that your plan would create will only make this road increasingly dangerous and I fear it is only a matter of time before somebody is seriously hurt, or worse killed.

I think too about the impact on local train services from Clandon station, especially at rush hour, where already commuters are forced to stand for significant portions of their journey to and from London. Also the pressures on doctors surgeries where even at the excellent Merrow Park surgery it can take 2 weeks or longer to book an appointment for anything other than an emergency.

This is not ‘nimbyism’ on my part. My ‘back yard’ is already over-populated. The roads are supporting more cars than they were originally designed for, rail services are overcrowded, doctors surgeries and hospitals are struggling to cope with the demands being made of them. This is not an exhaustive list.

Never has the Green Belt and the purpose for which it was introduced been so relevant.

REPRESENTATIONS TO GUILDFORD BOROUGH COUNCIL’S PROPOSED SUBMISSION LOCAL PLAN (2016)

Introduction

THPT is a Multi-Academy Trust which was created in November 2013 and is led by Howard of Effingham School which is an ‘Outstanding’ school and is a designated Academy Sponsor. As the first federation of schools in Surrey, formed in 2007 at the request of the Local Education Authority (LEA) and Department for Education (DfE), the school has a longstanding tradition of highly effective partnership working.

The Multi-Academy Trust is currently comprised of eight schools (three secondary and five primary – including infants and junior). THPT continues to be asked by the LEA and DfE to work with other schools to enhance on-going development of effective partnerships across both primary and secondary phases and to help raise standards of student achievement throughout Surrey. The Trust believes that integral to its on-going success is ensuring that staff and students have access to the highest quality learning environments and facilities.
The Trust is currently pursuing proposals, in partnership with Berkeley Homes (Southern) Ltd to secure new school premises for its lead-school in Effingham – Howard of Effingham School. These proposals were supported in the Draft Local Plan (2014) but have been refused planning permission and are subject to a current Planning Appeal.

These representations focus on the current Borough-wide infrastructure policy and site allocations for education in the Proposed Submission Local Plan, and the background documents which seek to justify those allocations. They begin with a review of National Policy, followed by a summary of our understanding of the Local Plan policies for education and its evidence base, and a review of that against the soundness tests in the National Planning Policy Framework (NPPF). They conclude that as drafted these policies are fundamentally unsound.

National Policy

Government policy since 2010 has placed an increasing emphasis on the role of schools as independent institutions in driving improvements in national education performance. The Government has strongly encouraged schools to become self-governing, through the promotion of Academies and the expansion of successful schools to maximise parental choice. Whilst Local Education Authorities (in this case, Surrey County Council) have a statutory role in ensuring sufficient school places in their areas, the 2011 Education Act included a presumption in favour of Free Schools and Academies providing these places.

This approach has been re-emphasised in the most recent Government policy. In March 2016, the new Education White Paper – Educational Excellence Everywhere extended the focus of the Coalition Government administration on driving national improvements by giving greater autonomy and leadership roles to Outstanding schools. The White Paper states that:

"We believe that the fastest and most sustainable way for schools to improve is for government to trust this country’s most effective education leaders, giving the freedom and power, and holding them to account for unapologetically high standards for every child, measured rigorously and fairly. This system will respond to performance, extending the reach of the most successful leaders and acting promptly to reduce the influence of those who aren’t delivering for our children. But it will also do more to set up these leaders for success, ensuring they have the necessary tools to seize the opportunities provided by greater autonomy and ensuring that for as it is required, support is available for them to draw on when they choose. This model underpins every one of the reforms set out in this White Paper’’ (para 1.14).

The White Paper promotes the role of Multi Academy Trusts in achieving this. Howard of Effingham School is the lead school in a Multi Academy Trust and is also an ‘Outstanding’ school in its own right. It has identified the need for new premises, both to maintain and enhance its role as an outstanding school, and also to meet additional local needs.

This approach to education policy is reflected in national planning policy. Paragraph 72 of the National Planning Policy Framework (NPPF) is set out in full below:

“The Government attaches great importance to ensuring that a sufficient choice of school places is available to meet the needs of existing and new communities. Local planning authorities should take a proactive, positive and collaborative approach to meeting this requirement, and to development that will widen choice in education.

They should:

Give great weight to the need to create, expand or alter schools;

Work with schools promoters to identify and resolve key planning issues before applications are submitted”.

The highlighted part of the text emphasises that local authorities should not just be planning for new infrastructure to meet the needs of development in their areas, but also expanding and improving schools to promote choice.

The NPPF and the Government’s earlier policy statement, Planning for Schools Development (2011), emphasise the need for local authorities and schools to work together pro-actively from an early stage to plan for state school development. Schools have an important role to play in the development of policy and priorities.

This adds emphasis to the Government’s requirement that one of the strategic priorities of local plans should be:
“the provision of health, security, community and cultural infrastructure and other cultural facilities” (para. 156).

Overall then, national policy places a very strong emphasis on the need to plan for the creation, expansion and alteration of schools, in a pro-active way, with schools themselves in order to enhance education standards and meet local community needs. As well as being consistent with National Policy, in order for plans to be found sound they must be positively prepared, justified against reasonable alternatives, and effective (deliverable).

**Proposed Local Plan Policy**

Policy I1 of the Proposed Submission Local Plan sets out the Council’s preferred approach to infrastructure delivery, including schools. This cross-refers to an Infrastructure schedule at Appendix C of the Plan. The section on secondary school provision in the Appendix is set out on pages 300 to 302.

Compared with proposals in the Draft Local Plan (2014), the Proposed Submission Local Plan allocates land for three new secondary schools, all as part of new strategic developments. These include: a minimum 4FE school at Gosden Hill Farm Strategic Site; a 4FE school at the former Wisley Airfield (which has recently been refused planning permission); and a 7FE school at the Normandy/Flexford strategic site. Whilst the evidence identifies an immediate need for new school capacity, the Housing Topic Paper suggests that the majority of provision on these sites is anticipated post-2027 (paragraphs 4.162 and 4.126). The Proposed Submission Local Plan is silent on the need to expand or alter schools to meet existing and future needs and on how widening choice in education might be achieved.

Neither the Housing Topic Paper nor the Guildford Draft Local Plan Education Review (2016), which was also published alongside the Proposed Submission Local Plan, set out when schools would be likely to be provided on these sites, by whom and whether they can meet needs in a timely manner. Pages 576 to 581 of the Land Availability Assessment (LAA) (2016) undertake what we regard as a limited and arbitrary assessment of potential secondary school sites. In particular, it does not consider suitability, timing or deliverability of the sites concerned.

On the basis of these limited and superficial assessments, the Council has removed all three secondary school site allocations in the previous Draft Local Plan (2014), and replaced them with entirely new sites in the Proposed Submission Local Plan.

The Council did not, contrary to clear guidance from Government, seek to engage with Howard of Effingham School a known interested party with whom the Council had been involved in pre-application discussions on the proposals which are currently subject of a planning appeal, to identify its needs for expansion or alteration, or its views on existing education requirements, the emerging conclusions of the LAA or other local plan evidence base documents.

I object to the fact that the plan implies modal shift to cycling and walking which in the rural areas is completely unrealistic due to lack of proper pedestrian footpaths on local roads and the requisite street lighting to ensure the safety of users. Much of the borough is RURAL IN NATURE and residents specifically do not want to live in well-lit areas more akin to urban living.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the impact of large numbers of new residents on school places which has not been properly planned. For example, Send Primary School (in the process of being rebuilt) is being rebuilt with no spare capacity. The proposed redevelopment of the Raleigh School in Horsley [not even in the local plan] is only for redevelopment not for enlargement. Schools planned for Three Farms Meadows will not be operational for the first 500 houses of development. Where will those children go to school? There is no capacity. When the school is built at A35 children will have to be bussed in from elsewhere as it’s not possible to walk… adding to congestion on local roads and the Strategic Road Network

Comment ID: PSLPP16/17255  Respondent: 15674273 / Savills for Thames Water (Katherine Jones)  Agent: 

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Policy I1: Infrastructure and delivery

Thames Water support Policy I1 and supporting text in principle as it is largely in line with previous representations, but consider that minor changes would be helpful to provide clarity.
Thames Water support the Policy in principle as a key sustainability objective for the preparation of the new Local Plan. New development should be co-ordinated with the infrastructure it demands and to take into account the capacity of existing infrastructure. Paragraph 156 of the NPPF states: “Local planning authorities should set out strategic policies for the area in the Local Plan. This should include strategic policies to deliver:...the provision of infrastructure for water supply and wastewater.”

Paragraph 162 of the NPPF relates to infrastructure and states: “Local planning authorities should work with other authorities to: assess the quality and capacity of infrastructure for water supply and wastewater and its treatment....take account of the need for strategic infrastructure including nationally significant infrastructure within their areas.”

The web based National Planning Practice Guidance (NPPG) published in March 2014 includes a section on ‘water supply, wastewater and water quality’ and sets out that Local Plans should be the focus for ensuring that investment plans of water and sewerage/wastewater companies align with development needs. The introduction to this section also sets out that “Adequate water and wastewater infrastructure is needed to support sustainable development” (Paragraph: 001, Reference ID: 34-001-20140306).

Thames Water support the identification of water supply and waste water treatment infrastructure at paragraph 4.6.3, but given the importance of such infrastructure to sustainable development, it is considered that text along the following lines should be also included to support Policy 11: “The Council will seek to ensure that there is adequate water supply, surface water, foul drainage and waste water treatment capacity to serve all new developments. Developers will be required to demonstrate that there is adequate waste water capacity and surface water drainage both on and off the site to serve the development and that it would not lead to problems for existing or new users. In some circumstances it may be necessary for developers to fund studies to ascertain whether the proposed development will lead to overloading of existing wastewater/sewerage infrastructure. Drainage on the site must maintain separation of foul and surface flows. Where there is an infrastructure capacity constraint the Council will require the developer to set out what appropriate improvements are required and how they will be delivered.

The development or expansion of water supply or waste water treatment facilities will normally be supported, either where needed to serve existing or proposed new development, or in the interests of long term water supply and waste water management, provided that the need for such facilities outweighs any adverse land use or environmental impact that any such adverse impact is minimised.”

Development Close to Thames Water Assets:

Where development is being proposed within 800m of a sewage/waste water treatment works, the developer or local authority should liaise with Thames Water to consider whether an odour impact assessment is required as part of the promotion of the site and potential planning application submission. The odour impact assessment would determine whether the proposed development would result in adverse amenity impact for new occupiers, as those new occupiers would be located in closer proximity to a sewage treatment works.

Where development is being proposed within 15m of a pumping station, the developer or local authority should liaise with Thames Water to consider whether an odour and / or noise and / or vibration impact assessment is required as part of the promotion of the site and potential planning application submission. Any impact assessment would determine whether the proposed development would result in adverse amenity impact for new occupiers, as those new occupiers would be located in closer proximity to a pumping station.

Where any such odour study in relation to development near a sewage treatment works or pumping station identifies there is an odour impact for proposed development and no improvements are programmed by the water company, then the developer needs to contact the water company to agree what improvements are required and how they will be funded prior to any occupation of the development.
Sustainable Drainage:

Thames Water recognises the environmental and economic benefits of surface water source control, and encourages its appropriate application, where it is to the overall benefit of their customers. However, it should also be recognised that SUDS are not appropriate for use in all areas, for example areas with high ground water levels or clay soils which do not allow free drainage. SUDS also require regular maintenance to ensure their effectiveness.

Limiting the opportunity for surface water entering the foul and combined sewer networks is of critical importance to Thames Water. Thames Water have advocated an approach to SuDS that limits as far as possible the volume of and rate at which surface water enters the public sewer system. By doing this, SuDS have the potential to play an important role in helping to ensure the sewerage network has the capacity to cater for population growth and the effects of climate change.

SuDS not only help to mitigate flooding, they can also help to:

- improve water quality
- provide opportunities for water efficiency
- provide enhanced landscape and visual features
- support wildlife
- and provide amenity and recreational benefits.

With regard to surface water drainage, Thames Water request that the following paragraph should be included in the Masterplan: “It is the responsibility of a developer to make proper provision for surface water drainage to ground, water courses or surface water sewer. It must not be allowed to drain to the foul sewer, as this is the major contributor to sewer flooding.”

I object to policy I1 Infrastructure and delivery

Most of the borough’s infrastructure is antiquated, congested and straining to accommodate even current needs and organic growth. Yet this plan’s commitment to building housing estates across the Guildford countryside will mean either major infrastructure investment that no-one is prepared to pay for or else a catastrophic and simultaneous collapse in transport, educational, medical, energy, water and communications services.

The plan targets greenfield sites – requiring heavy infrastructure investment – in order to generate CIL income necessary to meet an infrastructure shortfall that is already serious. The current draft CIL scale also encourages development on greenfield sites rather than brownfield and will reduce or negate developer's obligation to sell a percentage of homes at 20% below market value.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing infrastructure needs in this area is inadequate, identifying only the tip of an iceberg of existing congestion. Compton Village is already close
to tipping point, yet it will see a significant increase in traffic volume, will be completely congested and yet no plans exist to mitigate the problem.

The schemes referred to in this policy barely solve existing congestion and are inadequate when development takes place. The full impact on local road networks has not been fully considered. Some proposed development locations would require highway schemes that involve demolishing property and road-widening in residential areas to solve the resultant congestion. The A3 improvements are not guaranteed to take place but they are being used to justify removing large areas from the Green Belt before detailed traffic assessments have taken place. These detailed investigations are being deferred until the planning application stage and will be left to developers to prepare. If a site then proves to be unsustainable its Green Belt protection will have been lost for no reason and unsustainable development will take place by a more insidious process. Compton Village will actually incur increased traffic flow as a consequence of A3 widening according to the study, yet as was pointed out above, no solutions are in place to improve the situation.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritising greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly.

This plan, however, assumes infrastructure will follow on the heels of housebuilding. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognising this as a key issue, the plan makes too many assumptions, not least being the verbal promise that development will not take place without infrastructure preceeding it. It is not clear how this will happen and is not in the Plan, as it should be, if it is achievable.

The highways network is under stress at peak times in many parts of the borough. Queuing is the daily experience of drivers going to and from work. The local plan recognises the problems in para 2.14. Much of the road network is single-carriageway, and junctions act as constraints.

The key evidence on future traffic conditions is provided in the Strategic Highway Assessment Report (SHAR) which summarises the results of the tests carried out by Surrey County Council at the request of GBC. Five scenarios were examined using SCC’s strategic traffic model.

Scenario 1 contains all developments and planning permissions from 2009 to date. As such it corresponds to today’s circumstances, and describes the current unsatisfactory traffic conditions in peak periods.

Scenario 5 represents the position at the end of the plan period, including all development and highways schemes in the local plan.

The results of the analysis show that there will be widespread congestion in the morning peak hour across the network. The key strategic routes, the A3 through Guildford NE bound, and the M25 between Junctions 10 and 11, are shown to be at or over capacity. The summary network statistics presented in the SHAR, while useful, require some interpretation because the analysis of vehicle-hours is derived from link speeds only, and does not reflect junction delays and queues. The tables that show the ratio of flow to capacity and level of service are especially helpful to gaining an understanding of the conditions on the network in the forecast. Where the forecast traffic volume is above or close to capacity, flow becomes unstable and there is congestion. The SHA results provide evidence that, in 2031, congestion will be worse than it is today on much of the network.

It is the case that the traffic modelling does not take into account the potential for increased use of other modes, but the trip rates used for developments already have built in the typical level of use of other modes, and services will be required to meet that need. It is also the case that the model does not allow for park and ride, which would improve matters in the town centre, as discussed below.

In order to gain an insight into conditions across the network, it is necessary to combine information from several tables in the SHAR. Table 4.5 shows that the M25 and A3 will be at capacity in Scenario 5. The other roads that will have poor levels of service include those in Table 4.5 but also those in 4.12 (except the A3) and those in Tables 4.3 and 4.4 with levels of service E and F that will not be given some relief by improvement of the A3 in Scenario 5. Paras 4.10.3, 4 and 5
point out that there will be increased congestion. Given that the starting point is unsatisfactory, there can be no expectation that the schemes in the Infrastructure Development Plan will provide an overall improvement. There will be some local benefits, such as the Ash rail bridge for example, but in general conditions will be as bad and in many places, such as Compton Village, worse. So the statement in the SHAR para 4.2.5 that ‘the combined mitigation as reflected in Scenario5...indicates that at the strategic level it accommodates the additional PSLP demand’ needs qualifying – ‘at the cost of a lot of queuing’ and makes no mention of the impact this will have on pollution, which is already a known problem at the A3 end of Compton.

The cumulative effect of the additional traffic generated by the developments in the local plan will be to increase congestion, even with the proposed highway schemes in place. More detailed analysis of the junctions and queuing is required. So we question the conclusion that the developments would have “an acceptable impact on the capacity of the highway networks in terms of the policy test set in paragraph 32 of NPPF”.

Appendix 3 of the Transport Topic Paper shows the phasing of housing development and transport infrastructure.

The major scheme being considered for the A3 between the A31 and the A320 is scheduled for delivery in the period 2023/24 to 2027/28. The strategic developments at Blackwell Farm and Gosden Hill Farm are shown as being phased in from 2021/22 onwards. The Garlick’s Arch development is shown as starting in 2019/20. Therefore, there will be a period in which the existing A3 has to cope with the additional demand arising from those developments before extra capacity is provided.

The following comments regarding the strategic sites are taken from the SHAR:

Blackwell Farm – there will be congestion at the A31 junction, and the problems at the Tesco junction, and the Egerton road /Gill Avenue junction (para 4.9.5). Traffic is likely to access the Surrey research park and the RSCH through the development (para 4.7.3)

Gosden Hill Farm – there will be an increase in traffic through Burpham. There will be pressure on the A3100/B2234 roundabout (paras 4.7.6, 4.7.7 and 4.7.8).

Wisley – traffic will increase on minor roads to gain access to the A3 (N and S bound) and other routes (para 4.7.11). The development will add more traffic to the A3. The Burnt Common slips help alleviate the traffic through Ripley according to the model, but queuing on the A3 could mean this does not happen (para 4.7.14)

Normandy/Flexford – the report has little to say about the impact of this large development. The increase in flow on Westwood Lane is noted (para 4.5.7). Tables 4.10 and 4.11 show junction delay reducing at the Westwood Land, B3000 junction, but an increasing at the Puttenham Hill/Millbrook junction.

Ash – development in Ash is not specifically addressed, but there are major increases in traffic on a number of roads. The new rail bridge will bring relief (but traffic will move to the next junction).

Slyfield – there are no remark relating to SARP, and as there are no additional trips shown in and out of the Slyfield residential zone in Tables 3.3 and 3.4, it is possible that this development has been omitted. There is a significant increase in trips to and from the Slyfield industrial zone, which will impact on the A320 and Clay Lane.

Town Centre – the report has very little to say about the town centre. It is evident that the model is forecasting severe congestion on the approaches to the town centre, such as the A281, the A31 Farnham Road, and Woodbridge Road for example. No mitigation measures are planned. And in the Transport Strategy, GBC states that the intention is to adopt Allies & Morrison’s Scenario 2 which would have the effect of significantly reducing the capacity of the town centre road system. The implications have not been examined, but traffic using the A281 from Waverley, for example, would be affected.

The B3000 will be severely affected by development schemes and will not benefit from road improvements. It is essential that the impact of all change to road networks are looked at in conjunction with one another for any survey to be meaningful. The local plan does not state an objective for congestion. The two strategic objectives that are included for infrastructure refer to supporting sustainable development and delivering a balanced system. However, in
para 2.15 there is an aspiration expressed about opportunities ‘to improve the performance of the road networks through transport infrastructure and service improvements’, which taken with the previous paragraph includes reducing congestion. The evidence so far shows that this will not happen. The mitigation proposed is not sufficient to overcome the problems that will be caused by the level of growth in the local plan. Congestion will worsen. The network will lack resilience and be vulnerable to disruption due to incidents. Minor roads will have to cope with a lot more traffic, for which they are unsuitable.

2 Points of clarity and accuracy
2.1 Policy ID1: Infrastructure and delivery
The policy may benefit from incorporating some of the recommendations that came from the Water Quality Assessment (WQA) undertaken by AECOM.
For major developments in the Guildford, Ripley, and Ash Vale Sewage Treatment Works (STW) catchments it is recommended that the council embeds a development control policy within the local plan. This could require developers to provide evidence that they have consulted the sewer undertaker regarding capacity of the sewer network. Drainage strategies should also be submitted as part of the application to enable the sewer undertaker and the Environment Agency to fully assess the potential impacts on the sewer network. Developments should not be occupied before capacity of the sewer network to accommodate flows and capacity at the works is in place to treat to the required standard. For cases where capacity is not in place, the council could include wording in the policy on Grampian conditions.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
Zurich notes that reference to viability considerations when negotiating planning obligations has been removed since the Regulation 18 Draft GBLP was consulted upon. In accordance with paragraph 173 of the NPPF, Zurich recommends amendments that reference to viability considerations is reinstated except where the non-delivery of effected infrastructure would result in unresolved planning harm that is not outweighed by other material planning considerations. Revised wording for Policy I1 is set out below:

“To support delivery of this Local Plan, infrastructure needed to support development should be provided and available when first needed to serve the occupants and users of the development. This will be secured by planning obligation, planning condition, or from other infrastructure funding, including the Community Infrastructure Levy. Where the timely provision of necessary supporting infrastructure is not secured, development may be phased to reflect infrastructure delivery, or will be refused, unless evidence is provided to demonstrate that the delivery of such infrastructure would render the development proposal unviable and does not result in unresolved planning harm that is not outweighed by other material considerations”.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

---

I object to the plans for Wisley and Garlick’s Arch developments because no provision has been included for rail and given the overloading of the roads in the area, rail is the only type of new infrastructure that matters.

I object to the Local Plan’s malign intent for Send and Ripley because the nearest mainline station (Woking) is already overloaded and the Local Plan will only make matters worse.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

---

I object to the Local Plan because not enough has been done to show that the supposed needs in the Local Plan can’t be accommodated close to the transport and service centre in Guildford.

I object to the fact that infrastructure requirements have not been properly considered and are inadequate to deal with proposed housing levels. Roads, doctors and schools will be unable to cope.
What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Insufficient local infrastructure to support the increased housing - current parking, school facilities, medical facilities and transport facilities are already stretched and inadequate for existing needs. The excessive addition of the proposed housing will put an intolerable strain on the local community and inevitably result in a deterioration of such facilities, higher costs, lower quality and a poorer standard of living for residents. The existing and planned infrastructure simply cannot sustain such an increase in housing and people in this small area in my view.

Medical and schooling facilities - I am not convinced that the standard of local facilities provided for the education of our children and the treating of our infirm and elderly residents can be maintained with the addition of some many more houses and people. Existing facilities will be rapidly overloaded, while limited space exists to expand these to cope viably with the increases under consideration in your New Local Plan.

Negative environmental impact - the addition of so many more houses in the area will inevitably take its toll on the environment in terms of overloading our already old (in many cases) water drainage systems (both rain run-off and waste water), increasing noise pollution during construction and impacting air pollution from the additional cars that would inevitably come with the additional houses and people in the area. This can only lead to a detrimental impact on the health and safety of local residents.

I object to the lack of planned road infrastructure. (Policy I1). I live on the Portsmouth Road which runs through Ripley and Send adjacent to Garlick's Arch. We are already coping with large amounts of traffic which is often diverted onto our road when an accident closes the A3. The A3 from the junction north of the village to the M25 is almost at a standstill during the rush hour both going north in the morning and coming south in the evening. All of the above developments are sited along the A3 and with the number of houses proposed probably in the region of an extra 5000 cars will be wishing to use our local roads. Congestion will be even worse and at present Highways England has no plans to start considering improving the A3 before 2020. There should therefore be no development until this has been considered (Policy I2).

It fails completely to recognise the infrastructure requirements. There are some laughable suggestions about transport. It mentions railway stations in the east and west of Guildford. There is no money in Control Period 5 or 6 for Network Rail
to build these stations. There is no Train Operating company considering that they should run services as there is no business case.

Car parks at local rail stations are more than 80% full, the point at which rail industry modelling dictates that they are full and deter people from using them.

The plans for more houses in Horsley are inappropriate. There is simply not the infrastructure in terms of roads, drainage, schools, medical facilities, transport etc etc.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road and Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.
The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

Policies ID1 & ID2 Infrastructure – My Objections

Although much is made of the need for new infrastructure to support these developments and for this to be in place as needed, the Plan admits “…we forecast that there will also be an absolute increase in overall traffic volumes” and this is assuming all the infrastructure (listed in App. C to the Plan) is in place in a timely fashion. GBC has little or no control over the plans of Surrey County Council as the local highways authority and Highways England for trunk roads. Worryingly, the Plan now has less substantive information about improvements to the A3 South of the M25
from Highways England and it appears that their plans are not yet formed (Policy ID2). In the absence of such information, the infrastructure proposed is specific to each proposed development and does not address cumulative effects. What would be the case with regard to planning approval if SCC and /or HE do not provide timely infrastructure?

The Plan now calls for nearly all infrastructure to be funded by developers (see APP. C). We question how realistic it is to expect developers not only to pay for all the infrastructure but also to have it in place in a timely fashion. The Plan says that planning permission will be refused if timely provision of infrastructure cannot be secured. Such refusals will almost certainly be settled in the courts. Developers’ business models are based on building and selling houses to create the cash to provide infrastructure. People will be living on the sites well before infrastructure is complete. Will GBC prevent development of Gosden Hill until slip roads etc. are provided off and onto the A3? Again, the infrastructure is site specific and does not address cumulative effects.

If development were to be refused the land would still have been removed from the green belt and its future rendered uncertain.

Residents are being asked to accept very large amounts of development with little or no detail being provided on measures which would relieve existing congestion and limit future problems. The cumulative effects of the developments listed below are certain to have a devastating effect on the A247 through our village (and of course on Send) and it is hard to see how any of the infrastructure proposed in the Plan (App. C) will do anything to mitigate the effects of these developments on the A247 and hence our village.

**Summary of the Impacts on the A247 – My Objections**

All of these developments will draw additional traffic to the A247 through the village. It would be naïve to think that the employment sites and schools will serve only the developments themselves. Apart from the normal movements of residents to and from the new sites there will be considerable additional traffic on the A247 generated by:

- children from elsewhere being delivered to schools and collected
- the employees of the offices and industrial sites getting to work and returning home
- the vehicle movements generated by distribution and storage activities
- traffic from Wisley wishing to travel South and returning
- traffic from Gosden Hill wishing to travel South and returning
- traffic from Slyfield wishing to travel South and returning
- private and commercial traffic originating in the South and accessing Gosden Hill, Burnt Common or the A3 and returning (including traffic from Dunsfold)

The A247 although an A road:

- is less than 2 vehicle wide in places
- does not have continuous footpaths
- has several sharp bends
- has a hump-backed bridge with poor site lines
- has a very difficult junction to access the station
- is largely unlit
- has a primary school
-is already very congested at times

I have lived in Burpham for 24 years and seen the steady rise in new builds, with no consideration to the improvement of essential infrastructure. Given the proposed number of dwellings and the huge impact this would have on our roads, transport and the utilities especially Water this cannot continue, so why is there a lack of specific details of essential infrastructure especially as there is an acknowledged existing deficit.

**POLICY I1: INFRASTRUCTURE AND DELIVERY**
This policy should define what is meant by strategic sites. Only the largest sites can realistically and effectively provide on-site infrastructure.

The identification and managed delivery of infrastructure by the Council and partners will be essential to support small and medium scale rural schemes which should not be expected to shoulder the burden of non-site specific infrastructure.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

POLICY ID1: INFRASTRUCTURE AND DELIVERY

It is noted that the delivery of housing in the later stages of the plan period is dependent upon a major improvement to the A3 through Guildford. As set out in Policy ID1, it is essential that “the delivery of developments may need to be phased to reflect the delivery of infrastructure” and that “if the timely provision of infrastructure necessary to support new development cannot be secured, planning permission will be refused”. We consider this to be essential due to the existing congestion issues and the lack of certainty of any future scheme, as noted above.

Guildford Borough Council proposed submission Local Plan Strategy and Sites (June 2016) : consultation under Regulation 19 of Town and Country Planning (Local Planning) (England) Regs 2012

Submission of the Education Funding Agency

1. Thank you for seeking the Education Funding Agency’s (EFA) views on the above document; we welcome the opportunity to contribute to the development of planning policy at the local level.
2. The EFA was established in 2012 in order to help the government achieve its schools objectives by delivering effective capital programmes that improve the condition of existing buildings and support the creation of new places for pupils and learners. We manage £54 billion of funding a year to support all state-provided education for 8 million children aged 3 to 16, and 1.6 million young people aged 16 to 19.
3. The EFA aims to work closely with local authority education departments and planning authorities to meet the demand for new school places and new schools. As such, we would like to offer the following comments in response to the proposals outlined in the above consultation document:

Infrastructure Policies (Policy I1)

1. The EFA support reference within Policy I1 to securing contributions from developers towards school provision through CIL and s106. You will have no doubt taken account of the key strategic policies to reiterate this position, but it would be helpful if they were explicitly referenced within the document. In particular:

   National

   1. The National Planning Policy Framework (NPPF) advises that local planning authorities (LPAs) should take a proactive, positive and collaborative approach to ensuring that a sufficient choice of school places is available to meet the needs of communities and that LPAs should give great weight to the need to create, expand or alter schools to widen choice in education (para 72).
   2. The EFA support the principle of Guildford Borough Council (BC) safeguarding land for the provision of new schools to meet government planning policy objectives as set out in paragraph 72 of the NPPF. Support is also given for the siting of schools within the allocated sites in locations which promote sustainable travel modes for pupils, staff and visitors. There is also a need to ensure that the education contributions made by developers are sufficient to cover the increase in demand for school places that is likely to be generated by a development. When new schools are developed, local authorities should also seek to safeguard land for any future expansion of new schools where demand indicates this might be necessary.
   3. Guildford BC should also have regard to the Joint Policy Statement from the Secretary of State for Communities and Local Government and the Secretary of State for Education on 'Planning for Schools Development' (2011) which sets out the Government’s commitment to support the development of state-funded schools and their delivery through the planning system.

Guildford BC Proposed Policy and Provision

1. The EFA welcomes the support in Guildford’s Infrastructure Delivery Schedule (para 4.6.3) to schools as necessary infrastructure required to help deliver sustainable growth in the borough. The EFA note that significant growth in housing stock is expected in the borough, with 14,500 new homes anticipated between 2017-2033. This will place significant pressure on social infrastructure such as education facilities.
2. In light of the above, the EFA encourages local authorities to work closely with us during all stages of planning policy development to help guide the development of new school infrastructure and to meet the predicted demand for primary and secondary school places.
3. In this respect, the EFA commends, for example, the approach taken by the London Borough of Ealing in producing a Planning for Schools Development Plan Document (DPD). The DPD provides policy direction and establishes the Council’s approach to providing primary and secondary school places and helps to identify sites which may be suitable for providing them (including on MOL), whether by extension to existing schools or on new sites. The DPD includes site allocations and policies to safeguard the sites, and was adopted in May 2016 as part of the Local Plan. The DPD may provide useful guidance with respect to securing site allocations for
schools in your emerging sites allocations document, as well as providing example policies to aid their delivery within your subsequent Development Management DPD.

4. The Guildford Draft Local Plan: Education Review (May 2016) provides a useful background document setting out Guildford’s requirements for new schools over the plan period. It confirms the need for 8FE primary places across the borough arising specifically from the strategic sites identified. In addition, it confirms 5FE secondary provision is required (beyond the existing planned provision) up to 2025. We note the Education Review is however intended to be reviewed and updated prior to the Strategy and Sites examination and request sight of this once published, to help inform any subsequent response from the EFA. Ensuring there is an adequate supply of sites for schools is essential and will ensure that Guildford can swiftly and flexibly respond to existing and future need for school places to meet the needs of the borough over the plan period.

5. The EFA’s comments on the identified sites for anticipated education provision over the plan period are set out in the table below. These include strategic sites and sites identified in Guildford’s Infrastructure Delivery Schedule:

**Access / Transport Issues**

1. In developing policies for new schools, consideration should be given at an early stage in the site appraisal process as to how the use of public transport, cycling and walking can be encouraged to help reduce the number of car journeys to and from new schools. The inclusion of a well-developed green travel plan can help to ensure that new schools are better integrated with existing communities.

**Developer Contributions, costs of school provision, CIL and EFA funding**

1. There is a need to ensure that education contributions made by developers are sufficient to cover the increase in demand for school places that are likely to be generated by major developments in the borough. The EFA acknowledge the pupil yield calculator Surrey currently use to seek s106 contributions and support this approach in principle.
2. We note Guildford BC are currently preparing their CIL charging schedule and support the inclusion on the draft Regulation 123 list of primary school provision on strategic sites allocated in the Local Plan. The EFA would be particularly interested in responding to any review of infrastructure requirements, CIL draft charging schedule and (once adopted) any subsequent CIL review and/or amendments to your Regulation 123 list. As such, please add me to your database as the EFA contact for Local Plan and CIL consultations.
3. EFA have recently held discussions with officers from Guildford BC and Surrey CC regarding the potential for EFA to forward fund the provision of schools. We look forward to progressing these discussions with your officers for those sites/schools which will be secured by 2020.
4. Finally, I hope the above comments are helpful in shaping Guildford’s Local Plan Strategy and Sites, with particular regard the provision of land for new schools. I look forward to opportunities for EFA’s continued involvement in the Local Plan process.

A new Transport Topic Paper has been published by GBC. Items 3.16 and 3.17 (page 10) mention Highways England concerns regarding the Strategic Highway Assessment Report 2016 and two letters. These letters can be accessed from the “Get Involved” website by searching for the Highways England response to the consultation. It seems clear that further modelling will be undertaken before the Examination and it also seems unlikely that it will be consulted on. We consider that any further modelling should include more detailed information so that it can be subject to scrutiny by GBC and the public.

The wording of Policy ID1 has been amended to give an impression that provision of adequate infrastructure will be enforced. However, the reality is that GBC will not determine the required infrastructure. It will be determined by Surrey Highways for the local road network and they are required to support development – not put obstacles in the way. If the Strategic Highway Assessment Report is anything to go by, the requirements will be understated or not even recognised.

Transport assessments supporting planning applications will be prepared by consultants acting for, and remunerated by, the applicant. Improvements to the strategic road network (e.g. A3) will be determined by Highways England, budget constraints, and ministerial decisions. Cllr Furniss has stated that the proposed Blackwell Farm development will not depend on A3 widening (in response to a question from Karen Stevens to the Executive Advisory Board meeting held on 20 April). It seems likely that Highways England have felt the need to offer a reality check on the likelihood of major work on the A3, such as widening or a tunnel, in the foreseeable future – apart from improvements to two slip roads. The policy states that infrastructure will be secured by planning condition and/or planning obligation but this will require enforcement and we doubt the ability and willingness of GBC to overcome developers’ viability arguments. For the permissions that require a longer timescale there could be non-delivery issues if the original developer abandons the project without fulfilling all the conditions and obligations.

Item 4.6.8 still indicates that GBC will be prepared to reduce infrastructure requirements by negotiation, i.e. viability for the developer will take precedence over infrastructure. No change has been made to the monitoring requirement which is based on CIL receipts and spending rather than actual, and timely, delivery of infrastructure.

We object to the new Guildford Borough Council Transport Strategy 2017.

We object to ASP 3 new A3/A3100/B2215/A247 Burpham-Burnt common all-movements junction, formed by a new connector road linking between new A3/A3100 Burpham junction (SRN4) and the B2215 London Road, in combination with the new A3 northbound on-slip (SRN9) and the new A3 southbound off-slip (SRN10) under Infrastructure and Delivery.

If development gets the go ahead for the strategic site at Gosden Hill it would be logical to construct a 4 way A3 interchange at Burpham. The A247 link road to Woking already at capacity will become gridlocked.

We object to SRN4 New A3/A3100 Burpham junction with relocated A3 southbound off-slip and new A3 southbound on-slip. This will place an unbearable problem onto the A247 whereby traffic will be passing directly through Send from the A3 and M25 and the proposed new development at Wisley.
We object to SRN9 A3 northbound on-slip at A247 Clandon Road (Burnt Common) and SRN10 A3 southbound off-slip at A247 Clandon Road (Burnt Common). This will place an unbearable problem onto the A247 which is already at capacity.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Pyrford Green Belt Action Group objects to developments which will increase the volume of traffic

2.1 We object to developments causing increased traffic on motorways and arterial roads in Surrey. The M25 and A3 are already highly congested. Proposed developments, particularly at Wisley, would aggravate the position.

2.2 We object to developments which will increase the volume of traffic on minor roads and lanes. Pyrford, Send and Ripley already suffer from serious congestion on village roads. Developments proposed by Guildford Council will increase traffic across Newark Bridge in Ripley into Pyrford up the steep, narrow Church Hill and along Pyrford Common Road. This will increase noise and air pollution damage to Pyrford Common Site of Nature Conservation Importance, and the Wey Valley Biodiversity Opportunity Area.

An increased number of commuters from proposed developments in Guildford will be attracted by the proximity of West Byfleet main line railway station, onto roads already forecast by Woking Council to be at the lowest flow capacity: Category F ie “forced or breakdown of flow” (effectively nose to tail).

Road traffic is a major cause of air and noise pollution and this damages people and wildlife inside and outside of Guildford Borough, including Pyrford.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

The local infrastructure is insufficient as it stands, due to increases in the local population. I have personal experience of waiting 5 hours in A&E for treatment. Children have to be driven to schools at a distance from their homes due to lack of local places. Roads are regularly at a standstill with ‘normal’ commuter traffic and gridlocked when there is an accident or some road works. Air pollution is responsible for many deaths each year. It would take many years of investment to bring infrastructure up to an acceptable level for the current population. Levies on developers will not remedy this.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Comment ID: PSLPP16/15575  Respondent: 15977889 / Charles Kimpton  Agent:
OBJECT. CIL wrongly encourages development on green field sites requiring heavy infrastructure investment. New developments need to be concentrated in urban areas close to shops and transport links.

1. **Policy D1: infrastructure**

I OBJECT to the mismatch between the latest Plan’s ambitious development targets and that lack of any realistic plans for adequate infrastructure, as already highlighted in previous public consultations.

The Council have lately acknowledged that infrastructure is a constraint, and no-one expects all infrastructure to be pre-positioned before any development can take place. But the lack of any explanation as to how infrastructure improvements will, even roughly, be on the right scale is a giant hole in the Plan that invalidates most of its housing and other aspirations.

Policy D1’s assumption that the “infrastructure provider” will maintain infrastructure in most cases, and that developers will offer contributions via Community Infrastructure Levy, is inadequate. Deliberately setting out excessive development targets you know can never be met (and which create public alarm) is a planning failure that the Inspector should challenge.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

---

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.
I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

1. I OBJECT to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
The Foreword to the plan by Paul Spooner includes on page 5:

"We recognise that significant infrastructure upgrades are required to support existing communities and the planned
growth of the borough. The delivery of sites allocated in this plan is contingent upon the provision of new infrastructure,
which is a key theme of our Local Plan”.

The lack of any plan for either physical or green infrastructure improvement clearly contradicts this in respect of both
A43 Garlicks Arch and A42 Clockbarn Nursery, Tannery Lane, Send. Development of these sites without the contingent
infrastructure would therefore be contrary to the stated aims and themes of the Plan, and should not go ahead.

Having read your revised plan it appears that the only thing to happen is a very slight drop in number of new homes
proposed.

It still does not take into account lack of school places and medical appointments which are already at breaking point.

The infra structure cannot take the amount of extra traffic proposed. Parking is already a problem let alone moving round
in the area.

To put houses on at Wisley and to get them coming on at Ripley is total madness.

Junction 10 on the M25 is a black spot and very often is blocked as is the A3. The A3 has become due to volume of
traffic just like the M25.

We pass over the M25 nearly every day and it is always stuck and not moving one way or the other.

Trying to bring more traffic on at this junction seems a very bad idea, the whole of the area will grind to a halt.

Perhaps some of the land around Guildford would be a better idea. Shalford for instance has lots of areas which could be
built on.

The level of investment proposed in the plan seems unlikely to meet the already serious deficiencies in infrastructure across the borough, and where significant investment is specified in the Infrastructure Schedule, in many cases it is unclear whether public sector funding is going to become available to support it. Funding from developers for major infrastructure projects will is unlikely to be sufficient, but until such infrastructure is in place, many of the larger developments proposed in the Local Plan will be unsustainable.

It is vital that stringent measures are put in place to ensure that infrastructure improvements precede all new development. I feel that the GBC plans are still too weak. Infrastructure changes must be viewed borough wide and not in isolation. Our village of Jacobs Well already suffers from unacceptable traffic congestion (leading to delays), high air pollution levels, noise pollution and rat runs. The development of SARP, Wisley and Gosden Hill could place an unacceptable burden on the A320, Clay Lane, Jacobs Well Road and our village of Jacobs Well unless appropriate measures are taken. Flooding, both surface water and fluvial, is also an issue in our area which needs to be addressed.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
Although much is made of the need for new infrastructure to support these developments and for this to be in place as needed, the Plan admits “…we forecast that there will also be an absolute increase in overall traffic volumes” and this is assuming all the infrastructure (listed in App. C to the Plan) is in place in a timely fashion. GBC has little or no control over the plans of Surrey County Council as the local highways authority and Highways England for trunk roads. Worryingly, the Plan now has less substantive information about improvements to the A3 South of the M25 from Highways England and it appears that their plans are not yet formed (Policy ID2). In the absence of such information, the infrastructure proposed is specific to each proposed development and does not address cumulative effects. What would be the case with regard to planning approval if SCC and/or HE do not provide timely infrastructure?

The Plan now calls for nearly all infrastructure to be funded by developers (see APP. C). We question how realistic it is to expect developers not only to pay for all the infrastructure but also to have it in place in a timely fashion. The Plan says that planning permission will be refused if timely provision of infrastructure cannot be secured. Such refusals will almost certainly be settled in the courts. Developers’ business models are based on building and selling houses to create the cash to provide infrastructure. People will be living on the sites well before infrastructure is complete. Will GBC prevent development of Gosden Hill until slip roads etc. are provided off and onto the A3? Again, the infrastructure is site specific and does not address cumulative effects.

If development were to be refused the land would still have been removed from the green belt and its future rendered uncertain.

Residents are being asked to accept very large amounts of development with little or no detail being provided on measures which would relieve existing congestion and limit future problems. The cumulative effects of the developments listed below are certain to have a devastating effect on the A247 through our village (and of course on Send) and it is hard to see how any of the infrastructure proposed in the Plan (App. C) will do anything to mitigate the effects of these developments on the A247 and hence our village.

All of these developments will draw additional traffic to the A247 through the village. It would be naïve to think that the employment sites and schools will serve only the developments themselves. Apart from the normal movements of residents to and from the new sites there will be considerable additional traffic on the A247 generated by:

- children from elsewhere being delivered to schools and collected
- the employees of the offices and industrial sites getting to work and returning home
- the vehicle movements generated by distribution and storage activities
- traffic from Wisley wishing to travel South and returning
- traffic from Gosden Hill wishing to travel South and returning
- traffic from Slyfield wishing to travel South and returning
- private and commercial traffic originating in the South and accessing Gosden Hill, Burnt Common or the A3 and returning (including traffic from Dunsfold)

The A247 although an A road:

- is less than 2 vehicle wide in places
- does not have continuous footpaths
- has several sharp bends
- has a hump-backed bridge with poor site lines
- has a very difficult junction to access the station
- is largely unlit
- has a primary school
- is already very congested at times

**General**

On all land currently under Network Rail ownership then operational usage should be considered a priority. Access to the railway for operational use should also not be hindered or prevented by any development either on railway land or in land adjacent to the railway.

The cumulative effect of a number of developments in the same area should always be assessed to ensure that the appropriate CIL or Section 106 funds can be allocated to railway projects where there is a resultant impact from those developments.

As stated above, Network Rail are working closely with Guildford Borough Council to identify future land requirements around the Guildford Station area and develop a strategy that meets the needs of the railway and the wider community.

----------------------------------------

Network Rail is the statutory undertaker responsible for maintaining and operating the country’s railway infrastructure and associated estate. Network Rail owns, operates, maintains and develops the main rail network. This includes the railway tracks, stations, signalling systems, bridges, tunnels, level crossings, and viaducts.

Could you please ensure that the following comments are taken into account and included within the preparation of your forthcoming Local Plan:

Development proposals affecting the safety at level crossings are an extremely important consideration for Network Rail. As you will be aware the Local Planning Authority have a statutory responsibility under planning legislation (Schedule 5 (f)(ii) of the Town & Country Planning (Development Management Procedure Order 2010) to consult the statutory rail undertaker where a proposal for development is likely to result in a material increase in the volume of a material change in the character of the traffic using a level crossing over a railway.

Included below are sections from the House of Commons - Transport Committee - Eleventh Report - Safety at level crossings printed on the 24th February 2014.

The House of Commons - Transport Committee - Eleventh Report - Safety at level crossings states:
“Level crossings are a significant source of risk on the UK’s transport networks. Although the number of accidental deaths at level crossings has decreased in recent years, nine people died in 2012-13. Every one of those deaths was a personal tragedy which could have been averted. We recommend that the Office of Rail Regulation (ORR), which is responsible for rail safety, adopt an explicit target of zero fatalities at level crossings from 2020.”

“7. Level crossings are places where footpaths, bridleways or roads cross railway lines at the same level. Network Rail manages approximately 6,500 level crossings on the commercial rail network, and there are a further 1,500 crossings on heritage, industrial and metro railways.5 There are two general types of crossing: active crossings, which provide warnings or protection when a train is approaching, and passive crossings, which do not. Active protection may be automatic, or may require a signaler, driver or crossing keeper to perform certain actions. Passive crossings rely entirely on the user for their safe operation.”

“12. There are significant safety risks associated with the different forms of level crossing. Of Network Rail’s 6,500 crossings, 76% are passive crossings, which do not offer any warning of an approaching train (see Table 1). The decision on whether it is safe to cross is left to the user.”

In the recent report ‘Level Crossing Safety’ issued by the Transport Select Committee (Para 1 Pg 35) the following was stated that may be of use:- “Analysis of Network Rail and Department for Transport data shows that if an average walking trip includes a level crossing, the fatality risk to a pedestrian is about double the risk of an average walking trip without a level crossing.”

In relation to co-operation between railway operators, highway authorities and planning authorities:

“31. Local authorities must work with Network Rail and other railway operators to help keep level crossings safe. For example, local authorities’ plans for promoting walking and cycling routes that traverse level crossings can have a direct effect on safety at those crossings. However, the Association of Directors of Environment, Economy, Planning and Transport told us that liaison between Network Rail and local authorities is variable…Network Rail has highlighted a number of examples where local authorities have imposed planning obligations on developers, to help fund Network Rail's construction of footbridges… However, in some cases planning authorities have consented to large developments and changes in road layout without due attention to the increased risk at nearby level crossings… In its report into a fatal accident at the Kings Mill No. 1 crossing near Mansfield, the RAIB (Rail Accident Investigation Branch) criticised the local authority for establishing a walking and cycling trail without discussing the likely impact on the usage of a level crossing with Network Rail.”

“32. Railway operators are already statutory consultees where proposed development is likely to result in a material increase in the volume or character of traffic using a level crossing…The Law Commission's proposal for broader statutory duty of co-operation on railway operators, traffic authorities and highway authorities in respect of level crossings is a sensible suggestion….However, in the case of footpaths, private crossings or unadopted roads (which are not maintained by the highway authority), there is a case for adding planning authorities to that list…We welcome the duty of cooperation on railway operators, traffic authorities and highways authorities in respect of level crossings but recommend that it should also encompass planning authorities so that the impact of additional numbers of people using level crossings can be considered.”

We believe that proposals that impact upon level crossings should include S106 or CIL contributions to mitigate the impacts of those developments. Wherever possible Network Rail will seek closure of level crossings, and either replacement with a footbridge or inclusion of a diversionary route. We believe that S106 developer contributions should be used to fund footbridges and where this is not possible developer contributions should be used to fund any mitigation works at a level crossing as a result of increased type or volume of user. As Network Rail is funded by public remit we believe it is unreasonable to expect Network Rail to fund mitigation measures on railway infrastructure as a result of third party commercial development. We believe that the above comments should be integrated as policies within the Local Plan. Planning obligations for railway infrastructure should be included in the same manner as planning obligations for highways, local facilities etc. as developments can impact the railway and developer contributions should be levied to mitigate such impacts.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
- The scale of housing development at the four housing development sites remaining in this Local Plan will put too great a strain on local infrastructure. The approximately 2000 proposed homes at Wisley Airfield will put too great a strain on the local infrastructure. It is not sustainable to build dormitory towns and simply call them sustainable. Shifting to cycling and walking discriminates against vulnerable members of the community - the disabled, those with small children, the very old, or the infirm, or those who are ill. Alternatives impact on already congested roads or over-subscribed peak hour rail services.

Building in and around East Horsley will destroy the culture and fabric of the village. The roads in the village are already congested without the additional new homes and subsequent increased usage. They are generally narrow, with potholes, cracks and other signs of wear. During heavy rains, the drains block and flooding results. The pavements do not run along every road through the village, and where they do, they are narrow and often cracked and uneven. It is a village; it was never designed to support a town.

The local primary school (the Raleigh) is already at capacity, resulting in local children being sent miles from their homes for schooling. In addition, Horsley Medical Centre is at capacity.

The proposals are unsustainable because they do not meet the objective of providing infrastructure to support the new homes. Nor do the proposals take any account of the strongly-held view (30,000 objections) that the Green Belt should be protected.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object to the lack of proper infrastructure planning for sites (A43 and A42)

The Foreword to the plan by Paul Spooner includes on page 5:

"We recognise that significant infrastructure upgrades are required to support existing communities and the planned growth of the borough. The delivery of sites allocated in this plan is contingent upon the provision of new infrastructure, which is a key theme of our Local Plan”.

The lack of any plan for either physical or green infrastructure improvement clearly contradicts this in respect of both A43 Garlicks Arch and A42 Clockbarn Nursery, Tannery Lane, Send. Development of these sites without the contingent infrastructure would therefore be contrary to the stated aims and themes of the Plan, and should not go ahead.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
Although much is made of the need for new infrastructure to support these developments and for this to be in place as needed, the Plan admits…”we forecast that there will also be an absolute increase in overall traffic volumes” and this is assuming all the infrastructure (listed in App. C to the Plan) is in place in a timely fashion. GBC has little or no control over the plans of Surrey County Council as the local highways authority and Highways England for trunk roads. Worryingly, the Plan now has less substantive information about improvements to the A3 South of the M25 from Highways England and it appears that their plans are not yet formed (Policy ID2). In the absence of such information, the infrastructure proposed is specific to each proposed development and does not address cumulative effects. What would be the case with regard to planning approval if SCC and/or HE do not provide timely infrastructure?

The Plan now calls for nearly all infrastructure to be funded by developers (see APP. C). We question how realistic it is to expect developers not only to pay for all the infrastructure but also to have it in place in a timely fashion. The Plan says that planning permission will be refused if timely provision of infrastructure cannot be secured. Such refusals will almost certainly be settled in the courts. Developers’ business models are based on building and selling houses to create the cash to provide infrastructure. People will be living on the sites well before infrastructure is complete. Will GBC prevent development of Gosden Hill until slip roads etc. are provided off and onto the A3? Again, the infrastructure is site specific and does not address cumulative effects.

If development were to be refused the land would still have been removed from the green belt and its future rendered uncertain.

Residents are being asked to accept very large amounts of development with little or no detail being provided on measures which would relieve existing congestion and limit future problems. The cumulative effects of the developments listed below are certain to have a devastating effect on the A247 through our village (and of course on Send) and it is hard to see how any of the infrastructure proposed in the Plan (App. C) will do anything to mitigate the effects of these developments on the A247 and hence our village.

Summary of the Impacts on the A247 – My Objections

All of these developments will draw additional traffic to the A247 through the village. It would be naïve to think that the employment sites and schools will serve only the developments themselves. Apart from the normal movements of residents to and from the new sites there will be considerable additional traffic on the A247 generated by:

- children from elsewhere being delivered to schools and collected
- the employees of the offices and industrial sites getting to work and returning home
- the vehicle movements generated by distribution and storage activities
- traffic from Wisley wishing to travel South and returning
- traffic from Gosden Hill wishing to travel South and returning
- traffic from Slyfield wishing to travel South and returning
- private and commercial traffic originating in the South and accessing Gosden Hill, Burnt Common or the A3 and returning (including traffic from Dunsfold)
The A247 although an A road:

- is less than 2 vehicle wide in places
- does not have continuous footpaths
- has several sharp bends
- has a hump-backed bridge with poor site lines
- has a very difficult junction to access the station
- is largely unlit
- has a primary school
- is already very congested at times

Document: Proposed Submission Local Plan: strategy and sites 2017 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.
Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy II. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy II requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.
There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

**Document:** Proposed Submission Local Plan: strategy and sites 2017 / Policy ID1

**Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )**

Policy ID1: Infrastructure and delivery

Whilst supportive of the principle that development should be phased with delivery of infrastructure, the University notes that the delivery of the new homes proposed in the plan is urgent and pressing.

Strategic sites that have the ability to deliver some of their homes early should not be delayed unnecessarily if they can demonstrably be delivered in a way that takes account of infrastructure issues such as traffic generation and road capacity.

The Blackwell Farm allocation (Policy A26) is in a very sustainable location that offers significant opportunities in this regard, including the ability to link to the Sustainable Movement Corridor from west Guildford to the town centre; a new access to the A31 that can divert some traffic away from the A3; the ability to provide key worker homes for staff employed at the University of Surrey and other locations in the west Guildford area, such as the Royal Surrey County Hospital and the Surrey Research Park. This would reduce the trip generation and pressure on existing road infrastructure in the area. The phasing of development in conjunction with off site infrastructure provision/improvements needs to take this into account. Further information is provided in the PBA transport statement submitted with these comments.

The policy should include the following:

“`The phasing of development in conjunction with off site infrastructure provision/improvements will be considered on a site by site basis, acknowledging planned investments, the nature of the proposals and that there are sites that may be better placed to proceed in advance of others.”`

The University notes that various road improvements are proposed in the infrastructure schedule. The University considers that further details are needed of what is envisaged at each location. It is recognised that the IDP will evolve alongside the evidence base in terms of mitigation measures.

I object to the lack of proper infrastructure planning for sites (A43 and A42)

The Foreword to the plan by Paul Spooner includes on page 5:
"We recognise that significant infrastructure upgrades are required to support existing communities and the planned growth of the borough. The delivery of sites allocated in this plan is contingent upon the provision of new infrastructure, which is a key theme of our Local Plan”.

The lack of any plan for either physical or green infrastructure improvement clearly contradicts this in respect of both A43 Garlicks Arch and A42 Clockbarn Nursery, Tannery Lane, Send. Development of these sites without the contingent infrastructure would therefore be contrary to the stated aims and themes of the Plan, and should not go ahead.

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.
The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
I object to the lack of proper infrastructure planning for sites (Policy I1)
The Plan does not identify adequate infrastructure improvements to support the huge scale of development, especially at Garlick’s Arch (A43) which has no infrastructure projects in the Infrastructure Schedule to support it. Local services, utilities and sewerage, doctors etc. are at or close to capacity.

There are no plans to improve the capability of the medical and police/emergency services to cover the 5000+ houses in the north east of the borough.

I object to the lack of proper infrastructure planning for sites (A43 and A42)
The Foreword to the plan by Paul Spooner includes on page 5:

"We recognise that significant infrastructure upgrades are required to support existing communities and the planned growth of the borough. The delivery of sites allocated in this plan is contingent upon the provision of new infrastructure, which is a key theme of our Local Plan”.

The lack of any plan for either physical or green infrastructure improvement clearly contradicts this in respect of both A43 Garlicks Arch and A42 Clockbarn Nursery, Tannery Lane, Send. Development of these sites without the contingent infrastructure would be contrary to the stated aims and themes of the Plan, and should not go ahead.

Development of these sites without the contingent infrastructure would be contrary to the stated aims and themes of the Plan, and should not go ahead.
10,000 homes within a 10 mile radius of Normandy I remain concerned about this proposal as in no way can the infrastructure in the area cope. If this really is to proceed then GBC must commit to putting in the infrastructure to support it.

However our roads, sewage, power and water supplies struggle as is it, especially roads. With regular tail-backs on the A323 towards Ash and Puttenham Heath Road from the south in the afternoon and from the north in the morning. More building in areas around our village at Ash, Tongham and Blackwell Farm would exacerbate this and add to the misery of long delays, especially on the A31.

10,000 homes close by a village with narrow roads will be a nightmare as it is a rat run already.

Infrastructure
The A323 at Normandy reaches traffic gridlock in the evenings towards Ash/Aldershot and heavy traffic towards Guildford in the mornings. This will be further exacerbated as the new developments in Ash continue. This brings pollution and stress to the villages which means Westwood Lane, Glaziers Lane and Wyke Avenue become 'rat runs.'

East Horsley is a small village which does not have the infrastructure of roads, rail, parking, medical facilities or schooling to support such a huge increase in population. Fifty seven percent of new housing proposed is on land that is currently categorised as Green Belt. This is flouting government law which established Green Belt to protect the countryside for future generations.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

POLICY ID1 - Infrastructure and Delivery

3.64 The NPPF sets out at para 162 that:

Local planning authorities should work with other authorities and providers to:

• assess the quality and capacity of infrastructure for transport, water supply, wastewater and its treatment, energy (including heat), telecommunications, utilities, waste, health, social care, education, flood risk and coastal change management, and its ability to meet forecast demands

• take account of the need for strategic infrastructure including nationally significant infrastructure within their area

3.65 GVG recognises the vital importance of the new infrastructure that will be required to support and mitigate the impact of the growth set out in the Local Plan.

3.66 Paragraph 4.6.2 sets out the wider definition of Infrastructure under the Planning Act to include roads and other transport facilities, flood defences, schools and other educational facilities, medical facilities, sporting and recreational facilities, and open spaces, all of which are recognised and addressed within the GVG Masterplan.

3.67 The policies immediately following policy ID1 set out the strategy for road investment (ID2), sustainable transport (ID3), and green and blue infrastructure (ID4). However there is no other specific policy relating to other infrastructure, as defined under the Planning Act, to include flood defences, schools and other educational facilities, medical facilities, sporting and recreational facilities, and open spaces.

3.68 In relation to rail infrastructure, GVG, as part of its Plan, has produced detailed proposals for the station quarter which enhances the connection of the rail station to bus, road, rail, cycle and footpaths. GVG recognise the required 40% increase in capacity described in the Wessex Plan, Heathrow Southern Rail Access and other studies and has designed new platforms and a modern transport interchange for the future. Increases in services and new journey opportunities afforded by Guildford East and West Stations plus regular services to the villages south east of Guildford, Heathrow etc. will result in the rail station becoming an even more significant hub for the region. The GVG Plan includes detailed proposals for the rail station quarter which enhances the connection of the station to bus, road, rail, cycle and footpaths.

3.69 There is a requirement to consider other essential infrastructure if the Local Plan is to be found sound.
What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: pslp171/1763  Respondent: 17417985 / John Dumbleton  Agent:
Document:  Proposed Submission Local Plan: strategy and sites 2017 / Policy ID1
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

It is generally accepted that at peak times the A3 around Guildford and local roads in Merrow and Burpham are performing at over capacity. Anyone who has experienced traffic congestion in this area knows that the level of growth planned for this area will undoubtedly make it even worse notwithstanding the proposed schemes to improve the highway network. The transport infrastructure is another constraint that has not been properly assessed even with all the proposed measures being proposed to alleviate congestion around Guildford which have themselves been watered down in this draft Plan.

Policy ID1 states that the delivery of development may need to be phased to reflect the delivery of infrastructure to be secured by planning condition and planning obligation. This approach is not strong enough. Site development should not be allowed to proceed unless strong and satisfactory guarantees or undertakings to provide the essential elements of the infrastructure needed have been given by developers and other bodies providing those elements.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

GP Surgery access

The SA states with regard to GP Surgery access that there ‘is little potential to conclude on the ability of surgeries to accept additional patients or expand.’ The surgery is already heavily subscribed. Pressures on local GPs are mounting as other national considerations take hold. The SA continues by stating that ‘the proposed allocation at Send Marsh / Burnt Common (400 homes) potentially stands out as being some distance from a GP surgery.’ The plan does not contain any firm commitment for sustainable transport from the proposed development areas to GP surgeries, should there be room for the large number of young people expected to take up residence (400 x 3 people per house = 1200 new patients).

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: pslp171/1973  Respondent: 17433409 / Julie Iles  Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )
I also have concerns about the delivery of infrastructure to support improvements which are required as a direct result of new housing, for example new A3 slip roads at Burntcommon. Whilst I welcome developer funded commitments for road network improvements I am concerned that this will lead to a reduction of any affordable housing which will be delivered. This concern reflects a change in Section 4.2.40, where there seems to be some softening of the language around the issue of developers needing to demonstrate lack of economic viability of affordable homes in order to reduce their standard quota (40%). This concern applies to other developer funded projects including Wisley cycle networks.

I welcome the change in language suggesting that Rural Exception Homes (Section 4.2.46) now need to ‘meet the housing needs of the local community’. In village settings across The Horsleys, the definition of ‘the local community’ should be those living and working within the village, and I would expect a high level of consultation with villagers as well as the Parish Council and reference to Neighbourhood Plans such as that formally submitted to Guildford Borough Council by Effingham Parish Council to influence any such projects.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: pslp171/2090  Respondent: 17443745 / Robert Siaens  Agent:

Unless an efficient new junction with 4-way access to and from the A3 is included, all traffic from any development heading south onto the A3 will have to go towards town to access it, further clogging up Guildford’s already dire traffic problems. Guildford’s traffic problems HAVE TO BE addressed first and foremost to alleviate this awful problem, which is currently reducing the quality of life in this otherwise wonderful town. And all these problems are contributing to a worsening pollution problem in Burpham and Guildford, to which the proposed new housing on Gosden Hill farm will only contribute.

The A3 HAS TO BE sorted out, improvements carried out and, more than anything else, a tunnel planned to eliminate the bottleneck at the Cathedral junction during rush hours or when an accident happens. I consider this to be vital to the traffic flow and consequent wellbeing of our traffic congested town!

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: pslp171/2130  Respondent: 17445345 / Albury Parish Council (Joanna Cadman)  Agent: 
Document:  Proposed Submission Local Plan: strategy and sites 2017 / Policy ID1 
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

We support policy IDI (3) that states that improvements to infrastructure must go hand in hand with development and not lag behind, though this statement is contradicted in the Plan under point 4:1:9 which states that infrastructure changes won’t happen until the end of the plan in 2033-34.

We ask that Guildford Borough Council in its plans for infrastructure are mindful of building in nearby Boroughs including Waverley, and their impact on resources. Substantial new housing is to be built at Cranleigh, Dunsfold airfield, and Godalming. This will impact Albury adversely if commuters and visitors to the AONB are allowed to use the A248 in its current site running through the centre of Albury village.
1. The ESFA is supportive of the proposed changes to the Local Plan with regard to planning proactively for the provision of new schools.
2. The ESFA welcomes the addition of para 4.6.49a recognising that national planning policy requires great weight to be given to the need to create, expand or alter schools to meet the needs of existing and proposed communities. This was a point we highlighted in our response to the 2016 consultation document.
3. The ESFA supports the clarification of requirements regarding secondary school provision in policies A25 and A26; and the clarification of requirements for developer contributions towards education provision in policy A29.
4. The clarification of education infrastructure requirements, including delivery agents, costs and funding sources in the Infrastructure Schedule (Appendix C) is also supported. This is important to ensure that developers have a clear understanding of the requirements placed on them to deliver this critical supporting infrastructure. It also provides clarity for the Local Education Authority and Department for Education as to what infrastructure is anticipated to be needed and when, aiding a coordinated approach to forward planning and delivery.
5. Lastly, the ESFA welcomes the addition of a reference to the council’s ‘Education Review’ document (May 2016) in the Evidence base section (Appendix D), a key evidence base document that we highlighted in our previous comments. If this is updated prior to the Strategy and Sites examination we would request sight of this once published.

**Conclusion**

1. I hope the above comments are helpful in shaping Guildford borough’s Local Plan, with specific regard to the provision of land for new schools.
2. Please notify the ESFA when the Local Plan is submitted for examination, the Inspector’s report is published and the Local Plan is adopted.
3. Please do not hesitate to contact me if you have any queries regarding this response.

Right now, Guildford is near to full. Congestion in the town centre, and on all roads leading to it, is legendary particularly at peak times. It will only take a very small increase to tip the scales and make it horrible. At peak times it is already...
common for appointments to be missed, and for people to abandon their trips. Adding over 13000 more homes will make that so much worse still, effectively wrecking Guildford as a quality place to live.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

- Traffic congestion on the major roads west of Guildford is already at levels which significantly impact the lives of people living in the Ash Green area. A high volume of traffic passes through Ash Green each day to get onto the Hogs Back and as your Local Plan points out:

“2.14a Significant, recurrent traffic congestion is experienced during peak hours on the A3 trunk road, both as it runs through the urban area of Guildford, with queuing extending back onto the dual carriageway section of the eastbound A31,”

The additional housing proposed in the Local Plan will significantly add to traffic levels. Delays of 30 minutes are already common at the A31 / A3 junction. How can it be acceptable that the borough’s roads are already recognised as an impediment to business traffic to London and the M25 and yet it more houses are being proposed?

- The minor roads in Ash Green are already overcrowded with traffic volumes they were not designed to accommodate. I live on Ash Green Road, which acts as a “rat run” for commuters seeking to miss out the railway crossing at Ash station. The level crossing at Ash is closed for 35 minutes in each hour at peak times. The consequence is that roads such as Ash Green Road see excessive volumes of traffic during the morning and evening periods. Typical traffic rates are a car every 5 seconds for 2 days at each end of the day- on a road with no pavement, cars parked outside homes, a poorly maintained road surface and a humpback bridge and dangerous T-junction.

Adding more houses in this area will flood roads such as this with more traffic than they can possible handle and ruin the lives of those who live in the area.

Infrastructure and Delivery Section: Policies ID1-4 + Site Allocations A1-59

2.29 The changes made to the Infrastructure Schedule (Appendix C) cast significant doubts on the deliverability and viability of both the Local Plan itself and the large allocated sites (which account for 64% of the anticipated housing supply).
2.30 Appendix C contains the “key infrastructure requirements on which the delivery of the plan depends”. It is critical therefore that the infrastructure can be delivered on time and financed as per the detailed schedules. By definition, if it is not possible now to guarantee that the infrastructures as listed can all be delivered and funded on time then the plan will have failed its objective of identifying a confirmed number of homes to be delivered.

2.31 In assessing whether this infrastructure is likely to be delivered, it is salient to look at the total cost of the proposed key works as no total is included in the schedule.

- Transport Rail (NR1 - NR6): £155 million to be funded by Network Raid and Developer funded (with £20 million being specific developer funding contributing to NR1 (£100 million)).
- Transport Strategic Roads (SRN1 - SRN10): £334.1 million to £784.1 million to be funded by Highways England and Developer funded (with £30 million being specific developer funded as well as developer funding contributing to the £300 million to £750 million required for SRN2 / SRN3 / SRN5).
- Transport Local Road Networks (LRN1 - LRN25): £87.6 million to £102.6 million to be funded mainly by the developers (£73 million to £88 million).
- Park and Ride (P&R1): £7.5 million to be funded by the developers.
- Sustainable Movement Corridor (SMC1 - SMC6): £80 million to £90 million to be funded by the developers and the local growth fund.
- Bus Transport (BT1 - BT2): £5.25 million to £10.25 million to be developer funded.
- Bus Transport (BT3 - BT6): Not yet costed - to be developer funded.
- Active Modes (AM1 - AM3): £26.7 million - to be developer funded with contributions from local growth fund and surrey county council
- Electricity and Gas: (EG1) £30 million - to be funded by UK Power networks, SSE and developer funded
- Electricity and Gas: (EG2 - EG7) - Cost to be determined but likely to be significant to be funded by developers and UKPN.
- Water Supply: (WS1 - WS5) - Cost to be determined and funded by developers.
- Wastewater connections and treatment: (WCT1 - WCT6) - Cost to be determined and funded by developers and Thames Water.
- Flood risk reduction: (FRR1 - FRR3) - Cost to be determined and funded by developers
- SANG1 - SANG 12 - £62 million plus cost of SAN 9-SANG 12 to be determined and funded by developers.
- Open Space (OS1 - OS6) - Cost to be determined and funded by developers
- Education (EYED2) - Cost to be determined and funded by developers
- Primary Schools (PED 2 - PED7) - £24 million plus costs to be determined for PED6 / PED7 and funded by developers.
- Secondary Schools (SED1 - SED5) - £50 million plus costs to be determined for SED5 and funded by developers.
- Emergency services (ES1) - £100 million to be developer funded.
- Health and social care (HSC1 - HSC6) - yet to be fully costed and contributions from developers to be determined.
- Community Facilities include:
  - CMH1 to CMH3 - cost to be determined and developer funded
  - Waste transfer facility (SARP 1 - SARP3): £270 million loan to be repaid by developer (or alternatively £90 million depending on how the schedule is interpreted).

2.32 The reason for listing the above in detail is so that the total costs can be assessed and considered whether they are realistic and can be funded by developers/relevant authorities, rather than at the expense of the public purse.

2.33 First, it is not possible to provide an overall total as many material items have not had a cost determined yet. It is difficult to understand how the Plan can be approved and considered sound, deliverable and effective without knowing the full costs and how they will be funded.

2.34 However, the above figures show (taking the maximum number when a range is shown) of £1.712 billion and this excludes those items above which are yet to be costed and which will increase this amount significantly. It is not at all clear that these costs can be funded.

2.35 In particular consideration needs to be given to the cost of the projects which is anticipated are to be funded by Highways England and the developers. Highways England are dealt with separately, and this next section deals with the funding that it is anticipated will be met by the Developers.
2.36 Unfortunately, Appendix C does not provide sufficient detail to ascertain what the total commitment of the developers will be because (i) some of the items are not fully costed, and (ii) some of the items identify that a contribution will be required from the developers without specifying what that cost will be. It is clear though that the developers of the allocated sites will be required to make enormous contributions which (given the qualification mentioned above) can be summarised as follows:

- **Transport Rail**: £20 million being specific developer funded as well as developer funding contributing to NR1 (£100 million).
- **Transport Strategic Roads**: £30 million being specific developer funded as well as developer funding contributing to SRN2 / SRN3 / SRN5 (£300 million to £750 million).
- **Transport Local Road Networks (LRN1 - LRN25)**: £73 million to £88 million to be funded by the developers.
- **Park and Ride (P&R1)**: £7.5 million to be funded by the developers.
- **Sustainable Movement Corridor (SMC1 - SMC6)**: £80 million to £90 million to be funded by the developers (assuming only modest contribution from the local growth fund).
- **Bus Transport (BT1 - BT2)**: £5.25 million to £10.25 million to be developer funded.
- **Bus Transport (BT3 - BT6)**: Not yet costs - to be developer funded.
- **Active Modes (AM1 - AM3)**: £26.7 million - to be developer funded with contributions from local growth fund and surrey county council
- **Electricity and Gas**: (EG1) £30 million - to be funded by UK Power networks, SSE and developer funded
- **Electricity and Gas**: (EG2 - EG7) - Cost to be determined but likely to be significant to be funded by developers and UKPN.
- **Water Supply**: (WS1 - WS5) - Cost to be determined and funded by developers.
- **Wastewater connections and treatment**: (WCT1 - WCT6) - Cost to be determined and funded by developers and Thames Water.
- **Flood risk reduction**: (FRR1 - FRR3) - Cost to be determined and funded by developers
- **SANG1 - SANG 12**: £62 million plus cost of SAN 9-SANG 12 to be determined and funded by developers.
- **Open Space (OS1 - OS6)** - Cost to be determined and funded by developers.
- **Education (EYED2)** - Cost to be determined and funded by developers
- **Primary Schools (PED 2 - PED7)** - £24 million plus costs to be determined for PED6 / PED7 and funded by developers.
- **Secondary Schools (SED1 - SED5)** - £50 million plus costs to be determined for SED5 and funded by developers.
- **Emergency services (ES1)** - £100 million to be developer funded.
- **Health and social care (HSC1 - HSC6)** - yet to be fully costed and contributions from developers to be determined.
- **Community Facilities include**:
  - **CMH1 to CMH3** - cost to be determined and developer funded
  - **Waste transfer facility (SARP 1 - SARP3)**: £270 million loan to be repaid by developer (or alternatively £90 million depending on how the schedule is interpreted).

2.37 As mentioned above, Appendix C does not allow a specific number to be attached to the “developers’ financial obligation” but even taking a prudent assessment of the figures above, the total appears to be likely to be well in excess of £500 million (if the waste transfer facility costs is £90 million in aggregate) and £700 million (if the waste transfer facility costs are £270 million in aggregate).

2.38 The majority of these costs will have to be met by the large strategic sites. Therefore (if affordable homes are to be excluded) the developers will have to contribute significantly more that £100,000 per home (and maybe closer to £150,000 per home) as their contribution towards the infrastructure costs. This is considered excessive and considerably more than comparative figures for any other boroughs that have undertaken local plans.

2.39 The Infrastructure Delivery Plan (IDP) is clear that many of the costs of the infrastructure necessary to support the Plan are still unknown. The IDP also highlights that much of how the infrastructure will be funded is also unknown. We consider that there is not sufficient information regarding the cost of infrastructure and how this will be secured to result in a viable IDP. This undermines the soundness of the Local Plan.

2.40 It is a statutory requirement that all designated sites are viable and specifically (to quote from the glossary of terms) that “a site is said to be viable if after taking account of all costs it provides a competitive return to the developer and generates a land value sufficient to persuade the land owner to sell the land for the development proposed”. It seems unlikely that all (or indeed any of) the allocated sites are viable given the infrastructure burden imposed upon them.
2.41 Furthermore, it is unclear from the Local Plan what assurances the Council has obtained that the developers will be able to provide the funding both with regards to quantum and timing.

2.42 As is made clear in the Local Plan, it is necessary for all the infrastructure to either be built before the development can commence or adequate financial guarantees obtained that any future commitments will be funded. It would have been helpful if the Local Plan had confirmed the due diligence that has been undertaken to ensure that the appropriate funding / guarantees will be available on the required timetable.

2.43 In our July 2016 representations, we flagged the above issues in outline and confirmed that the Onslow Park site had very few infrastructure requirements. This has further been confirmed by Highways England and Surrey County Council.

2.44 It remains therefore our position that a number of the sites proposed for allocation, particularly those in less sustainable locations, have material problems associated with regards to suitability, sustainability, viability and deliverability and that the changes made to this iteration of the plan have not adequately addressed these concerns. Those that are urban extensions bear an infrastructure burden compounded by the less sustainable sites and suggests that a more considered spatial strategy that focuses on minimising infrastructure requirements and targeting such investment in or adjacent to the urban area would provide a more sustainable approach.

**Infrastructure and Delivery Section (Highways England): Policies ID1-4 + A1-59**

2.45 Furthermore, the changes to the Infrastructure Schedule (Appendix C) show that it is proposed that Highways England will fund several projects (with a possible cost per appendix C of up to £755 million). Highways England have as of today only approved to fund one of the projects and it seems unlikely they will be able to fund the other projects given the quantum requested and the funds available to Highways England.

2.46 The costs in appendix C which have been allocated to Highways England totals between £305 million and £755 million. It is surprising that there is such a large range in the costs. The pertinent points to note here are as follows:

2.47 In a meeting of the Guildford Borough, Economy and Infrastructure Executive Advisory Board held on 9th January 2017, the Board received a presentation from Hugh Coakley (Project Manager, Highways England) and Graham Bown (Atkins Global, consultant for Highways England) about the possible options for improving junction 10 of the M25. This confirmed that SRN5 (the A3 / M25 works) were planned to be undertaken with completion scheduled for 2023 (not 2022 shown in Appendix C).

2.48 However, the key points to note are that Highways England confirmed in the meeting that these were the only works authorised to be undertaken during the period to 2023.

2.49 The minutes record that the Board “were disappointed that improvements to the A3 at Guildford had no definite timescale”.

2.50 The minutes further record that the Guildford Borough, Economy and Infrastructure Executive Advisory Board noted that they “feared that existing levels of congestion around Guildford would be worsened when junction 10 was finished.”

2.51 It is therefore reasonable to question, given this concern, why this draft of the Local Plan has included strategic sites which will add to the A3 congestion level around Guildford.

2.52 The most recent Annual Report and Accounts of Highways England to 31st March 2016 confirms that the M25 / A3 junction works are the only authorised works that have been approved (see page 40 committed projects) in the next five years from the date of that report.

2.53 There is therefore a material doubt that SRN2 and SRN3 can or will be funded by Highways England within the timetable shown, or indeed ever, and in the meantime, there is likely to be more congestion around Guildford.

2.54 As a result of the above, it would seem sensible to review the proposed strategic sites, all of which increase traffic and put pressure on the A3 and M25.
2.55 If, as may well be the case, Highways England do not approve any further works other than the A3 / M25 junction works then the strategic sites cannot be developed and the Plan cannot be delivered and therefore is likely to be found unsound.
