2.56 The proposed cost that Highways England is being requested to fund in Appendix C could total £755 million on four separate road improvement schemes. This figure needs to be put into the context of an annual spend on road improvements by Highways England in the whole of England in the year to 31st March 2016 of £1.1 billion (source: The Annual Report and Accounts of Highways England to 31st March 2016 - section 6 page 28). The local plan envisages that two of the road improvement works (cost up to £500 million) will be financed by Highways England prior to 2022 with the other 2 projects being completed before 2027. It seems highly unlikely that Highways England will be able to allocate such large sums to these local projects as it would involve a disproportionate amount of each annual budget being allocated to these road improvements over a number of years. Indeed, Highways England would seem to have effectively confirmed this in their presentation to the Guildford Borough, Economy and Infrastructure Executive Advisory Board held on 9th January 2017 referenced above.

2.57 Onslow Park has no significant strategic highways or infrastructure requirements.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents: 170724_Onslow_Park_Reps_targeted_consultation_on_LP_with_app.pdf (2.4 MB)
As you will be aware, Thames Water are the statutory sewerage undertaker for the whole of the Guildford Borough and the statutory water undertaker for the southern part of the Borough and are hence a “specific consultation body” in accordance with the Town & Country Planning (Local Planning) Regulations 2012. We commented on the previous version of the submission Local Plan in July 2016, therefore the following comments relate to the amended policies only as requested:

Policy ID1: Infrastructure and delivery

Thames Water still support the amended Policy I1 (now Policy ID1) and supporting text in principle as it is largely in line with previous representations, but consider that the additional text on water/wastewater infrastructure should still be included.

Thames Water support the Policy in principle as a key sustainability objective for the preparation of the new Local Plan should be for new development to be co-ordinated with the infrastructure it demands and to take into account the capacity of existing infrastructure. The National Planning Policy Framework (NPPF) includes specific guidance on water and sewerage infrastructure. Paragraph 156 of the NPPF states: “Local planning authorities should set out strategic policies for the area in the Local Plan. This should include strategic policies to deliver:……the provision of infrastructure for water supply and wastewater….”

Paragraph 162 of the NPPF relates to infrastructure and states: “Local planning authorities should work with other authorities to: assess the quality and capacity of infrastructure for water supply and wastewater and its treatment…..take account of the need for strategic infrastructure including nationally significant infrastructure within their areas.”

The web based National Planning Practice Guidance (NPPG) published in March 2014 includes a section on ‘water supply, wastewater and water quality’ and sets out that Local Plans should be the focus for ensuring that investment plans of water and sewerage/wastewater companies align with development needs. The introduction to this section also sets out that “Adequate water and wastewater infrastructure is needed to support sustainable development” (Paragraph: 001, Reference ID: 34-001-20140306).

Thames Water support the identification of water supply and waste water treatment infrastructure at paragraph 4.6.3, but given the importance of such infrastructure to sustainable development, it is considered that text along the following lines should be also included to support Policy ID1: “The Council will seek to ensure that there is adequate water supply, surface water, foul drainage and waste water treatment capacity to serve all new developments. Developers will be required to demonstrate that there is adequate waste water capacity and surface water drainage both on and off the site to serve the development and that it would not lead to problems for existing or new users. In some circumstances it may be necessary for developers to fund studies to ascertain whether the proposed development will lead to overloading of existing wastewater/sewerage infrastructure. Drainage on the site must maintain separation of foul and surface flows. Where there is an infrastructure capacity constraint the Council will require the developer to set out what appropriate improvements are required and how they will be delivered.

The development or expansion of water supply or waste water treatment facilities will normally be supported, either where needed to serve existing or proposed new development, or in the interests of long term water supply and waste water management, provided that the need for such facilities outweighs any adverse land use or environmental impact that any such adverse impact is minimised.”

Site Allocations

Specific Water Supply and Sewerage/Wastewater Infrastructure Comments:

Water treatment and wastewater/sewage treatment capacity maybe a constraint in some catchments within the Guildford Borough area. As the Local Plan is finalised we will be reviewing which of our treatment sites need upgrades to accommodate the growth and we are willing to have a meeting with the Council to discuss this.
The attached updated table provides Thames Water’s site specific comments from desktop assessments on water supply and sewerage/wastewater infrastructure in relation to the proposed housing sites, but more detailed modelling may be required to refine the requirements.

These sites have been assessed on an individual base with only limited opportunity to consider cumulative impacts. Therefore, the impact of multiple sites in the same area coming forward may have a greater impact. The scale, location and time to deliver any required network upgrades will be determined after receiving a clearer picture of the location, type and scale of development together with its phasing.

Where we have identified sites where drainage infrastructure is likely to be required to ensure sufficient capacity is brought forward ahead of the development, in the first instance a drainage strategy would be required from the developer to determine the exact impact on our infrastructure and the significance of the infrastructure required to support the development in line with the Core Strategy Policy IN2: Water Supply and Wastewater.

It should be noted that in the event of an upgrade to our sewerage network assets being required, up to three years lead in time is usual to enable for the planning and delivery of the upgrade. As a developer has the automatic right to connect to our sewer network under the Water Industry Act we may also request a drainage planning condition if a network upgrade is required to ensure the infrastructure is in place ahead of occupation of the development. This will avoid adverse environmental impacts such as sewer flooding and / or water pollution.

Comment ID: pslp171/3266  Respondent: 17580289 / Linda Carter  Agent:
Document:  Proposed Submission Local Plan: strategy and sites 2017 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

The 2017 Plan makes a stronger case for the delivery of infrastructure for all new developments. However given the number of statutory bodies involved in its provision, and it being dependent on planning being granted, details seem piecemeal, non-existent or not developed properly.

For example ID1, the proposed construction of slip roads onto A3 at Ripley, Send and Burpham as part of the site allocations at Wisley Airfield, Garlick Arch and Gosden Hill Farm (all in an 8 mile stretch from A3/M25 to Burpham) has not taken into consideration the repercussions on the local roads of the adjacent villages, already congested and poorly maintained.

In policy ID3 there is a strong suggestion that walking and cycling are sustainable modes of transport in outlying rural areas where roads are already congested and poorly lit. This is not a realistic proposition, nor practical. Also, a suggested provision of a bus network, whilst ideal, is unlikely to be economic in the long-term and therefore unsustainable.

I object to Policy ID.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Comment ID: pslp171/3377  Respondent: 17630465 / Sussex and Surrey Police (Andrew Taylor)  Agent:
Document:  Proposed Submission Local Plan: strategy and sites 2017 / Policy ID1
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

To ensure our representations are as concise as possible we have only responded to those parts of the new Local Plan that directly relate to the priorities of Surrey Police to reduce crime and opportunities for crime in in the Borough, whether this be existing or new development.

The emerging local plan should include sound policy to reduce opportunities for crime and disorder to ensure the local plan is fully compliant with paragraphs 17, 58, 69, 70, 156, 162, and 177 of the National Planning Policy Framework (NPPF). Providing a sound basis for crime prevention within adopted planning policy will improve the quality of new development and ensure the advice provided by our crime prevention design advisors is supported by development control officers and adopted by all future applicants.

Chapter 3: Spatial Vision – page 21

Strategic objective 3 – page 24

Surrey Police welcome the support and inclusion of ‘Strategic objective 3’ requiring all development to be of high quality design and enables people to live safe, healthy and active.

lifestyles. This is drafted in line with paragraph 69 of the National Planning Policy Framework (NPPF), which states that planning policies should aim to achieve places which promote safe and accessible environments where crime and disorder, and the fear of crime, do not undermine quality of life or community cohesion.

This policy would be furthered strengthened through direct references to ‘Secured by Design’ and reducing crime and anti-social behaviour. In so doing, it would bring the Spatial Vision into closer alignment with Policy D4 (Character and design of new development).

Surrey Police strongly recommend the addition of the following Strategic objective under the heading of ‘Society’.

- Reducing crime, anti-social behaviour and the perception of crime through the application of Secured by Design standards and attaining the Secured by Design award. (recommended wording)

Furthermore, National Planning Practice Guidance is very clear that:

‘Designing out crime and designing in community safety should be central to the planning and delivery of new development. Section 17 of the Crime and Disorder Act 1998 requires all local authorities to exercise their functions with due regard to their likely effect on crime and disorder, and to do all they reasonably can to prevent crime and disorder. The prevention of crime and the enhancement of community safety are all matters that a local authorities should consider when exercising its planning functions under the Town and Country Planning legislation.

Local Authorities may, therefore, wish to consider how they consult their Police and Crime Commissioners on planning applications where they are Statutory Consultees and agree with their police force how they will work effectively together on planning matters.

It is important that crime reduction-based planning measures are based upon a clear understanding of the local situation, avoiding makings assumptions about the problems and their causes. Consideration also needs to be given to how planning policies relate to wider policies on crime reduction, crime prevention and sustainable communities. This means working closely with the police force to analyse and share relevant information and good practice.’

(Paragraph: 010 Reference ID: 26-011-20140306)

Strategic objective 12 – page 26

Surrey Police are concerned over the existing core theme regarding infrastructure and the limited detail relating to other infrastructure providers with the exception of transport. There is no recognition to emergency services within strategic objective 12 or 13. Improving health, education, life-long learning and well-being of all sectors of the community will not be achieved if that same community us not safe, secure and does not have adequate access to the emergency services.
In this respect, the Council’s attention is drawn to the fact that there is a significant body of Secretary of State and Planning Inspectorate decisions supporting the principle of developer contributions towards policing to mitigate against housing growth. These decisions can be summarised in Appendix 1.

Surrey Police consider that the current lack of reference to specific infrastructure providers is inconsistent with paragraphs 17, 58, 69, 70, 156, 177 and 186 of the National Planning Policy Framework (NPPF).

To address these concerns, Surrey Police proposed strategic objective 12 is replaced with the following:

12. To facilitate the timely provision of social and physical infrastructure necessary to improve health, education, life-long learning, well-being, safety and security of all sectors of the community.

And / or

‘Linking new development where appropriate, to the improvement of health, education, life-long learning and the emergency services.

Policy ID1: Infrastructure and delivery – page 122

Policy ID1 outlines the infrastructure necessary to support development and mitigate its otherwise adverse impacts. Policy ID1 does not state which types of infrastructure will be supported, however further explanation is given in the subsequent ‘definitions’ section.

Guidance note 4.6.2 does states “Infrastructure is a very broad term. The Planning Act 2008 as amended defines infrastructure as roads and other transport facilities, flood defences, schools and other educational facilities, medical facilities, sporting and recreational facilities, and open spaces. Guidance on the CIL also advises that infrastructure also includes cultural and sports facilities, district heading schemes, police stations and other community facilities.

The definition of policing infrastructure is however far more broad than ‘police stations’ and encapsulates a wide variety of infrastructure necessary for policing. For this reason, Surrey Police request ‘police station’ is replaced by ‘police infrastructure’.

Nationally, the Force ensure we take regular legal advice and guidance from industry professionals on the applicability of NPPF tests relating to the application of Regulation 122 on our funding requests for S106 agreements and Infrastructure Delivery Plans. This included advice as to what is infrastructure which can be summarised as follows:

- The first point to note is that “infrastructure” is not a narrowly defined term. Section 216 of the Planning Act 2008 provides a list of “infrastructure” but is clear that that list is non-exhaustive. That fact is demonstrated by the use of the word “includes” prior to the list being set out.

- There is no difficulty in the proposition that contributions towards Police infrastructure can be within the definition of infrastructure for the purposes of the 2008 Act. In policy terms this is reinforced by the reference to security infrastructure in paragraph 156 of the National Planning Policy Framework.

- Infrastructure is not limited to buildings and could include equipment such as vehicles, communications technology, and surveillance infrastructure such as CCTV.

Assessing the impact of housing growth in Guildford on policing capacity and police infrastructure

The emerging Guildford Local Plan makes provision for at least 12,426 homes in Guildford between 2015 and 2034 (an average of 654 homes a year), which will accommodate 31,562 additional persons at various allocated sites (based on 2011 census average household size).

Surrey Police records indicate that there were a total of 28,190 incidents recorded between the beginning of April 2016 and the end of March 2017. Of these incidents there were 8,520 recorded crimes which is only 28% of all recorded incidents. This results in approximately 0.508 incidents per household in the Borough or 0.2 incidents per person that require a police response in Guildford over the past year. The growth outlined in the emerging local plan would result in
an additional 6,312 incidents each year to be investigated (once full occupation is achieved). The number of recorded incidents would rise by approximately 332 incidents per year.

On average each police officer in Guildford attends approximately 141 incidents per year. These incidents range widely in complexity because of the statutory duties placed on the police force to respond to vulnerable persons. Surrey Police deliver crime prevention and presence, attendance and service lead at emergencies (e.g. traffic accidents, flooding, counter terrorism and community reassurance. We must also attend all incidents involving deaths, attend and input to community safety and crime partnerships, and provide referral responses when there are expressed concerns about the safety of children, the elderly and those with special needs. Common day-to-day incidents involve the detection and apprehension of intoxicated drivers, burglaries, various types of assault or domestic incidents and many more incidents which require police attention.

The emerging Local Plan proposes a significant increase to the housing stock of Guildford. This will be achieved through developing a range of strategic green and brownfield sites including Wisley Airfield. There is relatively little demand for emergency services from what are, in many cases, open fields or brownfield sites. Following redevelopment of these sites for housing and other uses, Surrey Police will have permanent, on-going demands placed upon our service. Ensuring Surrey Police are supported with the appropriate capital infrastructure to police these new developments is an essential planning policy consideration to be addressed in the emerging Local Plan and the subsequent Community Infrastructure Levy.

These additional crime, anti-social behaviour incidents and public safety/welfare incidents will translate into the following day-to-day impacts upon Surrey Police:

- Additional calls and response per year via the police control centre;
- Additional non-emergency events to follow up with public contact each year;
- Attendance to additional emergency events within areas of new development each year;
- Additional anti-social events to follow up with public contact each year;
- Increased demand for patrol cover including investment in new vehicles and other modes of transport for police officers;
- Additional demand for ANPR technologies (vehicles enabled or fixed site);
- Additional demands for new officers which incurs significant start-up costs through equipment and start-up training costs;
- Additional space in custody suites and other specialist policing functions;

The Council can be assured that the provision of new infrastructure to support the emergency facilities is supported by judgements from the High Court and appeal decisions made by the Secretary of State and Planning Inspectors. The following section outlines some of the key High Court rulings which set the legal principle of contributions towards policing.

**High Court and appeal decision in favour of developer contributions towards policing**

The principle of developer contributions towards policing has been tested in two notable High Court challenges ([Appendix 2 & 3](#)). There are also numerous appeal decisions in favour of developer contributions included the recent positive Secretary of State decision ([Appendix 4](#)) in favour of our partner force, Sussex Police.

The principle of developer contributions towards police infrastructure (and the definition of infrastructure) to support development growth was recently upheld by the High Court (22/11/16), in the case of Jelson Limited vs Secretary of State for Communities and Local Government and Hinkley and Bosworth Borough Council [2016] EWHC 2979 (Admin). As copy of this judgement is attached as Appendix 2. This High Court judgement included the following items as capital infrastructure considered necessary to support policing and confirming all items of infrastructure were fully compliant with CIL Regulation 122:

- Personal equipment (workstation, radios, protective equipment, uniforms, bespoke one-off training)
- Police vehicles
Jelson Limited’s argument against the police contribution are contained in paragraphs 73-76 of the enclosed High Court judgment. In summary, Jelson Limited argued the following:

- As the population of an area increased so the overall rate of crime in a police area, and hence the demands placed upon resources, declined.
- The Planning Inspector had not properly assessed the evidence submitted by Leicestershire Police. Has the Inspector done so, she would have rejected Leicestershire Police’s Section 106 contribution request.

Mr Justice Green wholly rejected Jelson’s case, as detailed in paragraphs 77-81 of the judgement. In summary, Mr Justice Green stated:

- The data submitted by Leicestershire Police did establish that the proposed development would have direct, additional and permanent demands upon policing services of all kinds.
- It was unreasonable to have expected the Inspector to undertake a more detailed analysis of the submissions from Leicestershire Police than she had done.
- The request made by Leicestershire Police was clear, with the continuous requested properly allocated to specific projects.
- The police evidence comprehensively demonstrated and evidenced the impact caused by the development and why the infrastructure types (and contributions) identified would mitigate this.
- In view of the above, the Inspector could have made no other reasonable choice but to award the requested Section 106 contributions to Leicestershire Police.

The case for developer contributions towards policing was tested prior to the Jelson case in The Police and Crime Commissioner for Leicestershire vs Blaby Council and Hallam Land (and other developers). Mr Justice Foskett made some obliter observations in the case that are relevant and applicable to the principle of contributions towards policing infrastructure:

61. I do not, with respect, agree that the challenge mounted by the Claimant in this case can be characterised as a quibble about a minor factor. Those who, in due course, purchase properties on this development, who bring up children there and who wish to go about their daily life in a safe environment, will want to know that the police service can operate efficiently and effectively in the area. That would plainly be the “consumer view” of the issue. The providers of the service (namely, the Claimant) have statutory responsibilities to carry out and, as the witness state of the Chief Constable makes clear, that itself can be a difficult objective to achieve in these financially difficult time. Although the sums at stake for the police contributions will be small in comparison to the huge sums that will be required to complete the development, the sums are large from the point of view of the police.

62. I am incline to the view that if a survey of local opinion were taken, concerns would be expressed if it were thought that the developers were not going to provide the police with a sufficient contribution to its funding requirements to meet the demands of policing the new area: lawlessness in one area can have effects in another nearby area.

Sussex and Surrey Police have adopted the same methodology considered in these High Court decisions which uses a detailed assessment of existing resources to determine our predicted infrastructure requirements. These judgments confirm the reasonableness of Surrey Police seeking infrastructure contributions from new major developments to mitigate the negative impacts they cause. This view has been supported by the Secretary of State and Planning Inspectorate on numerous occasions which are included as Appendix 1.
Surrey Police would also like to draw the Council's attention in particular to the following comments of the Inspector in the Land at Melton Road Appeal (APP/X2410/A/12/2173673) as they are particularly resonant:

“It seems to me that the introduction of additional population and property to an area must have an impact on policing, in the same way as it must on education and library services, for example. Moreover, it also seems to me that the twelfth core planning principle of the Framework, that planning should… “take account of and support local strategies to improve health, Social and cultural wellbeing for all, and deliver sufficient community and cultural facilities and services to meet local needs”, can only be served if policing is adequate to the additional burdens imposed upon it on the same way as any other public service.

The logic of this is inescapable. Section 8 of the Framework concerns the promotion of healthy communities and planning decision, according to paragraph 69 should aim to achieve places which promote, inter alia, “safe and accessible environmental where crime and disorder, and the fear of crime, do not undermine quality of life or community cohesion.”

Adequate policing is so fundamental to the concept of sustainable communities that I can see no reason, in principle, why it should be excluded for the purview of S106 financial contributions, subject to the relevant tests applicable to other public services. There is no reason, it seems to me why police equipment and other items of capital expenditure necessitated by additional development should not be funded, alongside, for example additional classrooms and stock and equipment for libraries”.

Without direct recognition to policing infrastructure Surrey Police consider policy ID1 of the emerging Local Plan would be inconsistent with paragraphs 17, 58, 69, 70, 156, 162, 177 and 186 of the National Planning Policy Framework (NPPF) and the recent judgement concerning policing between Jelson Limited vs Secretary of State for Communities and Local Government and Hinkley and Bosworth Borough Council.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Station redevelopment etc.

The Council documents refer to development and platform works at Guildford station together with aspirations for new stations within the locality and improvements on both the Portsmouth Direct and North Downs Lines.

There are only two references to Guildford (which are already complete and not the specific schemes listed) in the Enhancements Delivery Plan (EDP) which describes the outputs, scope and milestones for projects and ring fenced funds that Network Rail is committed to deliver in the current control period CP5 (1st April 2014 to 31st March 2019). Network Rail publishes an updated version of the EDP every quarter. ORR holds Network Rail to account for the delivery of the outputs it has committed to the funders of enhancements; in England and Wales this is typically the Department for Transport (DfT).

ORR does not present plans for future railway enhancement projects such as these to Parliament (although some are joint Train Operating Companies and Network Rail funded). The current process involves ORR requesting that DfT produce a High Level Output Statement (HLOS) which states what it requires the railway to achieve as a part of the run up to the h

As a response to our recent consultation on the treatment of enhancements DfT has said that its forthcoming HLOS may not include new enhancements schemes this time, with these being dealt with in a separate process outside of PR18.

The national rail network controlled by Network Rail is divided into a number of routes, Guildford falls under Wessex.

The Wessex Route Study, which sets out the strategic vision for the future of this part of the rail network over the next 30 years and provides options for funders was established in August 2015 contained many of the points raised by the Council, which would have had an opportunity to comment on Network Rail’s plans.

Proposed Submission Local Plan Regulation 19 representations (2016 and 2017)

Document part: Policy ID2 - Supporting the Department for Transport's "Road Investment Strategy"
Policy I2: Supporting the Department for Transport's "Road Investment Strategy"

We welcome inclusion of this policy although we consider the proposals inadequate to address the backlog of investment and future needs. Guildford should be a very cost beneficial place to invest.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

4.6.18 We are troubled reference to an A3 tunnel beyond the Plan period has been deleted and that land is not safeguarded for entrances or works areas.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

kkkkk) We are concerned that Policy ID2 is not sufficiently robust as to require works to be carried out as part of such developments in the neighbourhood of the A3 and M25.

lllll) We note at 4.6.18 reference to A3 widening and/or a tunnel option have been deleted. There needs to be a statement of intent to work towards a long-term solution to the A3 past Guildford which, in the opinion of the Society, will require a new alignment or approach.
mmm) No major resolution is likely to be forthcoming during the plan period. It is entirely likely that adding the proposed new four-way junction at Send will increase traffic and rat-running until a permanent solution to the A3 is found. The proposed Ockham junction will have a similar effect.

nnn) A more significant characteristic of the A3 past Guildford is that it climbs almost 100 metres in around 3.5km from the point at which it crosses the River Wey to the cutting at the top of the Hog’s Back.

[Image]

ooo) The turning off towards Farnham at the apex of a long steep climb causes problems due to slow-moving, nose-to-tail traffic in the inside lane conflicting with traffic in the outside lane wishing to exit onto the A31.

ppp) Widening the A3 will not especially help solve the problems associated with the 1 in 35 climb that quickly lead to a build-up at the Dennis Roundabout junction where traffic joins from the town, and then backs up quickly beyond that to the A320 turn.

qqq) Showing an extended line to near the Compton roundabout demonstrates the impact of crossing over the North Downs in either direction.

[Image]

rrr) Whilst these graphics are very basic and approximate, they do show part of the challenge caused by the current configuration of the A3 that has been running at capacity for around 20 years at peak hours, the overspill traffic rat-running through the town and neighbouring villages and residential areas.

TRANSPORT – TOPIC PAPER (2017)
In addition to points made elsewhere in our response, we are concerned that Guildford Borough Council seems to be putting far too much emphasis on the A3 improvements (and an aspirational tunnel) to solve all their problems. Traffic (and its knock-on effect on other forms of transport) will get a lot worse in the interim in the town centre, however much they attempt to delay development. The net effect will be strangle growth rather than encourage it.

DUTY TO COOPERATE – TOPIC PAPER (2017)
Guildford Borough Council has, by and large, made good efforts to cooperate with other Boroughs and agencies, and it takes two to cooperate in each case. We are disappointed at the number of references to third parties (such as Highways England) that have been removed from this draft plan because agreement has not been reached. We also believe the duty to cooperate should apply to cooperation with residents’ groups and community organisations such as the Guildford Society. There are too many loose ends that prevent the plan being satisfactorily completed, but we recognise that Guildford Borough Council wishes to press ahead towards adoption of its plan.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
POLICY I2 - Supporting the Department of Transport’s “Road Investment Strategy”

We object to this policy as it is too vague and optimistic. Significant improvements to the road infrastructure are like to be many years away even if they ever happen. The draft Plan, however, commits to building massive housing estates in the countryside before any of these road improvements are in place. This is inappropriate and will lead to massive traffic disruption during the construction phase and will add permanently to an already congested network.

Road infrastructure represents a major constraint that should have been applied to the OAN at a much earlier stage in the Plan process and not left as an unresolved difficulty in the draft Plan.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

11.1 OBJECT due to the congestion that development will cause to the trunk roads, A3/M25 (Policy I2)

There is no certainty that either the A3 or M25 in the borough will be improved to increase capacity and reduce congestion during the Plan period. Highways England has no plans to even examine improving the A3 before 2020. I worry that development of the large residential sites identified at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), will take place before any improvements are made to the trunk road network. The A3 & M25 are already at capacity during peak hours and any development prior to improvement of these roads will only make the situation worse.

Do you consider this section of the document; complies with the Duty to Cooperate? ( No ), is Sound? ( No ), is Legally Compliant? ( )

I object to policy i2

Supporting the Department of Transport’s “Road Investment Strategy” This policy is too vague and unrealistically optimistic. Decisions by Highways England on improving the strategic road network (the M25 and A3) are still years off. The Council has suggested a very expensive tunnel under Guildford, but there is no evidence to show that this is a realistic option. Even if Highways England accepted this (which is highly unlikely in the post-Brexit public spending climate) it would not be built until the end of the plan period at the earliest. Other, less expensive A3 improvements, and changes to the Junction 10/Heathrow stretch of the M25, will also take years to agree and complete. The draft plan, however, commits to building massive housing estates in the countryside before any of these road improvements are in place. This is foolhardy. Surrey is the most congested county in England, with 683 people per square kilometre, compared with an English average of 413. This policy will lead to massive traffic disruption during the construction phase and will add permanently to an already congested network (about 3,000 private cars from the 2,100 new homes at Wisley Airfield alone). This is a major development constraint that should have been applied to the OAN to constrain the housing target.

Public bus services have been cut and housing is proposed outside the town with a hugely expensive sustainable corridor so that people can walk or cycle in. Why not save money and build the houses in the town where people want them? This policy is in some ways ageist as elderly and infirm and those with small children are unlikely to benefit from this proposal as Guildford is very hilly!
Much of the funding is from development which will limit if not negate the implementation of affordable housing, which was originally a key driver of the Plan?

The 3 schemes are insufficient to prevent severe congestion on our highways and this is using a traffic model that has probably underestimated the issue. Constraints must be applied to the development levels or development needs to be put where infrastructure already exists and improvements can be considered rather than new infrastructure?

If the tunnel is a genuine consideration then land needs to be safe guarded or the notion should be removed. the same applies to railway stations which have been mentioned to pave the way for sustainable development but Network Rail has not agreed to them, even in principle (lacking the duty to cooperate).

The infrastructure proposals lack sufficient detail.'Improvements’ to x junction is inadequate. Details should outline exactly where and what the proposal is and what improvements will transpire?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object for the following reasons.

90. This policy is concerned only with the strategic road network – the A3 and M25 for which the responsibility and decision-making lies with Highways England. It is only reasonable that the council will work closely with Highways England to ensure that the Local Plan does not utilise land in a way that limits the scope for future improvements.

91. However, the proposals for the A3 are undecided and the council has suggested a very expensive tunnel proposal that, even if Highways England decided to go ahead with it, is unlikely to be delivered until the end of the plan period. Less expensive alternative A3 improvements would not be delivered before implementation of the current draft Local Plan and would deliver a massive growth in traffic.

92. The result of the EU referendum must raise uncertainties about existing budget provision and priorities for Highways England projects.

93. The road improvements are likely to lead to significant disruption to traffic during the construction phase on top of an already overloaded road network. It would be folly to make matters worse by committing to such a large housing number and the only logical conclusion is that a very significant traffic constraint should be applied to the housing number for this Local Plan.

The removal of item 4.6.17 is puzzling. In the rationale for changes it is described as a potential statement of common
ground with Highways England. GBC believe that it is likely to be agreed nearer to the plan Examination – but once
again it highlights the lack of control over key roads infrastructure in formulating the Plan.

Policy 12: Supporting the Department for Transport's "Road Investment Strategy"

While the M25 proposals are of some interest, the A3 proposals are in principle of central importance to Guildford, as
they will unlock much. But what are they? We are told in the vaguest terms, but either proffered alternative will affect
much on the ground. To not have some detail does undermine the transport section of the draft Local Plan.

Note that one particular issue that arises is Compton. This is a pretty valuable Conservation Area, but the road through
has become what is in effect a 'South Guildford By-pass' -a situation that will get worse with A3 improvements. How is
this to be tackled -for tackled it must be!

Policy I2
I object to this policy since it is too vague and optimistic. Action by Highways England on improving the strategic road network is a long way off and, apart from schemes already identified for funding, is unlikely to happen. The building of a tunnel is so unlikely it hardly merits mention.

Supporting Highways England’s Road policy is actually a legal responsibility.

It should be noted their [Highways England] time scale for meeting infrastructure requirements does not start until 2020. Any development alongside the A3 cannot (due to lack of infrastructure) start until or after that time.

Thus this Plan is undeliverable within the time schedules laid out.

It should also be noted that road intersections deemed as a requirement at the numerically lower traffic levels of the late 1970’s / early 1980’s have not been included within the plan. Those deemed as a requirement were:

- A320 south bound on and off the A3. [Ref. Documents Surrey History Centre for completion of the Burpham Ladymead bypass 1978-1982]
- Four way inter section A3 with Gosden Hill [see document Gosden Hill plan 1982.]
- Link Road from the bullet point immediately above to the A25. [see document Gosden Hill plan 1982.]

**Target for Policy I2**

Note: There is currently a £1.5 billion Surrey Infrastructure budget deficit prior to these proposals.

The Target actually reads:- ‘the three schemes on the strategic road network (locations not identified) within Guildford Borough as identified in the 2015-2020 period to be implemented by 2033!!!’

That means 28,000 vehicles, with 30% increased pollution level, will be on the roads of Guildford before the roads needed to serve the new homes are even planned to be built.

THIS IS UNSUSTAINABLE UNSOUND and UNTENABLE.

Note: Pollution level taken from the EA Spread sheet giving base level pollution calculations for given local traffic levels, speed and composition of vehicles

I OBJECT due to the congestion that development will cause to the trunk roads, A3/M25 (Policy I2)

I object to this policy as it is too vague and optimistic. Significant improvements to the road infrastructure are like to be many years away even if they ever happen. The draft plan, however, commits to building massive housing estates in the countryside before any of these road improvements are in place. This is inappropriate and will lead to massive traffic disruption during the construction phase and will add permanently to an already congested network (about 3,000 private cars from the 2,100 new homes at Wisley Airfield alone).

Road infrastructure represents a major constraint that should have been applied to the housing target at a much earlier stage in the plan process and not left as an unresolved difficulty in the draft plan.

There is no certainty that either the A3 or M25 in the borough will be improved to increase capacity and reduce congestion during the Plan period. Highways England has no plans to even examine improving the A3 before 2020. I have considerable concerns that development of the large residential sites identified at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), will take place before any improvements are made to the trunk road network. The A3 & M25 are already at capacity during peak hours and any development prior to improvement of these roads will only make the situations worse.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
Policy 12: Supporting the Department for Transports “Road Investment Strategy”

4.6.18: It is written in this paragraph: “…the scheme could either be the widening of the existing A3 carriageways or a tunnel option”. For the tunnel to be possible land needs reserving for a tunnel entrance.

Land should also be reserved for a bridge over the river and railway to unite the two sides of Guildford and take the pressure of the gyratory system.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

POLICY 2DI: Infrastructure and delivery

4.6.18 I object to the A3 tunnel option being deleted. The A3 cuts Guildford into two halves despoiling its attractiveness as a scenic heritage town, and causing noise pollution from very heavy traffic which impacts upon swathes of residential areas, lowering the quality of life for many residents. The Government says it wants to spend on infrastructure; Guildford should begin to lobby for a tunnel with a widened A3 for future generations. Tunnels are a way of life for other European countries, even though they are less crowded and have more space. Even junctions are built underground.

Land should be safeguarded to allow for tunnel entrances.

I OBJECT to poor air quality concerns (Policy I3)

Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel...
plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

Policy I2: Supporting the Department for Transport’s “Road Investment Strategy”

Response

Summary

I OBJECT to this policy as it stands. This policy is concerned only with the strategic road network – the A3 and M25 for which the responsibility and decision-making lies with Highways England. It is only reasonable that the council will work closely with Highways England to ensure that the Local Plan does not utilise land in a way that limit the scope for future improvements.

However, the proposals for the A3 are undecided and the council has suggested a very expensive tunnel proposal that, even if HE decided to go ahead with it, is unlikely to be delivered until the end of the plan period. Less expensive alternative A3 improvements would not be delivered before implementation of the current draft Local Plan and would deliver a massive growth in traffic. The road improvements are likely to lead to significant disruption to traffic during the construction phase on top of an already overloaded road network. It would be folly to make matters worse by committing to such a large housing number and the only logical conclusion is that a very significant traffic constraint should be applied to the OAN for this Local Plan.

Detailed response:

Funding for prospective road improvements has not been secured.

The wording of this policy is far too vague. Terms such as “working with” Highways England, to “facilitate” improvements, “to take account” of “emerging proposals” mean that this policy is, in effect, meaningless. Typographical errors – such as the misspelling of “licensed” – must also be corrected.

The Road Investment Strategy phase 2 (RIS2) for the period post 2020 is currently in the research stage. Until the research is completed it is impossible to prejudge what impact this will have on the Strategic Road network. However, the Strategic Transport Assessment does state “4.8.6 It should be noted that despite these improvements, Figure 4.7 shows the A3 is still operating overcapacity with resulting impacts on congestion.” and “4.5.10 Currently it is unclear why some minor roads in or just outside Guildford town centre are showing increases. These include roads such as Nightingale Road, Denmark Road and Tormead Road. However, it could be related to re-routing occurring as a result of the improvements to the A3 through Guildford attracting drivers to both join the A3 and remain on the A3 at Guildford and weaving through local streets.” Also, at 4.8.3 “At the same time, average vehicle speeds increase not just on the A3 but across the network within the borough as a whole. However, despite this it should be noted that although the average speed across the network in Scenario 5 is higher than in Scenario 1 (the Do-Minimum), there are differences
within the network with average speeds on A roads and minor roads lower than in Scenario 1.” In other words, traffic congestion on the local road network is predicted to be worse under this draft Local Plan.

It is possible or indeed probable that no further funding will be available, or that any funding will not meet projected full costs. If this funding is unavailable in full, then this policy should clearly state that projects cannot be developed.

RECOMMENDATION:

I propose that unless guaranteed public funds are available to cover costs in full, there should be no development of any individual sites of more than 10 homes outside the urban areas.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

POLICY I2 - Supporting the Department of Transport’s “Road Investment Strategy”

I OBJECT. This policy is too vague and optimistic. Decisions by Highways England on improving the strategic road network (the M25 and A3) are still years off. The Council have suggested a very expensive tunnel under Guildford, but this is no more than a dream. Even if Highways England accepted this (which is highly unlikely in the post-Brexit public spending climate) it would not be built until the end of the plan period at the earliest. Other, less expensive A3 improvements, and changes to the Junction 10/Heathrow stretch of the M25, will also take years to agree and complete.

The draft plan, however, commits to building massive housing estates in the countryside before any of these road improvements are in place. This is foolhardy. Surrey is the most congested county in England, with 683 people per square kilometre, compared with an English average of 413. This policy will lead to massive traffic disruption during the construction phase and will add permanently to an already congested network (about 3,000 private cars from the 2,100 new homes at Wisley Airfield alone). This is a major development constraint that should have been applied to the OAN before this consultation, and not left up in the air.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT TO POLICY I2 (SUPPORTING DTP’S ROAD STRATEGY): • Doesn’t allow for catastrophic increase in traffic resulting from spreading new housing estates across the borough. • Out of sync with DTP’s strategy: houses to be
built and Green Belt destroyed before plans for A3 etc implemented. • Road plans too optimistic anyway, especially post-Brexit. Probably won’t happen.

I object to the congestion that development will cause to the trunk roads A3/M25 (Policy12)

Both the A3 and M25 need improvements before any developments commence. This is clearly not going to happen in the timescales of the plan, so the proposed developments at Wisley Airfield (A35), Garlick's Arch (A43) and Gosden Hill (A25) should NOT take place.

Please record these objections individually against the relevant sections of the plan and ensure that they are submitted to the Planning Inspectorate.

The A3 or M25 would have to be improved before any development is done. Highways England has no plans to even start considering improving the A3 before 2020. Under the current economic climate post Brexit, it is unlikely any additional funding will be made available for new capital projects. Clearly no real improvements are possible in the timeframe of this Plan so the developments at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), should not take place.

Attached documents:
I OBJECT. This policy is too vague and optimistic. Decisions by Highways England on improving the strategic road network (the M25 and A3) are still years off. The Council have suggested a very expensive tunnel under Guildford, but this is no more than a dream. Even if Highways England accepted this (which is highly unlikely in the post-Brexit public spending climate) it would not be built until the end of the plan period at the earliest. Other, less expensive A3 improvements, and changes to the Junction 10/Heathrow stretch of the M25, will also take years to agree and complete.

The draft plan, however, commits to building massive housing estates in the countryside before any of these road improvements are in place. This is foolishly. Surrey is the most congested county in England, with 683 people per square kilometre, compared with an English average of 413. This policy will lead to massive traffic disruption during the construction phase and will add permanently to an already congested network (about 3,000 private cars from the 2,100 new homes at Wisley Airfield alone). This is a major development constraint that should have been applied to the OAN before this consultation, and not left up in the air.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

1. POLICY I2

I OBJECT due to the congestion that development will cause to the trunk roads, A3/M25 (Policy I2)

I object to this policy as it is too vague and optimistic. Significant improvements to the road infrastructure are like to be many years away even if they ever happen. The draft plan, however, commits to building massive housing estates in the countryside before any of these road improvements are in place. This is inappropriate and will lead to massive traffic disruption during the construction phase and will add permanently to an already congested network (about 3,000 private cars from the 2,100 new homes at Wisley Airfield alone).

Road infrastructure represents a major constraint that should have been applied to the housing target at a much earlier stage in the plan process and not left as an unresolved difficulty in the draft plan.

There is no certainty that either the A3 or M25 in the borough will be improved to increase capacity and reduce congestion during the Plan period. Highways England has no plans to even examine improving the A3 before 2020. I have considerable concerns that development of the large residential sites identified at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), will take place before any improvements are made to the trunk road network. The A3 and M25 are already at capacity during peak hours and any development prior to improvement of these roads will only make the situations worse.

<td>OBJECT. Obviously we must support the DOT but to put faith in an A3 tunnel gives a new dimension to the term 'wishful thinking'. There is simply no indication of how the traffic infrastructure could be modified to support the new proposals. Nor is there any mention of the Surrey County Council's £800,000,000 infrastructure deficit. Any future building of a tunnel would be decades away, witness the concept to delivery of the Hindhead tunnel.</td>

<td>This policy is concerned only with the strategic road network – the A3 and M25 for which the responsibility and decision-making lies with Highways England. It is only reasonable that the council will work closely with Highways England to ensure that the Local Plan does not utilise land in a way that limit the scope for future improvements.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
The proposals for the A3 are undecided and the council has suggested a very expensive tunnel proposal that, even if HE decided to go ahead with it, is unlikely to be delivered until the end of the plan period.

Less expensive alternative A3 improvements would not be delivered before implementation of the current draft Local Plan and would deliver a massive growth in traffic.

Surrey is the most congested county in England, with 683 people per square kilometre, compared with an English average of 413. The road improvements are likely to lead to massive disruption to traffic during the construction phase on top of an already overloaded road network. It would be folly to make matters worse by committing to a massive housing number and the only logical conclusion is that a very significant traffic constraint should be applied to the OAN for this Local Plan.

I object to policy i2 Supporting the Department of Transport’s ‘Road Investment Strategy’

This policy is too vague and unrealistically optimistic. Decisions by Highways England on improving the strategic road network (the M25 and A3) are still years off. The Council have suggested a very expensive tunnel under Guildford, but there is no evidence to show that this is a realistic option. Even if Highways England accepted this (which is highly unlikely in the post-Brexit public spending climate) it would not be built until the end of the plan period at the earliest. Other, less expensive A3 improvements, and changes to the Junction 10/Heathrow stretch of the M25, will also take years to agree and complete.
The draft plan, however, commits to building massive housing estates in the countryside before any of these road improvements are in place. This is foolhardy. Surrey is the most congested county in England, with 683 people per square kilometre, compared with an English average of 413. Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID2

Do you consider this section of the document; complies with the Duty to Cooperate? ( No ), is Sound? ( No ), is Legally Compliant? ( No )

this is very misleading as funding for traffic infrastructure is not available to complete the limited ambition highlighted in the plan.
The proposals for widening the A3 are not economically sound the gains are not justifiable so funding cannot be guaranteed yet projects and sites will have been given the green light and despite stating no infrastructure no development these appear to be just words with no teeth.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/17792  Respondent: 8858113 / Ramsey Nagaty  Agent:

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID2

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT to this policy as it stands. This policy is concerned only with the strategic road network – the A3 and M25 for which the responsibility and decision-making lies with Highways England. It is only reasonable that the council will work closely with Highways England to ensure that the Local Plan does not utilise land in a way that limit the scope for future improvements.

However, the proposals for the A3 are undecided and the council has suggested a very expensive tunnel proposal that, even if HE decided to go ahead with it, is unlikely to be delivered until the end of the plan period. Less expensive alternative A3 improvements would not be delivered before implementation of the current draft Local Plan and would deliver a massive growth in traffic. The road improvements are likely to lead to significant disruption to traffic during the construction phase on top of an already overloaded road network. It would be folly to make matters worse by committing to such a large housing number and the only logical conclusion is that a very significant traffic constraint should be applied to the OAN for this Local Plan.

Funding for prospective road improvements has not been secured.

The wording of this policy is far too vague. Terms such as “working with” Highways England, to “facilitate” improvements, “to take account” of “emerging proposals” mean that this policy is, in effect, meaningless. Typographical errors – such as the misspelling of “licensed” – must also be corrected.

The Road Investment Strategy phase 2 (RIS2) for the period post 2020 is currently in the research stage. Until the research is completed it is impossible to prejudge what impact this will have on the Strategic Road network. However, the Strategic Transport Assessment does state “4.8.6 It should be noted that despite these improvements, Figure 4.7 shows the A3 is still operating overcapacity with resulting impacts on congestion.” and “4.5.10 Currently it is unclear why some minor roads in or just outside Guildford town centre are showing increases. These include roads such as Nightingale Road, Denmark Road and Tormead Road. However, it could be related to re-routing occurring as a result of the improvements to the A3 through Guildford attracting drivers to both join the A3 and remain on the A3 at Guildford and weaving through local streets.” Also, at 4.8.3 “At the same time, average vehicle speeds increase not just on the A3 but across the network within the borough as a whole. However, despite this it should be noted that although the average speed across the network in Scenario 5 is higher than in Scenario 1 (the Do-Minimum), there are differences within the network with average speeds on A roads and minor roads lower than in Scenario 1.” In other words, traffic congestion on the local road network is predicted to be worse under this draft Local Plan.

It is possible or indeed probable that no further funding will be available, or that any funding will not meet projected full costs. If this funding is unavailable in full, then this policy should clearly state that projects cannot be developed.

RECOMMENDATION:

I propose that unless guaranteed public funds are available to cover costs in full, there should be no development of any individual sites of more than 10 homes outside the urban areas.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
Policy 12 - Supporting the Department of Transport's Road Investment Strategy

I object. The policy is too optimistic and the decisions are a long way off. They are expensive and may not be built. The draft plan commits to building housing estates in the countryside before these improvements are in place. The policy will create massive congestion and disruption.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object to this policy as it fails to address the congestion that development will cause to the trunk roads- the A3/M25 (Policy I2). The draft plan commits to building massive housing estates in the countryside before any road improvements are in place. This is inappropriate and will lead to traffic disruption during the construction phase and will add permanently to an already congested network. Road infrastructure represents a major constraint that should have been applied to the housing target at a much earlier stage in the plan process and not left as an unresolved difficulty in the draft plan.

There is no certainty that the A3 or M25 will be improved to increase capacity and reduce congestion during the Plan period. Highways England has no plans even to examine improving the A3 before 2020. I am therefore extremely concerned that development of the large residential sites identified at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), will take place before any improvements are made to the trunk road network. The A3 & M25 are already at capacity during peak hours and any development prior to improvement of these roads will make the situation far worse.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I OBJECT to this policy as it stands. This policy is concerned only with the strategic road network – the A3 and M25 for which the responsibility and decision-making lies with Highways England. It is only reasonable that the council will work
closely with Highways England to ensure that the Local Plan does not utilise land in a way that limit the scope for future improvements.

However, the proposals for the A3 are undecided and the council has suggested a very expensive tunnel proposal that, even if HE decided to go ahead with it, is unlikely to be delivered until the end of the plan period. Less expensive alternative A3 improvements would not be delivered before implementation of the current draft Local Plan and would deliver a massive growth in traffic. The road improvements are likely to lead to significant disruption to traffic during the construction phase on top of an already overloaded road network. It would be folly to make matters worse by committing to such a large housing number and the only logical conclusion is that a very significant traffic constraint should be applied to the OAN for this Local Plan.

Funding for prospective road improvements has not been secured.

The wording of this policy is far too vague. The removal of item 4.6.17 is puzzling. In the rationale for changes it is described as a potential statement of common ground with Highways England. It is not clear whether GBC are uncertain whether it will happen at all or just the timing – but once again it highlights the lack of control over key roads infrastructure in formulating the Plan.

9. The congestion that development will cause to the trunk roads, A3/M25 (Policy I2)

The A3 or M25 would have to be improved before any development is done. Highways England has no plans to even start considering improving the A3 before 2020. Under the current economic climate post Brexit, it is unlikely any additional funding will be made available for new capital projects. Clearly no real improvements are possible in the timeframe of this Plan so the developments at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), should not take place.

I OBJECT due to the congestion that development will cause to the trunk roads, A3/M25 (Policy I2)

There is no certainty that either the A3 or M25 in the borough will be improved to increase capacity and reduce congestion during the Plan period. Highways England has no plans to even examine improving the A3 before 2020. I have considerable concerns that development of the large residential sites identified at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), will take place before any improvements are made to the trunk road network. The A3 & M25 are already at capacity during peak hours and any development prior to improvement of these roads will only make the situations worse.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/4592   Respondent: 8892673 / Nick Forwood   Agent:
I object due to the congestion that development will cause to the trunk roads, A3/M25 (Policy I2).

There is no certainty that either the A3 or M25 in the borough will be improved to increase capacity and reduce congestion during the Plan period. Reviewing Highways England material, suggests that it has no plans to even examine improving the A3 before 2020. I have considerable concerns that development of the large residential sites identified at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), will take place before any improvements are made to the trunk road network. The A3 & M25 are already at capacity during peak hours and any development prior to improvement of these roads will only make the situations worse.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
I object to this as the Network Highways England makes decisions on the A3 and M25, and proposals for the A3 improvements would be delivered at the end of the plan period. If this plan is implemented a massive road building growth would be needed and result in even more gridlocked traffic around Guildford, road improvements will lead to further disruptions. Traffic constraints should be reflected in reduction of large housing numbers. Public funds should be available to cover costs of improvements in full, or housing developments should be limited to ten houses.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

1.1 We object to policy i2 Supporting the Department of Transport’s “Road Investment Strategy”

1.2 This policy is too vague and unrealistically optimistic. Decisions by Highways England on improving the strategic road network (the M25 and A3) are still years off. The Council have suggested a very expensive tunnel under Guildford, but this is no more than a dream. Even if Highways England accepted this (which is highly unlikely in the post-Brexit public spending climate) it would not be built until the end of the plan period at the earliest. Other, less expensive A3 improvements, and changes to the Junction 10/Heathrow stretch of the M25, will also take years to agree and complete. 1.3 The draft plan, however, commits to building massive housing estates in the countryside before any of these road improvements are in place. This is foolhardy. Surrey is the most congested county in England, with 683 people per square kilometre, compared with an English average of 413. This policy will lead to massive traffic disruption during the construction phase and will add permanently to an already congested network (about 3,000 private cars from the 2,100 new homes at Wisley Airfield alone). This is a major development constraint that should have been applied to the OAN before this consultation, and not left up in the air.

I support the improvements planned for the A3 through Guildford which are long overdue.

I object to the CLLR which is not a sustainable way for traffic to reach the A3.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: pslp171/1546  Respondent: 8894657 / Jacob's Well Residents' Association (Janet Smith)  Agent:
Document: Proposed Submission Local Plan: strategy and sites 2017 / Policy ID2
We support the improvements planned for the A3 through Guildford (which are long overdue) and to empower the Gosden Hill and Wisley developments.

We object to any future Clay Lane Link Road, which is not a sustainable way for traffic to reach the A3, as it would cross a 3b floodplain, create very dangerous junctions, disrupt a fragile ecosystem and cause unacceptable air and noise pollution close to residential properties, with many elderly residents.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

10. POLICY I2

I OBJECT due to the congestion that development will cause to the trunk roads, A3/M25 (Policy I2)

I object to this policy as it is too vague and optimistic. Significant improvements to the road infrastructure are like to be many years away even if they ever happen. The draft plan, however, commits to building massive housing estates in the countryside before any of these road improvements are in place. This is inappropriate and will lead to massive traffic disruption during the construction phase and will add permanently to an already congested network (about 3,000 private cars from the 2,100 new homes at Wisley Airfield alone).

Road infrastructure represents a major constraint that should have been applied to the housing target at a much earlier stage in the plan process and not left as an unresolved difficulty in the draft plan.

There is no certainty that either the A3 or M25 in the borough will be improved to increase capacity and reduce congestion during the Plan period.

Highways England has no plans to even examine improving the A3 before 2020. I have considerable concerns that development of the large residential sites identified at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), will take place before any improvements are made to the trunk road network. The A3 & M25 are already at capacity during peak hours and any development prior to improvement of these roads will only make the situations worse.

Policy I2: Supporting the Department for Transport’s “Road Investment Strategy”
The policy needs to ensure that pollution levels are reduced in the A3 M25 areas relating to Surrey.

Building of new and improved roads will take years and needs to be properly planned and started before any large housing developments start.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

TRAFFIC CHAOS

We object to the planned development because it will cause traffic chaos and gridlock. When GBC's elected councillors voted through the Draft Plan (on 24.5.16) they failed to scrutinise the Strategic Transport Report - a major piece of evidence. (Adjournment was requested so that this vital piece of evidence could be considered but GBC's councillors failed to allow this).

Surrey County Council's traffic simulations verify that the level of traffic on our roads is already above the capacity that they were designed for. GBC's unrealistic growth plans for Normandy and Flexford will force more traffic onto the already congested A3, A323, Cl6 and D60. There is no evidence of secure funding for any improvements to the A3 during the lifetime of the Draft Plan.

The already highly congested road network in and around Normandy/Flexford will grind to a halt at peak times causing significant adverse impact to the daily lives of local residents and small businesses. One major existing traffic congestion issue is the railway arch in Westwood Lane which only allows alternate single lane through traffic. It is already hazardous and a bottleneck for traffic at peak times. There is no capacity to change this in the future. The increased traffic will also cause a massive increase in exhaust pollution with excessive levels of nitrous oxide and carbon dioxide - threatening the health of all residents.

Traffic Black Spots Near Site Access - North end of Parcel of land A46 (Guildford Rd Junction with Westwood Lane).

Access to any development of houses and I or flats at rear of The Old Vicarage, Wyke would cause increased traffic dangers to an already very dangerous junction at comer of Westwood Lane and Guildford Road where there have been several fatalities.

There is also already heavy traffic at the Wyke Primary School across the road from the same junction.

I OBJECT TO POLICY I2 (SUPPORTING DTP’S ROAD STRATEGY):

• Doesn’t allow for catastrophic increase in traffic resulting from spreading new housing estates across the borough.
• Out of sync with DTP’s strategy: houses to be built and Green Belt destroyed before plans for A3 etc implemented.
• Road plans too optimistic anyway, especially post-Brexit. Probably won’t happen.

I OBJECT due to the congestion that development will cause to the trunk roads, A3/M25 (Policy I2)

I object to this policy as it is too vague and optimistic. Significant improvements to the road infrastructure are like to be many years away even if they ever happen. The draft plan, however, commits to building massive housing estates in the countryside before any of these road improvements are in place. This is inappropriate and will lead to massive traffic disruption during the construction phase and will add permanently to an already congested network (about 3,000 private cars from the 2,100 new homes at Wisley Airfield alone).

Road infrastructure represents a major constraint that should have been applied to the housing target at a much earlier stage in the plan process and not left as an unresolved difficulty in the draft plan.

There is no certainty that either the A3 or M25 in the borough will be improved to increase capacity and reduce congestion during the Plan period. Highways England has no plans to even examine improving the A3 before 2020. I have considerable concerns that development of the large residential sites identified at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), will take place before any improvements are made to the trunk road network. The A3 & M25 are already at capacity during peak hours and any development prior to improvement of these roads will only make the situations worse.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

1. I object due to the congestion that development will cause to the trunk roads, A3/M25 (Policy I2)

The A3 or M25 would have to be improved before any development is done. Highways England has no plans to even start considering improving the A3 before 2020. Under the current economic climate post Brexit, it is unlikely any additional funding will be made available for new capital projects. Clearly no real improvements are possible in the timeframe of this Plan so the developments at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), should not take place.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
I object to Policy 12. This document was not available before The Plan went to consultation, by a majority vote at full council. The transport strategy only deals with 'strategic roads' M25 and A3. There is no funding available for any improvements to either. The Plan envisages an A3 tunnel which is exceptionally expensive and will never be built during the life of this Plan or most likely the next. This means major strategic sites will go ahead approx 6,000 new homes needing to access to the strategic roads, but will be unable to, so the traffic will affect all the surrounding villages. The A323 which will also have increased commuter traffic due to the 4,000 planned homes in Aldershot, 4 miles away will impact on our road network, already working above their intended capacity. It will be a disaster. The Brexit vote has not been taken into consideration.

**POLICIES I1, I2 & I3**

The principal thoroughfares traversing East Horsley are narrow and winding, have a series of pinch points, have sections without any pavements and are generally unlit. In reality “East Horsley has lanes, not roads.” East Horsley’s ‘lanes’ are totally unsuitable for high volumes of traffic, in particular for the volume of HGV’s now using them. It is inevitable that the proposed developments in East Horsley itself and nearby, particularly in West Horsley and the proposals for Wisley Airfield site, will put further strain on the existing infrastructure. There are no proposals at all to cater for this.

I therefore **OBJECT** to the proposals for infrastructure in that they do not meet the stated objective of providing infrastructure to support the proposed developments.

Highways England will not even look at improving the A3 before 2020. I have real concerns that development of large residential sites at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), will happen before the trunk road network is improved. Queues are already horrendous at rush hour on the A3 & M25 in our area. Development in and around Ripley will make this worse.

Policy I2 - Supporting the Dept of Transport's Road Investment Strategy

I object to this policy only relating to the strategic road network, the A3/M25, without ensuring any development includes the necessary road infrastructure being implemented. I object to developers funding road infrastructure which suits their wishes, i.e. south bound slip road and north bound slip roads at the Ockham roundabout. Such provision at Burnt Common will not alleviate increased traffic on the local roads and villages should the 2,000+ houses be built at the former Wisley Airfield. The village already suffers traffic log-jams on a daily basis without such a development.

Policy I2: Supporting the Department for Transport’s “Road Investment Strategy”

9.2 As discussed in more detail below in our response to Policy A25 (Gosden Hill), GBC should be taking a far more positive and proactive approach in securing the delivery of the improvements identified in the Department for Transport’s Road Investment Strategy (RIS). We are concerned that the statement at the end of the Vision (page 21 of the Local Plan) suggests that the delivery of housing is dependent on these measures. It is therefore imperative that the RIS A3 improvement schemes are implemented as soon as practicably possible to ensure the Local Plan is deliverable.

9.3 We also note that reference in made in paragraph 4.6.18 to a feasibility study currently being undertaken which could establish that the scheme for the A3 through Guildford could be either widening of the existing A3 carriageways or a tunnel option. In summary, MGH does not consider a tunnel option to be realistic and we understand is unlikely to be pursued by Highways England / Department for Transport. It should therefore be discounted at this early feasibility stage.

<td></td>
<td></td>
</tr>
<tr>
<td>The Strategic Highway Assessment (SHA) Report (SCC, June 2016) comes to this conclusion, but recognises that its approach represents a “worst case” in terms of highway demand that has not taken into account any reduction in trips generated because of the mixed use nature of large developments or proposed investment in sustainable transport modes and other mitigation measures. Detailed comments in relation to the SHA are provided separately.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
The Local Plan should reflect the fact that highway infrastructure requirements set out are based on a ‘worst case’ assessment of highway impacts and that there must be flexibility in delivery. This should be reflected in the Local Plan Vision and in Policy I1 and Appendix C.

Nevertheless, the University recognises that further, more detailed assessment work will be required ahead of examination, such as identifying at what point widening of the A3 is triggered and what development can come forward ahead of this. In this regard, it will endeavour to provide technical assistance to GBC, SCC and Highways England wherever possible.

The University is aware of the proposed improvements to the A3 and M25 and has factored these into its future development proposals given the proximity of the University and Blackwell Farm (Policy A26) to the A3.

However, the University would be concerned if the need for these improvements and the programme for their delivery placed onerous constraints on its own development on its campus, or that of the Blackwell Farm site.

The plan should acknowledge that there are circumstances in which sustainable development of some elements of important strategic sites may come forward in advance of projects in the RIS.

In particular at Blackwell Farm (Policy A26) there is potential for development to come forward that can take some pressure off the A3 by providing an access into and out of the Surrey Research Park, the Royal Surrey County Hospital and the University via the new access on the A31. The residential development at this location is also on the Sustainable Movement Corridor with good links to the town centre by public transport, walking and cycling.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
I object to the congestion that development will cause to the trunk roads A3/M25 (Policy12)

Both the A3 and M25 need improvements before any developments commence. This is clearly not going to happen in the timescales of the plan, so the proposed developments at Wisley Airfield (A35), Garlicks Arch (A43) and Gosden Hill (A25) should NOT take place.

Policy I2: Supporting the Department for Transport's “Road Investment Strategy”

I OBJECT to this policy.

- This policy is concerned only with the strategic road network – the A3 and M25 for which the responsibility and decision-making lies with Highways England. It is only reasonable that the council will work closely with Highways England to ensure that the Local Plan does not utilise land in a way that limit the scope for future improvements.

- However, the proposals for the A3 are undecided and the council has suggested a very expensive tunnel proposal that, even if HE decided to go ahead with it, is unlikely to be delivered until the end of the plan period. Less expensive alternative A3 improvements would not be delivered before implementation of the current draft Local Plan and would deliver a massive growth in traffic. The road improvements are likely to lead to significant disruption to traffic during the construction phase on top of an already overloaded road network. It would be folly to make matters worse by committing to such a large housing number and the only logical conclusion is that a very significant traffic constraint should be applied to the OAN for this Local Plan.

The road improvements are likely to lead to massive disruption to traffic during the construction phase on top of an already overloaded road network. It would be folly to make matters worse by committing to a massive housing number and the only logical conclusion is that a very significant traffic constraint should be applied to the OAN for this Local Plan.

The removal of item 4.6.17 is puzzling. In the rationale for changes it is described as a potential statement of common ground with Highways England. It is not clear whether GBC believe that it is likely to be agreed nearer to the plan Examination – but once again it highlights the lack of control over key roads infrastructure in formulating the Plan.

Policy I2: Supporting the DfT’s RIS

Support (Sound)

WPI supports the draft policy and initiatives to enable Highways England deliver the Roads Investment Strategy 2 (RIS 2). The Local Plan delivery should be phased alongside the RIS 2. In respect of specific development proposals, whilst regard for RIS 2 is essential, due regard to infrastructure phasing proposals, in accordance with draft policy I1, is important (see WPI’s suggested amendments). It may be the case that development can proceed on the basis of short term or interim measures, ahead of Government investment decisions.

Transport technical evidence in support of the Wisley new settlement is included at Appendix 3.

I OBJECT due to the congestion that development will cause to the trunk roads, A3/M25 (Policy I2)

I object to this policy as it is too vague and optimistic. Significant improvements to the road infrastructure are like to be many years away even if they ever happen. The draft plan, however, commits to building massive housing estates in the countryside before any of these road improvements are in place. This is inappropriate and will lead to massive traffic disruption during the construction phase and will add permanently to an already congested network (about 3,000 private cars from the 2,100 new homes at Wisley Airfield alone).

Road infrastructure represents a major constraint that should have been applied to the housing target at a much earlier stage in the plan process and not left as an unresolved difficulty in the draft plan.

There is no certainty that either the A3 or M25 in the borough will be improved to increase capacity and reduce congestion during the Plan period. Highways England has no plans to even examine improving the A3 before 2020. I have considerable concerns that development of the large residential sites identified at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), will take place before any improvements are made to the trunk road network. The A3 & M25 are already at capacity during peak hours and any development prior to improvement of these roads will only make the situations worse.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I OBJECT. This policy is concerned only with the strategic road network – the A3 and M25 for which the responsibility and decision-making lies with Highways England (“HE”). It is only reasonable that the council will work closely with HE to ensure that the Local Plan does not utilise land in a way that limit the scope for future improvements. However, the proposals for the A3 are undecided and the council has suggested a very expensive tunnel proposal that, even if HE decided to go ahead with it, is unlikely to be delivered until the end of the plan period. Less expensive alternative A3 improvements would not be delivered before implementation of the current draft Local Plan and would deliver a massive growth in traffic. The road improvements are likely to lead to massive disruption to traffic during the construction phase on top of an already overloaded road network. It would be folly to make matters worse by committing to a massive housing number and the only logical conclusion is that a very significant traffic constraint should be applied to the OAN for this Local Plan.

Policy I2: Supporting The Department for Transport’s “Road Investment Strategy”

This policy again sounds hopeful on a first reading, however the same point applies as was identified for Policy I1. Paragraph 4.6.14 identifies three RIS Schemes that are relevant to Guildford:

- M25 upgrade J10 and J16 (“anticipated to commence” 2015 – 2020)
- M25/A3 interchange improvement (“anticipated to commence” 2020 – 2025)
- A3 improvements from the A320 to the A31 (no timescale given)

Similarly, paragraph 4.6.15 states that “The Council has and will continue to work closely with Highways England to tailor its development management processes, including for allocated strategic sites, with Highways England’s emerging schemes and their proposed timing and phasing. This will ensure that the assumptions used in developer’s transport assessments are robust. The timing and phasing of the delivery of Highways England’s emerging schemes will be key to addressing the existing peak hour congestion that often occurs on the Strategic Highway Network.”

Clearly the Council cannot be criticised for projects that are outside its control. However, it is not sensible or acceptable to propose a Local Plan that includes major developments in the borough that depend on key infrastructure delivered by an external supplier (Highways England) whose timescales are so questionable. I therefore OBJECT to this policy and to all policies that depend on it.

Similarly we welcome Policy I2: Supporting the Department for Transport’s “Road Investment Strategy”. We note in particular that it is considered that the delivery of some housing targets is dependent upon major improvement to the A3
through Guildford. Enterprise M3 LEP will continue to work closely with partners and continue to put pressure on Government to deliver the infrastructure that is needed to unlock and support the development of key housing sites and would expect Guildford Borough to play an active role in this engagement with government. Enterprise M3 welcomes the strong emphasis throughout the plan on the benefits of investment in sustainable transport and the recognition that such investment can contribute significantly to economic growth. We are therefore supportive of Policy I3 related to sustainable transport.

14. I object due to the congestion that development will cause to the trunk roads, A3/M25 (Policy I2)

The A3 or M25 would have to be improved before any development is done. Highways England has no plans to even start considering improving the A3 before 2020. Clearly no real improvements are possible in the timeframe of this Plan so the developments at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), should not take place.

I wish these objections to be fully taken into consideration and that the Plan is amended accordingly.

POLICY I2 - Supporting the Department of Transport’s “Road Investment Strategy”

I OBJECT. This policy is too vague and optimistic. Decisions by Highways England on improving the strategic road network (the M25 and A3) are still years off. The Council have suggested a very expensive tunnel under Guildford, but this is no more than a dream. Even if Highways England accepted this (which is highly unlikely in the post-Brexit public...
spending climate) it would not be built until the end of the plan period at the earliest. Other, less expensive A3 improvements, and changes to the Junction 10/Heathrow stretch of the M25, will also take years to agree and complete.

The draft plan, however, commits to building massive housing estates in the countryside before any of these road improvements are in place. This is foolhardy. Surrey is the most congested county in England, with 683 people per square Km, compared with an English average of 413. This policy will lead to massive traffic disruption during the construction phase and will add permanently to an already congested network (about 3,000 private cars from the 2,100 new homes at Wisley Airfield alone). This is a major development constraint that should have been applied to the OAN before this consultation, and not left up in the air.

I strongly object to any increase in traffic to the surrounding areas, adding more slip roads to the A3 will only make traffic worse and increase congestion.

The main road through West Clandon is already congested with many speeding motorists and large commercial vehicles using it. Pollution will also be increased.

disruption during the construction phase and will add permanently to an already congested network (about 3,000 private cars from the 2,100 new homes at Wisley Airfield alone).

Road infrastructure represents a major constraint that should have been applied to the housing target at a much earlier stage in the plan process and not left as an unresolved difficulty in the draft plan.

There is no certainty that either the A3 or M25 in the borough will be improved to increase capacity and reduce congestion during the Plan period. Highways England has no plans to even examine improving the A3 before 2020. I have considerable concerns that development of the large residential sites identified at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), will take place before any improvements are made to the trunk road network. The A3 & M25 are already at capacity during peak hours and any development prior to improvement of these roads will only make the situations worse.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Policy I2 – Supporting the Department for Transport’s “Road Investment Strategy”
I OBJECT. Road investment plans have a habit of being delayed or cancelled, particularly when projected costs begin to spiral. The two proposals in Road Period 1 (widening of the M25 and improvements to the M25/A3 junction) will probably increase traffic on the A3 and make matters worse around Guildford. The proposal in Road Period 2 for a tunnel under Guildford will never be more than a pipe-dream.

Nevertheless, the Local Plan proposes to build the new housing before these road improvements have been carried out. The lack of completed infrastructure must put severe constraints on what could actually be built, but the Local Plan fails to address this point.

I OBJECT TO POLICY I2 (SUPPORTING DTP’S ROAD STRATEGY):

• Doesn’t allow for catastrophic increase in traffic resulting from spreading new housing estates across the borough.
• Out of sync with DTp’s strategy: houses to be built and Green Belt destroyed before plans for A3 etc implemented.
• Road plans too optimistic anyway, especially post-Brexit. Probably won’t happen.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

</table>
However, the proposals for the A3 are undecided and the council has suggested a very expensive tunnel proposal that, even if HE decided to go ahead with it, is unlikely to be delivered until the end of the plan period. Less expensive alternative A3 improvements would not be delivered before implementation of the current draft Local Plan and would deliver a massive growth in traffic. The road improvements are likely to lead to massive disruption to traffic during the construction phase on top of an already overloaded road network. It would be folly to make matters worse by committing to a massive housing number and the only logical conclusion is that a very significant traffic constraint should be applied to the OAN for this Local Plan.

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID2
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

We OBJECT to this policy as it stands. This policy is concerned only with the strategic road network – the A3 and M25 for which the responsibility and decision-making lies with Highways England. It is only reasonable that the council will work closely with Highways England to ensure that the Local Plan does not utilise land in a way that limit the scope for future improvements.

However, the proposals for the A3 are undecided and the council has suggested a very expensive tunnel proposal that, even if HE decided to go ahead with it, is unlikely to be delivered until the end of the plan period. Less expensive alternative A3 improvements would not be delivered before implementation of the current draft Local Plan and would deliver a massive growth in traffic. The road improvements are likely to lead to significant disruption to traffic during the construction phase on top of an already overloaded road network. It would be folly to make matters worse by committing to such a large housing number and the only logical conclusion is that a very significant traffic constraint should be applied to the OAN for this Local Plan.
Funding for prospective road improvements has not been secured.

The wording of this policy is far too vague. Terms such as “working with” Highways England, to “facilitate” improvements, “to take account” of “emerging proposals” mean that this policy is, in effect, meaningless. Typographical errors – such as the misspelling of “licensed” – must also be corrected.

The Road Investment Strategy phase 2 (RIS2) for the period post 2020 is currently in the research stage. Until the research is completed it is impossible to prejudge what impact this will have on the Strategic Road network. However, the Strategic Transport Assessment does state “4.8.6 It should be noted that despite these improvements, Figure 4.7 shows the A3 is still operating overcapacity with resulting impacts on congestion.” and “4.5.10 Currently it is unclear why some minor roads in or just outside Guildford town centre are showing increases. These include roads such as Nightingale Road, Denmark Road and Tormead Road. However, it could be related to re-routing occurring as a result of the improvements to the A3 through Guildford attracting drivers to both join the A3 and remain on the A3 at Guildford and weaving through local streets.” Also, at 4.8.3 “At the same time, average vehicle speeds increase not just on the A3 but across the network within the borough as a whole. However, despite this it should be noted that although the average speed across the network in Scenario 5 is higher than in Scenario 1 (the Do-Minimum), there are differences within the network with average speeds on A roads and minor roads lower than in Scenario 1.” In other words, traffic congestion on the local road network is predicted to be worse under this draft Local Plan.

It is possible or indeed probable that no further funding will be available, or that any funding will not meet projected full costs. If this funding is unavailable in full, then this policy should clearly state that projects cannot be developed.

**RECOMMENDATION:**

We propose that unless guaranteed public funds are available to cover costs in full, there should be no development of any individual sites of more than 10 homes outside the urban areas.

• I OBJECT to the proposed developments opposite Winds Ridge (policy A44) and Clockbarn Nursery (policy A42) due to the impact that the additional traffic will have on small local roads. The first of these will increase the traffic leaving Send Hill onto Potters Lane at what is already a dangerous junction on very narrow lanes. Meanwhile, Send Road is already frequently blocked by HGVs trying to turn into Tannery Lane; this can only be made worse by additional traffic using the same road.

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID2
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1.1 I object to policy i2 “Supporting the Department of Transport’s Road Investment Strategy” on the grounds that;

1.2 This policy is too vague and unrealistically optimistic. Decisions by Highways England on improving the strategic road network (the M25 and A3) are still years off. The Council have suggested a very expensive tunnel under Guildford, but this is no more than a dream. Even if Highways England accepted this (which is highly unlikely in the post-Brexit public spending climate) it would not be built until the end of the plan period at the earliest. Other, less expensive A3 improvements, and changes to the Junction 10/Heathrow stretch of the M25, will also take years to agree and complete.

1.3 The draft plan, however, commits to building massive housing estates in the countryside before any of these road improvements are in place. This is foolhardy. Surrey is the most congested county in England, with 683 people per square kilometre, compared with an English average of 413. This policy will lead to massive traffic disruption during the construction phase and will add permanently to an already congested network (about 3,000 private cars from the 2,100 new homes at Wisley Airfield alone). This is a major development constraint that should have been applied to the OAN before this consultation, and not left up in the air.

3. I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure

There is too much traffic in our villages already and this plan will cause more congestion in Ripley, Send and Clandon, with no plans for improvements. You cannot squeeze modern traffic down lanes that were built for a horse and cart.

The rural roads in this area are narrow, in poor condition and have no pedestrian footpaths. The new homes will generate dangerous and unsustainable traffic. The historic village of Ripley was given a by-pass to save it for future generations not make its roads into a car park.

Every time there is a problem on the A3/M25 traffic already congests the area to dangerous levels. With the increasing cycle traffic on the Olympic cycle route to the Surrey Hills using the same narrow lanes, this is a recipe for a human disaster.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/9802  Respondent: 10853249 / Evan Parry-Morris  Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Unsuitability of local roads for heavy vehicles and more traffic

Many local roads around the villages of Send, Ripley and Clandon are narrow and there are already many instances of vehicles having to mount pavements to allow large vehicles to pass. This is particularly an issue on the A247 between Burnt Common and Clandon Crossroads. The inclusion of the Garlick’s Arch proposal, particularly the industrial and warehousing elements of the plan, is certain to make the situation far worse. I object to the development proposed in the local plan, which will result in more traffic using narrow roads.

WE OBJECT due to the congestion that development will cause to the trunk roads, A3/M25 (Policy I2)

I object to this policy, as it is too vague and optimistic. Significant improvements to the road infrastructure are like to be many years away even if they ever happen. The draft plan, however, commits to building massive housing estates in the countryside before any of these road improvements are in place. This is inappropriate and will lead to massive traffic
disruption during the construction phase and will add permanently to an already congested network (about 3,000 private cars from the 2,100 new homes at Wisley Airfield alone).

Road infrastructure represents a major constraint that should have been applied to the housing target at a much earlier stage in the plan process and not left as an unresolved difficulty in the draft plan.

There is no certainty that either the A3 or M25 in the borough will be improved to increase capacity and reduce congestion during the Plan period. Highways England has no plans to even examine improving the A3 before 2020. I have considerable concerns that development of the large residential sites identified at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), will take place before any improvements are made to the trunk road network. The A3 & M25 are already at capacity during peak hours and any development prior to improvement of these roads will only make the situations worse.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

I OBJECT to policy i2 Supporting the Department of Transport’s “Road Investment Strategy”

This policy is too vague and unrealistically optimistic. Decisions by Highways England on improving the strategic road network (the M25 and A3) are still years off. The Council have suggested a very expensive tunnel under Guildford, but this is no more than a dream. Even if Highways England accepted this (which is highly unlikely in the post-Brexit public spending climate) it would not be built until the end of the plan period at the earliest. Other, less expensive A3 improvements, and changes to the Junction 10/Heathrow stretch of the M25, will also take years to agree and complete.

The draft plan, however, commits to building massive housing estates in the countryside before any of these road improvements are in place. This is foolhardy. Surrey is the most congested county in England, with 683 people per square kilometre, compared with an English average of 413. This policy will lead to massive traffic disruption during the construction phase and will add permanently to an already congested network (about 3,000 private cars from the 2,100 new homes at Wisley Airfield alone). This is a major development constraint that should have been applied to the OAN before this consultation, and not left up in the air.

I object to policy I2
- underestimates car usage. Ripley built over 50 units recently. Car parking is impossible now. This is because car ownership was underestimated and so new housing owners park in the car park; and because it is a disproportionately large build for the settlement (ie new house owners swamp the small village car park)

**Document:** Proposed Submission Local Plan: strategy and sites 2016 / Policy ID2

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object due to the congestion that development will cause to the trunk roads, A3/M25 (Policy I2)

The A3 or M25 would have to be improved before any development is done. Highways England has no plans to even start considering improving the A3 before 2020. Under the current economic climate post Brexit, it is unlikely any additional funding will be made available for new capital projects. Clearly no real improvements are possible in the timeframe of this Plan so the developments at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), should not take place.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
1. I object due to the congestion that development will cause to the trunk roads, A3/M25 (Policy I2)

The A3 and M25 are already severely congested, and would have to be improved before any development is done. Highways England has no plans to even start considering improving the A3 before 2020. Clearly no real improvements are possible in the timeframe of this Plan so the developments at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), should not take place.

I OBJECT TO POLICY I2 (SUPPORTING DTP'S ROAD STRATEGY):

- Doesn’t allow for catastrophic increase in traffic resulting from spreading new housing estates across the borough.
- Out of sync with DTP’s strategy: houses to be built and Green Belt destroyed before plans for A3 etc implemented.
- Road plans too optimistic anyway, especially post-Brexit. Probably won’t happen.

1. **I object due to the congestion that development will cause to the trunk roads, A3/M25 (Policy I2)**

Highways England has no plans to even examine improving the A3 before 2020 and therefore there is no certainty that either the A3 or M25 in the borough will be improved to increase capacity and reduce congestion during the Plan period. I have considerable concerns that development of the large residential sites identified at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), will take place before any improvements are made to the trunk road network. The A3 & M25 are already at capacity during peak hours, see item 2 above, and any development prior to improvement of these roads will only make the situations worse.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.
Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

Highways England has no plans to even examine improving the A3 before 2020. I have considerable concerns that development of the large residential sites identified at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), will take place before any improvements are made to the trunk road network. The A3 & M25 are already at capacity during peak hours and any development prior to improvement of these roads will only make the situations worse.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
I OBJECT due to the congestion that development will cause to the trunk roads, A3/M25 (Policy I2)

I object to this policy as it is too vague and optimistic. Significant improvements to the road infrastructure are likely to be many years away even if they ever happen. The draft plan, however, commits to building massive housing estates in the countryside before any of these road improvements are in place. This is inappropriate and will lead to massive traffic disruption during the construction phase and will add permanently to an already congested network (about 3,000 private cars from the 2,100 new homes at Wisley Airfield alone).

Road infrastructure represents a major constraint that should have been applied to the housing target at a much earlier stage in the plan process and not left as an unresolved difficulty in the draft plan.

There is no certainty that either the A3 or M25 in the borough will be improved to increase capacity and reduce congestion during the Plan period. Highways England has no plans to even examine improving the A3 before 2020. I have considerable concerns that development of the large residential sites identified at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), will take place before any improvements are made to the trunk road network. Policy 12 - Supporting the Department of Transport's Road Investment Strategy

I object.

The policy is too optimistic and the decisions are a long way off. The schemes are expensive and may not be built.

The draft plan commits to building housing estates in the countryside before these improvements are in place.

The policy will create massive congestion and disruption.

I object due to the congestion that development will cause to the trunk roads, A3/M25 (Policy I2)
The A3 or M25 would have to be improved before any development is done. Highways England has no plans to even start considering improving the A3 before 2020. Under the current economic climate post Brexit, it is unlikely any additional funding will be made available for new capital.

I object to policy i2 Supporting the Department of Transport’s “Road Investment Strategy” This policy is too vague and unrealistically optimistic. Decisions by Highways England on improving the strategic road network (the M25 and A3) are still years off. The Council have suggested a very expensive tunnel under Guildford, but there is no evidence to show that this is a realistic option. Even if Highways England accepted this (which is highly unlikely in the post-Brexit public spending climate) it would not be built until the end of the plan period at the earliest. Other, less expensive A3 improvements, and changes to the Junction 10/Heathrow stretch of the M25, will also take years to agree and complete.
The draft plan, however, commits to building massive housing estates in the countryside before any of these road improvements are in place. This is foolhardy. Surrey is the most congested county in England, with 683 people per square kilometre, compared with an English average of 413. This policy will lead to massive traffic disruption during the construction phase and will add permanently to an already congested network (about 3,000 private cars from the 2,100 new homes at Wisley Airfield alone). This is a major development constraint that should have been applied to the OAN to constrain the housing target.

Furthermore, if Highways England had identified a need for an additional entrance / exit for the A3 near Ripley, they would compulsory purchase the land required to do so in the best location. They have not done this, nor identified Garlick’s Arch as a site to use.

**Do you consider this section of the document; complies with the Duty to Cooperate?** ( ), **is Sound?** ( ), **is Legally Compliant?** ( )
1. **POLICY I1**

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular pastime, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.
Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I strongly object due to the congestion that these developments will most likely cause to the trunk roads, A3/M25 (Policy I2)

I believe the A3 and/or the M25 would have to be improved before any development is done. We are advised that Highways England has no plans to even start considering improving the A3 before 2020.

I am a user of the A3 and M25 and it is often very congested and already typically adds between 15 to 30 minutes of delay at peak times to my commute. Clearly no real improvements are possible in the timeframe of this Plan so the developments at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), should therefore not take place.

POLICY I2 (SUPPORTING DTP’S ROAD STRATEGY) – Object since it doesn’t allow for the disastrous increase in traffic that will come from excessive development in the countryside. Green Belt will be lost before road improvements come about, making this policy also out of sequence with the Dept for Transport’s strategy. The road improvements are unlikely to happen anyway after Brexit.

1. POLICY I2

I OBJECT due to the congestion that development will cause to the trunk roads, A3/M25 (Policy I2)

I object to this Policy as it is too vague and optimistic. Significant improvements to the road infrastructure are like to be many years away even if they ever happen. The draft Plan, however, commits to building massive housing estates in the countryside before any of these road improvements are in place. This is inappropriate and will lead to massive traffic disruption during the construction phase and will add permanently to an already congested network (about 3,000 private cars from the 2,100 new homes at Wisley Airfield alone).

Road infrastructure represents a major constraint that should have been applied to the housing target at a much earlier stage in the plan process and not left as an unresolved difficulty in the draft plan.

There is no certainty that either the A3 or M25 in the borough will be improved to increase capacity and reduce congestion during the Plan period. Highways England has no plans to even examine improving the A3 before 2020. I have considerable concerns that development of the large residential sites identified at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), will take place before any improvements are made to the trunk road network. The
A3 & M25 are already at capacity during peak hours and any development prior to improvement of these roads will only make the situations worse.

**Document:**  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID2

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to policy i2 Supporting the Department of Transport’s “Road Investment Strategy” This policy is too vague and unrealistically optimistic. Decisions by Highways England on improving the strategic road network (the M25 and A3) are still years off. The Council have suggested a very expensive tunnel under Guildford, but there is no evidence to show that this is a realistic option. Even if Highways England accepted this (which is highly unlikely in the post-Brexit public spending climate) it would not be built until the end of the plan period at the earliest. Other, less expensive A3 improvements, and changes to the Junction 10/Heathrow stretch of the M25, will also take years to agree and complete. The draft plan, however, commits to building massive housing estates in the countryside before any of these road improvements are in place. This is foolhardy. Surrey is the most congested county in England, with 683 people per square kilometre, compared with an English average of 413. This policy will lead to massive traffic disruption during the
construction phase and will add permanently to an already congested network (about 3,000 private cars from the 2,100 new homes at Wisley Airfield alone). This is a major development constraint that should have been applied to the OAN to constrain the housing target.

We consider that there is no objectively assessed need for housing yet established, since the figure used is based on a Strategic Housing Market Assessment that is not transparent in its methodology. Whilst the document has been produced externally to the Council, by established practitioners in the field, and claims to have produced a measure of the “objectively assessed needs” we understand that the methodology used by them is (still) being claimed to be confidential. With the lack of opportunity for peer review of the process, let alone public examination of it, the document and its conclusions cannot be considered to be “objective”. Any plan based on this must be considered to be unsound.

In general there are areas of great concern, for example the delays in providing the necessary infrastructure before any increase in housebuilding (congestion on the A3 is not being addressed until well over 5 years time). Public transport solutions would, however, be far more sustainable than proposals to keep up-grading the A3, which are likely to have limited benefits. There do not seem to be co-ordinated plans for improving air quality, reducing CO2 emissions or preventing biodiversity loss. These sections need to move beyond platitudes. The big increase proposed in retail space is also a negative aspect.

Car free new developments are completely unrealistic in this age. It would impact negatively on the neighbouring estates. New housing estates and new retail outlets must be built with sufficient parking.
The changes made to the plan do not seem to address any of the concerns for our local environment and our quality of life. Many of the changes do not clarify but leave much open ended and open to interpretation and indeed leave back doors open for worse.

33 POLICY I2 DEPARTMENT FOR TRANSPORT

33.1 I object to policy i2 Supporting the Department of Transport’s “Road Investment Strategy”

33.2 This policy is too vague and unrealistically optimistic. Decisions by Highways England on improving the strategic road network (the M25 and A3) are still years off. The Council have suggested a very expensive tunnel under Guildford, but this is no more than a dream. Even if Highways England accepted this (which is highly unlikely in the post-Brexit public spending climate) it would not be built until the end of the plan period at the earliest. Other, less expensive A3 improvements, and changes to the Junction 10/Heathrow stretch of the M25, will also take years to agree and complete.

33.3 The draft plan, however, commits to building massive housing estates in the countryside before any of these road improvements are in place. This is foolhardy. Surrey is the most congested county in England, with 683 people per square kilometre, compared with an English average of 413. This policy will lead to massive traffic disruption during the construction phase and will add permanently to an already congested network (about 3,000 private cars from the 2,100 new homes at Wisley Airfield alone). This is a major development constraint that should have been applied to the OAN before this consultation, and not left up in the air.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
I OBJECT TO POLICY I2 (SUPPORTING DTP’S ROAD STRATEGY):

- Doesn’t allow for catastrophic increase in traffic resulting from spreading new housing estates across the borough.
- Out of sync with DTp’s strategy: houses to be built and Green Belt destroyed before plans for A3 etc implemented.
- Road plans too optimistic anyway, especially post-Brexit. Probably won’t happen.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

---

Further to this I object to the congestion that development will cause to the trunk roads, A3/M25 (Policy I2). The A3 / M25 junction are already dangerous due to excess traffic and need to be improved before any development is done. Highways England has no plans to even start considering improving the A3 before 2020. Clearly no real improvements are possible in the time frame of this Plan so the developments at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), should not take place.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( No ), is Legally Compliant? ( )

The potential increased development would lead to even more traffic using Horsley and Ockham Road North in particular as a cut through to the A3. We have already had numerous incidents with lorries and vans striking pedestrians, striking the railway bridge and driving way above the speed limit. The parish council have complained numerous times but Guildford Council have done NOTHING to address these concerns and therefore the proposed development will make matters even worse.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1. I object due to the congestion that development will cause to the trunk roads, A3/M25 (Policy I2)

The A3 or M25 would have to be improved before any development is done. Highways England has no plans to even start considering improving the A3 before 2020. Under the current economic climate post Brexit, it is unlikely any
additional funding will be made available for new capital projects. Clearly no real improvements are possible in the timeframe of this Plan so the developments at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), should not take place.

11. We object due to the congestion that development will cause to the trunk roads, A3/M25 (Policy I2)

There is no certainty that either the A3 or M25 in the borough will be improved to increase capacity and reduce congestion during the Plan period. Highways England has no plans to even examine improving the A3 before 2020. We have considerable concerns that development of the large residential sites identified at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), will take place before any improvements are made to the trunk road network. The A3
& M25 are already at capacity during peak hours and any development prior to improvement of these roads will only make the situations worse.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/13757   Respondent: 15227905 / Nigel Alexander   Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT TO POLICY I2 (SUPPORTING DTP’S ROAD STRATEGY):
• Doesn’t allow for catastrophic increase in traffic resulting from spreading new housing estates across the borough. 
• Out of sync with DTP’s strategy: houses to be built and Green Belt destroyed before plans for A3 etc implemented. 
• Road plans too optimistic anyway, especially post-Brexit. Probably won’t happen.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID2  
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Fourthly, I object due to the congestion that development will cause to both local and larger roads, A3/M25 (Policy I2)

The A3 or M25 must be improved before development is done. There are no plans to even start considering improving the A3 before 2020, so rendering the timescales are completely mismatched which means the developments at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), should not take place.

I object to the inclusion of the land for new on/off ramps at Burnt Common (A43a) North facing ramps to the A3 at Burnt Common are likely to increase the amount of ‘through’ traffic, including but not limited to more traffic from London/ M25 to Woking routing through Burnt Common, Send and Old Woking. This is not sustainable as this cannot be improved and current traffic is heavy for long hours every day.

The roads concerned are of increasingly poor quality and the additional volumes will cause further deterioration, leading to risk of vehicle damage, accidents, especially cyclists, and broader impacts to adjoining land, properties, etc.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/1623   Respondent: 15240161 / R O Moore   Agent:

POLICY I2 - Supporting the Department of Transport’s "Road Investment Strategy"

I OBJECT. This policy is too vague and optimistic. Decisions by Highways England on improving the strategic road network (the M25 and A3) are still years off. The Council have suggested a very expensive tunnel under Guildford, but this is no more than a dream. Even if Highways England accepted this (which is highly unlikely in the post-Brexit public spending climate) it would not be built until the end of the plan period at the earliest. Other, less expensive A3 improvements, and changes to the Junction 10/Heathrow stretch of the M25, will also take years to agree and complete.

The draft plan, however, commits to building massive housing estates in the countryside before any of these road improvements are in place. This is foolhardy. Surrey is the most congested county in England, with 683 people per square kilometre, compared with an English average of 413. This policy will lead to massive traffic disruption during the construction phase and will add permanently to an already congested network (about 3,000 private cars from the 2,100 new homes at Wisley Airfield alone). This is a major development constraint that should have been applied to the OAN before this consultation, and not left up in the air.

I object because of the compound effect of development on so many adjoining villages. What I have seen does not properly accommodate this. Bottlenecks will be created. look at the situation when the utilities dig up OR north or OR south. The detour when the bridge was out of action was along roads that were unsuitable. Plus locals used roads like The Drift causing misery to local people.

The RIS includes three strategic road improvement projects comprising improvements to the M25 and improvements to Junction 10 / A3 (the Wisley Interchange), which are anticipated ‘to commence’ in Road Period 1 (2015/16 to 2019/20) and the improvement of the A3 between Guildford and the Hogs Back A31 junction which is anticipated to ‘commence’ in Road Period 2 (by 2024/25).

It is to be noted that the RIS does not consider any improvement of the Ripley junction on the A3 that will serve the Wisley Airfield strategic allocation, or the proposed improvements to the Burpham junction on the A3 that will serve the Gosden Hill Farm allocation. Although the RIS includes improvements to the A3 / A31 junction it is not known how this might assist access to Blackwell Farm. It is assumed, as set out in Policy I1 that improvements to the network generated by the allocations will be funded exclusively by the developers.

Notwithstanding, the above it is clear that, as things stand, the improvements have yet to be agreed between the Council and Highways England and as such the effect of these improvements cannot be taken into account by the developers when assessing the highway implications of their own developments. This could further frustrate delivery of the strategic sites; especially if the Guildford improvements are not ‘anticipated’ to commence until Road Period 2, i.e. possibly not until 2025.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
The A3 acts as a mini motorway dividing the town. It used to be the ring road but has not functioned well for a number of years now. Most problems in town traffic stem from something happening elsewhere in the wider roadscape and usually from the A3, where the overuse initiates some sort of problem almost every day. Tinkering with the A3 in my opinion is not going to help - it is fundamentally in the wrong place for current needs and should be moved to flow around the urban area.

I object due to the congestion that development will cause to the trunk roads, A3/M25 (Policy I2)

There is no certainty that either the A3 or M25 in the borough will be improved to increase capacity and reduce congestion during the Plan period. Highways England has no plans to even examine improving the A3 before 2020. I have considerable concerns that development of the large residential sites identified at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), will take place before any improvements are made to the trunk road network. The A3 & M25 are already at capacity during peak hours and any development prior to improvement of these roads will only make the situations worse.

I object due to the congestion that development will cause to the trunk roads, A3/M25.

The A3 or M25 would have to be improved before any development is done. Highways England has no plans in its current schedule even to start considering improving the A3. Many of the main "plans" are "aspirational" (i.e. they have no basis, and should be discounted and excluded).

Clearly no real improvements are possible in the timeframe of this Plan, so the Plan is undeliverable and developments at Wisley Airfield (A35), Garlick's Arch (A43) and Gosden Hill (A25), should not take place.

Highways England has no plans to even examine improving the A3 before 2020. I have considerable concerns that development of the large residential sites identified at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), will take place before any improvements are made to the trunk road network. The A3 & M25 are already at capacity during peak hours and any development prior to improvement of these roads will only make the situations worse.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )
1. **I object due to the congestion that development will cause to the trunk roads, A3/M25 (Policy I2)**

The A3 or M25 would have to be improved **before** any development is done. Highways England has no plans to even start considering improving the A3 before 2020. Clearly no real improvements are possible in the timeframe of this Plan so the developments at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), should not take place.

I wish these objections to be fully taken into consideration and that the Plan is amended accordingly.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to policy I2 Supporting the Department of Transport’s “Road Investment Strategy” This policy is too vague and unrealistically optimistic. Significant improvements to the road infrastructure are like to be many years away even if they ever happen. The Council have suggested a very expensive tunnel under Guildford, but there is no evidence to show that this is a realistic option. Even if Highways England accepted this (which is highly unlikely in the post-Brexit public spending climate) it would not be built until the end of the plan period at the earliest. Other, less expensive A3 improvements, and changes to the Junction 10/Heathrow stretch of the M25, will also take years to agree and complete. The draft plan, however, commits to building massive housing estates in the countryside before any of these road improvements are in place. This is foolhardy. Surrey is the most congested county in England, with 683 people per square kilometre, compared with an English average of 413. This policy will lead to massive traffic disruption during the construction phase and will add permanently to an already congested network (about 3,000 private cars from the 2,100 new homes at Wisley Airfield alone). This is a major development constraint that should have been applied to the OAN to constrain the housing target.

POLICY I2 Supporting the Department of Transport’s “Road Investment Strategy”

GROUNDS FOR OBJECTION This policy is concerned only with the strategic road network – the A3 and M25 for which the responsibility and decision-making lies with Highways England. It is only reasonable that the council will work closely with Highways England to ensure that the Local Plan does not utilise land in a way that limit the scope for future improvements.

However, the proposals for the A3 are undecided and the council has suggested a very expensive tunnel proposal that, even if HE decided to go ahead with it, is unlikely to be delivered until the end of the plan period. Less expensive alternative A3 improvements would not be delivered before implementation of the current draft Local Plan and would deliver a massive growth in traffic. The road improvements are likely to lead to massive disruption to traffic during the construction phase on top of an already overloaded road network. It would be folly to make matters worse by committing to a massive housing number and the only logical conclusion is that a very significant traffic constraint should be applied to the OAN for this Local Plan.

Road infrastructure represents a major constraint that should have been applied to the housing target at a much earlier stage in the plan process and not left as an unresolved difficulty in the draft plan.

There is no certainty that either the A3 or M25 in the borough will be improved to increase capacity and reduce congestion during the Plan period. Highways England has no plans to even examine improving the A3 before 2020. I have considerable concerns that development of the large residential sites identified at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), will take place before any improvements are made to the trunk road network. The A3 & M25 are already at capacity during peak hours and any development prior to improvement of these roads will only make the situations worse.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
I OBJECT due to the congestion that development will cause to the trunk roads, A3/M25 (Policy I2). I object to this policy as it is too vague and optimistic. Significant improvements to the road infrastructure are like to be many years away even if they ever happen. The draft plan, however, commits to building massive housing estates in the countryside before any of these road improvements are in place. This is inappropriate and will lead to massive traffic disruption during the construction phase and will add permanently to an already congested network (about 3,000 private cars from the 2,100 new homes at Wisley Airfield alone).

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

- A3 through traffic needs additional lanes and separation from local traffic

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

1. I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.
With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested.

These narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians AND you have given no consideration to this point.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object to the congestion that development will cause and the lack of road infrastructure. POLICY I2

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
POLICY I2 - Supporting the Department of Transport’s “Road Investment Strategy”

I object to this policy:

I am being asked to buy into something which is so vague and undefined with no defined outcome against which I can form a judgement. It is not what the intention of the work is. Is it to relieve congestion from natural growth or to relieve some or all of the congestion predicted from the Council’s planned growth? Whatever the case, significant improvements to the road infrastructure are like to be many years away even if they ever happen. The draft Plan, however, commits to building housing estates along the A3 before any of these road improvements are in place. This will lead to massive traffic disruption. Road infrastructure represents a major constraint that should have been applied to the OAN at a much earlier stage in the Plan process and not left as an unresolved difficulty in the draft Plan.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

TRAFFIC CHAOS

We object to the planned development because it will cause traffic chaos and gridlock. When GBC’s elected councillors voted through the Draft Plan (on 24.5.16) they failed to scrutinise the Strategic Transport Report - a major piece of evidence. (Adjournment was requested so that this vital piece of evidence could be considered but GBC’s councillors failed to allow this).

Surrey County Council’s traffic simulations verify that the level of traffic on our roads is already above the capacity that they were designed for. GBC’s unrealistic growth plans for Normandy and Flexford will force more traffic onto the already congested A3, A323, Cl6 and D60. There is no evidence of secure funding for any improvements to the A3 during the lifetime of the Draft Plan.

The already highly congested road network in and around Normandy/Flexford will grind to a halt at peak times causing significant adverse impact to the daily lives of local residents and small businesses. One major existing traffic congestion issue is the railway arch in Westwood Lane which only allows alternate single lane through traffic. It is already hazardous and a bottleneck for traffic at peak times. There is no capacity to change this in the future. The increased traffic will also cause a massive increase in exhaust pollution with excessive levels of nitrous oxide and carbon dioxide - threatening the health of all residents.

Traffic Black Spots Near Site Access - North end of Parcel of land A46 (Guildford Rd Junction with Westwood Lane).

Access to any development of houses and I or flats at rear of The Old Vicarage, Wyke would cause increased traffic dangers to an already very dangerous junction at corner of Westwood Lane and Guildford Road where there have been several fatalities.

There is also already heavy traffic at the Wyke Primary School across the road from the same junction.

Supporting DfT’s Road Investment Strategy

I support the improvements planned for the A3 through Guildford, which are long overdue.

I object to the CLLR which is not a sustainable way for traffic to reach the A3 and would have disastrous consequences in terms of flooding, habitat destruction, dangerous junctions and noise and air pollution.

I object to the Local Plan as a whole due to the much increased congestion that will result from the developments on trunk roads, A3/M25.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

The A3 or M25 would have to be considerably improved before any development is done. Highways England has confirmed that they have no plans to even start considering improving the A3 before 2020. Clearly no real improvements are possible in the timeframe of this Plan so the developments at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), should not take place.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Comment ID: PSLPP16/7034  Respondent: 15442049 / Ellouise Fassom  Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT due to the congestion that development will cause to the trunk roads, A3/M25 (Policy 12)

I object to this policy as it is too vague and optimistic. Significant improvements to the road infrastructure are like to be many years away even if they ever happen. The draft plan, however, commits to building massive housing estates in the countryside before any of these road improvements are in place. This is inappropriate and will lead to massive traffic disruption during the construction phase and will add permanently to an already congested network (about 3,000 private cars from the 2,100 new homes at Wisley Airfield alone).
Road infrastructure represents a major constraint that should have been applied to the housing target at a much earlier stage in the plan process and not left as an unresolved difficulty in the draft plan.

There is no certainty that either the A3 or M25 in the borough will be improved to increase capacity and reduce congestion during the Plan period. Highways England has no plans to even examine improving the A3 before 2020. I have considerable concerns that development of the large residential sites identified at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), will take place before any improvements are made to the trunk road network. The A3 & M25 are already at capacity during peak hours and any development prior to improvement of these roads will only make the situations worse.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT TO POLICY I2 (SUPPORTING DTP’S ROAD STRATEGY):
• Doesn’t allow for catastrophic increase in traffic resulting from spreading new housing estates across the borough.
• Out of sync with DTp’s strategy: houses to be built and Green Belt destroyed before plans for A3 etc implemented.
• Road plans too optimistic anyway, especially post-Brexit. Probably won’t happen.

I object due to the congestion that development will cause to the trunk roads, A3/M25 (Policy I2)

The A3 or M25 would have to be improved before any development is done. Highways England has no plans to even start considering improving the A3 before 2020. Under the current economic climate post Brexit, it is unlikely any additional funding will be made available for new capital projects. Clearly no real improvements are possible in the timeframe of this Plan so the developments at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), should not take place

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

---

I OBJECT TO POLICY I2 (SUPPORTING DTp’S ROAD STRATEGY):
• Doesn’t allow for catastrophic increase in traffic resulting from spreading new housing estates across the borough.
• Out of sync with DTp’s strategy: houses to be built and Green Belt destroyed before plans for A3 etc implemented.
• Road plans too optimistic anyway, especially post-Brexit. Probably won’t happen.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I OBJECT due to the congestion that development will cause to the trunk roads, A3/M25 (Policy I2)

I object to this policy as it is too vague and optimistic. Significant improvements to the road infrastructure are like to be many years away even if they ever happen. The draft plan, however, commits to building massive housing estates in the countryside before any of these road improvements are in place. This is inappropriate and will lead to massive traffic disruption during the construction phase and will add permanently to an already congested network (about 3,000 private cars from the 2,100 new homes at Wisley Airfield alone).

Road infrastructure represents a major constraint that should have been applied to the housing target at a much earlier stage in the plan process and not left as an unresolved difficulty in the draft plan.

There is no certainty that either the A3 or M25 in the borough will be improved to increase capacity and reduce congestion during the Plan period. Highways England has no plans to even examine improving the A3 before 2020. I have considerable concerns that development of the large residential sites identified at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), will take place before any improvements are made to the trunk road network. The A3
& M25 are already at capacity during peak hours and any development prior to improvement of these roads will only make the situations worse.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT to this policy as it stands. This policy is concerned only with the strategic road network – the A3 and M25 for which the responsibility and decision-making lies with Highways England and will take years to agree and complete. The draft plan commits to building massive housing estates in the countryside before any of these road improvements are in place. Surrey is the most congested county in England, with 683 people per square kilometer, compared with an English average of 413. This policy will lead to massive traffic disruption during the construction phase and will add permanently to an already congested network (about 3,000 private cars from the 2,100 new homes at Wisley Airfield alone). This is a major development constraint that should have been applied to the OAN before this consultation.

Supporting the Dept of Transport's Road Investment Strategy

I object to this policy only relating to the strategic road network, the A3/M25, without ensuring any development includes the necessary road infrastructure being implemented. I object to developers funding road infrastructure which suits their wishes and not the necessary needs, i.e. south bound slip road and north bound sliproads at the Ockham roundabout. Such provision at Burnt Common increases the traffic through Ripley should the 2,000+ houses be built at the former Wisley Airfield. The village already suffers traffic log-jams on a daily basis.

<td>The council appropriately identifies that the enhancement of the A3 is essential to the scale of development possible within the local plan. Page 21 Strategy and sites states 'The delivery of housing in the later stages of the plan period is dependent upon major improvement to the A3 through Guildford'. Highways England have made no commitment to improve the A3 and yet the local plan still seeks to deliver the full housing target through the delivery of three of its four strategic sites sighted directly beside the A3. The transport survey also highlights that traffic will be impacted and congestion worsened irrespective of what improvement measures are put in place.</td>

POLICY I2 - Supporting the Department of Transport’s “Road Investment Strategy” - I OBJECT.

Decisions by Highways England on improving the strategic road network (the M25 and A3) are years away. The Council have suggested a very expensive tunnel under Guildford, without any plans, designs or specifics. Other, less expensive A3 improvements, and changes to the Junction 10/Heathrow stretch of the M25, will also take years to agree and complete. The draft plan, however, commits to building massive housing estates in the countryside before any of these road improvements are in place. Surrey is the most congested county in England, with 683 people per square kilometre, compared with an English average of 413. This policy will lead to massive traffic disruption during the construction phase and will add permanently to an already congested network (about 3,000 private cars from the 2,100 new homes at Wisley Airfield alone). This is a major development constraint that should have been applied to the OAN before this consultation.

POLICY I2 - Supporting the Department of Transport’s “Road Investment Strategy” - I OBJECT.

Decisions by Highways England on improving the strategic road network (the M25 and A3) are years away. The Council have suggested a very expensive tunnel under Guildford, without any plans, designs or specifics. Other, less expensive A3 improvements, and changes to the Junction 10/Heathrow stretch of the M25, will also take years to agree and complete. The draft plan, however, commits to building massive housing estates in the countryside before any of these road improvements are in place. Surrey is the most congested county in England, with 683 people per square kilometre, compared with an English average of 413. This policy will lead to massive traffic disruption during the construction phase and will add permanently to an already congested network (about 3,000 private cars from the 2,100 new homes at Wisley Airfield alone). This is a major development constraint that should have been applied to the OAN before this consultation.

**POLICY I2 - Supporting the Department of Transport’s “Road Investment Strategy”**

I object to this policy as it is too vague and optimistic. Significant improvements to the road infrastructure are likely to be many years away, even if they ever happen, and are beyond the command of the Council. The draft Plan, however, commits to building massive housing estates in the countryside before any of these road improvements are in place. This is inappropriate and will lead to massive traffic disruption during the construction phase and will add permanently to an already congested network.

Road infrastructure represents a major constraint that should have been applied to the OAN at a much earlier stage in the Plan process and not left as an unresolved difficulty in the draft Plan.

**I object due to the congestion that development will cause to the trunk roads, A3/M25 (Policy I2)**

The A3 or M25 would have to be improved before any development is done. Highways England has no plans to even start considering improving the A3 before 2020. Clearly no real improvements are possible in the timeframe of this Plan so the developments at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), should not take place.

**Document:** Proposed Submission Local Plan: strategy and sites 2016 / Policy ID2

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object due to the congestion that development will cause to the trunk roads, A3/M25 (Policy I2)

There is no certainty that either the A3 or M25 in the borough will be improved to increase capacity and reduce congestion during the Plan period. Highways England has no plans to even examine improving the A3 before 2020. I have considerable concerns that development of the large residential sites identified at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), will take place before any improvements are made to the trunk road network. The A3 & M25 are already at capacity during peak hours and any development prior to improvement of these roads will only make the situations worse.

Furthermore, if Highways England had identified a need for an additional entrance / exit for the A3 near Ripley, they would compulsory purchase the land required to do so in the best location. They have not done this, nor identified Garlick’s Arch as a site to use.

1. POLICY II

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1).

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular pastime, particularly at weekends hundreds of cyclists pass through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a
key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

1. POLICY I2

I OBJECT due to the congestion that development will cause to the trunk roads, A3/M25 (Policy I2)

I object to this policy as it is too vague and optimistic. Significant improvements to the road infrastructure are like to be many years away even if they ever happen. The draft plan, however, commits to building massive housing estates in the countryside before any of these road improvements are in place. This is inappropriate and will lead to massive traffic disruption during the construction phase and will add permanently to an already congested network (about 3,000 private cars from the 2,100 new homes at Wisley Airfield alone).

Road infrastructure represents a major constraint that should have been applied to the housing target at a much earlier stage in the plan process and not left as an unresolved difficulty in the draft plan.

There is no certainty that either the A3 or M25 in the borough will be improved to increase capacity and reduce congestion during the Plan period. Highways England has no plans to even examine improving the A3 before 2020. I have considerable concerns that development of the large residential sites identified at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), will take place before any improvements are made to the trunk road network. The A3 & M25 are already at capacity during peak hours and any development prior to improvement of these roads will only make the situations worse.
What changes (2016)/further amendments (2017) do you suggest should be made to the document?

POLICY I2 DEPARTMENT FOR TRANSPORT

I object to policy i2 Supporting the Department of Transport’s ‘Road Investment Strategy’

This policy is too vague and unrealistically optimistic. Decisions by Highways England on improving the strategic road network (the M25 and A3) are still years off. The Council have suggested a very expensive tunnel under Guildford, but there is no evidence to show that this is a realistic option. Even if Highways England accepted this (which is highly unlikely in the post-Brexit public spending climate) it would not be built until the end of the plan period at the earliest.
Other, less expensive A3 improvements, and changes to the Junction 10/Heathrow stretch of the M25, will also take years to agree and complete.

The draft plan, however, commits to building massive housing estates in the countryside before any of these road improvements are in place. This is foolhardy. Surrey is the most congested county in England, with 683 people per square kilometre, compared with an English average of 413. This policy will lead to massive traffic disruption during the construction phase and will add permanently to an already congested network (about 3,000 private cars from the 2,100 new homes at Wisley Airfield alone). This is a major development constraint that should have been applied to the OAN to constrain the housing target.

Policy I2

“The A3 Guildford scheme is subject to feasibility study and then progression through Highways England’s Project Control Framework during Road Period 1. As a result, the scheme could either be the widening of the existing A3 carriageways or a tunnel option”. The most likely north entrance for a tunnel at the north east end of the town would be at Gosden Hill. It is, therefore, absurd to consider building houses on this land until a decision has been reached on whether a tunnel will be built.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1. I object due to the congestion that development will cause to trunk roads and village roads (Policy I2)

There would need to be significant improvements made to the major trunk roads, A3 and M25, prior to any development taking place. It is noted that Highways England has no plans to start improvements on the A3 before 2020. Therefore it would be unsustainable for the huge developments at the Former Wisley Airfield A35, Garlick's Arch A43 and Gosden Hill A25 and the large developments in the Horsleys to take place within the time frame of the Plan.

The villages are already struggling with traffic volume and there is no strategy for improving capacity in the Plan. The road surfaces are in a bad condition, parking is an issue in many of the villages and provision for pedestrians is often poor. Added to this is the increased popularity of cycling which would create more danger for participants with increased traffic.

I wish my objections to be fully taken into consideration and that the Local Plan is amended in accordance with the objections raised

Given the scale of development planned, the A3 and M25 would have to be improved before any such development is done. Highways England have no plans to even start considering improvements to the A3 until at least 2020. Clearly, no tangible improvements will be possible in the timeframe of this Plan and so developments at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25) simply should take place.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID2

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT due to the congestion that development will cause to the trunk roads, A3/M25 (Policy I2)

I object to this policy as it is too vague and optimistic. Significant improvements to the road infrastructure are like to be many years away even if they ever happen. The draft plan, however, commits to building massive housing estates in the countryside before any of these road improvements are in place. This is inappropriate and will lead to massive traffic disruption during the construction phase and will add permanently to an already congested network (about 3,000 private cars from the 2,100 new homes at Wisley Airfield alone).

Road infrastructure represents a major constraint that should have been applied to the housing target at a much earlier stage in the plan process and not left as an unresolved difficulty in the draft plan.

There is no certainty that either the A3 or M25 in the borough will be improved to increase capacity and reduce congestion during the Plan period. Highways England has no plans to even examine improving the A3 before 2020. I have considerable concerns that development of the large residential sites identified at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), will take place before any improvements are made to the trunk road network. The A3 & M25 are already at capacity during peak hours and any development prior to improvement of these roads will only make the situations worse.

This is inappropriate and will lead to massive traffic disruption during the construction phase and will add permanently to an already congested network (about 3,000 private cars from the 2,100 new homes at Wisley Airfield alone).

Road infrastructure represents a major constraint that should have been applied to the housing target at a much earlier stage in the plan process and not left as an unresolved difficulty in the draft plan.

There is no certainty that either the A3 or M25 in the borough will be improved to increase capacity and reduce congestion during the Plan period. Highways England has no plans to even examine improving the A3 before 2020. I have considerable concerns that development of the large residential sites identified at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), will take place before any improvements are made to the trunk road network. The A3 & M25 are already at capacity during peak hours and any development prior to improvement of these roads will only make the situations worse.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

<td>I object to policy i2 Supporting the Department of Transport’s “Road Investment Strategy” This policy is too vague and unrealistically optimistic. Decisions by Highways England on improving the strategic road network (the M25 and A3) are still years off. The Council have suggested a very expensive tunnel under Guildford, but there is no evidence to show that this is a realistic option. Even if Highways England accepted this (which is highly unlikely in the post-Brexit public spending climate) it would not be built until the end of the plan period at the earliest. Other, less expensive A3 improvements, and changes to the Junction 10/Heathrow stretch of the M25, will also take years to agree and complete. The draft plan, however, commits to building massive housing estates in the countryside before any of these road improvements are in place. This is foolhardy. Surrey is the most congested county in England, with 683 people per square kilometre, compared with an English average of 413. This policy will lead to massive traffic disruption during the construction phase and will add permanently to an already congested network (about 3,000 private cars from the 2,100 new homes at Wisley Airfield alone). This is a major development constraint that should have been applied to the OAN to constrain the housing target.</td>

** I object to the congestion that development will cause to the trunk roads A3/M25 (Policy12)

Both the A3 and M25 need improvements before any developments commence. This is clearly not going to happen in the timescales of the plan, so the proposed developments at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25) should NOT take place.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID2

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT due to the congestion that development will cause to the trunk roads, A3/M25 (Policy I2)

I object to this policy as it is too vague and optimistic. Significant improvements to the road infrastructure are like to be many years away even if they ever happen. The draft plan, however, commits to building massive housing estates in the countryside before any of these road improvements are in place. This is inappropriate and will lead to massive traffic disruption during the construction phase and will add permanently to an already congested network (about 3,000 private cars from the 2,100 new homes at Wisley Airfield alone).

Road infrastructure represents a major constraint that should have been applied to the housing target at a much earlier stage in the plan process and not left as an unresolved difficulty in the draft plan.

There is no certainty that either the A3 or M25 in the borough will be improved to increase capacity and reduce congestion during the Plan period. Highways England has no plans to even examine improving the A3 before 2020. I have considerable concerns that development of the large residential sites identified at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), will take place before any improvements are made to the trunk road network. The A3 & M25 are already at capacity during peak hours and any development prior to improvement of these roads will only make the situations worse.

**Document:** Proposed Submission Local Plan: strategy and sites 2016 / Policy ID2

**Do you consider this section of the document; complies with the Duty to Cooperate?** ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT. This policy is too vague and optimistic. Decisions by Highways England on improving the strategic road network (the M25 and A3) are still years off. The Council have suggested a very expensive tunnel under Guildford, but this is no more than a dream. Even if Highways England accepted this (which is highly unlikely in the post-Brexit public spending climate) it would not be built until the end of the plan period at the earliest. Other, less expensive A3 improvements, and changes to the Junction 10/Heathrow stretch of the M25, will also take years to agree and complete. The draft plan, however, commits to building massive housing estates in the countryside before any of these road improvements are in place. This is foolhardy. Surrey is the most congested county in England, with 683 people per square kilometre, compared with an English average of 413. This policy will lead to massive traffic disruption during the construction phase and will add permanently to an already congested network (about 3,000 private cars from the 2,100 new homes at Wisley Airfield alone). This is a major development constraint that should have been applied to the OAN before this consultation, and not left up in the air.

**Policy I2 - Supporting the Dept of Transport's Road Investment Strategy**

I object to this policy only relating to the strategic road network, the A3/M25 and not local roads which will be overwhelmed by large developments, regardless of any strategic road network improvement. Wisley will completely overwhelm Ripley and Horsley and the roads will become rat-runs to stations, particularly Woking with its fast trains to London.

I object due to the congestion that development will cause to the trunk roads, A3/M25 (Policy I2)

There is no certainty that either the A3 or M25 in the borough will be improved to increase capacity and reduce congestion during the Plan period. Highways England has no plans to even examine improving the A3 before 2020. I have considerable concerns that development of the large residential sites identified at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), will take place before any improvements are made to the trunk road network. The A3 & M25 are already at capacity during peak hours and any development prior to improvement of these roads will only make the situations worse.

No consideration has been given to the increase in traffic, congestion, disruption and emissions when combined with Surrey County Council’s plan to start gas extraction and production works nearby at Albury Heath (AONB), which will mean drilling 24/7 for 15 years.

It is understood that the remit of Local Councils does not include consideration of plans outside of it’s area of responsibility, or the cumulative effects, however, it must be for Central Government to oversee all development projects closely enough to establish when there are conflicts of interest. It is irresponsible not to consider the cumulative damaging effects to the locality, the community and the environment as a whole. It is irresponsible to ‘pass the buck’ to other Councils and Government and leave local residents and communities to suffer the consequences of this siloed approach.

Policies 12 - Supporting the Department for Transport's "Road Investment Strategy" and 13 - Sustainable transport for new developments

Waverley and Guildford Borough Councils have worked closely recently with each other on transport issues, for example by jointly commissioning Surrey County Council to produce the 2016 Strategic Highway Assessment to inform both authorities' Local Plans. The RIS schemes for improvements to the A3 will have an indirect, but nonetheless important impact on the Strategic Road Network as it affects Waverley. The Council would therefore wish to add its support to that of Guildford Borough for the RIS as well as recognising the need for continued liaison between the Boroughs, the Highways Authority and Highways England on the nature and timescales of the A3 improvements.

I object due to the congestion that development will cause to the trunk roads, A3/M25 (Policy I2)

The A3 and M25 are already severely strained at the junctions closest to Ripley. The scale of development in the Local plan, particularly for the sites at Garlick’s Arch and Wisley Airfield (A35) is such that there will be unprecedented increases in traffic on these routes. I have been unable to identify adequate evidence of the plans in place to address the likely impacts on key trunk roads resulting from the scale of developments proposed in the area.

**Document:** Proposed Submission Local Plan: strategy and sites 2016 / Policy ID2

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the lack of planned road infrastructure. (Policy I1). I live on the Portsmouth Road which runs through Ripley and Send adjacent to Garlick's Arch. We are already coping with large amounts of traffic which is often diverted onto our road when an accident closes the A3. The A3 from the junction north of the village to the M25 is almost at a standstill during the rush hour both going north in the morning and coming south in the evening. All of the above developments are sited along the A3 and with the number of houses proposed probably in the region of an extra 5000 cars will be wishing to use our local roads. Congestion will be even worse and at present Highways England has no plans to start considering improving the A3 before 2020. There should therefore be no development until this has been considered (Policy I2).

**POLICY ID2: SUPPORTING THE DEPARTMENT FOR TRANSPORT'S “ROAD INVESTMENT STRATEGY”**

Our letter dated 5 October 2016 sets out Highways England comments on Policy ID2 and specifically its position on a potential A3 and planned M25 schemes, which remain the current position. However you will note that subsequent to a public consultation earlier this year, we plan to announce the preferred route for the M25 Junction 10 scheme in late August. This may or may not have implications for proposals set out in policies A43A (Burnt Common) and A35 (Wisley Airfield) can be delivered.

We are pleased to advise that on the 10th March 2017 the Department of Transport announced £220 million to help motorists to beat congestion and this included schemes for the A3 Guildford Northbound Off Slip at the University Interchange and A3 Guildford Stoke Interchange Southbound Off Slip Improvements. Further, we can also advise that schemes at Beechcroft Drive and for Safety Enforcement Cameras on the A3 through Guildford have been funded to enable progress with the intention to start construction before 2020.

The removal of item 4.6.17 is puzzling. In the rationale for changes it is described as a potential statement of common ground with Highways England. GBC believe that it is likely to be agreed nearer to the plan Examination – but once again it highlights the lack of control over key roads infrastructure in formulating the Plan.

**POLICY ID2 - Supporting the Department for Transport's 'Road Investment Strategy'

3.70 As already set out in this consultation response, GVG has concerns that the local plan is silent on the plans and delivery aspirations of other key stakeholders such as Highways England.

3.71 An example of this is where the text in paragraph 4.6.17 has been removed, relating to the agreement of a statement of common ground between GBC and Highways England. In the summary of changes to the Local Plan it is suggested that this text has been removed as this will be agreed closer to the Examination. This position is concerning, as the impact of development upon the A3 and road infrastructure is critical in the development of the Local Plan and it is therefore vital that this is agreed at consultation stage if the Plan is to be found sound. Furthermore, if the A3 is improved as proposed, there will be clear potential for increased north-south traffic through the town and surrounding villages getting to and from the A3.

Guildford station - new road bridge over railway.

Land immediately to the north of the station should be left undeveloped to allow for a road bridge to be constructed as part of a link road between Guildford Park Road and York Road. This would provide an alternative route to Farnham Road bridge to connect the west and east sides of the town on either side of the railway and river. If the gyratory system is downgraded to reduce town centre congestion and traffic across Farnham Road bridge is restricted to buses and emergency vehicles (as I have read in some transport proposals), then there will be no alternative route for motorists to travel across Guildford apart from using the A3 between Woodbridge Road and the Cathedral junction. These traffic proposals assume that motorists from the west side of the town can park near the station (e.g. Guildford Park Road and Farnham Road car parks) and walk into the town centre. This may be acceptable if their destination is in the lower part of the town centre, but it is a significant distance to walk to the upper part of the town, particularly for those with impaired mobility. The withdrawal of the town centre free bus service a few years ago was a retrograde step.

For traffic in the opposite direction - e.g. residents from the east side of the town and the A281 corridor going to and from the Royal Surrey Hospital and the University, both significant destinations, would also have to use the congested A3 for one junction if access over Farnham Road bridge is restricted and there is no alternative road across the railway in the vicinity of the town centre. It is unsatisfactory that local traffic has to use the A3 for a short distance between the Woodbridge Road junction and the Cathedral / University junction, thus causing regular congestion at peak hours. It is therefore imperative that passive provision is made in the Local Plan for an alternative road bridge over the railway to relieve Farnham Road bridge.

Policy I3: Sustainable transport for new developments

4.6.24 The Sustainable Movement Corridor will provide a priority pathway

The impact on non-prioritised users and knock-on effects for surrounding roads need to be assessed.

Object: Inadequate

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
The change from ‘will expect’ to ‘will be required’ in point (2) is supported. The similar revised wording in point (7) is also supported.

The lack of specificity about the Sustainable Movement Corridor makes it difficult to make an informed comment on point (3).

It is very likely that the claims made for the SMC exceed what can be delivered, and the plan should be based on realistic forecasts and a sound business case.

Para 4.6.24 states the aim and means of implementing the SMC. The provision of the corridor should be ‘subject to a sound business case’.

We oppose the very open-ended new policy on new public car parks without assurances on design and character or clarity on whether this relates to expansion of existing or conversion from another use. Interceptor car parks could be close to residential areas or landscape features and not all sites will be suitable. They could require careful siting and design.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

---

Provision of a “shoppers bus” that would serve all of the town centre and the adjacent residential area is vital to reduce car journeys to the centre. Drastic improvement to pedestrian facilities for those walking to the centre is also needed.

We support provision of off-street parking for residential developments; this ought also to be an objective for the established areas of older small houses that have no on-site parking of their own. However for non-residential developments located in and around the town centre this is not appropriate; it negates the whole objective of location to allow use of sustainable transport by employees and clients.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
Transport

West Horsley bus service through the village is extremely limited and only operates twice a day Monday to Friday.

Horsley, inadequate parking spaces, and Effingham Junction have frequent trains to London and Guildford 7 days a week. The early commuter trains are usually full from Guildford on arrival at Horsley and returning from London evening rush hours. You could be standing the entire journey.

Traffic generation from the proposed housing plan would be considerable affecting station traffic movement to/from Horsley and children getting to school. There is no land available for more car park spaces.

I walk; lead walks in the Surrey villages and green belt area often meeting and talking to schoolchildren during May & June from Surrey and the London area taking part in the Duke of Edinburgh Award for all young people to develop skills for life and work, fulfill their potential and have a brighter future.

The London children enjoying opportunities never experienced before are so excited all so keen marveling at seeing the beautiful Surrey villages and countryside, often asking questions about the area.

Infrastructure - Roads

Green Lane and most of the roads in and around West Horsley are very narrow, full of potholes often perilous, particularly when large GBC vehicles collecting refuse, garden rubbish, large lorry’s buses and tractors passing through.

The council has failed to properly maintain the roads. Occasional attempts are made ‘to make do and mend some of the potholes, but they are beyond the state which could support a significant increase in traffic.

To increase such traffic which would result if the proposed developments were to proceed would be wholly irresponsible.

Conclusion

Our generation must not leave a legacy such as this of a concrete jungle.

When the next generation can only look in books and see green fields, character historic Surrey villages - as history and say:

THIS IS HOW IT WAS IN THE OLDEN DAYS.

POLICY ID3 – Sustainable transport for new developments

ssss) Paragraph 4.6.20 is correct but seems contradictory when viewed against the removal of site A47 at Wanborough Station, whilst retaining sites A42 and A43 at Send.

tttt) We accept the revised wording to Policy ID3(1).
uuuuu) We accept the revised wording to Policy ID3(2).

vvvvv) We understand the rationale of Policy ID3(3).

wwwww) Lengthy statements from 4.6.22 to 4.6.27 indicate clear objectives towards ModalShift, including, in 4.6.24: ‘The Sustainable Movement Corridor will provide a priority pathway through the urban area of Guildford for buses, pedestrians and cyclists, serving the new communities at Blackwell Farm, SARP and Gosden Hill Farm including the new Park and Ride site, the new Guildford West (Park Barn) and Guildford East (Merrow) rail stations, the Onslow Park and Ride, both of the University of Surrey’s campuses, the town centre and Guildford rail station. The aim is for journeys to be rapid and reliable by bus and safe and direct on foot and by bike.’ However, these are followed by 4.6.28 which states: ‘Whilst the site allocations and proposals in this Plan – including the significant programme of schemes to provide and improve opportunities to use active modes, bus and rail – are intended to result in a modest modal shift over the period to 2034, we forecast that there will also be an absolute increase in overall traffic volumes.’ And then in 4.6.30a: ‘Roads in Guildford town centre carry high volumes of traffic and are subject to recurrent traffic congestion during peak periods, especially the gyratory and its immediate approaches. Over the weekday hours of 07:00-19:00, around a quarter of car trips passing through the Guildford gyratory either begin or end at a public car park in the town centre.’

xxxxx) These two statements accurately describe not only the dire existing situation with traffic in Guildford but also recognise that volumes are expected to increase to make matters worse. The last underlined sentence, though, is totally misleading, as is the suggestion, later in the paragraph, that increasing peripheral parking capacity will make a significant difference, thus diverting attention from the main issue.

a. Firstly, the statement refers to cars only, and

b. secondly, it refers to an average over the 12 hours of a weekday. As stated below, under Parking, peak hour behaviour is totally different, so it can be expected that a large proportion of the Town Centre parking would be by shoppers at off-peak times.

c. Thirdly, it identifies this behaviour with 25% of car trips through the gyratory, totally omitting any data or measures to deal with the remainder, to total over 2500 vehicles per hour, including heavy goods vehicles, at peak in 2011.

yyyyy) We believe that, by including Bridge Street, Onslow Street and Woodbridge Road - where these traffic flows occur - as part of the SMC, its objective to: ‘provide a priority pathway through the urban area of Guildford for buses, pedestrians and cyclists, . . . and . . . for journeys to be rapid and reliable by bus and safe and direct on foot and by bike’ is unlikely to be achievable without significantly more serious investment aimed at diverting major through traffic away from this artery.

zzzzz) We do not believe the wording of Policy ID3(4) is workable or able to promote goodneighbourliness, and we consider a more appropriate way to address this is to promote the use of car clubs where there are limited resident parking bays available, with all new developments required to establish a car club or join an existing one which is or will also be available to existing residents. This can supplement or replace ID3(6).

aaaaa) In terms of Policy ID3(5), the Guildford Society considers there needs to be a completerethinking of the way town centre parking (on street and in car parks), park & ride and public transport interact. For example: A return bus fare from Onslow Village costs £4.50 per person (assuming no pensioners); a return fare (including parking) from Onslow Park & Ride costs £1.50 per person return; Parking in York Road car park costs £2 for 2 hours plus £1 per hour thereafter. For a family of three, there is no point getting the bus at £13.50 return; the Park & Ride would cost £4.50; for £4.00 the family could drive into town and park in the York Road car park for up to four hours and still save money. If the price of rail travel from the proposed new Guildford West railway station is similar to travelling from Shalford, a fare of around £2.60 per person before railcard discounts, would suggest that the similar journey would cost £7.80. This illustrates the complete lack of a coherent transport and parking strategy, which will fail to alleviate the traffic and transport problems in and around Guildford.

bbbbbb) We strongly urge the Borough Council to consider expanding the Park & Ride network and to consider running services through the town centre from one Park & Ride facility to another so as to enable a greater number of stops in the town centre to be serviced by a single bus.
We commend Guildford Borough Council's Parking Strategy. However, as we commented to them in August 2016, when the draft was first published, no analysis has been made of the timing of off-street parking usage. We believe that it is important to distinguish between activity during peak times, when travel to and from work and schools is key, and other times when visitors and shoppers display totally different patterns of behaviour and are more likely to use town centre car parks.

The wording of Policy ID3(7) needs some greater clarity. We think we understand what the policy is driving at but we are not sure. This indicates a need for a rethink, although we believe the substance is broadly appropriate.

We have already highlighted issues we have with the change from ‘Developer Contributions’ to ‘Developer Funded’ in the Infrastructure Schedule at Appendix C. We note the requirement of Policy ID3(8) and reiterate our caution that this may be part of a gamble intended to avoid development altogether rather than to enable it.

We broadly agree with the amended wording of Policies ID3(9), ID3(10) and ID3(11).

We broadly support the content of most paragraphs following the Policy.

We are concerned about the apparent finality of the text in paragraph 4.6.28 which seems to suggest both that there is a need for more infrastructure and that all necessary infrastructure has already been identified in Appendix C. We fundamentally disagree with this notion because planning for the entire town centre (infrastructure included) is missing from the plan.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

**Comment ID:** pslp171/2030  **Respondent:** 8561377 / The Guildford Society (Julian Lyon)  **Agent:**  

**Document:** Proposed Submission Local Plan: strategy and sites 2017 / Policy ID3

**Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( No ), is Legally Compliant? ( )**

The first point to make regarding infrastructure is that there is a colossal amount of additional or revised evidence referred to in the Local Plan directly, and the evidence base indirectly, which makes like-for-like comparison very difficult and which should place additional burden on the Council to explain the impact, and to ensure the remainder of the evidence and the plan in general relates well to the amendments. The Council has done none of these things.

Consequently, the Society has attempted to review the entire infrastructure evidence.

**TRAFFIC & TRANSPORT**

As part of the process of understanding the proposed infrastructure framework and its place in (a) justifying the level of development, and (b) enabling it, the Guildford Society organised a transport open day in the Guildhall in Guildford High Street.

The pivotal problems with the town centre’s traffic infrastructure, and, to a substantial extent this ripples out into the alternative road transportation network, stem from the limitations of the gyratory system.

Traffic data is generally inconsistently gathered and presented, and there is no long-term Data capture that is publicly available other than monitoring by Google, TomTom and INRIX. The latter have identified the following:

**INRIX REPORT EXTRACT and Source – Attached at Annex 4**
Academic environmental studies demonstrate the way this impacts the air quality in the town centre – in particular those below where data was collected in Guildford:

KUMAR REPORT EXTRACT and Source – Attached at Annex 3

In terms of the gyratory system, we have read many reports and Council papers relating to the congestion and shortcomings of the system, particularly at peak hours – not many of these documents have been retained as part of the evidence base which, therefore, has the impression of a selective exercise designed to justify the plan and not the other way around.

As a consequence, there is no cohesive plan for the town centre traffic in the Draft Submission Local Plan. Guildford Borough Council seem to be gambling on an outside bet – namely, that (a) the A3 will be fixed soon enough in the Plan period; and (b) most traffic will use the A3 instead of travelling through the town centre.

The Guildford Society recognises that there is at least some sense in the premise that the A3 has been at or near peak capacity at rush hours for the past twenty years or so, and that some traffic will rat run through the town centre and other surrounding roads. It is desirable that the A3 be urgently addressed.

The Society does not, however, believe that failing to tackle the town centre in the meantime is in any way sustainable, and that any development in the Borough might be considered unsustainable in the context of NPPF in the absence of a proper plan to fix the traffic in the town centre.

From the Society’s perspective, there is a major long-term issue in the town centre, namely, that the traffic canyon and so-called ‘concrete collar’ making up the gyratory system in Onslow Street and Friary Bridge, Park Street and Bridge Street respectively.

One of the key challenges for the gyratory system is the fact there are several short lengths of road between traffic lights which do not accommodate any reasonable capacity.

Another challenge to analysing the system is that, despite there being several lanes in places, it is often the case that one lane is gridlocked whilst others are all but empty. At various times of day, it is a different lane that is full by comparison to the others.

There is much that could be done in the short term to alleviate the traffic problems by co-ordinating traffic lights and reorganising lanes. It is hard to see that any short-term measures will enable a better and safer environment for cycling. They will also not do much to allow for more efficient scheduling of buses, and will not enable capacity in the town centre to facilitate the proposed Sustainable Movement Corridor.

Consequently, the Council has put forward a Draft Submission Local Plan that does not show that it can be delivered comprehensively. A plan in which only some parts are viable cannot in reality be considered a sound plan.

The Guildford Society endorses the Guildford Vision Group approach to traffic in the town centre and its accommodation of increased freedom of bus and cycle movement to enable modal shift and to redistribute traffic away from the heart of the town and riverside.

There would need to be careful design and co-ordination of signals for the junctions but there seem to the Society, given all we have read and studied over many years, to be very real merits and ample reasons to safeguard the route in order to at least bring more of the traffic and transport infrastructure within the control of the Local Planning Authority.

On Saturday 15th July, the Guildford Society – with invitations to, and rejections from the Deputy Leader of Guildford Borough Council who is the lead member for infrastructure, and the Head of Strategic Projects – held a public workshop in the Guildhall in Guildford High Street, aimed at exploring alternative transportation options in the town. This was intended to begin a public conversation about the issues and canvass views of the bus station, cycling, bus routes and trains.

The information displays and stands included:
1. A ‘best guess’ at the proposed location of the relocated bus station (discussed and approved at an ‘in camera’, closed session of a Council meeting a couple of weeks previously):

2. A display showing concepts for the bus station relocation – largely ignored by the ‘stakeholder exercises’ conducted ARUP and Systra:

3. Guildford Vision Group’s plan and images – including its fly-through model:

4. Guildford Bike User Group (GBUG)

5. Guildford’s Bus Companies, represented by Compass and Safeguard

6. Guildford Borough Council’s Sustainable Movement Corridor plan (in the absence of Guildford Borough Council we adopted plans from the Local Plan and Evidence Base.

7. Illustration of future rail options.

8. An aerial photo of Guildford for attendees to put post-it notes with any location-specific comments.

Looking in greater detail at the GVG plan, we have the following observations as this relates directly to (a) the absence of Town Centre planning in the Regulation 19 Submission Draft Local Plan; and (b) as it relates to the ability to quantify development in the town centre in the context of the Regulation 19 plan.

Assuming traffic at 11th June 2011 levels (when the Sky High Traffic Studies were undertaken for Surrey County Council), we have no better information other than consider it reasonable to assume that the origins and destinations onto and off the town centre road system would be broadly the same.

Looking at the existing gyratory system, we have allocated the traffic to lanes based on the current layout (diagram on the next page):

We have then calculated the traffic through each lane (table below): [Table]

The key lanes from which the table was compiled are set out below, followed by two traffic graphs and a summary of the traffic on each short stretch of the gyratory: [Image]

The main finding from this exercise is the disparity between lanes, for example between the four lanes on Friary Bridge. Lane 4 is for traffic heading for the A31 where there is a dysfunctional pedestrian and vehicular traffic light that does not interact with its fellow traffic signals, causing a back-up onto the gyratory: [Table] [Image].

Equally, in Onslow Street, there is a considerable volume of traffic throughout the day (lane 28 is heading towards the A281 where there is a dysfunctional pair of pedestrian crossings that cause a build-up of traffic on the gyratory: [Table] [Image].

The volume of vehicles in morning and evening peak traffic is substantial and it is not clear how such volumes can be accommodated alongside the proposed town centre stretch of the Sustainable Movement Corridor.

Along Friary Street (needing to run in both directions) the traffic is never lower than 450 vehicles per fifteen minutes – 1,800 per hour – and currently peaks in the morning and evening at 2,500 vehicles per hour.

We have attempted to understand the data and apply it to the local plan proposals. We do agree this will improve by implementing the proposed changes to car park access at Millbrook. A similar approach to Bedford Road Car Park would improve this still further.

In the absence of any real impact assessment on town centre traffic, we really only have one other alternative to model the traffic against, and that is the proposal of the Guildford Vision Group. In the model below, it is clear that traffic on Park Street (A-B) and the new road B-C and C-D will be at a similar level to the current two-direction traffic on Onslow Street, but it will be the junctions that determine whether the town centre can keep moving.
The Guildford Vision Group plan will allow the town centre portion of the Sustainable Movement Corridor to be implemented and would route traffic away from the area.

Working through the analysis and the Guildford Vision Group draft master plan, it seems the road network can work well, given the following assessment:

First, here is the layout proposed by GVG marked with the four junctions that replace seven junctions on the existing gyratory system with much longer legs between junctions than the current arrangement: [Image]

We have assessed the junction movements for the above as set out below: [Image]

We have then assessed the anticipated traffic flows for each traffic movement (recognising that (a) there is no differentiation between vehicle types in the original survey, (b) changed layouts will almost certainly change behaviours, (c) there is no data for traffic stopping at town centre car parks, and (d) the data was zeroed out for vehicles using the gyratory to effectively make a U-turn). [Table]

This table is calculated from data for each 15-minute slot from 7am to 7 pm on 11th June 2011. [Image]

The most traffic-intensive stretches of road are the new roads and Park Street – the highest volume is southbound alongside the station between 4.30 and 5.30pm at 1589 vehicles per hour (26.5 vehicles per minute). There will inevitably still be peak hours congestion but the greater simplicity of the system and junctions should allow this to be minimised in a way the current system cannot.

The Guildford Society believes this is a critical component of enabling the town to accommodate growth and to cope with the growth in surrounding areas. It will be possible to mitigate some of that growth by resolving issues on the A3 and by encouraging modal shift.

GUILDFORD TRANSPORT STRATEGY 2017
This declares itself as an aspirational document and we consider its objectives to be commendable. The substance, however, relies heavily on the delivery of the Sustainable Movement Corridor (SMC). We entirely support the concept of the SMC but have serious concerns about its ability to function effectively as currently conceived alongside existing unmitigated traffic volumes (especially when adjusted to accommodate for growth). See our comments specifically at Policy ID3(3). We broadly agree with the traffic analysis carried out by the Guildford Residents’ Associations (GRA).

From a FoI response (Annex 5) we are aware that analysis of the impact of 1,800 homes at Dunsfold showed an increase of an average 110 cars per hour in the three-hour morning peak. A planned increase in housing in the plan period of 12,426 homes in the borough plus fifteen to twenty thousand in the influencing neighbouring boroughs will mean (mathematically) we may need to plan for an additional 1,800 cars per hour in the absence of suitable transport alternatives. Even if a fraction of this number actually reaches the current gyratory system, Guildford will fail to cope and the town will lose ground to Woking and other centres.

| Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( ) |

Please note the following:-
1. A320 from the north - during periods of high volume, traffic currently tails back to the Woking Road/ Clay Lane Junction and beyond.
2. A3 South/North bound. The A3 through Guildford is already not fit for purpose for a major trunk road carrying traffic from London to Portsmouth & Southampton with its 50MPH speed limit, twist and turns leading to constant traffic jams and numerous accidents. The only solution would be to build a tunnel similar to the one at Hindhead.
3. A246 from the east - during periods of high volume, traffic currently tails back to the Epsom Road/Trodds Lane junction.
4. A281 from the south - during periods of high volume, traffic currently tails back half way to Shalford.
5. A3100 from Godalming - during periods of high volume, traffic currently tails back to Artington.
6. A31 from the west - during periods of high volume, traffic currently tails back half way along the Hogs Back
7. A323 from the north west - during periods of high volume, traffic currently tails back to the Aldershot Road/ Gravets Lane Junction.
8. A322 from the north-west - during periods of high volume, traffic currently tails back to the Salt Box Road/ Worplesdon Road Junction.

I do not see any proposed plans to improve the infrastructure.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/3167  Respondent: 8568193 / Miss Edwina Attwood  Agent:
Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

12.I OBJECT to poor air quality concerns (Policy I3)

Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

We welcome and support this policy.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
In the Sunday Times (10.07.2016) Guildford was extolled as a marvellous place to live “surrounded by glorious and protected countryside – but the A3 runs through it like an ugly scar- that gets annoyingly busy though there is talk of burying it in a tunnel”. However in this plan so much of the countryside in the Green Belt is now apparently being offered up for development while little is being done to ease congestion and prevent the town from becoming crammed. Given there is only limited time to make specific comments we wish to make the following points.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Policy I3: Sustainable transport for new developments

I object for the following reasons.

94. I support the general idea of sustainable transport but have the following criticisms and comments on this policy and certain criticisms also apply to the proposals for the Sustainable Movement Corridor.

95. Guildford Borough Council hope that far more residents will prefer to ride bicycles, walk much longer distances, or make greater use of buses and park and rides. This is totally unrealistic and ignores residents’ actual needs and the deteriorating state of bus service provision.

96. The proposed provision of two new railway stations could have unintended consequences such as increased commuter traffic nearby and a need for onerous parking restrictions or inconvenience for local residents from commuter parking. It might also lead to impacts on the housing market local to the station, driving up prices with adverse consequences on affordability and any social housing.

97. I am concerned about proposals to move cyclists off the road and into space shared with pedestrians. This simply replaces one risk with another and is likely to be the cause of accidents – particularly where pedestrians, including schoolchildren and mothers with toddlers, need to cross the path of cyclists to reach a pedestrian crossing. Pedestrians should not have to worry about cyclists approaching from behind at speeds approaching 30mph (as many cyclists on modern machines are easily capable of). Children, in particular, can make unexpected moves across a shared area without thinking about other pavement users in the vicinity. Conflicts over who has priority are also likely to arise whatever signage is in place. Pedestrians are being seriously disadvantaged by this approach.

98. If the policy is successful in generating more trip choices by bicycle the immediately obvious environmental advantages have to be weighed against the impact on those parts of the Local Road Network where cycle lanes do not exist. The impact is that safe driving will lead to reduced average motor vehicle speeds and gap development in the traffic stream. Both these effects act to reduce the capacity of our local road network. This loss of capacity has not been recognised in the Transport Strategy.

99. The benefits of park and ride for the town centre have to be weighed against the traffic that they may generate elsewhere and the vast area of tarmac needed to accommodate them in a Borough where space is under great pressure. In particular, it is not acceptable, and does not fit in with the principle of sustainability, to tarmac over large areas of...
greenfield land for this purpose - or to use brownfield sites without putting building uses over the top of them. We cannot go on wasting precious space in this way.

100. Inserting of villages and the proposed relaxation of planning restrictions anywhere inside or outside settlements (Green Belt or not), implied in P2, will lead to substantial infilling that will not require traffic assessment but will contribute a highly significant amount of additional car journeys overall - by a more insidious process than the large developments proposed.

101. The obvious site choice for sustainable development would be on brownfield sites in the town but the Local Plan proposes allocating those sites to the declining retail industry instead.

102. Paragraph 4.6.21 suggests that sustainable transport is promoted. Far from providing sustainable transport this Plan will generate a massive increase in motor vehicle journeys. The Plan cannot force residents to ride bicycles or walk everywhere and most of the proposed housing sites will generate large numbers of vehicle journeys due to their greenfield locations. Wisley (Site A35) is a classic example of traffic generation through inappropriate location.

103. Paragraph 4.6.26 refers to reviewing existing transport facilities and likely transport generation as part of assessing the amount of incremental travel demand. That consideration should have taken place in a robust and detailed manner on a site-by-site basis before the sites were allocated in the Local Plan. It is not sufficient to leave that until the planning application stage, as intended by Guildford Borough Council and Surrey County Council, given that all sites will be subject to “permission in principle” under the Housing and Planning Act 2016 and so will not be capable of subsequent rejection on these grounds.

104. Paragraph 4.6.27 notes that Development must mitigate its transport impacts. The measures described rely entirely on residents responding positively to their travel information packs rather than dumping them in the nearest bin. It seems that Guildford Borough Council, in response to concerns about elderly and disabled people failing to be coerced into riding bicycles are now suggesting tricycles to overcome this obstacle to their aspirations. They should be aware that while tricycles may help with balance issues they are heavier and harder to ride uphill. While the policy (unusually) notes that mitigation must be provided, in fact this is then diluted to suggest that facilities for electric car charging points and encouragement to car-share can be sufficient; all are optional and therefore meaningless.

105. However well designed a development is it will make matters worse during construction and, if on a greenfield site, it is hard to see how it will achieve environmental benefits. On the other hand, replacing inefficient buildings on a brownfield site could lead to benefits in the long term.

106. Paragraph 4.6.28 notes “Developers should have regard” to the “Infrastructure Schedule at Appendix C”. The only thing that developers have regard for is forcing their application through and maximising their profit – that is the business they are in.

107. Appendix C is lacking in detail. It notes, for example that there will be new town centre bus facilities at a cost of £5-10 million – such vagueness make it clear that no real costing or analysis of proposals has been prepared, and that the Infrastructure improvements proposed have not been properly considered. Having regard to fluid and uncertain proposals is effectively meaningless as a constraint or a requirement.

108. Paragraph 4.6.29 requires that applications need to address the transport implications of the proposed development. Experience with recent planning applications suggests that developers will do everything in their power to understate transport impacts and I have no faith in Guildford Borough Council and Surrey County Council taking a sufficiently robust line on this.

109. Key Evidence is missing or inadequate.

I described the inadequacies of the transport assessment earlier in this letter.

Some examples in connection with sustainability from the **Guildford Borough Transport Study 2016**: 

---

**Guildford Borough Transport Study 2016**
110. The decision on Heathrow or Gatwick has yet to be taken but airport expansion in the south-east cannot be regarded as sustainable development and, although Guildford Borough Council has no control over such external decisions, its own forced growth agenda will drive a need for that expansion.

111. Benefits are claimed from projects such as Crossrail 2 which are highly unlikely to be delivered within the plan period – if at all.

112. The Southern Rail Access to Heathrow is still in its early stages and would have significant impacts on open space beyond our Borough. For example, all options in the feasibility study would use Staines Moor SSSI and Option 4 would use Bedfont Lakes Country Park (a Local Nature Reserve and SNCI). The various options would use existing commercial, residential and highways land in varying degrees. It seems unlikely that a solution will be delivered within the Plan period and removal of highly valued open space with high biodiversity (wherever it is in South-east England) cannot be regarded as sustainable. So Guildford Borough Council appears to hope to benefit from unsustainable projects elsewhere that will destroy important areas of open space and biodiversity.

113. There is a stark contrast between the plans for the town centre which involve encouraging a reduction in traffic by reducing road space and the plans for the Strategic Road Network and parts of the Local Road Network which involve increasing capacity. While increasing capacity may reduce some areas of congestion in the short term, history suggests that traffic will rapidly grow until the improved roads are congested once again. This can hardly be regarded as sustainable. A sustainable option would be to apply a very substantial traffic infrastructure constraint on the housing number.

114. While the A3 Guildford Tunnel aspiration has some environmental advantages over widening (in particular for residents living close to the A3), the environmental burden of the construction phase is likely to be far higher and aspects such as location of ventilation stacks and their local effect (in all weather conditions) do not appear to have been considered.

115. Under “Weaknesses” the point about A roads in Guildford Town also applies to surrounding areas in the Borough and beyond. The anticipated improvements ignore existing congestion to the south and east of Guildford – presumably because Surrey County Council’s strategic highway assessment methodology has an understated baseline and only identifies the tip of the iceberg. The current Plan will see increased congestion and a resultant reduction in air quality in many areas beyond the town centre.

116. “Largely commercial bus services” is seen as a strength whereas it should be seen as a weakness with a trend to reduced subsidies and the provision of bus services, especially in rural areas, being increasingly dependent on commercial gain. It is difficult to see this changing under the current Government cuts philosophy. The point “Subject to business case including funding” under Aspirations demonstrates this point.

117. Guildford is well behind other areas in monitoring air quality let alone attempting to reduce it. The study talks about reductions in some pollutants. This may be the case for pollutants such as Sulphur Dioxide, which contributed to the visible London smogs, but it is not true of diesel vehicle emissions which have increased as a result of Government policy including its aggressive growth agenda, and population increase through immigration.

118. The study mentions an aspiration to provide 30 accessible electric vehicle charging points but this will be nowhere near enough if there is a real shift to electric vehicles.

119. It is clear from the “Strategy outcomes” that GBC would prefer not to follow other areas in pro-actively tackling air quality.

120. The timescales indicate that the main rail improvements (Including the two new stations) are unlikely to be delivered until the end of the Plan period or even later. The sites that are supposedly justified by their inclusion will generate a major increase in road traffic in the interim and it may be more difficult to achieve this aspect of modal shift in the longer term. The same can be said about the other traffic infrastructure proposals. Residential development is being scheduled before the infrastructure that it will need.
121. Monitoring – “Increase” needs to be in proportion to population growth as otherwise failure will taken as success. “An Increase in average vehicle speeds” is inconsistent with the desire to reduce the number of persons killed or seriously injured. For example, some A roads pass through residential areas where pedestrians, including schoolchildren, are trying to cross the road at peak times. It is noted that increase in vehicle speeds is only desired in the morning. Going home from work does not seem to matter!

Monitoring Indicators for the policy:

122. Ten years is far too long to wait for information on whether the approach is working or not. The target requires only an increase. This would permit an increase less than that in line with any population growth to be regarded as success. The bar has been set well within the failure range given the proposed forced growth in local population.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

**Policy I3: Sustainable transport for New Developments**

As no new road completions are planned for any development until post 2030 – nothing can be considered sustainable, as all roads are currently running above capacity.

This policy also fails to understand that the average travel to work distance is 14 miles to over 50 locations. The only sustainable method to get people to work is push bikes or motorised low capacity transport utilising free running roads.

Road obstructions and little used bus lanes, buses which fail to follow routes required by people travelling to work and journeys with higher per mile costs than a private vehicle are unsustainable. This has been proved in Liverpool where bus lanes have now been removed, reducing pollution and traffic queues.

None of the proposed housing sites are within walking distances, even in good weather, to or from places of employment, shopping or major transport hubs. A walking distance criterion is irrational for normal people’s lives.

The policy is unsound because of the existence of policy I2.

Policy I3: Sustainable transport for new developments

Policy I3 box, 3rd para: The new developments proposed and the proposed building of 13,860 houses will have a simply huge impact on the road system in Guildford Borough, both on major roads, and country roads and lanes.

Major roads, particularly the A3, which cuts through the middle of Guildford, and if widened, will bring more traffic, noise pollution (which is a serious environmental problem in Guildford) and air pollution over the Plan period.

Country lanes are narrow and winding, and cannot be widened without demolishing houses and ruining ancient landscape. Park and Ride parks will not alleviate traffic on country lanes, and will not address the problems mentioned above. It needs to be written into the Local Plan how the impacts of the enormous amount of traffic can be alleviated in such a heavily populated borough as Guildford. Without such assurances based on evidence and careful analysis, traffic must be a constraint on the housing figure for Guildford.

At the same time as when sustainable travel is being promoted, Guildford is to lose its bus station. The bus station is in the heart of the town centre, close to the High St, and serves not only Guildford but the surrounding villages. Buses radiate out from the town in all directions and the bus station is heavily used. Buses also run every 10 minutes to the back entrance of the railway station en route to the hospital or university. No new bus station/exchange is written into the Draft Local Plan.

There appears to be no overall plan to enlarge Guildford railway station and to increase access to it.

A Sustainable Corridor is proposed (para.2, bullet point 8) with land to be reserved, but without further details it is not known how it will work on the narrow parts of the road on the route proposed.

Locally to Worplesdon the following infrastructure improvements would be required:

- Pedestrian facilities to meet proposed development, including a pedestrian crossing on the A323 near Hunts Farm.
- Improved cycling facilities throughout the parish and improved junctions to have the capacity to cater for existing and future traffic levels.
- I support the upgrade of the pedestrian bridge between the railway station and the town to fully integrate the station with the town.

It is noted that Policy 13 of the Local Plan (Guildford, 2016) places a requirement on any new developments ‘to demonstrate adequate provision to mitigate the likely impacts, including cumulative impacts, of the proposal on both the safe operation and the performance of the Local Road Network and Strategic Road Network’. Hampshire County Council, as a neighbouring Highway Authority would like the to see the wider area incorporated, to include the cross- borough boundary areas such as Hampshire’s road network, within this requirement.

The County Council would expect to be consulted on any future planning applications as and when it is lodged in relation to the developments in Ash and Tongham, in order to identify the potential impact on Hampshire’s Road Network. In addition, it is requested that Hampshire County Council be involved in any discussions aimed at addressing the impacts of any such development.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
I OBJECT in the strongest possible terms to the Guildford Borough Proposed Submission Local Plan (June 2016). This Plan is unsustainable, unworkable and, in many provisions, unnecessary.

I set out below my objection to specific policies and matters within the Plan.

I have itemised my objections below but also wish to support some of my points by recalling personal experience and other observations (A-C)

1. **Increased danger to pedestrians should the A247 become busier.** I have medical conditions that require my using a walking stick when out and about. Walking along the stretch of A247 between the Burn Common Roundabout to where it meets the A246 is a fraught experience and requires considerable concentration. In many places the pavements are narrow, uneven and winding; should I stumble I could easily end up in the round. To make matters worse these walkways are not continuous so one often has to cross the busy road and back to reach one’s destination.

2. **Clandon Station is a notoriously dangerous place to exit.** Either on foot or by car, turning right from the main car park onto the A247

3. **Increased congestion on A247 during peaks periods.** While driving during rush hour it can already take 2-3 minutes simply to exit right from Lime Grove onto the A247. Roadworks and accidents cause long –lasting tailbacks as there is no easy way to divert.

I respectfully remind Guildford Borough Council that it has a duty of care to residents and this must be taken into consideration when evaluating the impact of traffic in the area

I STRONGLY OBJECT to the Guildford Borough Proposed Submission Local Plan (June 2016). Having lived in West Clandon all my life, I have seen how the local area is already becoming overcrowded. Moreover the A247 is forever becoming a more popular thoroughfare for commuters using the A3 and Woking railway station, coming from Merrow, Gomshall and Horsley, which already has a severe negative impact on those living in the village. The population growth in the surrounding area is evidently already taking its toll on the day-to-day lives of the village people, and I thoroughly believe that to increase it by building almost 14,000 houses will only make matters worse. As a result I consider this Plan unsustainable, unworkable and, in many provisions, unnecessary. Besides congestion I have many other concerns about it, and herewith set out my objections to specific policies and matters. Please email me an acknowledgement that you have received this correspondence and are dealing with it accordingly.

Transport

There is no real clarity on transport and road infrastructure. The Plan hints at road improvements but in an ill-defined way. The traffic issues that have dogged Guildford for years are not resolved – there is no commitment to new town bridges, no indication of a central bus exchange, no commitment to consider the viability of a tunnel. Some things that are proposed are unsustainable – the Sustainable Movement Corridors for example. This has all the hall marks of a brainstorming session with Google maps. One site visit would have been enough to realise that the A3100 is not wide enough and has too many pinch points to accommodate four traffic lanes.

The Gosden Hill development is another example of lack of intellectual vigour. Access to it is via a new on-then-off A3 slip road, with the current slip road becoming two way. With all that is proposed for this development, including a 1000 vehicle Park and Ride, and other developments north of Burpham such as Garlick’s Arch and Wisley, thousands more vehicles will be on the roads and many of them will need to access the north bound carriageway of the A3. How do they do this? Drive through Burpham to the Clay Lane north bound slip road. It may look fine and dandy on Google but the reality is somewhat different. Our roads are already congested to the point of grid lock. I live by the present south bound slip and see the traffic come to a halt most days. The SHAR does note that there will be an increase in traffic through Burpham, putting pressure on the A3100/B2234 roundabout. May I respectfully draw your attention to the fact that there is already a great deal of pressure on that roundabout which alternates between a highways version of bumper cars and complete gridlock.

To the new Burnt Common interchange to A3 for 2000 proposed Wisley houses, 2000 houses at Gosden Hill, and 1850 houses at Blackwell farm, much of the traffic would go through Send, there would be major traffic problems on every weekday, life in Send would made much worse.

I cannot understand why Send has been singled out for this treatment, our family for one would certainly want to move out of this area to another Greenbelt village elsewhere, where we would hopefully receive better treatment from our authorities. We will be seeking compensation.

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3

Do you consider this section of the document; complies with the Duty to Cooperate? (Yes), is Sound? (Yes), is Legally Compliant? (Yes)

The Strategic Highway Assessment report (2016) sets out that in respect of the development proposed in the Local Plan, without any mitigation, the greatest potential impacts are seen on the network in the vicinity of Ash / Ash Vale and travelling north into the borough of Surrey Heath. Some of the trips in Ash / Ash Vale will join the A331 Blackwater Valley Road to travel further afield, but it is likely that a reasonable proportion will travel into the neighbouring boroughs of Rushmoor and Surrey Heath. Some of these roads already experience congestion, despite the model suggesting that existing traffic flows are relatively low.

Policy I1 (Infrastructure and delivery) of the draft Plan requires the infrastructure needed to support development to be provided and available when first needed to serve the occupants and users of the development. Infrastructure includes parks, green spaces and play areas, roads and other transport, schools, flood defences, sporting and recreational facilities, and medical facilities. Policy I3 deals with sustainable transport for new developments, and seeks to ensure that new developments will contribute to the delivery of an integrated, accessible and safe transport system.

Specifically of interest to the strategic allocation around Ash and Tongham, further information on key infrastructure projects is provided at Appendix C of the draft Plan, in the Infrastructure Schedule. Infrastructure projects LRN9 through to LRN14 relate to improvements to traffic management and environmental improvements in and around Ash, Ash Vale and Tongham, to be funded through a combination of developer contributions and Enterprise M3 Local Economic Partnership Local Growth Fund awards. For example, the schedule identifies LRN14, which is a junction improvement scheme at the connection of the A331 Blackwater Valley Route with the A31 Hog’s Back (Tongham). It is important to note that this mitigation is required to enable the development proposed in the Local Plan to proceed.

In this context, Rushmoor Borough Council is supportive of the planning policy framework and detailed infrastructure projects as they relate to the road network, subject to certainty regarding the delivery of these improvements as part of the overall package of implementation of development in and around Ash, Ash Vale and Tongham.

As well as Policy I3, Sustainable transport for new developments, the draft Local Plan is also committed to supporting the Department for Transport’s Road Investment Strategy (Policy I2), focusing on improvements to the strategic road network (A3 and M25). The draft Local Plan is supported by the Guildford Borough Transport Strategy 2016, which sets out the strategic and local transport infrastructure required to support the development proposed in the Plan.

Rushmoor Borough Council is supportive of the suite of transport policies and proposals identified through the policy framework in the draft Plan and the Guildford Borough Transport Strategy 2016. It is likely that the benefits of the implementation of these proposals will be felt not only within Guildford Borough, but also more widely, given the sensitivity of the transport network to individual incidents. For example, Policy A26, the mixed use allocation for Blackwell Farm, off the A31, includes a new link road from the A31, through to Surrey Research Park and the Royal Surrey County Hospital. This will be immensely beneficial in terms of relieving congestion on the A31 into Guildford, as
this will assist with removing the need for traffic travelling from the west of Guildford to drive in and back out using either the A3 trunk road or via the town when seeking to access the Research Park and the Hospital.

However, in the absence of the implementation of the full suite of transport policies and proposals to support the quantum of development set out in the Local Plan, this would potentially result in negative cross boundary transport impacts, the residual cumulative impacts of which would be severe. In this context, the Council looks forward to continuing to work with Guildford Borough Council on potential cross boundary strategic transport issues, to ensure that those arising from development proposed in the Guildford Local Plan are appropriately mitigated.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
1. The assertion that the development will result in a meaningful shift to cycling and walking. The development is too isolated, and even within the development itself too spread out to anticipate a reduced reliance on private cars.

2. The increased volume of car traffic. A proposed development of 2,068 homes would result in an estimated 4,000 additional cars on the roads.

3. The congestion this traffic will cause on the narrow rural roads in Ockham and the surrounding areas, exacerbated by wide vehicles including increased bus and HGV movements.

4. The danger this traffic will be to local cyclists and pedestrians, due to the absence of any cycling paths and the lack of pedestrian footpaths (and the space to provide them).

5. The increase in the already severe congestion on the Strategic Road Network of the A3 and M25. A further planning application at RHS Wisley (with a significant increase in visitor traffic) and a proposed 600 pupil secondary school on the site would add additional congestion at the M25/A3 junction as well as local roads. No development can proceed without significant infrastructure enhancements to the A3 and M25. Partial improvement works on the A3 south of the site are not due to start until 2019 at the earliest.

6. The lack of suitable public transport. The local rail stations of Effingham and Horsley cannot cope with the proposed increase in passenger traffic and car parking is already at capacity.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Similarly societal trends are also showing an increase in electric cars and smart/electric bikes, development of driverless vehicles and the need for mass transit systems.

Existing train services from Guildford are inadequate. Commuter trains are overcrowded and, at peak hours, unreasonably so. I would welcome the opportunity for a halt at Park Barn, although I have reservations about Merrow. I will continue to lobby the train operators and Network Rail as I have done for many years.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Policy ID3 – An imaginative approach to planning for car ownership and use is essential, particularly in town centre locations, and the changes to this policy and supporting text appear to go some way to achieving this.

I would like to see reference to cycling provision (particularly safe storage facilities) strengthened even further. Building car-free development will continue to have an element of aspiration until public and alternative transport is of excellent quality.
17. I object to the impact of further congestion on local village roads and lanes.

18. I object to the impact of excessive development on the A3 and M25 on air quality. The air quality in many parts of the borough is greater than EU permitted levels and will damage the health of residents and future residents.

19. I object to the fact that 70% of the proposed 13,860 houses are designated on Green Belt land along the A3. This will result in gridlock on the A3, the A247 and the surrounding roads which are already at capacity.

The change from 'will expect' to 'will be required' in point (2) is supported. The similar revised wording in point (7) is also supported.

The lack of specificity about the Sustainable Movement Corridor makes it difficult to make an informed comments on point (3). It is very likely that the claims made for the SMC exceed what can be delivered, and the plan should be based on a realistic forecast and a sound business case.

Point (11) is noted but it is not clear that any of the town centre sites included in the plan would involve additional off-street parking.

In para 4.6.28, the aim of achieving 'a modest modal shift' is noted, and also that the road schemes in the plan will 'mitigate the principal adverse material impacts of this growth in traffic volumes'. It is realistic to recognise that there will be congestion on the road network in peak periods. However, the problem is that better evidence is required of what conditions will be like both half way through the plan period and in 2034. The risk of them being unsatisfactory (perhaps unacceptable) is significant.

Para 4.6.24 states the aim and means of implementing the SMC. The sentence beginning 'The Sustainable Movement Corridor will be implemented...' should be revised at the end to read '...provision for the corridor, subject to a sound business case'.

<td>Policy I3 - Sustainable Transport for New Developments</td>
<td>I strongly object to any development being built that does not have existing sustainable transport. Blackwell Farm, Wisley Airfield, Gosden Hill and Garlicks Arch do not have such facilities. The former Wisley Airfield is absolutely isolated and can only be accessed by car. Even if a bus service is provided, few will carry shopping, etc., by bus. Walking to Ripley or East Horsley is unrealistic as there are no footpaths, cycle paths or street lighting. (Blackwell Farm and Gosden Hill are in the same situation). New developments should take place alongside existing sustainable transport facilities. The Merrow Golf Club, recently proposed for housing, is adjacent to a Park and Ride and new rail links so that is an example of sustainable transport.</td>

I object that housing being proposed on the Green Belt will increase traffic bringing increased danger and pollution and slower journey times on our already overcrowded village roads.

[Comments on 2016 Plan:] Suggest deletion of the final bullet point as this should be included in the CIL 123 Infrastructure list.

Bullet point 7 should read Travel Plan (in the singular) – see page 149.

[Comments on 2017 Plan:] This policy still refers to the P&R site at Gosden Hill. This shows inconsistency between policies.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

[Comments on 2016 Plan:] Suggest deletion of the final bullet point as this should be included in the CIL 123 Infrastructure list.

Bullet point 7 should read Travel Plan (in the singular) – see page 149.

**Attached documents:**
In principle this policy is supported however we would suggest the following additions:

Point 4 In terms of vehicular parking for new developments: (a) in Controlled Parking Zones, or component areas thereof, in which the demand for on-street parking by residents of existing dwellings and, where allowed, ‘pay and display’ visitor parking exceeds the supply of designated on-street parking spaces, planning permission for new residential development resulting in a net increase in dwellings will be subject to a planning obligation to require that future occupants will not be eligible for on-street residents parking permits, with the exception of disabled people who will be eligible (to be secured through the s106 agreement), and (b) for residential new development in all other areas, and for all nonresidential new development in the borough, off-street vehicle parking should be provided such that the level of any resulting parking on the public highway does not adversely impact road safety or the movement of other road users.

Point 8 Planning applications for new development will have regard to the Infrastructure Schedule at Appendix C which sets out the key infrastructure requirements on which the delivery of the Plan depends, or any updates in the latest Guildford borough Infrastructure Delivery Plan and wherever possible, there is early delivery of such infrastructure to provide early benefit to the Borough.

Point 9 Provision of suitable access and transport infrastructure and services will be achieved through direct improvements and/or schemes funded through Section 278 agreements, Section 106 contributions and/or the Community Infrastructure Levy (CIL), to which will address impacts in the wider area including across the borough boundary.

4.6.24 The Sustainable Movement Corridor will provide a priority pathway through the urban area of Guildford for buses, pedestrians and cyclists, serving the new communities at Blackwell Farm, SARP and Gosden Hill Farm including the new Park and Ride site, the new Guildford West (Park Barn) and Guildford East (Merrow) rail stations, the Onslow Park and Ride, both of the University of Surrey’s campuses, the town centre and Guildford rail station. The aim is for journeys to be rapid and reliable by bus and safe and direct on foot and by bike whilst not having an adverse impact on the existing highway network.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
I support the concept and aim but OBJECT on the grounds that the practicalities of sustainable transport have not been properly considered, it is not sustainable to build dormitory towns and call them sustainable. Not everyone can cycle all the time.

How can large developments outside the town centre maximise sustainable travel? This is a matter for the planning process - the further from the town centre, the less sustainable the development will be.

Reliance on cycling discriminates against vulnerable members of the community. How can the disabled, those with small children, or the very old, or the infirm, or those who are ill, cycle outside the town in order to commute, or even inside the town? Only some people cycle – and Guildford has some steep hills, especially going out of town. Park and rides are slow – how can those with a 3 hour commute add 1 hour to their journey from using park and rides?

The only sustainable mechanism for new developments is to have them in the town centre close to the railway and the main shopping links where a hoppa bus can provide satisfactory links for those who cannot walk or cycle.

While we welcome the intention to encourage rail travel by adding two new stations there could be unintended consequences.

Detailed response:

Once again we see the word “expect” used which means the policy has no teeth. The word “expect” must be replaced with the word “require” so that this policy is enforceable.

There are a number of problems with this policy.

Congestion is a widely recognised factor in the local area of Guildford, and this is a major factor in the public response to the proposed housing numbers, which represents more than a 25% increase in housing numbers in a borough that is already profoundly congested. [Source: SHMA p61: itself sourced from ONS for 2013.] Residents recognise that to increase the population by this level within the existing transport provision is not feasible, and this informs much of the public response to the proposed level of housing accommodation.

It is not clear that this recognition, which is widespread through the borough, is shared by those who have drafted the Local Plan.

Guildford is a commuter town, which (compared to London) offers better quality of life and lower house prices, so it will continue to be a commuter town for the foreseeable future. As a result, access to the stations for commuting is of significance. It is not realistic to assume that traffic to stations for commuters can be replaced either by bus services (slow, intermittent, expensive, and in many cases absent completely) or by cycle. There is a capacity issue of car parking at the station, which effectively creates an absolute constraint on the feasibility of commuting from Guildford.

Cycling is attractive, and, for the urban young, especially students, it is both practical and cheap, and can be quick. However, as noted, those en route to work cannot be assumed to be able to cycle in working clothes. Elderly members of the community, those transporting small children, and the disabled cannot participate in cycling except to a limited extent. Effectively the "average" person deemed to be capable of cycling to substitute for car trips is an able-bodied adult not travelling to somewhere where smart clothing is required, not needing to arrive clean (or with showering facilities on arrival, not provided by all employers); this is not sufficiently widespread in terms of the local demographic for travellers that it should be allowed to determine policy – and of course, not needing to transport, for example, supermarket shopping after the trip. What about the disabled? the elderly? those looking after more than one child? Are they to be housebound? This is not a reasonable strategy. Before transport and buildings are determined on the basis of such a policy, it is also imperative that safe cycle routes are implemented through the borough. Cycling in winter on rural roads is inherently more dangerous. Upgrading these roads would not be feasible in terms of cost nor desirable in terms of local character.
Cycle lanes which disappear into normal traffic lanes, which travel over potholes and which allow cyclists to be threatened by HGVs are not conducive to wider cycle usage, nor should wider cycle usage be encouraged until it can be demonstrated that it is safe, which currently, locally, it is not. The A25 cycle corridor scheme (Part of LRN1) will exchange the risk between cyclists and vehicles sharing space for the risk between cyclists and pedestrians sharing space. Much of the A25 has no pedestrian area anyway outside the urban space. Many cyclists travel at high speed and they will be put into conflict with pedestrians including mothers with very young children and schoolchildren many of whom need to cross the road and hence cross the cycleway. This is likely to lead to accidents and pedestrians are being disadvantaged.

Road capacity reduces as average speeds come down due to congestion. Where proper cycle lanes or off-road lanes are not provided then it is inevitable that safe driving will lead to reduced average motor vehicle speeds and gap development in the traffic stream. Both these effects act to reduce the capacity of our local road network. This loss of capacity has not been recognised in the Transport Strategy.

The concept of the park and ride with access into the town limited for those who live outside the town, is similarly flawed. Park and Ride is expensive, cumbersome and slow. It should be noted that in Oxford it has had a disastrous impact on small local retailers which is a retail segment that it is important to retain and support.

Use of park and rides increases the use of the strategic road network by local users, which is not what it is designed to do.

This proposal is combined with aggressive exclusion from the town of those who are living in peripheral communities, which will increasingly resemble housing estates. This is a strategy for sink estates through Surrey instead of the Green Belt - this is not a strategy for growth. Head offices will choose to go elsewhere, because highly skilled staff and management in the cutting edge industries that GBC wants to encourage, will not choose to live in a dense housing estate.

The existing extent of traffic congestion has not been fully recognised. As a consequence the impact of the various development scenarios has been understated and the infrastructure costs are an understatement.

The transport studies are incomplete and unpublished and this should have led to deferral of consideration of the Local Plan consultation process until it was possible to revise the plan post publication of the studies. This matter was raised by a number of councillors at the Full Council meeting on 24 May 2016 when the consultation was approved, but a motion to defer was overturned by the majority party.

Cross-subsidy in terms of infrastructure is envisaged. The infrastructure deficit needs to be resolved before there are large numbers of new residents exacerbating the current congestion. The funding of the new developments through CIL and S 106 is expected to contribute to the transport impacts across the borough, and there is negligible concern for the transport problems created within those new developments or in areas adjacent to them. This is not acceptable to existing residents and is likely to cause some problems with the future residents too, who may arguably feel aggrieved that the road funding associated with their developments is being subverted to other areas. While this may be permissible under the revised CIL regulations it is questionable whether it is morally acceptable to grant planning permission to build on the Green Belt in order to cross subsidise the building of roads or other infrastructure in the town centre or elsewhere across the borough or outside it.

Insetting of villages and the proposed relaxation of planning restrictions anywhere outside settlements (Green Belt or not), implied in P2, will lead to substantial infilling that will not require traffic assessment but will contribute a highly significant amount of additional car journeys overall - by a more insidious process than the large developments proposed.

Costs for rail or bus travel could be substantially reduced and would incentivise their use; but these are outside the remit of GBC and so cannot be encouraged by them.

It remains to be seen whether the proposed new stations will be delivered as they are not entirely within the council’s control. While we welcome the intention to encourage rail travel by adding two new stations there could be unintended
consequences as the roads local to both sites are heavily congested. If parking facilities are inadequate this could lead to a need for onerous parking restrictions on roads nearby – possibly affecting small businesses adversely.

If parking facilities are adequate this will encourage more traffic onto local roads and commuters tend to be hurrying to catch a train or anxious to return home after a day at work. That does not bode well for the safety of pedestrians needing to cross those roads. House prices near to stations tend to attract higher prices and this will increase the profit motive to developers wanting to build on greenfield sites nearby. It will also mean that so-called affordable housing will be even less affordable at these sites. It may also lead, over time, to an undesirable loss of social-rented housing in the vicinity. A minor issue is that stopping at the additional stations will increase the train journey times to and from Guildford town centre on the lines affected.

**Detail in Policy wording – flawed drafting:**

The policy begins and ends with the weak and totally ineffective word, in planning terms, “expect”.

Contributing through CIL will not necessarily address needs local to the development concerned, and created by it, but may involve solving existing problems elsewhere in the Borough.

Bullets 4 & 5 – improvements to park and ride facilities imply increased car usage from outside the town and the parking provision acknowledges that most journeys will be by car.

Bullet 6 - Has the Vehicle parking Supplementary Planning Document been published? It is not listed as key evidence but the policy refers. How can a policy have been determined with reference to a non-existent part of the evidence base?

Bullets 7, 8, 9 & 10 are weak & aspirational with let-out words such as “facilitate the use of”, “wherever possible”, “contribute” and “where appropriate” (and poorly bulleted!). How will the use of ultra low emission vehicles be facilitated? This is such a vague aspiration as to be meaningless.

The policy only “expects” new developments to contribute, demonstrate adequate provision, etc – it should enforce them. A transport statement AND assessment ought to be a fixed requirement – not a matter for negotiation – while the policy implies that this might be waived even for sites that generate significant amounts of movement.

The construction traffic, noise and pollution generated by meeting the proposed housing number will be excessive. It will have a highly significant impact on the amenity and health of those residents living close to the development sites and those who live on the routes that will be taken by the construction traffic.

The last paragraph says nothing new in planning terms but does mean that the Local Plan has not fully and properly considered the traffic impacts of the proposed sites. We have experience of how misleading the TAs produced by developers can be – using averaging techniques and understated baseline figures, days when schools are not operating and many other devices to pull the wool over the eyes of planning authorities. This aspect is a denial of responsibility by GBC. The result is that Green Belt and countryside will be released for development when fuller consideration of traffic impacts at the Local Plan stage should have prevented that. If the planning authority is taken in by developers’ TAs then wholly unsuitable developments will be permitted.

**Introduction:**

The spatial development strategy (paragraph 4.6.20 and Policy S2) does not address the development needs of the borough ensuring distances are practical; this is certainly not the case with all the development sites. For example, the Wisley airfield site will generate a massive increase in vehicle journeys; developments in West Horsley will lead to greater car use, as will the proposed developments at Garlick’s Arch and in Send. The obvious site choice for sustainable development would be on brownfield sites in the town but the Local Plan proposes allocating those sites to the declining retail industry instead.

Paragraph 4.6.21 suggests that sustainable transport is promoted. Far from providing sustainable transport this Plan will generate a massive increase in motor vehicle journeys. The Plan cannot force residents to ride bicycles or walk everywhere.
Paragraph 4.6.22 seeks to set out a reasoned justification and alleges that development should offer real travel choice by sustainable transport modes. There is little sign that this is being taken seriously enough now.

Paragraph 4.6.23 proposed to bring forward a Vehicle Parking Supplementary Planning Document. It is not clear what to make of this. Failure to provide off-street vehicle parking will not prevent residents owning cars and finding somewhere else to park but it may make life difficult for key workers to commute to their place of work. How can a consultation take place relying on non-existent background documents which are key parts of the Evidence Base? How can anyone comment on non-existent documents, and even if brought forward part-way through the consultation, any comments will be prejudiced by the absence of this informing the start of the consultation.

Paragraph 4.6.24 refers to the Sustainable Movement Corridor. Bus services are aspirational but economic reality may mean that they fail to persist. There is not enough detail published on how the SMC will be delivered – suggesting that it is aspirational rather than fully thought through.

Paragraph 4.6.26 refers to reviewing existing transport facilities and likely transport generation as part of assessing the amount of incremental travel demand. That consideration should have taken place in a robust and detailed manner on a site-by-site basis before the sites were allocated in the Local Plan. It is not sufficient to leave that until the planning application stage as intended by GBC and SCC, given that all sites will be subject to “permission in principle” under the Housing and Planning Act 2016 and so will not be capable of subsequent rejection on these grounds.

Paragraph 4.6.27 notes that Development must mitigate its transport impacts. The measures described rely entirely on people taking them up and not dumping their travel information packs in the nearest bin. It is clear that GBC, in response to concerns about elderly and disabled people failing to be coerced into riding bicycles are now suggesting tricycles to overcome this obstacle to their aspirations. They should be aware that while tricycles may help with balance issues they are heavier and harder to ride uphill. While the policy (unusually) notes that mitigation must be provided, in fact this is then diluted to suggest that facilities for electric car charging points and encouragement to car-share can be sufficient; all are optional and therefore meaningless.

However well designed a development is it will make matters worse during construction and if on a greenfield site, it is hard to see how it will achieve environmental benefits. On the other hand, replacing inefficient buildings on a brownfield site could lead to benefits in the long term.

Paragraph 4.6.28 notes “Developers should have regard” to the “Infrastructure Schedule at Appendix C”. The only thing that developers have regard for is forcing their application through and maximising their profit – that is the business they are in. Appendix C is lacking in detail. It notes, for example that there will be new town centre bus facilities at a cost of £5-10 million – such vagueness make it clear that no real costing or analysis of proposals has been prepared, and that the Infrastructure improvements proposed have not been properly considered. Having regard to fluid and uncertain proposals is effectively meaningless as a constraint or a requirement.

Paragraph 4.6.29 requires that applications need to address the transport implications of the proposed development. Experience with recent planning applications suggests that developers will do everything in their power to understate transport impacts and we have no faith in GBC and SCC taking a sufficiently robust line on this.

Key Evidence is missing or inadequate.

The Strategic Transport Assessment (SCC 2016) is listed as “forthcoming”, but this plan has been produced in the absence of any strategic transport review.

There are further inadequacies in the Evidence Base, highlighted in the following annexes, which include examples of deficiencies, ambiguities and inadequacies in the transport and infrastructure evidence. This is not a comprehensive list of deficiencies, but serves as an illustration of the poor evidence on which decisions have been based.

Annexe 1
Comments on Guildford Borough Transport Study 2016

Page 2 – “address the historic infrastructure deficit” - developers are not required to do this?

Page 2 – It is wrong to claim that the cycle infrastructure along the A25 is good – and many cyclists are not careful, so putting them in contention with pedestrians is not a good idea.

Page 5 – The decision on Heathrow or Gatwick has yet to be taken but airport expansion in the south-east cannot be regarded as sustainable development and, although GBC has no control over such external decisions, its own growth agenda will drive a need for that expansion.

Page 6 An additional weakness is alternative “road closure diversion” routes for the SRN on the LRN

Page 6 Are the “Committed Improvements” actually committed and guaranteed to be delivered?

Page 7 The rail strategy does not provide for Wisley (residents would drive to stations)

Page 7 How long will it take to deliver Crossrail 2? “We hope that Crossrail 2 could be operational by 2030, but we are in the very early stages of planning and no decision to build it has been made.”

Page 7 Guildford platform capacity still many years away if ever.

Page 7 The rail strategy anticipates many improvements that have not been secured and may have unintended consequences if they proceed (see above)

Page 7 The Southern Rail Access to Heathrow ##[see the feasibility study dated December 2015 – although other proposals may be put forward (e.g. by Hounslow)]## is still in its early stages and would have significant impacts on open space beyond our Borough. For example, all options in the feasibility study would use Staines Moor SSSI and Option 4 would use Bedfont Lakes Country Park (a Local Nature Reserve and SNCI).

The various options would use existing commercial, residential and highways land in varying degrees. It seems unlikely that a solution will be delivered within the Plan period and removal of highly valued open space with high biodiversity (wherever it is in South-east England) cannot be regarded as sustainable.

Page 10 and 13 There is a stark contrast between the plans for the town centre which involve encouraging a reduction in traffic by reducing roadspace and the plans for the SRN and parts of the LRN which involve increasing capacity. While increasing capacity may reduce some areas of congestion in the short term, history suggests that traffic will rapidly grow until the improved roads are congested once again. This can hardly be regarded as sustainable. A sustainable option would be to apply a very substantial traffic infrastructure constraint on the housing number.

Page 10 While the A3 Guildford Tunnel aspiration has some environmental advantages over widening (in particular for residents living close to the A3), the environmental burden of the construction phase will be far higher and aspects such as location of ventilation stacks and their local effect (in all weather conditions) do not appear to have been considered.

Page 14 Under Weaknesses the point about A roads in Guildford Town also applies to surrounding areas in the Borough and beyond. The anticipated improvements ignore existing congestion to the south and east of Guildford – presumably because SCC’s transport assessment methodology only identifies the tip of the iceberg. The current Plan will see increased congestion and a resultant reduction in air quality in many areas beyond the town centre.

Page 16 “Largely commercial bus services” is seen as a strength whereas it should be seen as a weakness with a trend to reduced subsidies and the provision of bus services, especially in rural areas, being increasingly dependent on commercial gain. It is difficult to see this changing under the current Government cuts philosophy. The point “Subject to business case including funding” under Aspirations demonstrates this point.

Page 18 We welcome the aspiration to “Expand the public realm through significantly extended pedestrian-priority areas”
Guildford is well behind other areas in monitoring air quality let alone attempting to reduce it.

The introduction talks about reductions in some pollutants. This may be the case for pollutants such as Sulphur Dioxide, which contributed to the visible London smogs, but it is not true of diesel vehicle emissions which have increased as a result of Government policy including its aggressive growth agenda and population increase through immigration.

30 accessible electric vehicle charging points are only an aspiration and will be nowhere near enough if there is a real shift to electric vehicles.

It is clear from the “Strategy outcomes” that GBC would prefer not to follow other areas in pro-actively tackling air quality.

Page 22/23/24 The timescales indicate that the main rail improvements (Including the two new stations) are unlikely to be delivered until the end of the Plan period or even later. The sites that are supposedly justified by their inclusion will generate a major increase in road traffic in the interim and it may be more difficult to achieve this aspect of modal shift in the longer term. The same can be said about the other traffic infrastructure proposals. Residential development is being scheduled before the infrastructure that it will need.

Page 24 Monitoring – “Increase” needs to be in proportion to population growth as otherwise failure will taken as success. “An Increase in average vehicle speeds” is inconsistent with the desire to reduce the number of persons killed or seriously injured. For example, some A roads pass through residential areas where pedestrians, including schoolchildren, are trying to cross the road at peak times. It is noted that increase in vehicle speeds is only desired in the morning. Going home from work does not seem to matter!

Annexe 2

GTAMS

NPPF and NPPG The Plan ignores the points concerning Green Belt and protecting the environment. GBC have tried to get round this by spinning their messages and using misleading statistics including a major understatement of the area of Green Belt to be removed.

Planning Update (March 2015) – The point in this update concerning Green Belt has been ignored

Monitoring Indicators:

Ten years is far too long to wait for information on whether the approach is working or not. The target requires only an increase. This would permit an increase less than that in line with any population growth to be regarded as success. The bar has been set well within the failure range.

Policy 14: Green and blue infrastructure

Response

Summary

Response type: OBJECT

The Policy shows concern for conserving and enhancing biodiversity, which is welcome. We also note and welcome the intention to extend the principle beyond Biodiversity Opportunity Areas. However the current plan to build on large areas of countryside and to inset villages will have the opposite effect. The Policy appears therefore to be a box-ticking exercise with no real teeth to it.
There is no mention of the value of wildlife gardening to biodiversity or the important role that larger gardens play in a village setting.

There is no mention of the impact of the plan on food production, or monitoring the loss of agricultural land.

“The natural world, its biodiversity and its constituent ecosystems are critically important to our wellbeing and economic prosperity, but are consistently undervalued in conventional economic analyses and decision-making” (Biodiversity 2020 page 11)

“As a public authority in England you have a duty to have regard to conserving biodiversity as part of your policy or decision making.” (Government Planning Guidance)

Part of the problem is that “Biodiversity benefits are unpriced” and so not valued by those who look only at the more obvious and simplistic economic benefits.

We have some concerns that “enhancing” the River Wey in the town centre will avoid using the available brownfield land around Walnut Tree Close and Slyfield for urban regeneration and sustainable housing that could otherwise be used.

Why should the Walnut Tree Close/Woodbridge Meadows industrial area not be regenerated from bus garages, urban car parks and empty factories to offer sustainable, well designed, urban homes which are medium height, and can meet almost all of Guildford’s real housing needs?

**Detailed response:**

The policy on Green and Blue infrastructure is broadly supported with an important and major caveat; and if disregarded this should count as an objection.

However, it is noted that the largest areas of industrial brownfield land within the borough are near to or adjacent to the River Wey, particularly in the Walnut Tree Close area and in the Slyfield industrial area.

These areas could support much more housing than the relatively small numbers indicated in the policy on the town centre, under a town centre regeneration scheme. This would have huge benefits for the community as a whole since relatively run down areas would be subject to regeneration, the river banks would be cleaner and more attractive.

It is vitally important for the town as a whole that the run-down Walnut Tree Close area is used for well-designed housing, as indicated by the Mastervision document first draft compiled by Allies and Morrison. John Rigg of Savills and Guildford Vision Group indicated to the Scrutiny Committee of GBC that initial commercial projections indicated that the Walnut Tree Close area alone could provide 4000 homes. This is significantly in excess of the current GBC proposals. Both Allies & Morrison and GVG initially indicated that they believed that this site could be available for regeneration within the critical 5 year window required for the local plan. It is therefore essential that nothing in this policy should jeopardise anything that could lead to the Walnut Tree Close area being a regeneration zone.

As has been noted elsewhere, for reasons that are not altogether clear but appear to be connected to central government direction and a desire to maximize the Community Infrastructure Levy, there is an aggressive desire to push development on to the Green Belt at all costs, ignoring or eliminating for other reasons sites which could be used in the town for residential purposes. This has informed recent planning decisions (both the Aldi site and the Waitrose site were originally zoned for residential purposes and were eminently suitable for this) and this bias seems to be informing the Local Plan.

As a result, it is important that the desire for Green and Blue infrastructure does not become an excuse for preventing regeneration of Walnut Tree Close. It is noted that the Council has stated that “The Council is keen to protect the watercourses from inappropriate development that would spoil their character”. The bus station adjacent to the River Wey, and the empty car parks associated with empty factory space, are hardly attractive development – well designed mid height (3-4 storey) apartment blocks would be a great improvement to the river corridor, offer major scope for
sustainable regeneration, and would prevent the need for any incursion into the Green Belt to meet reasonable housing needs.

That regeneration zone would be highly sustainable, because it would be within 1 mile of the railway station, adjacent to the A3, and would eliminate an area of huge congestion in the town because if the industrial sites were replaced by housing then the residents would commute by train or walk to work rather than having to drive in to an industrial estate.

It certainly does not seem appropriate to create substantial new parkland on current hard standing. The protections to which this policy refers largely describe existing open space, which is of great importance. But to determine not to utilize brownfield land for residential use at an appropriate density in order to force building on to the Green Belt would seem to be in contradiction of the principles of use of the Green Belt applied in the Gallaher Homes v Solihull court of appeal case, where the hierarchy of use is clearly defined, with urban brownfield required to be used as a first option.

So there is some considerable support for the residential element of this policy, with the note that this should be explicitly amended to permit construction of a regeneration zone on the brownfield areas surrounding the river in the middle of the town, and that this should not be held up pending yet more transport studies (Guildford’s track record on brownfield utilisation is poor), but should be implemented with immediate effect.

It is not clear what form the “parkland” along the River Wey will take but the images available in the Town Centre MasterPlan suggest mown grass similar to the area around Millmead. This misses an opportunity to enhance biodiversity and enable town centre residents to engage with wildlife. Engagement with wildlife should mean much more than throwing bread at ducks and chasing pigeons. To achieve a wildlife corridor through Guildford, that can also benefit the health and well-being of residents living close by, the green space retained beside the river should be managed with the needs of wildlife in mind.

**Responses to policy notes:**

4.6.33 Villages are generally permeable to wildlife. The lower density of housing and presence of gardens (especially larger gardens) provides a corridor for movement across the residential area. Insetting of villages and the relaxation of planning restrictions in the Green Belt implied by Policy P2 will lead to infilling, “garden grabbing” and consequent loss of biodiversity. It will replace connections and corridors between habitats with barriers and lead to further fragmentation of our natural infrastructure.

4.6.34 In the past Guildford Borough Council recognised the role that wildlife gardening and management of parks and open spaces for wildlife could play in enhancing biodiversity. There seems to have been a shift away from this. These aspects should be recognised in the Plan as well as the importance of BOAs and although 4.6.35 goes part way towards this we have yet to see the GISPD.

4.6.36 This is long overdue and should include the way that our lanes are managed. The current approach is unsympathetic, sometimes damaging tree roots and scarce native plants. It seems to be oriented towards encouraging faster traffic rather than recognising the traffic-calming effects of natural vegetation (See the original Quiet Lanes Initiative) – management of open spaces and lanes

We await the Countryside Vision with interest.

4.6.37 It appears that Policy I5 (whatever it was) has been omitted. (We think this means P5 – more evidence of slapdash work)

4.6.38 I agree with this statement but public access is frequently damaging to biodiversity – the more obvious examples being dogs out of control in the vicinity of ground-nesting birds and trampling of grassland habitats. Public open space must be protected for the reasons given but wildlife needs undisturbed (or at least less disturbed) space too if it is to thrive.

**Responses to definitions:**
This section starts with a definition that is not a proper definition and is followed by statements that are not definitions at all, apart from the last – suggesting that this part of the document has not been thought through or checked.

4.6.42 “Biodiversity creation and/or enhancement” is not a definition – it requires definition.

Do you mean that you will create new species or encourage them to evolve? Or do you mean that you will increase the number of species living in the Borough, or the population of each species, or both?

The points made are aspirational that have no enforcement to back them.

We support the use of green roofs and walls.

However, building on the countryside and increasing the population by such a large amount will not help vulnerable species. It will put added pressure on remaining habitats and increase light and air pollution, degrading the ability of the borough to support wildlife.

4.6.43 Arrangements with developers have no guarantee of success or longevity. They involve partial mitigation and overall loss of the original biodiversity interest of a site.

4.6.44 This appears to be saying that you will deliberately put playing fields, sports facilities and other leisure activities in BOAs – but these are land uses that reduce biodiversity!

4.6.45 Our understanding of SANG is that it is intended to reduce pressure on Special Protection Areas by providing an alternative area for people to walk their dogs – and hope that they do not prefer to use the SPA. In other words they are intended to attract the type of user that is damaging to vulnerable species such as ground-nesting birds. In the desperation to find SANG land Guildford Borough Council are making use of existing open space that will not attract people away from the SPA and you are ignoring the impact on existing wildlife. For example – GBC decided to include the towpath in the Parsonage Meadows SANG as a way of also facilitating a cycle route. Encouraging cyclists and dog-walkers to use the same narrow path will not encourage dog-walkers to use it rather than the SPA. At Effingham Common GBC plan to designate an important area for wildlife and ground-nesting Skylarks. GBC is riding roughshod over the opinions of the Commoners and local residents. GBC used to put up signage warning dog-walkers not to disturb the Skylarks during the nesting season – but it appears that these signs are no longer there. Protests to Cllr Richard Billington may result in returning signs but these are not yet in place.

In allocating sites as SANG, GBC has ignored the requirement to consider existing biodiversity and clearly have little or any knowledge or understanding of the issue. The issues relating to Russell Place Farm have been pointed out by a qualified Biologist (see article in The Guildford Dragon – Chris Venables), Many invertebrates are dependent on the dung of grazing animals and this aspect of our countryside is being steadily driven out of our Borough.

4.6.46 We welcome this acknowledgement of the damaging effects of the proposed building developments. This also has relevance to the manner in which the green spaces next to the River Wey are managed.

4.6.47 We welcome the proposals but are concerned that these may be no more than good intentions. How will GBC ensure that they are carried out fully – and paid for by the developer?

**Reasoned Justification:**

4.6.50 As the emerging strategy for Surrey and the GISPD are not yet available the plan should not be proposing sites that will jeopardise them. The implication is that this aspect of the plan is not being taken seriously and will carry no weight in site selection despite the guidance in the NPPF.

4.6.51 In fact some GBC contract mowing and lane management is not in line with a strategy that is meant to protect biodiversity. (Examples – damage to tree roots and unsympathetic treatment of roadside vegetation (that includes orchid species) in Chalk Lane – southern end of Kingston Meadow in East Horsley is now mown flat rather than left to grow as a meadow through the Spring and Summer as it used to be (so no more day-flying Burnet moths there for example.)
KEY EVIDENCE

Guildford Borough Policy Statements are statements – not evidence.

Additional evidence should include:

Existing SNCI surveys, including those that took place in 2004-2007.

Biodiversity evidence emerging from Neighbourhood Plans.

Evidence obtained by requests to local naturalists and natural history societies including those with a specialist interest.

MONITORING

Simply maintaining open space will not be enough for a significantly enlarged population.

Providing more open space to meet existing shortfalls or the needs of a much larger population will reduce the area of land currently in food production or providing wildlife habitat.

SANG delivery is harming existing biodiversity

It is not clear how you will measure a change in biodiversity just by looking at planning applications. “Net gains in biodiversity provided by development” is a contradiction in terms. There may well be a few examples in England where low density housing has been combined with manufactured habitat at the expense of loss of agricultural land with no surrounding habitat damage - but we see no evidence of that in the Local Plan. Even when a housing development replaces agricultural land it increases pressure on the surrounding countryside. A simple example is where houses border woodland and residents dump their garden rubbish (and often worse) over the garden fence. Increased leisure use on nearby countryside also has an adverse effect on biodiversity.

There is no guarantee that mitigations listed in an application will be carried out and their effectiveness is not guaranteed either. GBC would need to carry out follow-up ecological surveys on all sites. Who would pay for these? Are there enough consultants to carry out the work in sufficient detail? What aspects of biodiversity will be measured?

How frequently are surveys by Natural England intended to take place? How will GBC ensure that NE carry them out? A baseline of existing surveys against which changes will be monitored should be included within the plan and it must be comprehensive for monitoring to be effective.

How frequently will SNCI surveys be carried out? At what expense? The last survey published in 2007 made recommendations for an increase in the size of the Wisley Airfield SNCI and stated that this should be taken into account for planning purposes. This was overridden in the recent planning inspector’s report and the Local Plan includes this particular SNCI as a building site. This is clearly a case of hypocrisy and suggests that the Council has no genuine intention to maintain biodiversity let alone enhance it.

We believe that a survey of SNCIs is currently taking place but that it is limited in scope to the previously known sites. This prevents other sites, where genuine biodiversity enhancement has taken place (often as a result of volunteer community effort), from being recognised in this way. While every stone is being turned over in the quest to find green space to build on, no genuine effort is being made to identify biodiversity hotspots that may have been overlooked in the past. In other words the approach being taken is one that intends to make no net gain, and possibly even reduce, sites of nature conservation interest – in contradiction to the stated aims.

If an existing SNCI (or one proposed on grounds of biodiversity but not formally accepted in a Local Plan) is found to be in poor condition the action taken should be to bring it back into good condition – not to remove its status and build on it.

Policy P3: Countryside.
**Response**

**Summary**

I OBJECT to this policy as it stands. There is huge emphasis on provision both of services and of additional Green Belt in Ash and Tongham. It is not clear why new Green Belt should be designated here, while the Green Belt is being rolled back in all other areas of the borough. The only notable fact is that the Leader of the Council and other Executive members are based in this area and the question of impartiality does need to be raised.

**Detailed response**

Note that in the recent judicial review in relation to Ashdown Forest, the SANG zone for the Ashdown Forest SPA was 7km, and this gave rise to a lower housing number than that proposed by this local authority.

The urban areas of Ash and Tongham are indeed of importance within the borough, creating a barrier between the countryside of Guildford and the urban towns of Aldershot and Farnborough.

However, as noted, it does not seem entirely appropriate to seek to reduce Green Belt designation everywhere else in the borough, on the grounds of overwhelming housing need (which is itself not an exceptional circumstance) – including land within the Green Belt and the Thames Basin Heath SPA, but then to propose designating additional Green Belt in this particular area.

If the planning policy is sufficiently aggressive as to disregard existing Green Belt, to propose significant development in that area, then it is inappropriate, and in contravention of existing planning law, (Gallagher Homes v Solihull as determined by the Court of Appeal) to consider proposing new areas for Green Belt. It is unclear why the strategic gap that separates the Ash and Tongham urban areas from neighbouring Aldershot is of greater significance to the borough as a whole, than other threatened Green Belt villages and fields.

The desire to protect the strategic gap between Ash and Tongham and Ash Green is welcomed, and provided that this does not arise because of a loss of Green Belt land elsewhere, the proposal to include some of this land within the Green Belt is welcomed too. However, Green Belt boundaries should not be traded off. One village community should not benefit to the detriment of another. The proposed extension of Green Belt designation to Ash and Tongham is unlikely to succeed, because it is not inherently better at serving the purposes of the Green Belt than other areas threatened by development, and a similar attempt in Solihull was wholly unsuccessful. The Court of Appeal decision will represent a precedent in this regard.

As noted in Gallagher Homes v Solihull, the NPPF is based on PPG2 which is quoted in a similar context to this proposal:

“If such an alteration is proposed the Secretary of State will wish to be satisfied that the authority has considered opportunities for development within the urban areas contained by and beyond the Green Belt.”

In other words, before altering Green Belt boundaries (to use for building), land beyond the Green Belt should be considered as building land first; and first of all, brownfield urban land should be used. Provided that the Green Belt is not subject to the wholesale assault then this extension might be acceptable to the wider community within the borough. It will not be acceptable as a trade-off for loss of the Green Belt elsewhere.

Policy P3 States that ‘development will only be permitted permitted provided it:

“requires a countryside location or where a rural location can be justified, and is proportionate to the nature and scale of the site, its setting and countryside location, and does not lead to greater physical or visual coalescence between the Ash and Tongham urban area and Aldershot”.
We would like to know what the rural justification of proposed housing has for Ash and Tongham and how Guildford Borough Council proves that contributes to the rural economy? In the Local Plan, Guildford Borough Council refers to these Eastern Borough proposals as ‘extensions to urban boundaries’. Developments of 1241 and 91 homes cannot possibly meet the necessary term ‘rural justification’ (The site allocation maps show different figures of 1200, 62, 58 homes)

As far as we can tell with the corresponding maps, the proposed developments in Ash and Tongham will create a greater coalescence between the separate villages to combine them into one urban area with a slither of green space between it and the A331/Aldershot.

Designation of Green Belt does not guarantee a barrier between Ash and Ash Green as Guildford has demonstrated the urge to move the Green Belt boundaries in communities elsewhere. We would suggest removing the allocation of further Green Belt designation as it does not follow NPPG Policy. There are no exceptional circumstances to allow changes in Green Belt Boundaries in Guildford.

It is also not clear what the impact will be of designating SANG in this area, and whether this will be used to permit building on Green Belt or land otherwise protected because of the Thames Basin Heath SPA designation elsewhere.

Ash and Tongham have countryside designated Ancient Woodland, AGLV and SNCI and a sensitive historic site which must be protected. This, together with a focus on using existing brownfield within the urban settlement area and a more realistic housing number, should succeed in protecting the valuable countryside around Ash and Tongham, while the attempt to adjust Green Belt boundaries seems doomed to failure and therefore will allow wholesale overdevelopment in this area.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

We object to policy I3 Sustainable transport for new developments
This is another vaguely aspirational policy, based on wishful thinking and not grounded in the practical realities of daily life. It consists of a standard, box-ticking list of local government measures unrelated to the specifics of the plan. Like infrastructure, transport appears to be an afterthought; the policy fails in its essential job of guiding planning decisions, since it assumes development of any kind can be supported by sustainable transport.

We support the concept and aim but OBJECT on the grounds that the practicalities of sustainable transport have not been properly considered, it is not sustainable to build dormitory towns and call them sustainable. Not everyone can cycle all the time.

How can large developments outside the town centre maximise sustainable travel? This is a matter for the planning process - the further from the town centre, the less sustainable the development will be.

Reliance on cycling discriminates against vulnerable members of the community. How can the disabled, those with small children, or the very old, or the infirm, or those who are ill, cycle outside the town in order to commute, or even inside the town? Only some people cycle – and Guildford has some steep hills, especially going out of town. Park and rides are slow – how can those with a 3 hour commute add 1 hour to their journey from using park and rides?
The only sustainable mechanism for new developments is to have them in the town centre close to the railway and the main shopping links where a hoppa bus can provide satisfactory links for those who cannot walk or cycle. While we welcome the intention to encourage rail travel by adding two new stations there could be unintended consequences. Once again we see the word “expect” used which means the policy has no teeth. The word “expect” must be replaced with the word “require” so that this policy is enforceable.

There are a number of problems with this policy.

Congestion is a widely recognised factor in the local area of Guildford, and this is a major factor in the public response to the proposed housing numbers, which represents more than a 25% increase in housing numbers in a borough that is already profoundly congested. [Source: SHMA p61: itself sourced from ONS for 2013.] Residents recognise that to increase the population by this level within the existing transport provision is not feasible, and this informs much of the public response to the proposed level of housing accommodation.

It is not clear that this recognition, which is widespread through the borough, is shared by those who have drafted the Local Plan.

Guildford is a commuter town, which (compared to London) offers better quality of life and lower house prices, so it will continue to be a commuter town for the foreseeable future. As a result, access to the stations for commuting is of significance. It is not realistic to assume that traffic to stations for commuters can be replaced either by bus services (slow, intermittent, expensive, and in many cases absent completely) or by cycle. There is a capacity issue of car parking at the station, which effectively creates an absolute constraint on the feasibility of commuting from Guildford.

Cycling is attractive, and, for the urban young, especially students, it is both practical and cheap, and can be quick. However, as noted, those en route to work cannot be assumed to be able to cycle in working clothes. Elderly members of the community, those transporting small children, and the disabled cannot participate in cycling except to a limited extent. Effectively the “average” person deemed to be capable of cycling to substitute for car trips is an able-bodied adult not travelling to somewhere where smart clothing is required, not needing to arrive clean (or with showering facilities on arrival, not provided by all employers); this is not sufficiently widespread in terms of the local demographic for travellers that it should be allowed to determine policy – and of course, not needing to transport, for example, supermarket shopping after the trip. What about the disabled? the elderly? those looking after more than one child? Are they to be housebound? This is not a reasonable strategy. Before transport and buildings are determined on the basis of such a policy, it is also imperative that safe cycle routes are implemented through the borough. Cycling in winter on rural roads is inherently more dangerous. Upgrading these roads would not be feasible in terms of cost nor desirable in terms of local character.

Cycle lanes which disappear into normal traffic lanes, which travel over potholes and which allow cyclists to be threatened by HGVs are not conducive to wider cycle usage, nor should wider cycle usage be encouraged until it can be demonstrated that it is safe, which currently, locally, it is not. The A25 cycle corridor scheme (Part of LRN1) will exchange the risk between cyclists and vehicles sharing space for the risk between cyclists and pedestrians sharing space. Much of the A25 has no pedestrian area anyway outside the urban space. Many cyclists travel at high speed and they will be put into conflict with pedestrians including mothers with very young children and schoolchildren many of whom need to cross the road and hence cross the cycleway. This is likely to lead to accidents and pedestrians are being disadvantaged.

Road capacity reduces as average speeds come down due to congestion. Where proper cycle lanes or off-road lanes are not provided then it is inevitable that safe driving will lead to reduced average motor vehicle speeds and gap development in the traffic stream. Both these effects act to reduce the capacity of our local road network. This loss of capacity has not been recognised in the Transport Strategy.

The concept of the park and ride with access into the town limited for those who live outside the town, is similarly flawed. Park and Ride is expensive, cumbersome and slow. It should be noted that in Oxford it has had a disastrous impact on small local retailers which is a retail segment that it is important to retain and support.

Use of park and rides increases the use of the strategic road network by local users, which is not what it is designed to do.
This proposal is combined with aggressive exclusion from the town of those who are living in peripheral communities, which will increasingly resemble housing estates. This is a strategy for sink estates through Surrey instead of the Green Belt - this is not a strategy for growth. Head offices will choose to go elsewhere, because highly skilled staff and management in the cutting edge industries that GBC wants to encourage, will not choose to live in a dense housing estate.

The existing extent of traffic congestion has not been fully recognised. As a consequence the impact of the various development scenarios has been understated and the infrastructure costs are an understatement.

The transport studies are incomplete and unpublished and this should have led to deferral of consideration of the Local Plan consultation process until it was possible to revise the plan post publication of the studies. This matter was raised by a number of councillors at the Full Council meeting on 24 May 2016 when the consultation was approved, but a motion to defer was overturned by the majority party.

Cross-subsidy in terms of infrastructure is envisaged. The infrastructure deficit needs to be resolved before there are large numbers of new residents exacerbating the current congestion. The funding of the new developments through CIL and S 106 is expected to contribute to the transport impacts across the borough, and there is negligible concern for the transport problems created within those new developments or in areas adjacent to them. This is not acceptable to existing residents and is likely to cause some problems with the future residents too, who may arguably feel aggrieved that the road funding associated with their developments is being subverted to other areas. While this may be permissible under the revised CIL regulations it is questionable whether it is morally acceptable to grant planning permission to build on the Green Belt in order to cross subsidise the building of roads or other infrastructure in the town centre or elsewhere across the borough or outside it.

Insetting of villages and the proposed relaxation of planning restrictions anywhere outside settlements (Green Belt or not), implied in P2, will lead to substantial infilling that will not require traffic assessment but will contribute a highly significant amount of additional car journeys overall - by a more insidious process than the large developments proposed.

Costs for rail or bus travel could be substantially reduced and would incentivise their use; but these are outside the remit of GBC and so cannot be encouraged by them.

It remains to be seen whether the proposed new stations will be delivered as they are not entirely within the council’s control. While we welcome the intention to encourage rail travel by adding two new stations there could be unintended consequences as the roads local to both sites are heavily congested. If parking facilities are inadequate this could lead to a need for onerous parking restrictions on roads nearby – possibly affecting small businesses adversely.

If parking facilities are adequate this will encourage more traffic onto local roads and commuters tend to be hurrying to catch a train or anxious to return home after a day at work. That does not bode well for the safety of pedestrians needing to cross those roads. House prices near to stations tend to attract higher prices and this will increase the profit motive to developers wanting to build on greenfield sites nearby. It will also mean that so-called affordable housing will be even less affordable at these sites. It may also lead, over time, to an undesirable loss of social-rented housing in the vicinity. A minor issue is that stopping at the additional stations will increase the train journey times to and from Guildford town centre on the lines affected.

Detail in Policy wording – flawed drafting:

The policy begins and ends with the weak and totally ineffective word, in planning terms, “expect”.

Contributing through CIL will not necessarily address needs local to the development concerned, and created by it, but may involve solving existing problems elsewhere in the Borough.

Bullets 4 & 5 – improvements to park and ride facilities imply increased car usage from outside the town and the parking provision acknowledges that most journeys will be by car.

Bullet 6 - Has the Vehicle parking Supplementary Planning Document been published? It is not listed as key evidence but the policy refers. How can a policy have been determined with reference to a non-existent part of the evidence base?
Bullets 7, 8, 9 & 10 are weak & aspirational with let-out words such as “facilitate the use of”, “wherever possible”, “contribute” and “where appropriate” (and poorly bulleted!). How will the use of ultra low emission vehicles be facilitated? This is such a vague aspiration as to be meaningless.

The policy only “expects” new developments to contribute, demonstrate adequate provision, etc – it should enforce them. A transport statement AND assessment ought to be a fixed requirement – not a matter for negotiation – while the policy implies that this might be waived even for sites that generate significant amounts of movement.

The construction traffic, noise and pollution generated by meeting the proposed housing number will be excessive. It will have a highly significant impact on the amenity and health of those residents living close to the development sites and those who live on the routes that will be taken by the construction traffic.

The last paragraph says nothing new in planning terms but does mean that the Local Plan has not fully and properly considered the traffic impacts of the proposed sites. For example, the Wisley airfield site will generate a massive increase in vehicle journeys; developments in West Horsley will lead to greater car use, as will the proposed developments at Garlick’s Arch and in Send. The obvious site choice for sustainable development would be on brownfield sites in the town but the Local Plan proposes allocating those sites to the declining retail industry instead.

Paragraph 4.6.21 suggests that sustainable transport is promoted. Far from providing sustainable transport this Plan will generate a massive increase in motor vehicle journeys. The Plan cannot force residents to ride bicycles or walk everywhere.

Introduction:

The spatial development strategy (paragraph 4.6.20 and Policy S2) does not address the development needs of the borough ensuring distances are practical; this is certainly not the case with all the development sites. For example, the Wisley airfield site will generate a massive increase in vehicle journeys; developments in West Horsley will lead to greater car use, as will the proposed developments at Garlick’s Arch and in Send. The obvious site choice for sustainable development would be on brownfield sites in the town but the Local Plan proposes allocating those sites to the declining retail industry instead.

Justification:

Paragraph 4.6.22 seeks to set out a reasoned justification and alleges that development should offer real travel choice by sustainable transport modes. There is little sign that this is being taken seriously enough now.

Paragraph 4.6.23 proposed to bring forward a Vehicle Parking Supplementary Planning Document. It is not clear what to make of this. Failure to provide off-street vehicle parking will not prevent residents owning cars and finding somewhere else to park but it may make life difficult for key workers to commute to their place of work. How can a consultation take place relying on non-existent background documents which are key parts of the Evidence Base? How can anyone comment on non-existent documents, and even if brought forward part-way through the consultation, any comments will be prejudiced by the absence of this informing the start of the consultation.

Paragraph 4.6.24 refers to the Sustainable Movement Corridor. Bus services are aspirational but economic reality may mean that they fail to persist. There is not enough detail published on how the SMC will be delivered – suggesting that it is aspirational rather than fully thought through.

Paragraph 4.6.26 refers to reviewing existing transport facilities and likely transport generation as part of assessing the amount of incremental travel demand. That consideration should have taken place in a robust and detailed manner on a site-by-site basis before the sites were allocated in the Local Plan. It is not sufficient to leave that until the planning application stage as intended by GBC and SCC, given that all sites will be subject to “permission in principle” under the Housing and Planning Act 2016 and so will not be capable of subsequent rejection on these grounds.
Paragraph 4.6.27 notes that Development must mitigate its transport impacts. The measures described rely entirely on people taking them up and not dumping their travel information packs in the nearest bin. It is clear that GBC, in response to concerns about elderly and disabled people failing to be coerced into riding bicycles are now suggesting tricycles to overcome this obstacle to their aspirations. They should be aware that while tricycles may help with balance issues they are heavier and harder to ride uphill. While the policy (unusually) notes that mitigation must be provided, in fact this is then diluted to suggest that facilities for electric car charging points and encouragement to car-share can be sufficient; all are optional and therefore meaningless.

However well designed a development is it will make matters worse during construction and if on a greenfield site, it is hard to see how it will achieve environmental benefits. On the other hand, replacing inefficient buildings on a brownfield site could lead to benefits in the long term.

Paragraph 4.6.28 notes “Developers should have regard” to the “Infrastructure Schedule at Appendix C”. The only thing that developers have regard for is forcing their application through and maximising their profit – that is the business they are in. Appendix C is lacking in detail. It notes, for example that there will be new town centre bus facilities at a cost of £5-10 million – such vagueness make it clear that no real costing or analysis of proposals has been prepared, and that the Infrastructure improvements proposed have not been properly considered. Having regard to fluid and uncertain proposals is effectively meaningless as a constraint or a requirement.

Paragraph 4.6.29 requires that applications need to address the transport implications of the proposed development. Experience with recent planning applications suggests that developers will do everything in their power to understate transport impacts and we have no faith in GBC and SCC taking a sufficiently robust line on this.

Key Evidence is missing or inadequate.

The Strategic Transport Assessment (SCC 2016) is listed as “forthcoming”, but this plan has been produced in the absence of any strategic transport review.

There are further inadequacies in the Evidence Base, highlighted in the following annexes, which include examples of deficiencies, ambiguities and inadequacies in the transport and infrastructure evidence. This is not a comprehensive list of deficiencies, but serves as an illustration of the poor evidence on which decisions have been based.

**Annexe 1**

Comments on Guildford Borough Transport Study 2016

Page 2 – “address the historic infrastructure deficit” - developers are not required to do this?

Page 2 – It is wrong to claim that the cycle infrastructure along the A25 is good – and many cyclists are not careful, so putting them in contention with pedestrians is not a good idea.

Page 5 – The decision on Heathrow or Gatwick has yet to be taken but airport expansion in the south- east cannot be regarded as sustainable development and, although GBC has no control over such external decisions, its own growth agenda will drive a need for that expansion.

Page 6 An additional weakness is alternative “road closure diversion” routes for the SRN on the LRN

Page 6 Are the “Committed Improvements” actually committed and guaranteed to be delivered?

Page 7 The rail strategy does not provide for Wisley (residents would drive to stations)

Page 7 How long will it take to deliver Crossrail 2 ? “We hope that Crossrail 2 could be operational by 2030, but we are in the very early stages of planning and no decision to build it has been made.”

Page 7 Guildford platform capacity still many years away if ever.
Page 7 The rail strategy anticipates many improvements that have not been secured and may have unintended consequences if they proceed (see above).

Page 7 The Southern Rail Access to Heathrow [see the feasibility study dated December 2015 – although other proposals may be put forward (e.g.by Hounslow)] is still in its early stages and would have significant impacts on open space beyond our Borough. For example, all options in the feasibility study would use Staines Moor SSSI and Option 4 would use Bedfont Lakes Country Park (a Local Nature Reserve and SNCI).

The various options would use existing commercial, residential and highways land in varying degrees. It seems unlikely that a solution will be delivered within the Plan period and removal of highly valued open space with high biodiversity (wherever it is in South-east England) cannot be regarded as sustainable.

Page 10 and 13 There is a stark contrast between the plans for the town centre which involve encouraging a reduction in traffic by reducing roadspace and the plans for the SRN and parts of the LRN which involve increasing capacity. While increasing capacity may reduce some areas of congestion in the short term, history suggests that traffic will rapidly grow until the improved roads are congested once again. This can hardly be regarded as sustainable. A sustainable option would be to apply a very substantial traffic infrastructure constraint on the housing number.

Page 10 While the A3 Guildford Tunnel aspiration has some environmental advantages over widening (in particular for residents living close to the A3), the environmental burden of the construction phase will be far higher and aspects such as location of ventilation stacks and their local effect (in all weather conditions) do not appear to have been considered.

Page 14 Under Weaknesses the point about A roads in Guildford Town also applies to surrounding areas in the Borough and beyond. The anticipated improvements ignore existing congestion to the south and east of Guildford – presumably because SCC’s transport assessment methodology only identifies the tip of the iceberg. The current Plan will see increased congestion and a resultant reduction in air quality in many areas beyond the town centre.

Page 16 “Largely commercial bus services” is seen as a strength whereas it should be seen as a weakness with a trend to reduced subsidies and the provision of bus services, especially in rural areas, being increasingly dependent on commercial gain. It is difficult to see this changing under the current Government cuts philosophy. The point “Subject to business case including funding” under Aspirations demonstrates this point.

Page 18 We welcome the aspiration to “Expand the public realm through significantly extended pedestrian-priority areas”

Page 19 Guildford is well behind other areas in monitoring air quality let alone attempting to reduce it.

The introduction talks about reductions in some pollutants. This may be the case for pollutants such as Sulphur Dioxide, which contributed to the visible London smogs, but it is not true of diesel vehicle emissions which have increased as a result of Government policy including its aggressive growth agenda and population increase through immigration.

30 accessible electric vehicle charging points are only an aspiration and will be nowhere near enough if there is a real shift to electric vehicles.

It is clear from the “Strategy outcomes” that GBC would prefer not to follow other areas in pro-actively tackling air quality.

Page 22/23/24 The timescales indicate that the main rail improvements (Including the two new stations) are unlikely to be delivered until the end of the Plan period or even later. The sites that are supposedly justified by their inclusion will generate a major increase in road traffic in the interim and it may be more difficult to achieve this aspect of modal shift in the longer term. The same can be said about the other traffic infrastructure proposals. Residential development is being scheduled before the infrastructure that it will need.

Page 24 Monitoring – “Increase” needs to be in proportion to population growth as otherwise failure will taken as success. “An Increase in average vehicle speeds” is inconsistent with the desire to reduce the number of persons killed or seriously injured. For example, some A roads pass through residential areas where pedestrians, including schoolchildren, are trying to cross the road at peak times. It is noted that increase in vehicle speeds is only desired in the morning. Going home from work does not seem to matter!
Annexe 2

GTAMS

NPPF and NPPG The Plan ignores the points concerning Green Belt and protecting the environment. GBC have tried to get round this by spinning their messages and using misleading statistics including a major understatement of the area of Green Belt to be removed.

Planning Update (March 2015) – The point in this update concerning Green Belt has been ignored.

Monitoring Indicators:

- Ten years is far too long to wait for information on whether the approach is working or not. The target requires only an increase. This would permit an increase less than that in line with any population growth to be regarded as success. The bar has been set well within the failure range.

Re: Responses to Guildford Borough Proposed Submission Local Plan (June 2016)

I OBJECT in the strongest possible terms to the Guildford Borough Proposed Submission Local Plan (June 2016). This Plan is unsustainable, unworkable and, in many provisions, unnecessary.

I set out below my objections to specific policies and matters within the Plan.

I strongly object to GBC Plan in that it has made no provision whatsoever in the Plan to protect the residents in West Clandon (A247) from the vast amount of increased traffic on a road that cannot possibly cope with the additional vehicles yet alone all the HGV's that would be travelling backwards and forwards to these proposed sites in the building of the proposed developments.

1. POLICY I3

I OBJECT to poor air quality concerns (Policy I3)
Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

The link road that runs through the village of West Clandon (A247) is currently a 'hazardous' road as highlighted in a traffic survey, and only today there has been yet another accident on this road with the colliding vehicles mounting the pavement. At present, infant school children walking to the small local school are forced to walk along narrow pavements close to a road which is unsuited to the volume and type of traffic that uses it. Last week I had to jump across the pavement to avoid being hit by a lorry who drove up onto the pavement to avoid another passing the other way, and had my own car struck by another travelling at speed a few months ago. Large vehicles such as lorries and buses are frequently seen mounting the pavements at significant speeds to avoid collisions with one another and will no doubt in time lead to serious injury or death. A development as proposed in the local plan will significantly increase the likelihood of this occurring, as a direct result of the obvious increase in traffic in the area.

Section page number 46 of 484  Document page number 1601
Before every blade of grass is destroyed, every tree hacked down and every living creature is slaughtered to accommodate 1,150 house in Normandy, I would ask you to make sure the roads that service this area are in-place before a house is built. The roads concerned are the A3, A31, A323, Westward Lane (D class) and Glaziers Lane (D class). A 'D' class lane is one that has no structural foundations and is little more than a farm track. With the influx of thousands of lorries and cars these roads and lanes are not fit for purpose in their present state. This would have to be addressed immediately and be the first priority.

The railway line from Aldershot to Guildford must be updated and have more stations in order to get some of the cars off the roads. New stations for the Guildford University, Park Barn, Wanborough and Ash must be in-place and free adequate parking to accompany these stations. Without these travelling arrangements it goes without saying that chaos will be achieved to those unfortunate enough to buy a house in these areas. The level crossing at Ash station must be done away with and a bridge put in place because this is a major pinch-point on the A323. The bridge is essential and must be one of your first considerations. The traffic in this area is a total shambles in the rush-hour let alone when hundreds more homes are built.

I strongly support the welcome emphasis in the 2017 Plan on improved infrastructure for cycling in, into, and around Guildford. At present there is no safe way of crossing Guildford on a bicycle, especially from east to west. The Plan document rightly refers to "a fragmented and disjointed network of cycle routes, consisting of routes both on and adjacent to local roads, with the latter often comprising shared lanes for pedestrians and cyclists. Many cycle lanes and tracks are narrow and some are unattractive to the average cyclist." This is very true, and I hope that as this Plan is implemented the Council is as good as its word and delivers a first class cycling infrastructure that will lead to a reduction in car journeys and improved quality of life for all.

POLICY I3 - Sustainable transport for new developments

I OBJECT. This is another vaguely aspirational policy, based on wishful thinking and not grounded in the practical realities of daily life. It consists of a standard, box-ticking list of local government measures unrelated to the specifics of the plan. Like infrastructure, transport appears to be an afterthought; the policy fails in its essential job of guiding planning decisions, since it assumes development of any kind can be supported by sustainable transport.

The sustainability of the dormitory settlements which the Council want built across the countryside depends on a general “modal shift” from private car use to walking, cycling and public transport. This is unrealistic. The proposed sites are often miles away from the nearest railway station. Bus services even in the largest villages are almost non-existent – just one bus to and from Guildford each day in the Horsleys and none at weekends. Since bus services depend on profitability, they cannot be expanded and the Council are not proposing to subsidise new ones. Rural buses are too slow anyway for busy people. Most rural roads in the borough are narrow, winding, hilly, potholed, muddy and unlit. Many flood badly and have no footpaths.

The desired modal shift would require a comprehensive co-ordination of bus and train timetables with services every few minutes, seven days a week, to stops within walking distance of every home in the borough. This kind of integrated...
public transport system has been achieved in Switzerland, for instance, but only at huge public cost and thanks to a political consensus supporting state ownership of trains, buses and the post office, which delivers rural passengers as well as mail. There is absolutely no chance of this in the UK.

The vast majority of the borough’s residents are not, in practice, able to cycle. This includes children, the elderly, commuters who have to look smart, the infirm, the unfit and people carrying goods or shopping of any kind. Dependence on walking and cycling discriminates against these groups, which include some of the most vulnerable members of the community. It is socially unjust.

One in two working people in Guildford commute for up to 3 hours a day, as I used to do. They will not leave their cars for even part of their journey if it means longer travel times.

Park-and-rides are a welcome part of the transport mix but are too slow for commuters and others on a tight schedule. Well-off pensioners seem to be the main beneficiaries. For an adult couple going shopping it is still cheaper to park in town.

Forget about water buses. The Wey is too narrow and, with a river speed limit of 4mph, boats are too slow for anything but recreation. Except on the tideway, not even the Thames has such services.

The addition of two new stations appears attractive but will slow down train journeys, which are already slower than at any time since the 1930s. Knock-on effects on localities where the new stations are built have not been worked out or presented.

I OBJECT TO POLICY I3 (SUSTAINABLE TRANSPORT): • Just a list of generic measures, not related to real life or the particularities of Guildford. • Fails to treat sustainability as a constraint. Assumes excessive levels of development proposed in the plan can be supported by sustainable development. • Unrealistic. Most people can’t or won’t walk or cycle – commuters in a hurry, the elderly, children, people who are unwell or unfit, people carrying heavy shopping or other goods. I.e. most residents! • Town’s eye view of transport. Ignores scarcity of existing rural public transport and commercial unviability of increasing it. Ignores terrible state of Surrey’s roads, potholes, flooding etc. Ignores extra stress to be created by huge new housing estates in countryside.

Policy I3: sustainable transport for new developments
Sustainable transport modes are encouraged in various sections of the local plan. In order to embrace sustainable transport modes new developments must facilitate trips by walking and cycling. Whilst East Horsley has a railway station, the development sites A37, A38, A40 and A41 are not within reasonable (defined as less than 1km) walking distance therefore requiring trips to the station by car; the station car park is at capacity. Legible walking routes would require substantial upgrade to street scenes, for example there are no streetlamps in West Horsley North.

If these building projects were carried out then there would be total traffic gridlock not only in the local area but on the M25 and A3 and, of course on every one of the smaller roads in Surrey and the surrounding Counties.

Amongst my other objections to the draft local plan, where no consideration has been given, are:

There are not sufficient Transport links (railways, buses or roads).

Object
Policy needs expanding, and to have more solutions.
While I support the concept but fail to see how it can be applied for new out of town Greenbelt sites. We are in the surrey HILLS it isn’t flat and cycling is not practical in many cases.
Bus travel is being scaled down by Surrey CC, and private investment will only be on profitable routes. No bus hub is yet clear to link busses and trains.
The further from the town centre, the less sustainable and more car dependant the development will be.

Document: Proposed Submission Local Plan: strategy and sites 2017 / Policy ID3

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to Policy ID3 (3), which states: “New development providing, contributing and/or close to the routes of the proposed Sustainable Movement Corridor in the Guildford urban area will have regard to the Sustainable Movement Corridor Supplementary Planning Document.”

The Sustainable Movement Corridor Supplementary Planning Document does not appear to have been published so GBC cannot consult meaningfully on this policy.

The whole concept of the Sustainable Movement Corridor (SMC) appears vague and uncertain – what began as a car-free route through Guildford for pedestrians, cyclists and buses/trams has been downgraded to a bus/cycle lane through some of the busiest sections of Guildford’s road network. Without widening sections of the route (which is not proposed), the SMC would reduce capacity on an already overstretched road network. This will be a particular problem at pinch-points along the route, such as the A3 underpass at Egerton Road, where cars are at a standstill most weekday mornings during the University term time (Figure 9(a) and Figure 9(b)).

Proposals to introduce a significant bus service to proposed key development sites to the town centre and other key destinations (Policy A26 Infrastructure requirement (5)), whilst a good idea in theory, are not practical. Guildford borough is too rural (with villages too far apart) and the town’s population too small and low density to sustain a viable passenger transport system. Furthermore, there appears to be no real expectation that the SMC would achieve a modal shift and reduce car movements significantly so it is questionable why GBC would propose expenditure of up to £250m on the scheme.

[Figure 9(a)] above and [Figure 9(b)] – The strategic movement corridor will reduce capacity of Egerton Road passing beneath the A3 during peak times

[Figure 10] – Concentric circles drawn from University of Surrey’s Senate House demonstrate how remote Blackwell Farm is from the central hub of Guildford, with its existing transport provision

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3
I OBJECT to poor air quality concerns (Policy I3)

Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the detrimental impact on transport, local roads and road safety. I specifically object to:

1. The assertion that the development will result in a meaningful shift to cycling and walking. The development is too isolated, and even within the development itself too spread out to anticipate a reduced reliance on private cars.
2. The increased volume of car traffic. A proposed development of 2,068 homes would result in an estimated 4,000 additional cars on the roads.
3. The congestion this traffic will cause on the narrow rural roads in Ockham and the surrounding areas, exacerbated by wide vehicles including increased bus and HGV movements.
4. The danger this traffic will be to local cyclists and pedestrians, due to the absence of any cycling paths and the lack of pedestrian footpaths (and the space to provide them).
5. The increase in the already severe congestion on the Strategic Road Network of the A3 and M25. A further planning application at RHS Wisley (with a significant increase in visitor traffic) and a proposed 600 pupil secondary school on the site would add additional congestion at the M25/A3 junction as well as local roads. No development can proceed without significant infrastructure enhancements to the A3 and M25. Partial improvement works on the A3 south of the site are not due to start until 2019 at the earliest.
6. The lack of suitable public transport. The local rail stations of Effingham and Horsley cannot cope with the proposed increase in passenger traffic and car parking is already at capacity.

**SUSTAINABLE TRANSPORT FOR NEW DEVELOPMENTS.** Policy 13 I OBJECT, as often the proposed sites are remote from existing bus stops, stations and even roads with pavements. This assumes that people will stop using cars as transport methods. This assumption is unrealistic as has been proved time and time again in new developments resulting in parking chaos around the developments as residents try and park near home and traffic snarl ups.

**I object to the congestion that development will cause to the local village roads and the lack of road infrastructure.**

This will cause more congestion to the villages of Ripley, Send and Clandon, which have narrow roads, country lanes and no footpaths. More houses will increase danger and unsustainable volumes of traffic.

**I object to poor air quality concerns (Policy 13)**

The increased congestion that will arise from the massive proposed developments will in turn lead to increased air pollution which will have damaging effect on local residents and their health.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Attached documents:**
Policy 13 - “Sustainable Transport for new developments” indicates that developers will be expected to propose and secure travel plans for their developments and contribute to the transport arrangements for the able and disabled. The words “will be expected” are pathetically weak and developers will do everything in their power to avoid or minimise such commitments. As with the 2014 draft Local Plan, it is deeply concerning that very little work has been done to quantify the infrastructure requirements that will need to be implemented to support the proposed increase in housing.

Chinthurst Lane is not wide enough to accommodate more traffic. It is already busy and if we are to preserve the character of the roads and lanes that form the boundaries of this area we must avoid erosion of the private verges and common land which would be inevitable if attempts were made to widen it. Upgrading, widening and imposition of formal highways, street lighting and fences would suburbanise a rural part of the Village.

4. There are not enough jobs in Guildford for all the potential new residents so most will be commuting in all directions but particularly to London. There is no infrastructure in place. There may be a new station but there are not enough trains possible to be run on the existing lines. Already no seats available on morning or evening trains on the main line and branch lines to Waterloo. Traffic on the A3 is excessive and the roads in Guildford Centre and around cannot cope now, it only needs one small event to cause havoc to thousands and delays of hours. Park and ride is affected by any road problems and doesn't run long enough hours for commuters to and from London.

5. The Wisley Junction 10 where the A3 meets the M25 is already an accident black spot.

I am a long term resident of West Clandon, having grown up here myself, and now bringing up my own young children in the village.

I OBJECT in the strongest possible terms to the Guildford Borough Proposed Submission Local Plan (June 2016). This Plan is unsustainable, unworkable and, in many provisions, unnecessary.

I set out below my objections to specific policies and matters within the Plan and would make in addition one key point upfront regarding traffic – I have seen first-hand over the years the increase in traffic through the village on a road (the A247) which simply cannot cope with it. The pavements are narrow, the road is narrow and there are difficult bends and twists. The cars and large lorries travel far too fast through the village and there are too many of them. Only this week there was a serious accident causing 2 cars to fully mount the pavement, and this happened just minutes after a group of children passed by that point walking to school. It can surely only be a matter of time before there is a tragic loss of life on this road and as such I object in the strongest possible terms to any further development which leads to even more traffic passing through West Clandon – including the proposed developments at both Gosden Hill Farm and Garlicks Arch.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

I OBJECT to poor air quality concerns (Policy I3)

Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from severe traffic congestion. Much of West Clandon is deemed by Guildford Borough Council to be a Conservation Area and we residents are required to abide by those rules. Is not GBC also duty bound to protect and conserve the area? Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon, The Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles have, of necessity, to mount the pavement. With a primary school, two pubs and a children’s playground, quite clearly the village should be protected from, and not be forced to take yet more, traffic.

<td>First, the increased traffic implicit in a significant number of additional new houses. Over the period I have lived in East Horsley, the experience of walking down Ockham Road North and Ockham Road South to the station or the shops has become increasingly fraught, as more and more traffic, including heavy vehicles as well as domestic vehicles, charge by unrelentingly. These roads are narrow and the speed and heavyweight of traffic currently using them act as a severe deterrent to many people who would otherwise go out on foot rather than by car. The significant numbers of new houses currently being proposed under the new plan would only intensify this situation, and would seem designed further to discourage pedestrians, and make the roads – and of course, the parking at both ends of East Horsley – even more congested and unviable.</td>

2. Proposed developments on Sites A42, A43, A43A, A44.

I wish to object to the proposed developments on these sites. The combination of these new housing proposals gives rise to population increase of over 25%. This is a clear overdevelopment of the three settlements. The lack of infrastructure has already been noted. In particular, the A247, the main artery through Send is extremely congested. Send is a classic linear village and most of the house along the A247 were constructed before the car era and lack off-road parking facilities and inconsequence many cars are permanently parked on road. This is a source of traffic congestion with long tailbacks in the morning and evening rush hours and delays at other times when large vehicles traverse the village. The situation will be exacerbated later this year when the new St Bede’s school opens (Planning application 16/P/00033 Approved GBC 31st March 2016) as access to both infants and junior school will now be from the A247 effected doubling the number of pupils arriving in that way. While the planning application included a School Green Travel Plan to minimise car journeys to the school the mitigation measures of increased cycling and walking are difficult to implement as footpaths and cycle paths are inadequate. Public transport is not an option as no buses pass the school. Inevitably increased car use will result giving more congestion with increased risks to children.

Traffic

The increase in traffic on East Lane, in particular, will be intolerable with the proposal of over 345 new households impacting on this road (potentially up to 750 more cars?). It is already congested during school times from Nightingale Avenue and Northcote Road. This will have a massive impact on our day-to-day lives.

2000 houses are being planned for Wisley Airfield. Many of these potential residents will be driving in and out of Horsley to use the station and shops. **We simply DO NOT have the capacity for additional parking at Horsley Station and local shops. The Station car park is currently full every weekday as it is. It will become impossible to use the train as there is no alternative parking.**

POLICY I3 - Sustainable transport for new developments

I OBJECT. This is another vaguely aspirational policy, based on wishful thinking and not grounded in the practical realities of daily life. It consists of a standard, box-ticking list of local government measures unrelated to the specifics of the plan. Like infrastructure, transport appears to be an afterthought; the policy fails in its essential job of guiding planning decisions, since it assumes development of any kind can be supported by sustainable transport.

The sustainability of the dormitory settlements which the Council want built across the countryside depends on a general “modal shift” from private car use to walking, cycling and public transport. This is unrealistic. The proposed sites are often miles away from the nearest railway station. Bus services even in the largest villages are almost non-existent – just one bus to and from Guildford each day in the Horsleys and none at weekends. Since bus services depend on profitability, they cannot be expanded and the Council are not proposing to subsidise new ones. Rural buses are too slow anyway for busy people. Most rural roads in the borough are narrow, winding, hilly, potholed, muddy and unlit. Many flood badly and have no footpaths.

The desired modal shift would require a comprehensive co-ordination of bus and train timetables with services every few minutes, seven days a week, to stops within walking distance of every home in the borough. This kind of integrated public transport system has been achieved in Switzerland, for instance, but only at huge public cost and thanks to a political consensus supporting state ownership of trains, buses and the post office, which delivers rural passengers as well as mail. There is absolutely no chance of this in the UK.

The vast majority of the borough’s residents are not, in practice, able to cycle. This includes children, the elderly, commuters who have to look smart, the infirm, the unfit and people carrying goods or shopping of any kind. Dependence on walking and cycling discriminates against these groups, which include some of the most vulnerable members of the community. It is socially unjust.

One in two working people in Guildford commute for up to 3 hours a day. They will not leave their cars for even part of their journey if it means longer travel times.

Park-and-rides are a welcome part of the transport mix but are too slow for commuters and others on a tight schedule. Well-off pensioners seem to be the main beneficiaries. For an adult couple going shopping it is still cheaper to park in town.

Forget about water buses. The Wey is too narrow and, with a river speed limit of 4mph, boats are too slow for anything but recreation. Except on the tideway, not even the Thames has such services.

The addition of two new stations appears attractive but will slow down train journeys, which are already slower than at any time since the 1930s. Knock-on effects on localities where the new stations are built have not been worked out or presented.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
I have lived in the Guildford area for most of my life. During that time London has spread right out to the M25 and its impact beyond. I drive 16 miles to work and it usually takes me about an hour and can easily take longer. And it doesn't take a great deal and the whole of Guildford can be backed up with traffic. We are clearly not coping with the number of people who live here already.

I object to the fact that the infrastructure has not been properly assessed and is inadequate to deal with current housing levels, with such a large increase in housing the roads will not be able to accommodate the huge increase in traffic. There are currently serious delays on all roads during the rush hour and they are busy at all times of the day.

1. POLICY I3

I OBJECT to poor air quality concerns (Policy I3)

Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

I object to the last minute site allocation A43a for a new on/off slip roads onto the A3 as the local roads already have a congestion problem. All the local small roads would be at daily gridlock due to the HUGE influx of through traffic.

I object to the danger of the increased volume of traffic that will arise from the A43a on/off ramps to pedestrians and cyclists. Many of our small local roads do not have pavements and very few cycle lanes.

I object to site allocation A25 Gosden Farm as the impact of the extra traffic through Send and Ripley to access the A3/M25 would be vast.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
I object to the additional load that will be caused to public transport in the Send, Ripley, Clandon, Wisley and Gosden Farm areas with increased population. There is a lack of public transport. Local stations are already overcrowded. Car parks already overflow into neighbouring residential roads. Bus services in the area have recently been reduced.

I object to health suffering due to vastly increased air, noise and light pollution of all the additional traffic that would pass through the Send, Ripley and Clandon areas. The A3/M25 pollution is already in excess of permitted levels and building 2,000 extra homes with their extra vehicles at Wisley Airfield (A35) will only increase this.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Comment ID: PSLPP16/4030  Respondent: 8817537 / Kim Meredith  Agent:

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to building 45 houses at Clockbarn Nursery Send (A42) because of inadequate access and traffic volume. Tannery Lane is too small a narrow country lane to take any more traffic. The junction with Send Road is already very hazardous for vehicles emerging into the main road. There is already planning permission for 64 houses at the Tannery and the building of a marina which will already exacerbate the congestion issue. The lane was not built for heavy use.

I wish my objections to be fully taken into consideration and that the Local Plan is amended accordingly.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

In addition to children requiring education, the proposed new houses will contain adults requiring work. Where in the Horsley do the jobs for these people exist? Perhaps the planners think that they will be commuters. If so the planners haven't attempted to travel from Horsley or Effingham Station in the rush hour. The station car parks are already full and the trains crowded even before they pull into our stations. There simply isn't the room for hundreds more people.

Perhaps the planners think that these new residents will drive to work and I understand that there is a proposal to build an additional A3 intersection in the area; perhaps the planners have included this In their proposals in an attempt to alleviate the local gridlock that the additional home owners will create trying to drive their children to non-existent local schools or themselves to work in jobs that aren't in the area. If so, then these planners clearly haven't travelled on the A3 northbound towards London or southbound towards Guildford recently, where the traffic is already at a crawl throughout the rush hour periods, even if it is on a rare day when the M25 is flowing adequately.

1. Also in Key Facts, para 2.7, you note the high car ownership and levels of movement. We have the A323, A322, and A320 through our parish all of which suffer from significant congestion at present. A large increase in houses, let alone 71%, would not be sustainable with these roads.

1. I object to poor air quality concerns (Policy I3)

Paragraph 4.6.27 of the Plan states that "Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health." The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health.

Thirdly I object to the Local Plan and the proposed developments as it will have a significant impact on existing infrastructures which are already at their limits particularly at peak times. Train stations and their car parks are already...
full to capacity and the road systems are full at peak hours. The B roads that run through the Horsley villages are not designed to take the existing levels of traffic and the proposed developments will only make this worse. The proposed development at the Wisley airfield will not provide affordable housing for those that need it as the prices will be driven by existing housing in the area. The proposed changes to the infrastructure are inadequate and will not address the issues created by this very large development.

I object to the very large proposed development of 2,000 houses at Wisley Airfield, 2,000 houses at Gosden Hill and 1,850 houses at Blackwell Farm because it will wipe out large areas of Green Belt and agricultural land. It would also prove to be catastrophic to the surrounding small roads, which would not be able to cope, and on the A3 and M25 interchange nearby.

Many of the strategic sites e.g. Wisley Airfield and Garlick’s Arch, are in unsustainable locations. They do not benefit from railway stations within easy walking distance and bus services across rural villages are forever reducing. Residents will have few options, but to be reliant on motor vehicles. I object on the grounds that these sites are not sustainable. The proposals that I have seen are likely to cause grid lock in Burpham if Gosden Hill Farm is developed as proposed. It would only increase traffic congestion as the roads to be used cannot take cycle and bus lanes in the way proposed without having a detrimental effect on vehicle movements due to the narrowness of the roads that it is proposed would be included. Vehicles that would still need to access the town centre would suffer serious delays.

**TRANSPORT & HIGHWAY CONSIDERATIONS**

Any traffic generated from the proposed Site Allocation housing sites in West Horsley and East Horsley will only further contribute to traffic congestion in the area. The existing road system is appropriate for a semi-rural village, such as West Horsley; indeed its appearance and scale are another important characteristic of the village.

Many of the traffic routes are little more than lanes, many with pavements on only one side of the carriageway. When you consider however that many households now have at least two cars, the potential increase in traffic, should the proposed development take place, could easily overwhelm the existing infrastructure and lead to serious, and potentially life threatening, safety concerns.

No specific proposal as to how GBC intend to address these concerns has been detailed in the Local Plan nor in the Draft Guildford borough Infrastructure Delivery Plan 2016. This is clearly unacceptable, given that GBC are making a proposal for such excessive residential development within, and around, the village.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

<tr>
<td><strong>Do you consider this section of the document; complies with the Duty to Cooperate?</strong> ( ), <strong>is Sound?</strong> ( ), <strong>is Legally Compliant?</strong> ( )</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Furthermore, GBC are still championing the creation of a new significant settlement under Policy A35: Land at former Wisley Airfield, Ockham. This is potentially a double whammy for local infrastructure, and in particular local roads, from which it may never recover!</td>
<td></td>
<td></td>
</tr>
<tr>
<td>I would therefore also take this opportunity to <strong>OBJECT to Policy A35: Land at former Wisley airfield, Ockham.</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Whilst Horsley station has frequent trains to London and Guildford, car parking at the station is limited and is often full during the week. There is no adjacent land available for additional car parking provision. A significant increase in the village population will obviously increase the pressure on station car parking and traffic movements to and from the station on already narrow and, at times, congested local roads.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>There is currently a regular bus service operating along the A246 between Guildford and Leatherhead, however this is really only of use to residents at the very southern end of West Horsley. There is also currently an extremely limited bus service along East Lane and The Street, through West Horsley village, which only operates 2 or 3 times per day between Monday to Friday only. There is no service at the weekends. Any development of new homes at this end of the village would necessitate an improvement in this service for it to be considered in any way sustainable.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>In Policy I3: Sustainable transport for new developments; GBC proposes that “We will expect developments will contribute…..We will expect new development to…. We will expect new all applications for ….”. Is that really the best we can hope for? That GBC ‘expects’ things from developers rather than ‘requires’ them! The policy as drafted ‘has no teeth’ and is clearly open to abuse from developers or housebuilders.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>I would therefore ask that <strong>Policy I3: Sustainable transport for new developments should be AMENDED</strong> to state that GBC require these things rather than expect them!</td>

I object to policy I3 Sustainable transport for new developments. This is another aspirational policy, not grounded in the practical realities of daily life. It consists of a standard, box-ticking list of local government measures unrelated to the specifics of the plan. Like infrastructure, transport appears to be an afterthought; the policy fails in its essential job of guiding planning decisions, since it assumes development of any kind can be supported by sustainable transport.

The sustainability of the dormitory settlements which the Council want built across the countryside depends on a general ‘modal shift’ from private car use to walking, cycling and public transport. This is unrealistic. The proposed sites are often miles away from the nearest railway station. Bus services even in the largest villages are almost non-existent – just one bus to and from Guildford each day in the Horsleys and none at weekends. Since bus services depend on profitability, they cannot be expanded and the Council are not proposing to subsidise new ones. Rural buses are too slow anyway for busy people. Most rural roads in the borough are narrow, winding, hilly, potholed, muddy and unlit. Many flood badly and have no footpaths.

The desired modal shift would require a comprehensive co-ordination of bus and train timetables with services every few minutes, seven days a week, to stops within walking distance of every home in the borough. This kind of integrated public transport system has been achieved in Switzerland, for instance, but only at huge public cost and thanks to a political consensus supporting state ownership of trains, buses and the post office, which delivers rural passengers as well as mail. There is absolutely no chance of this in the UK.

The vast majority of the borough’s residents are not, in practice, able to cycle. This includes children, the elderly, commuters who have to look smart, the infirm, the unfit and people carrying goods or shopping of any kind. Dependence on walking and cycling discriminates against these groups, which include some of the most vulnerable members of the community. It is socially unjust. One in two working people in Guildford commute for up to 3 hours a day. They will not leave their cars for even part of their journey if it means longer travel times.

Park-and-rides are a welcome part of the transport mix but are too slow for commuters and others on a tight schedule. For an adult couple going shopping it is still cheaper to park in town.

I like the idea of water buses but have concerns over the reality. The Wey is narrow and, with a river speed limit of 4mph, boats are too slow for anything but recreation. Except on the tideway, not even the Thames has such services.
The addition of two new stations appears attractive but will slow down train journeys, which are already slower than at any time since the 1930s. Knock-on effects on localities where the new stations are built have not been worked out or presented. Ie. Cost of housing will increase.

I live in Shere Road, West Horsley and since I moved here 12 years ago, it has become a 'cut-through' for lorries and cars. Despite the speed limit having been lowered to 30 mph it still happens. There are no pavements and only a few grass verges that are walkable. School children are at risk on their way to school as they have to walk in the road. All of this is without adding more and more people and vehicles to the equation. Recently it has taken a considerably longer time to get out of Shere Road onto the A246 because of the volume of traffic. It has always been difficult at school times but it is now throughout the day. The prospect of these housing developments being added to the mix is extremely worrying. This situation, of course, also exists at Ockham Road South and The Street, West Horsley.

A leaflet from Dandara was delivered a few days ago and this has added insult to injury! A more patronising, self interested, hyperbole I have yet to read. Trying to convince local residents that they are "assisting us" by persuading GBC that their proposed development next to the roundabout by Bell & Colville is an advantageous alternative to existing
proposed sites.. This development would be next to Shere Road onto the Epsom Road A246, adding chaos to frustratiion. A conflict of interests I fear.

Re: Inappropriate Development on the Green Belt, Normandy 2nd letter

I would like to raise my objections regarding the development of 1,100 homes in our lovely rural village of Normandy. This will totally ruin the heart of our village and destroy our rural environment. As you are aware from past consultations the planning applications on the above site is not a welcome proposition, for a number of reasons.

• There is already a problem with the traffic; this can only get worse with all the extra housing, and the extra cars etc using the small rural roads. In Westwood lane there is the extra problem of the railway bridge with one way traffic. It is utter chaos in the evening trying to get onto the Guildford/Aldershot Road during the peak times. It can take as long as 40 minutes to drive a mile towards Ash. The secondary school and primary school is going to cause more problems with children being dropped off and picked up for school. The roads are so small and not wide enough for two cars to pass. One has only to come and see the state of the grass verges all around the area to establish vehicles have to mount the pavement to get past other vehicles, at the present times with the huge Lorries using our village as short cut to the A31.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object on the grounds that the extra housing and the traffic arising from it will exacerbate the parking situation at Horsley Station and the village, together with worse congestion on Ockham Road North and South than already exists at peak times.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )
3. Local Roads: The roads are already in a poor state of repair and struggle to cope with the existing levels of daily traffic. At certain times of the day, several roads in the village are especially congested and it can be difficult to move around. Many local roads have no footpath or very narrow footpaths with the majority unlit. It can therefore be quite dangerous to use these footpaths, especially in winter and at night. There is absolutely no scope for additional roads or widening of roads due to existing houses meaning that the current problem will just be exacerbated if development on the scale suggested is allowed to take place. If it is assumed that every new house has at least 2 cars, this means that there will be, potentially, 6,000 more cars within a 3-mile radius of East and West Horsley. The impact on local roads will be horrendous.

4. Public transport: The West Horsley bus service is very limited and only operates 3 times per day, weekdays only and not at peak commuter times. The bus service operating from Guildford to Leatherhead travels along the A246 at the southern end of the village but is really only of use to residents living at that end of the village. Although the train service from Horsley to London and Guildford is generally good/frequent, parking at Horsley Station is already under significant pressure and the car park is often full. There is no land adjacent to the existing car park for additional parking. There is already a problem with rail passengers parking in the East Horsley Village Hall car park (thereby denying bona fide village hall users from parking there) and I would imagine this will only increase.

I object to the increase in traffic, (at least 25,000 vehicles,) that the Proposed Plan will incur. Gridlock will prevail in many locations, e.g. A3/Wisley interchange, the A3/M25, and also the A246/Ockham Road South. Our local roads in the Horsleys, and Ockham are narrow, winding lanes and will become very dangerous with greatly increased traffic, putting the many cyclists at risk. There are already unavoidable “pinch points”, such as in Ockham Road South, where vehicles find it difficult to pass a bus, lorry or even large van

**Do you consider this section of the document; complies with the Duty to Cooperate?** ( ), **is Sound?** ( ), **is Legally Compliant?** ( )

I object to policy I3 Sustainable transport for new developments

This is another vaguely aspirational policy, based on wishful thinking and not grounded in the practical realities of daily life. It consists of a standard, box-ticking list of local government measures unrelated to the specifics of the plan. Like infrastructure, transport appears to be an afterthought; the policy fails in its essential job of guiding planning decisions, since it assumes development of any kind can be supported by sustainable transport.

I support the concept and aim but OBJECT on the grounds that the practicalities of sustainable transport have not been properly considered, it is not sustainable to build dormitory towns and call them sustainable. Not everyone can cycle all the time.
How can large developments outside the town centre maximise sustainable travel? This is a matter for the planning process - the further from the town centre, the less sustainable the development will be.

Reliance on cycling discriminates against vulnerable members of the community. How can the disabled, those with small children, or the very old, or the infirm, or those who are ill, cycle outside the town in order to commute, or even inside the town? Only some people cycle – and Guildford has some steep hills, especially going out of town. Park and rides are slow – how can those with a 3 hour commute add 1 hour to their journey from using park and rides?

The only sustainable mechanism for new developments is to have them in the town centre close to the railway and the main shopping links where a hoppa bus can provide satisfactory links for those who cannot walk or cycle. While we welcome the intention to encourage rail travel by adding two new stations there could be unintended consequences.

Once again we see the word “expect” used which means the policy has no teeth. The word “expect” must be replaced with the word “require” so that this policy is enforceable.

There are a number of problems with this policy.

Congestion is a widely recognised factor in the local area of Guildford, and this is a major factor in the public response to the proposed housing numbers, which represents more than a 25% increase in housing numbers in a borough that is already profoundly congested. [Source: SHMA p61: itself sourced from ONS for 2013.] Residents recognise that to increase the population by this level within the existing transport provision is not feasible, and this informs much of the public response to the proposed level of housing accommodation.

It is not clear that this recognition, which is widespread through the borough, is shared by those who have drafted the Local Plan.

Guildford is a commuter town, which (compared to London) offers better quality of life and lower house prices, so it will continue to be a commuter town for the foreseeable future. As a result, access to the stations for commuting is of significance. It is not realistic to assume that traffic to stations for commuters can be replaced either by bus services (slow, intermittent, expensive, and in many cases absent completely) or by cycle. There is a capacity issue of car parking at the station, which effectively creates an absolute constraint on the feasibility of commuting from Guildford.

Cycling is attractive, and, for the urban young, especially students, it is both practical and cheap, and can be quick. However, as noted, those en route to work cannot be assumed to be able to cycle in working clothes. Elderly members of the community, those transporting small children, and the disabled cannot participate in cycling except to a limited extent. Effectively the "average" person deemed to be capable of cycling to substitute for car trips is an able-bodied adult not travelling to somewhere where smart clothing is required, not needing to arrive clean (or with showering facilities on arrival, not provided by all employers); this is not sufficiently widespread in terms of the local demographic for travellers that it should be allowed to determine policy – and of course, not needing to transport, for example, supermarket shopping after the trip. What about the disabled? the elderly? those looking after more than one child? Are they to be housebound? This is not a reasonable strategy. Before transport and buildings are determined on the basis of such a policy, it is also imperative that safe cycle routes are implemented through the borough. Cycling in winter on rural roads is inherently more dangerous. Upgrading these roads would not be feasible in terms of cost nor desirable in terms of local character.

Cycle lanes which disappear into normal traffic lanes, which travel over potholes and which allow cyclists to be threatened by HGVs are not conducive to wider cycle usage, nor should wider cycle usage be encouraged until it can be demonstrated that it is safe, which currently, locally, it is not. The A25 cycle corridor scheme (Part of LRN1) will exchange the risk between cyclists and vehicles sharing space for the risk between cyclists and pedestrians sharing space. Much of the A25 has no pedestrian area anyway outside the urban space. Many cyclists travel at high speed and they will be put into conflict with pedestrians including mothers with very young children and schoolchildren many of whom need to cross the road and hence cross the cycleway. This is likely to lead to accidents and pedestrians are being disadvantaged.

Road capacity reduces as average speeds come down due to congestion. Where proper cycle lanes or off-road lanes are not provided then it is inevitable that safe driving will lead to reduced average motor vehicle speeds and gap development
in the traffic stream. Both these effects act to reduce the capacity of our local road network. This loss of capacity has not been recognised in the Transport Strategy.

The concept of the park and ride with access into the town limited for those who live outside the town, is similarly flawed. Park and Ride is expensive, cumbersome and slow. It should be noted that in Oxford it has had a disastrous impact on small local retailers which is a retail segment that it is important to retain and support.

Use of park and rides increases the use of the strategic road network by local users, which is not what it is designed to do.

This proposal is combined with aggressive exclusion from the town of those who are living in peripheral communities, which will increasingly resemble housing estates. This is a strategy for sink estates through Surrey instead of the Green Belt - this is not a strategy for growth. Head offices will choose to go elsewhere, because highly skilled staff and management in the cutting edge industries that GBC wants to encourage, will not choose to live in a dense housing estate.

The existing extent of traffic congestion has not been fully recognised. As a consequence the impact of the various development scenarios has been understated and the infrastructure costs are an understatement.

The transport studies are incomplete and unpublished and this should have led to deferral of consideration of the Local Plan consultation process until it was possible to revise the plan post publication of the studies. This matter was raised by a number of councillors at the Full Council meeting on 24 May 2016 when the consultation was approved, but a motion to defer was overturned by the majority party.

Cross-subsidy in terms of infrastructure is envisaged. The infrastructure deficit needs to be resolved before there are large numbers of new residents exacerbating the current congestion. The funding of the new developments through CIL and S 106 is expected to contribute to the transport impacts across the borough, and there is negligible concern for the transport problems created within those new developments or in areas adjacent to them. This is not acceptable to existing residents and is likely to cause some problems with the future residents too, who may arguably feel aggrieved that the road funding associated with their developments is being subverted to other areas. While this may be permissible under the revised CIL regulations it is questionable whether it is morally acceptable to grant planning permission to build on the Green Belt in order to cross subsidise the building of roads or other infrastructure in the town centre or elsewhere across the borough or outside it.

Insetting of villages and the proposed relaxation of planning restrictions anywhere outside settlements (Green Belt or not), implied in P2, will lead to substantial infilling that will not require traffic assessment but will contribute a highly significant amount of additional car journeys overall - by a more insidious process than the large developments proposed.

Costs for rail or bus travel could be substantially reduced and would incentivise their use; but these are outside the remit of GBC and so cannot be encouraged by them.

It remains to be seen whether the proposed new stations will be delivered as they are not entirely within the council’s control. While we welcome the intention to encourage rail travel by adding two new stations there could be unintended consequences as the roads local to both sites are heavily congested. If parking facilities are inadequate this could lead to a need for onerous parking restrictions on roads nearby – possibly affecting small businesses adversely.

If parking facilities are adequate this will encourage more traffic onto local roads and commuters tend to be hurrying to catch a train or anxious to return home after a day at work. That does not bode well for the safety of pedestrians needing to cross those roads. House prices near to stations tend to attract higher prices and this will increase the profit motive to developers wanting to build on greenfield sites nearby. It will also mean that so-called affordable housing will be even less affordable at these sites. It may also lead, over time, to an undesirable loss of social-rented housing in the vicinity. A minor issue is that stopping at the additional stations will increase the train journey times to and from Guildford town centre on the lines affected.

**Detail in Policy wording – flawed drafting:**

The policy begins and ends with the weak and totally ineffective word, in planning terms, “expect”. 

---

Section page number 91 of 484
Contributing through CIL will not necessarily address needs local to the development concerned, and created by it, but may involve solving existing problems elsewhere in the Borough.

Bullets 4 & 5 – improvements to park and ride facilities imply increased car usage from outside the town and the parking provision acknowledges that most journeys will be by car.

Bullet 6 - Has the Vehicle parking Supplementary Planning Document been published? It is not listed as key evidence but the policy refers. How can a policy have been determined with reference to a non-existent part of the evidence base?

Bullets 7, 8, 9 & 10 are weak & aspirational with let-out words such as “facilitate the use of”, “wherever possible”, “contribute” and “where appropriate” (and poorly bulleted!). How will the use of ultra low emission vehicles be facilitated? This is such a vague aspiration as to be meaningless.

The policy only “expects” new developments to contribute, demonstrate adequate provision, etc – it should enforce them. A transport statement AND assessment ought to be a fixed requirement – not a matter for negotiation – while the policy implies that this might be waived even for sites that generate significant amounts of movement.

The construction traffic, noise and pollution generated by meeting the proposed housing number will be excessive. It will have a highly significant impact on the amenity and health of those residents living close to the development sites and those who live on the routes that will be taken by the construction traffic.

The last paragraph says nothing new in planning terms but does mean that the Local Plan has not fully and properly considered the traffic impacts of the proposed sites. We have experience of how misleading the TAs produced by developers can be – using averaging techniques and understated baseline figures, days when schools are not operating and many other devices to pull the wool over the eyes of planning authorities. This aspect is a denial of responsibility by GBC. The result is that Green Belt and countryside will be released for development when fuller consideration of traffic impacts at the Local Plan stage should have prevented that. If the planning authority is taken in by developers’ TAs then wholly unsuitable developments will be permitted.

**Introduction:**

The spatial development strategy (paragraph 4.6.20 and Policy S2) does not address the development needs of the borough ensuring distances are practical; this is certainly not the case with all the development sites. For example, the Wisley airfield site will generate a massive increase in vehicle journeys; developments in West Horsley will lead to greater car use, as will the proposed developments at Garlick’s Arch and in Send. The obvious site choice for sustainable development would be on brownfield sites in the town but the Local Plan proposes allocating those sites to the declining retail industry instead.

Paragraph 4.6.21 suggests that sustainable transport is promoted. Far from providing sustainable transport this Plan will generate a massive increase in motor vehicle journeys. The Plan cannot force residents to ride bicycles or walk everywhere.

**Justification:**

Paragraph 4.6.22 seeks to set out a reasoned justification and alleges that development should offer real travel choice by sustainable transport modes. There is little sign that this is being taken seriously enough now.

Paragraph 4.6.23 proposed to bring forward a Vehicle Parking Supplementary Planning Document. It is not clear what to make of this. Failure to provide off-street vehicle parking will not prevent residents owning cars and finding somewhere else to park but it may make life difficult for key workers to commute to their place of work. How can a consultation take place relying on non-existent background documents which are key parts of the Evidence Base? How can anyone comment on non-existent documents, and even if brought forward part-way through the consultation, any comments will be prejudiced by the absence of this informing the start of the consultation.

Paragraph 4.6.24 refers to the Sustainable Movement Corridor. Bus services are aspirational but economic reality may mean that they fail to persist. There is not enough detail published on how the SMC will be delivered – suggesting that it is aspirational rather than fully thought through.
Paragraph 4.6.26 refers to reviewing existing transport facilities and likely transport generation as part of assessing the amount of incremental travel demand. That consideration should have taken place in a robust and detailed manner on a site-by-site basis before the sites were allocated in the Local Plan. It is not sufficient to leave that until the planning application stage as intended by GBC and SCC, given that all sites will be subject to “permission in principle” under the Housing and Planning Act 2016 and so will not be capable of subsequent rejection on these grounds.

Paragraph 4.6.27 notes that Development must mitigate its transport impacts. The measures described rely entirely on people taking them up and not dumping their travel information packs in the nearest bin. It is clear that GBC, in response to concerns about elderly and disabled people failing to be coerced into riding bicycles are now suggesting tricycles to overcome this obstacle to their aspirations. They should be aware that while tricycles may help with balance issues they are heavier and harder to ride uphill. While the policy (unusually) notes that mitigation must be provided, in fact this is then diluted to suggest that facilities for electric car charging points and encouragement to car-share can be sufficient; all are optional and therefore meaningless.

However well designed a development is it will make matters worse during construction and if on a greenfield site, it is hard to see how it will achieve environmental benefits. On the other hand, replacing inefficient buildings on a brownfield site could lead to benefits in the long term.

Paragraph 4.6.28 notes “Developers should have regard” to the “Infrastructure Schedule at Appendix C”. The only thing that developers have regard for is forcing their application through and maximising their profit – that is the business they are in. Appendix C is lacking in detail. It notes, for example that there will be new town centre bus facilities at a cost of £5-10 million – such vagueness make it clear that no real costing or analysis of proposals has been prepared, and that the Infrastructure improvements proposed have not been properly considered. Having regard to fluid and uncertain proposals is effectively meaningless as a constraint or a requirement.

Paragraph 4.6.29 requires that applications need to address the transport implications of the proposed development. Experience with recent planning applications suggests that developers will do everything in their power to understate transport impacts and we have no faith in GBC and SCC taking a sufficiently robust line on this.

Key Evidence is missing or inadequate.

The Strategic Transport Assessment (SCC 2016) is listed as “forthcoming”, but this plan has been produced in the absence of any strategic transport review.

There are further inadequacies in the Evidence Base, highlighted in the following annexes, which include examples of deficiencies, ambiguities and inadequacies in the transport and infrastructure evidence. This is not a comprehensive list of deficiencies, but serves as an illustration of the poor evidence on which decisions have been based.

**Annexe 1**

Comments on Guildford Borough Transport Study 2016

Page 2 – “address the historic infrastructure deficit” - developers are not required to do this?

Page 2 – It is wrong to claim that the cycle infrastructure along the A25 is good – and many cyclists are not careful, so putting them in contention with pedestrians is not a good idea.

Page 5 – The decision on Heathrow or Gatwick has yet to be taken but airport expansion in the south-east cannot be regarded as sustainable development and, although GBC has no control over such external decisions, its own growth agenda will drive a need for that expansion.

Page 6 An additional weakness is alternative “road closure diversion” routes for the SRN on the LRN

Page 6 Are the “Committed Improvements” actually committed and guaranteed to be delivered?

Page 7 The rail strategy does not provide for Wisley (residents would drive to stations)
How long will it take to deliver Crossrail 2? “We hope that Crossrail 2 could be operational by 2030, but we are in the very early stages of planning and no decision to build it has been made.”

Guildford platform capacity still many years away if ever.

The rail strategy anticipates many improvements that have not been secured and may have unintended consequences if they proceed (see above).

The Southern Rail Access to Heathrow (see the feasibility study dated December 2015 – although other proposals may be put forward (e.g.by Hounslow)) is still in its early stages and would have significant impacts on open space beyond our Borough. For example, all options in the feasibility study would use Staines Moor SSSI and Option 4 would use Bedfont Lakes Country Park (a Local Nature Reserve and SNCI).

The various options would use existing commercial, residential and highways land in varying degrees. It seems unlikely that a solution will be delivered within the Plan period and removal of highly valued open space with high biodiversity (wherever it is in South-east England) cannot be regarded as sustainable.

There is a stark contrast between the plans for the town centre which involve encouraging a reduction in traffic by reducing roadspace and the plans for the SRN and parts of the LRN which involve increasing capacity. While increasing capacity may reduce some areas of congestion in the short term, history suggests that traffic will rapidly grow until the improved roads are congested once again. This can hardly be regarded as sustainable. A sustainable option would be to apply a very substantial traffic infrastructure constraint on the housing number.

While the A3 Guildford Tunnel aspiration has some environmental advantages over widening (in particular for residents living close to the A3), the environmental burden of the construction phase will be far higher and aspects such as location of ventilation stacks and their local effect (in all weather conditions) do not appear to have been considered.

Under Weaknesses the point about A roads in Guildford Town also applies to surrounding areas in the Borough and beyond. The anticipated improvements ignore existing congestion to the south and east of Guildford – presumably because SCC’s transport assessment methodology only identifies the tip of the iceberg. The current Plan will see increased congestion and a resultant reduction in air quality in many areas beyond the town centre.

“Largely commercial bus services” is seen as a strength whereas it should be seen as a weakness with a trend to reduced subsidies and the provision of bus services, especially in rural areas, being increasingly dependent on commercial gain. It is difficult to see this changing under the current Government cuts philosophy. The point “Subject to business case including funding” under Aspirations demonstrates this point.

We welcome the aspiration to “Expand the public realm through significantly extended pedestrian-priority areas”.

Guildford is well behind other areas in monitoring air quality let alone attempting to reduce it.

The introduction talks about reductions in some pollutants. This may be the case for pollutants such as Sulphur Dioxide, which contributed to the visible London smogs, but it is not true of diesel vehicle emissions which have increased as a result of Government policy including its aggressive growth agenda and population increase through immigration.

30 accessible electric vehicle charging points are only an aspiration and will be nowhere near enough if there is a real shift to electric vehicles.

It is clear from the “Strategy outcomes” that GBC would prefer not to follow other areas in pro-actively tackling air quality.

The timescales indicate that the main rail improvements (Including the two new stations) are unlikely to be delivered until the end of the Plan period or even later. The sites that are supposedly justified by their inclusion will generate a major increase in road traffic in the interim and it may be more difficult to achieve this aspect of modal shift in the longer term. The same can be said about the other traffic infrastructure proposals. Residential development is being scheduled before the infrastructure that it will need.
Page 24 Monitoring – “Increase” needs to be in proportion to population growth as otherwise failure will be taken as success. “An Increase in average vehicle speeds” is inconsistent with the desire to reduce the number of persons killed or seriously injured. For example, some A roads pass through residential areas where pedestrians, including schoolchildren, are trying to cross the road at peak times. It is noted that increase in vehicle speeds is only desired in the morning. Going home from work does not seem to matter!

Annexe 2

GTAMS

NPPF and NPPG The Plan ignores the points concerning Green Belt and protecting the environment. GBC have tried to get round this by spinning their messages and using misleading statistics including a major understatement of the area of Green Belt to be removed.

Planning Update (March 2015) – The point in this update concerning Green Belt has been ignored

Monitoring Indicators:

Ten years is far too long to wait for information on whether the approach is working or not. The target requires only an increase. This would permit an increase less than that in line with any population growth to be regarded as success. The bar has been set well within the failure range.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3

Do you consider this section of the document; complies with the Duty to Cooperate? ( No ), is Sound? ( No ), is Legally Compliant? ( )

I support the concept and aim but OBJECT on the grounds that the practicalities of sustainable transport have not been properly considered, it is not sustainable to build dormitory towns and call them sustainable. Not everyone can cycle all the time.

How can large developments outside the town centre maximise sustainable travel? This is a matter for the planning process - the further from the town centre, the less sustainable the development will be.

Reliance on cycling discriminates against vulnerable members of the community. How can the disabled, those with small children, or the very old, or the infirm, or those who are ill, cycle outside the town in order to commute, or even inside the town? Only some people cycle – and Guildford has some steep hills, especially going out of town. Park and rides are slow – how can those with a 3 hour commute add 1 hour to their journey from using park and rides?

The only sustainable mechanism for new developments is to have them in the town centre close to the railway and the main shopping links where a hopa bus can provide satisfactory links for those who cannot walk or cycle.

While I welcome the intention to encourage rail travel by adding two new stations there could be unintended consequences.

Once again I see the word “expect” used which means the policy has no teeth. The word “expect” must be replaced with the word “require” so that this policy is enforceable.

There are a number of problems with this policy.

Congestion is a widely recognised factor in the local area of Guildford, and this is a major factor in the public response to the proposed housing numbers, which represents more than a 25% increase in housing numbers in a borough that is already profoundly congested. [Source: SHMA p61: itself sourced from ONS for 2013.] Residents recognise that to increase the population by this level within the existing transport provision is not feasible, and this informs much of the public response to the proposed level of housing accommodation.

It is not clear that this recognition, which is widespread through the borough, is shared by those who have drafted the Local Plan.

Guildford is a commuter town, which (compared to London) offers better quality of life and lower house prices, so it will continue to be a commuter town for the foreseeable future. As a result, access to the stations for commuting is of significance. It is not realistic to assume that traffic to stations for commuters can be replaced either by bus services (slow, intermittent, expensive, and in many cases absent completely) or by cycle. There is a capacity issue of car parking at the station, which effectively creates an absolute constraint on the feasibility of commuting from Guildford.

Cycling is attractive, and, for the urban young, especially students, it is both practical and cheap, and can be quick. However, as noted, those en route to work cannot be assumed to be able to cycle in working clothes. Elderly members of the community, those transporting small children, and the disabled cannot participate in cycling except to a limited extent. Effectively the "average" person deemed to be capable of cycling to substitute for car trips is an able-bodied adult not.
travelling to somewhere where smart clothing is required, not needing to arrive clean (or with showering facilities on arrival, not provided by all employers); this is not sufficiently widespread in terms of the local demographic for travellers that it should be allowed to determine policy – and of course, not needing to transport, for example, supermarket shopping after the trip. What about the disabled? the elderly? those looking after more than one child? Are they to be housebound? This is not a reasonable strategy. Before transport and buildings are determined on the basis of such a policy, it is also imperative that safe cycle routes are implemented through the borough. Cycling in winter on rural roads is inherently more dangerous. Upgrading these roads would not be feasible in terms of cost nor desirable in terms of local character.

Cycle lanes which disappear into normal traffic lanes, which travel over potholes and which allow cyclists to be threatened by HGVs are not conducive to wider cycle usage, nor should wider cycle usage be encouraged until it can be demonstrated that it is safe, which currently, locally, it is not. The A25 cycle corridor scheme (Part of LRN1) will exchange the risk between cyclists and vehicles sharing space for the risk between cyclists and pedestrians sharing space. Much of the A25 has no pedestrian area anyway outside the urban space. Many cyclists travel at high speed and they will be put into conflict with pedestrians including mothers with very young children and schoolchildren many of whom need to cross the road and hence cross the cycleway. This is likely to lead to accidents and pedestrians are being disadvantaged.

Road capacity reduces as average speeds come down due to congestion. Where proper cycle lanes or off-road lanes are not provided then it is inevitable that safe driving will lead to reduced average motor vehicle speeds and gap development in the traffic stream. Both these effects act to reduce the capacity of our local road network. This loss of capacity has not been recognised in the Transport Strategy.

The concept of the park and ride with access into the town limited for those who live outside the town, is similarly flawed. Park and Ride is expensive, cumbersome and slow. It should be noted that in Oxford it has had a disastrous impact on small local retailers which is a retail segment that it is important to retain and support.

Use of park and rides increases the use of the strategic road network by local users, which is not what it is designed to do.

This proposal is combined with aggressive exclusion from the town of those who are living in peripheral communities, which will increasingly resemble housing estates. This is a strategy for sink estates through Surrey instead of the Green Belt - this is not a strategy for growth. Head offices will choose to go elsewhere, because highly skilled staff and management in the cutting edge industries that GBC wants to encourage, will not choose to live in a dense housing estate.

The existing extent of traffic congestion has not been fully recognised. As a consequence the impact of the various development scenarios has been understated and the infrastructure costs are an understatement.

The transport studies are incomplete and unpublished and this should have led to deferral of consideration of the Local Plan consultation process until it was possible to revise the plan post publication of the studies. This matter was raised by a number of councillors at the Full Council meeting on 24 May 2016 when the consultation was approved, but a motion to defer was overturned by the majority party.

Cross-subsidy in terms of infrastructure is envisaged. The infrastructure deficit needs to be resolved before there are large numbers of new residents exacerbating the current congestion. The funding of the new developments through CIL and S 106 is expected to contribute to the transport impacts across the borough, and there is negligible concern for the transport problems created within those new developments or in areas adjacent to them. This is not acceptable to existing residents and is likely to cause some problems with the future residents too, who may arguably feel aggrieved that the road funding associated with their developments is being subverted to other areas. While this may be permissible under the revised CIL regulations it is questionable whether it is morally acceptable to grant planning permission to build on the Green Belt in order to cross subsidise the building of roads or other infrastructure in the town centre or elsewhere across the borough or outside it.

Insetting of villages and the proposed relaxation of planning restrictions anywhere outside settlements (Green Belt or not), implied in P2, will lead to substantial infilling that will not require traffic assessment but will contribute a highly significant amount of additional car journeys overall - by a more insidious process than the large developments proposed.
Costs for rail or bus travel could be substantially reduced and would incentivise their use; but these are outside the remit of GBC and so cannot be encouraged by them.

It remains to be seen whether the proposed new stations will be delivered as they are not entirely within the council’s control. While I welcome the intention to encourage rail travel by adding two new stations there could be unintended consequences as the roads local to both sites are heavily congested. If parking facilities are inadequate this could lead to a need for onerous parking restrictions on roads nearby – possibly affecting small businesses adversely.

If parking facilities are adequate this will encourage more traffic onto local roads. House prices near to stations tend to attract higher prices and this will increase the profit motive to developers wanting to build on greenfield sites nearby. It will also mean that so-called affordable housing will be even less affordable at these sites. It may also lead, over time, to an undesirable loss of social-rented housing in the vicinity. A minor issue is that stopping at the additional stations will increase the train journey times to and from Guildford town centre on the lines affected.

**Detail in Policy wording – flawed drafting:**

The policy begins and ends with the weak and totally ineffective word, in planning terms, “expect”.

Contributing through CIL will not necessarily address needs local to the development concerned, and created by it, but may involve solving existing problems elsewhere in the Borough.

Bullets 4 & 5 – improvements to park and ride facilities imply increased car usage from outside the town and the parking provision acknowledges that most journeys will be by car.

Bullet 6 - Has the Vehicle parking Supplementary Planning Document been published? It is not listed as key evidence but the policy refers. How can a policy have been determined with reference to a non-existent part of the evidence base?

Bullets 7,8, 9 & 10 are weak & aspirational with let-out words such as “facilitate the use of”, “wherever possible”, “contribute” and “where appropriate” (and poorly bulleted!). How will the use of ultra low emission vehicles be facilitated? This is such a vague aspiration as to be meaningless.

The policy only “expects” new developments to contribute, demonstrate adequate provision, etc – it should enforce them. A transport statement AND assessment ought to be a fixed requirement – not a matter for negotiation – while the policy implies that this might be waived even for sites that generate significant amounts of movement.

The construction traffic, noise and pollution generated by meeting the proposed housing number will be excessive. It will have a highly significant impact on the amenity and health of those residents living close to the development sites and those who live on the routes that will be taken by the construction traffic.

The last paragraph says nothing new in planning terms but does mean that the Local Plan has not fully and properly considered the traffic impacts of the proposed sites. We have experience of how misleading the TAs produced by developers can be – using averaging techniques and understated baseline figures, days when schools are not operating and many other devices to pull the wool over the eyes of planning authorities. This aspect is a denial of responsibility by GBC. The result is that Green Belt and countryside will be released for development when fuller consideration of traffic impacts at the Local Plan stage should have prevented that. If the planning authority is taken in by developers’ TAs then wholly unsuitable developments will be permitted.

**Introduction:**

The spatial development strategy (paragraph 4.6.20 and Policy S2) does not address the development needs of the borough ensuring distances are practical; this is certainly not the case with all the development sites. For example, the Wisley airfield site will generate a massive increase in vehicle journeys; developments in West Horsley will lead to greater car use, as will the proposed developments at Garlick’s Arch and in Send. The obvious site choice for sustainable development would be on brownfield sites in the town but the Local Plan proposes allocating those sites to the declining retail industry instead.
Paragraph 4.6.21 suggests that sustainable transport is promoted. Far from providing sustainable transport this Plan will generate a massive increase in motor vehicle journeys. The Plan cannot force residents to ride bicycles or walk everywhere.

Justification:

Paragraph 4.6.22 seeks to set out a reasoned justification and alleges that development should offer real travel choice by sustainable transport modes. There is little sign that this is being taken seriously enough now.

Paragraph 4.6.23 proposed to bring forward a Vehicle Parking Supplementary Planning Document. It is not clear what to make of this. Failure to provide off-street vehicle parking will not prevent residents owning cars and finding somewhere else to park but it may make life difficult for key workers to commute to their place of work. How can a consultation take place relying on non-existent background documents which are key parts of the Evidence Base? How can anyone comment on non-existent documents, and even if brought forward part-way through the consultation, any comments will be prejudiced by the absence of this informing the start of the consultation.

Paragraph 4.6.24 refers to the Sustainable Movement Corridor. Bus services are aspirational but economic reality may mean that they fail to persist. There is not enough detail published on how the SMC will be delivered – suggesting that it is aspirational rather than fully thought through.

Paragraph 4.6.26 refers to reviewing existing transport facilities and likely transport generation as part of assessing the amount of incremental travel demand. That consideration should have taken place in a robust and detailed manner on a site-by-site basis before the sites were allocated in the Local Plan. It is not sufficient to leave that until the planning application stage as intended by GBC and SCC, given that all sites will be subject to “permission in principle” under the Housing and Planning Act 2016 and so will not be capable of subsequent rejection on these grounds.

Paragraph 4.6.27 notes that Development must mitigate its transport impacts. The measures described rely entirely on people taking them up and not dumping their travel information packs in the nearest bin. It is clear that GBC, in response to concerns about elderly and disabled people failing to be coerced into riding bicycles are now suggesting tricycles to overcome this obstacle to their aspirations. They should be aware that while tricycles may help with balance issues they are heavier and harder to ride uphill. While the policy (unusually) notes that mitigation must be provided, in fact this is then diluted to suggest that facilities for electric car charging points and encouragement to car-share can be sufficient; all are optional and therefore meaningless.

However well designed a development is it will make matters worse during construction and if on a greenfield site, it is hard to see how it will achieve environmental benefits. On the other hand, replacing inefficient buildings on a brownfield site could lead to benefits in the long term.

Paragraph 4.6.28 notes “Developers should have regard” to the “Infrastructure Schedule at Appendix C”. The only thing that developers have regard for is forcing their application through and maximising their profit – that is the business they are in. Appendix C is lacking in detail. It notes, for example that there will be new town centre bus facilities at a cost of £5-10 million – such vagueness make it clear that no real costing or analysis of proposals has been prepared, and that the Infrastructure improvements proposed have not been properly considered. Having regard to fluid and uncertain proposals is effectively meaningless as a constraint or a requirement.

Paragraph 4.6.29 requires that applications need to address the transport implications of the proposed development. Experience with recent planning applications suggests that developers will do everything in their power to understate transport impacts and I have no faith in GBC and SCC taking a sufficiently robust line on this.

Key Evidence is missing or inadequate.

The Strategic Transport Assessment (SCC 2016) is listed as “forthcoming”, but this plan has been produced in the absence of any strategic transport review.
There are further inadequacies in the Evidence Base, highlighted in the following annexes, which include examples of deficiencies, ambiguities and inadequacies in the transport and infrastructure evidence. This is not a comprehensive list of deficiencies, but serves as an illustration of the poor evidence on which decisions have been based.

Annexe 1

Comments on Guildford Borough Transport Study 2016

Page 2 – “address the historic infrastructure deficit” - developers are not required to do this?

Page 2 – It is wrong to claim that the cycle infrastructure along the A25 is good – and many cyclists are not careful, so putting them in contention with pedestrians is not a good idea.

Page 5 – The decision on Heathrow or Gatwick has yet to be taken but airport expansion in the south-east cannot be regarded as sustainable development and, although GBC has no control over such external decisions, its own growth agenda will drive a need for that expansion.

Page 6 An additional weakness is alternative “road closure diversion” routes for the SRN on the LRN

Page 6 Are the “Committed Improvements” actually committed and guaranteed to be delivered?

Page 7 The rail strategy does not provide for Wisley (residents would drive to stations)

Page 7 How long will it take to deliver Crossrail 2? “We hope that Crossrail 2 could be operational by 2030, but we are in the very early stages of planning and no decision to build it has been made.”

Page 7 Guildford platform capacity still many years away if ever.

Page 7 The rail strategy anticipates many improvements that have not been secured and may have unintended consequences if they proceed (see above)

Page 7 The Southern Rail Access to Heathrow [see the feasibility study dated December 2015 – although other proposals may be put forward (e.g.by Hounslow)] is still in its early stages and would have significant impacts on open space beyond our Borough. For example, all options in the feasibility study would use Staines Moor SSSI and Option 4 would use Bedfont Lakes Country Park (a Local Nature Reserve and SNCI).

The various options would use existing commercial, residential and highways land in varying degrees. It seems unlikely that a solution will be delivered within the Plan period and removal of highly valued open space with high biodiversity (wherever it is in South-east England) cannot be regarded as sustainable.

Page 10 and 13 There is a stark contrast between the plans for the town centre which involve encouraging a reduction in traffic by reducing roadspace and the plans for the SRN and parts of the LRN which involve increasing capacity. While increasing capacity may reduce some areas of congestion in the short term, history suggests that traffic will rapidly grow until the improved roads are congested once again. This can hardly be regarded as sustainable. A sustainable option would be to apply a very substantial traffic infrastructure constraint on the housing number.

Page 10 While the A3 Guildford Tunnel aspiration has some environmental advantages over widening (in particular for residents living close to the A3), the environmental burden of the construction phase will be far higher and aspects such as location of ventilation stacks and their local effect (in all weather conditions) do not appear to have been considered.

Page 14 Under Weaknesses the point about A roads in Guildford Town also applies to surrounding areas in the Borough and beyond. The anticipated improvements ignore existing congestion to the south and east of Guildford – presumably because SCC’s transport assessment methodology only identifies the tip of the iceberg. The current Plan will see increased congestion and a resultant reduction in air quality in many areas beyond the town centre.

Page 16 “Largely commercial bus services” is seen as a strength whereas it should be seen as a weakness with a trend to reduced subsidies and the provision of bus services, especially in rural areas, being increasingly dependent on commercial
gain. It is difficult to see this changing under the current Government cuts philosophy. The point “Subject to business case including funding” under Aspirations demonstrates this point.

Page 18 I welcome the aspiration to “Expand the public realm through significantly extended pedestrian-priority areas”

Page 19 Guildford is well behind other areas in monitoring air quality let alone attempting to reduce it.

The introduction talks about reductions in some pollutants. This may be the case for pollutants such as Sulphur Dioxide, which contributed to the visible London smogs, but it is not true of diesel vehicle emissions which have increased as a result of Government policy including its aggressive growth agenda and population increase through immigration.

30 accessible electric vehicle charging points are only an aspiration and will be nowhere near enough if there is a real shift to electric vehicles.

It is clear from the “Strategy outcomes” that GBC would prefer not to follow other areas in pro-actively tackling air quality.

Page 22/23/24 The timescales indicate that the main rail improvements (Including the two new stations) are unlikely to be delivered until the end of the Plan period or even later. The sites that are supposedly justified by their inclusion will generate a major increase in road traffic in the interim and it may be more difficult to achieve this aspect of modal shift in the longer term. The same can be said about the other traffic infrastructure proposals. Residential development is being scheduled before the infrastructure that it will need.

Page 24 Monitoring – “Increase” needs to be in proportion to population growth as otherwise failure will taken as success. “An Increase in average vehicle speeds” is inconsistent with the desire to reduce the number of persons killed or seriously injured. For example, some A roads pass through residential areas where pedestrians, including schoolchildren, are trying to cross the road at peak times. It is noted that increase in vehicle speeds is only desired in the morning. Going home from work does not seem to matter!

Annexe 2

GTAMS

NPPF and NPPG The Plan ignores the points concerning Green Belt and protecting the environment. GBC have tried to get round this by spinning their messages and using misleading statistics including a major understatement of the area of Green Belt to be removed.

Planning Update (March 2015) – The point in this update concerning Green Belt has been ignored

Monitoring Indicators:

Ten years is far too long to wait for information on whether the approach is working or not. The target requires only an increase. This would permit an increase less than that in line with any population growth to be regarded as success. The bar has been set well within the failure range.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Item 4.6.20 makes a statement that is clearly at odds with the choice of sites which will generate a major increase in private motor vehicle journeys. For example, the Lead Councillor for the Local Plan seems to be alone in believing that a sustainable plan for Wisley Airfield will be found.

This land contributes hugely to the open character of the village and provides an attractive setting for the village's community facilities.

Any housing development on this elevated site would impact negatively on the attractiveness of the village and surrounding area. Access to this site would be on Chinthurst Lane. This road is already heavily congested with 'rat run' and local traffic and is not capable of absorbing further vehicles. The road is without pavements in places and is already a serious health risk to pedestrians, including older people and young children. Worsen this situation and the dangers will increase significantly.

I object to poor air quality concerns (Policy I3)

Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

Transport and Roads:

• Many of the traffic routes in and around the Horsleys are only lanes, often with pavements on one side of the carriageway. The roads are already busy, with queues at rush hour and the state of potholes on most roads is atrocious. Considering many households now have two cars, the potential increase in traffic from so many proposed new homes would overwhelm the existing infrastructure and lead to serious, and potentially life threatening, safety concerns.

• Car parking at Horsley railway station is already limited and usually full during the working week. There is no adjacent land available for additional car parking provision. A significant increase in the villages’ population will increase pressure on station car parking and increase traffic movements to and from the station, which already has a terribly dangerous intersection at its access junction. There is little or no scope for improvement to this situation.

My garden backs onto the A323 and the road and general area is chocked with traffic already. I and some of my neighbours are suffering from C.O.P.D.

"This kind of extra traffic and associated pollution would bring with it health hazards" as stated by the BBC report (Road pollution is more than twice as deadly as traffic accidents, according to a study of UK air quality) The Royal Surrey Hospital is working to capacity already and is £11m in debt. The state of some of the local roads needs addressing before considering a larger population in this area.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
I object to plan from a traffic and parking perspective.

Most of the new houses will have at least 2 cars, which means 6,000 more cars within a three mile radius of the villages. The roads and major junctions already have considerably heavy traffic at peak times and cannot cope with more. Sometimes it takes 15 minutes to queue and then get onto the Epsom Road from Ockham Road by the Duke of Wellington. Parking is already very tricky at times in the village, as it is at the railway stations and medical centre.

I object to the plans from a commuting perspective.

Trains to London at peak times are already at capacity. They simply cannot take any more people. More commuters will mean misery for us on daily basis.

I object to the plan due to the impact upon the local Road Network.

In respect of the proposals for development at Wisley Airfield and for an upgrade the current A3 junction at Burmington to a full 4-way junction, SCC traffic modelling anticipates increased use of three routes accessing the A3 at Burmington in order to travel to Guildford and beyond. The SCC report states that “consequently, it indicates that further thought may have to be given to managing traffic in this area as part of a transport assessment should the development be progressed”. It appears that the Plan is proposing a strategic site at Wisley Airfield without even knowing what improvements to the local road infrastructure will be required. If that is the case for Wisley Airfield, then it is almost certainly true for the proposed developments in East and West Horsley as well.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object to the congestion that development will cause to the local village roads and the lack of planned road infrastructure. The A3 and the village roads around Horsley are already congested. Many of the roads in Horsley are narrow, without pavements for pedestrians. To add more vehicles into the mix would be dangerous and would have a damaging effect on the character of our rural areas.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Roads and infrastructure. There is a regular service on trains to and from London and Guildford from Horsley station. Parking at the station car park is becoming an increasing problem for both commuters and later travellers. There would be an increase in traffic movements from West Horsley to the station for dropping off and collecting passengers. This is particularly noticeable at school times and for commuters.

There would also be a large increase in car usage on already busy roads as for each new house there is often another 1 or 2 cars using the roads.

To summarise, the facilities and infrastructure of West Horsley cannot support anything like the scale of development which is proposed. There appear to be no plans to expand the infrastructure before new homes are built.

I hope these comments are of assistance in your deliberations.

The weight of traffic has increased with an alarming rate, not only due to many newly built houses (infill) but also due to Satellite Navigation systems sending traffic from the A246 through East Horsley to the A3 and A246. The roads are barely wide enough to accommodate the heavy load of lorries, coaches, large 4x4s and other traffic. There is nowhere to park in the village as the carpark behind the shops fills up very rapidly these days. So THE HORSLEYS ARE FULL.

I therefore strongly object to the horrifying idea of building any more houses in or around the Horsleys.

4. West Horsley village is not capable of supporting the proposed increase in Already the local infrastructure, amenities and services can be overwhelmed with traffic and some are in particularly high demand such as the Medical Health Centre, schools, railway parking and shopping parking. Parking at East Horsley station is already a major issue (personal experience has shown that often, when taking a mid-morning train, the car park is virtually full and on more than one occasion I have taken the last space - whilst more people were seeking to park). In rush hour the trains themselves are running at a high capacity even by the time they arrive at Horsley station, with the limited number of faster trains being particularly full- the proposed additional housing will create serious capacity issues for rail transport. This doesn't seem to have been taken into account. Road transport is a poor alternative choice given the capacity challenges already experienced in the area. Access to the local Medical Surgery, Village Hall and sports facilities are equally constrained. The local West Horsley village store may close this year as the owner wishes to retire which will place even greater strain on the other local shops. The same can be said for utilisation of the local shopping parades should the village population be expanded in such a dramatic fashion. In short, there are serious capacity issues that are not addressed in The Plan.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

The plan says little about the infrastructure which would be needed to support over 500 new homes, increasing the number of homes in West Horsley by over 50% - not to mention the 2000 proposed for the nearby Wisley Airfield site. However we fear great changes - and problems - in several areas, including:-

1. Traffic and Communications

The roads in the village are scarcely adequate for the present traffic. Some would need to be widened, there would be a need for traffic islands and roundabouts in some places, street lighting would have to be installed, extra parking areas would be needed in the village, and all this would adversely affect our rural environment.

Furthermore, many new residents would want to commute from Horsley station and park their cars there. The parking area at the station is already inadequate, and if 50% or more extra cars are using it, where will you find space for them?

12. I object to poor air quality concerns (Policy I3)

As a local resident, with a young family I am acutely concerned, with air quality and the levels of harmful motor transport emissions. Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” As this development, is within 400m from my house, I ask GBC to detail how they achieve this? This proposed development, particularly in the north east of the borough will lead to considerable further congestion, and emissions as traffic will mount up waiting for the lights to change. This will be particularly acute to nearby properties such as mine. This will have a detrimental health effect to my children when they play in their garden.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1.1 We object to policy I3 Sustainable transport for new developments

1.2 This is another vaguely aspirational policy, based on wishful thinking and not grounded in the practical realities of daily life. It consists of a standard, box-ticking list of local government measures unrelated to the specifics of the plan. Like infrastructure, transport appears to be an afterthought; the policy fails in its essential job of guiding planning decisions, since it assumes development of any kind can be supported by sustainable transport.

1.3 The sustainability of the dormitory settlements which the Council want built across the countryside depends on a general “modal shift” from private car use to walking, cycling and public transport. This is unrealistic. The proposed sites are often miles away from the nearest railway station. Bus services even in the largest villages are almost non-existent – just one bus to and from Guildford each day in the Horsleys and none at weekends. Since bus services depend on profitability, they cannot be expanded and the Council are not proposing to subsidise new ones. Rural buses are too slow anyway for busy people. Most rural roads in the borough are narrow, winding, hilly, potholed, muddy and unlit. Many flood badly and have no footpaths.

1.4 The desired modal shift would require a comprehensive co-ordination of bus and train timetables with services every few minutes, seven days a week, to stops within walking distance of every home in the borough. This kind of integrated public transport system has been achieved in Switzerland, for instance, but only at huge public cost and thanks to a political consensus supporting state ownership of trains, buses and the post office, which delivers rural passengers as well as mail. There is absolutely no chance of this in the UK.

1.5 The vast majority of the borough’s residents are not, in practice, able to cycle. This includes children, the elderly, commuters who have to look smart, the infirm, the unfit and people carrying goods or shopping of any kind. Dependence on walking and cycling discriminates against these groups, which include some of the most vulnerable members of the community. It is socially unjust. One in two working people in Guildford commute for up to 3 hours a day, as I used to do. They will not leave their cars for even part of their journey if it means longer travel times.

1.6 Park-and-rides are a welcome part of the transport mix but are too slow for commuters and others on a tight schedule. Well-off pensioners seem to be the main beneficiaries. For an adult couple going shopping it is still cheaper to park in town. 1.7 Forget about water buses. The Wey is too narrow and, with a river speed limit of 4mph, boats are too slow for anything but recreation. Except on the tideway, not even the Thames has such services.

1.8 The addition of two new stations appears attractive but will slow down train journeys, which are already slower than at any time since the 1930s. Knock-on effects on localities where the new stations are built have not been worked out or presented.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
The JWRA support the additions that state that any new developments must take into account the impact on air quality, noise and the environment.

---

You need to visit Horsley Station at 9.30am Monday to Friday and take a look at the Station car park.

Since the extension of the platform there are even more people using Horsley Station to commute. It is at capacity now.

You only have to look at this one example to realise that more housing will cripple Horsley from an infrastructure perspective.

It is incredibly short sighted to think that available land = great place to build houses. The actual building of the houses is only part of the consideration. You have to think about everything else that housing impacts.

The station car park is a visible example of how full this area is now. Think about schools, medical facilities and drainage. This area cannot handle the growth that is planned.

The proposal to remove the Horsleys from the Green Belt has not been properly investigated. The extension of the boundaries of the settlement areas of the Horsleys seems to be only to increase land available for future developments.

The development of over 2000 house village at the former Wisley Airfield, only 2 miles away surely cannot make any sense either. The impact on the Horsleys for all the previously documented reasons would be enormous.

Please close your eyes for 1 minute and stop to think about this very carefully.

The Horsleys cannot accommodate such a plan. It will not work.

11. POLICY I3

I OBJECT to poor air quality concerns (Policy I3)

Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

Policy I3: Sustainable transport for new developments

I OBJECT to this policy to the extent that it has a detrimental impact on the existing Green Belt.

I also OBJECT to this policy as it does not include, but should include, compulsory cycle lanes separated from the roads on all new developments.

I also OBJECT to this policy as it is too weak in saying only that developers “will be expected to” propose and secure travel Plans for their developments and contribute to transport arrangements for the able and disabled. This proposed policy needs to be made more robust and properly tie down developers and major housebuilding companies.

If new towns such as Wisley are built, then there will be insufficient employment locally and the car will be the only mode of transport available for commuters. The roads would grind to a halt.

The bicycle is good in theory but unlikely in reality for many. Most cyclists are recreational cyclists. Others are too old, too young, have too much to carry, do not want to arrive sweaty.

I object to the proposals to inset 14 village from the Green Belt and to change settlement boundaries. Land can only be removed from the Green Belt in exceptional circumstances. Housing is not a special circumstance.

Furthermore, I object strongly to the proposed Site allocation A35 (Wisley Airfield site). Although GBC proposes new infrastructure here, it takes no account of the already overburdened rail link into London – the plan talks about laying on adequate public transport to Horsley and Effingham stations, but this commuter line already suffers from severe overcrowding – indeed South West trains haven’t been able to cope despite adding extra coaches to their trains. Parking at the stations is already to capacity.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

---

Local Infrastructure

My view is that the local infrastructure is already overloaded.

Road Network

Junctions are often totally gridlocked at peak times (I am particularly affected by the junction of the A246 and Ockham Road South, the junction of Effingham Common Road and Forest Road, and the A3 junction at Ockham/Ripley). The number of new houses proposed will result in a significant increase in traffic volume which cannot possibly be absorbed. The condition of the roads is also an issue. Many are in a constant state of repair and the drains are unable to cope with rain.

Parking

The station car park at Horsley station is already at maximum capacity.

At The train station the car park is already full quite often, where would the extra commuters park? Potentially 1200 extra cars in the village? No way

The drains on Ockham road north often get blocked, and back up, there are major problems and another 604 homes in the villages will lead to major problems. The drains have a lot of broken bricks in them I have heard and cannot take any more capacity

All the Traffic stopping at glenesk school is a proven bottleneck in the morning, The private schools already generate far too much additional traffic through the village first thing and last thing, building all these extra homes will make it gridlock in the mornings and afternoons

I OBJECT TO POLICY I3 (SUSTAINABLE TRANSPORT):
• Just a list of generic measures, not related to real life or the particularities of Guildford.
• Fails to treat sustainability as a constraint. Assumes excessive levels of development proposed in the plan can be supported by sustainable development.
• Unrealistic. Most people can’t or won’t walk or cycle – commuters in a hurry, the elderly, children, people who are unwell or unfit, people carrying heavy shopping or other goods. I.e. most residents!
• Town’s eye view of transport. Ignores scarcity of existing rural public transport and commercial unviability of increasing it. Ignores terrible state of Surrey’s roads, potholes, flooding etc. Ignores extra stress to be created by huge new housing estates in countryside.

TRAFFIC CONGESTION

Traffic in west Guildford is very congested, particularly in early morning and evening. It is more convenient to walk to the town centre than use a car in this period.

Infrastructure could very much improved in the town with a bus and train interchange at Guildford station to assist commuters coming into and out of the town. In addition, new stations at Park Barn (for the RSCH Hospital), at Bellfields and Shalford could ease congestion.

I object to the detrimental impact on transport, local roads and road safety these housing proposals will bring to this area, with its narrow rural roads, few pavements, almost nonexistent street lighting - country lanes used regularly by sports cyclists and horseriders. The increased traffic, let alone increase in HGV traffic, will exacerbate the dangers to cyclists, pedestrians and horseriders, and to road traffic generally as the roads are not wide enough to allow two large vehicles to pass in places.

I object to the fact that insufficient consideration has been given to the significant infrastructure enhancements that would be needed to the major roads, A3 and M25, as well as rail stations at Effingham Junction and Horsley which cannot cope with the proposed increase in passenger traffic and whose car parks are already used to capacity.

- I object that housing on the Green Belt will increase traffic through our already overcrowded village roads. In particular I bring to your attention the A247 through West Clandon. I suggest to you that a site visit here has not been made. If it had, it would become patently obvious that although the road might be designated an “A” road, it is totally inadequate to carry the through traffic which uses it now. It is considerably narrower than “A” road specifications and is dangerously lacking in adequate pavements, none of which can be easily rectified.

Never has it been more necessary to protect and conserve our precious Green Belt, for this century and beyond, for future generations.

Re: I object to the GBC Proposed Local Plan (June 2016)

I would like to register my STRONG objection to the draft local plan for the following reasons:

I object the Proposed Local Plan that relates to the Ripley/Ockham area because of the impact it will have on our roads. I live in Ripley and the A.3 is regularly at a stand-still in the mornings due to the large amount of traffic queuing to get on to the M.25 at the Wisley intersection. Any problem on the A.3 and traffic comes through Ripley. The inclusion of the former Wisley Airfield as a potential site for over 2,000 houses could not be contemplated without improved infrastructure improvements. If in the fullness of time the A3 and M25 are upgraded somehow to cope with the extra traffic, how will Ockham Road North, Ockham Lane and Old Lane and Ripley High Street cope with the extra cars trying to get to the local railway stations, shops, schools etc? The station car parks are always full, it is too dangerous to cycle. This is compounded with the inclusion of Garlick’s Arch (A43) in the Local Plan and Gosden Hill Farm.

I object to development at Garlick’s Arch (A43) and Gosden Hill Farm (A25)

I object to the lack of provision for alternatives to car use. The local bus service is reduced every year as is the Park and Ride service. These are only really useful to people who have no time constraints. Cycling would be a dangerous option as our village lanes would be more overcrowded and they are unsafe now for individual cyclists.

The avowed intention of the Plan is to provide additional employment; yet this is proposed to the West of the town - and the extra housing in West (and East) Horsley is to the East of the town. This will cause extra strain on an already congested (overloaded) road system in the town. In any case, the South East of the Country does not need further expansion if any quality of life is to be maintained.

I have already stated that the proposed density of new housing in the parishes of West and East Horsley will greatly increase the problems of the present road network, much of which consists of narrow country lanes, and of public
transport. There is little or no excess parking at East Horsley station now. The trains are full at peak times and the bus service is fairly rudimentary. Add to this the proposal for the former Wisley Airfield and there is a prospect of near gridlock on the roads and insupportable conditions at the amenities and services in the two villages. There is nothing in the Local Plan which proposes any positive development to meet increases in population - only pious wishes. The concept of developers being expected to propose and secure "travel plans" for each development and contribute to transport arrangements can only be ineffective and weak. A proper development strategy would put forward positive plans to meet such an enormous population increase.

I object to the Local Plan in its present form for lack of clear transport proposals.

I object to Policy 13 because it is not realistic. It expects everyone to walk, cycle, glide down a river or use public transport. GBC will not be able to support this Policy because they do not control Public Transport. Private operators do and they have control of the timetables and fares. If the buses, trains or boats are not economically viable or not subsidised by SCC the operators will stop them. Not all public transport even goes where you need to go. How will we get to work and will residents be able to afford public transport. People can’t afford fares now, let alone in the future. This is a weak and unrealistic policy.

I object to the idea of a large scale settlement within Wisley/Ockham. Ockham is only a small village with narrow winding country lanes totally unsuitable for an extra 5,000 cars!

I object to the local plan as the transport issues will be huge. People will not be able to cycle to the stations there are no cycle paths and no room on the narrow country lands for them. The A3/M25 junction is already gridlocked every morning, it cannot take any more cars.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3
Policy i3: Sustainable transport for developers versus finite and inadequate local Infrastructure

I OBJECT TO Policy i3 and the Local Plan’s woefully inadequate provision for transport and infrastructure arrangements to support its housing and development plans. The policy fails to provide any concrete obligation on developers to address weaknesses in transport – and there are practical reasons why this will not be possible in East and West Horsley and the surrounding villages (including Ockham / Wisley).

Road widths will not accommodate increased bus use through the villages and I see no acceptable solution to the need to provide access from the newly developed houses to employment which will, inevitably, be based outside of the village communities. Busses and lorries are frequently forced into the middle of the roads to manoeuvre around bends or avoid tree branches, exacerbating congestion. Pavements are narrow and there is no scope to widen thoroughfares to accommodate the inevitable increase in traffic. Local rail station car parks are already full and rail services are woefully overcrowded, particularly heading to / from London where many of the employment opportunities lie. Road-widths combined with the size of many modern cars and commercial vehicles make commuting by bicycle totally unsafe and there is no room for the provision of cycle lanes. New residents will have few options but to commute to work by car, leading to an unacceptable level of traffic on the roads through Ockham and the Horsleys. The draft Plan fails to recognise that the majority of the infrastructure in East and West Horsley is finite, is not capable of expansion and has no capacity to absorb a large increase in population.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
Infrastructure/sustainability

- Huge increase in traffic
- Village roads incapable of sustaining higher traffic levels
- Extremely limited public transport see local time table for buses and trains
- Reliance on cars not sustainable
- Lack of station parking
- Lack of visitors/tourists parking
- Under capacity of sewers and treatment works
- Broadband update required at present
- Flooding already a problem in places

Other

- Air quality already poor at rush hour
- Tourism will be lost as green belt is lost

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
totally unsuitable for high volumes of traffic, in particular for the volume of HGV’s now using them. It is inevitable that the proposed developments in East Horsley itself and nearby, particularly in West Horsley and the proposals for Wisley Airfield site, will put further strain on the existing infrastructure. There are no proposals at all to cater for this.

I therefore OBJECT to the proposals for infrastructure in that they do not meet the stated objective of providing infrastructure to support the proposed developments.

I OBJECT to poor air quality concerns (Policy I3)

Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

TRAFFIC AND PARKING

Assuming that every new house has at least 2 cars, this means potentially 6,000 more cars within a three mile radius of the villages. The impact on local roads will be tremendous. Parking at Horsley & Effingham junction stations (which are already full), at the shops, at the medical centre and at the village hall will all be affected.

Local Road Network:

In respect of the proposals for development at Wisley Airfield and for an upgrade the current A3 junction at Burntcommon to a full 4-way junction, SCC traffic modelling anticipates increased use of Guileshall Lane, Hungry Hill Lane and Tithebarns Lane for traffic accessing the A3 at Burntcommon in order to travel to Guildford and beyond. The SCC report states that “consequently, it indicates that further thought may have to be given to managing traffic in this area as part of a transport assessment should the development be progressed”. It appears that the Plan is proposing a strategic site at Wisley Airfield without even knowing what improvements to the local road infrastructure will be required. If that is the case for Wisley Airfield, then it is almost inevitably true for the proposed developments in East and West Horsley as well

Pollution:

The large increase in volume of traffic will cause an increase in nitrogen dioxide and particulates in the environment – already a cause for concern in several areas in the Borough.

Transport:

Misery for commuters, nowhere to park and full trains at commuting times.
I support provision of off-street parking for residential developments. This ought also to be an objective for the established areas of older small houses that have no on-site parking of their own. However, for non-residential developments located in and around the town centre this is not appropriate - it negates the whole objective of location to allow use of sustainable transport by employees and clients.

I strongly object to any development being built that does not have existing sustainable transport. Blackwell Farm, Wisley Airfield, Gosden Hill and Garlicks Arch do not have such facilities. The former Wisley Airfield is absolutely isolated and can only be accessed by car. Even if a bus service is provided, few will carry shopping, etc., by bus. Walking to Ripley or East Horsley is unrealistic as there are no footpaths or lighting. Blackwell Farm and Gosden Hill are in the same situation. New developments should take place alongside existing sustainable transport facilities. The Merrow Golf Club, proposed for housing, is adjacent to a Park and Ride, that is an example of sustainable transport.

I object to the new local plan as follows

1. I object to the increase in the volume of traffic that so many new homes will generate.

The numbers of houses planned for Guildford as a whole will lead to considerable congestion in the borough which will adversely affect the the commercial life of this borough and surrounding areas. The concentration of developments close to the junction of the A3 and A31 (Blackwell Farm in particular but also developments on the Hospital, Science Park and Cathedral sites, and to a lesser extent all other developments west of the town centre)will have a major detrimental impact on the flow of traffic on the A3 and A31. This junction is already a congestion hotspot and even another carriageway from Stoke to the University roundabout will not cope with the increase in traffic which can be anticipated. The mention of mitigating interventions implies changes to local communities to try to alleviate this problem as it develops but these solutions are not described so it is impossible to judge if they will be adequate and what the impacts
will be. It seems likely that the whole of the west of Guildford will be blighted by this. Other developments threaten to do the same to the rest of the borough.

As a resident of Guildford for almost 30 years, I have seen it grow and grow without any apparent thought for what the infrastructure can reasonably sustain.

From my observations; The main roads, especially the A3, cannot cope in the rush hours, and nearly all the proposed developments will adversely affect the A3.

Therefore, in my opinion, It would be totally irresponsible to propose major developments, some in the Green Belt, at Gosden Hill (2000 homes), Blackwell Farm (1800 homes), Wisley (2000), Normandy (1000 homes), Send (400 homes) and Guildford (3000 homes), before the A3 is able to cope with the existing situation.

I suggest that there should be a complete freeze on all major housing developments until the above is rectified, i.e. a tunnel is built for the A3 through Guildford.

I would also point out that there is considerable housing construction taking place, infilling, replacing old properties with several units, which seems to be ignored in the housing need number.

Guildford appears to have very limited influence on the road network since the A3 which has a profound influence on traffic circulation is in the hands the Highways Agency who work to their own timetable, funding cycles and priorities. The Sustainable Movement Corridor seems to be based on wishful thinking. It appears a worthy attempt to modernise and ramp up the use of more environmentally friendly transport, but given the constricted amount of space available it will inevitably restrict traffic volumes and add to congestion instead of easing it. Modal shift will not occur if journey times are longer; bus passengers and cyclists will only use it if it is convenient and journey times are short and reliably consistent. Traffic congestion is expected to increase during the plan period which is an extraordinary thing to plan for.

The Borough is in a difficult place, both literally and metaphorically. Limited space and resources to expand to meet its housing and business expectations and to develop the infrastructure to support this expansion.

The transport evidence is very weak and major transport issues are unresolved e.g. another river crossing in the town, a central bus depot.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
1. I OBJECT to poor air quality concerns (Policy 13)

Paragraph 4.6.27 of the Plan states that "Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health." The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Of particular concern with the latest plan is the proposal for a new 4-way junction at Burnt Common. This area already suffers considerably when there is any accident or congestion nearby on the P.3 or M25. The provision of additional access will simply add to the problem of vehicles attempting to avoid that congestion by emptying on to local roads. Only a few weeks ago a lorry caused significant damage to the railway bridge over Ockham Road North, ignoring the warning height limit signs.

It is clear from comments made by Surrey County Council, the Highways Authority and Thames Water, amongst others, that they also have significant concerns that the infrastructure will not cope as it currently stands and that the proposed Local Plan does not include any or sufficient provision for the likely increase in road traffic, drainage needs and school places. These issues should be addressed properly so as to provide a proper and agreed framework within which any development should take place, not left to be dealt with on a piecemeal basis as we go along.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Whilst we support the principle of sustainable transport, it has been ineffectively introduced in Guildford. The council seems to believe that a white line can be painted on the side of the road and it can be designated “a cycle path”. Cars
frequently park over these paths, making them extremely dangerous for the cyclist. There is no enforcement, so these paths fall into disuse.

Allowing development of the Green Belt to fund transport schemes will simply generate more traffic from more homes and add to congestion which is already a major problem for the town.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Attached documents:**
I object to poor air quality concerns (Policy 13)

The increased congestion that will arise from the massive proposed developments will in turn lead to increased air pollution which will have damaging effect on local residents and their health

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
I believe the transport requirements have not been thought through as it is my understanding that even if all the proposed highway improvements in the plan were built congestion would not improve and we would have a lot more people stuck in traffic with nowhere to go.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I OBJECT to this policy.

• The practicalities of sustainable transport have not been properly considered, it is not sustainable to build dormitory towns and call them sustainable. Not everyone can cycle all the time.

• Large developments outside the town centre cannot maximise sustainable travel. The further from the town centre, the less sustainable the development will be.

• Reliance on cycling discriminates against vulnerable members of the community. How can the disabled, those with small children, or the very old, or the infirm, or those who are ill, cycle outside the town in order to commute, or even inside the town? Only some people cycle – and Guildford has some steep hills, especially going out of town. Park and rides are slow – how can those with a 3 hour commute add 1 hour to their journey from using park and rides?

• The only sustainable mechanism for new developments is to have them in the town centre close to the railway and the main shopping links where a hoppa bus can provide satisfactory links for those who cannot walk or cycle.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
I am concerned about both of the above given the proposed increase in traffic that the excessive additional housebuilding would create,

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Traffic implications for the Tyting area

The lanes of the Surrey Hills are only suited to carrying a low level of traffic, often being narrow single track roads, as is the case for Halfpenny Lane and White Lane/Guildford Lane in the Tyting area.

The combination of the scale of growth proposed in this 2017 plan and a reduction of capacity in the town centre (as indicated by the plans for the Sustainable Movement Corridor and the Town Centre Regeneration Strategy) threatens to lead to much more peak hour traffic on minor roads around the town as drivers find alternatives routes.

This potential impact on the lanes should be avoided and the character of the lanes protected.

Living in Compton I am very concerned at the impact it will have on not just our already heavily over used road which already suffers from very high pollution.
It seems we would be sucked into the urban sprawl of Guildford losing our rural positioning as a small village. I believe it has been suggested the proposal for 2600 new homes at Dunsfold and associated services would not increase traffic volumes through Compton. I think there is some very naïve thinking on that issue. The road structure as it seems does not work at this time; higher volumes will bring massive gridlock. I know people are reluctant to come to Guildford simply because of traffic problems; more will not help the businesses of Guildford.

POLICY I3 Sustainable transport for new developments

OBJECT I support the concept of sustainable transport but object on the grounds that the practicalities have not been properly considered,

- It is not sustainable to build dormitory towns and call them sustainable.

Not everyone can cycle all the time.

How can large developments outside the town centre maximise sustainable travel? This is a matter for the planning process - the further from the town centre, the less sustainable the development will be.

Reliance on cycling discriminates against vulnerable members of the community. How can the disabled, those with small children, or the very old, or the infirm, or those who are ill, cycle outside the town in order to commute, or even inside the town? Only some people cycle - and Guildford has some steep hills, especially going out of town. Park and rides are slow – how can those with a 3 hour commute add 1 hour to their journey from using park and rides?

The only sustainable mechanism for new developments is to have them in the town centre close to the railway and the main shopping links where a “hoppa bus” can provide satisfactory links for those who cannot walk or cycle.

While I welcome the intention to encourage rail travel by adding two new stations (subject to negotiation with Network Rail) there could unintended consequences.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
Item 4.6.20 makes a statement that is clearly at odds with the choice of sites which will generate a major increase in private motor vehicle journeys.

**Appendix C Infrastructure Schedule**

The earliest dates for the railway stations at Park Barn and Merrow are not expected before 2024 (six years later than first anticipated).

Two road safety schemes for the A3 have been abandoned.

SCC appear to have washed their hands of involvement in the delivery of a number of highway developments on the local road network (which is their responsibility), (E.g. those in LRN7).

LRN7 (For Wisley Airfield) is an example of inadequate infrastructure requirements to address the problems that would be created by a strategic site.

I am writing to oppose the proposal to remove the Green Belt protection from some of the villages in the Guildford area. As a resident of Chilworth for the past 15 years I feel very strongly about the traffic situation in and around Chilworth, Shalford and the traffic that approaches from the Peasmarsh direction.

If future development is granted in these villages roads will become even more unbearable than they currently are at peak times and in the case of the Shalford to Guildford road at any time of the day. It is absolutely absurd that it regularly takes 45 minutes to do a 5 minute journey. Safety of school children in Chilworth is already compromised with cars parked all along the road at pick up and drop off, more houses will mean more children and more cars and the higher risk of an accident to happen.

I OBJECT to 2016 Draft Local Guildford Plan

---
I object to a totally unrealistic number of houses for the country lanes to absorb.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

---

I OBJECT to poor air quality concerns (Policy I3)

Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Transport

Traffic generated from the proposed housing would be considerable if you consider most households have 2 cars or more, plus cycles. Bus services are limited and only operate 2-3 times/day Monday to Friday. Horsley station has limited parking and at times is full on a weekday. An increase in village population will increase pressure on the station parking and traffic movement to and from the station. The access to the A3 in Ockham is already dangerous at peak times, with traffic joining the A3 from both Ripley and the Horsleys.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

---

I object to the increase in traffic, (at least 25,000 vehicles,) that the Proposed Plan will incur. Gridlock will prevail in many locations, e.g. A3/Wisley interchange, the A3/M25, and also the A246/Ockham Road South, not to mention the A3...
around Guildford itself. Our local roads in the Horsleys, and Ockham are narrow, winding lanes and will become very
dangerous with greatly increased traffic, putting the many cyclists at risk. There are already unavoidable “pinch points”,
such as in Ockham Road South, where vehicles find it difficult to pass a bus, lorry or even large van.

I object to the air quality in the area being further polluted by the increased traffic

Large greenbelt schemes should be avoided. There is not the infrastructure to cope. The “war on the motorist” means
there has been no substantial road building for the last twenty years. Ripley High Street is blocked at rush hour now, so it
cannot cope with additional traffic from Garlick’s Arch or Wisley airfield/Three Meadows.

We need new dual carriageways. A Southern bypass for Guildford (A31 to A25). The Hindhead tunnel shows how this
could be done. Plus the Woking Eastern Approach Road (WEAR) needs to be resurrected.

Promoting walking/cycling is good, but remember, we have an ageing population who will need to drive & park. You
need to increase short stay parking near shops/doctor’s surgeries & more disabled parking

Policy I3: Sustainable Transport for New Developments

Like the policies above this policy has initial appeal that does not bear detailed examination; it reads very much as though it has been copied from a manual of some sort.

As commented at the start of this response letter, there is little point in “expecting” various deliverables from new developments; this Policy has to “require” them or they simply won’t be delivered. This policy needs to be redrafted.

I also see that paragraph 4.6.22 still contains the statement from the previous draft that “For the average person cycling has the potential to substitute for short car trips, particularly under five kilometres, and walking for trips under one kilometre”. While it’s correct that the potential exists, the chance of it happening (without a massive campaign, coupled with a major increase in fuel prices) is very small. Just as an exercise, it would be very interesting to carry out a survey of Council staff to find out how far from work they live, and how many ever cycle to work. Of those that do, a supplementary question should be on how many days in the year they do so. One only has to drive in Guildford in the rush hour to know that it’s a small proportion of the total.

To be fair, making changes to established travel habits will be difficult, and the planning system is just one part of the overall whole. But nevertheless, bearing in mind the requirements of NPPF paragraph[.]

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

Attached documents:
**OBJECT (on 3 distinct grounds)**

1. Paragraph 11 is understandable – but it needs to be amplified by further conditions. At present it effectively states that the Planners would have no option but to support an application for off-street parking that reduced traffic through the gyratory … even if the design was the most hideous concept that had ever been created. I’m sure that is not the intention, but this wording is a serious hostage to fortune.

2. The drafting of this Policy is inadequate: a) I have no idea what the practical meaning of paragraph 6 of this Policy means. Will it be a planning condition? Will the Council pay for it? At present it really doesn’t say anything. b) I also fail to understand what paragraph 7 of the Policy really means. If it is not readily understandable, it fails the test of NPPF paragraph 154.

3. In the interests of making best use of land, all new parking in the town should be required to be multi-storey, and should preferably include at least some floors below ground level.

I3 - Sustainable transport for new developments:

I support this policy, but see little evidence of its application in the case of West Horsley. I believe it to be fundamental and crucial, particularly in a semi-rural setting such as West Horsley, that there is infrastructural provision made for walking and cycling, which is very much the national drive towards a healthier and safer lifestyle in this the 21st century.

I OBJECT to poor air quality concerns (Policy I3)

Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Enterprise M3 welcomes the strong emphasis throughout the plan on the benefits of investment in sustainable transport and the recognition that such investment can contribute significantly to economic growth. We are therefore supportive of Policy I3 related to sustainable transport.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

11. I object to poor air quality concerns (Policy I3)

The huge developments being proposed, particularly in the north east of the borough will lead to considerable further congestion and to greater levels of air pollution, which will have a detrimental effect on local residents and their health.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
I have read some of the documents on your website and it appears to me that some of the articles are written assuming that the decision has been made to house many more people than can be sustained in the area.

It is surely self-evident that traffic in the area cannot be increased without significant degradation of the living standards of the current population.

Two examples will clearly demonstrate this. The first is the commuter trains that head to London every morning and return every evening. Your staff, since they are based in Guildford, will not have experienced the overcrowding that is apparent every day of the week. Delays are frequent and the trains inadequate - among other things they do not have air-conditioning.

No doubt your response will be that the platforms are being extended and will be able to accommodate more passengers. My view is that, with the extended platforms, the current commuter traffic can be accommodated; not increased traffic resulting from all the additional houses that are planned.

Secondly, it appears from your plans that road traffic will be alleviated by the realignment of roads around the A3 / M25 junction. This is a complete fallacy. I travel on the road from Horsley to Cobham every weekday morning and find that 90% of the time the M25 heading clockwise is backed up and unable to move around 7:30 in the morning. What hope is there to improve this situation if the A3 / M25 junction is improved. This will do nothing to improve the traffic flow on the M25 which is already a dangerously crowded road at rush hour.

There are many other objections that I have and I feel that the views of the majority of current residents are being rode roughshod over by studies that purport to claim that the expansion of housing in the area will be achieved with minimal disruption.

I therefore submit my objection to these schemes in the strongest terms to ensure that the countryside is preserved and we do not all end up in continuous traffic jams and dangerously overcrowded trains.

I look forward to hearing that these plans are stopped in the near future and also look forward to your reply to confirm that you are of a similar view.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:  💻 IMG_20141005_0001.pdf (1.4 MB)
3) The potential increase in cyclists' deaths on the roads around Horsley and the Wisley airfield. The road from Cobham to East Horsley is already heavily trafficked by cyclists. Heavy lorries during construction and subsequently traffic from the owners of the new houses will significantly increase the risk of deaths.

4) The train service from Horsley and Effingham Junction is already overloaded at rush hour. The additional house will make commuting by train to London impossible; if not for Horsley and Effingham Junction users then further up the line to London.

5) It is interesting to note that the golf course in The Drift was planning to re-landscape the course. There were objections from the council complaining that heavy lorries would be dangerous around the narrow roads around East and West Horsley.

6) The narrow roads in the area cannot accommodate such heavy additional traffic.

I request that you reconsider such a plan immediately to prevent the congestion (and potential deaths) that will come from such ill-thoughtout ideas.

Sustainability

I object to all the proposed housing developments in Send (A42, A43, A44) because they will all promote the opposite of “encouraging sustainable forms of transport”, “conserving landscape character”, and “providing housing to meet local needs”, and most of the other Sustainability criteria. I object because, obviously as a resident ,I can see for myself that local amenities at present are either inadequate or under strain, and therefore will not meet the required Sustainability criteria with the influx of another thousand or so people. The Sustainability report 2016 seems just to pay vague lip-service to GBC plans, rather than being properly fact-based, truthful, and pragmatic on these matters.

Transport Considerations

Royal Mail are fully supportive of the Council’s commitment to working to facilitate major, long-term improvements to the A3 trunk road and M25 motorway in order to improve capacity and safety as indicated in Policy I2 (Supporting the Department for Transport’s “Road Investment Strategy”).

It is requested that Royal Mail be kept informed of proposals for highways improvements in sufficient time in advance to enable for alternative transport arrangements to be put into effect/ effective re-routing strategies to be implemented to facilitate operations scheduling.

Conclusion

Royal Mail would welcome further engagement with Guildford Borough Council particularly where proposals would impact on the usage of the highway and allocations / sites next to or adjacent to the Delivery Offices coming forward for redevelopment.

I trust that these representations are acceptable and would be grateful if you could acknowledge receipt and keep me informed of future stages of the adoption of the Guildford Borough Council Local Plan and other planning policy documents.

There are problems on A3/M25 most days as these roads are at capacity NOW. Everything comes to a standstill. On these days, more vehicles come through the village, trying to find alternative routes which causes long lines of traffic. Access on to the A3 at Burnt Common will not ease the congestion if there are so many more vehicles using the local roads.

Air pollution from thousands of extra cars affecting children, the elderly and even the RHS at Wisley.

Pedestrian and cyclist will be less safe on more crowded local roads.

I am not convinced we need all these new homes.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

More houses will mean more cars - some households will have more than one. The main route through East Horsley is a fairly narrow B-road, which is increasingly used by unsuitably large vehicles, which use it as a short cut from the M25/ A3 to the A246. A car meeting one of these is forced onto the pavement, which is illegal & a hazard for pedestrians. This road cannot be widened because there are houses on either side. WE NEED TO REDUCE THE TRAFFIC, NOT INCREASE IT. The Thatchers site, which is next to a busy petrol station, will have access onto the A246 on an S-bend, where there is already a junction with Ockham Road South. This will surely become an accident black spot.

I appreciate that there may be a need for some new houses in the area, but nothing like the number proposed, which would completely change the character of the Horsleys.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/12675  Respondent: 10619169 / Wendy Critchlow  Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT to poor air quality concerns (Policy I3)

Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
The proposed developments west of Guildford, in particular A29 and A46, when considered in conjunction with the Aldershot Urban Extension planned by the adjacent county, are unsound in terms of sustainable transport infrastructure.

The proposed road upgrades under Policy I3 as described in Appendix C of the Local Plan will not mitigate the road usage forecast in SCC’s OGSTAR Scenario 7. Neither will the proposed new railway station or cycle route.

A possible solution might be a Bus Rapid Transit network using the disused railway alignment through Ash as part of its alignment. The transit of the green belt between the Ash/Tongham and Guildford urban areas would generate environmental impact issues.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

We have a neighbourhood plan in Burpham that protects the open spaces in the locality but was unable to prevent a sustainable movement corridor being suggested which I feel is unsound. There is no room on the roads to carry the proposed cycle, traffic and pedestrians particularly at the roundabouts

1. Woodruff Ave – George Abbott School
2. Kingspost Parade – Retail shops
3. Sainsbury’s

Add into this mix a proposed development of 2000 homes at Gosden Hill.

No evidence of the additional pollution of this slow extra traffic to cyclists and locals on foot.

I also wish to support the Guildford Residents Association points and oppose the intended increase to the size of Guildford by a quarter; mostly north of the town, in this draft plan.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
I wish to strongly object to the above Plan.

Reasons:

1. Infrastructure:

Both Glaziers Lane and Westwood Lane, which on the Plan are either side of the proposed project, are narrow country lanes. Westwood Lane has a narrow one way system under the railway bridge and on Glaziers Lane the bridge has a bend and blind spot. Neither road has foot paths its entire length, not without crossing from side to side, and on Glaziers Lane one has to cross on a bend. The A323 is extremely busy, especially at peak times. The turning into Glaziers Lane from A323 is extremely tight and I have witnessed accidents there. The thought of another 2,000 car owners plus the extra traffic a school would bring does not bear thinking about.

I strongly request an Inspector views these roads.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
One in two working people in Guildford commute for up to 3 hours a day. They will not leave their cars for even part of their journey if it means longer travel times.

Park-and-rides are a welcome part of the transport mix but are too slow for commuters and others on a tight schedule. Well-off pensioners seem to be the main beneficiaries. For an adult couple going shopping it is still cheaper to park in town.

Forget about water buses. The Wey is too narrow and, with a river speed limit of 4 knots, boats are too slow for anything but recreation. Except on the tideway, not even the Thames has such services.

The addition of two new stations appears attractive but will slow down train journeys, which are already slower than at any time since the 1930s. Knock-on effects on localities where the new stations are built have not been sufficiently worked out.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
2. Proposed developments on Sites A42, A43, A43A, A44.

I wish to object to the proposed developments on these sites. The combination of these new housing proposals gives rise to population increase of over 25%. This is a clear overdevelopment of the three settlements. The lack of infrastructure has already been noted. In particular, the A247, the main artery through Send is extremely congested. Send is a classic linear village and most of the house along the A247 were constructed before the car era and lack off-road parking facilities and inconsequence many cars are permanently parked on road. This is a source of traffic congestion with long tailbacks in the morning and evening rush hours and delays at other times when large vehicles traverse the village. The situation will be exacerbated later this year when the new St Bede’s school opens (Planning application 16/P/00033 Approved GBC 31st March 2016) as access to both infants and junior school will now be from the A247 effected doubling the number of pupils arriving in that way. While the planning application included a School Green Travel Plan to minimise car journeys to the school the mitigation measures of increased cycling and walking are difficult to implement as footpaths and cycle paths are inadequate. Public transport is not an option as no buses pass the school. Inevitably increased car use will result giving more congestion with increased risks to children.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

1. I object to poor air quality concerns (Policy I3)

Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the north east of the

borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
8. I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure

The Plan would cause an inevitable increase in Road Traffic Accidents involving both cars and cyclists and thus the number of deaths due to R.T.As.

The congestion affecting Ripley High Street, particularly at the junction of Newark Road, will worsen and local businesses will be deleteriously affected, as will the already poor road surfaces.

Parking in Ripley is already ridiculously hard and such a gargantuan increase in the number of cars will make it impossible.

10. I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure

The Plan would cause an inevitable increase in Road Traffic Accidents involving both cars and cyclists and thus the number of deaths due to R.T.As.

The congestion affecting Ripley High Street, particularly at the junction of Newark Road, will worsen and local businesses will be deleteriously affected, as will the already poor road surfaces.

Parking in Ripley is already ridiculously hard and such a gargantuan increase in the number of cars will make it impossible.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
I would like my comments below to be seen by the Inspector and are taken into consideration since I have been resident of Ripley & Send since 1977 and I have seen the area worsening due to increasing traffic within the poor infrastructure in Riple and Send areas.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object to the fact that 70% of the proposed 13,860 houses are to be built within the Green Belt land running along the A3. This will destroy the open enjoyment of the borough and produce even more accidents (currently at least one a week) on the A3 and surrounding roads including the A247 which are all already running at 200% capacity.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the 2016 Draft Local Plan for the following reasons;

We live in Burpham. The proposed developments at Gosden Hill and Wisley will obviously increase the volume of traffic in the area. We live in Orchard Road which exits onto the old London Road near the BP garage. At busy times it is already difficult to leave our road because of the volume of tightly packed traffic in what is effectively the slip road off
the southbound A3 not only for traffic coming into Guildford itself but also going through Jacobs Well to access, inter
alia, the southern side of Woking.

It may be expected that one day there will be a tunnel bypass under Guildford and the northern entrance is likely to be on
Martin Grant land.

Therefore the suggested development on Gosden Hill should be halved in the number of homes.

Guildford desperately needs new homes for the benefit of the current workers and population, our children and
grandchildren but much more thought needs to be given to seriously expanding the current infrastructure of roads, water
supply, sewage and utilities. Upfront integrated thinking is needed and funding made available.

We should not argue about the forecast needs of homes. The problem is to get started and see how the needs develop
especially since the Brexit decision may reduce demand long term.

Another urgent need is to expand the south bound exit from Guildford onto the A3. At busy times this is log jammed
because three lanes are squeezed into two.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

• I OBJECT to the impact on the infrastructure around the villages. The roads around Send and Ripley are already
congested and cannot cope with the current needs. The Local Plan does not incorporate a detailed transport
infrastructure strategy that would demonstrate how the road network would support the additional pressure on
the roads and other amenities if the proposed development went ahead.

We are writing to express our grave concerns regarding the proposed housing & road development in the Send / Burnt
Common / Send Marsh area

There are several reasons for our concern which we will explain here.

However, the worst impact in our opinion will be to traffic. The traffic through Send is already chaotic in the mornings &
evenings. Caused by the volume of cars heading to and from Burnt Common Roundabout, heading for London M25 (via
Ripley village), Guildford, both via the A3 and to/from Woking. Sometimes the traffic queue from Burnt Common
roundabout tails back into the middle of the village, even beyond the Send Marsh Road junction. This is compounded by
thoughtless parents parking willy-nilly all around the infant school dropping off or collecting their kids. Send surgery carpark (for surgery patients) is also nearly always full of ‘school run’ vehicles, meaning patients have nowhere to park. This will get ten-fold worse when St Bedes School also moves to the same site. Tannery lane crossroads is chaotic and dangerous at the best of times - this too will get much worse along with the Send Marsh Road cut through used by many drivers to avoid the Burnt Common roundabout - both already being accident black spots.

Added to this we have the Send Hill and Potters Lane problem. This route is already used heavily as a cut through from the northbound A3. It is very narrow around the cemetery and almost impossible to pass at times due to bad parking etc. Also the worrying prospect of traveler sites (and face the facts, we all know what that means) in one of the nicest and most peaceful place in the village. Many people have paid a fortune to be laid to rest in the cemetery. Who will guarantee that it will be kept clean, tidy, quiet and respectable especially when a funeral is taking place?

We notice a new slip road is proposed just south of the A3 at Tithebarns Lane junction, to join the A3 northbound so as to not necessitate passing through Ripley. This will not work! It will simply create peak time traffic jams in Clandon Road back to Burnt Common roundabout and into Send Barns Lane due to the volume of vehicles trying (unable) to join the traffic jam on the already snarled up A3 heading northwards. Note: The existing peak time northbound traffic on the A3, already tails back southwards from the M25 entry slip, back past the northbound Ripley entry slip road and sometime almost back to the Burpham junction. Peak time traffic joining the A3 northbound at the new proposed slip road will simply be trying to join a traffic jam.

If ever there’s a major incident on the A3 or the M25, this entire area just becomes one gigantic car park which will only ever get worse if huge extra volumes of traffic are encouraged.

Whoever has studied this, clearly has never had to use (& has no knowledge of) the roads around this entire area at peak times.

Also please bear-in-mind there are hundreds of very elderly people in the Send area who need to negotiate these roads on foot, and also who have no access to PC’s & emails etc to express their worries and heartbreak at these proposals. Our once beautiful village & surrounding area being swallowed up and ruined as London continues to spew outside of the M25.

Further to reading the new local plan. I wish to express my objections to large parts of it especially the area of Send village which is where I grew up. This is point A40-A44 inclusive on the online plan. I would like to say that this is a rural village and should stay as one and the number of new homes being built within the village and that of Ripley reduced greatly. He traffic will be terrible and I object to the green belt being built upon. We should be preserving these green villages and should look to a lesser amount of homes or an alternative. Also I object to the amount of extra pollution from the amount of cars in the village will produce and also that from the proposed industrial sites. I object to the sheer scale of proposals and would like the green village to remain a green village!

Further points to note are the infrastructure is simply not in place to accommodate such development, indeed the railway bridge on Westwood lane is becoming quite dangerous at peak times and I suspect this will require traffic lights at some point before a serious accident occurs. We also know that Glaziers lane has been used as a "rat run" to the Hogs Back for large heavy goods vehicles and the road is just not suitable for that type and volume of traffic. Having met a HGV coming the other way on the railway bridge by Wanborough station on more than one occasion I can say from experience how frightening the experience is!

The weight of traffic entering Guildford, from all directions, as a result of the Local Plan proposals will greatly worsen what is already a standstill at peak times. The current road system cannot cope with current levels of traffic and much work needs to be completed before more traffic is introduced.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
I am writing to object to the local plan.

Despite the possible need for more houses to be built in this area, I believe that there are many disadvantages of this plan that far outweigh the benefits.

One of the main reasons I, along with many others, object to this plan, is that the increased number of houses will lead to higher levels of congestion. Even though more roads are being built congestion will still rise. This puts the safety of the children at local schools at higher risk. This backs up my argument as to why I object to the local plan.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I OBJECT to poor air quality concerns (Policy I3)

I OBJECT to poor air quality concerns (Policy I3)

I OBJECT to poor air quality concerns (Policy I3)
Allowing Green Belt development to pay for transport schemes will simply generate yet more traffic from more homes, fuelling congestion.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Policy I3 – Sustainable transport for new developments

I OBJECT. It is wishful thinking to imagine that many people will cycle from their new homes to the railway station. Most commuters will not wish to be wet, muddy and cold when they start or finish work and they will not be able to take much with them, for safety reasons. The roads are narrow, congested, poorly lit and poorly maintained, and are a hazard for cyclists. Shoppers will not cycle to the supermarket (how would they carry their shopping home? – or will they have it delivered, so adding to the traffic). The elderly would be unwise to cycle if they are at all unsteady or slow to react. Use of tricycles instead is hazardous – they are wider and less manoeuvrable.

Plans for a new railway station at Merrow (“Guildford East”) have been put forward and rejected many times in the past; there is no reason to suppose that it will be any different this time.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
Comment ID: PSLPP16/4047  Respondent: 10781729 / Sylvia Williams  Agent:

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I am also worried about the impact from all the extra cars on our roads. Parking is already a problem in East Horsley where most of our shops are and the doctors surgery and the railway station. The area around Glenesk school in Ockham Road North is always a problem in the morning and I can envisage gridlock with all the extra traffic as this road is an important route to the A3 and M25.

I OBJECT to POLICY I3 (SUSTAINABLE TRANSPORT):

- Just a list of generic measures, not related to real life or the particularities of Guildford.
- Fails to treat sustainability as a constraint. Assumes excessive levels of development proposed in the plan can be supported by sustainable development.
- Unrealistic. Most people can’t or won’t walk or cycle – commuters in a hurry, the elderly, children, people who are unwell or unfit, people carrying heavy shopping or other goods. i.e. most residents!
- Town’s eye view of transport. Ignores scarcity of existing rural public transport and commercial unviability of increasing it. Ignores terrible state of Surrey’s roads, potholes, flooding etc. Ignores extra stress to be created by huge new housing estates in countryside.

Vehicular traffic already places great burdens on local roads, in particular Ockham Road which is used by numerous heavy vehicles as a convenient cut through from the A3 to the A246. This should be discouraged since cars or lorries frequently need to mount footpaths in order to pass with consequent damage to gullies, verges and paths which are not designed for such loads and consequently break down. The hazards to pedestrians and cyclists are considerable. Any substantial increase in housing, and therefore residents and cars, will exacerbate an already dangerous situation.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT in the strongest possible terms to the Guildford Borough Proposed Submission Local Plan (June 2016). This Plan is unsustainable, unworkable and, in many provisions, unnecessary. My wife and I currently experience considerable traffic congestion on the A247 through Clandon and on the A3 between
Ripley and Guildford. Just in recent days this has caused us:
- To be late for work
- To be delayed returning home (including taking 30 minutes to travel the last mile home on the A247).
- To miss appointments
- To get caught in traffic jams on the A3 for routine shopping trips
- To lose a wing mirror, knocked off by a large truck passing through the narrow sections of the A247 in Clandon

The further substantial congestion that would be caused by the proposed developments at Wisley Airfield, Garlick’s Arch and Gosden Hill Farm is unacceptable and unsustainable.

In addition, we strongly oppose the proposed changes to the Green Belt and the insetting of villages. There are no specific exceptional circumstances to justify amendments to Green Belt boundaries. Proposed developments in supposedly protected areas are in breach of party manifesto commitments and contrary to previous responses to public consultation.

I OBJECT to poor air quality concerns (Policy I3)

Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

POLICY 13 Sustainable transport for new developments

OBJECT We support the concept of sustainable transport but object on the grounds that the practicalities have not been properly considered,

It is not sustainable to build dormitory towns and call them sustainable. Not everyone can cycle all the time.

How can large developments outside the town centre maximise sustainable travel? This is a matter for the planning process – the further from the town centre, the less sustainable the development will be.

Reliance on cycling discriminates against vulnerable members of the community. How can the disabled, those with small children, or the very old, or the infirm, or those who are ill, cycle outside the town in order to commute, or even inside the town? Only some people cycle –and Guildford has some steep hills, especially going out of town. Park and rides are slow – how can those with a three hour commute add one hour to their journey from using park and rides?

The only sustainable mechanism for new developments is to have them in the town centre close to the railway and the main shopping links where a “hoppa bus” can provide satisfactory links for those who cannot walk or cycle.

While we welcome the intention to encourage rail travel by adding two new stations (subject to negotiation with Network Rail) there could unintended consequences.

We object to policy I3 Sustainable transport for new developments This is another vaguely aspirational policy, based on wishful thinking and not grounded in the practical realities of daily life. It consists of a standard, box-ticking list of local government measures unrelated to the specifics of the plan. Like infrastructure, transport appears to be an afterthought; the policy fails in its essential job of guiding planning decisions, since it assumes development of any kind can be supported by sustainable transport.

We support the concept and aim but OBJECT on the grounds that the practicalities of sustainable transport have not been properly considered, it is not sustainable to build dormitory towns and call them sustainable. Not everyone can cycle all the time.

How can large developments outside the town centre maximise sustainable travel? This is a matter for the planning process - the further from the town centre, the less sustainable the development will be.

Reliance on cycling discriminates against vulnerable members of the community. How can the disabled, those with small children, or the very old, or the infirm, or those who are ill, cycle outside the town in order to commute, or even inside the town? Only some people cycle – and Guildford has some steep hills, especially going out of town. Park and rides are slow – how can those with a 3 hour commute add 1 hour to their journey from using park and rides?
The only sustainable mechanism for new developments is to have them in the town centre close to the railway and the main shopping links where a hoppa bus can provide satisfactory links for those who cannot walk or cycle.

Once again we see the word “expect” used which means the policy has no teeth. The word “expect” must be replaced with the word “require” so that this policy is enforceable.
There are a number of problems with this policy.

Congestion is a widely recognised factor in the local area of Guildford, and this is a major factor in the public response to the proposed housing numbers, which represents more than a 25% increase in housing numbers in a borough that is already profoundly congested. [Source: SHMA p61: itself sourced from ONS for 2013.] Residents recognise that to increase the population by this level within the existing transport provision is not feasible, and this informs much of the public response to the proposed level of housing accommodation.

It is not clear that this recognition, which is widespread through the borough, is shared by those who have drafted the Local Plan.

Guildford is a commuter town, which (compared to London) offers better quality of life and lower house prices, so it will continue to be a commuter town for the foreseeable future. As a result, access to the stations for commuting is of significance. It is not realistic to assume that traffic to stations for commuters can be replaced either by bus services (slow, intermittent, expensive, and in many cases absent completely) or by cycle. There is a capacity issue of car parking at the station, which effectively creates an absolute constraint on the feasibility of commuting from Guildford.

Cycling is attractive, and, for the urban young, especially students, it is both practical and cheap, and can be quick. However, as noted, those en route to work cannot be assumed to be able to cycle in working clothes. Elderly members of the community, those transporting small children, and the disabled cannot participate in cycling except to a limited extent. Effectively the "average" person deemed to be capable of cycling to substitute for car trips is an able-bodied adult not travelling to somewhere where smart clothing is required, not needing to arrive clean (or with showering facilities on arrival, not provided by all employers); this is not sufficiently widespread in terms of the local demographic for travellers that it should be allowed to determine policy – and of course, not needing to transport, for example, supermarket shopping after the trip. What about the disabled? the elderly? those looking after more than one child? Are they to be housebound? This is not a reasonable strategy. Before transport and buildings are determined on the basis of such a policy, it is also imperative that safe cycle routes are implemented through the borough. Cycling in winter on rural roads is inherently more dangerous. Upgrading these roads would not be feasible in terms of cost nor desirable in terms of local character.

Cycle lanes which disappear into normal traffic lanes, which travel over potholes and which allow cyclists to be threatened by HGVs are not conducive to wider cycle usage, nor should wider cycle usage be encouraged until it can be demonstrated that it is safe, which currently, locally, it is not. The A25 cycle corridor scheme (Part of LRN1) will exchange the risk between cyclists and vehicles sharing space for the risk between cyclists and pedestrians sharing space. Much of the A25 has no pedestrian area anyway outside the urban space. Many cyclists travel at high speed and they will be put into conflict with pedestrians including mothers with very young children and schoolchildren many of whom need to cross the road and hence cross the cycleway. This is likely to lead to accidents and pedestrians are being disadvantaged.

Road capacity reduces as average speeds come down due to congestion. Where proper cycle lanes or off-road lanes are not provided then it is inevitable that safe driving will lead to reduced average motor vehicle speeds and gap development in the traffic stream. Both these effects act to reduce the capacity of our local road network. This loss of capacity has not been recognised in the Transport Strategy.

The concept of the park and ride with access into the town limited for those who live outside the town, is similarly flawed. Park and Ride is expensive, cumbersome and slow. It should be noted that in Oxford it has had a disastrous impact on small local retailers which is a retail segment that it is important to retain and support.

Use of park and rides increases the use of the strategic road network by local users, which is not what it is designed to do.

This proposal is combined with aggressive exclusion from the town of those who are living in peripheral communities, which will increasingly resemble housing estates. This is a strategy for sink estates through Surrey instead of the Green Belt - this is not a strategy for growth. Head offices will choose to go elsewhere, because highly skilled staff and management in the cutting edge industries that GBC wants to encourage, will not choose to live in a dense housing estate.
The existing extent of traffic congestion has not been fully recognised. As a consequence the impact of the various
development scenarios has been understated and the infrastructure costs are an understatement.

The transport studies are incomplete and unpublished and this should have led to deferral of consideration of the Local
Plan consultation process until it was possible to revise the plan post publication of the studies. This matter was raised
by a number of councillors at the Full Council meeting on 24 May 2016 when the consultation was approved, but a
motion to defer was overturned by the majority party.

Cross-subsidy in terms of infrastructure is envisaged. The infrastructure deficit needs to be resolved before there are
large numbers of new residents exacerbating the current congestion. The funding of the new developments through CIL
and S 106 is expected to contribute to the transport impacts across the borough, and there is negligible concern for the
transport problems created within those new developments or in areas adjacent to them. This is not acceptable to existing
residents and is likely to cause some problems with the future residents too, who may arguably feel aggrieved that the
road funding associated with their developments is being subverted to other areas. While this may be permissible under
the revised CIL regulations it is questionable whether it is morally acceptable to grant planning permission to build on the
Green Belt in order to cross subsidise the building of roads or other infrastructure in the town centre or elsewhere across
the borough or outside it.

Insetting of villages and the proposed relaxation of planning restrictions anywhere outside settlements (Green Belt or
not), implied in P2, will lead to substantial infilling that will not require traffic assessment but will contribute a highly
significant amount of additional car journeys overall - by a more insidious process than the large developments proposed.

Costs for rail or bus travel could be substantially reduced and would incentivise their use; but these are outside the remit
of GBC and so cannot be encouraged by them.

It remains to be seen whether the proposed new stations will be delivered as they are not entirely within the council’s
control. While we welcome the intention to encourage rail travel by adding two new stations there could be unintended
consequences as the roads local to both sites are heavily congested. If parking facilities are inadequate this could lead to a
need for onerous parking restrictions on roads nearby – possibly affecting small businesses adversely.

If parking facilities are adequate this will encourage more traffic onto local roads and commuters tend to be hurrying to
catch a train or anxious to return home after a day at work. That does not bode well for the safety of pedestrians needing
to cross those roads. House prices near to stations tend to attract higher prices and this will increase the profit motive to
developers wanting to build on greenfield sites nearby. It will also mean that so-called affordable housing will be even
less affordable at these sites. It may also lead, over time, to an undesirable loss of social-rented housing in the vicinity. A
minor issue is that stopping at the additional stations will increase the train journey times to and from Guildford town
centre on the lines affected.

**Detail in Policy wording – flawed drafting:**

The policy begins and ends with the weak and totally ineffective word, in planning terms, “expect”.

Contributing through CIL will not necessarily address needs local to the development concerned, and created by it, but
may involve solving existing problems elsewhere in the Borough.

Bullets 4 & 5 – improvements to park and ride facilities imply increased car usage from outside the town and the parking
provision acknowledges that most journeys will be by car.

Bullet 6 - Has the Vehicle parking Supplementary Planning Document been published? It is not listed as key evidence but
the policy refers. How can a policy have been determined with reference to a non-existent part of the evidence base?

Bullets 7,8, 9 & 10 are weak & aspirational with let-out words such as “facilitate the use of”, “wherever possible”,
“contribute” and “where appropriate” (and poorly bulleted!). How will the use of ultra low emission vehicles be
facilitated? This is such a vague aspiration as to be meaningless.
The policy only “expects” new developments to contribute, demonstrate adequate provision, etc – it should enforce them. A transport statement AND assessment ought to be a fixed requirement – not a matter for negotiation – while the policy implies that this might be waived even for sites that generate significant amounts of movement.

The construction traffic, noise and pollution generated by meeting the proposed housing number will be excessive. It will have a highly significant impact on the amenity and health of those residents living close to the development sites and those who live on the routes that will be taken by the construction traffic.

The last paragraph says nothing new in planning terms but does mean that the Local Plan has not fully and properly considered the traffic impacts of the proposed sites. We have experience of how misleading the TAs produced by developers can be – using averaging techniques and understated baseline figures, days when schools are not operating and many other devices to pull the wool over the eyes of planning authorities. This aspect is a denial of responsibility by GBC. The result is that Green Belt and countryside will be released for development when fuller consideration of traffic impacts at the Local Plan stage should have prevented that. If the planning authority is taken in by developers’ TAs then wholly unsuitable developments will be permitted.

**Introduction:**

The spatial development strategy (paragraph 4.6.20 and Policy S2) does not address the development needs of the borough ensuring distances are practical; this is certainly not the case with all the development sites. For example, the Wisley airfield site will generate a massive increase in vehicle journeys; developments in West Horsley will lead to greater car use, as will the proposed developments at Garlick’s Arch and in Send. The obvious site choice for sustainable development would be on brownfield sites in the town but the Local Plan proposes allocating those sites to the declining retail industry instead.

Paragraph 4.6.21 suggests that sustainable transport is promoted. Far from providing sustainable transport this Plan will generate a massive increase in motor vehicle journeys. The Plan cannot force residents to ride bicycles or walk everywhere.

**Justification:**

Paragraph 4.6.22 seeks to set out a reasoned justification and alleges that development should offer real travel choice by sustainable transport modes. There is little sign that this is being taken seriously enough now.

Paragraph 4.6.23 proposed to bring forward a Vehicle Parking Supplementary Planning Document. It is not clear what to make of this. Failure to provide off-street vehicle parking will not prevent residents owning cars and finding somewhere else to park but it may make life difficult for key workers to commute to their place of work. How can a consultation take place relying on non-existent background documents which are key parts of the Evidence Base? How can anyone comment on non-existent documents, and even if brought forward part-way through the consultation, any comments will be prejudiced by the absence of this informing the start of the consultation.

Paragraph 4.6.24 refers to the Sustainable Movement Corridor. Bus services are aspirational but economic reality may mean that they fail to persist. There is not enough detail published on how the SMC will be delivered – suggesting that it is aspirational rather than fully thought through.

Paragraph 4.6.26 refers to reviewing existing transport facilities and likely transport generation as part of assessing the amount of incremental travel demand. That consideration should have taken place in a robust and detailed manner on a site-by-site basis before the sites were allocated in the Local Plan. It is not sufficient to leave that until the planning application stage as intended by GBC and SCC, given that all sites will be subject to “permission in principle” under the Housing and Planning Act 2016 and so will not be capable of subsequent rejection on these grounds.

Paragraph 4.6.27 notes that Development must mitigate its transport impacts. The measures described rely entirely on people taking them up and not dumping their travel information packs in the nearest bin. It is clear that GBC, in response to concerns about elderly and disabled people failing to be coerced into riding bicycles are now suggesting tricycles to overcome this obstacle to their aspirations. They should be aware that while tricycles may help with balance issues they are heavier and harder to ride uphill. While the policy (unusually) notes that mitigation must be provided, in fact this is
then diluted to suggest that facilities for electric car charging points and encouragement to car-share can be sufficient; all are optional and therefore meaningless.

However well designed a development is it will make matters worse during construction and if on a greenfield site, it is hard to see how it will achieve environmental benefits. On the other hand, replacing inefficient buildings on a brownfield site could lead to benefits in the long term.

Paragraph 4.6.28 notes “Developers should have regard“ to the “Infrastructure Schedule at Appendix C”. The only thing that developers have regard for is forcing their application through and maximising their profit – that is the business they are in. Appendix C is lacking in detail. It notes, for example that there will be new town centre bus facilities at a cost of £5-10 million – such vagueness make it clear that no real costing or analysis of proposals has been prepared, and that the Infrastructure improvements proposed have not been properly considered. Having regard to fluid and uncertain proposals is effectively meaningless as a constraint or a requirement.

Paragraph 4.6.29 requires that applications need to address the transport implications of the proposed development. Experience with recent planning applications suggests that developers will do everything in their power to understate transport impacts and we have no faith in GBC and SCC taking a sufficiently robust line on this.

Key Evidence is missing or inadequate.

The Strategic Transport Assessment (SCC 2016) is listed as “forthcoming”, but this plan has been produced in the absence of any strategic transport review.

There are further inadequacies in the Evidence Base, highlighted in the following annexes, which include examples of deficiencies, ambiguities and inadequacies in the transport and infrastructure evidence. This is not a comprehensive list of deficiencies, but serves as an illustration of the poor evidence on which decisions have been based.

Annexe 1

Comments on Guildford Borough Transport Study 2016

Page 2 – “address the historic infrastructure deficit” - developers are not required to do this?

Page 2 – It is wrong to claim that the cycle infrastructure along the A25 is good – and many cyclists are not careful, so putting them in contention with pedestrians is not a good idea.

Page 5 – The decision on Heathrow or Gatwick has yet to be taken but airport expansion in the south- east cannot be regarded as sustainable development and, although GBC has no control over such external decisions, its own growth agenda will drive a need for that expansion.

Page 6 An additional weakness is alternative “road closure diversion” routes for the SRN on the LRN

Page 6 Are the “Committed Improvements” actually committed and guaranteed to be delivered?

Page 7 The rail strategy does not provide for Wisley (residents would drive to stations)

Page 7 How long will it take to deliver Crossrail 2? “We hope that Crossrail 2 could be operational by 2030, but we are in the very early stages of planning and no decision to build it has been made.”

Page 7 Guildford platform capacity still many years away if ever.

Page 7 The rail strategy anticipates many improvements that have not been secured and may have unintended consequences if they proceed (see above)

Page 7 The Southern Rail Access to Heathrow [see the feasibility study dated December 2015 – although other proposals may be put forward (e.g. by Hounslow)] is still in its early stages and would have significant impacts on
open space beyond our Borough. For example, all options in the feasibility study would use Staines Moor SSSI and Option 4 would use Bedfont Lakes Country Park (a Local Nature Reserve and SNCI).

The various options would use existing commercial, residential and highways land in varying degrees. It seems unlikely that a solution will be delivered within the Plan period and removal of highly valued open space with high biodiversity (wherever it is in South-east England) cannot be regarded as sustainable.

Page 10 and 13 There is a stark contrast between the plans for the town centre which involve encouraging a reduction in traffic by reducing roadspace and the plans for the SRN and parts of the LRN which involve increasing capacity. While increasing capacity may reduce some areas of congestion in the short term, history suggests that traffic will rapidly grow until the improved roads are congested once again. This can hardly be regarded as sustainable. A sustainable option would be to apply a very substantial traffic infrastructure constraint on the housing number.

Page 10 While the A3 Guildford Tunnel aspiration has some environmental advantages over widening (in particular for residents living close to the A3), the environmental burden of the construction phase will be far higher and aspects such as location of ventilation stacks and their local effect (in all weather conditions) do not appear to have been considered.

Page 14 Under Weaknesses the point about A roads in Guildford Town also applies to surrounding areas in the Borough and beyond. The anticipated improvements ignore existing congestion to the south and east of Guildford – presumably because SCC’s transport assessment methodology only identifies the tip of the iceberg. The current Plan will see increased congestion and a resultant reduction in air quality in many areas beyond the town centre.

Page 16 “Largely commercial bus services” is seen as a strength whereas it should be seen as a weakness with a trend to reduced subsidies and the provision of bus services, especially in rural areas, being increasingly dependent on commercial gain. It is difficult to see this changing under the current Government cuts philosophy. The point “Subject to business case including funding” under Aspirations demonstrates this point.

Page 18 We welcome the aspiration to “Expand the public realm through significantly extended pedestrian-priority areas”

Page 19 Guildford is well behind other areas in monitoring air quality let alone attempting to reduce it.

The introduction talks about reductions in some pollutants. This may be the case for pollutants such as Sulphur Dioxide, which contributed to the visible London smogs, but it is not true of diesel vehicle emissions which have increased as a result of Government policy including its aggressive growth agenda and population increase through immigration.

30 accessible electric vehicle charging points are only an aspiration and will be nowhere near enough if there is a real shift to electric vehicles.

It is clear from the “Strategy outcomes” that GBC would prefer not to follow other areas in pro-actively tackling air quality.

Page 22/23/24 The timescales indicate that the main rail improvements (Including the two new stations) are unlikely to be delivered until the end of the Plan period or even later. The sites that are supposedly justified by their inclusion will generate a major increase in road traffic in the interim and it may be more difficult to achieve this aspect of modal shift in the longer term. The same can be said about the other traffic infrastructure proposals. Residential development is being scheduled before the infrastructure that it will need.

Page 24 Monitoring – “Increase” needs to be in proportion to population growth as otherwise failure will taken as success. “An Increase in average vehicle speeds” is inconsistent with the desire to reduce the number of persons killed or seriously injured. For example, some A roads pass through residential areas where pedestrians, including schoolchildren, are trying to cross the road at peak times. It is noted that increase in vehicle speeds is only desired in the morning. Going home from work does not seem to matter!

Annexe 2
NPPF and NPPG The Plan ignores the points concerning Green Belt and protecting the environment. GBC have tried to get round this by spinning their messages and using misleading statistics including a major understatement of the area of Green Belt to be removed.

Planning Update (March 2015) – The point in this update concerning Green Belt has been ignored

Monitoring Indicators:

· Ten years is far too long to wait for information on whether the approach is working or not. The target requires only an increase. This would permit an increase less than that in line with any population growth to be regarded as success. The bar has been set well within the failure range.

I OBJECT TO THE IMPACT ON THE INFRASTRUCTURE AROUND THE VILLAGES

• I OBJECT to the impact of the Local plan on the local infrastructure. The roads around Send and Ripley are already congested and cannot cope with the current needs. The Local Plan does not incorporate a detailed transport infrastructure strategy that would demonstrate how the road network would support the additional pressure on the roads and other amenities if the proposed development went ahead. The plans to improve the A3 are years off (2025 – 30) and, even if they were implemented, would be preceded by years of gridlock on the local roads. Plans to improve local roads (ref LRN20, specifically Send Road and Send Barns Lane) through an investment of £1.5m will be woefully inadequate to cope with the increased traffic. Additionally, increased traffic through the villages will increase the hazards along the main roads, particularly pedestrians, especially children (using the Send School or catching buses to Guildford schools) and the increasing number of cyclists. This will be exacerbated by HGVs accessing the planned industrial units at Garlick’s Arch.

• I OBJECT to Policy A43a (Land for North facing slip roads to/from A3 at send Marsh/Burnt Common) This would necessitate a 4-way junction at Burnt Common and would inevitably increase the amount of traffic using the local roads in Send. This junction would worsen the problem of drivers using Send as a cut through from
Guildford to Woking on local roads that are just not intended for this purpose. As a resident, I am amazed that there hasn’t yet been a serious accident as drivers use Potters Lane for just this purpose with little regard for the 30mph speed limit.

- I OBJECT to the proposed development of Gosden Hill Farm (Policy A25) and its inevitable impact on the roads around Send. Despite assurances of an additional railway station, commuters will utilise the opportunity to leave the A3 at the existing Burnt Common roundabout and travel on the faster Woking to Waterloo line, rather than use the slower Guildford line.

- I OBJECT to the proposed developments opposite Winds Ridge (policy A44) and Clockbarn Nursery (policy A42) due to the impact that the additional traffic will have on small local roads. The first of these will increase the traffic leaving Send Hill onto Potters Lane at what is already a dangerous junction on very narrow lanes. Meanwhile, Send Road is already frequently blocked by HGVs trying to turn into Tannery Lane; this can only be made worse by additional traffic using the same road.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

The reason for objecting are that the local roads, including the A3 and M25 are already too congested and the proposed development will add further to the current level of congestion and pollution. The smaller roads through West Clandon, Ripley and Send cannot cope with the increased level of traffic that such developments will bring.

I object to the impact on air quality that both the Wisely development and the Garlick’s Arch development will have

I object to the developments in Ripley and Send also on the grounds on air quality which is sure to be harmed by the massive influx of traffic from 2500 homes in the area which will likely bring about 5000 cars to the area. This will be particularly acute in Ripley – a village of only around 2000 people, you are tripling the size of without any supporting road infrastructure leaving stationary grid-lock e.g. on the Ripley High Street where I live, no doubt reducing the already poor air quality.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

**I object to poor air quality concerns (Policy 13)**

The increased congestion that will arise from the massive proposed developments will in turn lead to increased air pollution which will have damaging effect on local residents and their health.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Firstly, my wife and I together with many local friends and neighbours are hugely shocked and dismayed at the sheer extent of the proposed developments across the various sites in our immediate area; quite apart from the massive implications to the old Wisley airfield site which will also affect our villages. This last matter seems to have been raised again, notwithstanding your reservations.**

We have lived in West Horsley for 34 years, schooled our children locally and have both worked locally too. We are members of various local care related organisations and commit much of our spare time to local charities as well as our Church. You could say that we have invested many years of time and energy into the well being of our local community, which we value hugely.

The proposed several developments of some 533 (plus a recent add-on of 60) houses together with 2100 houses plus service/leisure businesses at Wisley, is quite out of proportion to the nature of this area and far outside the scope of the the existing and developable infrastructure of roads, water services, drainage, schooling, medi-care. local amenities and the huge increase in traffic demands it would create. Roads and the narrow lanes serving the area, drainage and the other services are already at maximum capacity.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

I wish to object to the proposals laid down in the local plan:
We cannot absorb the population resulting from the planned development/s because:

The road system is at present stretched to accommodate traffic from the M25/A3/Ripley to Woking, using Sendmarsh Road and Send Road. The proposal of 400 houses & industrial units will mean the road to Woking will be permanently grid-locked and the condition of the roads will deteriorate. Traffic will use the roads which have proved they frequently need repairing now and so be a greater strain on Guildford financial sources.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Traffic generation from the proposed new housing estates will be considerable. Most households in rural areas as a necessity have 2 cars, many having 3. Journey times on local roads will increase significantly.

3. I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure

There is too much traffic in our villages already and this plan will cause more congestion in Ripley, Send and Clandon, with no plans for improvements. You cannot squeeze modern traffic down lanes that were built for a horse and cart.

The rural roads in this area are narrow, in poor condition and have no pedestrian footpaths. The new homes will generate dangerous and unsustainable traffic. The historic village of Ripley was given a by-pass to save it for future generations not make its roads into a car park.

Every time there is a problem on the A3/M25 traffic already congests the area to dangerous levels. With the increasing cycle traffic on the Olympic cycle route to the Surrey Hills using the same narrow lanes, this is a recipe for a human disaster.

The sites planned for development, approx 533 homes, put increasing pressure upon a stressed infrastructure. The villages in the area cannot cope with the infrastructure at present, never mind increased numbers of children in our schools, increased traffic on our picturesque country lanes, increased medical needs etc, the list is endless. This is a sure sign of the first step toward urbanisation, the people that live in the area are here to get away from that.

To even consider sites within this historic and scenic Surrey countryside is a travesty.

**Document:** Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT to poor air quality concerns (Policy I3)

Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

I also appalled at the deterioration in local roads over the last 5-7 years along with the congestion that already exists which will only decline further with the lack of road infrastructure (Policy I1). There is too much traffic in our villages already and this plan will cause more congestion in Ripley, Send and Clandon, with no plan to improve that. The rural roads in this area are narrow, in poor condition and have no footpaths. 5000 more houses means dangerous and unsustainable traffic.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
The creation of more housing will impact on the: 

Roads - already in a bad state of repair; congested (frequently the 5 minute drive through Ripley from the A3 takes 15/20 minutes due to the increased traffic through the bottle neck in the village; Send has similar issues); unpassable due to increases in cars who then park on roadsides restricting traffic flow on side roads and severe traffic congestion on the A3 around the M25 and Guildford.

Public transport - trains overcrowded

Doctors/dental surgeries/hospitals - demand for appointments; treatment and operations will increase with the influx of new residents to the area but which is currently under pressure.

Policing/emergency services - the local Police station in Ripley and Woking fire station has closed; an increase in local population would necessitate more emergency service cover - will this be factored in? If so who will pay?

3) I object due to the congestion on the roads. There is already a lot of traffic coming through Ripley, which is often at a standstill at rush hour. The Wisley Airfield development alone would add an awful lot of traffic as the potential residents would need their cars to go to Horsley and Woking stations and to go to London. The roads in the area are too narrow to cope.

Comment ID: PSLPP16/6385  Respondent: 10845377 / Natasha Lock  Agent:

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3

| TRAFFIC AND PARKING |

Assuming that every new house has at least 2 cars, this means potentially 6,000 more cars within a three mile radius of the villages. The impact on local roads will be tremendous. Parking at Horsley & Effingham junction stations (which are already full), at the shops, at the medical centre and at the village hall will all be affected.

Local Road Network:

In respect of the proposals for development at Wisley Airfield and for an upgrade the current A3 junction at Burntcommon to a full 4-way junction, SCC traffic modelling anticipates increased use of Guileshall Lane, Hungry Hill Lane and Tithebarns Lane for traffic accessing the A3 at Burntcommon in order to travel to Guildford and beyond. The SCC report states that “consequently, it indicates that further thought may have to be given to managing traffic in this area as part of a transport assessment should the development be progressed”. It appears that the Plan is proposing a strategic site at Wisley Airfield without even knowing what improvements to the local road infrastructure will be required. If that is the case for Wisley Airfield, then it is almost inevitably true for the proposed developments in East and West Horsley as well.

1.1 I object to policy I3 “Sustainable transport for new developments” on the grounds that;

1.2 This is another vaguely aspirational policy, based on wishful thinking and not grounded in the practical realities of daily life. It consists of a standard, box-ticking list of local government measures unrelated to the specifics of the plan. Like infrastructure, transport appears to be an afterthought; the policy fails in its essential job of guiding planning decisions, since it assumes development of any kind can be supported by sustainable transport.

1.3 The sustainability of the dormitory settlements which the Council want built across the countryside depends on a general “modal shift” from private car use to walking, cycling and public transport. This is unrealistic. The proposed sites are often miles away from the nearest railway station. Bus services even in the largest villages are almost non-existent – just one bus to and from Guildford each day in the Horsleys and none at weekends. Since bus services depend on profitability, they cannot be expanded and the Council are not proposing to subsidise new ones. Rural buses are too slow anyway for busy people. Most rural roads in the borough are narrow, winding, hilly, potholed, muddy and unlit. Many flood badly and have no footpaths.

1.4 The desired modal shift would require a comprehensive co-ordination of bus and train timetables with services every few minutes, seven days a week, to stops within walking distance of every home in the borough. This kind of integrated public transport system has been achieved in Switzerland, for instance, but only at huge public cost and thanks to a political consensus supporting state ownership of trains, buses and the post office, which delivers rural passengers as well as mail. There is absolutely no chance of this in the UK.
1.5 The vast majority of the borough’s residents are not, in practice, able to cycle. This includes children, the elderly, commuters who have to look smart, the infirm, the unfit and people carrying goods or shopping of any kind. Dependence on walking and cycling discriminates against these groups, which include some of the most vulnerable members of the community. It is socially unjust. One in two working people in Guildford commute for up to 3 hours a day, as I used to do. They will not leave their cars for even part of their journey if it means longer travel times.

1.6 Park-and-rides are a welcome part of the transport mix but are too slow for commuters and others on a tight schedule. Well-off pensioners seem to be the main beneficiaries. For an adult couple going shopping it is still cheaper to park in town.

1.7 The Wey is too narrow and, with a river speed limit of 4mph, boats are too slow for anything but recreation. In addition any vessel would have to negotiate a number of locks to travel any significant distance. Except on the tideway, not even the Thames has such services.

1.8 The addition of two new stations appears attractive but will slow down train journeys, which are already slower than at any time since the 1930s. Knock-on effects on localities where the new stations are built have not been worked out or presented.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

The local roads in the Guildford Area are already at capacity, especially the A3 and need major work on them to keep the traffic flowing. This should be the Council's priority before any new developments are envisaged. Any new developments in the Ripley, Burpham, Send and Wisley areas will result in the A3 becoming totally clogged (even with the suggested new slip roads at Burnt Common and Railway Station at Merrow) and vehicles being unable to move in peak times which will have a knock-on effect for local businesses and freight companies losing money because of delays. The frustrated drivers will then decide to avoid the A3 and take to the declassified roads which are not designed for high levels of traffic. Remember for every house built there will be on average 2 cars.

13. I object due to the congestion that development will cause to the trunk roads, A3/M25

The A3 and M25 would need to be improved before any development can be considered. Highways England has no plans to even start considering improving the A3 before 2020. Clearly no enhancements are possible in the timeframe of this Plan so the developments at Wisley Airfield, Garlick’s Arch and Gosden Hill should not take place.

Parking issues in local villages caused by a larger population

Parking in local villages is already an issue. It is frequently impossible to find parking in Ripley if you require to stay for more than two hours. I object to the proposals as further development around our villages will only make the situation worse.

Congestion on the trunk roads, A3/M25

The A3 and M25 already suffer from severe congestion during rush hours, in addition, Highways England have no plans to improve the A3 prior to 2020. I object to the development of these sites shown in the local plan because trunk roads would be unable to cope.

Congestion on local village roads and lanes

Many of the villages are suffering from severe congestion, for example the Shell roundabout at Burnt Common, and the Newark Road & Rose Lane junction in Ripley. I object to the further development which will cause further congestion in and around our villages.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Comment ID: PSLPP16/7178  Respondent: 10854113 / Sarah Pickering  Agent:
Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3
WE OBJECT due to the congestion that development will cause to the trunk roads, A3/M25 (Policy I2)

I object to this policy, as it is too vague and optimistic. Significant improvements to the road infrastructure are like to be many years away even if they ever happen. The draft plan, however, commits to building massive housing estates in the countryside before any of these road improvements are in place. This is inappropriate and will lead to massive traffic disruption during the construction phase and will add permanently to an already congested network (about 3,000 private cars from the 2,100 new homes at Wisley Airfield alone).

Road infrastructure represents a major constraint that should have been applied to the housing target at a much earlier stage in the plan process and not left as an unresolved difficulty in the draft plan.

There is no certainty that either the A3 or M25 in the borough will be improved to increase capacity and reduce congestion during the Plan period. Highways England has no plans to even examine improving the A3 before 2020. I have considerable concerns that development of the large residential sites identified at Wisley Airfield (A35), Garlick’s Arch (A43) and Gosden Hill (A25), will take place before any improvements are made to the trunk road network. The A3 & M25 are already at capacity during peak hours and any development prior to improvement of these roads will only make the situations worse.

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

It is totally unacceptable to even contemplate the development of houses/industrial units at Wisley Airfield, Garlicks Arch and Gosden Hill Farm. Whilst it is anticipated the plan will ensure sufficient health care and schooling is in place it is totally obvious to any user of the local roads during peak rush hour (both morning and evening) that the A3 and M25
cannot cope NOW and I don't see how widening these roads is going to improve the situation or adding an extra junction just create more accidents and more delays when trying to exit the A3 for the M25.

This current plan is flawed and needs to be put in the bin. A sensible plan considering current residents, the environment, what is achievable with the major infrastructure needs to be developed. It is not just about the profits that can be made by companies.

**Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )**

I OBJECT in the strongest possible terms to the Guildford Borough Proposed Submission Local Plan (June 2016). This Plan is unsustainable, unworkable and, in many provisions, unnecessary.

I set out below my objections to specific policies and matters within the Plan.

I have particular concerns about the growth in traffic on our already overburdened roads, in particular the A3, which is frequently gridlocked at peak times, and the A247, which despite its A road status is too narrow to allow for two large vehicles to pass each other. Only last week I witnessed the aftermath of an accident on the A247 and another near-accident in the same place. The unsustainable increase in housing numbers will add to the traffic in a way which the roads cannot cope with.

I OBJECT to poor air quality concerns (Policy I3)

Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**
I PART SUPPORT, PART OBJECT to this policy

I support the concept and aim but OBJECT on the grounds that the practicalities of sustainable transport have not been properly considered.

A central bus station and shuttle bus service in the town centre are essential for existing development and are crucial before any new development.

While I welcome the intention to encourage rail travel by adding two new stations, there could be unintended consequences.

I object to the local plan as it will increase congestion on road infrastructure that can’t cope

The area has too much road traffic at present, and the rural roads are in poor condition through overweight traffic (lorries and coaches) damaging the surface, particularly evident in our local area along East Lane, and the Drift, Horsley.

An increase in housing as proposed will lead to a substantial increase in cars, and in turn traffic. Leading to congestion, increased traffic noise, traffic pollution, increased accidents and a detrimental effect to the environment both physical and social.

Parking at both Effingham and Horsley Train Stations is currently at capacity, with no room for further parking during peak hours.

I object due to the congestion that the actual development will cause
Before any development can commence, trunk roads and access routes to the areas would need to be improved to enable the access of vehicles.

There are no such plans for the A3 and M25 and the local rural roads can't handle the construction traffic.

**I object due to insufficient plans for meeting commuter needs**

Without a regular bus network, footpaths, cycle ways, sufficient train frequency, increased road network, then the proposed plan will not be able to accommodate the needs to commute.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**I object** to policy I3 Sustainable transport for new developments

This is another vaguely aspirational policy, based on wishful thinking and not grounded in the practical realities of daily life. It consists of a standard, box-ticking list of local government measures unrelated to the specifics of the plan. Like infrastructure, transport appears to be an afterthought; the policy fails in its essential job of guiding planning decisions, since it assumes development of any kind can be supported by sustainable transport.

The sustainability of the dormitory settlements which the Council want built across the countryside depends on a general “modal shift” from private car use to walking, cycling and public transport. This is unrealistic. The proposed sites are often miles away from the nearest railway station. Bus services even in the largest villages are almost non-existent – just one bus to and from Guildford each day in the Horsleys and none at weekends. Since bus services depend on profitability, they cannot be expanded and the Council are not proposing to subsidise new ones. Rural buses are too slow anyway for busy people. Most rural roads in the borough are narrow, winding, hilly, potholed, muddy and unlit. Many flood badly and have no footpaths.

The desired modal shift would require a comprehensive co-ordination of bus and train timetables with services every few minutes, seven days a week, to stops within walking distance of every home in the borough. This kind of integrated public transport system has been achieved in Switzerland, for instance, but only at huge public cost and thanks to a political consensus supporting state ownership of trains, buses and the post office, which delivers rural passengers as well as mail. There is absolutely no chance of this in the UK.

The vast majority of the borough’s residents are not, in practice, able to cycle. This includes children, the elderly, commuters who have to look smart, the infirm, the unfit and people carrying goods or shopping of any kind. Dependence on walking and cycling discriminates against these groups, which include some of the most vulnerable members of the community. It is socially unjust. One in two working people in Guildford commute for up to 3 hours a day, as I used to do. They will not leave their cars for even part of their journey if it means longer travel times.

Park-and-rides are a welcome part of the transport mix but are too slow for commuters and others on a tight schedule. Well-off pensioners seem to be the main beneficiaries. For an adult couple going shopping it is still cheaper to park in town.

Forget about water buses. The Wey is too narrow and, with a river speed limit of 4mph, boats are too slow for anything but recreation. Except on the tideway, not even the Thames has such services.
The addition of two new stations appears attractive but will slow down train journeys, which are already slower than at any time since the 1930s. Knock-on effects on localities where the new stations are built have not been worked out or presented.

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Congestion on the trunk roads, A3/M25
I object to the development of the strategic sites due to A3 and M25 already being at capacity during peak hours. Highways England has no plans to look at improving the A3 before 2020. It is therefore not sustainable to identify sites for further development which will worsen the congestion on these motorways and trunk roads.

Congestion on the local village roads and lanes
Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. I object to further development which will cause greater congestion in and around our villages.

Unsuitability of our local roads for heavy vehicles and more traffic
Many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition. I object to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.
## Poor air quality concerns

Further congestion, particularly in built-up residential areas will only lead to greater levels of air pollution. I object to further development, which will result in a fall in the air quality.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Attached documents:**

### Comment ID: PSLPP16/10909   **Respondent:** 10866721 / Andy Court   **Agent:**

**Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )**

## Sites being planned in unsustainable locations

Many of the strategic sites e.g. Wisley Airfield and Garlick’s Arch, are in unsustainable locations. They do not benefit from railway stations within easy walking distance and bus services across rural villages are forever reducing. Residents will have few options, but to be reliant on motor vehicles. I object on the grounds that these sites are not sustainable.

**Parking issues in local villages caused by larger population**

Many of the affected villages, such as Ripley, already suffer from parking problems. Further development around these villages will only result in more traffic and more parking problems. To which I object.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Attached documents:**

### Comment ID: PSLPP16/11687   **Respondent:** 10868609 / Robert Lockie   **Agent:**

**Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )**

I object to the proposal for building in Send as Send Road (A247) would be gridlocked all day and Send would be a through route for traffic to Woking from the M25 to the A3. This would also have a major impact on Old Woking with its narrow roundabout and roads.

I strongly object to the fact that our roads already are fit to bursting at least twice daily, during the rush hours. The A3 is constantly blocked at the turn off to Guildford Town, the two lanes at the Wooden Bridge section are also constantly blocked and can take extended time to complete a simple journey. Having had to attend the Royal Surrey County Hospital for cancer treatment on a regular basis, this stretch of road became a nightmare journey for me, never knowing what time to leave and if I would get there for my appointments.

I object strongly to lack of the Guildford Planning Department and Local Plan developers to understand and take action on the A3 access to the M25 at Wisley, to the most heavily used section of this orbital motorway. How on earth do they propose to add a 25% increase in the homes and the traffic that that will bring to this section alone?

I strongly object to the increase in pollution that will be generated by the increase in traffic using, already crowded roads, to access the new A3 at Burnt Common.

I object to policy I3 - doesn't consider poor state of current rural roads with potholes, broken edges and flooding. Rose Lane in Ripley has recurring potholes, worse since HGVs coming down more regularly. - relying on public transport is only possible when there is a reliable regular service to multiple destinations. A bus to one or two destinations a few times a day does not actually provide for the majority of residents.

It appears that the increase in pollution has not been properly considered. The large increase in the volume of traffic will only increase pollution.
Horsley Railway station car park is already operating on full during weekdays. With the increased number of houses in both East & West Horsley and in Ockham, most of these people will be using Horsley Railway station. Where are they all going to park?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

The small parade of shops near the Bell & Colville garage only has a tiny amount of parking spaces. This area is frequently very congested with lorries making deliveries and/or cars parked there. The road around here is VERY narrow and this causes much congestion for traffic to/from the A246. There is also no room for the road to be widened along this stretch. The roads will NOT be able to cope with substantially increased traffic.

• Parking at the shops in East Horsley for the shops and Public Library is already difficult currently. How is the village going to accommodate the extra people and cars from the proposed substantial increased housing?

Until you come up with a fully considered plan for the infrastructure to serve the proposed increased population, what you propose is just totally unsustainable and everything WILL come to a grinding halt and NOTHING will function. Will you take personal responsibility for this then?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

1. Roads Must BE Widened

Lorries, buses and cars are now much wider than they used to be about 20 years ago. The roads were adequate then but they are NOT wide enough now!!! We are also sharing the roads with cyclists who are consistently now cycling 2 or 3 abreast. As there is full encouragement for people to cycle, then there must be proper provision for cycle/pedestrian
pathways/lanes. On a recent occasion, there was a group of cyclists cycling three abreast and there were 15 of them cycling as a group altogether. It meant that it was impossible to overtake such a group of cyclists safely. Many motorists are now overtaking cyclists on a bend without being able to see if the road is actually clear! On one occasion, I was unfortunate enough to experience a Police car overtaking a single cyclist on a bend and if I had not braked in time, I would have been in an accident with a Police car!

1. Full Bus Services Must Be Put Into Place

Horsley railway station car park is nearly full up every day now. Where are the parking spaces for the increased number of people living in the additional housing in Wisley, Ockham, and East & West Horsley going to be located? On the other hand, if a bus service is to be provided, this must run frequently, say every 10/15 mins during very peak times and every 20 mins during very early mornings and late evenings for this to work.

A few years ago when I was at school in Burpham, a local 10 minute journey would frequently be disrupted by traffic on the Send Road, the A3 and also the slip road into Burpham. Even though we would leave extra time for rush hour traffic, the smallest of incidents would mean this journey time could creep up to three or four times as long. The local bus companies will confirm this as students on the buses were let off detentions as it became such a common complaint. The only time that traffic does improve is during holiday periods and the Summer months when fewer students are in school because of exam study leave. This means that demands on the roads are not as high but of course this is only for a short time during the year.

I object to poor air quality concerns (Policy I3)

The huge developments being proposed, particularly in the north east of the borough will lead to considerable further congestion and to greater levels of air pollution, which will have a detrimental effect on local residents and their health. It has been shown that Wisley already has NOX levels above the EU legal limits and by law a school cannot be located in this area as a result.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

I also OBJECT to this proposal on the grounds of the impact of the increased traffic on the area. Already the area is gridlocked in the morning & evening rush hour & the new plans will create even more of a cut through to Woking.

The local roads going through Send & Ripley will not be able to cope & there is no room to widen the roadways.

It will add to congestion.

I also OBJECT due to the environmental impact and pollution to the area. This proposal does not take such an environmental impact into sufficient consideration.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the fact that 70% of the proposed 13,860 houses are targeted at the Green Belt strung along the A3 which will destroy the open amenity of the borough and produce gridlock on the A3 and surrounding roads including the A247 which are all already at 100% capacity

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Pollution: I strongly object to the new draft plan proposing additional 2000 homes at Wisley, 2000 at Gosden Hill Farm, nearly 600 in The Horsleys and 400 at Garlicks Arch as it will have a great impact on the local road network which at peak times is already struggling. The large increase in volume of traffic will cause an increase in nitrogen dioxide and particulates in the environment - already a cause for concern in several areas in the borough. Additional noise and air pollution will be inevitable with this increase in traffic and it will have a significant impact on our environment.

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I strongly object to Guildford Borough Council’s Local Plan June 2016 as I believe its is unsound an far too aspirational.
I believe the order and timing of the proposals around housing, transport and infrastructure are incorrect.

Transport A3

Transport should be the first decision to be taken. This should first be about the A3, how the volume of traffic southbound at the Burpham turnoff can be handled as well as elevating the traffic jams on the A3 through Guildford. The proposed tunnel entrance would sit on the Gosden Hill site. By allowing housing to be built on this site before the decision on the A3 would remove this key tunnel entrance site for relieving the traffic through the whole of Guildford.
London Road Burpham

The designation of the London Road as a sustainable movement corridor to have a dedicated bus lane and cycle lane is not appropriate. I suggest that you come and look at the road at rush hour, it crawls along and with increased development the traffic will only get worse. Even if it were flowing the road width is constrained, how 4 lanes could be incorporated is beyond belief.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attacked documents:

I object to increases in traffic as the air quality will be compromised and will have a bad effect on residents who already have breathing problems and it may actually increase the amount of people suffering in the future. I also object to this because the local doctor's surgery may not be able to cope with a large influx of new patients from new housing developments - on occasions it is difficult to get an appointment for several days.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attacked documents:

I object to the Plan because of concerns about poor air quality (Policy I3)

I object to the fact that air quality concerns have not been taken seriously – air pollution in many parts of the borough, and particularly close to the A3, is in excess of EU-permitted levels. Additional traffic will exacerbate this situation, impacting the health of all current and future residents. No account is being taken of the acid deposition on the Thames Basin Heaths SPA and the irreversible impact of the habitat degradation.
The huge developments being proposed, particularly in the north east of the borough will lead to considerable further congestion and to greater levels of air pollution, which will have a detrimental effect on local residents and their health.

I object to the threats which the proposal poses to Ockham and surrounding villages. There is no way that the small local roads could cope with the huge increase in traffic which would be caused by the development. There are already severe problems on the A3 and M25 every day with frequent accidents and the pollution levels are extremely high. The trains are already overcrowded and it can be impossible to park at Horsley station during the day.

Traffic in the village and surrounding areas is heavily congested with a volume of vehicles through the village damaging road surfaces and too heavy for small country roads to cope with. They were certainly not built to carry 32 ton trucks which constantly damage trees and roadside vegetation because of their size and height.

(Rail bridge was hit by a large lorry recently causing closure of Ockham Road through the village for several days, not for the first time).

The A3 and the B246 Guildford/Leatherhead Road for example, are almost daily at a standstill, as is the M25 intersection at Junction 10.

Parking in East Horsley has become impossible with no scope to ease the problem.

I OBJECT TO POLICY I3 (SUSTAINABLE TRANSPORT):

• Just a list of generic measures, not related to real life or the particularities of Guildford.
• Fails to treat sustainability as a constraint. Assumes excessive levels of development proposed in the plan can be supported by sustainable development.
• Unrealistic. Most people can’t or won’t walk or cycle – commuters in a hurry, the elderly, children, people who are unwell or unfit, people carrying heavy shopping or other goods. I.e. most residents!
• Town’s eye view of transport. Ignores scarcity of existing rural public transport and commercial unviability of increasing it. Ignores terrible state of Surrey’s roads, potholes, flooding etc. Ignores extra stress to be created by huge new housing estates in countryside.

**Policy I3: Sustainable transport for new developments**

I have not seen any proposals for new or improved transport infrastructure as a result of these developments. The obvious conclusion is that there will be a huge increase in motor traffic on village roads as a result of the new developments. As a motorist this will lead to a significant increase in journey times and no doubt the problems we already have with potholes will only get worse. As a cyclist (I cycle to and from Horsley station most days) I worry about the impacts on road safety given our roads are generally quite narrow and poorly lit. As a resident I worry about increased noise and air pollution.

I OBJECT to poor air quality concerns (Policy I3)

Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

POLICY I3 - Sustainable transport for new developments

I OBJECT . This is another vaguely aspirational policy, based on wishful thinking and not grounded in the practical realities of daily life. It consists of a standard, box-ticking list of local government measures unrelated to the specifics of the plan. Like infrastructure, transport appears to be an afterthought; the policy fails in its essential job of guiding planning decisions, since it assumes development of any kind can be supported by sustainable transport.

The sustainability of the dormitory settlements which the Council want built across the countryside depends on a general "modal shift" from private car use to walking, cycling and public transport. This is unrealistic. The proposed sites are often miles away from the nearest railway station. Bus services even in the largest villages are almost non-existent - just one bus to and from Guildford each day in the Horsleys and none at weekends. Since bus services depend on profitability, they cannot be expanded and the Council are not proposing to subsidise new ones. Rural buses are too slow anyway for busy people. Most rural roads in the borough are narrow, winding, hilly, potholed, muddy and unlit. Many flood badly and have no footpaths.

The desired modal shift would require a comprehensive co-ordination of bus and train timetables with services every few minutes, seven days a week, to stops within walking distance of every home in the borough. This kind of integrated public transport system has been achieved in Switzerland, for instance, but only at huge public cost and thanks to a political consensus supporting state ownership of trains, buses and the post office, which delivers rural passengers as well as mail. There is absolutely no chance of this in the UK.

The vast majority of the borough's residents are not, in practice, able to cycle. This includes children, the elderly, commuters who have to look smart, the infirm, the unfit and people carrying goods or shopping of any kind. Dependence on walking and cycling discriminates against these groups, which include some of the most vulnerable members of the community. It is socially unjust.

One in two working people in Guildford commute for up to 3 hours a day, as I used to do. They will not leave their cars for even part of their journey if it means longer travel times.

Park-and-rides are a welcome part of the transport mix but are too slow for commuters and others on a tight schedule. Well-off pensioners seem to be the main beneficiaries. For an adult couple going shopping it is still cheaper to park in town.
Forget about water buses. The Wey is too narrow and, with a river speed limit of 4mph, boats are too slow for anything but recreation. Except on the tideway, not even the Thames has such services.

The addition of two new stations appears attractive but will slow down train journeys, which are already slower than at any time since the 1930s. Knock-on effects on localities where the new stations are built have not been worked out or presented.

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Infrastructure is not in place that in any way deals with the amount of houses and commercial development being proposed in the Compton area and its surrounds. We are referring in particular to the B3000, A3 and A31. These roads are already at saturation point. They not only deal with local traffic, but also traffic, passing through to get to the West Country, Dover, London, Dorking and the Coast. An ever-increasing number of heavy goods vehicles using the B3000 have to pass over a narrow Victorian railway bridge causing difficulties for cars coming the other way and great danger to pedestrians or anyone on a bicycle.

Access proposed to some of the developments envisaged will also create congestion around the Business Park causing serious problems for ambulances to the Royal Surrey County Hospital, and also push more traffic though Compton by coming off the A3 at Compton and then using Down Lane to access Guildford or the proposed development.

Pollution on the B3000, which is already very high and not being addressed, will increase if further traffic is put on this road.

Research upon which assumptions have been made is often out of date. Traffic in this area steadily increases every year without the huge developments being imposed on the area without proper forethought.

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT. This is another vaguely aspirational policy, based on wishful thinking and not grounded in the practical realities of daily life. It consists of a standard, box-ticking list of local government measures unrelated to the specifics of the plan. Like infrastructure, transport appears to be an afterthought; the policy fails in its essential job of guiding planning decisions, since it assumes development of any kind can be supported by sustainable transport.
The sustainability of the dormitory settlements which the Council want built across the countryside depends on a general “modal shift” from private car use to walking, cycling and public transport. This is unrealistic. The proposed sites are often miles away from the nearest railway station. Bus services even in the largest villages are almost non-existent – just one bus to and from Guildford each day in the Horsleys and none at weekends. Since bus services depend on profitability, they cannot be expanded and the Council are not proposing to subsidise new ones. Rural buses are too slow anyway for busy people. Most rural roads in the borough are narrow, winding, hilly, potholed, muddy and unlit. Many flood badly and have no footpaths.

The desired modal shift would require a comprehensive co-ordination of bus and train timetables with services every 10-15 minutes, seven days a week, to stops within walking distance of every home in the borough. This kind of integrated public transport system has been achieved in Switzerland, for instance, but only at huge public cost and thanks to a political consensus in favour of state ownership of trains, buses and the post office, which delivers rural passengers as well as mail. There is absolutely no chance of this in the UK.

The vast majority of the borough’s residents are not, in practice, able to cycle. This includes children, the elderly, commuters who have to look smart, the infirm, the unfit and people carrying goods or shopping of any kind. Dependence on walking and cycling discriminates against these groups, which include some of the most vulnerable members of the community. It is socially unjust.

One in two working people in Guildford commute for up to 3 hours a day. They will not leave their cars for even part of their journey if it means longer travel times.

Park-and-rides are a welcome part of the transport mix but are too slow for commuters and others on a tight schedule. Well-off pensioners seem to be the main beneficiaries. For an adult couple going shopping it is still cheaper to park in town.

Forget about water buses. The Wey is too narrow and, with a river speed limit of 4 knots, boats are too slow for anything but recreation. Except on the tideway, not even the Thames has such services.

The addition of two new stations appears attractive but will slow down train journeys, which are already slower than at any time since the 1930s. Knock-on effects on localities where the new stations are built have not been sufficiently worked out.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/13990  Respondent: 10941057 / Tim Green  Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the impact of excessive development on the A3 and M25 on air quality. The air quality in many parts of the borough is greater than EU permitted levels and will damage the health of residents and future residents.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Comment ID: PSLPP16/16128  Respondent: 10941057 / Tim Green  Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )
1. I object to the impact of excessive development on the A3 and M25 on air quality. The air quality in many parts of the borough is greater than EU permitted levels and will damage the health of residents and future residents.
2. I object to the fact that 70% of the proposed 13,860 houses are designated on Green Belt land along the A3. This will result in gridlock on the A3, the A247 and the surrounding roads which are already at capacity.
3. I object to the inadequate protection of the environment.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the impact of further congestion on local village roads and lanes.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/8004  Respondent: 10941153 / Michael Cox  Agent:
Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

The local roads in the Guildford Area are already at capacity, especially the A3 and need major work on them to keep the traffic flowing. This should be the Council's priority before any new developments are envisaged. Any new developments in the Ripley, Burpham, Send and Wisley areas will result in the A3 becoming totally clogged (even with the suggested new slip roads at Burnt Common and Railway Station at Merrow) and vehicles being unable to move in peak times which will have a knock-on effect for local businesses and freight companies losing money because of delays. The frustrated drivers will then decide to avoid the A3 and take to the declassified roads which are not designed for high levels of traffic. Remember for every house built there will be on average 2 cars.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/9317  Respondent: 10943457 / Henry Benzikie  Agent:
Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT to poor air quality concerns (Policy I3)

Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the
north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

I object to poor air quality concerns (Policy 13) The increased congestion that will arise from the massive proposed developments will in turn lead to increased air pollution which will have damaging effect on local residents and their health

I object to the congestion that development will cause to the trunk roads A3/M25 (Policy 12) Both the A3 and M25 need improvements before any developments commence. This is clearly not going to happen in the timescales of the plan, so the proposed developments at Wisley Airfield (A35), Garlicks Arch (A43) and Gosden Hill (A25) should NOT take place. Please record these objections individually against the relevant sections of the plan and ensure that they are submitted to the Planning

My next objection is to the impact on the road network that is already at breaking point. As the building work is planned to continue over a period of years there will be a constant flow of site traffic, the need for the first inhabitants to reach places of employment, education and retail sites adding considerably to the already poor air quality. The resultant traffic congestion adding to existing local residents woes.

As a Cobham resident I fail to see how our village can absorb the increased number of shoppers and their vehicles. And to Cobham people will come as it is unlikely that all necessary infrastructure will be up and running before the first residents move in. This is another cause for objecting to this element of the Local plan 2016. As for the calm assertion that these new residents will take either to their feet or bicycles; plainly these are developers with a well honed sense of humour bordering on the ridiculous.

Next we come to public transport or more sensibly the lack thereof. Even allowing for the longer trains that have been introduced by SWT there is not the capacity to absorb more passenger traffic from the local railway stations nor is there sufficient car parking space and / or provision thereof. Whilst being very grateful for the bus service we do have it is not going to be able to cope with the numbers of passengers at peak times. And even if additional services were introduced it will not make reliability any greater unless there is a dedicated bus lane from Esher via Cobham.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

As far as Burpham is concerned the tunnel and the access to Guildford (by-passing Burpham) MUST be dealt with before any building takes place. Burpham is not coping very well with the traffic at present. We knew Burpham when the London Road was the A3 and by the time the new A3 was built it was out of date anyway. Don't make the same mistake again. The A3 is like the M25 - the planners underestimated how much it would be used by local traffic (slipping on and off) these roads were not wide enough to contain the mass traffic - then the M25 could only be widened in certain places and the same applies to the A3.
Road systems should plan for the distant future as much as possible and the problems we have right now need to be resolved as soon as possible so that planning for housing and infrastructure can take place (not the other way round).

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
- It is not sustainable to build dormitory towns and call them sustainable.
- Not everyone can cycle all the time.
- How can large developments outside the town centre maximise sustainable travel? This is a matter for the planning process - the further from the town centre, the less sustainable the development will be.
- Reliance on cycling discriminates against vulnerable members of the community. How can the disabled, those with small children, or the very old, or the infirm, or those who are ill, cycle outside the town in order to commute, or even inside the town? Only some people cycle – and Guildford has some steep hills, especially going out of town. Park and rides are slow – how can those with a 3 hour commute add 1 hour to their journey from using park and rides?
- The only sustainable mechanism for new developments is to have them in the town centre close to the railway and the main shopping links where a “hoppa bus” can provide satisfactory links for those who cannot walk or cycle.
- While I welcome the intention to encourage rail travel by adding two new stations (subject to negotiation with Network Rail) there could unintended consequences.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Comment ID: PSLPP16/4993  Respondent: 10986689 / Richard Harris  Agent:

**Document**: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3

**Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )**

1. I OBJECT to poor air quality concerns (Policy I3)

Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/2410  Respondent: 10987137 / Susan Wong  Agent:

**Document**: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3

**Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )**

1. Some changes to the roads are proposed but there will still be much more traffic in the Burpham area which already has serious problems. Will the new people enjoy living here when they discover it takes an extraordinary long time to get through Merrow and Burpham with all the clogged up roads? Some roads can be widened but it often causes a problem when the traffic is funneled in to narrower roads with less traffic lanes.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
**I object to poor air quality concerns (Policy 13)** The increased congestion that will arise from the massive proposed developments will in turn lead to increased air pollution which will have damaging effect on local residents and their health.

</tr>
</tbody>
</table>
6. Increasing development of Clandon First School on the A247
7. The narrow sections on the road so that two lorries or buses cannot pass each other
8. Any accidents or problems on the A3 and/or M25 causing lengthy tail backs along the A247
9. Proposed tourist/play developments at Newlands Corner

10 Existing footpaths alongside the road non-existent and/or inadequate

The existing problems and proposed developments will completely overburden the local road network and increase congestion on the A3 and A247 through the centre of West Clandon. The A247 is already very heavily used whilst being entirely unsuitable for designation as an A road.

Note the following accident data:

2010 – 2014 from Crashmap data

- Clandon Cross Roads Area to Bulls Head - 17 incidents
- Bulls Heads Head to Bennett Way - 8 incidents
- Bennett Way to Highcotts Lane - 15 incidents
- Tithebarn Lane to Portsmouth Road Birch Close - 8 incidents

2015

- 21 October 2015 – A247 near shell garage - Three vehicles collided causing delays
  Surrey Fire and Rescue deployed.

2016

- 15 April 2016 12 year old boy injured in The Street – A247 closed in both directions
- 28 April 2016 A3 West Clandon London bound between A247 Tythebarns Lane (Burntcommon and M25 J10 (Wisley Interchange) congestion on A3 to A3100 Clay Lane Burpham
- 30 June 2016 Motorcyclists with injuries airlifted to hospital Send Marsh Road
- 12 July 2016 Two cars in collision (and at least one written off) outside Summers on the A247

Attempts have been made over many years to reduce traffic, traffic speeds and accident risks through West Clandon, however little has been achieved as the road cannot be widened and SCC is reluctant to impose further speed limits as congestion is already very high. There is already 95% of a Clandon By Pass built: a consistently wide road with little housing fronting on to it. Park Lane and Merrow Lane lead directly from Merrow to the A3 at Burpham. Completing this by pass needs actioning before any further development in the Clandon area is considered and it is negligent of the Council not to pursue this in concert with Surrey County Council and the Highways Agency.

6] I object to the detrimental impact on transport, local roads and road safety. I specifically object to:

1. The assertion that the development will result in a meaningful shift to cycling and walking. The development is too isolated, and even within the development itself too spread out to anticipate a reduced reliance on private cars
2. The increased volume of car traffic. A proposed development of 2,068 homes would result in an estimated 4,000 additional cars on the roads
3. The congestion this traffic will cause on the narrow rural roads in Ockham and the surrounding areas, exacerbated by wide vehicles including increased bus and HGV movements
4. The danger this traffic will be to local cyclists and pedestrians, due to the absence of any cycling paths and the lack of pedestrian footpaths (and the space to provide them)
5. The increase in the already severe congestion on the Strategic Road Network of the A3 and M25. A further planning application at RHS Wisley (with a significant increase in visitor traffic) and a proposed 600 pupil secondary school on the site would add additional congestion at the M25/A3 junction as well as local roads. No development can proceed without significant infrastructure enhancements to the A3 and M25. Partial improvement works on the A3 south of the site are not due to start until 2019 at the earliest
6. The lack of suitable public transport. The local rail stations of Effingham and Horsley cannot cope with the proposed increase in passenger traffic and car parking is already at capacity

Transport

- It is unreasonable to seek approval of a local Plan without clarity on the essential issue of transport and roads infrastructure. The Plan indicates that road improvements will happen, but as some sort of evolving feast as directed by SCC and Highways England. This essential ingredient must be clearly defined for a Plan to be considered properly.
- In particular, the Gosden Hill development and its interaction with the A3 is too vague and not realistic. The suggestion of on & off slips to the A3 southbound only is ridiculous, and the alternative proposal by Highways England of a possible multi-direction interchange cannot be left to their discretion and to whether or not some funds can be found (because of course they will not). An integrated A3 multi-direction interchange plan must be part of the developers plan.
- The existing Clay Lane northbound access is just not sufficient, bearing in mind the extra traffic that will be generated by the various proposed housing and commercial developments to the north of the town, as well as Slyfield and Gosden Hill. It should also have some consideration of whether access/egress to Gosden Hill could be via the proposed improved interchange at Burgh Common, avoiding the otherwise inevitable increased congestion in Burpham.
- The potential traffic solution of a tunnel must also be integrated with the Burpham development plan, as the Burgh Common to A320 section of the A3 must be the likely start point for such a development.

There are frequent references to the Sustainable Movement Corridor, but no definitive route is proposed. There is 1 small part shown in Appendix C, but no indication of how this will be achieved from Gosden Hill/Burpham to the Town Centre. For instance, presumably Park & Ride buses will just follow the existing London Road into Guildford, adding to the existing congestion.

I object to the fact that 70% of the proposed 13,860 houses are targeted at the Green Belt strung along the A3 which will destroy the open amenity of the borough and produce gridlock on the A3 and surrounding roads including the A247 which are all already at 100% capacity.

Furthermore these two villages are typical of the beautiful and picturesque countryside of Surrey where many roads are narrow, with little or no pavement. Walking along these is already unsafe, with cars and lorries dangerously close to pedestrians, whether these are families with young children or elderly people using walking aids. The increase in traffic caused by building on the site near Horsley station at one end of the village and on the site of Thatchers Hotel at the other end will greatly exacerbate this danger.

Infrastructure.

1. Roads – The overall road network within Guildford is already hugely challenged. In particular the A3, which will be a major feeder road for the expansion in the West of Guildford will be unable to cope at peak periods. Guildford already can’t cope when there is a problem on the A3, adding thousands of additional cars to this route will make it materially worse. It is also likely that the A31 will also be overburdened. The evidence for this over-burden is clear. Already in the period since the prior town plan there have been a number of fatalities and serious injuries caused by traffic volumes in the town centre. Increasing road usage will exacerbate this situation. Finally, the road network that the Blackwell Farm Site will be dependent on also feeds the hospital, a part of the road network just off the A3 and suffering from existing capacity problems at peak periods. This is also the same network that feeds the hospital. At peak periods the additional traffic will literally put people’s lives at risk. Even excepting this the evidence provided by the plan suggests that in the evening rush hour (with all the change being considered) traffic volumes will actually slow.

2. Rail – Guildford is hugely dependent upon the rail network, in particular for travel to / from London. Even at weekends the current rail provision is such that it can be difficult to get a seat. On weekdays, particularly between 7 and 9 am and between 5 and 8pm it can literally be impossible to get a seat. While further increases in capacity and frequency are to be welcomed, the reality of these changes is that they are required now with the current volume of passengers – I travel regularly on these trains and passengers fainting as a consequence of the conditions is a relatively frequent occurrence. Adding thousands of new homes, and at least hundreds of new commuters without the development of a substantially new rail network – including new terminus or significant expansion at Waterloo (one of the major constraints to rail volume) will leave Guildford woefully under-served by its rail connections. It is also apparent that some proposals exist to increase population along the train route between Portsmouth and London – it is not clear that the impact of all of these changes at the same time have been considered on the capacity changes.

3. Town centre access – As discussed the current draft local plan, with its anticipated reduction in car-parking and traffic volumes is completely incompatible with the proposals in the local plan.

I OBJECT TO the inevitable congestion on local roads as a result of this housing strategy.

Anybody who lives around Guildford would vouch for the fact that the A3 comes to a standstill several times a week, particularly around the Guildford area. To put it simply, this proposed housing strategy will cause absolutely chaos on the roads, and it is not only an ill-advised strategy as a result, but to ignore this fact would show the Local Council to be extremely naive to the problems we face in the South East.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

12.1 OBJECT to poor air quality concerns (Policy 13)

Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

Do you consider this section of the document: complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

This fundamentally contradicts the plan’s assertion that the development will encourage more cyclists and pedestrians. One heavy rainfall is all it takes to cause drainage to overflow and local roads to flood. These roads were built for minimum traffic and most don’t have pavements, are badly lit and there is certainly no room for expansion to include any purpose built cycle lanes or designated cycle routes.

The A3 and the M25 are hugely congested at rush hour in the very area the plan proposes to build this substantial number of dwellings. No development can proceed without significant infrastructure enhancements to the A3 and M25. Partial improvement works on the A3 south of the site are not due to start until 2019 at the earliest.

The problem is further exacerbated by the lack of suitable public transport. The local rail stations of Effingham and Horsley cannot cope with the proposed increase in passenger traffic and car parking is already at capacity.

I trust that these objections will be fully considered.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/16812  Respondent: 11024769 / Sarah Runton  Agent:
Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3

Do you consider this section of the document: complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the detrimental impact on transport, local roads and road safety. I specifically object to:

1. The assertion that the development will result in a meaningful shift to cycling and walking without substantial investment in cycle lanes and pathways as well as pavements. The development is too isolated, and even within the development itself too spread out to anticipate a reduced reliance on private cars.
2. The increased volume of car traffic. A proposed development of 2,068 homes would result in an estimated 4,000 additional vehicles. The congestion this traffic will cause on the narrow rural roads in Ockham and the surrounding areas, exacerbated by wide vehicles including increased bus and HGV traffic.
3. This fundamentally contradicts the plan’s assertion that the development will encourage more cyclists and pedestrians. The danger this traffic will be to local cyclists and pedestrians is obvious to all who live in the area, due to the absence of any cycling paths and the lack of pedestrian footpaths (and the space to provide them).
4. The increase in the already
severe congestion on the Strategic Road Network of the A3 and M25. A further planning application at RHS Wisley (with a significant increase in visitor traffic) and a proposed 600 pupil secondary school on the site would add additional congestion at the M25/A3 junction as well as local roads. No development can proceed without significant infrastructure enhancements to the A3 and M25.

Partial improvement works on the A3 south of the site are not due to start until 2019 at the earliest. The lack of suitable public transport. The local rail stations of Effingham and Horsley cannot cope with the proposed increase in passenger traffic and car parking is already at capacity

I object to the Policy E2 at Garlicks Arch (A43) 7,000 sq. m of warehousing and storage use Class B1c, B2 and B8) floor space will be directed to the Industrial Strategic Employment Sites. This could be put either at Slyfield or just to the South in Burnt Common where there is an existing brown field site which can easily accommodate the requirement, and was removed from the plan with less than two weeks notice. How can it be beneficial to take land out of production and lose ancient woodland and leave an existing brownfield site giving no benefit.

I object to the fact that Guildford Borough Council members stood for the green belt and people voted them back in, now their true colours are shown, and they want to insert so much Green belt, while not giving consideration for brown field sites and population density in existing urban areas. Even The MP for Mole Valley says that this plan is not fit for purpose.

I Object to the huge impact on the local Trunk Roads A3 and M25, huge improvements need to be made to these routes prior to any housing being added to the area. The A3 to Guildford is a large car park at peak hours. The expected time for improvements to the A3 Guildford is 2020 at the very earliest and now we have Brexit to add to the thoughts of this plan, there is no way that the timetable for such infrastructures’ to be updated prior to this date. Therefore this is another reason the plan should not stand.

The transport infrastructure in Guildford is already stretched to its limits at peak times - the A3 and A31 in the area of Onslow Village, the hospital and the cathedral, in particular. The road network is simply at or beyond capacity and adding further traffic to the area would cause misery for commuters, local residents and emergency services alike. I actually find it incredible that anyone could have proposed the scale of development they have for the west of Guildford in light of its impact on the road network as must surely have been highlighted by any traffic assessments.
Locally to us, the infant school in Onslow Village is already subject to considerable road noise and pollution, which would worsen if the A3 was widened, which surely it would have to be to cope with any future expansion, let alone the amount proposed. Only a major project such as the A3 Guildford bypass tunnel project would be likely to have a significant impact. Additionally, the proposed junction for the Blackwell Farm development at the top of the Farnham Road is likely to make the roads busier and more dangerous in Onslow Village as vehicles seek to find alternative, clearer routes, magnifying the current issues that occur whenever there are problems on the A3 or A31.

Train transport is similarly at its limits in Guildford with commuter trains between Guildford and London some of the most overcrowded in the country – my husband is forced to stand or sit on the floor during his daily commute despite several trains an hour and an expensive season ticket. Any increase in capacity as a result of electrification of tracks or increased numbers of trains is needed just to deal with current problems. I am baffled as to how adding extra stations at ‘East’ and ‘West’ Guildford is supposed to help as surely the majority of those commuters would just be using the trains from there as a shuttle to the mainline station?

I do not believe that the proposed mitigating interventions do more than tinker at the edges, even if they were only to tackle the current issues, and are woefully inadequate.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

flood badly and have no footpaths. The desired modal shift would require a comprehensive co-ordination of bus and train timetables with services every few minutes, seven days a week, to stops within walking distance of every home in the borough. This kind of integrated public transport system has been achieved in Switzerland, for instance, but only at huge public cost and thanks to a political consensus supporting state ownership of trains, buses and the post office, which delivers rural passengers as well as mail. There is absolutely no chance of this in the UK. The vast majority of the borough’s residents are not, in practice, able to cycle. This includes children, the elderly, commuters who have to look smart, the infirm, the unfit and people carrying goods or shopping of any kind. Dependence on walking and cycling discriminates against these groups, which include some of the most vulnerable members of the community. It is socially unjust. One in two working people in Guildford commute for up to 3 hours a day. They will not leave their cars for even part of their journey if it means longer travel times. Park-and-rides are a welcome part of the transport mix but are too slow for commuters and others on a tight schedule. For an adult couple going shopping it is still cheaper to park in town. I like the idea of water buses but have concerns over the reality. The Wey is narrow and, with a river speed limit of 4mph, boats are too slow for anything but recreation. Except on the tideway, not even the Thames has such services. The addition of two new stations appears attractive but will slow down train journeys, which are already slower than at any time since the 1930s. Knock-on effects on localities where the new stations are built have not been worked out or presented. Ie. Cost of housing will increase.

1. Sites being planned in unsustainable locations

Many of the strategic sites e.g. Wisley Airfield and Garlick’s Arch, are in unsustainable locations. They do not benefit from railway stations within easy walking distance and bus services across rural villages are forever reducing. Residents will have few options, but to be reliant on motor vehicles. I object on the grounds that these sites are not sustainable.

I OBJECT that the already overloaded infrastructure and existing transport overload seems to have been completely ignored in the case of Send as has the existing traffic congestion during peak times in Send and in particular the A247 being used by large commercial vehicles for which the road is totally unsuited. This is without the inevitable significant overload which will be caused by the proposed additional housing population and industrial development which is just not sustainable and will cause major inconvenience and significantly increased polution for the existing population of Send. Additional housing is already being developed in Tannery Lane as well as the Marina being developed using a narrow road with a dangerous junction onto the A247 in the middle of Send Village. Send is already becoming the through route from Woking to the M25 and A3 and will become gridlocked all day - even without the proposed NEW 4-Way A3 Interchange This alone will destroy the village and cause major Health and Safety problems,
particularly in relation to the major school development and merger of two schools which fronts onto Send Barns Lane (A247) where parents already cause serious parking congestion and traffic problems with just the one current school without the addition of the new second one.

- The large developments planned for this area, Garlick’s arch (A43), Wisley Airfield (A35) and Gosden Farm (A25) will put a significant amount of pressure on the local amenities. The transport links are not built for this level of development and with the lack of a railway station and poor bus links it means that a lot of people will have a car. The roads around these areas are small and are already gridlocked at peak times. With these three developments, as well as some of the smaller infilling of houses (including over 500 houses built in the Horsley area), there will be even more gridlock during peak times then there already is.

- The smaller roads of Polesdon Lane, Papercourt Lane and Tannery Lane will simply not be able to cope with the increased amount of traffic. This will put further strain on Ripley High Street, Newark Lane and Send Road which are always very busy.

1. OBJECT TO POLICY I3 (SUSTAINABLE TRANSPORT) as the policy which fails to address the real life constraints and demands of modern life. In failing to recognising employment opportunities (or lack of them) within the local communities, the Council’s proposals are unrealistic and fail to address the commuting pressures of the population who will occupy the proposed new housing developments, frequently located on the village fringes. The majority of people cannot or will not walk or cycle – commuters are in a hurry and many will already face a long commute to work. The elderly, children, people with disabilities or who are unwell or unfit, or simply people carrying heavy shopping will not walk or jump on a bike. Life in a village is very different to life in an urban area and the Council failed to address these differences. Roads in the Horsleys are narrow and in a poor condition making them hazardous for cyclists – pavements switch from side to side or disappear completely, are narrow, often overgrown and not suitable for hugely increased numbers of people (particularly families with buggies / young children).

1. POLICY I3

I OBJECT to poor air quality concerns (Policy I3)

Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

- Local roads are already overwhelmed by rush hour traffic; in the north of the borough in particular the current traffic volumes on commuter routes which are often country lanes are creating long queues through village centres such as Ripley and Send, impacting on the quality of life including the exposure to harmful levels of vehicle emissions.
- Rail services into London where many of the new residents are likely to work are already at or above capacity. The fast services from Woking will be chosen by many commuters living in the new properties planned for Wisley site A35, Garlick’s Arch A43 and those to the east of the A3. This will cause further traffic issues through the villages en-route to Woking.
- Bus services are currently inadequate, slow, declining in number and due in part to the traffic issues above are totally unsuitable to be promoted as an alternative for commuters in the villages outside of Guildford.
- Active travel in the villages will in the main be cycling, this is not an attractive alternative due to the narrow country lanes which cyclists would need to travel on en-route to local stations. Currently cyclists on these commuter routes increase congestion as it is not possible for cars and commercial vehicles to safely overtake them; unless proper provision is created then this is not a sustainable alternative.

I strongly object due to poor air quality concerns and noise pollution levels (Policy I3)

The huge developments being proposed, particularly in the north east of the borough will lead to considerable further congestion and to greater levels of air pollution, which will have a detrimental effect on local residents and their health.

In addition to air quality the proposed previous development in the fields adjacent to Garlicks Arch noted that the levels of noise from the A3 were high and this would lead to poor quality of life for the new residents. We live on the opposite side of Burnt Common Close – so further from the A3 – and we certainly find the traffic noise can be tiresome, especially in winter when there is less deadening of the noise and the wind direction can carry noise from the A3. Adding the on/off ramp will make air quality poorer and add more noise because there will be more traffic on all roads around this area.

Have you seen the traffic congestion on the M25 near the A3? Have you seen how difficult it is to join the M25 from the A3 in the mornings? Have you seen the congestion leaving the M25 for those who work in our area? Yet…………… you are proposing more housing and encouraging more jobs for people outside our area without a thought of improving the infrastructure………which after all should be considered well ahead of any future development.

POLICY I3 (SUSTAINABLE TRANSPORT) – I object to this pious and overoptimistic list of measures. They are just not rooted in the realities of living in Guildford. Sustainability should set a limit on development – not (as here) assume that it can be magicked up to support excessive housebuilding.

The assumptions about walking and cycling are totally unrealistic. These modes of travel will not be used by most of Guildford’s population. Many are increasingly pressed for time, old, frail and obese. Others are too young, unwell or carrying heavy loads.

Not enough attention is given to transport in the countryside, where there is little public transport and no chance of funding its expansion. It disregards the poor state of our roads (the worst county in the country) and the additional problems that will be caused by excessive housebuilding in the countryside.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object to the proposed developments at Flexford, Normandy and Keens Lane, Worplesdon.

In both cases these developments will place even greater strain on traffic movements on the A 323, which is already seriously overloaded at peak times. In addition the private application to develop the Roker golf course at Fairlands with a secondary school and 370 houses (16/P/01397) cannot be ignored in the context of the Local Plan. If approved, this development would discharge its traffic directly onto the A323, with wholly undesirable consequences.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object to policy I3 Sustainable transport for new developments This is another aspirational policy, not grounded in the practical realities of daily life. It consists of a standard, box-ticking list of local government measures unrelated to the specifics of the plan. Like infrastructure, transport appears to be an afterthought; the policy fails in its essential job of guiding planning decisions, since it assumes development of any kind can be supported by sustainable transport. The sustainability of the dormitory settlements which the Council want built across the countryside depends on a general “modal shift” from private car use to walking, cycling and public transport. This is unrealistic. The proposed sites are often miles away from the nearest railway station. Bus services even in the largest villages are almost non-existent – just one bus to and from Guildford each day in the Horsleys and none at weekends. Since bus services depend on profitability, they cannot be expanded and the Council are not proposing to subsidise new ones. Rural buses are too slow...
anyway for busy people. Most rural roads in the borough are narrow, winding, hilly, potholed, muddy and unlit. Many
flood badly and have no footpaths. The desired modal shift would require a comprehensive co-ordination of bus and
train timetables with services every few minutes, seven days a week, to stops within walking distance of every home in
the borough. This kind of integrated public transport system has been achieved in Switzerland, for instance, but only at
huge public cost and thanks to a political consensus supporting state ownership of trains, buses and the post office, which
delivers rural passengers as well as mail. There is absolutely no chance of this in the UK. The vast majority of
the borough’s residents are not, in practice, able to cycle. This includes children, the elderly, commuters who have to look
smart, the infirm, the unfit and people carrying goods or shopping of any kind. Dependence on walking and cycling
discriminates against these groups, which include some of the most vulnerable members of the community. It is socially
unjust. One in two working people in Guildford commute for up to 3 hours a day. They will not leave their cars for
even part of their journey if it means longer travel times. Park-and-rides are a welcome part of the transport mix but are
too slow for commuters and others on a tight schedule. For an adult couple going shopping it is still cheaper to park in
town. I like the idea of water buses but have concerns over the reality. The Wey is narrow and, with a river speed limit
of 4mph, boats are too slow for anything but recreation. Except on the tideway, not even the Thames has such services.
The addition of two new stations appears attractive but will slow down train journeys, which are already slower than at
any time since the 1930s. Knock-on effects on localities where the new stations are built have not been worked out or
presented. Ie. Cost of housing will increase.

P129 (4) In terms of vehicular parking for new developments:

(a) in Controlled Parking Zones, or component areas thereof, in which the demand for on-street parking by residents of
existing dwellings and, where allowed, `pay and display’ visitor parking exceeds the supply of designated on-street
parking spaces, planning permission for new residential development resulting in a net increase in dwellings will be
subject to a planning obligation to require that future occupants will not be eligible for on-street residents parking
permits, with the exception of disabled people who will be eligible. We welcome this action to restrict residents parking permits. However we ask that no permits are issued in established residential areas for new dwellings, irrespective of the perceived demand; experience has shown that in most areas the demand is already too much.

**P129.** “(6) The provision and/or improvement of a car club by a new development will be supported if appropriate.”

Car clubs clearly support reduced car use, by their “pay as you go” system. We ask that the qualification “if appropriate” be deleted.

**P130.** “(11) The provision of additional public off-street car parking in Guildford town centre will be supported when it facilitates the interception of trips that would otherwise drive through the Guildford gyratory.”

We ask that this be reworded: that would otherwise drive through the town centre or surrounding residential areas. “Rat runs” are increasingly a problem along narrow residential roads, and create safety risks; problems are not limited to the gyratory.

**P133.** “Monitoring Indicators...Walking, cycling, bus and rail modal share for travel to work journey of Guildford borough residents”.

It is known that a significant proportion of the congestion traffic is caused by children being taken to schools around the centre, and that some are from outside Guildford. We suggest reword as “…for travel to work and school.”

<td>As stated previously, RHS Wisley is the most popular tourist / cultural attraction in the Borough, and is one of the world’s most significant gardens. The Garden is one of the top attractions in England and has approximately 1 million visitors per year with the anticipation of visitor numbers increasing to 1.4 million visitors by 2023. Enhancing and maintaining the quality of the visitor experience and providing the necessary facilities for these numbers is of the utmost importance to the Society. As part of the recent planning application submissions, forms of sustainable transport were reviewed alongside the exploration of promoting more sustainable forms of transport and how existing parking facilities can be used more efficiently. Through this process and the ongoing masterplan exercise, all reasonable endeavours will be undertaken to explore sustainable transport methods that can be implemented to mitigate against the potential impacts of increasing visitor numbers. These measures need to be appropriate to the needs and demographic of the majority of visitors to RHS Wisley. It is noted that the number of visitors to Wisley changes through the week and season, but largely fall outside of peak hours where highway network congestion is at its greatest. Due to the current physical constraints of the site and its rural location, including narrow roads to the north and west and the A3 and M25 to the east and south, providing safe alternative transport methods is challenging. Planned improvements to the M25 Junction 10 would be welcomed. With that said, the RHS support the aims of Policy 13 and are encouraged that the policy wording incorporates ‘where appropriate’. This acknowledges the difficulties new developments face within rural areas of the Borough.</td>

Enhancing and maintaining the quality of the visitor experience and providing the necessary facilities for the increased number of visitors is of the utmost importance to the RHS. As part of the recent planning consents forms of sustainable transport were reviewed alongside the exploration of promoting more sustainable forms of transport and how existing parking facilities can be used more efficiently.

Through this process and the ongoing masterplan exercise, all reasonable endeavours will be undertaken to explore sustainable transport methods that can be implemented to mitigate against the potential impacts of increasing visitor numbers. These measures need to be appropriate to the needs and demographic of the majority of visitors to RHS Wisley. It is noted that the number of visitors to Wisley changes through the week and season, but largely fall outside of peak hours where highway network congestion is at its greatest.

Due to the current physical constraints of the site and its rural location, including narrow roads to the north and west and the A3 and M25 to the east and south, providing safe alternative transport methods is challenging.

The planned improvements to the M25 Junction 10 are welcomed subject to their detailed design, which is currently being discussed by the RHS with Highways England, with ‘improved access to Wisley Garden’ being a specific aim of the highways improvement. The RHS is opposed to any landtake from their RPG site, and seeks an appropriate local road network to support its operations, as well as a Junction 10 solution.

Policy ID3 has been amended to include requirements for new developments to meet including maximising the use of walking, cycling and public and community transport. This policy now requires developments to meet criteria outlined rather than expect and incorporate sustainable transport modes where appropriate, which is how the policy was previously worded.

Whilst the RHS support the aims of Policy ID3 and seeks to encourage, where possible, sustainable transport modes, it is important that flexibility is applied to new developments within rural areas of the borough where there is reliance on vehicular use.

With that said, we request that the policy wording incorporates ‘where appropriate’ with regards to rural areas of the borough as previously included.

1. I object to poor air quality concerns (Policy I3)

The huge developments being proposed, particularly in the north east of the borough will lead to considerable further congestion and to greater levels of air pollution, which will have a detrimental effect on local residents and their health.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Adequate infrastructure is not in place to accommodate these developments and no provision has been allowed for such – particularly roads and waste. The local roads cannot handle the current traffic numbers – without significant investment in alternative road systems the local area will become completely clogged with traffic.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I support a tunnel from Send to Compton that takes the through traffic on the A3 away from our local roads. I also support a four way junction at Send or Potters Lane with a direct route through to Merrow. I also support a four way junction at the A3/A320 in Guildford so that A3 traffic have direct and improved route through to Woking.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Secondly, the area is not well equipped infrastructure wise to deal with the increased traffic and people that increased housing would lead to. Clay Lane, Jacobs Well Road and Blanchards Hill are already extremely busy roads. Blanchards Hill has no footpath and is 40mph making it dangerous for there to be further traffic and pedestrians. Although if it is removed from the green belt then I would expect the road safety to be investigated and a 30mph limit put in place along the road as per most residential non green belt roads.
Clay Lane link road

I object to the building of the clay lane link road from Slyfield to Clay Lane. I have previously provided detailed reasons why I object to this but briefly, Clay lane, Blanchards Hill and other local roads are already very busy and dangerous, particularly at rush hour. Blanchards Hill is a rural road with no footpath and would be particularly more dangerous if traffic was to increase. A lot of the houses along all roads are very close to the road and therefore resulting increase in heavy traffic would be detrimental to the buildings as well as causing disruption to the inhabitants. It would also ruin the nature of the area by making it a busy thoroughfare rather than a village where people live.

Document: Proposed Submission Local Plan: strategy and sites 2017 / Policy ID3

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

The Borough Planners have consistently ignored the views of experts and local people in respect of developments in Burpham. Local flooding has been the consequence of a lack of improved infrastructure when considering planning applications. Congestion and pollution has been exacerbated by poor planning decisions in respect of infill, housing and commercial development and the growth of a local secondary school with its greatly increased catchment area, necessitating the use of busses and domestic vehicles to convey pupils to and from the premises, combined with HGVs servicing the two superstores, has seen pollution levels climb exponentially. This increases demand on an already overburdened primary and secondary health care service.

The apparently planned 'improvements' to access to and from the A3 not only does not improve the situation of congestion and pollution but increases it, to the detriment of the residents and road users. Witness the now frequent congestion on the A3 around the Cathedral area, this backs up the southbound A3 carriageway and road users divert at the 'Merrow and Burpham Interchange' in the mistaken belief that this will improve their journey time. The reality is that the traffic is stationary or very slow moving through Burpham- and thus pollution is increased. To add to this by requiring any new and additional traffic to travel, from proposed developments, to the Northbound A3 [or Slyfield] via Burpham is frankly mindblowingly stupid. All the evidence points to a conclusion that it will increase the deadly effects of pollution and bring gridlock to the local roads.

The 'Improved' two way junction will do nothing to 'improve' the situation on the A3 and A3100. Any plans to extend 'potential' to 'reality' in respect of the B2234 will further increase the level of traffic and pollution. The proposed 'Sustainable Movement Corridor' along the A3100 is clearly an idea that appears 'good' on paper and has been drawn up by someone somewhat distant from the reality of the situation. Vehicles are becoming physically larger, traffic, as illustrated, is becoming heavier and Burpham's local roads are more and more frequently being used by HGVs, particularly, as mentioned, in the servicing of the two Burpham superstores, the road identified is not wide enough to allow two additional lanes for public transport. Is land and property to be compulsory purchased to fulfil this aspect of the plan? I would, however, agree, that in the event of realistically costed plan to build Guildford Tunnel on this part of the A3 - similar to the Hindhead one - then land does NOW need to be identified by way of forward planning. The Local Plan should, in my opinion, also encompass relevant aspects of the Highway Agency's Plans for this major route as it significantly impacts of the community at Burpham.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/14548  Respondent: 11967745 / Terence Vincent  Agent:
I live off of Clay Lane in Burpham and pass over the A3 daily and witness the stationery traffic south bound towards Guildford twice a day. This traffic has dramatically increased over a relatively short period of time. The issue of the A3 needs to be overcome before thousands of new houses are built. The suggested tunnel under Guildford needs to be thoroughly investigated before houses are built in this area.

Transport:

The evidence on future traffic conditions which has been provided in the Strategic Highway Assessment Report was produced late and is incomplete. Critical information on congestion has not been given in time to be taken into account in the plan proposals.

The proposed Sustainable Movement Corridor is simple unsound and cannot be delivered due to the narrow roads and pinch points on an already very congested route through Burpham.

Of further note is that the proposed Gosden Hill development of 2000 houses plus offices, school etc will add significant pressure to the already congested London road and New Inn Lane. The increase in solution and noise is unacceptable.

The phasing of the proposed Gosden Hill development is in advance of proposed improvements to the A3. This makes no sense.

The major transport issues around Guildford need to be resolved before any further development is considered, these include the proposed A3 tunnel, new river crossing, a workable central bus terminal and a rail station at Merrow.

It seems that Guildford Borough Council is planning a series of large developments along the A3 corridor but has not thoroughly looked at the impact of this for the surrounding villages. The villages on both sides of the A3 have very inadequate roads to cope with the anticipated amount of traffic and the roads available cannot be improved to the point that will ease the expected congestion. There are many other worries as well, such as environmental concerns, noise pollution, air pollution levels, flood risks, the sheer quantity of housing and industrial units supposedly required, the list goes on.

I object to the fact that land will be removed from the Green Belt before detailed traffic assessments and confirmed road improvement approvals are in place to prove development is possible. Adequate infrastructure provision should be a precondition of sustainable development.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

34 POLICY I3 SUSTAINABLE TRANSPORT

34.1 I object to policy I3 Sustainable transport for new developments

34.2 This is another vaguely aspirational policy, based on wishful thinking and not grounded in the practical realities of daily life. It consists of a standard, box-ticking list of local government measures unrelated to the specifics of the plan. Like infrastructure, transport appears to be an afterthought; the policy fails in its essential job of guiding planning decisions, since it assumes development of any kind can be supported by sustainable transport.

34.3 The sustainability of the dormitory settlements which the Council want built across the countryside depends on a general “modal shift” from private car use to walking, cycling and public transport. This is unrealistic. The proposed sites are often miles away from the nearest railway station. Bus services even in the largest villages are almost non-existent – just one bus to and from Guildford each day in the Horsleys and none at weekends. Since bus services depend on profitability, they cannot be expanded and the Council are not proposing to subsidise new ones. Rural buses are too slow anyway for busy people. Most rural roads in the borough are narrow, winding, hilly, potholed, muddy and unlit. Many flood badly and have no footpaths.

34.4 The desired modal shift would require a comprehensive co-ordination of bus and train timetables with services every few minutes, seven days a week, to stops within walking distance of every home in the borough. This kind of integrated public transport system has been achieved in Switzerland, for instance, but only at huge public cost and thanks to a political consensus supporting state ownership of trains, buses and the post office, which delivers rural passengers as well as mail. There is absolutely no chance of this in the UK.

34.5 The vast majority of the borough’s residents are not, in practice, able to cycle. This includes children, the elderly, commuters who have to look smart, the infirm, the unfit and people carrying goods or shopping of any kind. Dependence on walking and cycling discriminates against these groups, which include some of the most vulnerable members of the community. It is socially unjust. One in two working people in Guildford commute for up to 3 hours a day, as I used to do. They will not leave their cars for even part of their journey if it means longer travel times.

34.6 Park-and-rides are a welcome part of the transport mix but are too slow for commuters and others on a tight schedule. Well-off pensioners seem to be the main beneficiaries. For an adult couple going shopping it is still cheaper to park in town.

34.7 Forget about water buses. The Wey is too narrow and, with a river speed limit of 4mph, boats are too slow for anything but recreation. Except on the tideway, not even the Thames has such services.
34.8 The addition of two new stations appears attractive but will slow down train journeys, which are already slower than at any time since the 1930s. Knock-on effects on localities where the new stations are built have not been worked out or presented.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT TO POLICY I3 (SUSTAINABLE TRANSPORT):

- Just a list of generic measures, not related to real life or the particularities of Guildford.
- Fails to treat sustainability as a constraint. Assumes excessive levels of development proposed in the plan can be supported by sustainable development.
- Unrealistic. Most people can’t or won’t walk or cycle – commuters in a hurry, the elderly, children, people who are unwell or unfit, people carrying heavy shopping or other goods. I.e. most residents!
- Town’s eye view of transport. Ignores scarcity of existing rural public transport and commercial unviability of increasing it. Ignores terrible state of Surrey’s roads, potholes, flooding etc. Ignores extra stress to be created by huge new housing estates in countryside.

I should also like to object about the disproportionate concentration of proposed new development areas in this part of the Borough ie Ripley/Send/Wisley. The infrastructure is clearly not able to support more population and the improvement of the A3 junction at Burnt Common would be grossly insufficient to improve even the current situation let alone an increased level of population and traffic movement.

Effingham Common Road

My daughter goes to Howard of Effingham School by bus. Occasionally, some mornings, I may have to take her in. Effingham Common Road from the school to Effingham Junction, in direction of Wisley, is usually a solid traffic jam for its whole length (over 1 mile) at this time in the morning, although it does move steadily.

As I turn off onto Forest Road (when coming home) I do not know what the road is like once it becomes Old Lane, but presumably the traffic is still very heavy. These are country lanes. Clearly building a village/town of 2000 plus houses between this traffic jam and the A3 will have an enormous impact.

When I raised this issue, specifically with a GBC officer specialising on transport, at the East Horsley open day, he confirmed that they were completely unaware of this issue!

The proposed building at Wisley Airfield and Gosden Hill Farm will also add enormously to the flow of traffic through this area, an area that already experiences near grid-lock each rush hour. The A3 between Guildford and Burnt Common must suffer from the greatest number of fatalities of any road in Surrey. The new access/exit to the A3 at Burnt Common will increase capacity onto minor country roads doing little to improve the flow of traffic. The additional junctions will also make the A3 even more dangerous on this terrible stretch of road.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Traffic and parking: Assuming that every new house has at least 2 cars, this means potentially 6,000 more cars within a three mile radius of the villages. The impact on local roads will be tremendous. Parking at Horsley & Effingham junction stations (which are already full), at the shops, at the medical centre and at the village hall will all be affected.

Local Road Network: In respect of the proposals for development at Wisley Airfield and for an upgrade the current A3 junction at Burntcommon to a full 4-way junction, SCC traffic modelling anticipates increased use of Guileshall Lane, Hungry Hill Lane and Tithebarns Lane for traffic accessing the A3 at Burntcommon in order to travel to Guildford and beyond. The SCC report states that “consequently, it indicates that further thought may have to be given to managing traffic in this area as part of a transport assessment should the development be progressed”. It appears that the Plan is proposing a strategic site at Wisley Airfield without even knowing what improvements to the local road infrastructure will be required. If that is the case for Wisley Airfield, then it is almost inevitably true for the proposed developments in East and West Horsley as well.

Pollution: The large increase in volume of traffic will cause an increase in nitrogen dioxide and particulates in the environment – already a cause for concern in several areas in the Borough.

re the GBC plan to build over 14,000 new homes under the revised draft local plan such as Garlicks' Arch, Wisley and Gosden Hill.

It is bad enough getting out of Send Marsh Road onto Portsmouth Road in rush hour times and this area CANNOT cope with additional housing and traffic. Soon there will be a fatal collision as the roads cannot cope with this extra traffic.

The extra road traffic will also affect the M25 around junction 10 and the A3 south bound to Guildford. Both of which can be very congested. It's not just the amount of vehicles, but the extra noise and air pollution they will emit.

The plans you are proposing would have devastating consequences for the local traffic. The stretch of A3 from M25 past Guildford is extremely busy both ways not only in the rush hours anymore. The traffic congestion starts well before 8am and continue pretty much all day. Suggesting that this stretch of A3 can take any more traffic resulting from building over 6500 houses is frankly insane.

Please have consideration for the local traffic connecting to A3 and the residents of the area using the local roads. We will end up in a situation where we cannot pull out of our drives to join the traffic on the main road through Send because it will be just solid queues both ways.

And adding another junction to A3 at Garlick's Arch is going to make traffic worse for both local roads and A3. I strongly object against adding another junction to A3.

I work as a Driving Instructor and use the roads daily. In the last five years my job has become increasingly difficult, just trying to get between pupils and to teach them safely. On average the A246 which runs through our village is completely blocked both morning and night at least twice a week. This can be due to a road repair in old Woking, a broken down lorry or more regularly now, a crash on either the A3 or M25 leading to vehicles exiting these roads in favour of the local roads.

The A247 has houses both sides for most of it with limited parking, so cars are parked on the road, reducing it to single lane status in many places. The junction with Broadmead roundabout leads in to small roads, already carrying far more cars than they were ever designed to do. This road also has dense terrace housing with no parking other than on the road. Have you ever tried driving down this road in the evening or when the A3 is blocked? It is simply gridlocked. The air pollution from the stationary cars and lorries is awful!

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I Object to the Garlicks Arch planned development.

My concern is the impact of such a large development would have on the community, which is already well stretched.

The A3 link roads entry and exit at Burnt Common won't ease the problem through Ripley village as the flow on A3 is often at a crawl at Rush hour therefore cars now come of the A3 slip road to Burnt Common and Send and then rejoin the cue at Wisley for the M25, likewise people who live in Send etc will still join the A3 through Ripley because they know there is often a problem in the morning rush hour when traffic gets built up from the M25 back towards Burpham, and quite often its a build up on the South Bound carriageway especially in late afternoon tailing back from Guildford.

So the development at Garlick Arch will only bring more congestion on our roads, and extra pressure on schools medical centre etc.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object to the large number of houses proposed in the plan on all of the sites. The increased population will undoubtedly place extra traffic onto roads which already struggle to cope with the current population. The A247 through Send is a small road in a bad state of repair due to traffic loading. During certain periods of the day the traffic queues back for more than a mile and as soon as any maintenance or service works are undertaken the road becomes realistically impassable during peak periods. The village of Old Woking provides a bottle neck for traffic heading toward Woking and Maybury and increasing population in Send and beyond will only exacerbate the situation.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Comment ID: PSLPP16/549  Respondent: 15144545 / Stacey Maxwell  Agent:

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1. Implications on traffic

Building as many houses as proposed will have a catastrophic effect on the A3 and local roads. The road I live on is already ridiculously busy and due to the bottleneck at the end of the road, I see a lot of aggressive driving. How will these roads cope with any more traffic? Will building more houses help with the aggressiveness? I think not. For example, the site at Wisley Airfield proposed over 2,000 houses which could mean (at the very least) an extra 4,000 cars on the road. Given Highways England has no plans to improve the A3 in the
immediate future, how on earth will the surrounding villages be able to cope? For this reason, I STRONGLY OBJECT to the development proposed in the Local Plan.

1. **Congestion on the local village roads**
   Following on from #4, the villages are already at capacity from the sheer amount of traffic we currently experience. The parking situation on the high street and surrounding roads is not sustainable. The house that I share with my partner has neither a driveway nor allocated space so we are reliant on being able to park on the road outside our house. More traffic on our roads from these proposed developments leading to a larger population would be disastrous. I STRONGLY OBJECT to further development which will do nothing to help with the current congestion or parking issues we currently face.

1. **Unsuitability of our local roads for heavy vehicles and more traffic**
   The surrounding villages around these strategic sites by their very definition have a lot of country lanes which are very narrow and often allow for only 1 car to pass at a time. On the road I live, I often see heavy goods vehicles and other unsuitable vehicles, such as coaches, pass by which are totally unsuitable for this road. The local roads are not in an optimal condition either which would only get worse with more traffic. For these reasons, I STRONGLY OBJECT to the development proposed in the Local Plan.

We already see significant traffic through Ripley, Send and Clandon. During the development stage this would increase significantly and remain at much higher levels than currently experienced once completed. The proposal of Garlick’s Arch in particular would create huge increases in additional congestion.

I do not feel the development meets any needs of the local communities and only see any development of these areas as a negative move and therefore object to the proposals.

I am very concerned about the proposed changes to the A3 Junction at Burnt common. I travel along those roads on a daily basis and the proposed changes to this junction or the provision of a new large junction will simply overload the already busy roads and local services. I am concerned that these changes will lead to traffic cutting through Send and Old Woking to reach Woking centre. I object to the proposed new A3 Junction layout for those reasons.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Policy I3: Sustainable transport for new developments  

5.25 We agree that new developments should provide the best sustainable travel options possible, and we consider that this is necessary for both sustainable development and prosperity. Development in unsustainable locations should be avoided and where unavoidable, should be required to provide for the essential infrastructure requirements needed to support the development.

5.26 The location of development is key in this regard and the commitment noted earlier in these representations, should be towards a sustainable spatial strategy that focuses development and growth to Guildford as the key town within the Borough and the location that maximises the benefit arising from investment in services and infrastructure and optimises the use of pedestrian, cycle and public transport modes.

5.27 We support the fact the policy outlines Park and Ride facilities as a form of sustainable travel, and that new development should secure appropriate improvements to public and community transport, including infrastructure and park and ride requirements.

I have a little car but never use it between 7am-10am in the morning and 4pm-7pm in the evening because the A323 is jammed solid. With 2-cars per household and the proposed houses to be built in Ash, Tongham and Aldershot this equates to thousands of more cars using the A323. I think traffic lights or a roundabout will have to be built at the end of Westward Lane and Glaziers Lane because one would never be able to get onto the main Guildford to Aldershot Road. A road bridge at Ash station would be a good idea.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

In particular I object to the following proposed sites:

Policy A43 Garlick’s Arch;

Policy A25 Gosden Hill Farm Merrow;

Policy A35 Wisley

The combined effect of these substantial proposed developments within close proximity will place an unsustainable burden on the infrastructure of the areas affected. The surrounding roads are already extremely busy and in particular the resulting increase in traffic on the A3 and M25 will be disastrous. The A3 is already at a near standstill on the approach
to the M25 during the morning peak time and this will become substantially worse by the construction of upwards of four
and a half thousand houses, plus commercial/industrial units on these three sites combined.

I object to the proposal to create a four way junction on the A3 at Burnt Common (Policy 43A) by extending north and
south access as this will increase traffic enormously on the A247 which is already at full capacity through Send at peak
times and experiences huge traffic jams when even minor road works are required along its length. The proposal will
also increase the volume of traffic on the A247 through West Clandon which is totally unsuitable for any significant
volume of HGV traffic due to a very narrow stretch within the village where two large vehicles are unable to pass each
other.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
1. I object to the building of homes without due thought for school journeys. These represent a large proportion of traffic during rush hours, and the dependency of our children on parents to ferry them around. We should encourage housing to be built near schools or new schools to be built so that children can travel short distances by green transport.

I wish these objections to be fully taken into consideration and that the Plan is amended accordingly.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

1. I object to poor air quality concerns (Policy I3)

Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health.

They do not take into consideration the lack of schools & medical facilities but above all they will have a devastating effect on the A247. Plans already agreed – ie the Send Marina, & the additional houses on the Vision Engineering plot will be more than enough to bring this road to rush hour standstill & the Tannery Lane crossroads, already difficult for large commercial vehicles will become an even more hazardous accident spot.

The short section of the A247 between the Burnt Common roundabout & the new north & south A3 slip roads will have to absorb all this new local traffic but it will also attract those who currently go through Ripley.

A traffic survey of current levels would surely confirm that there are certain times of the day when one can take several minutes to gain access to the road.

As stated in my previous comment. The current infrastructure is unable to cope and provide a safe environment for people to walk or cycle in Horsley. The proposed development will exacerbate these problems and in reality people will not be able to safely walk or cycle around the village.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
Roads and Drainage in East & West Horsley are in very poor condition and severely under pressure in our current environment. I have particular concerns about Ockham Road North with increased traffic this road will need better drainage and traffic calming measure which local residence have petitioned for with little success. Therefore I fear the dramatic increase in housing will cause even further problems as the Council have failed to resolve the existing issues therefore I do not see an evidence to show this will be improved in the future.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

This will ruin the rural environment of Send. The current infrastructure of Send cannot cope now with the existing population, any increase will have serious adverse effects upon the community.

The proposal of a new 4 way interchange onto the A3 at Burnt Common is ridiculous, part from ruining the environment I green belt the extra traffic and in particular pollution will have a huge impact on Send.

All traffic from the M25 wishing to travel to Woking will be routed through Send, this cannot and will not be accepted.

Send is a small village and our main road A247 cannot cope now. There will be total grid lock!

As a resident of over 40 years I have seen Send deteriorate, Potters Lane has become a nightmare early in the morning and evening with the lane being used as a "Rat Run" for commuters to and from Woking/Guildford, its time that the A3 end of Potters Lane was closed and the Woodhill link to the old A3 made exit only.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )
I object to the congestion that development will cause to the local villages, roads and the lack of road infrastructure (Policy L1). Our villages are already suffering from severe congestion for much of the day, for example the junction in the centre of Ripley. Many of the country lanes around the villages of Ripley, Send and Clandon are narrow.

With no proper pedestrian footpaths and no proper cycle lanes on the narrow roads, development will result in the road becoming ever more dangerous.

I object due to the congestion that developments will cause to the [text unreadable] roads A3/M25 and the air quality. Environmental impact on amenity and health to the local residents.

b) Safety matters. Most of the side roads are narrow and inadequate at times as it is. The pavements and footpaths (away from the High Street) are narrow and in bad repair.

Many people do still walk (they have to). In many cases there are home at all, or are very narrow.

And we have often have to share them with cyclists. This is a safety issue.

All this will be the consequence of the tremendous increase of houses.

I am writing to object to the local plan.

Despite the possible need for more houses to be built in this area, I believe that there are many disadvantages of this plan that far outweigh the benefits.

One of the main reasons I, along with many others, object to this plan, is that the increased number of houses will lead to higher levels of congestion. Even though more roads are being built congestion will still rise. This puts the safety of the children at local schools at higher risk. This backs up my argument as to why I object to the local plan.

Policy I3 does not face reality. Developments outside the immediate village areas (eg that proposed for West Horsley) are not close enough to railway lines to encourage the use of public transport and will inevitably increase the number of cars on the local (overcrowded) roads. It is naive to suggest otherwise.

I am writing to object most strongly to the proposed local plan. We have lived in Send Marsh since 1975. My husband had to commute to London for work, but we wanted to live in an area beyond the suburbs of the city, which had some open space. The proposed construction of hundreds of houses in and around Send Ripley Merrow and the Clandons, will create a density of housing and therefore increased traffic and pressure on local services that will mean we become a suburban area too!

1. I object to poor air quality concerns (Policy I3)

The huge developments being proposed, particularly in the north east of the borough will lead to considerable further congestion and to greater levels of air pollution, which will have a detrimental effect on local residents and their health. It has been shown that Wisley already has NOX levels above the EU legal limits and by law a school cannot be located in this area as a result.

We are writing with reference to the 2016 draft local plan and wish to notify you of our objection to this.

Before any local housing developments in the proposed areas - Blackwell farm, Wisley, Slyfield, Send, Garlick's Arch - essential road infrastructure must take place, which includes building the A3 tunnel.

Before the building of Aldi in Burpham we could travel along New Inn Lane with some traffic congestion but ever since its construction (in order for us to get to Orchard Road) there is on average a 30 min plus queue all the way along that road during peak hours. This is because at the roundabout, there is a constant stream of traffic from the right (usually the A3 or from Jacobs Well) and as you have to give priority to the right, this lane of traffic hardly ever moves, particularly if you want to turn right to Sainsbury's or if you live along any of the side streets on London Road like we do. This is not effective or productive when you have two small children in the back of a car. We now have to resort to going along Merrow Lane as that is the only other access road and start queuing up with the A3 slip road traffic.

We have lived in Guildford for more than 10 years and although the housing developments continue there has been little investment in expanding the road infrastructure. We did feedback to the previous local plan and none of the proposals to alleviate congestion such as the roundabout in Merrow at the top of Park Lane were implemented, i.e. make the roundabout a small hump which can be driven over as those coming from Clandon that want to turn right cannot do so because of those coming from Burpham who want to turn right and then clog up the roundabout.
It is the only town in the UK that has a hideous system of one way access points to and from the A3 which forces many people to travel past Ladymead just to join the A3 southbound.

The proposed local housing developments will add 6000+ homes without much change to infrastructure. Already it takes more than 30 mins to travel anywhere around Guildford. Do you really want Guildford to be renowned for its stupid road infrastructure? We will become the laughing stock of the south.

The plan also shows a disproportionate level of housing development in these areas, coupled with a limited consultation period, lack of any detail on essential infrastructure and lack of evidence for alleged housing numbers which has more than doubled from the previous figure in 2012.

A positive decision on the A3 tunnel needs to be taken before Gosden Hill and the other areas can be earmarked for development.

We urge you to consult in an appropriate period and to think of the hellish lives of residents and future generations should you implement this plan without the required road infrastructure.

To the Planning Policy (Local Plan Consultation)

I am writing to object to the Draft Local Plan for Wisley Airfield, Gosden Hill Farm and Garlicks Arch.

There will be chaos in the area with the proposed new traffic and new sliproads onto Burnt Common roundabout. The A3/M25 is already a very traffic spot and getting gradually worse putting a strain on the adjoining roads. We already have an influx of cyclists and heavy traffic.

1. Congestion on the A3 and M25 trunk roads

I object to the development of the strategic sites due to the A3 and M25 already being at capacity during peak hours. Highways England has no plans to look at improving the A3 before 2020. It is therefore not sustainable to identify sites for further development which will worsen the congestion on these motorways and trunk roads.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
12. We object to poor air quality concerns (Policy I3)

Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

---

The scale of the proposed development is mind blowing, we really do not have the infrastructure in place to support so many houses, specifically, schools, nurseries, doctors surgeries, etc.

Many of the local roads are single track roads which will be totally unable to support increased traffic flows.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

I OBJECT TO POLICY I3 (SUSTAINABLE TRANSPORT):

• Just a list of generic measures, not related to real life or the particularities of Guildford.
• Fails to treat sustainability as a constraint. Assumes excessive levels of development proposed in the plan can be supported by sustainable development.
• Unrealistic. Most people can’t or won’t walk or cycle – commuters in a hurry, the elderly, children, people who are unwell or unfit, people carrying heavy shopping or other goods. I.e. most residents!
• Town’s eye view of transport. Ignores scarcity of existing rural public transport and commercial unviability of increasing it. Ignores terrible state of Surrey’s roads, potholes, flooding etc. Ignores extra stress to be created by huge new housing estates in countryside.
What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I have reviewed the plans proposed with regards to the revision of areas currently within the green belt and feel these plans are unacceptable due to the following:

1. I object due to the congestion that the proposed development will have on an already over loaded road network. I feel changes to existing trunk roads especially A3/M25 will have to be made prior to further development being considered/ suggested. Moreover the rural roads around Ripley, send and Clandon are already overloaded with through traffic. These are narrow and in poor condition. Most don't currently have a footpath nor cycle path. There is no plan to improve these hence I object.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

**POLICY I3 - Sustainable transport for new developments**

I OBJECT. This is another vaguely aspirational policy, based on wishful thinking and not grounded in the practical realities of daily life. It consists of a standard, box-ticking list of local government measures unrelated to the specifics of the plan. Like infrastructure, transport appears to be an afterthought; the policy fails in its essential job of guiding planning decisions, since it assumes development of any kind can be supported by sustainable transport.

The sustainability of the dormitory settlements which the Council want built across the countryside depends on a general "modal shift" from private car use to walking, cycling and public transport. This is unrealistic. The proposed sites are often miles away from the nearest railway station. Bus services even in the largest villages are almost non-existent—just one bus to and from Guildford each day in the Horsleys and none at weekends. Since bus services depend on profitability, they cannot be expanded and the Council are not proposing to subsidise new ones. Rural buses are too slow anyway for busy people. Most rural roads in the borough are narrow, winding, hilly, potholed, muddy and unlit. Many flood badly and have no footpaths.

The desired modal shift would require a comprehensive co-ordination of bus and train timetables with services every few minutes, seven days a week, to stops within walking distance of every home in the borough. This kind of integrated public transport system has been achieved in Switzerland, for instance, but only at huge public cost and thanks to a political consensus supporting state ownership of trains, buses and the post office, which delivers rural passengers as well as mail. There is absolutely no chance of this in the UK.

The vast majority of the borough’s residents are not, in practice, able to cycle. This includes children, the elderly, commuters who have to look smart, the infirm, the unfit and people carrying goods or shopping of any kind. Dependence on walking and cycling discriminates against these groups, which include some of the most vulnerable members of the community. It is socially unjust.

One in two working people in Guildford commute for up to 3 hours a day, as I used to do. They will not leave their cars for even part of their journey if it means longer travel times.
Park-and-rides are a welcome part of the transport mix but are too slow for commuters and others on a tight schedule. Well-off pensioners seem to be the main beneficiaries. For an adult couple going shopping it is still cheaper to park in town.

Forget about water buses. The Wey is too narrow and, with a river speed limit of 4mph, boats are too slow for anything but recreation. Except on the tideway, not even the Thames has such services.

The addition of two new stations appears attractive but will slow down train journeys, which are already slower than at any time since the 1930s. Knock-on effects on localities where the new stations are built have not been worked out or presented.

1. I OBJECT to poor air quality concerns (Policy I3)

Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

My biggest concerns are extra traffic congestion especially in central guildford and with that would come horrendous parking issues. Guildford town centre is already lacking in adequate parking sites.

I object to poor air quality concerns (Policy 13)

The increased congestion that will arise from the massive proposed developments will in turn lead to increased air pollution which will have damaging effect on local residents and their health.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
Policy i3: Sustainable Transport for new developments.

Developers will be expected to propose and secure travel Plans for their developments and contribute to transport arrangements for the able and disabled.

I can’t think of a single developer who would get even remotely close to achieving this, when it will be at odds with their profit potential. Development history has taught us that scant regards is taken for the community when it comes to development and profit making.

We object to policy I3 Sustainable transport for new developments This is aspirational, the modal shift aim being worthwhile, but the realities are quite different. The policy fails in its essential job of guiding planning decisions since it assumes development of any kind can be supported by sustainable transport. The sustainability of the dormitory settlements which the Council want to build across the countryside depends on a general “modal shift” from private car use to walking, cycling and public transport. This is unrealistic. The proposed sites are often miles away from the nearest railway station. Bus services even in the largest villages are almost non-existent – just one bus to and from Guildford each day in the Horsleys and none at weekends. Other areas have lost their bus service or it has been cut and many villages have a service which is infrequent. Since bus services depend on profitability, they cannot be expanded and the Council are not proposing to subsidise new ones. Rural buses are slow and lack predictability due to the congested roads. Most rural roads in the borough are narrow, winding, hilly, potholed, muddy and unlit. Many flood badly and have no footpaths. The desired modal shift would require a comprehensive co-ordination of bus and train timetables with services every few minutes, seven days a week, to stops within walking distance of every home in the borough. This kind of integrated public transport system has been achieved in Switzerland, for instance, but only at huge public cost and thanks to a political consensus supporting state ownership of trains, buses and the post office, which delivers rural passengers as well as mail. There is absolutely no chance of this in the UK. The vast majority of the borough’s residents are not, in practice, able to cycle. This includes children, the elderly, commuters who have to look smart, the infirm, the unfit and people carrying goods or shopping of any kind. Dependence on walking and cycling discriminates against these groups, which include some of the most vulnerable members of the community. It is socially unjust. One in two working people in Guildford commute for up to 3 hours a day. They will not leave their cars for even part of their journey if it means longer travel times. Park-and-rides are a welcome part of the transport mix but are too slow for commuters and
others on a tight schedule. For an adult couple going shopping it is still cheaper to park in town. We like the idea of water buses but have concerns over the reality. The Wey is narrow and, with a river speed limit of 4mph, boats are too slow for anything but recreation. Except on the tideway, not even the Thames has such services. The addition of two new stations appears attractive but will slow down train journeys, which are already slower than at any time since the 1930s. Knock-on effects on localities where the new stations are built have not been worked out or presented. Ie.

The vast majority of the borough’s residents are not, in practice, able to cycle. This includes children, the elderly, commuters who have to look smart, the infirm, the unfit and people carrying goods or shopping of any kind. Dependence on walking and cycling discriminates against these groups, which include some of the most vulnerable members of the community. It is socially unjust. One in two working people in Guildford commute for up to 3 hours a day. They will not leave their cars for even part of their journey if it means longer travel times. Park-and-rides are a welcome part of the transport mix but are too slow for commuters and others on a tight schedule. For an adult couple going shopping it is still cheaper to park in town. The addition of two new stations appears attractive but will slow down train journeys, which are already slower than at any time since the 1930s. Knock-on effects on localities where the new stations are built have not been worked out or presented. Ie. Cost of housing will increase.

Who is the 'sustainable corridor' for if the vast majority of people are to live outside the town and are unable to walk or cycle to Guildford because of all the factors already mentioned, including lack of pavements and safe cycle routes? If more people lived in the town then this might be justifiable but as it is, it is unclear who will really benefit from it?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Traffic and Transport
29. There is no realistic proposal in the Plan for the provision of enhanced public transport, which could lead to significant modal shift. By the nature of the rural road network, the resulting substantial increase in road traffic would be likely to cause either (a) increased traffic on inappropriate rural roads; and/or (b) pressure to expand highway capacity with resulting urbanisation of the rural area.

30. The impact of these large scale principally housing developments (A43 Garlick’s Arch, A25 Gosden Hill, A35 Land at Wisley Airfield and A36-A41 Horsleys) on the roads around Ripley are likely to lead to unacceptable levels of traffic that cannot be mitigated due to the nature of the country lanes around Ripley and the listed buildings within the conservation area of Ripley.

31. They are also likely to add significantly to traffic on the already congested A3. Highways England have stated that the A3 north of Guildford to M25 is already at capacity in both directions in the peak hour. This problem will be exacerbated by the substantial new housing proposed for the rural area north of Guildford.

I have been examining Guildford proposed development plan and, while I am happy more housing has been planned, I am concerned about sufficient improvement in the transportation network being able to accommodate for more people and cars. The situation is already far from ideal, including parking, and I hope it does not get any worse.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
Paragraph 4.6.21 confirms that Policy I3 promotes the use of sustainable transport modes to ensure ‘safe and suitable access will be achieved and improvements will be undertaken within the transport network that cost effectively limit the significant impacts of the development’. This strategy concentrates on walking and cycling access, the use of public and community transport and the promotion of Park & Ride, to be paid for by developers and by CIL.

Miller maintains that without significant investment in the local highway network it is difficult to prioritise public transport and Park & Ride as a sustainable mode. Whilst the Council has committed to its Sustainable Movement Corridor (paragraph 4.6.24) it is not understood how the proposed ‘rapid and reliable’ routes for buses or to the rail stations can be provided, or what the cost of these improvements is likely to be. Whilst the routes may have been identified, paragraph 4.6.25 makes it abundantly clear that these improvements are at present ‘aspirational’ at best:

‘The measures applicable to each development proposal will vary on a case-by-case basis, according to the type and scale of development proposed, its location, and the level of existing transport infrastructure and services in the immediate area. This could also include a financial contribution for the implementation of schemes beyond the scope of an individual development to deliver’.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
I OBJECT TO POLICY I3 (SUSTAINABLE TRANSPORT):
• Generic measures, not related to real life or the particularities of Guildford.
• Fails to treat sustainability as a constraint. Assumes excessive levels of development proposed in the plan can be supported by sustainable development.
• Unrealistic. Most people can’t or won’t walk or cycle – commuters in a hurry, the elderly, children, people who are unwell or unfit, people carrying heavy shopping or other goods. I.e. most residents!
• Town’s eye view of transport. Ignores scarcity of existing rural public transport and commercial unviability of increasing it. Ignores terrible state of Surrey’s roads, potholes, flooding etc. Ignores extra stress to be created by huge new housing estates in countryside.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
I object to the 2016 Draft Local Plan.

I live in Burpham, very close to the A3 and the traffic is already extremely heavy, often coming to a complete standstill. Building the proposed number of new homes in Burpham, Slyfield, Ripley, Send, Clandon, etc. all close to the A3 and Guildford will mean movement of traffic will become much worse. Guildford already becomes gridlocked when the A3 or the A25 is extra slow. I suggest better road facilities should be decided and developed before more development is undertaken.

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

We live in New Inn Lane and are writing to object to the 2016 Draft Local Plan. Guildford is becoming grid locked at certain times of the day as it is due to the volumes of traffic and the inadequate infrastructure.

The other day or took me nearly an hour to drive from Burpham to Royal Surrey Hospital at 5pm to pick my wife up from work. Every morning and evening Guildford almost stops so to even consider building 2,000 new homes which means at least 4,000 additional cars on the road without massive investment in the roads, seems madness.

We, along with 300 others objected to the building of Aldi in Burpham due to increased traffic and again the council did not listen and this has made the area a lot worse. You cannot park in Kingspost parade at certain times due to Aldi customers using it as an overflow car park, something that was not even considered as part of the planning approval.

The houses that were built in Raynham Close provided inadequate parking, as all new housing developments seem to these days and therefore you now have a parking problem in Burnet Avenue.

The bottom line is there are far too many houses and cars in Burpham without building anymore and a new railway station will compound the problem not solve it.

The strategy to cram as many houses into an existing area is not a plan, it's purely focusing on meeting government targets rather than what is best for the long term good of the area. Unless the problem is dealt with in a sensible planned way you will just create more problems down the line which is where this is heading.

Our second objection is regarding the local infrastructure. We are far from convinced that the proposed road improvements to cope with the planned developments are adequate. The addition of some 6000 homes to this area of the borough will inevitably add massively to the number of cars using both the A3 trunk road and the local roads in Burpham and into the town centre. Driving to work as we do have noticed over the last 10 years a huge increase in traffic and the A3 simply cannot cope any longer with queues regularly reaching back to before the Burpham exit and the London road toward Guildford constantly moves at a snails pace. Even weekend traffic is now becoming noticeably heavier and a slight incident such as an accident or heavy rain brings the whole road network to a standstill extremely quickly.

I object to worsening air quality.

It is not appropriate to inflict upon local residents the greater levels of air pollution that the developments proposed and the associated further traffic congestion will cause.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
I object to poor air quality concerns.

The huge developments being proposed, particularly in the north east of the borough will lead to considerable further congestion and to greater levels of air pollution, which will have a detrimental effect on local residents and their health.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object to the destruction of areas that are currently home to natural flora and fauna displacing animals and birds.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object to the added noise of traffic that will be created by the increased volume of traffic.

4) I object to the extension of hours of noisy traffic that will be created by people trying to avoid the queues that already build up on A3 and M25. People get up earlier and earlier to get ahead of the traffic jams on these roads.

5) I object to the increased pollution from traffic fumes from extra cars. The pollution levels are already too high, and cause sore throats.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
I object to the increased traffic volume which would cause children, who already take 1 hour to get home from school on the bus between Guildford and Ripley, to take even longer.

9) I object to the danger caused by more cars on roads which are also used by over sized buses. On the narrow lanes of Send the width of the buses cross the center lane demarcation. On blind corners as in Send Marsh, the bus rounds the corner in the same lane as those heading in the opposite direction. Accidents are hard to avoid.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Dependence on walking and cycling discriminates against these groups, which include some of the most vulnerable members of the community. It is socially

Page 305 of 484
unjust. One in two working people in Guildford commute for up to 3 hours a day. They will not leave their cars for even part of their journey if it means longer travel times. Park-and-rides are a welcome part of the transport mix but are too slow for commuters and others on a tight schedule. For an adult couple going shopping it is still cheaper to park in town. I like the idea of water buses but have concerns over the reality. The Wey is narrow and, with a river speed limit of 4mph, boats are too slow for anything but recreation. Except on the tideway, not even the Thames has such services. The addition of two new stations appears attractive but will slow down train journeys, which are already slower than at any time since the 1930s. Knock-on effects on localities where the new stations are built have not been worked out or presented. Ie. Cost of housing will increase.

1. I OBJECT to poor air quality concerns (Policy I3)

Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

Policy I3: Sustainable transport for new developments

I OBJECT to this policy.

- The practicalities of sustainable transport have not been properly considered, it is not sustainable to build dormitory towns and call them sustainable. Not everyone can cycle all the time.
- Large developments outside the town centre cannot maximise sustainable travel. The further from the town centre, the less sustainable the development will be.
- Reliance on cycling discriminates against vulnerable members of the community. How can the disabled, those with small children, or the very old, or the infirm, or those who are ill, cycle outside the town in order to commute, or even inside the town? Only some people cycle – and Guildford has some steep hills, especially going out of town. Park and rides are slow – how can those with a 3 hour commute add 1 hour to their journey from using park and rides?
The only sustainable mechanism for new developments is to have them in the town centre close to the railway and the main shopping links where a hoppa bus can provide satisfactory links for those who cannot walk or cycle.

I object to the lack of proper infrastructure planning for sites (A43 and A42)

The Foreword to the plan by Paul Spooner includes on page 5:

“We recognise that significant infrastructure upgrades are required to support existing communities and the planned growth of the borough. The delivery of sites allocated in this plan is contingent upon the provision of new infrastructure, which is a key theme of our Local Plan”.

The lack of any plan for either physical or green infrastructure improvement clearly contradicts this in respect of both A43 Garlicks Arch and A42 Clockbarn Nursery, Tannery Lane, Send. Development of these sites without the contingent infrastructure would therefore be contrary to the stated aims and themes of the Plan, and should not go ahead.

6) **WE OBJECT TO** the congestion that development will cause to the local village roads and the lack of road infrastructure. There is too much traffic in our villages already and this plan will cause more congestion in Ripley, Send and Clandon, with no plan to improve that. The rural roads in this area are narrow, in poor condition and have no footpaths. 5000 more houses means dangerous and unsustainable traffic.

I wish these objections to be fully taken into consideration and that the Plan is amended accordingly.

2) This proposed development will further congest our roads

   - Travel time to work along the A3 has increased dramatically over the past 2 years,
   - My business has suffered as patients are unable to arrive on time for early appointments
   - The slightest problem on the major access roads causes huge gridlock and traffic chaos again impacting my business
   - Appointments have been lost due to this congestion resulting in reduced business efficiency
   - Extra load on the road from the proposed development can only add to the problem and will seriously mean my consideration of relocating away from Guildford.

**The University and Its Town**

The relationship between the University of Surrey and Guildford Borough Council goes back to the early 1960s when the Borough supported its own development by attracting the University of Surrey to relocate to the town.

Today the University and the companies on its Research Park bring £1.7bn of gross added value to the UK each year and directly or indirectly support 17,312 UK jobs, 10,644 of them in Guildford. The University is ranked 4th in the country in the Guardian 2016 and 2017 league Tables and was awarded the University of the Year Status by The Times/The Sunday Times in 2016. The wholly-owned Surrey Sports Park attracts international teams and high-profile events and is appreciated by local residents who pay well in excess of 3/4 million visits to the park each year.

The University, the Research Park companies, the Royal Surrey County Hospital and Guildford Business Park are located in an area of roughly a square mile to the west of Guildford Town Centre. This square mile covers less than 1% of Guildford Borough but generates around 45% of the Gross Value Added of the Borough. The experience of the many staff working in the square mile and the University students is affected by housing and infrastructure deficits and the University’s plans and this response reflect that context.

The underpinning need for the local Plan is clear:

- Population growth in this area is rapid and this will continue
- The UK is already in housing crisis, with the younger and future generations particularly badly affected
- The housing crisis is particularly serious in the South East and in this Borough
- The economy must be allowed to grow to deal with the country's debt burden and population growth
- To enable economic and housing growth, infrastructure deficits must be tackled
- Guildford is an integral part of the dynamic fast growth area of London and the South

It cannot distance itself from that growth and cannot avoid dealing with the consequences of it.

The University is, of course, acutely aware both of the social costs of growth, and of the infrastructural deficits that our town has to contend with. Investments by the University in student accommodation over the past ten years are approaching £130m (including £85m in new accommodation); a further sum of around £75m is due to be spent delivering 1,150 new units over the next three years and further accommodation will be built to support new demand as funds permit.

The University is also all too familiar with local infrastructural deficits and has itself had to contend with well-documented traffic and parking issues and restrictions. The University’s own investment in transport infrastructure and on public transport subsidies has cost many millions over the past ten years, not least for the new Egerton Road Junction. It has always been known that this junction was just part of a more comprehensive solution which would need to include access to the West through a road across Blackwell Farm to the A31. That new road infrastructure would benefit the University, the Research Park, the Hospital and Guildford town itself, and the development of Blackwell Farm provides an excellent opportunity to deliver and fund those essential improvements.
**POLICY I3 - Sustainable transport for new developments**

I OBJECT. This is another vaguely aspirational policy, based on wishful thinking and not grounded in the practical realities of daily life. It consists of a standard, box-ticking list of local government measures unrelated to the specifics of the plan. Like infrastructure, transport appears to be an afterthought; the policy fails in its essential job of guiding planning decisions, since it assumes development of any kind can be supported by sustainable transport.

The sustainability of the dormitory settlements which the Council want built across the countryside depends on a general “modal shift” from private car use to walking, cycling and public transport. This is unrealistic. The proposed sites are often miles away from the nearest railway station. Bus services even in the largest villages are almost non-existent – just one bus to and from Guildford each day in the Horsleys and none at weekends. Since bus services depend on profitability, they cannot be expanded and the Council are not proposing to subsidise new ones. Rural buses are too slow anyway for busy people. Most rural roads in the borough are narrow, winding, hilly, potholed, muddy and unlit. Many flood badly and have no footpaths.

The desired modal shift would require a comprehensive co-ordination of bus and train timetables with services every few minutes, seven days a week, to stops within walking distance of every home in the borough. This kind of integrated public transport system has been achieved in Switzerland, for instance, but only at huge public cost and thanks to a political consensus supporting state ownership of trains, buses and the post office, which delivers rural passengers as well as mail. There is absolutely no chance of this in the UK.

The vast majority of the borough’s residents are not, in practice, able to cycle. This includes children, the elderly, commuters who have to look smart, the infirm, the unfit and people carrying goods or shopping of any kind. Dependence on walking and cycling discriminates against these groups, which include some of the most vulnerable members of the community. It is socially unjust.

One in two working people in Guildford commute for up to 3 hours a day. They will not leave their cars for even part of their journey if it means longer travel times.

Park-and-rides are a welcome part of the transport mix but are too slow for commuters and others on a tight schedule. Well-off pensioners seem to be the main beneficiaries. For an adult couple going shopping it is still cheaper to park in town.

Forget about water buses. The Wey is too narrow and, with a river speed limit of 4mph, boats are too slow for anything but recreation. Except on the tideway, not even the Thames has such services.

The addition of two new stations appears attractive but will slow down train journeys, which are already slower than at any time since the 1930s. Knock-on effects on localities where the new stations are built have not been worked out or presented.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
Transport

Your Transport 2016 report states “Existing road and parking infrastructure is already inadequate or under pressure and would worsen with the planned development, reducing quality of life, particularly in:... Send, particularly Potters Lane, ...”. Therefore, I object because all the proposed developments in Send (A42, A43, A44, and particularly A43a) with have asignificant negative effecton the transport infrastructure, which your consultants say is already inadequate.

Sustainability

I object to all the proposed housing developments in Send (A42, A43, A44) because they will all promote the opposite of “encouraging sustainable forms of transport”, “conserving landscape character”, and “providing housing to meet local needs”, and most of the other Sustainability criteria. I object because, obviously as a resident ,I can see for myself that local amenities at present are either inadequate or under strain, and therefore will not meet the required Sustainability criteria with the influx of another thousand or so people. The Sustainability report 2016 seems just to pay vague lip-service to GBC plans, rather than being properly fact-based, truthful, and pragmatic on these matters.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Transport

As it is now, there are insufficient parking spaces at both Horsley and Effingham stations. If you arrive after 09:00 and need to go to a meeting in London then there is nowhere left to park your car and all of the local roads nearby have parking restrictions.

There are also other facilities and services that just could not cope with the increase in population and traffic. Horsley railway station car park and bicycle bay is full every week day and there is limited parking for the village shops, library, bank, and restaurants. Traffic congestion, parking queues, and frustrated drivers will be the inevitable result with all the attendant safety concerns. There is also a capacity problem with the village waste water system which periodically overflows flooding local roads. Thames Water has already advised you that the system will be unable to support the additional demand, but no mention in the plan for upgrading it.

The current plan could increase the village population by something like 1,500 people and the number of cars by an extra 700 – 800. The totally neglected road network in the village is insufficient at present for the volume of traffic because The Street through the centre of the village is a convenient short cut for A246 traffic from the Guildford direction heading for the A3 and the M25. And there is no general public car park in West Horsley. What are the Council’s proposals for coping with this already acute problem?

1. **I OBJECT to poor air quality concerns (Policy I3)**

Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

I OBJECT to poor air quality concerns (Policy I3)

Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

Attached documents:
Both my husband and myself object strongly to the 2016 Draft Local Plan for the following reasons:— 1, An extremely large number of houses to be built in a relatively small area of Guildford which will completely change the villages and their contribution and ambiance of living in the area. If that number of houses are built there will be an enormous increase in the number of cars and general traffic in and around Guildford. The infrastructure cannot cope with the traffic at present and if on average every house has 2 cars this will increase this by up to 12000 regularly using the roads making it frustrating and dangerous.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Lack of details on essential infrastructure – the local schools have already expanded to take the existing capacity, doctors’, and the Royal Surrey are already stretched. The roads around Burpham and Guildford cannot cope with the existing amount of traffic – there are frequently delays getting into and out of Guildford as the A3 around the University and Royal Surrey are unable to cope. This leads to congestion around the Wooden Bridge, Ladymead and Stoke junctions. Any problems on the A3 cause all the traffic to come through Burpham which already has jams and congestion at rush hour along the London Road and Clay Lane without any additional traffic. In addition, the current roads are in a poor state of repair in many places.

The noise levels from the A3 and other local roads is already high – more traffic will make this worse.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

1. **Lack of planned infrastructure.**

The Plan does not make provision for increasing the availability of public transport alternatives to private motor vehicle use, especially for additional places on local commuter trains or in station car parks.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
**Comment ID:** PSLPP16/4012  **Respondent:** 15351617 / Patricia George  **Agent:**  
**Document:** Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3  
**Do you consider this section of the document; complies with the Duty to Cooperate?** ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the 2016 Draft Local Plan for the following reasons: 

**Infrastructure:**

1. The Aldi roundabout is frequently gridlocked. When the Aldi juggernaut lorries make deliveries it is impossible for local residents to gain access to their houses. Additional traffic from the Gosden Hill development would exacerbate the situation. You have not provided a clear plan of how you will widen the roads and Aldi roundabout or how the additional traffic would access the A3.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Attached documents:**

**Comment ID:** PSLPP16/4054  **Respondent:** 15353217 / Vali Drummond  **Agent:**  
**Document:** Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3  
**Do you consider this section of the document; complies with the Duty to Cooperate?** ( ), is Sound? ( ), is Legally Compliant? ( )

There is simply not the infrastructure in place for this to happen

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Attached documents:**

**Comment ID:** PSLPP16/4062  **Respondent:** 15353441 / Sue Storr  **Agent:**  
**Document:** Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3  
**Do you consider this section of the document; complies with the Duty to Cooperate?** ( ), is Sound? ( ), is Legally Compliant? ( )

I wish to put in writing that I object most strongly to the GBC's Local draft Plan 2016 - this will have an horrendous impact of the traffic through Burpham - and will completely ruin the lives of the inhabitants.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Do you consider this section of the document; complies with the Duty to Cooperate?** ( ), is Sound? ( ), is Legally Compliant? ( )
Potholes on East Lane have not been attended to in the year that we’ve lived here (despite reporting them) with existing traffic levels. And yet the plan proposes to add 35% more households into the

Horsleys? Imagine the increased use that our roads will take, not to mention the jump in traffic noise, road safety and pollution. Even with only one car per household (and most rural households seem to have at least two cars given public transport is so poor) that is an increase of 3000 cars in our immediate area alone. Have you ever tried to park at Horsley or Effingham Junction station in the rush hour, or had to wait for a space to park by the East Horsley shops? Our wonderful Horsley Medical Centre already seems to be running at capacity, with some waits at times to be seen. More households will add additional strain on already overstretched services locally and regionally. Have you ever seen the car park at Royal Surrey hospital mid morning or had to wait in A&E at Royal Surrey with a toddler? How many more consultants, registrars and nursing staff at Royal Surrey have been allowed for in your plans?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

6. I OBJECT to Policy I3: which ignores the current scarcity of rural transport and makes no mention of the dilapidated state of Surrey’s roads. The policy ignores the additional strains placed on the transport system by the thousands of houses proposed. For the railway, where are the suggested longer platforms, or more frequent trains, or early or late services, or toilets on rolling stock to support the plan?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

No thought seems to have been given to the traffic congestion that will inevitably ensue; the only station with a good service to London is Woking, and anyone who travels to Woking from the Ripley, Send or Clandon areas will have already experienced the frustrating drive to Woking Station - the roads are not good enough for the present traffic let alone the additional traffic from the proposed development. Increased air pollution will also result from extra traffic.

Many of the local lanes have no pavements or paths for pedestrians and are narrow. Any increase in traffic (especially lorry traffic) will bring real danger to motorists, cyclists and pedestrians. The provision of cycle lanes is sporadic.

The poor state of repair of many of these roads seems to indicate that The Council already finds maintaining them difficult; a greatly increased volume of traffic will inevitably stretch resources even further.

This development is out of all proportion in relation to the currently existing infrastructure. Where are the plans that detail how this infrastructure problem will be solved?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
2). We are already overloaded with cars, it is difficult to park for shopping in Station Parade and our roads are much too narrow for the large lorries which are even now encountered.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

3) The congestion in Burpham leading up to the A3 junctions will be extreme and needs to be dealt with before so many houses are built increasing the

the number of cars using the roads by at least double.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

12. I OBJECT to poor air quality concerns (Policy I3)

Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
The traffic in Send is already unbearable during the busy periods in the morning, we are constantly congested on Send Barnes lane and I cannot imagine how difficult it would be with more vehicles on the road.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object to all the plans proposed and am at a loss to understand your willingness to consider send at all with all the congestion and traffic gridlock we have already.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

However, prior to this development plan carried out, we definitely and urgently need new roads and transport system to accommodate this future expansion of the area. I've already felt that roads in Guildford get busier and less efficient, and I'm very much concerned about more traffic jams not only during peak times but also anytime and everywhere in Guildford once the housing development in the planned areas are in the full swing and in complete.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object to houses being built on Clockbarn Nursery and Send Hill. Both areas have small country roads and are already busy enough.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

**Transport**

The road transport network is currently not fit for purpose. I am stuck in traffic every evening for a significant time trying to complete my journey home, this is mainly due to heavy congestion on the A3 and poor connection to / from the A3 in the Burpham area. The current road network needs to be upgraded to be suitable for the existing population before considering adding 5,000+ additional cars to the local roads that would be caused by the new homes, industry and park & ride proposed at Gosden Hill Farm. I understand that a tunnel under Guildford is being considered underneath the 50 mph section of the A3, the proposed location at Gosden Hill Farm would be the most sensible entry point for this tunnel so it is very short sighted to develop this land for houses. Improvements to the A3 like the proposed tunnel under Guildford are required to be implemented before even considering building any more houses in the local area. The A3100 London Road is the intended entry point to this new development at Gosden Hill Farm, this will become two way and all traffic heading north on the A3 will be routed south down the A3100 to the Clay Lane slip road. This will lead to very heavy congestion around the Burpham roundabouts and all roads into Burpham. New Inn Lane and the A3100 are currently grid locked every evening due to rush-hour traffic, the development at Gosden Hill Farm will add 5,000+ more cars and cause significantly more inconvenience to everyone who uses these road systems. Improvements to the current road network in Burpham are required to be implemented before even considering building more houses in the local area. As a minimum any new development would need to include a 4 way A3 interchange north of Burpham around Potters Lane, this should be included as part of the future tunnel project. The Strategic Highway Assessment Report (SHAR) and Sustainable Movement Corridor (SMC) do not take account of the current narrow road limitations, pinch points or include adequate information regarding congestion and as such the Local Plan should be considered unsound. Congestion is clearly going to be very severe and make travel round Burpham impossible at certain times of day.

5. We object to Policy S1 not offering sustainable development as regards roads and rail infrastructure which currently does not cope with demand, congestion on the A3 in particular, but also other A roads in the area such as the A247, the A246 and then there is the already overcrowded and slow train system for those already living in the borough and needing to commute to London. No pre-emptive planning has been made to alleviate these real problems which will be much exacerbated by large increases in housing.

We specifically want you to note the winding, narrow and dangerous route via the A247 through West Clandon which then drives people to use a cut-out with the even narrower rural road, the Ripley Road, through East Clandon to and from the A3. This will be much exacerbated with the large increase in housing twinned with large increase in cars and travel.

I am writing to lodge an objection to the 2016 Draft Local Plan, which I believe to be poorly thought through in terms of housing need and proposed infrastructure.

Most importantly, I believe that we must have clarity on the viability of a much-needed tunnel taking the A3 underneath Guildford before committing to building on Gosden Hill Farm, where the tunnel is likely to begin/end.

The Highways Agency has already judged that the access from the A3 to the Horsley/Wisley area is not sufficient to cope with the likely increase in traffic volume from proposed developments. Ockham Road and Forest Road are narrow “B” roads and there is no scope for any effective improvement. The increase in traffic will cause significant local problems, resulting in other, even more minor, local roads being used as “rat-runs” to avoid key junctions.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object to the fact that the traffic impact of the Plan on Compton has been effectively ignored. With the proposed developments at Blackwell Farm (1,800 homes), Normandy (1,000 homes), Ash (1,300 homes) and proposed developments at Aldershot and Bordon, the increase in traffic on the B3000 in Compton is likely to be severe. In fact, the
Highways Assessment ranks the B3000 only just below the major A roads and Trunk roads in terms of negative traffic impact. No solutions or steps to achieve some mitigation are offered and I therefore strongly object to the level of building proposed in the Plan and would question why no constraint to the numbers proposed had been applied to reflect this major issue.

Still on the subject of the B3000, GBC has undertaken NO2 readings for a number of properties on the Street (B3000) in Compton. I am aware that one property on the B3000 has exceeded the recommended limit. This fact is known to GBC and I object to the Air Quality problem in Compton not being referred to in the Plan. This is particularly relevant bearing in mind the forecast additional traffic Compton will be getting (see paragraph 6 above).

POLICY I3 Sustainable transport for new developments

GROUND FOR OBJECTION We support the concept of sustainable transport but object on the grounds that the practicalities have not been properly considered,

It is not sustainable to build dormitory towns and call them sustainable.

Not everyone can cycle all the time.

How can large developments outside the town centre maximise sustainable travel? This is a matter for the planning process- the further from the town centre, the less sustainable the development will be.

Reliance on cycling discriminates against vulnerable members of the community. How can the disabled, those with small children, or the very old, or the infirm, or those who are ill, cycle outside the town in order to commute, or even inside the town? Only some people cycle –and Guildford has some steep hills, especially going out of town. Park and rides are slow – how can those with a 3 hour commute add 1 hour to their journey from using park and rides?

The only sustainable mechanism for new developments is to have them in the town centre close to the railway and the main shopping links where a “hoppa bus” can provide satisfactory links for those who cannot walk or cycle.

While we welcome the intention to encourage rail travel by adding two new stations (subject to negotiation with Network Rail) there could unintended consequences.

| Document page number | 1887 |
These narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians AND you have given no consideration to this point.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

16. I OBJECT to poor air quality concerns (Policy I3)

Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

The link road that runs through the village of West Clandon (A247) is currently a 'hazardous' road as highlighted in a traffic survey, and only today there has been yet another accident on this road with the colliding vehicles mounting the pavement. At present, infant school children walking to the small local school are forced to walk along narrow pavements close to a road which is unsuited to the volume and type of traffic that uses it. Last week my wife had to jump across the pavement to avoid being hit by a lorry who drove up onto the pavement to avoid another passing the other way, and had her own car struck by another travelling at speed a few months ago. Large vehicles such as lorries and buses are frequently seen mounting the pavements at significant speeds to avoid collisions with one another and will no doubt in time lead to serious injury or death. A development as proposed in the local plan will significantly increase the likelihood of this occurring, as a direct result of the obvious increase in traffic in the area.

Response to Guildford Borough Proposed Submission Local Plan (June 2016)

I OBJECT in the strongest possible terms to the Guildford Borough Proposed Submission Local Plan (June 2016). This Plan is unsustainable, unworkable and, in many provisions, unnecessary.

I set out below my objections to specific policies and matters within the Plan. The worst aspect of this is the additional traffic through Merrow, Guildford, Ripley, Clandon and on the A3. I commute by motorbike so I can more or less get through the traffic – but I see the chaos caused every day. Only today, there was an accident with a car pulling out of a drive in Clandon and immediately causing a two way jam over a mile long through the village in each direction. It is unworkable now. Please understand these roads cannot sustain the even greater impact of even more traffic.

I wish to register my objection to the 2016 Draft Local Plan, which I believe has not been thoroughly thought through in terms of housing need and proposed infrastructure.

Furthermore, I believe it is important that we have clarity on the viability of a tunnel taking the A3 underneath Guildford before committing to building on Gosden Hill Farm, where the tunnel is likely to begin/end.

(3) Increased Traffic and Lack of Parking Facilities -
On the assumption that every new house has at least 2 cars, this means potentially 6,000 more cars within a 3-mile radius of the Horsleys. The impact on local roads will be awful. The roads are already in a terrible state, continually crumbling due to the strain of existing traffic and poor drainage causing flooding. Parking at Horsley & Effingham Junction stations (which are already full), at the shops, at the medical centre and at the village hall will all be untenable.

(4) Local Road Networks –
As mentioned above, the roads in the Horsleys struggle to cope with the volume of traffic that already exists. In respect of the proposals for development at Wisley Airfield and for an upgrade the current A3 junction at Burmtcommon to a full 4-way junction, SCC traffic modelling anticipates increased use of Guileshall Lane, Hungry Hill Lane and Tithebarns Lane for traffic accessing the A3 at Burmtcommon in order to travel to Guildford and beyond. The SCC report states that “consequently, it indicates that further thought may have to be given to managing traffic in this area as part of a transport assessment should the development be progressed”. It appears that the Plan is proposing a strategic site at Wisley Airfield without even knowing what improvements to the local road infrastructure will be required. If that is the case for Wisley Airfield, then it is inevitably true for the proposed developments in East and West Horsley as well.

(5) Pollution –
The large increase in volume of traffic will cause an increase in nitrogen dioxide and particulates in the environment – already a cause for concern in several areas in the Borough.

12. I object to poor air quality concerns (Policy I3)

As a local resident, with a young family I am acutely concerned, with air quality and the levels of harmful motor transport emissions. Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” As this development, is within 400m from my house, I ask GBC to detail how they acheive this? This proposed development, particularly in the north east of the borough will lead to considerable further congestion, and emissions in traffic will mount up waiting for the lights to change. This will be particularly acute to nearby properties such as mine. This will have a detrimental health effect to my children when they play in their garden.

I despair at the lack of vision in exploring innovative solutions. Over 30 years of almost total inaction with the sole exception of P&R. There are so many things that could be done:

- integration of bus and rail services is essential

- rapid transport solutions of various kinds linking P&R, the centre, the main station, the hospital and research park etc, perhaps comprising an expanded train service with new stations plus trams or even buses running on raised tracks above the narrow main road arteries coupled with a dramatic reduction in public car parks (disabled only?) to ensure new public transport services are fully used and thereby have a chance of being economic

- integration of bus and rail services is essential

- rapid transport solutions of various kinds linking P&R, the centre, the main station, the hospital and research park etc, perhaps comprising an expanded train service with new stations plus trams or even buses running on raised tracks above the narrow main road arteries coupled with a dramatic reduction in public car parks (disabled only?) to ensure new public transport services are fully used and thereby have a chance of being economic

1. I OBJECT to poor air quality concerns

Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

SUSTAINABLE TRANSPORT FOR NEW DEVELOPMENTS. Policy 13
I OBJECT, as often the proposed sites are remote from existing bus stops, stations and even roads with pavements. This assumes that people will stop using cars as transport methods. This assumption is unrealistic as has been proved time and time again in new developments resulting in parking chaos around the developments as residents try and park near home and traffic snarl ups.

I OBJECT that the already overloaded infrastructure and existing transport overload seems to have been completely ignored in the case of Send, as has the existing traffic congestion during peak times and in particular Send Barns Lane (A247) being used by large commercial vehicles, for which the road is totally unsuited. This is without the inevitable significant overload which will be caused by the proposed additional housing population and industrial development which is just not sustainable and will cause major traffic jams and significantly increased pollution for the existing population of Send. A Narrow Boat Marina and additional housing is already being developed in Tannery Lane, using a narrow road with a dangerous junction onto the A247 in the middle of Send Village. Send has already become a principal through route from Woking to the M25 and A3 and will become gridlocked all day - even without the proposed NEW 4-Way A3 Interchange. This alone could destroy the village and cause major Health and Safety problems, particularly in relation to the new development and merger of two schools which front onto Send Barns Lane (A247). There is already serious parking congestion and traffic problems with just the one current school. With the addition of the new second, congestion will increase.

I object to the proposed number of new houses in an area where residents experience traffic congestion every single day, where I have to drive my husband to the station at Effingham Junction as there are no parking spaces for his car by the time he leaves after 9.30am, where it already takes two or three days before a doctor’s appointment is available in East Horsley, and the Waitrose car park in Cobham already has a daily queue for entry which blocks the approach road. Cobham, Ockham, the Horsleys and Ripley are already at capacity for the road and support infrastructure.

In the meantime if we choose to go to Guildford to support the Farmer’s Market the traffic getting in and out is painful. Last weekend I had to complete my weekend meat order by calling in at the butcher’s in Bramley. The A281 back to Guildford was solid so I went via Godalming and there was a roadworks diversion on the Charterhouse road. I sat in traffic for an hour trying to get home to Cobham. Compton was at a standstill. There are already too many people here!

I have lived in Ockham for 37 years and the quality of life has diminished here in that time along with the air quality due to the increase in traffic jams on the A3. Your local plan does not make life better for the residents who have been paying GBC Council Taxes for many years – we get less for more money.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

1. I object to poor air quality concerns (Policy I3)

The major developments being proposed, particularly in the north east of the borough will lead to considerable further congestion and greater levels of air pollution, thereby having a detrimental effect on local residents and their health.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
Burnt Common is already a very busy traffic crossroads and any new slip roads to new housing developments will feed more through and local traffic through a already congested area.

Our area, despite it being in or near Green Belt, is already grinding to a halt most of the day with traffic and the M25 which would bring people into the area does not function as a motorway any more with gridlock for 90% of the time and more traffic coming to the area will only add to the misery.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

Attached documents:

---

My objection is on the grounds that traffic in the area (particularly along the A323) is already bad particularly in rush hour, and an increase by more than 2400 houses will only worsen this congestion.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

Transport-

the following needs are unsupported in the plan:

Evidence of future traffic conditions which is in the SHAR has not been finished and has been provided too late for the PLAN to respond to.

The proposed Sustainable Movement Corridor is unsound, due to narrow roads and pinch points. At Burpham the London Road is supposed to carry 2 bus/cycle lanes north and south bound as well as 2 general traffic lanes each way. This will result in the Gosden Hill development, the 1000 car park and ride, 2 schools and railway station as well as unspecified retail and business traffic proposed to start as early as 2021 delivering massive traffic to London Road /new inn lane junction before the proposed A3 improvements in 2023-2027.
The tunnel, railway station etc issues need to be decided before the building of 2000 houses on the site where the 4 way junction of A3 is planned to go.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object in the strongest terms to Guildford Borough Council’s Draft Local Plan June 2016.

I believe the Draft Local Plan is unsound and unsustainable due to lack of detail on basic infrastructure including the road network. Priority should be given to a solution being found and implemented to relieve the extensive existing traffic problems in and around the Guildford area especially the town centre and the A3 arterial route.

Until congestion relief is delivered on a sustainable basis it would be unsound to consider any major development in the area.

I object to inclusion of the policy A43 Land at Garlick's Arch, Send Marsh/Burntcommon and Ripley on the grounds of the harm it would do to the local environment in terms of air pollution.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

The huge developments being proposed, particularly in the north east of the borough will lead to considerable further congestion and to greater levels of air pollution, which will have a detrimental effect on local residents and their health.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Travel - roads, buses and trains would be reduced to chaos if the proposed number of houses were to be granted

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Guildford is already a bottle neck on the A3 and the most logical solution is a tunnel such as that at Hindhead. It therefore follows that no new development should be allowed to take place until such a decision has been made so that land that will be needed for its construction is not used.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
The village (West Horsley) does not have the infrastructure to sustain expansion to the degree that is suggested by the Guildford plan.

There is currently:
- One small village shop
- No post office
- No bank or cash machine
- No doctors surgery
- No secondary school
- Not enough state primary school places
- Limited bus service

Any development in West Horsley will therefore have a significant impact on the facilities (shops, doctors, station, parking) in East Horsley with is already stretched with the current size/population of the village.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Comment ID: PSLPP16/6920  Respondent: 15440705 / Jane Martin  Agent:
Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Current village roads are not big enough or well enough made to sustain an increase in traffic. Each new household will most likely bring with it 2-3 cars as a necessity in this rural area. In addition to the 4-5000 additional cars that will come with the proposed development at Wisley Airfield. The impact of this on local roads is massive. Traffic already travels at dangerous speed (well about the 30 mph limit) along Ockham Road North, The Street and East Lane. An increase in traffic on the local roads will increase the danger to residents of all ages including the very young and elderly. It will also lessen the semi-rural nature of the village.

Horsley Station is already a busy commuter station 7 days per week. With most travellers travelling to the station by car the car park/waiting area/volume of traffic at peak times (London commuting and school times) will be unsustainable for East Horsley.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

7) I object to the detrimental impact on transport, local roads and road safety. I specifically object to:

1. The assertion that the development will result in a meaningful shift to cycling and walking. The development is too isolated, and even within the development itself too spread out to anticipate a reduced reliance on private cars.
2. The increased volume of car traffic. A proposed development of 2,068 homes would result in an estimated 4,000 additional cars on the roads.
3. The congestion this traffic will cause on the narrow rural roads in Ockham and the surrounding areas, exacerbated by wide vehicles including increased bus and HGV movements.
4. The danger this traffic will be to local cyclists and pedestrians, due to the absence of any cycling paths and the lack of pedestrian footpaths (and the space to provide them).
5. The increase in the already severe congestion on the Strategic Road Network of the A3 and M25. A further planning application at RHS Wisley (with a significant increase in visitor traffic) and a proposed 600 pupil secondary school on the site would add additional congestion at the M25/A3 junction as well as local roads. No development can proceed without significant infrastructure enhancements to the A3 and M25. Partial improvement works on the A3 south of the site are not due to start until 2019 at the earliest.

6. The lack of suitable public transport. The local rail stations of Effingham and Horsley cannot cope with the proposed increase in passenger traffic and car parking is already at capacity.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/7197  Respondent: 15445665 / Jonathan Hewlett  Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

9) I object to the fact that air quality concerns have not been taken seriously – air pollution in many parts of the borough, and particularly at the M25/A3 junction, is in excess of EU-permitted limits. Additional traffic will exacerbate this situation, impacting the health of all current and future residents. No account is being taken of the acid deposition on the Thames Basin Heaths SPA and the irreversible impact of the habitat degradation.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT to poor air quality concerns (Policy I3)

Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

I OBJECT TO POLICY I3 (SUSTAINABLE TRANSPORT):

- Just a list of generic measures, not related to real life or the particularities of Guildford.
- Fails to treat sustainability as a constraint. Assumes excessive levels of development proposed in the plan can be supported by sustainable development.
- Unrealistic. Most people can’t or won’t walk or cycle – commuters in a hurry, the elderly, children, people who are unwell or unfit, people carrying heavy shopping or other goods. i.e. most residents!
- Town’s eye view of transport. Ignores scarcity of existing rural public transport and commercial unviability of increasing it. Ignores terrible state of Surrey’s roads, potholes, flooding etc. Ignores extra stress to be created by huge new housing estates in countryside.

Roads:

The roads that will be used by the proposed houses simply will not cope with increased traffic. They barely cope with the traffic during morning and evening rush hours already. The staggered junction across Ockham Road North from the end of East Lane across to the Drift will simply be grid-locked and pose an ever greater danger to the children who cross that junction on their way to and from school.

At present the road surfaces are inadequately maintained and are riddled with pot-holes. The surface of East Lane near to the junction with Ockham Road is a disgrace. This problem can only get worse with an increase in traffic such as that proposed. As the budget for road maintenance seems to be inadequate to deal with present problems where are the necessary added resources to come from if these proposals are accepted? I therefore object to the proposals on these grounds

The traffic through Ripley currently, especially that going towards the A3 London bound, is already, at times extremely heavy, how the roads would cope with the extra local traffic created is hard to imagine.

With large developments at both Gosden Farm and Wisley Airfield adjacent roads would come to a complete standstill. Ripley has over the past two or three years seen many small pockets of housing developed, the proposed plan at The Talbot is over development in the conservation area.

I object to policies I2, I3: the proposed ThreeFarms Meadow and Garlick's Arch site will need considerable alterations for Trunk road access; who will pay for this? It seems that the question is just assumed away, it will happen to allow the developers to build. If that assumption is based on the ordinary tax payer funding road improvements, then it is high objectionable; why should any one allow tax payers money to subsidise private development profit when they object tp the whole Plan in the first place. Either way the situation on the A3 and M25 is one of total congestion at key times; the A£ is-congested between Guildford and Cobham, most all the time; how do the authorities think that thousands more vehicles are going to be accomodated?

With air quality breaking the limits set for healthy habitation, the polution levels, Nitrous oxide, Bezines etc, will undoubtedly rise to totally illegal standards. The situation in the north of the Borough is aledy extreme.

means of sustainable forms of transport from the above mentioned developments. Guildford residents use cars and these proposals only increase the likelihood of more cars on our roads.

Furthermore the Department for Transport’s Road Investment Strategy includes schemes for the A3 in Guildford and the M25 Junction 10/A3 Wisley interchange; Also, it says that interim ‘quick win’ schemes to deliver road safety and some congestion relief on the A3 in Guildford will be delivered within the plan period. But ‘some’ relief does not commit to assuring residents that any work will be undertaken in this area.

The SA states that the delivery of housing in the later stages of the plan period is dependent upon major improvement to the A3. When will we know about this and is the Guildford plan being held back until such information is confirmed? No statement is included to this effect.

The SA notes that another important consideration is the potential for increased traffic to impact on historic character within Conservation Areas; It states that it is difficult to draw strong conclusions in the absence of detailed modelling work. Should this not be a pre-cursor to any plan? An issue of particular importance it notes is that there is likely to be an increase in traffic through the Ripley Green and Ockham Conservation Areas (the former being associated with a high concentration of listed buildings)

I Object to any houses etc being built in and around Send, Send Marsh, Ripley, Ockham, and Burpham.

for each house built - think at least two cars, so a TOTAL of 6325 would equate to 12600 vehicles on our country roads, which are not made for such an increase in traffic, they are at Full capacity now.

I Object to the proposed new interchange with the A3 at Burnt Common, if there is an accident on the A3 where does the traffic go, through the villages. We already experience problems if the A3 or M25 are closed due to Accidents - where does the traffic go - through the villages.

When Newark Lane was closed for 6months for bridge work, all traffic was diverted through Send or Ripley to get anywhere - this caused long delays.

Local air quality is known to be poor. This is principally due to the congestion on the SRN with both the A3 and M25 at a standstill during peak hours. Residents of the proposed development (5100) will rely on the private car as the local roads, which are narrow and windy and unlit are not suitable for cycling or walking, nor are they suitable to for public transport. An additional 4000 cars will make the local roads, which are already under pressure more congested as residents travel to work, school etc.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

I object to the detrimental impact on transport, local roads and road safety. I specifically object to:

a. The assertion that the development will result in a meaningful shift to cycling and walking. The development is too isolated, and even within the development itself too spread out to anticipate a reduced reliance on private cars
b. The increased volume of car traffic. A proposed development of 2,068 homes would result in an estimated 4,000 additional cars on the roads
c. The congestion this traffic will cause on the narrow rural roads in Ockham and the surrounding areas, exacerbated by wide vehicles including increased bus and HGV movements
d. The danger this traffic will be to local cyclists and pedestrians, due to the absence of any cycling paths and the lack of pedestrian footpaths (and the space to provide them)
e. The increase in the already severe congestion on the Strategic Road Network of the A3 and M25. A further planning application at RHS Wisley (with a significant increase in visitor traffic) and a proposed 600 pupil secondary school on the site would add additional congestion at the M25/A3 junction as well as local roads. No development can proceed without significant infrastructure enhancements to the A3 and M25. Partial improvement works on the A3 south of the site are not due to start until 2019 at the earliest
f. The lack of suitable public transport. The local rail stations of Effingham and Horsley cannot cope with the proposed increase in passenger traffic and car parking is already at capacity

I object to the fact that air quality concerns have not been taken seriously – air pollution in many parts of the borough, and particularly at the M25/A3 junction, is in excess of EU-permitted levels. Additional traffic will exacerbate this situation, impacting the health of all current and future residents. No account is being taken of the acid deposition on the Thames Basin Heaths SPA and the irreversible impact of the habitat degradation.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

At present it is extremely difficult to drive into Guildford from Burpham - the flow of traffic is just unbelievable. I note it has been indicated that an additional 2,000 homes hope to be built in Burpham. You have to consider that if this crazy plan is passed 2,000 homes could generate at least 4,000, possibly more, cars (2/3 cars per household is the ‘norm’ these days) so how will we be able to drive into the City centre and exactly where will all these additional cars be parked - if,
and when, they arrive in Guildford? You must be aware that parking in this present day is very difficult - on occasions impossible!

27. Policy ID3 Sustainable transport for new developments

The change from ‘will expect’ to ‘will be required’ in point (2) is supported. The similar revised wording in point (7) is also supported.

The lack of specificity about the Sustainable Movement Corridor makes it difficult to make an informed comment on point (3).

In para 4.6.28, the aim of achieving a modest modal shift is noted, and also that the road schemes in the plan will ‘mitigate the principal adverse material impacts of this growth in traffic volumes’. It is realistic to recognise that there will be congestion on the road network in peak periods. However, the problem is that better evidence is required of what conditions will be like both half way through the plan period and in 2034. The risk of them being unsatisfactory (perhaps unacceptable) is significant. Point (11) is noted but it is not clear that any of the town centre sites included in the plan would involve additional off-street car parking.

Infrastructure Policy I3
In order to try and save money I have recently decided to cycle to work rather than use the car. A one-way trip is 50 minutes, which, realistically is not to everyone’s taste. Other than the obvious health benefits, it means I am not sitting in commuting car jams every day as I can find alternative cycle routes often away from the main flow of traffic.

However it has made me realise that the proposed large housing developments at Wisley Airfield, the Horsleys and also further up the A3 in Send and on the edge of Burpham (Guildford) will make cycling on the local roads even more difficult and dangerous than it is already. Most of our local roads are narrow and windy, unlit and with poor sight lines. Many of them have pinch points which means larger buses and HGVs have to go over the centre white line or up onto the pavement. Cycling is for the brave on these roads and the large volume of additional traffic likely to come with the proposed developments will not convince people to take it up in preference to their car. The Wisley Airfield proposal is suggesting that cycling along narrow country lanes is to be encouraged to get to rail stations some 3 miles away. I think this is highly unlikely.

I OBJECT to Policy I3 as I feel it doesn’t consider accurately enough the consequences of excessive housing developments on our local roads.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/8135  Respondent: 15461633 / Anna Wood  Agent: 
Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to poor air quality concerns (Policy 13)

The increased congestion that will arise from the massive proposed developments will in turn lead to increased air pollution which will have damaging effect on local residents and their health.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Congestion on village roads and lanes

Many local villages suffer from long traffic delays and congestion. Junctions like Newark Road and Rose Lane in Ripley, and the Shell roundabout at Burnt Common often have long traffic queues, which are likely to be significantly worse should the local plan be implemented. I object to the further congestion in and around our villages the development would cause.

Congestion on local trunk roads

Local trunk roads such as the A3 and M25 already suffer severe congestion during the rush hour. I object to the development of sites in the vicinity of trunk roads where there are current issues with rush-hour congestion.

Parking issues in local villages

Parking in local villages such as Ripley is already an issue. It’s frequently impossible to find parking in the village for longer than two-hour periods. I object to the proposals as further development around our villages and an increased population would make parking even more difficult.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/8464  Respondent: 15467905 / C J Reina  Agent:

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

The new homes and developments proposed on sites at Gosden Hill Farm, Blackwell Farm, Wisley, Slyfield etc, plus the destruction of village communities (currently situated in the Green Belt) will only add to the already overloaded access roads. Road traffic travelling towards the town centre and A3 southbound from Burpham is already being forced to divert
via the Weylea Farm estate to avoid congestion on the London Road through Burpham. Even London Road adjacent to Stoke Park and Guildford By-Pass are already congested and reaching saturation point - and this is before any further development has occurred.

Road users are already impatient and stressed by the infamous congestion on the M25, I believe that development on the site proposed will result in unacceptable chaos and traffic jams would inevitably lengthen and increase not only on the M25 but also the A3 in both directions. Any accidents occurring on both these major roads and on the access roads would be extremely difficult for emergency response vehicles to deal with.

I urge the Council to re-think both the size and the location of the proposed developments.

It will be too late once the houses are built. Thinking ahead concerning infrastructure is vital. Lessons must be learned from the disasters associated with the Aldi store development. Clearly the limited road access to and from the store was not taken in to account when Planning Permission was granted and this is a relatively small development.

**Document:** Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3

**Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )**

At present Send consists of many narrow roads surrounded by many fields and wooded areas where people cycle, walk, run, bird watch and exercise dogs. The proposed developments would make these activities cease, because of the dangers from traffic which would increase dramatically with the proposed housing developments. We regularly see new development with inadequate parking, the only realistic expectation is two cars per household will be added to our local road system. Also we have seen lorry traffic has increased many times over the last two years and it would increase even more during the housing developments on roads that are already in a poor state of repair.

All of the proposed projects would have a dramatic effect on traffic levels and pollution on major roads such as the M25 and the A3 and then filtering down to the country lanes which cannot deal with the volume and potential danger of excessive traffic.

Transport

Having lived in Burpham for many years, the congestion has steadily got worse until the opening of Aldi and then it got substantially worse – this was after many traffic surveys carried out by GBC during the planning process and proves how unreliable and unrealistic the current method of surveying is.

A realistic traffic solution must be put in place before any agreement is made on housing.
London Road is currently queueing solidly from the Spectrum roundabout to the A3 northbound constantly between the hours of 3.30pm and 6.30pm adding a bus lane and a cycle lane to this will result in more chaos and undoubtedly more accidents as there is not sufficient space.

I look forward to hearing from you that the Council has come to it’s senses and will revisit and amend this unsound plan.

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

My son and grand children live on The Street in West Clandon, [personal information redacted], and I visit on a weekly basis and stay for two days to look after my grandchildren. The Street is already a extremely busy and dangerous road with a narrow pavement and in places the road so narrow that trucks and buses have to mount the pavement to pass. I regularly walk my grandchildren along The Street to the recreation ground which is an unpleasant and dangerous experience and it is only a matter of time before there is a serious accident on this road. Furthermore the exit from my sons property is the completely blind bend opposite the church. Exiting the property onto the road is already extremely dangerous and the prospect of the increased traffic resulting from the proposals in the local plan will only make things worse. I therefore object to the Local Plan in its current form on following basis.

I object to poor air quality concerns (Policy I3)

The huge developments being proposed, particularly in the north east of the borough will lead to considerable further congestion and to greater levels of air pollution, which will have a detrimental effect on local residents and their health. It has been shown that Wisley already has NOX levels above the EU legal limits and by law a school cannot be located in this area as a result.

Comment ID: PSLP16/8821  Respondent: 15477569 / Paul Cheeseman  Agent:

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the detrimental impact on transport, local roads and road safety. I specifically object to:

1. The assertion that the development will result in a meaningful shift to cycling for which there is no empirical or logical evidence provided.
2. The increased volume of car traffic. A proposed development of 2,068 homes most with two cars.
3. The congestion this traffic will cause on the narrow rural roads in Ockham
4. The increase in the already severe congestion on the A3 and Ripley village.
5. The lack of suitable public transport. The development is too isolated, and even within the development itself too spread out to anticipate a reduced reliance on private cars would result in an estimated 4,000 additional cars on the roads on the surrounding areas, exacerbated by wide vehicles including increased bus and HGV movements
6. The absence of any cycling paths and the lack of pedestrian footpaths (and the space to provide them)
7. The A3 and M25. A further planning application at RHS Wisley (with a significant increase in visitor traffic) and a proposed 600 pupil secondary school on the site would add additional congestion at the M25/A3 junction as well as local roads. No development can proceed without significant infrastructure enhancements to the A3 and M25. Partial improvement works on the A3 south of the site are not due to start until 2019 at the earliest.

7) I object to the fact that air quality concerns have not been taken seriously – air pollution in many parts of the borough, and particularly at the M25/A3 junction, is in excess of EU-permitted levels. Additional traffic will exacerbate this situation, impacting the health of all current and future residents.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
1. **Traffic and Roads**

The road sat present in Burpham are not sufficient to take the amount of traffic which will be generated by the new developments.

The proposed Sustainable Movement Corridor in the proposal of London Road will not take the amount of traffic required, even if the possible A3 tunnel is built.

The increase in traffic will not be able to be dealt with by the London Road/New Inn Lane roundabout.

Thus, again I object to the plan in regard to traffic movement in Burpham.

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT in the strongest possible terms to the Guildford Borough Proposed Submission Local Plan (June 2016). This Plan is unsustainable, unworkable and, in many provisions, unnecessary.

I set out below my objections to specific policies and matters within the Plan.

The A247 in West Clandon is already used by too many vehicles travelling too quickly and any additional traffic could make it dangerous.

As an electric wheelchair user I often travel between my parents’ home [Response has been redacted due to statement containing personal data which cannot be disclosed due to the provisions of the Data Protection Act 1998.] Guildford and Clandon station. The road is already too busy to cross safely, especially when cars are travelling above the speed limit as they often do. There is limited pavement on either side of the road and it is incredibly scary when large vehicles including lorries regularly mount the pavement at various “pinch points” along the road, or come extremely close to me when I am travelling on the pavement. There are no sensible places to cross the A247 between my parents’ house and either the train station or the bus stops, but as I am reliant on accessible public transport I have no choice but to put myself in danger in order to reach my destination. Even where you can see a little distance in either direction, this is insufficient with the volume of traffic using the road and the fact that it consistently approaches at speeds well above the limit. Any increase in the volume of traffic using the A247 (which would be the inevitable outcome were these plans to go ahead as currently described) would be extremely dangerous, not only for myself but for others using the pavements, especially those with disabilities, small children or pushchairs who require the full width of the pavement and can’t move out of the way quickly if vehicles come to close or even mount the pavement. The presence of many narrow points and a large density of twists and turns along the A247 make it difficult for drivers to see what is ahead and drive safely, especially when the speed limit is being exceeded. I believe that local peoples’ lives will be put at risk as a direct result of these plans being carried out as they stand and I fully expect the council to take this into consideration and not go ahead.

Similarly in peak times Guildford City Centre is already too busy and congested, and there is little possibility for mitigating this problem, or indeed consideration of this issue in the proposals.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Comment ID: PSLPP16/15900  Respondent:  15478209 / Sally Daboo  Agent:

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT to poor air quality concerns (Policy I3)
Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Comment ID: PSLPP16/9082  Respondent: 15478785 / Alicia Grainger  Agent:

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to Policy I3

I'm not convinced that the measures are related to real life or the particularities of Guildford. Most people don’t or can’t walk or cycle here – commuters are in a hurry, and people carrying heavy shopping or other goods i.e. most residents, wouldn’t use the transport suggested. It is a towns eye view of transport and ignores the scarcity of existing rural public transport and commercial unviability of increasing it. It ignores the terrible state of Surrey’s roads, potholes, flooding etc. and the huge extra stress that would be created by new housing developments.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT to poor air quality concerns (Policy I3)

Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )
** I object to poor air quality concerns (Policy 13) The increased congestion that will arise from the massive proposed developments will in turn lead to increased air pollution which will have damaging effect on local residents and their health.

** I object to the congestion that development will cause to the trunk roads A3/M25 (Policy 12) Both the A3 and M25 need improvements before any developments commence. This is clearly not going to happen in the timescales of the plan, so the proposed developments at Wisley Airfield (A35), Garlicks Arch (A43) and Gosden Hill (A25) should NOT take place. Please record these objections individually against the relevant sections of the plan and ensure that they are submitted to the Planning Inspectorate.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
Transport:

The evidence on future traffic conditions which has been provided in the Strategic Highway Assessment Report was produced late and is incomplete. Critical information on congestion has not been given in time to be taken into account in the plan proposals.

The proposed Sustainable Movement Corridor is simple unsound and cannot be delivered due to the narrow roads and pinch points on an already very congested route through Burpham.

Of further note is that the proposed Gosden Hill development of 2000 houses plus offices, school etc will add significant pressure to the already congested London road and New Inn Lane. The increase in solution and noise is unacceptable.

The phasing of the proposed Gosden Hill development is in advance of proposed improvements to the A3. This makes no sense.

The major transport issues around Guildford need to be resolved before any further development is considered, these include the proposed A3 tunnel, new river crossing, a workable central bus terminal and a rail station at Merrow.

I object to the strain put on the already strained infrastructure in these villages. Ripley high street is already crowded with cars, with little parking and the junction with Newark Lane is chaotic at peak times and many times during the day. Add many more homes to the mix and the route to/from the A3 would be strained to breaking point, not to mention liable to lead to accidents.

Poor air quality concerns
I object as it will mean greater air pollution.

Unsuitability of our local roads for heavy vehicles and more traffic
The local roads in the area are very narrow.

Congestion on the local village roads and lanes
I object as more traffic would mean terrible congestion for villages and lanes.

Congestion on the trunk roads, A3/M25
I object to the development of the strategic sites due to A3 and M25 already being at capacity during peak hours, it would only make transport much worse.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

The London Road (one of the main roads into the town centre) does not have the capacity to include a bus lane and a cycle lane, furthermore, the current Bus system does not warrant the need for an extra lane. The designation as a sustainable movement corridor cannot be correct as the road is not wide enough and the traffic is already horrendous queuing the full length from The Parkway to the A3100 Clay Lane. The costs and disruption, in my view, clearly outweigh any benefits that might be gained, certainly, this won't encourage residents to drive less.

In addition, the impact of the increased traffic will be a disaster for local residents. The plan for the roads hinges on the provision of two new slip roads but these are not likely to be delivered until 2021 at the earliest and may be as late at 2033. Each slip road is likely to cost £10m. I strongly suggest that these will not be delivered and even if they are it will be long after the damage to the local environment has been done.

1) The amount of traffic in our area has reached saturation point, I leave home over an hour early to get to school for 8 30, grid locks are normal events and tempers are always running high.

2) I live on an approach road to the A3/M25 getting out of the drive is very dangerous, in fact I had a serious accident last year and I cannot leave my drive now unless a member of my family helps me. If any further developments happen around Ripley/Send the amount of traffic down Newark lane will increase even more.

I object to poor air quality concerns (Policy I3)

The huge developments being proposed, particularly in the north east of the borough will lead to considerable further congestion and to greater levels of air pollution, which will have a detrimental effect on local residents and their health.

Clay Lane link road

I object to the building of the clay lane link road from Slyfield to Clay Lane. I have previously provided detailed reasons why I object to this but briefly, Clay lane, Blanchards Hill and other local roads are already very busy and dangerous, particularly at rush hour. Blanchards Hill is a rural road with no footpath and would be particularly more dangerous if traffic was to increase. A lot of the houses along all roads are very close to the road and therefore resulting increase in heavy traffic would be detrimental to the buildings as well as causing disruption to the inhabitants. It would also ruin the nature of the area by making it a busy thoroughfare rather than a village where people live.

Paragraph 4.6.27 of the Plan states that "Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health." The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

OBJECTION TO PROPOSED RESIDENTIAL DEVELOPMENT IN WEST HORSLEY

The proposals currently being considered for increasing the density of housing in this area must take account of the B2039 (Ockham Road North/Ockham Road South) which is the only road linking the A3 through to the A246 Guildford road. This road is incapable of supporting the amount of traffic the proposed new housing would generate. I would imagine the cost of building or widening a connecting road would make the development proposals financially unfeasible.

Traffic

The increase in traffic on East Lane, in particular, will be intolerable with the proposal of over 345 new households impacting on this road (potentially up to 750 more cars?). It is already congested during school times from Nightingale Avenue and Northcote Road. This will have a massive impact on our day-to-day lives.

2000 houses are being planned for Wisley Airfield. Many of these potential residents will be driving in and out of Horsley to use the station and shops. We simply DO NOT have the capacity for additional parking at Horsley Station and local shops. The Station car park is currently full every weekday as it is. It will become impossible to use the train as there is no alternative parking.

• I OBJECT to the impact on the infrastructure around the villages. The roads around Send and Ripley are already congested and cannot cope with the current needs. The Local Plan does not incorporate a detailed transport infrastructure strategy that would demonstrate how the road network would support the additional pressure on the roads and other amenities if the proposed development went ahead.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

infrastructure. I object to the developments for new sites within the green belt, for example the garlick arch site. As the infrastructure in Ripley village in not adequate to accommodate such a large number of new residents. At rush hour times trying to get through Ripley is bad enough. With queues backing up to the m25 in the evenings. Trying to join the a3 or come off the a3 will become far harder if there is so many new homes being built.

The parking is currently lacking in Ripley as already a small village and high street. With 400 new houses proposed at the garlick arch site, there could be potentially 800+ cars. As most households would have two vehicles. The local areas can not cater for this influx of vehicles. There is not enough parking in Ripley and send for this.

POLICY I3 - Sustainable Transport for New Developments

I OBJECT. This is just a pie in the sky bit of box ticking, if one assumes that households have a minimum of one car but looking around it seems that most have two or more and this will be the normal means of transport. These days people will not wait around for a bus that fails to turn up, we will certainly not have a service like central London with one every 5 minutes, so if one is missing it is not too long to wait for the next. Unless Guildford borough bans the ownership of cars, cars will be the standard method of transport. People will not want to cycle because of the large number of cars.

Policy I3 - Sustainable Transport for New Developments

I strongly object to any development being built that does not have existing sustainable transport. Blackwell Farm, Wisley Airfield, Gosden Hill and Garlicks Arch do not have such facilities. The former Wisley Airfield is absolutely isolated and can only be accessed by car and even if a bus service is provided, few will carry shopping, etc., by bus. Blackwell Farm and Gosden Hill are in the same situation and none are accessible by foot. New developments should take place alongside existing sustainable transport facilities. The Merrow Golf Club, proposed for housing, is adjacent to a Park and Ride, that is an example of sustainable transport.

Re: Responses to Guildford Borough Proposed Submission Local Plan (June 2016)
I OBJECT in the strongest possible terms to the Guildford Borough Proposed Submission Local Plan (June 2016). This Plan is unsustainable, unworkable and, in many provisions, unnecessary.

I set out below my objections to the Plan.

I frequently visit my daughter and son-in-law who live off The Street. Every week this entails many trips to neighbouring villages with small children in the car. The current density of road traffic along The Street makes joining and leaving it on a blind corner a hazardous action; it’s feels as though it’s only a matter of time when, not if, there will be an accident. The children’s ages are 2 and 4; we are confronted with lorries, high-speed bikes and hastening commuters on a daily basis. The only time it feels safe to join the road is when there is one of the rush hour jams.

This is the present situation in a rural village. The consequences of a huge boost in the local population doesn’t bear thinking about.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

---

Comment ID: PSLPP16/15325  Respondent: 15570817 / Tom Edelsten  Agent:

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT to poor air quality concerns (Policy I3)

Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

I OBJECT in the strongest possible terms to the Guildford Borough Proposed Submission Local Plan (June 2016). This Plan is unsustainable, unworkable and, in many provisions, unnecessary.

I set out below my objections to specific policies and matters within the Plan.

There is already considerable concern in the village because of the narrow road running through it. At the particular point where we are, opposite the Church, there is already a bottleneck which it is impossible to change – listed buildings of historic interest etc. At several points in the village, there are tight corners, which cannot be changed because of constriction by buildings, walled gardens, listed features etc. This isn’t even the narrowest point.

I am by now very familiar with the road through the village and am already concerned about how much traffic “cuts through”; given the lack of facility for expansion, this can only become worse. The plan would seem to be complete madness.
What changes (2016)/further amendments (2017) do you suggest should be made to the document?

The question of air-quality around the A3 has also been totally ignored. The existing situation in that the area around Wisley Airfield already breaks the maximum levels of pollution allowed by UK environmental laws. Adding the proposed numbers of houses on the airfield, plus the unrealistic increase in housing proposed for the Horsleys, will make this situation not only much worse, but exceedingly dangerous to many residents of supposedly rural country villages.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I OBJECT TO POLICY I3 (SUSTAINABLE TRANSPORT):

• Just a list of generic measures, not related to real life or the particularities of Guildford.
• Fails to treat sustainability as a constraint. Assumes excessive levels of development proposed in the plan can be supported by sustainable development.
• Unrealistic. Most people can’t or won’t walk or cycle – commuters in a hurry, the elderly, children, people who are unwell or unfit, people carrying heavy shopping or other goods. I.e. most residents!
• Town’s eye view of transport. Ignores scarcity of existing rural public transport and commercial unviability of increasing it. Ignores terrible state of Surrey’s roads, potholes, flooding etc. Ignores extra stress to be created by huge new housing estates in countryside.

<tr>
<td><strong>POLICY I3 - Sustainable transport for new developments - I OBJECT</strong></td>
<td>The policy fails in its primary task of guiding planning decisions. The proposed sites are often miles away from the nearest railway station. Bus services even in the largest villages are almost non-existent – just one bus to and from Guildford each day in the Horsleys and none at weekends. Most rural roads in the borough are narrow, winding, hilly, potholed, muddy and unlit. Many flood badly and have no footpaths (see attached photos again). The vast majority of the borough’s residents are not, in practice, able to cycle. This includes children, the elderly, commuters who have to look smart, the infirm, the unfit and people carrying goods or shopping of any kind. The addition of two new stations will slow down train journeys, which are already slower than at any time since the 1930s.</td>

I write to OBJECT to Amended planning application 15/P/00012 for the following reasons:

Sustainability: The site is remote and occupants will rely on the use of the private motor car adding to traffic congestion on both the Strategic Route Network (the A3 and the M25) and local roads which are already running over capacity.
• The application relies on people switching to walking, cycling and public transport. This is unrealistic as it is two miles to the nearest railway station and at least half the route has no footpath. Roads are narrow and unlit and hazardous due to surface water seeping from fields and ice and snow in winter. GBC has failed consistently to remedy the issues of Ockham Road flooding, simply placing the onus on the motorist with signage urging them to Beware. The very fact that signs are placed shows GBC has been alerted to a problem yet failed to remedy it, placing lives at risk. This will be exacerbated with a higher population density.
  • There is no spare parking capacity at either of the local stations.
  • Local villages have been disfigured by gallons of yellow paint to prevent parking- yet another indication of over-capacity of use and yet the basic issue has not been addressed- more parking is needed but there is no space for it. Adding more people will only make things worse.
  • Sites of this size are required to provide outdoor open space. The applicant has “double counted” the outdoor space with that required for SANGS
  • The loss of high quality agricultural land is in contravention of policy.

The judicious and forward-thinking approach to housing development in Guildford would be to assess the existing road and traffic problems first, which would also include addressing the congestion and safety issues of the A3. Whether the answer is a tunnel, widening, double-deck or a by-pass to the by-pass, it would have to be very audacious and bullish planners and councillors who would willingly sign their name and stand up to say publicly that they approve of this current Plan. It would be their names connected with consigning Guildford to a future of traffic congestion, regular gridlock, and increased pollution.

I3 Until the GBC Local Plan has concrete solutions to the current traffic problems, experienced on the main arterial roads into Guildford, and addresses - justifiably and effectively - the increased pressure on the road infrastructure placed by new housing estates and new villages, any large-scale housing developments are inevitably in jeopardy. The new GBC Local Plan has not scored positively on its own 7-point On-line Questionnaire for the proposed sites, and that is the basis of my strong objection the Plan in its current form.

Allowing Green Belt development to pay for transport schemes will simply generate yet more traffic from more homes, fuelling congestion. I travel in from Gomshall every day and there is already a considerable backing up of traffic entering Guildford via the Epsom Road. This would be horrendous if the proposed level of new house building was to go ahead. Bus and train services from outlying villages are virtually useless as there are not enough of them and not often enough. I would be more inclined to use public transport if the buses and trains came more frequently than every 1 or 2 hours....

The addition of nearly 14,000 extra homes and 25,000 to 30,000 people has very serious implications for infrastructure and traffic, which the Plan hardly addresses and for which there is little funding (if any) - schools, medical centres, drainage, sewerage and so on, but particularly roads. The impact of Brexit is yet to be fully felt, but will almost certainly limit public funding even further and developers will be reluctant to commit to new developments in an uncertain market. If the Plan is implemented, it will lead to an increase of around 25,000 to 30,000 vehicles, plus extra traffic generated by developments in other boroughs and by normal traffic growth. The borough’s roads are already overcrowded at particular times and many are in a state of poor repair. Moreover, away from the main arteries, the back roads are often little more than lanes - narrow and with no pavements. For them to safely accommodate all the extra traffic, there would need to be many road changes and adjustments, requiring more road furniture, pedestrian crossings, traffic controls and so on, all having a detrimental impact on the character and nature of our environment, aside from costing a huge amount.

The borough’s main artery, the A3, suffers considerable congestion now, particularly on the southern approach to the town’s turn-off, southwards at the hospital exit, and northwards at the junction with the M25, where pollution levels often exceed permitted levels. The Plan proposes more access to and from the A3 with a four-way junction at Burnt Common and further access at the Wisley junction (see item 6) to accommodate traffic from proposed new developments. These will only increase the number of vehicles using the road, adding excessive traffic levels, increased congestion and pollution. (There has been talk of building an A3 tunnel under Guildford, but this is a pipedream with no realistic prospect of ever being built, especially because of the huge cost, for which there is no planned funding).

Re: Primary Vehicular Access via Existing or Realigned Junction of A31 and Down Place access road, to be signalised

As a Hogs Back resident, I have received your notice drawing attention to these plans and wish to record that I object to these plans.

Whilst I appreciate the need for building new homes, it isn’t the actual development which is of concern but the seeming lack of proper and informed consideration to the infrastructure to support the development.

To try to install ANY form of access up to the A31 is only adding to the existing problems currently experienced along the Hogs Back stretch of the A31 and will have repercussion on all the surrounding villages, not only to the north side but also to the south side, including Puttenham and Compton.

To add to the existing weight of traffic on this section of road will force drivers to look to alternative routes into Guildford, with the consequence that the routes through the villages will also become deadlocked and dangerous.

This should not just be about the convenience of the new home owners/tenants to be installed in the new development, allowing them quick access to the A31, but also about the existing residents of the surrounding villages.

Sufficient provision should be made to the north, west and east of the development to move the additional weight of vehicles AWAY from this already congested area.

The effects on the existing residents and indeed the natural environment could be immense and presumably irreversible. The Hogs Back stretch of the A31 already suffers from numerous problems which the Council seems intent on ignoring at every turn, despite the residents’ efforts to be heard and not railroaded.

I have noticed there have been environmental study boxes installed along the Hogs Back – please could you advise who has installed them as I would be extremely interested to hear more about their findings.

If you can give me any direction in this matter, I will gladly take up my own further research.

In the meantime, I again reiterate MY OBJECTION to this access route.

I object to the extra housing proposed on the basis of transport limitations

Commuting from Horsley and Effingham Junction stations, where the parking is already full, would become unmanageable. The local road network is not sufficiently developed to cope with the huge number of extra cars that would be inevitable with this increase in housing - quite apart from the extra noise and air pollution to local residents, there is a real risk of bottle necks being created at junctions on and off the A3

I object to the 2016 Draft Local Plan proposed on the Guildford Borough Council. Although the videos and documents state that the plan is aimed at providing affordable housing to accommodate local workers and attract more talent to the area, there is insufficient detail provided as to how the infrastructure will be upgraded to cope with this increase.

It hardly needs to be said that traffic in Guildford and the surrounding roads, especially the A3, is cripplingly high. There are frequent accidents, some fatal, and even without an accident the high amount of traffic makes the commute very frustrating. The impact of going through this daily commute is very taxing on the well-being of people living in these parts. More homes in these areas increases the numbers of people, but the plan provides no details or suggestions such as widening of roads, provision of subsidised transport for locals or anything that will really reduce congestion on the roads and improve efficiency and personal well-being.

In addition, the impact on leisure such as walking and cycling is very, very dangerous. This area is very close to the popular South Downs and has lovely Areas of Outstanding Natural Beauty, but it is difficult to enjoy them safely as there are more and more large vehicles on the regular roads and taking to the back lanes to avoid traffic. This causes a conflict with those indulging in walking and cycling to enjoy the natural beauty. In fact, I personally know of a couple of people who have been knocked off their bicycles by close proximity to motorised vehicles. Your plan does not provide any clear information as to how this will be improved. There are general statements made about needing to accommodate other forms of transport, but there are no practical details given that will make these pursuits safer.

I object to poor air quality concerns (Policy 13)

The increased congestion that will arise from the massive proposed developments will in turn lead to increased air pollution which will have damaging effect on local residents and their health.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

**POLICY I3 SUSTAINABLE TRANSPORT**

I object to policy I3 Sustainable transport for new developments.

This is another aspirational policy, not grounded in the practical realities of daily life. It consists of a standard, box-ticking list of local government measures unrelated to the specifics of the plan. Like infrastructure, transport appears to be an afterthought; the policy fails in its essential job of guiding planning decisions, since it assumes development of any kind can be supported by sustainable transport.

The sustainability of the dormitory settlements which the Council want built across the countryside depends on a general ‘modal shift’ from private car use to walking, cycling and public transport. This is unrealistic. The proposed sites are often miles away from the nearest railway station. Bus services even in the largest villages are almost non-existent – just one bus to and from Guildford each day in the Horsleys and none at weekends. Since bus services depend on profitability, they cannot be expanded and the Council are not proposing to subsidise new ones. Rural buses are too slow anyway for busy people. Most rural roads in the borough are narrow, winding, hilly, potholed, muddy and unlit. Many flood badly and have no footpaths.

The desired modal shift would require a comprehensive co-ordination of bus and train timetables with services every few minutes, seven days a week, to stops within walking distance of every home in the borough. This kind of integrated public transport system has been achieved in Switzerland, for instance, but only at huge public cost and thanks to a political consensus supporting state ownership of trains, buses and the post office, which delivers rural passengers as well as mail. There is absolutely no chance of this in the UK.

The vast majority of the borough’s residents are not, in practice, able to cycle. This includes children, the elderly, commuters who have to look smart, the infirm, the unfit and people carrying goods or shopping of any kind. Dependence on walking and cycling discriminates against these groups, which include some of the most vulnerable members of the community. It is socially unjust. One in two working people in Guildford commute for up to 3 hours a day. They will not leave their cars for even part of their journey if it means longer travel times.

Park-and-rides are a welcome part of the transport mix but are too slow for commuters and others on a tight schedule. For an adult couple going shopping it is still cheaper to park in town.

I like the idea of water buses but have concerns over the reality. The Wey is narrow and, with a river speed limit of 4mph, boats are too slow for anything but recreation. Except on the tideway, not even the Thames has such services.

The addition of two new stations appears attractive but will slow down train journeys, which are already slower than at any time since the 1930s. Knock-on effects on localities where the new stations are built have not been worked out or presented. I.e. Cost of housing will increase.

Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

Policy I3

‘Sustainable Movement Corridor’ – it is impossible to see how this will work. Physically, in Burpham it would involve a significant widening of the road which would totally destroy the character of Burpham’s ‘Main St’. It is also difficult to see how this would affect behaviour given that most people would be afraid to use it, given the traffic volumes, and any would simply be incapable of using it. There are a lot of older people in Burpham.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

1. TRAFFIC/ROADS/NOISE

Traffic congestion in Guildford is already chronic, and its impacts felt in many ways. In my area

1. Traffic noise from the A3 can be heard all over Burpham and into some of the estates in Merrow
2. Local access roads into and out of Guildford are badly congested in AM and PM rush hours, with the A3 backed up from Stag Hill to the Burpham turning on a very frequent basis.
3. The ever increasing amount of traffic on the A3 is making the already inadequate joining points with the A31 and hospital/university northbound, and town north and south bound, positively dangerous. (Have GBC recently looked at serious accident data and costs, and impact on emergency response rates for ambulances and fire services,.....)
4. Local planning approval of the Aldi Burpham store has led to traffic backed up Burpham Lane waiting for car park spaces, onto the roundabout with the London Road. This is happening ESPECIALLY AT WEEKENDS, the one time of the week that the London Road used to be relatively free flowing at this point.

Before any significant housing development takes place in the North of the Borough, the above problems need to be solved. If not, the chronic daily congestion will turn to grid lock.

I believe the answer to all of this is for GBC to think boldly, and FAST TRACK the A3 tunnel suggested, leaving the original A3 for local traffic. Benefits would be numerous, with POSITIVE outcomes for a big proportion of borough residents, businesses, and passing goods traffic.

- Reduction in loss of life and of serious injury impacts by improving safety for this stretch of the A3
- A3 Traffic noise elimination from Ripley through to Burpham, the town and cathedral/university campuses
- Local and trunk road significant congestion reduction and thus time and money savings for residents and business
- Pollution containment

This is GBC's chance to do something that the vast majority of residents would welcome, AND BENEFIT from. If a 2 km tunnel can be justified for Hindhead (population 4000, thus 0.5 tunnel metres per resident), let's secure the 8KM tunnel for Guildford (population 137 000, thus only 0.058 tunnel metres per resident).

A comment too on phasing - optimize and build the A3 tunnel first, don't reduce your flexibility and increase your tunnel cost by premature commitment to large scale housing developments at various points along the way.

The impact of the tunnel would then allow a more sensible debate on borough housing increase with the right infrastructure backbone already in place.

A word too on the suggested road developments within the draft plan. With respect to the north of the Borough and in the light of the massive housing proposals from Wisley through to Gosden Hill, these road developments alone, will be ineffective. They will simply deliver more traffic onto a full A3, and locally a full New Inn Lane/London Road. Congestion will worsen yet further, perhaps leading to frequent gridlock.

Furthermore, the suggested new Sustainable movement corridor in the London Road area will be anything but sustainable - adding to local traffic noise and pollution, and road safety impacts especially with respect to pedestrians and school children. Additionally how will this be built without compulsory purchase of local housing and business properties (Aldi????). I understand to that the roads part of the plan is "aspirational" only. How can this be acceptable, against a housing increase proposal of 25% over 20 years. THIS WILL JUST NOT WORK.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

TRANSPORT - the following needs are unsupported in the plan:

Evidence of future traffic conditions which is in the SHAR has not been finished and has been provided too late for the PLAN to respond to.

The proposed Sustainable Movement Corridor is unsound, due to narrow roads and pinch points. At Burpham the London Road is supposed to carry 2 bus/cycle lanes north and south bound as well as 2 general traffic lanes each way. This will result in the Gosden Hill development, the 1000 car park and ride, 2 schools and railway station as well as unspecified retail and business traffic proposed to start as early as 2021 delivering massive traffic to London Road /New Inn Lane junction before the proposed A3 improvements in 2023- 2027.

The tunnel, railway station etc issues need to be decided before the building of 2000 houses on the site where the 4-way junction of A3 is planned to go.

The introduction of such a disproportionate volume of new housing without first tackling the already severe traffic problems in the area is totally irresponsible and seriously questionable. Building housing and commercial developments which will inordinately increase the amount of traffic both residing within the area and travelling to Guildford from outside, will create a pressure cooker situation of constantly grid locked roads. The road system is currently under significant pressure and the problems of traffic management must be addressed before any new building in the area can be considered feasible.

I OBJECT to poor air quality concerns (Policy I3)

Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

- Just a list of generic measures, not related to real life or the particularities of Guildford.
- Fails to treat sustainability as a constraint. Assumes excessive levels of development proposed in the plan can be supported by sustainable development.
- Unrealistic. Most people can’t or won’t walk or cycle – commuters in a hurry, the elderly, children, people who are unwell or unfit, people carrying heavy shopping or other goods. I.e. most residents!
- Town’s eye view of transport. Ignores scarcity of existing rural public transport and commercial unviability of increasing it. Ignores terrible state of Surrey’s roads, potholes, flooding etc. Ignores extra stress to be created by huge new housing estates in countryside.

I object to policy I3 Sustainable transport for new developments This is another aspirational policy, not grounded in the practical realities of daily life. It consists of a standard, box-ticking list of local government measures unrelated to the specifics of the plan. Like infrastructure, transport appears to be an afterthought; the policy fails in its essential job of guiding planning decisions, since it assumes development of any kind can be supported by sustainable transport. The sustainability of the dormitory settlements which the Council want built across the countryside depends on a general “modal shift” from private car use to walking, cycling and public transport. This is unrealistic. The proposed sites are often miles away from the nearest railway station. Bus services even in the largest villages are almost non-existent – just one bus to and from Guildford each day in the Horsleys and none at weekends. Since bus services depend on profitability, they cannot be expanded and the Council are not proposing to subsidise new ones. Rural buses are too slow anyway for busy people. Most rural roads in the borough are narrow, winding, hilly, potholed, muddy and unlit. Many flood badly and have no footpaths. The desired modal shift would require a comprehensive co-ordination of bus and train timetables with services every few minutes, seven days a week, to stops within walking distance of every home in the borough. This kind of integrated public transport system has been achieved in Switzerland, for instance, but only at huge public cost and thanks to a political consensus supporting state ownership of trains, buses and the post office, which delivers rural passengers as well as mail. There is absolutely no chance of this in the UK. The vast majority of the
borough’s residents are not, in practice, able to cycle. This includes children, the elderly, commuters who have to look smart, the infirm, the unfit and people carrying goods or shopping of any kind. Dependence on walking and cycling discriminates against these groups, which include some of the most vulnerable members of the community. It is socially unjust. One in two working people in Guildford commute for up to 3 hours a day. They will not leave their cars for even part of their journey if it means longer travel times. Park-and-rides are a welcome part of the transport mix but are too slow for commuters and others on a tight schedule. For an adult couple going shopping it is still cheaper to park in town. I like the idea of water buses but have concerns over the reality. The Wey is narrow and, with a river speed limit of 4mph, boats are too slow for anything but recreation. Except on the tideway, not even the Thames has such services. The addition of two new stations appears attractive but will slow down train journeys, which are already slower than at any time since the 1930s. Knock-on effects on localities where the new stations are built have not been worked out or presented. Ie. Cost of housing will increase.

Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Roads and Transport Infrastructure

- The rail station car park is normally full on weekdays. If the village population were to increase there will be added pressure on this already full parking scenario, and on traffic movements to/from Horsley station to drop off/collect travellers, commutators and school children.

- Traffic generated from the proposed new development will be significant, given most households in rural areas have 2 and often more cars. Journey times will increase significantly on local roads. The roads, by the way are already in a shocking state in terms of potholes.

- Increased traffic will also pose a safety issue to pedestrians. In some places the pavements are already very narrow and an increase in traffic increases the likelihood of an accident in these areas.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Policy i3 - Sustainable Transport for new developments

- The proposed policy is unrealistic and lacking clarity or credibility in its wording regarding developers proposing and securing travel plans for their developments and contributing to transport arrangements for both the able and disabled.

I object to poor air quality concerns (Policy I3)

The increased congestion that will arise from the massive proposed developments will in turn lead to increased air pollution which will have damaging effect on local residents and their health.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

1. I object the the development of the strategic sites at Wisley Airfield, Garlicks arch and Gosden Hill as the the road infrastructure does not have capacity to cope with any medium let alone large developments of the proposed scale.
2. I object to the inclusion of the Wisley airfield site and Garlicks Arch as strategic sites due to the congestion on local roads at all times of day. For instance it is often hard to pull out of my home onto the main road in Ripley due to a continual flow of traffic, adding more residents to the local area will result in a large increase in the number of accidents, especially as the roads are narrow.
3. I object to the Strategic sites as the road network that currently exists is barely maintained by the council, an increase in the traffic and number of HGVs using the roads will result in further deterioration. The road infrastructure is incapable of handling the increase demand during the construction phase without significant investment and will be in an even greater state of disrepair once an extra circa 2000 cars are using them daily. I object to the inclusion of Wisley airfield and Garlicks Arch in the local plan due to them being in unsustainable locations regarding public transport. Neither location has a suitable train station located within realistic walking or cycling distance, this means only bus services and cars are feasible.

I object the the inclusion of the large strategic sites as insufficient parking will be provided, the village of Ripley already has problems with residents parking on pavements, there is not enough space to support additional vehicles which would be here. Additionally the parking at local stations is insufficient, a multistory car park would need building at each station to accommodate even one of the smaller proposed strategic sites.

I object to the proposed strategic sites as I fail to see how these are in any way helpful to the needs of local residents, if you also fail to provide improvements to the transport network, and rail access for the many new commuters who will move to the area there are no benefits to existing residents that you represent. There is a level of assumption being applied by the developer that the employment market is able to absorb the increase in residents.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
Currently the road network serving Burpham (primarily London Road, New Inn Lane and Clay Lane) is stretched beyond capacity on a daily basis and is made far worse if there are problems on the A3, which happens regularly. The proposed construction of new A3 southbound on and off slip roads and minor alterations to London Road will only have the effect of funnelling even more traffic through Burpham. At present there is often gridlock at the roundabouts connecting London Road to New Inn Lane and Clay Lane: a potential increase of 3000+ vehicles passing through the area as a result of the Gosden Hill development would exacerbate this problem and make it fairly consistent throughout the day, not just at rush hours. Although some of this extra traffic would join the A3 southbound, this would only stretch the congestion further north when even now at peak times, the southbound queue tails back from the beginning of the elevated section to the Burpham off-slip. It also to be noted that such an increase in traffic doesn’t just affect Clandon, Merrow and Burpham, it would have a corresponding effect on town centre traffic flow, congestion and parking.

Before embarking on further housing developments in Guildford, it is vital that the existing road and traffic problems are addressed first, which would also include addressing the congestion and safety issues of the A3. Those who agree to the plan would condemn Guildford to a future of increasing traffic congestion, regular gridlock, and increased pollution. The lack of practical detail regarding important infrastructures, such as roads, traffic flow and increased sewerage and water provision, indicates that the plan has not been positively prepared, and as such is not justified and consequently cannot be effective; it therefore does not meet GBC’s own overall aspirations and thereby fails the Duty to Cooperate.

Until the GBC Local Plan has concrete solutions to the current traffic problems, experienced on the main arterial roads into Guildford, and effectively addresses the increased pressure on the road infrastructure placed by new housing estates and new villages, any large-scale housing developments are inevitably in jeopardy. The new GBC Local Plan has not scored positively on its own 7-point On-line Questionnaire for the proposed sites, and that is the basis of my strong objection to the Plan in its current form.

**Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )**
I understand that Guildford are trying to provide more homes for younger people in the area and whilst this is a good and needed plan, I have to object due to the fact that NO account has been made for the road infrastructure around Guildford and particularly my village of Compton, where I live on the main street through Compton. Our village life has been ruined due to the heavy traffic on this B Road! More houses will exacerbate this problem as rarely do drivers do even the 30 Mph asked for.

The council have consistently ignored our requests about this and I have to object to the development which seems to exceed the number of houses that I feel that field could accommodate comfortably and for quality of life. I believe 1,800 are planned with an 'industrial park' added to it! Down Lane, running on one side of the field is already a small road as you know and can't handle the numbers you seem to expect as this road will be used.

For our problem in Compton, please immediately place a 25mph zone from Cyprus Farm to just beyond St Nicholas Church or even Lemon Tree Restaurant. Which is to be enforced by a camera at all times. We need an electronic board at either end permanently showing 25 mph. We also need a pedestrian crossing immediately outside Mission Cottage gate to go over to the right hand side of Eastbury lane, presently has no pavement area and this can be built on this corner (I could show you) there is nothing there except an impromptu flower bed, this crossing must have a traffic light. More and more of us, who have no driveways are forced to park our cars in Eastbury Lane and it is DANGEROUS! to cross this road as the traffic does not slow down. I have elderly relatives and a newborn grandson. I don't allow my family to cross this road, we have to use the layby outside my neighbours house - 'the old post office', I have to drop them off, as well as heavy shopping and then park my car in Eastbury Lane. A walk into my village is fraught with worry as large lorries Sainsburys and Waitrose vans etc., drive very close to us on the pavement, they need to slow down.

It is very very obvious that if Guildford County Council want to provide more homes, then massive investment needs to be given for a series of tunnels under the south and east of Guildford linking up the A3 with Godalming and the Shalford, Cranleigh and Dorking areas. We are in a conservation area but this is completely wrecked by the traffic. You can't have it both ways. Show me the investment and plans for the traffic, then I will show you support for what you are trying to do if the numbers and plans make sense. We are not unreasonable but the council is ignoring us and you are ruining the quality of our lives, putting our lives in danger and affecting our house prices by the heavy traffic involved. I cannot support this at the present time and I OBJECT.

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

The area is not designed to take a huge influx of residents or vehicles. There is often flooding in the area, draining is insufficient and the infrastructure and road network is barely able to cope as it is.

Flooding of Ockham Road, the roundabout at Ockham Park (at the site of the Wisley proposal), Plough lane, Old Lane, Lower Road in Effingham are specific examples where there was significant flooding in the last two years which has caused damage to property, vehicles, roads not to mention the additional congestion this caused. The proposals that are suggested in the latest application do not go far enough to resolve any of these issues.

The roads in the area are not suitable for the additional volume of traffic and I would classify a number of them as country lanes. There are real examples of where roads are breaking up, repeated potholes, drains sinking as well as being dug up for utilities repairs and hence can barely cope with the current situation. Examples are Ockham Road (both North and South), Forest Road and the Drift.

As a keen cyclist, these poor road conditions make it challenging enough to ride on and I have significant concern on my safety should there be additional traffic on the roads, particularly as I have mentioned above that they are winding country lanes.

The proposal of the additional housing plus support and delivery vehicles would create a significant increase in traffic volume. The 2011 census indicated an average car ownership of 1.51 per household and no doubt that figure has risen since thus causing a significant increase in road users which the local infrastructure cannot support. As a daily user of the A3 and M25, the congestion is already extreme. During the week, traffic is already queuing for the M25 by 6.45am and this is likely to get worse should these proposals go ahead.

I believe the proposal to put these additional houses on the edge of the A3 / M25 will have severe impact on this already stressed journey and there are no proper proposals put forward to help justify or accommodate.

The rail network does not fair much better with trains to London already at capacity. During the week, the car park at both Horsley and Effingham Junction are busy to full. No doubt residents of the proposed developments would wish to use these stations and so would result in insufficient parking / cycle park facilities. Again, the proposal does not offer any suitable sustainable alternatives which would be acceptable from an environmental perspective or to the local residents and infrastructure.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
I OBJECT to poor air quality concerns (Policy I3)

Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
I object to poor air quality concerns (Policy 13)

The increased congestion that will arise from the massive proposed developments will in turn lead to increased air pollution which will have damaging effect on local residents and their health.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
I am registering my objection to the local plan.

The reason for objecting are that the local roads, including the A3 and M25 are already too congested and the proposed development will add further to the current level of congestion and pollution. The smaller roads through West Clandon, Ripley and Send cannot cope with the increased level of traffic that such developments will bring.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT TO POLICY I3 (SUSTAINABLE TRANSPORT):

• Just a list of generic measures, not related to real life or the particularities of Guildford.
• Fails to treat sustainability as a constraint. Assumes excessive levels of development proposed in the plan can be supported by sustainable development.
• Unrealistic. Most people can’t or won’t walk or cycle – commuters in a hurry, the elderly, children, people who are unwell or unfit, people carrying heavy shopping or other goods. I.e. most residents!
• Town’s eye view of transport. Ignores scarcity of existing rural public transport and commercial unviability of increasing it. Ignores terrible state of Surrey’s roads, potholes, flooding etc. Ignores extra stress to be created by huge new housing estates in countryside.

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

The infrastructure is totally inadequate for all of the associated new traffic which would inevitably come from the building of hundreds of new homes and, even worse, the planned industrial premises and factories and warehousing etc. We do not want articulated lorries speeding along our country lanes.

No funding has been made available, nor has any funding been agreed by the Highways Agency for new roads and infrastructure. This fact came to light at a local plan consultation meeting at which Mr. Spooner of Guildford Borough Council was present, with a colleague, both of whom confirmed that there are, as yet, no plans in place by the Highways Agency for new roads in this area.

The developments being proposed are vast and the consequences will be felt on peoples health with the increased pollution. I have a daughter with asthma and know how serious childhood illnesses exacerbated by pollution can be.

The traffic is already horrendous, we do not want more cars on the roads. There are currently just sufficient parking spaces in Ripley and around. It would not take many more cars on the roads to tip that balance and make for example taking the kids to the park, an impossibility for those who already need to drive into the village centres. The frustrations of congested roads decreases our quality of life as they are horribly stressful, together with the pollution caused and damage to our environment. Many of the roads already require passing places as they are narrow - more traffic will increase the number of accidents as more cars try to navigate these narrow roads.

I OBJECT. This is another vaguely aspirational policy, based on wishful thinking and not grounded in the practical realities of daily life. It consists of a standard, box-ticking list of local government measures unrelated to the issues and Options paper and then to the 2014 draft local plan specifics of the plan. Like infrastructure, transport appears to be an afterthought; the policy fails in its essential job of guiding planning decisions, since it assumes development of any kind can be supported by sustainable transport.

The sustainability of the dormitory settlements which the Council want built across the countryside depends on a general “modal shift” from private car use to walking, cycling and public transport. This is unrealistic. The proposed sites are often miles away from the nearest railway station. Bus services even in the largest villages are almost non-existent – just one bus to and from Guildford each day in East and west Horsley and none at weekends. Since bus services depend on profitability, they cannot be expanded and the Council are not proposing to subsidise new ones. Rural buses are too slow anyway for busy people. Most rural roads in the borough are narrow, winding, hilly, potholed, muddy and unlit. Many flood badly and have no footpaths.

The desired modal shift would require a comprehensive co-ordination of bus and train timetables with services every few minutes, seven days a week, to stops within walking distance of every home in the borough. This kind of integrated public transport system has been achieved in Switzerland, for instance, but only at huge public cost and thanks to a political consensus supporting state ownership of trains, buses and the post office, which delivers rural passengers as well
as mail. There is absolutely no chance of this in the UK.
The vast majority of the borough’s residents are not, in practice, able to cycle. This includes children, the elderly, commuters who have to look smart, the infirm, the unfit and people carrying goods or shopping of any kind. Dependence on walking and cycling discriminates against these groups, which include some of the most vulnerable members of the community. It is socially unjust.

One in two working people in Guildford commute for up to 3 hours a day, as I used to do. They will not leave their cars for even part of their journey if it means longer travel times.
Park-and-rides are a welcome part of the transport mix but are too slow for commuters and others on a tight schedule. Well-off pensioners seem to be the main beneficiaries. For an adult couple going shopping it is still cheaper to park in town.
Forget about water buses. The Wey is too narrow and, with a river speed limit of 4mph, boats are too slow for anything but recreation. Except on the tideway, not even the Thames has such services.
The addition of two new stations appears attractive but will slow down train journeys, which are already slower than at any time since the 1930s. Knock-on effects on localities where the new stations are built have not been worked out or presented.

Knock-on effects on localities where the new stations are built have not been worked out or presented. Ie. Cost of housing will increase.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Transport:

The evidence on future traffic conditions which has been provided in the Strategic Highway Assessment Report was produced late and is incomplete. Critical information on congestion has not been given in time to be taken into account in the plan proposals.

The proposed Sustainable Movement Corridor is simple unsound and cannot be delivered due to the narrow roads and pinch points on an already very congested route through Burpham.

Of further note is that the proposed Gosden Hill development of 2000 houses plus offices, school etc will add significant pressure to the already congested London road and New Inn Lane. The increase in solution and noise is unacceptable.

The phasing of the proposed Gosden Hill development is in advance of proposed improvements to the A3. This makes no sense.

The major transport issues around Guildford need to be resolved before any further development is considered, these include the proposed A3 tunnel, new river crossing, a workable central bus terminal and a rail station at Merrow.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/15929  Respondent: 15627105 / Julia McClung  Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the detrimental impact on transport, local roads and road safety. I specifically object to:

The increased volume of car traffic.

- The congestion this traffic will cause on the narrow rural roads in the Horsleys and the surrounding areas, exacerbated by wide vehicles including increased bus and HGV movements.
- The danger this traffic will be to local cyclists and pedestrians, due to the absence of any cycling paths and the lack of pedestrian footpaths (and the space to provide them).
- The increase in the already severe congestion on the Strategic Road Network of the A3 and M25. A further planning application at RHS Wisley (with a significant increase in visitor traffic) and a proposed 600 pupil secondary school on the site would add additional congestion at the M25/A3 junction as well as local roads. No development can proceed without significant infrastructure enhancements to the A3 and M25. Partial improvement works on the A3 south of the site are not due to start until 2019 at the earliest
- The lack of suitable public transport. The local rail stations of Horsley and Effingham cannot cope with the proposed increase in passenger traffic and car parking is already at capacity.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

a. The increased volume of car traffic.

b. The congestion this traffic will cause on the narrow rural roads in the Horsleys and the surrounding areas, exacerbated by wide vehicles including increased bus and HGV movements.

c. The danger this traffic will be to local cyclists and pedestrians, due to the absence of any cycling paths and the lack of pedestrian footpaths (and the space to provide them).

d. The increase in the already severe congestion on the Strategic Road Network of the A3 and M25. A further planning application at RHS Wisley (with a significant increase in visitor traffic) and a proposed 600 pupil secondary school on the site would add additional congestion at the M25/A3 junction as well as local roads. No development can proceed without significant infrastructure enhancements to the A3 and M25. Partial improvement works on the A3 south of the site are not due to start until 2019 at the earliest.

e. The lack of suitable public transport. The local rail stations of Horsley and Effingham cannot cope with the proposed increase in passenger traffic and car parking is already at capacity.

**Document:** Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3

**Do you consider this section of the document; complies with the Duty to Cooperate?** ( ), **is Sound?** ( ), **is Legally Compliant?** ( )

The words “Roads and Transport Infrastructure” are mentioned in Definitions under Policy I1 (Infrastructure and Delivery), but no detail for West Horsley has been found in any of the Local Plan documents, including the Infrastructure Delivery Plan.

I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1). 5,036 houses are proposed between the M25 and Burpham (about 5 miles) which will obviously lead to a merging urbanisation of the identities of the villages. There is too much traffic in our villages already and this plan will cause more congestion in West Horsley, East Horsley, Normandy, Ockham, Ripley, Send and Clandon, with no plan to improve that. The rural roads in this area are narrow, in poor condition and have no footpaths. 5000 more houses in such a small area means dangerous and unsustainable traffic.

I object due to the congestion that development will cause to the trunk roads, A3/M25 (Policy I2). The A3 or M25 would have to be improved before any development is done. Highways England has no plans to even start considering improving the A3 before 2020. Under the current economic climate, it is unlikely any additional funding will be made available for new capital projects. Clearly no real improvements are possible in the timeframe of this Plan.

Policy I3 provides that developers “will be expected” to propose and secure travel plans for their developments and contribute to transport arrangements for the able and disabled. Legally, this is meaningless - this proposed policy lacks ‘teeth’ and is unrealistic where development and major housebuilding companies are involved.

I object to poor air quality concerns (Policy I3). The huge developments being proposed, particularly in the north east of the borough will lead to considerable further congestion and to greater levels of air pollution, which will have a detrimental effect on local residents and their health. It has been shown that Wisley already has NOX levels above the EU legal limits and by law a school cannot be located in this area as a result.
Whilst Horsley station has frequent trains to London and Guildford seven days a week, the station car park is normally full on weekdays. An increase in village population will increase pressure on station parking and traffic movements to/from Horsley station, to drop off/collect travellers to London and school children going to Guildford and Leatherhead.

Improved safety for pedestrians and cyclists needed

Improved road safety to ameliorate the village environment for cyclists and pedestrians is vital. GBC should work with the highways authority and enforcement agencies to apply a zero tolerance attitude towards antisocial, dangerous and aggressive motorists. Safety for sustainable travel attracts insufficient attention in your Local Plan.

Generally, much more work needs to be done by GBC (in conjunction with Surrey County Council as the highways authority and the Parish Councils) to slow motor vehicles and to protect pedestrians and cyclists in East and West Horsley. The potential proposals in relation to East and West Horsley and Ockham give insufficient consideration to the infrastructure and the inability of the current road network to satisfactorily service the increased demand that would be placed upon it by potential development.

The roads in the villages are inappropriate for existing traffic using them and something must be done to ensure that they are no longer used as a cut through by commercial vehicles seeking to avoid the major trunk road network: this needs to be carefully considered as part of the local plan adoption process.

**I OBJECT TO POLICY I3 (SUSTAINABLE TRANSPORT):** • Just a list of generic measures, not related to real life or the particularities of Guildford. • Fails to treat sustainability as a constraint. Assumes excessive levels of development proposed in the plan can be supported by sustainable development. • Unrealistic. Most people can’t or won’t walk or cycle – commuters in a hurry, the elderly, children, people who are unwell or unfit, people carrying heavy shopping or other goods. i.e. most residents! • Town’s eye view of transport. Ignores scarcity of existing rural public transport and commercial unviability of increasing it. Ignores terrible state of Surrey’s roads, potholes, flooding etc. Ignores extra stress to be created by huge new housing estates in countryside.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**I object to poor air quality concerns (Policy I3)**

Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.”

The significant level of development being proposed, particularly in the north east of the borough will lead to considerable increases in congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health.

The Plan does not consider the cumulative effects in conjunction with Albury Heath AONB Compressed Natural Gas extraction plans which have just been approved by Surrey County Council and falls within Guildford Borough Council

The Plan does not consider the wider environmental effects in conjunction with the 200 other Green Belt site being developed by local councils around London Area or its effect on all residents in and around the M25 area.

The Plan does not consider the cumulative impacts on TBH and London and South East nature reserves and wildlife habitats.

The Plan does not consider the cumulative impacts of the Plan in conjunction with the possible development of 3rd runway at Heathrow and associated damage to air quality.

The Plan does not mention or show calculations of the considerable damage to air quality during demolition and construction phases as well as completion.

The Plan does not quantify or assess the extreme disturbance to local residents and wildlife during the construction phases which will be continuous over many years – this is unacceptable and unsustainable, especially when combined with Surrey County Council’s Compressed Natural Gas Extraction site at Albury Heath AONB.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Attached documents:**
I object to the detrimental impact on transport, local roads and road safety I3

I specifically object to:

1. The assertion that the development will result in a meaningful shift to cycling and walking. The development is too isolated and, even within the development itself, too spread out to anticipate a reduced reliance on private cars.

1. **The increased volume of car traffic.** A proposed development of 2,068 homes would result in an estimated 4,000 additional cars on the roads.

1. **The congestion this traffic will cause on the narrow rural roads** in Ockham and the surrounding areas, exacerbated by wide vehicles including increased bus and HGV movements.

1. **The danger this traffic will be to local cyclists and pedestrians,** due to the absence of any cycling paths and the lack of pedestrian footpaths (and the space to provide them).

1. **The increase in the already severe congestion on the Strategic Road Network of the A3 and M25.** A further planning application at RHS Wisley (with a significant increase in visitor traffic) and a proposed 600 pupil secondary school on the site would add additional congestion at the M25/A3 junction as well as local roads. No development can proceed without significant infrastructure enhancements to the A3 and M25. Partial improvement works on the A3 south of the site are not due to start until 2019 at the earliest.

1. **The lack of suitable public transport.** The local rail stations of Effingham and Horsley cannot cope with the proposed increase in passenger traffic and car parking is already at capacity.

I object to the fact that air quality concerns have not been taken seriously

Air pollution in many parts of the borough, particularly at the M25/A3 junction, is **already in excess of EU-permitted levels.** Additional traffic will exacerbate this situation, impacting the health of all current and future residents. No account is being taken of the acid deposition on the Thames Basin Heaths SPA and the irreversible impact of the habitat degradation.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Attached documents:**
population around the site but to those on the route to the ultimate destination. A recent US study, by the National Institute for Occupational Safety and Health, showed that vehicle crashes are the single biggest cause of fatalities to oil and gas workers while the increase in onshore gas production has resulted in a 350% increase in traffic fatalities in regions where gas production is occurring.

The increase in traffic will also increase local pollution levels, vehicles transporting plant, equipment, workers and compressed gas are mostly heavy diesel engined vehicles - the most polluting to the environment. A recent NHS study showed that 40,000 deaths in the UK each year are directly caused by pollution.

Evidence was found to suggest that long-term exposure to air pollution is linked to:

- decline in lung function in adults – which can be a risk factor for chronic obstructive pulmonary disease
- asthma
- type 2 diabetes
- problems with brain development and cognition (thinking ability)
- cardiovascular diseases – conditions that can affect the heart and blood vessels, such as coronary heart disease
- cancer

15 years of 24/7 gas production activity will create unacceptable increases in local pollution levels, affecting the public, local residents, wildlife and ecosystem. The Green Belt is designed not only to provide ‘openness’ and prevent ‘urban sprawl’ but also to provide compensation for human polluting activities and to maintain biodiversity supporting our ecosystem, absorbing carbon and other pollutants from the environment and helping to clean our air, which is already failing to meet levels for good health. Damaging the Green Belt and cutting ancient woodland has a devastating effect on human health and local wildlife.

Albury civil parish spans the small village and three hamlets, which are Farley Green, Little London and adjacent Brook – spaced out by Albury Heath, Foxholes Wood, small fields and Albury Park. About a third of Blackheath Common on the Greensand Ridge is in the parish, which centrally nestles in the ‘Vale of Holmesdale’. Albury new village is at the point where the Sherborne flowing from near Newlands Corner via the Silent Pool joins the Tillingbourne that runs through the centre of the village and until the 20th century fed the flour mill at the Chilworth edge of the village. The old village lies within Albury Park. There is another brook leading into Chilworth called Law Brook which Brook is centred on. The potential for polluting these local water courses which support a range of wildlife, is unacceptable. The area contains and is adjacent to nature reserves, National Trust sites and SSSIs which provide habitats to a number of rare and endangered species.

The roads around an AONB are totally inappropriate for these sorts of vehicle movements, and the villages the HGVs will pass through are densely populated and the roads very narrow in places, frequently used by walkers, cyclists, and passing birds and wildlife (particularly during migrations and breeding seasons when wildlife populations can increase greatly and are more vulnerable with young), the risk of accident, injury and death is unacceptable. There are regular small cycling groups as well as large organised events using the roads in Albury and nearby, the Surrey Hills Cyclone Sportive passes through Albury, The Dirty Weekend series and many others. This will create unacceptable road and health hazards for the cyclists and increased congestion for everyone during these times.

If the proposals by Guildford Borough Council for development of 20,000 new dwellings in the Guildford area go ahead, including several thousand properties and associated urban development around the nearby villages of East/West Clandon, East/West Horsley, Wisley, Ripley, Send Marsh, Pyrford, Ockham, etc. the cumulative effect of increased vehicle numbers during construction and thence from new residents (20,000 new properties will likely swell local populations by around 45,000 and their vehicles) will cause utter carnage. Recent heavy rainfall caused flooding at the A3 underpass at Kingston causing a 3hr traffic jam back as far as Ripley and surrounding villages (I had the pleasure of being caught up in it personally), which shows that these roads cannot cope with the volume of traffic as it is, particularly during poor weather or if there is an incident or accident blocking the roads. The added pressure on the A3, A25, A246 and knock-on effect on the M25 will be intolerable even in the best of conditions. The cumulative effect on local pollution, congestion, competition for space, resources and amenities, and detrimental effect on health of local communities and wider populations will be very significant. It’s like watching a perfect storm forming with Guildford at the centre.
What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Comment ID: PSLPP16/16411  Respondent: 15644225 / Patricia Savin  Agent:

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

In addition to the principal objection on the grounds of the impact upon the Green Belt, I also consider that there are fundamental and insurmountable issues associated with the capacity of the existing infrastructure in this part of the Borough, which wholly precludes further development of the level identified. Not only is the strategic highway network already at capacity at peak times, particularly on the A3, but the local network is also under considerable pressure, which I do not consider would be alleviated by the addition of a new A3 junction or piecemeal upgrading.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1. TRAFFIC CONGESTION AND POLLUTION

Roads and country lanes are already congested at peak times. Increased traffic will result in more accidents and greater pollution. Many are already unsafe for cyclists and pedestrians. For example, Ockham Road South is narrow for the volume of traffic it carries, is dangerous to cross and the pavement is unsafe for pedestrians in a number of places.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
Increased pollution

The Green Belt acts as a physical barrier between the urban areas and the countryside, resulting in improved air quality in urban centres and the loss of such valuable green spaces will lead to the irreversible loss of a carbon sink for air pollution. In addition, the proposed number of houses will inevitably lead to a significant increase in the volume of traffic, increasing the levels of nitrogen dioxide and particulates in the environment, hence exacerbating an area of concern already present in several areas of the Borough.

In addition to my objection to site reference A36 as mentioned above, I also object to any significant increase in the number of dwellings in the villages of East and West Horsley or in the surrounding neighbourhoods. In particular, I object to the proposal of 2,000 homes at former Wisley airfield (Ref A35) and the further 2,000 homes at Gosden Hill Farm (Ref A25). These two sites will cause huge pressures on the Horsley villages and I do not believe the villages are capable of supporting and withstanding such pressures. My concerns are outlined below:

Pressure on road system

The roads in the villages of East and West Horsley are currently not maintained to a desirable standard. Hence, it seems reasonable to anticipate that any increase on the current number of users could only cause these stretches of road to deteriorate more rapidly. With the proposal of large nearby sites such as A35 and A25 as well as many new developments within the villages themselves, many of the roads could be required to take on hundreds of new users. Many of these roads are narrow and often in poor condition and hence heavy traffic and large vehicles, such as lorries or tractors, will cause these roads to become congested and dangerous. Furthermore, there are often narrow or non-existent stretches of pavement along many of these roads which will become even more dangerous for all users, in particular the elderly, wheelchair users and pushchairs. In the majority of cases, there is no potential to expand these roads or pavements.

Pressure on rail network

As a commuter to London, I have experienced many overfilled trains at peak times and hence an increase in the commuter population could only exacerbate this problem.

Pressure on parking

Parking at Horsley and Effingham Junction stations is already at capacity at peak times with the current number of users and so a significant increase in users is likely to heighten this problem. Additionally, there will be further strain on the parking at the shops, medical centre and village hall in the centre of East Horsley. There are many elderly residents in both villages and it is of great concern to me that they may not be able to access parking spaces sufficiently close to the services they require with this increase in demand.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
In particular we object to villages being removed from the green belt, and the increase in traffic congestion that would occur. The A247 has at many places got narrow footpaths on one side of the road, making it extremely dangerous when traffic mounts the pavements – as often happens with lorries passing through.

We are also concerned about the following:-

- A247 would be more used more by the Sat. Nav.
- Environment: Health hazard – air pollution - Noise and the affect that has on nerves - Loss of green fields. People need to see greenery.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

What is so baffling, is that you come with up with these silly ideas like "oh we'll just put 2000 homes here" but don't think about the ramifications of how that will affect the local area. There are already too many cars on the roads around Ripley, Send, Send Marsh, Burnt Common, Horsley, Clandon that during peak times the slightest accident can cause a mile tail back and bring a village to a stand still. The volume of traffic on the roads everyday increase the wear and tear on the roads which lead to potholes and unsafe driving conditions. Two thousand homes, just think about the stupid amount of traffic that that will increase, think about the excess petrol fumes and what effect that will have on the seldom areas of greenery that you choose to leave standing. This ridiculous idea of turning Burnt Common into Slyfield Greens [Response has been redacted due to statements being considered defamatory, derogatory, inflammatory or offensive in nature], and what's the thinking behind Garlick's Arch? That all residence who live on that development will come and go only via the A3? Because there's no way that Portsmouth Road is going to manage with that added level of traffic EVERY DAY. So now you have an abundance of traffic joining the A3. All this will do is turn the A3 into a car park and I know what your answer will be for that. "We'll just make it four lanes each side", after all what's a few less trees and Wisley right?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
1. I OBJECT to poor air quality concerns (Policy 13)

Paragraph 4.6.27 of the Plan states that "Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health." The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

---

East and West Horsley and much of the local area enjoy significant numbers of visitors, on foot, by car and more often on bikes; these proposals will destroy the area as we know it whilst putting the lives of visitors and residents at risk. This should NOT be allowed to happen. Please reconsider your justification for the New Plan in its entirety along with the damage and inconvenience to existing residents, please do NOT let this happen.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

---

I object to the fact that infrastructure planning for sites has not been properly addressed. There is a huge infrastructure deficit. Sites which will rely on the private car must be excluded from the local plan. Unrealistic transport plans put forward by developers need to be rejected.

I object to the fact that many of the allocated sites are being planned in unsustainable locations.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
I object to the lack of consideration for the protection of heritage assets. There appears to be no recognition that the number of HGVs used during major construction either of infrastructure or housing has a huge negative impact on listed buildings due to shaking foundations and increase in pollution (and impact on brickwork/mortar etc).

I object due to the inadequate protection of the environment in terms of wildlife, SNCIs, SPA; in terms of air pollution and noise and light pollution.

I object due to the fact that local healthcare facilities will be overwhelmed by large numbers of additional residents – it is already difficult to get an appointment at the GP and the RSCH is failing to meet waiting times for outpatients' appointments.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object to the proposed housing developments at Wisley Airfield (A35) and Garlick’s Arch (A43) as they have very limited public transport facilities ie; no railway stations and inadequate bus services, which will therefore lead to increased levels of private car use.

I object to the developments at Wisley Airfield, Garlick's Arch and within the Horsleys villages as the car parks at the railway stations of Horsley and Effingham at already at capacity.

I object to the plan as it lacks detail for a cycle infrastructure which might mitigate increased private car use.

I object to the local plan as these developments should be in urban areas where there is sustainable transport.

I object to the local plan as the increased levels of NO2 and PARTICULATES in the air may cause SIGNIFICANT health risks to the adults and children living within the strategic sites and proposed high density levels of development within the Ockham, Send, Ripley and Horsleys villages.

I object as the levels of Air quality pollutants produced by the construction and then the increased local traffic are likely to breach European rules and regulations and therefore leave the council and therefore the council tax payer liable to fines.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
The rural roads in this area are narrow, in poor condition and have no footpaths. 5000 more houses means dangerous and unsustainable traffic.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/17399  Respondent: 15682465 / Nick Beesly  Agent:
Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3

1. Traffic will increase significantly and the access and exit roads to and from the A3 are too narrow to cope with the resultant increase in traffic - particularly at peak hours.
2. Light and sound pollution.
   The area enjoys fairly dark skies for its proximity to London. Any additional development will add to the light pollution unless provisions are made to ensure strict control of any additional lighting. Please consult Guildford
Astronomical Society.
It already suffers from noise pollution from the A3. Traffic noise pollution seems inevitable if development proceeds.

I object to policy I3 Sustainable transport for new developments.

This is another aspirational policy, not grounded in the practical realities of daily life. It consists of a standard, box-ticking list of local government measures unrelated to the specifics of the plan. Like infrastructure, transport appears to be an afterthought; the policy fails in its essential job of guiding planning decisions, since it assumes development of any kind can be supported by sustainable transport.

The sustainability of the dormitory settlements which the Council want built across the countryside depends on a general “modal shift” from private car use to walking, cycling and public transport. This is unrealistic. The proposed sites are often miles away from the nearest railway station. Bus services even in the largest villages are almost non-existent – just one bus to and from Guildford each day in the Horsleys and none at weekends. Since bus services depend on profitability, they cannot be expanded and the Council are not proposing to subsidise new ones. Rural buses are too slow anyway for busy people. Most rural roads in the borough are narrow, winding, hilly, potholed, muddy and unlit. Many flood badly and have no footpaths.

The desired modal shift would require a comprehensive co-ordination of bus and train timetables with services every few minutes, seven days a week, to stops within walking distance of every home in the borough. This kind of integrated public transport system has been achieved in Switzerland, for instance, but only at huge public cost and thanks to a political consensus supporting state ownership of trains, buses and the post office, which delivers rural passengers as well as mail. There is absolutely no chance of this in the UK.

The vast majority of the borough’s residents are not, in practice, able to cycle. This includes children, the elderly, commuters who have to look smart, the infirm, the unfit and people carrying goods or shopping of any kind. Dependence on walking and cycling discriminates against these groups, which include some of the most vulnerable members of the community. It is socially unjust. One in two working people in Guildford commute for up to 3 hours a day. They will not leave their cars for even part of their journey if it means longer travel times.

Park-and-rides are a welcome part of the transport mix but are too slow for commuters and others on a tight schedule. For an adult couple going shopping it is still cheaper to park in town.

I like the idea of water buses but have concerns over the reality. The Wey is narrow and, with a river speed limit of 4mph, boats are too slow for anything but recreation. Except on the tideway, not even the Thames has such services.

The addition of two new stations appears attractive but will slow down train journeys, which are already slower than at any time since the 1930s. Knock-on effects on localities where the new stations are built have not been worked out or presented. Ie. Cost of housing will increase.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Comment ID: PSLPP16/17669  Respondent: 15693185 / Susan Wade  Agent:

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

The transport infrastructure, both in the town but in particular along the A3 corridor are not fit to support the proposed level of housing needs and consequently the extra traffic. Major issues such as a central bus facility close to the railway station have also not been resolved. Without improvements to support growth Guildford will become grid-locked.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/17688  Respondent: 15694113 / Claire Netherton  Agent:

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID3

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Due to the absence of cycling paths and the lack of footpaths (and the space to provide them) the assertion that the development would result in a meaningful shift to cycling and walking is unbelievable. The increased traffic would add danger to cyclists and pedestrians (including those increasingly using local roads for recreational purposes).

Object to the issue of air quality not being taken seriously. Air pollution in this area in the north of the Borough of Guildford and the south of the Borough of Elmbridge and particularly near the M25/A3 junction already exceeds EU-permitted levels. Additional traffic would worsen the situation, affecting the health of all current and future residents.

I object to sites A25 and A35 for the same reasons as above. The sheer scale of the developments is disproportionate and will stretch local resources beyond measure as well as significantly detracting from the current natural beauty in the surrounding areas which are protected by a greenbelt for good reason and should continue to be protected.

Any plans to pedestrianize essential routes though central Guildford, without providing replacement routes (which would be extremely challenging) are also very naive and short sighted. The only solution to the terrible congestion and traffic problems within Guildford, are to discourage drivers, or to build a bypass. Non essential commuter traffic passing through Guildford and its surrounding villages should be discouraged, perhaps with tolls (that should not be levied on local residents!) and with business rate incentives for companies who work within the local area and employ staff living within the local area.

Many of the recent small scale alterations to Guildfords roads and the closing of pedestrian underpasses, have been very ill conceived ideas. The junction at Waitrose, the underpass at the bottom of the high street and removal of the road side pull-ins for buses on the A281 in Shalford. These all demonstrate a lack of foresight and have each ADDED to the congestion problems on Guildford,s busy roads. Such poor decisions really make me worry about the councils ability to plan, oversee and execute any large scale changes to the town and its surrounding area....

I use the A247 to walk my dog to the park in centre of West Clandon. The road is already WAY too busy and unsuited to the current volume of traffic and LGVs. It’s only a matter of time before a pedestrian is killed on The Street.

I have also just passed my driving test and am already fed up with the congestion at the top of the A247 at the “Clandon Cross roads”

Transportation congestion - existing roads and train routes (and the associated car parking facilities) already struggle to cope with the current daily load factors resulting in car transport tailbacks and train overcrowding at peak times. Adding more people and cars will only exacerbate this problem. Additionally, during the many years required to construct these houses, the road users and residents will be subject to significant inconvenience from the movement of heavy lorries and equipment and the delivery of building materials which will, doubtless, cause significant wear and tear on the roads (which it seems even now are only repaired infrequently).

I OBJECT to the council failing to deliver sufficient infrastructure to cope with the proposed development within this area of the borough. The bus network is almost non-existent and new buses are linked only to the Wisley development. The train station car-parks at Horsley and Effingham junction are always full and there is no space to enlarge them. The roads are not suitable for commuters to cycle any distance due to the narrowness of the roads, speed of traffic and lack of space to build cycle paths.
What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Sustainable transport for new developments

Paragraph 4.6.20: The RSPB support the inclusion of the requirement that developments that generate significant movement should be located where the need to travel will be minimised and the use of sustainable transport modes can be maximised. However, the RSPB is concerned that the proposed development at the Wisley airfield is not consistent with this policy due to its relatively remote location, away from established employment and service opportunities and lack of adequate public transport connections.

It is important that the impact of the proposed improvements to the M25/A3 Junction should be considered in combination with likely impacts of the Wisley Airfield scheme. These improvements are anticipated to have an adverse effect on the SPA and it is essential that the impacts of the Wisley Airfield scheme are considered in combination with this road scheme.

**Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )**

I am a young professional, born in Guildford and currently residing as a homeowner in Burpham with concerns over the council's attitude towards current and potential future residents of the Borough's quality of life. I wanted my comments to be acknowledged with regard to the proposed local plan on both a subjective and objective basis as I would think it is people of my demographic you are looking to attract and keep in the area.

I am not overly against the building of new houses/flats, as I am led to believe we have a housing crisis in this country so understand the desire for growth, however I am concerned that the proposed development at Gosden Hill Farm will place too much of a burden on a local infrastructure (i.e. the roads in particular) which is already overwhelmed at peak times. I would urge the council to ensure that transport infrastructure is improved BEFORE any new housing development and not just to address the current deficit that is already evident, but to adequately provision for anticipated future growth beyond Gosden Hill Farm.

I have found it unclear from what I have seen in the plan about timelines for Gosden Hill Farm and the new southbound slip roads for the A3, but my concern stems from observing housing development near the train station and by the cricket ground on Woodbridge Road. Given that I would expect each household to have between 1 and 2 cars, how will the current road system cope with these new vehicles when people move in? It appears the council are (rather admirably) trying to address a housing crisis but leaving infrastructure as an afterthought, kicking infrastructure down the track for what will become a future problem; it will not simply go away! (and potentially drive people away from the area) Why let the current system get worse before trying to improve it?
While the borough's road system has been much maligned for as long as I have been alive, one positive I can say about where I live on Ladygrove drive, Burpham is the northbound slip roads onto and off of the A3. However, the following list are subjective observations of the problems I have when travelling to and from the south:

- Peak time congestion from Clay Lane all the way into the town centre. I may be inclined to take public transport but it isn't efficient enough: the bus takes too much time weaving around residential areas and then gets stuck in the same traffic either on London Road or Parkway anyway. This congestion is usually even worse on the way back home from work and what should be a 15 minute journey regularly turns into an hour.
- I often use Farnham Road Car Park, either to use the train for my client based work or because my company holds parking permits for Farnham Road when I am needed in our main Guildford Office. Due to the one-way system being gridlocked constantly at peak times, I am forced to join the A3 from the A25 for all of 30 seconds before I come off at the University roundabout to facilitate easier access to Farnham Road's Entrance. Either a southbound slip at Burpham or a road that better connects the A25 to the University roundabout (or both!) would be a clear way to alleviate traffic and improve traffic flow as I am sure I am not the only one who has a similar route.
- I often travel to Portsmouth at weekends and the issue of no southbound slip raises it's head once again as I am illogically forced to drive through Guildford and join congestion once again trying to then enter the A3. Southbound travel from north of Guildford centre is just horrendous.
- As mentioned earlier, I use the trains for work from time to time. I understand that the service through Guildford to Waterloo is one of the most crowded in the country and I can see why. It is on a par with, if not worse than a London tube carriage and again, expansion needs to be considered before more houses. I am not sure where the inhabitants of the new flats by the train tracks were expected to be accommodated by the transport system? A new station at Merrow will surely just add to the overcrowding rather than alleviate it.

Adding new houses at Gosden Hill will make these problems worse, so it is imperative that improvements are made before housing starts to be developed to ensure the high quality of life survey results Guildford has been receiving in recent times continues and to ensure the future prosperity of the area. I am afraid that if the council executes the plan in the same way they executed the box park 'village' last year, then the plan will be an unmitigated disaster. Although, the village has improved marginally since it's refurbishment, it appears that local resident views are not given the consideration they deserve and I would anticipate University students not staying in the area after graduation if the correct level of engagement is not achieved.

**Do you consider this section of the document; complies with the Duty to Cooperate?** ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT to poor air quality concerns (Policy I3)

Paragraph 4.6.27 of the Plan states that “Development must also mitigate its traffic impacts, including its environmental impacts and impacts on amenity and health.” The significant level of development being proposed, particularly in the north east of the borough will lead to considerable further congestion, despite any attempts to mitigate this through travel plans. This will be particularly acute in built up residential areas and will only lead to greater levels of air pollution, which will have a detrimental effect on local residents and their health and can result in early death.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Attached documents:**
Transport

The amendments to the sustainable transport section seeking to mitigate the transport impacts of new development are supported as Guildford Borough is within commuting distance of MVDC by both car and train.

MVDC still consider that the Proposed Plan is sound and recognise the ongoing and previous Duty to Cooperate working that has taken place between our two Councils in the production of the Guildford Local Plan.

Document:  Proposed Submission Local Plan: strategy and sites 2017 / Policy ID3

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( No ), is Legally Compliant? ( )

I welcome the strengthening of Policy ID3. However, paragraphs (1) and paragraph 4.6.22 should be strengthened further by adding "add providing facilities for charging electric vehicles". I support the encouragement of walking, cycling and public transport, but as an older member of the borough, I am well aware that these forms of transport are often not possible for the very young and the elderly and they will continue to need to use private transport. Moreover, it is inevitable that people will continue to want to use their car, even if other options are available. The policy as a whole does not pay sufficient attention to this need of a substantial number of the population: however, the wider adoption of electric vehicles would have major benefits for the environment from reduced air pollution and noise pollution.

Paragraph 4.6.22 should be strengthened further by adding "and use of electric vehicles"

Paragraph 4.6.27 should be improved by changing 'can' in 'Such measures can include car clubs, car sharing, facilities for electric charging plug-in points" to 'should'

POLICY ID3 - Sustainable transport for new developments

3.72 A substantial amount of text and additional policy has been added to policy ID3 in relation to sustainable development, however, most of this text relates to vehicle movements and car parking.

3.73 GBC is assuming substantial modal shift in the town centre. GVG supports this aspiration. However, GVG believes the scale of modal shift proposed by the council – around 40% - will be very difficult to achieve due to the continuing need to access the town centre for retail and commercial activity and the Rail Station.

3.74 The inserted text at para 4.6.30a relates to Guildford town centre and recognises the congestion problem, especially the gyratory, as does GVG. The inserted text states that:

*This is, in part, a consequence of a mismatch between the demands for, and supply of, public off-street car parking on the different approach needs. The policy with respect to the provision of additional public off-street car parking is designed to reduce the impact of these trips on traffic volumes and congestion in the town centre. This planning policy will complement future environmental improvements in the town centre realising the Council’s ‘drive to, not through’ concept.*

3.75 GVG does not accept this explanation for congestion or the proposed solution.

3.76 The revised approach adopted by GBC on traffic completely ignores the role of Guildford as a regional and sub-regional destination. It also ignores the enhanced pull of Guildford if town centre regeneration comes forward at levels as expected by both GVG and GBC.
3.77 The approach of GBC is completely at odds with the principles of sustainable development and the requirement for modal shift away from cars to other forms of public transport.

3.78 The GBC plan is silent on measures to mitigate North South Traffic through the town centre which will be exacerbated by developments south of the borough e.g. major housing at Dunsfold and significant housing growth in Godalming. In the absence of any substantive plan to by-pass Guildford on a North-South axis, handling traffic from the A281, A3100 and A25, Guildford will have to support an increase North-South Traffic. The GVG Plan allows for traffic to be supported at current levels, whilst reducing accidents and pollution in the town centre. The GVG plan also provides for major environmental wins around areas allocated to housing, leisure, commerce and tourism in the town centre.

3.79 GVG supports the concept proposed by the council of ‘drive to, not through’ the GBC plan does not support this concept practically by creating provision for interceptor ‘Park and Ride’ car parks, or the better utilisation of bus and rail networks. The only new ‘Park and Ride’ in the plan appears at Gosden Hill linked to Guildford Station East proposals, but no capacity is proposed. The plan is silent on opportunities based at Shalford Station and north of the town in the Slyfied area.

3.80 GVG notes that there are approximately 5,800 car parking spaces in the town centre. Many of these spaces are in large surface parks that represent a lost opportunity for other uses. GVG are concerned that revenue generation from car parking may be clouding GBC’s long-term plan making judgement.

3.81 The masterplan as prepared by GVG demonstrates a pedestrian and cycle friendly environment where the gyratory is replaced with a new bridge link to take through traffic away from the town centre and from areas of high pedestrian activity. Whilst GVG accepts that according to the Guildford Town and Approaches Movement Study that highway interventions are generally unsuccessful in providing infrastructure solutions, the GVG crossing is about removing the maximum areas of conflict between town centre, pedestrians and vehicles. It delivers environmental improvements to the riverside, new homes, and will assist in achieving modal shift. The bridge link will also remove traffic from the proposed new housing, retail

3.82 and the visitor areas, leaving the town centre available for an improved pedestrian environment in close proximity to sustainable methods of transport, the retail core and a reconnected riverside. The GVG also allows for the creation of the proper transport interchange centred on a revised and expanded rail station. This crossing can be delivered in a phased approach without disturbing the current town centre.

The focus of the local plan on large scale development in the Ash and Tongham Urban Area will substantially increase the number of commuters travelling into Guildford for work and recreation. These commuters will be joined by those travelling from neighbouring boroughs adding to the congestion on roads that are already heavily congested. I support GBCs policies to increase access to and use of sustainable transport options, but I believe that the policies do not go far enough in creating an integrated network of cycling super-highways that are physically separated from the roads. These will provide safe routes for children to cycle to school (improving child health and reducing congestion around school gates), for people to cycle greater distances to work (cycle super-highways could connect Guildford with the surrounding towns and villages for up to a 12-mile radius), and for people to use for safe recreation. The cycle routes will be funded specifically by an additional levy placed on all new developments.
• Policy ID3 1 should read: New developments will contribute to the delivery of an integrated, accessible and safe transport system, including the construction of an integrated network of safe cycle and walking routes between Guildford and the surrounding towns and villages, maximising the use of the sustainable transport modes of walking and cycling for commuting and recreation, and the use of public and community transport.

• Policy ID3 2c should read: the creation of cycle and walking routes between Guildford and surrounding towns and villages, to local facilities, services, bus stops and railway stations, to ensure their effectiveness and amenity. To bring about the improvement, and expansion of existing routes.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Proposed Submission Local Plan Regulation 19 representations (2016 and 2017)

Document part: Policy ID4 - Green and blue infrastructure
Policy I4: Green and blue infrastructure

We welcome this policy.

We propose that “slow the flow” and sustainable drainage schemes, intended to reduce flood risk, should be considered as also contributing to blue green infrastructure due to their wider benefits.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

---

The introductory text has improved a little but the policy itself remains inadequate and lacks the joined up thinking required. The policy launches straight into “biodiversity” obligations.

We welcome the proposed SPD to set out opportunities and shape delivery of integrated multifunctional Blue Green Infrastructure.

We propose that “slow the flow” and sustainable drainage schemes, intended to reduce flood risk, should be considered as contributing to blue green infrastructure due to their wider benefits.

The addition of 4.6.49a is out of place here. It puts inappropriate focus on a specific proposal. It is already covered by national policy so an application can be considered with reference to this. Planners are well placed to balance and weigh different policy objectives when considering any application where the public interest requires a trade-off. Once you start referring to specific proposals in plan policies, where do you draw the line? Legitimate transport or health or flood risk management needs?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

POLICY I4 Green and blue infrastructure

WHPC supports this policy.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/16071  
Respondent: 8565601 / Tyting Society (David Thorp)  
Agent:

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID4

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Some 40 hectares of the Tyting farmland is proposed as a potential location for a SANG. In principle the Tyting Society is prepared to accept this proposal subject to a number of considerations.

- Maximising the agricultural use
  For over ten years the local community has been interested in securing the long-term future of the Tyting farmland in agricultural use. The most promising development over this long period has been the tenancy with Surrey Wildlife Trust who has successfully begun to restore this land since 2014. We therefore wish to encourage GBC to enter into an agreement for SWT to run the farm for a long period. We believe a way forward can be agreed whereby the grazing and conservation objective can be best met and be a good fit with SWT’s mission.
- Minimising footpath disruption
  From the initial plans seen to date, there are concerns regarding the extent and location of the paths in the farm and the proposed footpath accesses from White Lane and Halfpenny Lane. Both households adjacent to the path off White Lane are concerned about intrusion. The only mandatory element from Natural England is the circular route and so we support steps to minimise the interaction of cattle and free roaming dogs through a reduction in planned footpaths.
- Handling traffic and car parking
  Car parking for the SANG and additional traffic on White Lane and Halfpenny Lane are important safety and environmental issues. We are pleased to understand that no additional car park is being proposed to that currently enjoyed by walkers in the Tyting area.
Management of SANG monies
The Tyting Society cares about the future management of the SANG designated land as the farmland is central to the whole Tyting area. We are keen to find a mechanism with GBC for the management and use of SANG funds involving the local community on a regular basis.

We look forward to working with Guildford Borough Council to implement the proposed Tyting Farm SANG.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/2504  Respondent: 8570273 / Fiona Curtis  Agent: Fiona Curtis
Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID4

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to policy I4 green and blue infrastructure. This policy is confusing. It sits oddly with the plan's onslaught on the Green Belt. The plan to build on large areas of countryside and to inset 15 villages will cancel out any benefits from extending the principle of enhancing biodiversity beyond Biodiversity Opportunity Areas. There is no mention of the value of wildlife gardening to biodiversity or the important role that larger gardens play in a village setting. Land designated as 'open space' appears to be protected whereas land that is actually open space (ie Blackwell Farm, Wisley, Gosden Hill and Normandy strategic sites) is proposed for development? It would be useful to understand who will monitor this policy and how Independent will they be? Will biodiversity be their prime concern or will all concerns be secondary to development?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: pslp171/296  Respondent: 8571521 / Surrey Nature Partnership (Sarah Jane Chimbwandira)  Agent: 
Document: Proposed Submission Local Plan: strategy and sites 2017 / Policy ID4

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

We greatly welcome and support this enlightened policy, especially its references to the Surrey Nature Partnership and its work promoting the recognition of Biodiversity Opportunity Areas in 4.6.34-36 and 4.6.50. Additions at para. 4.6.42a-45 are useful and provide important clarity. With reference to para 4.6.50, we look forward to working with you on the intended Green Infrastructure Supplementary Planning Document, where we can perhaps assist with interpreting the achievement of biodiversity net gain standards within the Borough.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/9264  Respondent: 8573793 / Harry Eve  Agent: 
Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID4

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Policy I4: Green and blue infrastructure I object for the following reasons.
123. This policy has been constructed without reference to the Surrey Nature Partnership which, I understand, is supposed to inform a Countryside Vision and Green and Blue Infrastructure Supplementary Planning Document neither of which appear to have been published or consulted on.

124. The Policy shows concern for conserving and enhancing biodiversity, which I welcome. I also note and welcome the intention to extend the principle beyond Biodiversity Opportunity Area However the current plan to build on large areas of countryside, inset villages and create new village boundaries to encourage infilling in the Green Belt will have the opposite effect. The Policy appears to be a box-ticking exercise with no real teeth to it.

125. There is no mention of the value of wildlife gardening to biodiversity or the important role that larger gardens play in a village setting.

126. There is no mention of the impact of the plan on food production, or monitoring the loss of agricultural land.

127. Some quotations from relevant documents regarding the importance of biodiversity:

"The natural world, its biodiversity and its constituent ecosystems are critically important to our wellbeing and economic prosperity, but are consistently undervalued in conventional economic analyses and decision-making" (Biodiversity 2020 page 11)

"As a public authority in England you have a duty to have regard to conserving biodiversity as part of your policy or decision making." (Government Planning Guidance)

Part of the problem is that "Biodiversity benefits are unpriced" and so not valued by those who look only at the more obvious and simplistic economic benefits.

128. I am concerned that "enhancing" the River Wey in the town centre will avoid using the available brownfield land around Walnut Tree Close and Slyfield for urban regeneration and sustainable housing that could otherwise be Why should the Walnut Tree Close/Woodbridge Meadows industrial area not be regenerated from bus garages, urban car parks and empty factories to offer sustainable, well designed, urban homes which are medium height, and can meet almost all of Guildford's real housing needs? It is vitally important for the town as a whole that the run-down Walnut Tree Close area is used for well-designed housing.

129. The plan involves an aggressive desire to push development on to the Green Belt at all costs, ignoring, or eliminating for other reasons, sites which could be used in the town for residential purposes. This has informed recent planning decisions (both the Aldi site and the Waitrose site were originally zoned for residential purposes and were eminently suitable for this) and this bias seems to be informing the ocal Plan to the detriment of our countryside, biodiversity and villages.

130. It is not clear what form the "parkland" along the River Wey will take but the images available in the Town Centre Master Plan suggest mown grass similar to the area around Millmead. This misses an opportunity to enhance biodiversity and enable town centre residents to engage with wild Engagement with wildlife should mean much more than throwing bread at ducks, chasing pigeons and antagonising swans. To achieve a wildlife corridor through Guildford, that can also benefit the health and well-being of residents living close by, the green space retained beside the river should be managed with the needs of wildlife in mind as well as people.

MONITORING

1. Simply maintaining open space will not be enough for a significantly enlarged population.
2. Providing more open space to meet existing shortfalls or the needs of a much larger population will reduce the area of land currently in food production or providing wildlife habitat.
3. SANG delivery is harming existing biodiversity
4. It is not clear how you will measure a change in biodiversity just by looking at planning applications. "Net gains in biodiversity provided by development" is a contradiction in terms. There may well be a few examples in England where low density housing has been combined with manufactured habitat at the expense of loss of agricultural land with no surrounding habitat damage - but I see no evidence of that in the Local Plan. Even when a housing development replaces agricultural land, it increases pressure on the surrounding countryside. A simple example is where houses border woodland and residents dump their garden rubbish (and often worse) over the garden fence. Increased leisure use on nearby countryside also has an adverse effect on biodiversity.
5. There is no guarantee that mitigations listed in an application will be carried out and their effectiveness is not guaranteed either. Guildford Borough Council would need to carry out follow-up ecological surveys on all sites.
Who would pay for these? Are there enough consultants to carry out the work in sufficient detail? What aspects of biodiversity will be measured?

6. How frequently are surveys by Natural England intended to take place? How will Guildford Borough Council ensure that Natural England carry them out? A baseline of existing surveys against which changes will be monitored should be included within the plan and it must be comprehensive for monitoring to be effective.

7. How frequently will SNCI surveys be carried out? At what expense? The last survey published in 2007 made recommendations for an increase in the size of the Wisley Airfield SNCI and stated that this should be taken into account for planning purposes. This was overridden in the recent planning inspector’s report and the Local Plan includes this particular SNCI as a building site. This is clearly a case of hypocrisy and suggests that the Council has no genuine intention to maintain biodiversity let alone enhance it.

8. My understanding is that a survey of SNCIs is currently taking place but that it is limited in scope to the previously known sites. This prevents other sites, where genuine biodiversity enhancement has taken place (often as a result of volunteer community effort), from being recognised in this way. While every stone is being turned over in the quest to find green space to build on, no genuine effort is being made to identify biodiversity hotspots that may have been overlooked in the past. In other words the approach being taken is one that intends to make no net gain, and possibly even reduce, sites of nature conservation interest – in contradiction to the stated aims.

9. If an existing SNCI (or one proposed on grounds of biodiversity but not formally accepted in a Local Plan) is found to be in poor condition the action taken should be to bring it back into good condition – not to remove its status and build on it.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/13027  Respondent: 8573793 / Harry Eve  Agent: 

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

149. Additional evidence should include:

Existing SNCI surveys, including those that took place in 2004-2007.

Biodiversity evidence emerging from Neighbourhood Plans.

Evidence obtained by requests to local naturalists and natural history societies including those with a specialist interest / expertise.

MONITORING

150. Simply maintaining open space will not be enough for a significantly enlarged population.

151. Providing more open space to meet existing shortfalls or the needs of a much larger population will reduce the area of land currently in food production or providing wildlife habitat.

152. SANG delivery is harming existing biodiversity

153. It is not clear how you will measure a change in biodiversity just by looking at planning applications. “Net gains in biodiversity provided by development” is a contradiction in terms. There may well be a few examples in England where low density housing has been combined with manufactured habitat at the expense of loss of agricultural land with no surrounding habitat damage - but I see no evidence of that in the Local Plan. Even when a housing development replaces agricultural land, it increases pressure on the surrounding countryside. A simple example is where houses border
woodland and residents dump their garden rubbish (and often worse) over the garden fence. Increased leisure use on nearby countryside also has an adverse effect on biodiversity.

154. There is no guarantee that mitigations listed in an application will be carried out and their effectiveness is not guaranteed either. Guildford Borough Council would need to carry out follow-up ecological surveys on all sites. Who would pay for these? Are there enough consultants to carry out the work in sufficient detail? What aspects of biodiversity will be measured?

155. How frequently are surveys by Natural England intended to take place? How will Guildford Borough Council ensure that Natural England carry them out? A baseline of existing surveys against which changes will be monitored should be included within the plan and it must be comprehensive for monitoring to be effective.

156. How frequently will SNCI surveys be carried out? At what expense? The last survey published in 2007 made recommendations for an increase in the size of the Wisley Airfield SNCI and stated that this should be taken into account for planning purposes. This was overridden in the recent planning inspector’s report and the Local Plan includes this particular SNCI as a building site. This is clearly a case of hypocrisy and suggests that the Council has no genuine intention to maintain biodiversity let alone enhance it.

157. My understanding is that a survey of SNCIs is currently taking place but that it is limited in scope to the previously known sites. This prevents other sites, where genuine biodiversity enhancement has taken place (often as a result of volunteer community effort), from being recognised in this way. While every stone is being turned over in the quest to find green space to build on, no genuine effort is being made to identify biodiversity hotspots that may have been overlooked in the past. In other words the approach being taken is one that intends to make no net gain, and possibly even reduce, sites of nature conservation interest – in contradiction to the stated aims.

158. If an existing SNCI (or one proposed on grounds of biodiversity but not formally accepted in a Local Plan) is found to be in poor condition the action taken should be to bring it back into good condition – not to remove its status and build on it.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/13058  Respondent: 8573793 / Harry Eve  Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Some comments on the policy notes:

131. 4.6.33 Villages are generally permeable to wildlife. The lower density of housing and presence of gardens (especially larger gardens) provides a corridor for movement across the residential area. Insetting of villages and the relaxation of planning restrictions in the Green Belt implied by Policy P2 will lead to infilling, “garden grabbing” and consequent loss of biodiversity. It will replace connections and corridors between habitats with barriers and lead to further fragmentation of our natural infrastructure.

132. 4.6.34 In the past Guildford Borough Council recognised the role that wildlife gardening and management of parks and open spaces for wildlife could play in enhancing biodiversity. There seems to have been a shift away from this. These aspects should be recognised in the Plan as well as the importance of Biodiversity Opportunity Areas and although 4.6.35 goes part way towards this we have yet to see the Green and Blue Infrastructure Supplementary Planning Document or have an opportunity to comment on it.

133. 4.6.36 This is long overdue and should include the way that our lanes are managed. The current approach is unsympathetic, sometimes damaging tree roots and scarce native plants. It seems to be oriented towards encouraging faster traffic rather than recognising the traffic-calming effects of natural vegetation (See the original Quiet Lanes Initiative).
134. 4.6.38 I agree with this statement but public access is frequently damaging to biodiversity – the more obvious examples being dogs out of control in the vicinity of ground-nesting birds and trampling of grassland habitats. Public open space must be protected for the reasons given but wildlife needs undisturbed (or at least less disturbed) space too if it is to thrive.

Policy definitions:

135. This section starts with a definition that is not a proper definition and is followed by statements that are not definitions at all, apart from the last – suggesting that this part of the document has not been thought through or checked.

136. 4.6.42 “Biodiversity creation and/or enhancement” is not a definition – it requires definition.

Do you mean that you will create new species or encourage them to evolve? Or do you mean that you will increase the number of species living in the Borough, or the population of each species, or both?

137. The points made are aspirational that have no enforcement to back them.

138. I support the use of green roofs and walls.

139. Building on the countryside and increasing the population by such a large amount will not help vulnerable species. It will put added pressure on remaining habitats and increase light and air pollution, degrading the ability of the borough to support wildlife.

140. 4.6.44 This appears to be saying that you will deliberately put playing fields, sports facilities and other leisure activities in BOAs – but these are land uses that reduce biodiversity!

141. 4.6.43 Arrangements with developers have no guarantee of success or longevity. They involve partial mitigation and overall loss of the original biodiversity interest of a site.

142. 4.6.45 My understanding of SANG is that it is intended to reduce pressure on Special Protection Areas by providing an alternative area for people to walk their dogs – and hope that they do not prefer to use the SPA. In other words they are intended to attract the type of use that is damaging to vulnerable species such as ground-nesting birds. In the desperation to find SANG land Guildford Borough Council are making use of existing open space that will not attract people away from the SPA and they are ignoring the impact on existing wildlife. For example – Guildford Borough Council decided to include the towpath in the Parsonage Meadows SANG as a way of also facilitating a cycle route. Encouraging cyclists and dog-walkers to use the same narrow path will not encourage dog-walkers to use it rather than the SPA. At Effingham Common Guildford Borough Council plan to designate an important area for wildlife and ground-nesting Skylarks as SANG. The Council is riding roughshod over the opinions of the Commoners and local residents. The Council used to put up signage warning dog-walkers not to disturb the Skylarks during the nesting season – but these signs were not put up until well into the nesting season this year and only then after complaints and harassment of Skylarks by out-of-control dogs.

143. In allocating sites as SANG, Guildford Borough Council has ignored the requirement to consider existing biodiversity and clearly have little or any knowledge or understanding of the issue. The issues relating to Russell Place Farm have been pointed out by a qualified Biologist. Many invertebrates are dependent on the dung of grazing animals and this aspect of our countryside is being steadily driven out of our Borough.

144. 4.6.46 I welcome this acknowledgement of the damaging effects of the proposed building developments. This also has relevance to the manner in which the green spaces next to the River Wey are managed.

145. 4.6.47 I welcome the proposals but I am concerned that these may be no more than good intentions. How will Guildford Borough Council ensure that they are carried out fully – and paid for by the developer?

Reasoned Justification:

146. 4.6.50 As the emerging strategy for Surrey and the Green and Blue Infrastructure Supplementary Planning Document are not yet available, or consulted on, the plan should not be proposing sites that will jeopardise them. The implication is that this aspect of the plan is not being taken seriously and will carry no weight in site selection despite the guidance in the NPPF.
147. 4.6.51 In fact some Guildford Borough Council contract mowing and lane management is not in line with a strategy that is meant to protect biodiversity.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

While there has been some improvement in the wording it is clear that the selection of Biodiversity Opportunity Areas (BOAs) has been no more than a desktop exercise influenced by the proposal of new identified settlement boundaries, in this draft local plan, that were not fully thought through and which threaten landscape and biodiversity.

The addition of the words “where possible” is a let-out clause that demonstrates the reality that biodiversity will be greatly reduced by the many greenfield development sites proposed.

Important habitats for biodiversity (outside BOAs) are not restricted to those which are adjacent to BOAs. The policy appears to abandon them.

4.6.45 is misleading. The primary role of SANGs is to divert recreational use, and dog-walkers in particular, away from the TBHSPA. This requires making it more attractive in terms of access and lack of restrictions. It is extremely doubtful whether SANG will achieve its primary purpose. Existing biodiversity and recreational use is being ignored by GBC and developers in selecting sites. For example, dog walkers are being encouraged to use sites occupied by ground-nesting Skylarks. It is wrong to claim, in effect, that SANG will produce net gains in biodiversity when it will be used to justify the destruction of existing wildlife on greenfield sites by building on it.

I am suspicious of the introduction of 4.6.49a which appears to be an afterthought to weaken the policy. It could be taken as an indication of pre-determination in relation to certain local school proposals.

Policy 14: Green and blue infrastructure

I have not looked recently at the Water Framework Directive (blue infrastructure), but if it follows the normal pattern of Directives, then it is up to the member state to implement (mainly by way of national Regulation) and not directly by individuals. Revisit the drafting? In any case this will presumably be affected by Brexit?

This policy is in direct conflict with the Slyfield re-generation site situated in the 1901 flood plain. It is intended to ‘directly affect’ and cause material harm to the nature conservation interests of local sites (Riverside Nature Reserve). There can be no justification clear or otherwise to install 10 metre high lamp standards and disturb a landfill site or to move a waterworks which has been situated on ‘the perfect’ site for over 100 years to a location of ‘made land’.

Thus while commendable it fails the soundness test and is in conflict with other policies within the Plan.

Open Space

There is little point in saving 500 sq metres in the Town Centre when multiple 100’s of hectares are removed from the Green Belt.

SANG’s

Suitable Alternative Natural Green Spaces, these are ‘irresponsible’ designations of land. These paper designations do not physically change the sites from that of pre-designation and, save for the odd fence, gate and walk way, does nothing other than rename a location and become effectively Green Belt or Local Green Space by another name.

If an enclosed site is 100 hectares it is madness to label 50% SANG and 50% not SANG. It is only a designation on paper that changes rather than the sustainability of the site within Mother Nature. If the site was returned to Mother Nature from a farm yard or industrial site – this is fair designation. Designating open fields as SANGS is a meaningless paper exercise.

An unsound practice in the real world.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
We are concerned that plans to divert the Wey Navigation to permit non-essential development within the flood plain are being hidden behind these changes. Noting the EA has not prevented excessive erosion along the Wey between Stoke Lock and Bowers Lock since 2014. Over 150 trees are endangered by this policy.

A section in this policy referring to Local Green Spaces is required, as it is notably missing throughout this Plan.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object to the deletion of the words: “having natural river banks as habitat”

Natural river banks not only enhance the habitat, but the landscape of the river. Hard concreted river banks destroy the natural appearance of rivers. Banks, in particular, raised above the level of the river are unnatural alongside a narrow river, such as the River Wey. Natural river banks are a way of bringing natural open space into towns and the countryside appearance of the River Way as it passes through the town has always been a feature of Guildford, contrasted by the Town Wharf and Bedford Wharf areas with the cinema and Electric Theatre.

The addition of this sentence is welcome. It is important that Areas of Outstanding Natural Beauty used as SANGS should keep their natural beauty (the reason why they were designated as AONBs) and not be urbanised by man-made structures and additions.

Paragraph (4.6.45) would benefit from being worded more strongly to protect AONB land used as SANGS from urbanization and unnecessary car parks, which spoil their natural beauty.
The inclusion of Russell Place Farm as a SANG in the Local Plan on page 296, in my opinion amounts to pre-determination of planning application no: 13/P/01453, which has not yet been decided by the Borough Council despite the application being submitted almost three years ago.

A site visit was undertaken on 16 June 2016 after the s19 public consultation period has commenced.

With respect to all Traveller pitches I would expect DCLG Planning Policy for Traveller Sites August 2015 to apply.

The inset map for Wood Street Village is incorrect as it does not show the common land on Oak Hill.

Policy I4: I support this policy in its aim of enhancing biodiversity supporting which the allotments do.

It is for these reasons that I strongly support these two policies.

I also think that "allotments" needs to be specifically included in the list of green spaces in the definition of "green and blue infrastructure" in para 4.6.31 of the draft plan (page 116)

Policy I4: Green and blue infrastructure.
We greatly welcome this vastly-improved policy over that in the previous document. We have several suggestions for improvements to the supporting text around the policy, as below (indicated in red);

4.6.31 Introduction. ...The diversity of potential uses means that by planning for adequate retention and provision of green and blue infrastructure we can make a significant contribution to wellbeing and sustainability across the social, environmental and economic dimensions.

4.6.33 A positive approach to the adequate supply and maintenance of Green Infrastructure is crucial to the maintenance, protection and enhancement of biodiversity and wildlife in the borough, not least through the potential for creation provision of new habitats and by serving to provide connections between existing habitats. It can further assist in adaptation to climate change by providing pathways for species dispersal and migration; climate amelioration through providing the cooling effects of tree cover; and in natural management of fluvial flooding, for example, through floodplain re-connection and restoration, provision, connectivity which can also result in and the creation of new wetland habitats.

4.6.34 The Surrey Nature Partnership (SyNP) is the designated Local Nature Partnership for Surrey mandated by Government. SyNP is working with Surrey local authorities to set out an approach to conserving and enhancing the biodiversity of the county at a landscape scale. This approach identifies Biodiversity Opportunity Areas (BOAs) as areas where there are concentrations of recognised sites of biodiversity importance, both statutory and non-statutory. a particular type of habitat. BOAs represent areas where improved habitat management and efforts to restore and re-create priority habitats will be most effective in improving connectivity and reducing habitat fragmentation. BOAs extend across local authority boundaries and therefore provide a strategic approach that addresses biodiversity at a landscape scale. In fact, the majority of the Guildford’s countryside within the borough of falls within BOAs (see figure 1), which is broadly indicative of just how rich in wildlife the borough is.

Blue infrastructure

4.6.39 The River Wey Navigation is a highly valued asset of borough wide significance, both as an important element of our borough’s biodiversity and as a very significant public space The National Trust has compiled a set of guidelines for what it considers are important characteristics of the river, and how this should be managed. These include the importance of the river as a ‘visually important open corridor’ and ‘an important leisure asset’ as well as a Conservation Area.

4.6.40 The EU Water Framework Directive 2000 aims for achievement of ‘good status’ for all ground and surface waters in the EU, initially by 2015 but by 2027 at the latest. This is assessed against a set of standards including water quality (both its chemistry and biology) and river morphology (for example, preserving or restoration to a naturally meandering course, having natural river banks as habitat) and re-connecting rivers to their floodplains; and providing backwater ponds). Much of the River Wey in the borough currently achieves ‘moderate status’, with some tributaries achieving only ‘poor’ or ‘bad’. The River Wey directly upstream from the borough is largely ‘poor’. The River Blackwater also largely achieves ‘moderate status’, but is a tributary of and thus within the neighbouring River Loddon catchment. This is considered a strategic issue due to the cross boundary nature of the impacts, and the importance of our waterways for the ecological health of the borough. Significant pressures on the River Wey include pollution from waste water and deriving from agricultural inputs, as well as from various sources in towns and from transport infrastructure; and the constraints to its natural function imposed by historic physical modifications to the river.

4.6.41 Both the River Wey and the River Blackwater, in combination with their floodplains and tributaries, are identified as BOAs.

Within Policy 14 itself; Blue infrastructure. Waterways will be protected and enhanced. Development proposals that are likely to have an impact on waterways (including across their catchments), must demonstrate how they will support the achievement of the Water Framework Directive and have followed guidance from the Environment Agency and Natural England on implementation of the Wey Catchment Management Plan and flood risk management.

Definitions

4.6.42 Net gains in biodiversity means biodiversity creation and/or enhancement. This should be integrated into the design of the site through the provision of new wildlife habitats, but also…
Certain of these suggested insertions and corrections would also need to be carried through to the Green & Blue Infrastructure Topic Paper.

Policy ID4: Green and Blue infrastructure. 4.6.34 “This approach identifies Biodiversity Opportunity Areas (BOAs) as areas where there are concentrations of recognised..” (suggest insertion to aid clarity here)

Policy ID4: “Proposals for development must demonstrate how they will deliver appropriate net gains in biodiversity where possible.” Our only concern here is over where the arbitration of ‘possibility’ would ultimately lie. This is perhaps better clarified later on as resting wholly with yourselves (and essentially not with a developer or their advisers/consultants). We trust the Borough will be equipped with the specialist knowledge to implement this and look forward to working with you as and when required on such matters.

4.6.50 “The NPPF requires… through a Green & Blue Infrastructure Supplementary Planning Document once enough detail has emerged.” (suggest insertion here for consistency if appropriate). The Trust welcomes this intended SPD and we look forward to working with you on its development.

Monitoring Indicators: Net gains in biodiversity provided by development on sites of 25 homes or greater. This appears a reasonable enough approach; perhaps the derivation of this threshold requires some further clarification however.

Comment ID: PSLPP16/1155  Respondent: 8603201 / Guildford Allotments Society (Andrew Simmonds)  Agent:

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID4

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Response to Guildford Proposed Submission Local Plan
This response is on behalf of Guildford Allotments Society, who manage approximately 650 allotment plots within Guildford town, all of them on land leased to us by GBC. There are two issues that concern us.

Firstly, the Local Plan involves building 13,860 homes within the borough by 2033, two thirds of which will be on sites at Ash/Tongham, Blackwell Farm (on the Hogs Back); Gosden Hill Farm, and Wisley airfield. The remainder appear to be smaller developments within Guildford town and the surrounding villages. Yet the plan makes no mention of a need for allotments, nor whether there is a requirement for additional sites. I believe that there is, and that this is a notable omission of the Local Plan. Indeed, GBC has a responsibility under S23 of the Small Holdings and Allotments Act 1908 to provide sufficient allotment plots if there is a demand. We believe that this omission of allotments from the Local Plan is a substantial oversight.

Attached as attachment 1 is our reasoning as to why around 140 additional allotment plots, within some 4.4 hectares in total, should be provided on several new sites within the Borough to ensure that the number of plots is broadly sufficient when these additional houses are built. The sites need to broadly be in the right locations, close to where the tenants live, to comply with your planning policies.

Secondly, our site at Bellfields. It has been suggested that part of this site, along with the neighbouring waste water treatment works, should become a housing development. Yet this does not feature in the plan. I therefore assume that it is beyond the 2033 planning horizon, and I am therefore not discussing the issue further; but for reference, details are set out as attachment 2. Should that for any reason not be the case, there is an opportunity for undertaking a strategic review of our allotment sites and their sizes to ensure that they provide the plots required to meet the demand, in areas accessible to tenants and complying with the policies laid out in the Local Plan. We recognise that there is a need to optimise the location of the additional houses and allotment sites.

Please do not hesitate to contact me should you wish to develop these issues further.

Yours sincerely

Andrew Simmonds

Attachment 1

Issue 1 - Reasoning in support of the additional allotment provision.

Current allotment provision within the Borough is roughly 1 plot for every 100 homes. Currently there are 137 on the waiting list, so arguably the current provision is inadequate; although the waiting list tends to fluctuate between 50 and 250. What is certain is that we are not over-provided for; but this is not an exact science.

The current waiting list is weighted towards Burpham, Merrow and the eastern town centre, and the Westborough / Rydes Hill area. However, we believe that there is no reasonable site available or likely to become available within these areas. Park Barn and Westborough have a higher proportion of allotment holders than the average; our sites at Farnham Road and Aldershot Road (Westborough Allotments) are full, and a number of other tenants resident in these areas are accommodated at Bellfields, our largest site.

With 13,860 additional homes, it seems reasonable to suggest that an additional 140 plots should be made available. In terms of land space, 40 plots require 1.25 hectares (to allow for access paths between plots, storage facilities for equipment, and sheds along the boundaries). Thus 140 plots = 4.4 hectares.

To comply with the policies within the plan; five stand out as being relevant. These are: policies D1 (Making Better Places), D2 (Sustainable Design), I1 (Infrastructure & Delivery), I3 (Sustainable Transport) and I4 (Green and Blue Infrastructure). Together, these infer that the four major development sites should each have their own dedicated allotment spaces within the curtilage of the development — say about 100 plots in all, or about 3.15 hectares in total — and that the remaining additional plots — about 40, or 1.25 hectares — should be identified within the town and surrounding villages broadly relative to the developments. The most important aspect is that the plots need to be on a secure site, readily accessible from people’s homes.

There is a potential for additional demand - in that if the additional houses have small gardens, they will not be large enough for people to grow their own, and hence likely that more residents will want allotments. So maybe the suggested demand above is inadequate.
I do not expect this Society to manage all of these sites; those at Ash/Tongham, and at Wisley, are outside of the area we currently serve; although there is no reason why we should not if it were felt appropriate.

A site at Blackwell Farm would prove popular, both for the new residents there and the additional demand from Park Barn / Westborough. Similarly, a site within the Gosden Hill development would be welcomed; both these sites need to be sized to match the local demand, taking into account current local unmet demand.

**Legal References**

Small Holdings and Allotments Act 1908

Relevant Sections:

S23 – Duty of councils to provide allotments
S25 Acquisition of land for purpose of Act
S26 Improvement and adaptation of land for allotments

**Attachment 2**

Issue 2 - The Bellfields site.

This site is currently the largest we operate, with 109 tenants. Should this site be proposed for housing development, or indeed any other development, the future we believe can comprise of three groups, each roughly a third of the total.

The first third are relatively elderly and live locally, and we believe that this situation will be ongoing. We would wish to retain around a third of the current area in that location, at Bellfields.

A second third live further away, primarily in the Stoughton / Rydes Hill / Westborough areas. There is scope to develop further land at the Aldershot Road (Westborough Allotments) site which is currently unused and outside of our current lease from GBC, which could simply relocate these tenants at Bellfields to be closer to their homes; this potential land swap would involve around a third of the current Bellfields site.

The final third need reprovision elsewhere; ideally close to Stoke Park as being the best area for where our tenants live, although we cannot identify a suitable site for allotment use. An area of Burpham Court Farm has been suggested as a potential swap for this final third. Whilst not rejecting the idea, it is not the optimal location in that it is not near to people’s homes; it is not accessible by public transport; and it is adjoining and would have access via a busy road that will become busier if/when the link road from Slyfield is built. The Gosden Hill development is likely to further add traffic to the area, and to Burpham itself. The Burpham Court Farm site simply does not meet the policies set out in the Local Plan, and our preference would thus be to not move these tenants from the Bellfields site.

Thus in conclusion, unless another site more local to Stoke Park can be identified, our preference would be to retain around two thirds of the current site at Bellfields, with the other third being released upon development of the unused land at the Aldershot Road (Westborough Allotments) site.

Making the other part of Riverside Nature Reserve a SANG will not provide any new land to recreation for the 28,000+ new residents.

Guildford is in desperate need of a local plan but this is unsound and will not deliver.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

We note and support the following policies in the Plan:

Policy I4 Green and Blue infrastructure

7.5.1 We welcome GBC’s recognition of the importance of preserving and enhancing green spaces and stretches of open water, and looks forward to the Green and Blue Infrastructure Supplementary Planning Document (“SPD”)

In that context we would encourage GBC to incorporate within the Local Plan the proposal by parish residents, working with Surrey Wildlife, to develop the Stonebridge site as a Wildlife Refuge.

7.5.2 We welcome the aspect of the Policy with regard to Open Space and note the inclusion of Shalford as having a “shortfall of park and rec (public combined), children’s play space and youth provision” (page 81) in the Guildford Open Space, Sports and Recreation Assessment 2016-2033 prepared by Ethos Environmental Planning in June 2016.

7.5.3 We further note in the Assessment of Sites of Amenity Value produced by Ethos Environmental Planning in May 2016 that, on page 118, the land to the south of the Village Hall was identified as a site of High Amenity Value GIS ETH_088 and that “the site is in an elevated position and offers aesthetic value”. It should be noted that the site could be accessible to the public with a public footpath on the western boundary and the public village hall to the north.

7.5.4 The Policies Map for Shalford (south) on page 364 of the Plan now clearly identifies the site as Open Space which under NPPF paragraph 74 means that it “should not be built on except in specified circumstances”. We welcome this protection if it is determined ultimately that the land falls within the proposed revised settlement boundary for Shalford.

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID4

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Response type: OBJECT

The Policy shows concern for conserving and enhancing biodiversity, which is welcome. We also note and welcome the intention to extend the principle beyond Biodiversity Opportunity Areas. However the current plan to build on large areas of countryside and to inset villages will have the opposite effect. The Policy appears therefore to be a box-ticking exercise with no real teeth to it.

There is no mention of the value of wildlife gardening to biodiversity or the important role that larger gardens play in a village setting.

There is no mention of the impact of the plan on food production, or monitoring the loss of agricultural land.

“The natural world, its biodiversity and its constituent ecosystems are critically important to our wellbeing and economic prosperity, but are consistently undervalued in conventional economic analyses and decision-making” (Biodiversity 2020 page 11)

“As a public authority in England you have a duty to have regard to conserving biodiversity as part of your policy or decision making.” (Government Planning Guidance)

Part of the problem is that “Biodiversity benefits are unpriced” and so not valued by those who look only at the more obvious and simplistic economic benefits.

We have some concerns that “enhancing” the River Wey in the town centre will avoid using the available brownfield land around Walnut Tree Close and Slyfield for urban regeneration and sustainable housing that could otherwise be used.

The policy on Green and Blue infrastructure is broadly supported with an important and major caveat; and if disregarded this should count as an objection.

However, it is noted that the largest areas of industrial brownfield land within the borough are near to or adjacent to the River Wey, particularly in the Walnut Tree Close area and in the Slyfield industrial area.

These areas could support much more housing than the relatively small numbers indicated in the policy on the town centre, under a town centre regeneration scheme. This would have huge benefits for the community as a whole since relatively run down areas would be subject to regeneration, the river banks would be cleaner and more attractive.

It is vitally important for the town as a whole that the run-down Walnut Tree Close area is used for well-designed housing, as indicated by the Mastervision document first draft compiled by Allies and Morrison. John Rigg of Savills and Guildford Vision Group indicated to the Scrutiny Committee of GBC that initial commercial projections indicated that the Walnut Tree Close area alone could provide 4000 homes. This is significantly in excess of the current GBC proposals. Both Allies & Morrison and GVG initially indicated that they believed that this site could be available for regeneration within the critical 5 year window required for the local plan. It is therefore essential that nothing in this policy should jeopardise anything that could lead to the Walnut Tree Close area being a regeneration zone.

As has been noted elsewhere, for reasons that are not altogether clear but appear to be connected to central government direction and a desire to maximize the Community Infrastructure Levy, there is an aggressive desire to push development
on to the Green Belt at all costs, ignoring or eliminating for other reasons sites which could be used in the town for residential purposes. This has informed recent planning decisions (both the Aldi site and the Waitrose site were originally zoned for residential purposes and were eminently suitable for this) and this bias seems to be informing the Local Plan.

As a result, it is important that the desire for Green and Blue infrastructure does not become an excuse for preventing regeneration of Walnut Tree Close. It is noted that the Council has stated that “The Council is keen to protect the watercourses from inappropriate development that would spoil their character”. The bus station adjacent to the River Wey, and the empty car parks associated with empty factory space, are hardly attractive development – well designed mid height (3-4 storey) apartment blocks would be a great improvement to the river corridor, offer major scope for sustainable regeneration, and would prevent the need for any incursion into the Green Belt to meet reasonable housing needs.

That regeneration zone would be highly sustainable, because it would be within 1 mile of the railway station, adjacent to the A3, and would eliminate an area of huge congestion in the town because if the industrial sites were replaced by housing then the residents would commute by train or walk to work rather than having to drive in to an industrial estate.

It certainly does not seem appropriate to create substantial new parkland on current hard standing. The protections to which this policy refers largely describe existing open space, which is of great importance. But to determine not to utilize brownfield land for residential use at an appropriate density in order to force building on to the Green Belt would seem to be in contradiction of the principles of use of the Green Belt applied in the Gallaher Homes v Solihull court of appeal case, where the hierarchy of use is clearly defined, with urban brownfield required to be used as a first option.

So there is some considerable support for the residential element of this policy, with the note that this should be explicitly amended to permit construction of a regeneration zone on the brownfield areas surrounding the river in the middle of the town, and that this should not be held up pending yet more transport studies (Guildford’s track record on brownfield utilisation is poor), but should be implemented with immediate effect.

It is not clear what form the “parkland” along the River Wey will take but the images available in the Town Centre MasterPlan suggest mown grass similar to the area around Millmead. This misses an opportunity to enhance biodiversity and enable town centre residents to engage with wildlife. Engagement with wildlife should mean much more than throwing bread at ducks and chasing pigeons. To achieve a wildlife corridor through Guildford, that can also benefit the health and well-being of residents living close by, the green space retained beside the river should be managed with the needs of wildlife in mind.

Responses to policy notes:

4.6.33 Villages are generally permeable to wildlife. The lower density of housing and presence of gardens (especially larger gardens) provides a corridor for movement across the residential area. Insetting of villages and the relaxation of planning restrictions in the Green Belt implied by Policy P2 will lead to infilling, “garden grabbing” and consequent loss of biodiversity. It will replace connections and corridors between habitats with barriers and lead to further fragmentation of our natural infrastructure.

4.6.34 In the past Guildford Borough Council recognised the role that wildlife gardening and management of parks and open spaces for wildlife could play in enhancing biodiversity. There seems to have been a shift away from this. These aspects should be recognised in the Plan as well as the importance of BOAs and although 4.6.35 goes part way towards this we have yet to see the GISPD.

4.6.36 This is long overdue and should include the way that our lanes are managed. The current approach is unsympathetic, sometimes damaging tree roots and scarce native plants. It seems to be oriented towards encouraging faster traffic rather than recognising the traffic-calming effects of natural vegetation (See the original Quiet Lanes Initiative) – management of open spaces and lanes

We await the Countryside Vision with interest.

4.6.37 It appears that Policy I5 has been omitted,(We think this meansP5 – more evidence of slapdash work)

4.6.38 We agree with this statement but public access is frequently damaging to biodiversity – the more obvious examples being dogs out of control in the vicinity of ground-nesting birds and trampling of grassland habitats. Public open space must be protected for the reasons given but wildlife needs undisturbed (or at least less disturbed) space too if it is to thrive.

Responses to definitions:
This section starts with a definition that is not a proper definition and is followed by statements that are not definitions at all, apart from the last – suggesting that this part of the document has not been thought through or checked.

4.6.42 “Biodiversity creation and/or enhancement” is not a definition – it requires definition.

Do you mean that you will create new species or encourage them to evolve? Or do you mean that you will increase the number of species living in the Borough, or the population of each species, or both?

The points made are aspirational that have no enforcement to back them.

We support the use of green roofs and walls.

However, building on the countryside and increasing the population by such a large amount will not help vulnerable species. It will put added pressure on remaining habitats and increase light and air pollution, degrading the ability of the borough to support wildlife.

4.6.43 Arrangements with developers have no guarantee of success or longevity. They involve partial mitigation and overall loss of the original biodiversity interest of a site.

4.6.44 This appears to be saying that you will deliberately put playing fields, sports facilities and other leisure activities in BOAs – but these are land uses that reduce biodiversity!

4.6.45 Our understanding of SANG is that it is intended to reduce pressure on Special Protection Areas by providing an alternative area for people to walk their dogs – and hope that they do not prefer to use the SPA. In other words they are intended to attract the type of user that is damaging to vulnerable species such as ground-nesting birds. In the desperation to find SANG land Guildford Borough Council are making use of existing open space that will not attract people away from the SPA and you are ignoring the impact on existing wildlife. For example – GBC decided to include the towpath in the Parsonage Meadows SANG as a way of also facilitating a cycle route. Encouraging cyclists and dog-walkers to use the same narrow path will not encourage dog-walkers to use it rather than the SPA. At Effingham Common GBC plan to designate an important area for wildlife and ground-nesting Skylarks. GBC is riding roughshod over the opinions of the Commoners and local residents. GBC used to put up signage warning dog-walkers not to disturb the Skylarks during the nesting season – but these signs were not put up until well into the nesting season this year and only then after complaints and harassment of Skylarks by out-of-control dogs.

In allocating sites as SANG, GBC has ignored the requirement to consider existing biodiversity and clearly have little or any knowledge or understanding of the issue. The issues relating to Russell Place Farm have been pointed out by a qualified Biologist (see article in The Guildford Dragon by Chris Venables, Many invertebrates are dependent on the dung of grazing animals and this aspect of our countryside is being steadily driven out of our Borough).

4.6.46 We welcome this acknowledgement of the damaging effects of the proposed building developments. This also has relevance to the manner in which the green spaces next to the River Wey are managed.

4.6.47 We welcome the proposals but are concerned that these may be no more than good intentions. How will GBC ensure that they are carried out fully – and paid for by the developer?

Reasoned Justification:

4.6.50 As the emerging strategy for Surrey and the GISP are not yet available the plan should not be proposing sites that will jeopardise them. The implication is that this aspect of the plan is not being taken seriously and will carry no weight in site selection despite the guidance in the NPPF.

4.6.51 In fact some GBC contract mowing and lane management is not in line with a strategy that is meant to protect biodiversity. Examples – damage to tree roots and unsympathetic treatment of roadside vegetation (that includes orchid species) in Chalk Lane – southern end of Kingston Meadow in East Horsley is now mown flat rather than left to grow as a meadow through the Spring and Summer as it used to be (so no more day-flying Burnet moths).

KEY EVIDENCE

Guildford Borough Policy Statements are statements – not evidence.

Additional evidence should include:
Existing SNCI surveys, including those that took place in 2004-2007.

Biodiversity evidence emerging from Neighbourhood Plans.

Evidence obtained by requests to local naturalists and natural history societies including those with a specialist interest.

**MONITORING**

Simply maintaining open space will not be enough for a significantly enlarged population.

Providing more open space to meet existing shortfalls or the needs of a much larger population will reduce the area of land currently in food production or providing wildlife habitat.

SANG delivery is harming existing biodiversity

It is not clear how you will measure a change in biodiversity just by looking at planning applications. “Net gains in biodiversity provided by development” is a contradiction in terms. There may well be a few examples in England where low density housing has been combined with manufactured habitat at the expense of loss of agricultural land with no surrounding habitat damage - but we see no evidence of that in the Local Plan. Even when a housing development replaces agricultural land it increases pressure on the surrounding countryside. A simple example is where houses border woodland and residents dump their garden rubbish (and often worse) over the garden fence. Increased leisure use on nearby countryside also has an adverse effect on biodiversity.

There is no guarantee that mitigations listed in an application will be carried out and their effectiveness is not guaranteed either. GBC would need to carry out follow-up ecological surveys on all sites. Who would pay for these? Are there enough consultants to carry out the work in sufficient detail? What aspects of biodiversity will be measured?

How frequently are surveys by Natural England intended to take place? How will GBC ensure that NE carry them out? A baseline of existing surveys against which changes will be monitored should be included within the plan and it must be comprehensive for monitoring to be effective.

How frequently will SNCI surveys be carried out? At what expense? The last survey published in 2007 made recommendations for an increase in the size of the Wisley Airfield SNCI and stated that this should be taken into account for planning purposes. This was overridden in the recent planning inspector’s report and the Local Plan includes this particular SNCI as a building site. This is clearly a case of hypocrisy and suggests that the Council has no genuine intention to maintain biodiversity let alone enhance it.

We believe that a survey of SNCIs is currently taking place but that it is limited in scope to the previously known sites. This prevents other sites, where genuine biodiversity enhancement has taken place (often as a result of volunteer community effort), from being recognised in this way. While every stone is being turned over in the quest to find green space to build on, no genuine effort is being made to identify biodiversity hotspots that may have been overlooked in the past. In other words the approach being taken is one that intends to make no net gain, and possibly even reduce, sites of nature conservation interest – in contradiction to the stated aims.

If an existing SNCI (or one proposed on grounds of biodiversity but not formally accepted in a Local Plan) is found to be in poor condition the action taken should be to bring it back into good condition – not to remove its status and build on it.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Attached documents:**
We object to the omission of a policy for the River Wey which was included in the previous local plan. The existing policy G11 from 2003 Local Plan should be included so that development within the River Wey corridor will only be permitted provided that:

1.1.1 It protects or improves the special character of the River Wey and the Guildford and Godalming Navigations, in particular their visual, setting, amenities, ecological value, architectural and historic interest;

1.1.2 The special character of the landscape and townscape in the corridor is protected or improved;

1.1.3 Views both within and from the corridor which contribute to this special character are protected or improved;

1.1.4 Where appropriate, public access is provided to and along the River and the Navigations.

1.1.5 The Nature Conservation value of the site is protected or improved

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? (Yes), is Legally Compliant? ( )

Everything that can be done to conserve natural green landscapes, be they woodland, hedges, commons, heaths, agricultural land or parks and gardens should be done. We are the custodians of the landscape and the biodiversity that depends on us for its survival. It should be our pleasure and our duty to offer protection to our wildlife and its habitats. The maintenance of clean, lifeful water courses is essential. the blue and green infrastructure should be kept as wild as possible, not turned into playing fields and mown dog walking areas. The open green landscape is not there just to be tamed by us but as a living habitat, which still gives enormous pleasure to those who wish to walk in it.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( No ), is Legally Compliant? ( )

I OBJECT to the fact that, while this Policy claims "Permission will not be granted for proposals that are likely to materially harm the nature conservation interests of local sites unless clear justification is provided that the need for development clearly outweighs the impact on biodiversity", this is manifestly contradicted by other Policies, in particular the inclusion in the Plan of Policy/Site A46. If this site is developed as per the Plan, i.e. if 1100 new houses are built on it, it will completely destroy a precious wildlife habitat that is home to an extraordinary variety of flora and fauna, as evidenced by the separate submission from the Friends of Normandy Wildlife. And all this on the spurious grounds that building 1100 houses 'enables' the development of a new secondary school, the need for which has not been established. The same comments apply to the proposed Policy/Site A47, which is a SNCI - how can anyone justify building 50 houses on such a site? Thus this Policy clearly is not strong enough to achieve the objectives it sets itself.

<table>
<thead>
<tr>
<th><strong>Russell Place Farm - Wood Street Village SANG</strong></th>
</tr>
</thead>
</table>

This site is not needed as a SANG as it is adjacent to 128 hectares of Common Land – Broad Street and Backside Commons offer the residents and visitors enough varied recreational space in the village – walkers, dog walkers, horse riding, bicycling and running.

Natural England’s report NECR136 para 3.58 dated 13th February 2014 indicates that there is no evidence to suggest provision of a SANG reduces the number of visitors to the SPA. Contrary to the NPPF para 118.

- This land is within the Metropolitan Green Belt so this would be “inappropriate” development.

There is already a public footpath 377 across this land providing for dog walking facilities.

- This is viable working farm land. Agricultural land should be protected for the future needs of a growing population in the SE.
- This expanse of farm land is a very attractive feature in Frog Grove Lane and the plans put forward will turn it into a contrived, sculptured space with unnatural footpaths creating an “urban” character compared to the “natural” character of the established Commons.

<table>
<thead>
<tr>
<th><strong>Broad Street Common and Backside Common SANG</strong></th>
</tr>
</thead>
</table>

Common Land is given to the people for their recreation and enjoyment of natural spaces and environments and are already publicly available land where residents have the right to walk over the commons via s193 of the Law of Property Act 1925 and the CROW Act (Countryside and Rights of Way) 2000.

Natural England’s report NECR136 para 3.58 dated 13th February 2014 indicates that there is no evidence to suggest provision of a SANG reduces the number of visitors to the SPA. Contrary to the NPPF para 118.

It is therefore inappropriate to designate the COMMONS as SANGS as it DOES NOT provide any new additional recreational space.

I object to POLICY I4 Green and blue infrastructure

- Infrastructure considered here as an afterthought, rather than pre-condition of development. Should be a key issue for the rest of the plan.
- Excessive housebuilding in countryside not supported by any funding or provision for infrastructure.
- Heavy focus on building on greenfield sites inefficient and unnecessary: cheap for developers but much more expensive for the public who have to fund the infrastructure.
- Draft CIL scale discourages use of brownfield land first.
- No plan for organic increase in existing traffic congestion, let alone once thousands of houses are built across the countryside. Local roads hardly considered. Green Belt being eroded before road widening/improvement plans certain, encouraging over-development of greenfield sites.
- All Green Belt sites should be removed from the plan until “exceptional circumstances” for development are proven, as stipulated repeatedly in the NPPF. The Green Belt should trump short-term considerations such as perceived housing need, as case law has established.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Green infrastructure

I support the addition of the statement in para 4.6.42a that: “Where proposals fall within or adjacent to a BOA [Biodiversity Opportunity Area], biodiversity measures should support the BOA’s objectives, including those set out in the BOA Policy Statements produced by SyNP [Surrey Nature Partnership].” However, it has not been explained how the Local Plan meets this requirement. The Blackwell Farm (A26) allocation has habitats and Species of Principal Importance for the Conservation of Biodiversity. It is located adjacent to a BOA, and arguably should have been included within it. Bizarrely, all the farmland along the northern slopes of the Hogs Back has been included with the BOA, except for that in the ownership of the University of Surrey. This begs the question: why has Surrey Nature Partnership omitted this land from this BOA, when it forms the same habitat and has the same biodiversity value as adjacent land included within it? This omission would appear to be deliberate, in the same way that SCC has not been able to demonstrate (despite FOI requests) that it carried out landscape character assessments for land on Blackwell Farm (as part of the AONB boundary review).

It is a policy of the NPPF to “Allocate land with the least environmental or amenity value, where consistent with other policies in this Framework”, and it is a strategic priority of Biodiversity 2020: A Strategy for England’s Wildlife and Ecosystem Services to “take a strategic approach to planning for nature within and across local areas” as “This approach will guide development to the best locations” in the context of reducing environmental pressures. It has not been explained how the Local Plan has used Surrey Nature Partnership’s identification of Biodiversity Opportunity Areas to guide developments to the best location.

Blue infrastructure

I object to the changes in policy ID4, which fail to take into account the environmental impacts on the River Wey of developing the Blackwell Farm site and other strategic sites.

GBC has been tasked with the specific action in the River Basin Management Plan that, when developing new DPDs and when making planning decisions, the planning authority should use evidence relating to “priority water bodies” (those that have been assigned “bad”/“poor” status, such as the River Wey), alongside other relevant evidence, to influence the location and scale of future development[12]. There is no indication in the Plan of how GBC has fulfilled this requirement. The River Wey is already failing the Water Framework Directive for phosphates and Natural England states that the majority of phosphates in rivers comes from treated/untreated sewerage. The current Plan will only make this matter worse.
Blackwell Farm remains home to a number of birds of Principal Importance for the Conservation of Biodiversity, despite the recent use of bird scarers on the University-owned farmland.

More than a half of Blackwell Farm sits above the 90m contour (orange) and includes C18 parkland (light blue), ancient woodland and Grade 2 farmland (dark blue/green). The farmland in yellow is criss crossed with ancient hedgerows and provides a habitat for ground nesting birds.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1. We live in the Surrey Hills Area of Outstanding Natural Beauty and as such, any developments should be carefully considered and alternatives taken where possible. Rather than building upon a new site, Guildford town could usefully be regenerated with 4-5 storey blocks with landscaping and underground parking. I understand that new homes are needed for University students but Surrey University, has failed to use its existing planning consents (dating from 2004) to accommodate 3,000 students or development its campus (e.g. build on its extensive and underused car parks). If students were accommodated in this way, 2,000 homes would be freed up in town Building more homes in Guildford cannot make houses more affordable, given the proximity of the London market.

2. Local people should be consulted and not ignored. Villages need protecting in terms of both design and scale.

Comment ID: PSLPP16/5628  Respondent: 8795649 / G Pask  Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the fact that air quality concerns have not been taken seriously - air pollution in many parts of the borough, and particularly at the M25/A3 junction, is in excess of EU-permitted levels. Additional traffic will exacerbate this situation impacting the health of all current and future residents. No account is being taken of the acid deposition on the Thames Basin Heaths SPA and the irreversible impact of the habitat degradation.

Comment ID: PSLPP16/4106  Respondent: 8805249 / Peter Warburton  Agent:
Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID4
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1. I object to the fact that air quality concerns have not been taken seriously – air pollution in many parts of the borough, and particularly at the M25/A3 junction, is in excess of EU-permitted levels. Additional traffic will exacerbate this situation, impacting the health of all current and future residents. No account is being taken of the acid deposition on the Thames Basin Heaths SPA and the irreversible impact of the habitat degradation.
2. I object to the fact that the proposed plan does not meet the needs and desires of local communities, as evidenced through the Ockham Parish Plan. The top two responses as to why local residents enjoy life in Ockham are (1) access to the countryside and clean air and (2) the peace and quiet afforded by wide open spaces. Over 90% wish to see both the historic features of the village maintained and the village’s green spaces, including the FWA/TFM, protected.

Comment ID: PSLPP16/4309  Respondent: 8824065 / Robin Hubbard  Agent:
Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID4
The proposal for ‘open space’ in the current version of the plan does not retain the same long term protection as if the fields were left as they are (based on opinion I have had from planners and lawyers), both outside the settlement boundary and within the green belt. We know that developers have already been working on a plan to develop the land, so I therefore challenge why the council would then make the above proposed changes as this would then result in this precious land losing its protection and being open for development?

While I appreciate the Council are, by this classification of ‘open space’, acknowledging that this land is of unusual significance to the entire village, but nobody in the village has yet to receive a meaningful planning or legal explanation as to why or how ‘open space’ could possibly be a better classification. I suspect this is because one doesn’t exist! I am therefore asking for your support in not making changes for the sake of it when the entire local community are united behind their desire to keep this attractive and open land protected, and the settlement and green belt boundaries left as they are in relation to these fields.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1. Paras 2.20 and 2.21 sound very reasonable “… to look to a controlled realignment of the Green Belt boundary and development of a small number of strategic sites to allow us to provide for mixed and inclusive communities supported by new infrastructure” until one looks at what you are actually proposing for Worplesdon – strategic developments, which include a 71% increase in housing, a care home, a cemetery, a park and ride, a secondary school and community football ground and a great many traveller sites. All this in just one parish.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

1. Site 109. Blackwell Farm. SANG

Blackwell Farm is a working farm. It is good quality agricultural land. With the proposed increase in population in the South East there will be greater pressure on food resources so we need to protect our ability to provide food and crops for this country in the coming years.

The land is ancient woodland and should not be disturbed.

The land abuts Broadstreet and Backside Common and therefore is an inappropriate and unnecessary place to site a SANG. We do not want artificially contrived SANGs when we already have natural common land nearby.

The public already has access to this land because of existing footpaths and bridleways.

1. Site 110. Broadstreet and Backside Common. SANG

Commons are already publicly available land. The public have the right to walk over the commons via s193 of the Law of Property Act 1925 and the CROW Act (Country and Rights of Way) 2000. It is, therefore, inappropriate to designate the commons as SANG as it does NOT provide any new additional recreational space.

We do not want artificially contrived SANGs when we already have natural common land.

Natural England’s report NECR136 para 3.58 dated 13 February 2014, indicates that there is no evidence to suggest provision of a SANG reduces the number of visitors to the SPA. Contrary to the NPPF – para 118.

Rather than providing numerous SANG sites, policy constraints should be applied to the SHMA – the figure of 652 houses per year needs to be reduced in recognition of the planning constraints in Guildford (Green Belt, SPA, SSSI, SNCI, infrastructure deficiencies)

1. Site 112. Russell Place Farm.

This land is good quality agricultural land. It is currently used for grazing cattle. With the proposed increase in population in the South East there is greater pressure on food resources so we need to protect our ability to provide food and crops for this country.
The land abuts Broadstreet and Backside Common and therefore is an inappropriate and unnecessary place to site a SANG. We do not want artificially contrived SANGs when we already have natural common land nearby.

The public already has access to this field because of existing footpaths.

Rather than providing numerous SANG sites policy constraints should be applied to the SHMA – the figure of 652 houses per year needs to be reduced in recognition of the planning constraints in Guildford (Green Belt, SPA, SSSI, SNCl, infrastructure deficiencies)

1. Site 113. Stringers Common. SANG

Commons are already publicly available land. Residents have the right to walk over the commons via s193 of the Law of Property Act 1925 and the CROW Act (Countryside and Rights of Way) 2000. It is, therefore, inappropriate to designate the commons as SANG as it does NOT provide any new additional recreational space.

We do not want artificially contrived SANGs when we already have natural common land.

**Object** to the impact it will have on a village that is positioned on the north side of the North Downs and partially within the Surrey Hills AONB and attracts a large number of recreational visitors throughout the year including walkers and cyclists. Within the village area are a number of important wildlife habitats that I believe should be preserved for future generations. Furthermore, I believe it will change the dark skies within the area affecting both wildlife and enjoyment of the night sky. Additionally, one of the proposed sites wraps around the local camping site, which welcomes visitors from around the world who use it as a base to visit Guildford, The Surrey Hills, RHS Wisley, Polesden Lacey, Hatchlands, Clandon, Hampton Court and day trips to London. Any proposed development on this site is likely to deter such tourism and cause further negative impact on the village.

There is talk of only low grade agricultural land being used for building. This is a red herring. Low grade agricultural land is needed to maintain the biodiversity in the area. It is because of additional population pressures that Suitable Alternative Natural Green Spaces (SANGS) are begin proposed (although this appears to be a sop so that houses can be built). Their aim is to have fewer people in the existing Thames Basin Heath Special Protection Area. This low grade agricultural land is needed as land; not as a housing estate.

1. **Policy I4 – object**
   1. The Policy should provide support for Wildlife Corridors, such as those identified in the Effingham Neighbourhood Plan. The Policy should state that developments will not be permitted that will materially harm designated wildlife corridors.
   2. Para 4.6.45 – Evidence is that designation of a SANG, such as Effingham Common has resulted in the reduction in biodiversity. For example, there has been a noticeable decline in skylarks on the Common due to dog walkers not following designed footpaths and bridleways.
   3. Monitoring Indicators for Policy I4 – object due to inadequate measures.
      1. Surveys of key species groups are required to monitor protected sites, This is the only method to state whether biodiversity is increasing or decreasing over time. Minimum time frame for comparisons is ten years, as used by IUCN for Red Lists.
      2. Survey of abundance of indicator species on the protected sites. There are a number of key indicators used at the national level.

      • Number of new SANGS is not a measure of biodiversity, but a measure of permitted development within 5km of a SPA.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to policy I4 green and blue infrastructure.

This policy is a box-ticking exercise with no teeth to it. It sits oddly with the plan’s onslaught on the Green Belt. The plan to build on large areas of countryside and to inset villages will cancel out any benefits from extending the principle of enhancing biodiversity beyond Biodiversity Opportunity Areas.

There is no mention of the value of wildlife gardening to biodiversity or the important role that larger gardens play in a village setting.

ABSENCE OF POLICY ON RIVER WEY

I object to the omission of a policy for the River Wey which was included in the previous local plan. The existing policy G11 from 2003 Local Plan should be included so that development within the River Wey corridor will only be permitted provided that:

It protects or improves the special character of the River Wey and the Guildford and Godalming Navigations, in particular their visual, setting, amenities, ecological value, architectural and historic interest;

The special character of the landscape and townscape in the corridor is protected or improved;

Views both within and from the corridor which contribute to this special character are protected or improved;

Where appropriate, public access is provided to and along the River and the Navigations.

The Nature Conservation value of the site is protected or improved.

GREEN BELT SITES

I object to ALL Green Belt sites allocated for development in the local plan.

I object to the identification and allocation of sites in this plan without regard to Green Belt, infrastructure or other constraints. The plan says that ‘allocating these sites does not grant planning permission for development, however, it does identify the principle of development and uses.’ This ignores the tens of thousands of detailed comments the Council have received about individual sites ever since the Issues and Options consultation in 2013. This amounts to a war of attrition by the Council in conjunction with developers, since many busy residents are tired of repeating the same comments as it appears to be a waste of time and effort. The plan has hardly changed since the Council received 20,000 objections to its first draft plan in 2014.13

All Green Belt sites should be removed from the plan until ‘exceptional circumstances’ for development are proven, as stipulated repeatedly in the NPPF. The Green Belt should trump short-term considerations such as perceived housing need, as case law has established.

• We need to maintain our wildlife, and we should be looking at ways of keeping the environment green and not being overloaded with property in areas of wild life This situation makes an even worse scenario for our drainage system, and could lead if more property is built, being all concrete, to the whole area being flooded. This is purely greed of squeezing people into confined spaces. However, what will happen to all the wildlife, you cannot expect deer to stay in the small woods that have been allocated for being woodland for animals. Changing the fields into a concrete jungle is not a welcome sight. Why are you even considering building on green belt land? When there are numerous other sites to be considered for example brown field sites and Wisely air field.

I would like you to consider the above planning application with the village of Normandy as a priority to maintaining a healthy environment to live in. I look forward to your comments.

All SANGs should be created in consultation with Surrey Wildlife Trust and local conservation groups.

Proposed SANG 4 at Tyting Farm should be created and managed so as to maximise chalk downland flora and create a substantial portion of a green corridor linking Pewley Down and Newlands Corner. Special emphasis should be given to managing the habitat for the flagship Small Blue butterfly (Cupido mimimus), a UK BAP priority species.

I OBJECT

The Policy shows concern for conserving and enhancing biodiversity, which is welcome. I also note and welcome the intention to extend the principle beyond Biodiversity Opportunity Areas. However the current plan to build on large areas of countryside and to inset villages will have the opposite effect. The Policy appears therefore to be a box-ticking exercise with no real teeth to it.

There is no mention of the value of wildlife gardening to biodiversity or the important role that larger gardens play in a village setting.

There is no mention of the impact of the plan on food production, or monitoring the loss of agricultural land.

“The natural world, its biodiversity and its constituent ecosystems are critically important to our wellbeing and economic prosperity, but are consistently undervalued in conventional economic analyses and decision-making” (Biodiversity 2020 page 11)

“As a public authority in England you have a duty to have regard to conserving biodiversity as part of your policy or decision making.” (Government Planning Guidance)

Part of the problem is that “Biodiversity benefits are unpriced” and so not valued by those who look only at the more obvious and simplistic economic benefits.

We have some concerns that “enhancing” the River Wey in the town centre will avoid using the available brownfield land around Walnut Tree Close and Slyfield for urban regeneration and sustainable housing that could otherwise be used.

The policy on Green and Blue infrastructure is broadly supported with an important and major caveat; and if disregarded this should count as an objection.

However, it is noted that the largest areas of industrial brownfield land within the borough are near to or adjacent to the River Wey, particularly in the Walnut Tree Close area and in the Slyfield industrial area.

These areas could support much more housing than the relatively small numbers indicated in the policy on the town centre, under a town centre regeneration scheme. This would have huge benefits for the community as a whole since relatively run down areas would be subject to regeneration, the river banks would be cleaner and more attractive.

It is vitally important for the town as a whole that the run-down Walnut Tree Close area is used for well-designed housing, as indicated by the Mastervision document first draft compiled by Allies and Morrison. John Rigg of Savills and Guildford Vision Group indicated to the Scrutiny Committee of GBC that initial commercial projections indicated that the Walnut Tree Close area alone could provide 4000 homes. This is significantly in excess of the current GBC proposals. Both Allies & Morrison and GVG initially indicated that they believed that this site could be available for regeneration within the critical 5 year window required for the local plan. It is therefore essential that nothing in this policy should jeopardise anything that could lead to the Walnut Tree Close area being a regeneration zone.

As has been noted elsewhere, for reasons that are not altogether clear but appear to be connected to central government direction and a desire to maximize the Community Infrastructure Levy, there is an aggressive desire to push development on to the Green Belt at all costs, ignoring or eliminating for other reasons sites which could be used in the town for residential purposes. This has informed recent planning decisions (both the Aldi site and the Waitrose site were originally zoned for residential purposes and were eminently suitable for this) and this bias seems to be informing the Local Plan.

As a result, it is important that the desire for Green and Blue infrastructure does not become an excuse for preventing regeneration of Walnut Tree Close. It is noted that the Council has stated that “The Council is keen to protect the watercourses from inappropriate development that would spoil their character”. The bus station adjacent to the River Wey, and the empty car parks associated with empty factory space, are hardly attractive development – well designed mid height (3-4 storey) apartment blocks would be a great improvement to the river corridor, offer major scope for sustainable regeneration, and would prevent the need for any incursion into the Green Belt to meet reasonable housing needs.

That regeneration zone would be highly sustainable, because it would be within 1 mile of the railway station, adjacent to the A3, and would eliminate an area of huge congestion in the town because if the industrial sites were replaced by housing then the residents would commute by train or walk to work rather than having to drive in to an industrial estate.
It certainly does not seem appropriate to create substantial new parkland on current hard standing. The protections to which this policy refers largely describe existing open space, which is of great importance. But to determine not to utilize brownfield land for residential use at an appropriate density in order to force building on to the Green Belt would seem to be in contradiction of the principles of use of the Green Belt applied in the Gallaher Homes v Solihull court of appeal case, where the hierarchy of use is clearly defined, with urban brownfield required to be used as a first option.

So there is some considerable support for the residential element of this policy, with the note that this should be explicitly amended to permit construction of a regeneration zone on the brownfield areas surrounding the river in the middle of the town, and that this should not be held up pending yet more transport studies (Guildford’s track record on brownfield utilisation is poor), but should be implemented with immediate effect.

It is not clear what form the “parkland” along the River Wey will take but the images available in the Town Centre MasterPlan suggest mown grass similar to the area around Millmead. This misses an opportunity to enhance biodiversity and enable town centre residents to engage with wildlife. Engagement with wildlife should mean much more than throwing bread at ducks and chasing pigeons. To achieve a wildlife corridor through Guildford, that can also benefit the health and well-being of residents living close by, the green space retained beside the river should be managed with the needs of wildlife in mind.

Responses to policy notes:

4.6.33 Villages are generally permeable to wildlife. The lower density of housing and presence of gardens (especially larger gardens) provides a corridor for movement across the residential area. Insetting of villages and the relaxation of planning restrictions in the Green Belt implied by Policy P2 will lead to infilling, “garden grabbing” and consequent loss of biodiversity. It will replace connections and corridors between habitats with barriers and lead to further fragmentation of our natural infrastructure.

4.6.34 In the past Guildford Borough Council recognised the role that wildlife gardening and management of parks and open spaces for wildlife could play in enhancing biodiversity. There seems to have been a shift away from this. These aspects should be recognised in the Plan as well as the importance of BOAs and although 4.6.35 goes part way towards this we have yet to see the GISPD.

4.6.36 This is long overdue and should include the way that our lanes are managed. The current approach is unsympathetic, sometimes damaging tree roots and scarce native plants. It seems to be oriented towards encouraging faster traffic rather than recognising the traffic-calming effects of natural vegetation (See the original Quiet Lanes Initiative) – management of open spaces and lanes

We await the Countryside Vision with interest.

4.6.37 It appears that Policy I5 has been omitted. (We think this means P5 – more evidence of slapdash work)

4.6.38 We agree with this statement but public access is frequently damaging to biodiversity – the more obvious examples being dogs out of control in the vicinity of ground-nesting birds and trampling of grassland habitats. Public open space must be protected for the reasons given but wildlife needs undisturbed (or at least less disturbed) space too if it is to thrive.

Responses to definitions:

This section starts with a definition that is not a proper definition and is followed by statements that are not definitions at all, apart from the last – suggesting that this part of the document has not been thought through or checked.

4.6.42 “Biodiversity creation and/or enhancement” is not a definition – it requires definition.

Do you mean that you will create new species or encourage them to evolve? Or do you mean that you will increase the number of species living in the Borough, or the population of each species, or both?

The points made are aspirational that have no enforcement to back them.

We support the use of green roofs and walls.
However, building on the countryside and increasing the population by such a large amount will not help vulnerable species. It will put added pressure on remaining habitats and increase light and air pollution, degrading the ability of the borough to support wildlife.

4.6.43 Arrangements with developers have no guarantee of success or longevity. They involve partial mitigation and overall loss of the original biodiversity interest of a site.

4.6.44 This appears to be saying that you will deliberately put playing fields, sports facilities and other leisure activities in BOAs – but these are land uses that reduce biodiversity!

4.6.45 Our understanding of SANG is that it is intended to reduce pressure on Special Protection Areas by providing an alternative area for people to walk their dogs – and hope that they do not prefer to use the SPA. In other words they are intended to attract the type of user that is damaging to vulnerable species such as ground-nesting birds. In the desperation to find SANG land Guildford Borough Council are making use of existing open space that will not attract people away from the SPA and you are ignoring the impact on existing wildlife. For example – GBC decided to include the towpath in the Parsonage Meadows SANG as a way of also facilitating a cycle route. Encouraging cyclists and dog-walkers to use the same narrow path will not encourage dog-walkers to use it rather than the SPA. At Effingham Common GBC plan to designate an important area for wildlife and ground-nesting Skylarks. GBC is riding roughshod over the opinions of the Commoners and local residents. GBC used to put up signage warning dog-walkers not to disturb the Skylarks during the nesting season – but these signs were not put up until well into the nesting season this year and only then after complaints and harassment of Skylarks by out-of-control dogs.

In allocating sites as SANG, GBC has ignored the requirement to consider existing biodiversity and clearly have little or any knowledge or understanding of the issue. The issues relating to Russell Place Farm have been pointed out by a qualified Biologist (see article in The Guildford Dragon by Chris Venables, Many invertebrates are dependent on the dung of grazing animals and this aspect of our countryside is being steadily driven out of our Borough).

4.6.46 We welcome this acknowledgement of the damaging effects of the proposed building developments. This also has relevance to the manner in which the green spaces next to the River Wey are managed.

4.6.47 We welcome the proposals but are concerned that these may be no more than good intentions. How will GBC ensure that they are carried out fully – and paid for by the developer? All the promises of the University when granted Manor Farm in 2003 came to nothing, no wild life trail, no classroom for children doing nature walks, no park for the residents of Guildford at Blackwell Farm, only some of the student accommodation units granted built etc etc.

**Reasoned Justification:**

4.6.50 As the emerging strategy for Surrey and the GISPD are not yet available the plan should not be proposing sites that will jeopardise them. The implication is that this aspect of the plan is not being taken seriously and will carry no weight in site selection despite the guidance in the NPPF.

4.6.51 In fact some GBC contract mowing and lane management is not in line with a strategy that is meant to protect biodiversity. Examples – damage to tree roots and unsympathetic treatment of roadside vegetation (that includes orchid species) in Chalk Lane – southern end of Kingston Meadow in East Horsley is now mown flat rather than left to grow as a meadow through the Spring and Summer as it used to be (so no more day-flying Burnet moths).

**KEY EVIDENCE**

Guildford Borough Policy Statements are statements – not evidence.

Additional evidence should include:

Existing SNCI surveys, including those that took place in 2004-2007.

Biodiversity evidence emerging from Neighbourhood Plans.

Evidence obtained by requests to local naturalists and natural history societies including those with a specialist interest.

**MONITORING**

Simply maintaining open space will not be enough for a significantly enlarged population.
Providing more open space to meet existing shortfalls or the needs of a much larger population will reduce the area of land currently in food production or providing wildlife habitat.

SANG delivery is harming existing biodiversity

It is not clear how you will measure a change in biodiversity just by looking at planning applications. “Net gains in biodiversity provided by development” is a contradiction in terms. There may well be a few examples in England where low density housing has been combined with manufactured habitat at the expense of loss of agricultural land with no surrounding habitat damage - but we see no evidence of that in the Local Plan. Even when a housing development replaces agricultural land it increases pressure on the surrounding countryside. A simple example is where houses border woodland and residents dump their garden rubbish (and often worse) over the garden fence. Increased leisure use on nearby countryside also has an adverse effect on biodiversity.

There is no guarantee that mitigations listed in an application will be carried out and their effectiveness is not guaranteed either. GBC would need to carry out follow-up ecological surveys on all sites. Who would pay for these? Are there enough consultants to carry out the work in sufficient detail? What aspects of biodiversity will be measured?

How frequently are surveys by Natural England intended to take place? How will GBC ensure that NE carry them out? A baseline of existing surveys against which changes will be monitored should be included within the plan and it must be comprehensive for monitoring to be effective.

How frequently will SNCI surveys be carried out? At what expense? The last survey published in 2007 made recommendations for an increase in the size of the Wisley Airfield SNCI and stated that this should be taken into account for planning purposes. This was overridden in the recent planning inspector’s report and the Local Plan includes this particular SNCI as a building site. This is clearly a case of hypocrisy and suggests that the Council has no genuine intention to maintain biodiversity let alone enhance it.

We believe that a survey of SNCIs is currently taking place but that it is limited in scope to the previously known sites. This prevents other sites, where genuine biodiversity enhancement has taken place (often as a result of volunteer community effort), from being recognised in this way. While every stone is being turned over in the quest to find green space to build on, no genuine effort is being made to identify biodiversity hotspots that may have been overlooked in the past. In other words the approach being taken is one that intends to make no net gain, and possibly even reduce, sites of nature conservation interest – in contradiction to the stated aims.

If an existing SNCI (or one proposed on grounds of biodiversity but not formally accepted in a Local Plan) is found to be in poor condition the action taken should be to bring it back into good condition – not to remove its status and build on it.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate?  ( ), is Sound?  ( ), is Legally Compliant?  ( )

I object to the omission of a policy for the River Wey which was included in the previous local plan. The existing policy G11 from 2003 Local Plan should be included so that development within the River Wey corridor will only be permitted provided that:

- It protects or improves the special character of the River Wey and the Guildford and Godalming Navigations, in particular their visual, setting, amenities, ecological value, architectural and historic interest;
- The special character of the landscape and townscape in the corridor is protected or improved;
- Views both within and from the corridor which contribute to this special character are protected or improved;
• Where appropriate, public access is provided to and along the River and the Navigations.
• The Nature Conservation value of the site is protected or improved

Policy 14 Green and Blue Infrastructure

I object. The plan to build on Green Belt and villages will cancel out any benefits of enhancing biodiversity.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/2238  Respondent: 8860897 / Julia Shaw  Agent:

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID4

Do you consider this section of the document; complies with the Duty to Cooperate? ( No ), is Sound? ( No ), is Legally Compliant? ( )

Response type: OBJECT

The Policy shows concern for conserving and enhancing biodiversity, which is welcome. I also note and welcome the intention to extend the principle beyond Biodiversity Opportunity Areas. However the current plan to build on large areas of countryside and to inset villages will have the opposite effect. The Policy appears therefore to be a box-ticking exercise with no real teeth to it.

There is no mention of the value of wildlife gardening to biodiversity or the important role that larger gardens play in a village setting.

There is no mention of the impact of the plan on food production, or monitoring the loss of agricultural land.

“The natural world, its biodiversity and its constituent ecosystems are critically important to our wellbeing and economic prosperity, but are consistently undervalued in conventional economic analyses and decision-making” (Biodiversity 2020 page 11)

“As a public authority in England you have a duty to have regard to conserving biodiversity as part of your policy or decision making.” (Government Planning Guidance)

Part of the problem is that “Biodiversity benefits are unpriced” and so not valued by those who look only at the more obvious and simplistic economic benefits.

I have some concerns that “enhancing” the River Wey in the town centre will avoid using the available brownfield land around Walnut Tree Close and Slyfield for urban regeneration and sustainable housing that could otherwise be used.

Why should the Walnut Tree Close/Woodbridge Meadows industrial area not be regenerated from bus garages, urban car parks and empty factories to offer sustainable, well designed, urban homes which are medium height, and can meet almost all of Guildford’s real housing needs?
The policy on Green and Blue infrastructure is broadly supported with an important and major caveat; and if disregarded this should count as an objection.

However, it is noted that the largest areas of industrial brownfield land within the borough are near to or adjacent to the River Wey, particularly in the Walnut Tree Close area and in the Slyfield industrial area.

These areas could support much more housing than the relatively small numbers indicated in the policy on the town centre, under a town centre regeneration scheme. This would have huge benefits for the community as a whole since relatively run down areas would be subject to regeneration, the river banks would be cleaner and more attractive.

It is vitally important for the town as a whole that the run-down Walnut Tree Close area is used for well-designed housing, as indicated by the Mastervision document first draft compiled by Allies and Morrison. John Rigg of Savills and Guildford Vision Group indicated to the Scrutiny Committee of GBC that initial commercial projections indicated that the Walnut Tree Close area alone could provide 4000 homes. This is significantly in excess of the current GBC proposals. Both Allies & Morrison and GVG initially indicated that they believed that this site could be available for regeneration within the critical 5 year window required for the local plan. It is therefore essential that nothing in this policy should jeopardise anything that could lead to the Walnut Tree Close area being a regeneration zone.

As has been noted elsewhere, for reasons that are not altogether clear but appear to be connected to central government direction and a desire to maximize the Community Infrastructure Levy, there is an aggressive desire to push development on to the Green Belt at all costs, ignoring or eliminating for other reasons sites which could be used in the town for residential purposes. This has informed recent planning decisions (both the Aldi site and the Waitrose site were originally zoned for residential purposes and were eminently suitable for this) and this bias seems to be informing the Local Plan.

As a result, it is important that the desire for Green and Blue infrastructure does not become an excuse for preventing regeneration of Walnut Tree Close. It is noted that the Council has stated that “The Council is keen to protect the watercourses from inappropriate development that would spoil their character”. The bus station adjacent to the River Wey, and the empty car parks associated with empty factory space, are hardly attractive development – well designed mid height (3-4 storey) apartment blocks would be a great improvement to the river corridor, offer major scope for sustainable regeneration, and would prevent the need for any incursion into the Green Belt to meet reasonable housing needs.

That regeneration zone would be highly sustainable, because it would be within 1 mile of the railway station, adjacent to the A3, and would eliminate an area of huge congestion in the town because if the industrial sites were replaced by housing then the residents would commute by train or walk to work rather than having to drive in to an industrial estate.

It certainly does not seem appropriate to create substantial new parkland on current hard standing. The protections to which this policy refers largely describe existing open space, which is of great importance. But to determine not to utilize brownfield land for residential use at an appropriate density in order to force building on to the Green Belt would seem to be in contradiction of the principles of use of the Green Belt applied in the Gallaher Homes v Solihull court of appeal case, where the hierarchy of use is clearly defined, with urban brownfield required to be used as a first option.

So there is some considerable support for the residential element of this policy, with the note that this should be explicitly amended to permit construction of a regeneration zone on the brownfield areas surrounding the river in the middle of the town, and that this should not be held up pending yet more transport studies (Guildford’s track record on brownfield utilisation is poor), but should be implemented with immediate effect.

It is not clear what form the “parkland” along the River Wey will take but the images available in the Town Centre MasterPlan suggest mown grass similar to the area around Millmead. This misses an opportunity to enhance biodiversity and enable town centre residents to engage with wildlife. Engagement with wildlife should mean much more than throwing bread at ducks and chasing pigeons. To achieve a wildlife corridor through Guildford, that can also benefit the health and well-being of residents living close by, the green space retained beside the river should be managed with the needs of wildlife in mind.

Responses to policy notes:

4.6.33 Villages are generally permeable to wildlife. The lower density of housing and presence of gardens (especially larger gardens) provides a corridor for movement across the residential area. Insetting of villages and the relaxation of planning restrictions in the Green Belt implied by Policy P2 will lead to infilling, “garden grabbing” and consequent loss of biodiversity. It will replace connections and corridors between habitats with barriers and lead to further fragmentation of our natural infrastructure.
4.6.34 In the past Guildford Borough Council recognised the role that wildlife gardening and management of parks and open spaces for wildlife could play in enhancing biodiversity. There seems to have been a shift away from this. These aspects should be recognised in the Plan as well as the importance of BOAs and although 4.6.35 goes part way towards this I have yet to see the GISPD.

4.6.36 This is long overdue and should include the way that our lanes are managed. The current approach is unsympathetic, sometimes damaging tree roots and scarce native plants. It seems to be oriented towards encouraging faster traffic rather than recognising the traffic-calming effects of natural vegetation (See the original Quiet Lanes Initiative) – management of open spaces and lanes

I await the Countryside Vision with interest.

4.6.37 It appears that Policy I5 has been omitted. (I think this means P5 – more evidence of slapdash work)

4.6.38 I agree with this statement but public access is frequently damaging to biodiversity – the more obvious examples being dogs out of control in the vicinity of ground-nesting birds and trampling of grassland habitats. Public open space must be protected for the reasons given but wildlife needs undisturbed (or at least less disturbed) space too if it is to thrive.

Responses to definitions:

This section starts with a definition that is not a proper definition and is followed by statements that are not definitions at all, apart from the last – suggesting that this part of the document has not been thought through or checked.

4.6.42 “Biodiversity creation and/or enhancement” is not a definition – it requires definition.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

In terms of culture and scenically, with the River Wey, Guildford could become one of THE most attractive commuter towns of London, but the is NO ASPIRATION in the plan to enhance this; it's a notoriously traffic-jammed disgrace.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**
All the West Horsley sites are enlarging the parish boundaries into green spaces and in particular the development sites at; A38 Manor Farm, A40 Waterloo Farm and A41, East Lane; contribute to the openness and rural character of the village. Additionally restraints on these sites relating to wildlife corridors.

In the case of the open green fields of site A41, this is a truly rural character of the village with its ancient woodland beyond to the south and hence should not be included in the proposed sites as no ‘special circumstances’ as defined by the NPPF have been demonstrated nor likely to be by definition.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Sangs are created so that building houses can get the go-ahead. We do not want development in this area of exceptional natural beauty.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object to the plan due to the impact upon pollution.

The increase in traffic across the area will increase harmful toxins in the air, already an issue in some areas of the borough.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
I object to the fact that the proposed development plan does not meet the needs and desires of local communities, as evidenced through the Ockham Parish Plan. The top two responses as to why local residents enjoy life in Ockham are 1) access to the countryside and clean air and 2) the peace and quiet afforded by wide open spaces. Over 90% wish to see both the historic features of the village maintained and the village's green spaces, including the FWA/TFM, protected.

There is a diverse range of flora and fauna in the area that would be adversely affected. Habitats adjoining A46 are Priority Habitats under the NERC Act, including protected species (European Protected Species, Species of Principal Importance and those protected by The Wildlife and Countryside Act (1981).

The urban brownfield/derelict sites in the borough should be released for housing development before the development of land located within the Green Belt is considered.

**Attached documents:**

---

**Comment ID:** PSLPP16/16986  **Respondent:** 8893057 / Dianne Garnett  **Agent:**

**Document:** Proposed Submission Local Plan: strategy and sites 2016 / Policy ID4

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1.1 **We object** to policy I4 green and blue infrastructure.

1.2 This policy is a box-ticking exercise with no teeth to it. It sits oddly with the plan’s onslaught on the Green Belt. The plan to build on large areas of countryside and to inset villages will cancel out any benefits from extending the principle of enhancing biodiversity beyond Biodiversity Opportunity Areas.

1.3 There is no mention of the value of wildlife gardening to biodiversity or the important role that larger gardens play in a village setting.

1 **ABSENCE OF POLICY ON RIVER WEY**

1.1 **We object** to the omission of a policy for the River Wey which was included in the previous local plan. The existing policy G11 from 2003 Local Plan should be included so that development within the River Wey corridor will only be permitted provided that:

- It protects or improves the special character of the River Wey and the Guildford and Godalming Navigations, in particular their visual, setting, and ecological value, architectural and historic interest;
- The special character of the landscape and townscape in the corridor is protected or improved;
- Views both within and from the corridor which contribute to this special character are protected or improved;
- Where appropriate, public access is provided to and along the River and the Navigations.
- The Nature Conservation value of the site is protected or improved.
2 GREEN BELT SITES

2.1 We object to ALL Green Belt sites allocated for development in the local plan.

2.2 We object to the identification and allocation of sites in this plan without regard to Green Belt, infrastructure or other constraints. The plan says that “allocating these sites does not grant planning permission for development, however, it does identify the principle of development and uses.” This ignores the tens of thousands of detailed comments the Council have received about individual sites ever since the Issues and Options consultation in 2013. This amounts to a war of attrition by the Council in conjunction with developers, since many busy residents are sick and tired of repeating the same comments to deaf ears. The plan has hardly changed since the Council received 20,000 objections to its first draft plan in 2014.13

2.3 There is no need for housing on this site because the local plan housing target is incorrect and inflated and ignores constraints.

2.4 All Green Belt sites should be removed from the plan until “exceptional circumstances” for development are proven, as stipulated repeatedly in the NPPF. The Green Belt should trump short-term considerations such as perceived housing need, as case law has established.

I OBJECT TO POLICY I4 (GREEN & BLUE INFRASTRUCTURE):

• No teeth. Policy cancelled out by huge developments across the countryside. No mention of opportunity costs of loss of Green Belt services and amenities (e.g. farming).

SITES

I OBJECT TO ALL POLICIES INVOLVING BUILDING IN THE GREEN BELT:

• No “exceptional circumstances” shown, numbers excessive and the clearly expressed views of residents in previous consultations ignored.

I object to the plan as it will alter the character of the area and damage wildlife. Replacing the country roads and hedgerows to cope with the increase traffic will damage the environment. Increasing capacity for parking at local stations will require network rail to build multi-storey car parks at Effingham and Horsley to cope with the increase - massively altering the character of the villages. There is little spare capacity on morning commuter trains to cope with the increase.

I object to policy 14.Insetting sites on Green Belt does not enhance biodiversity. It is destructive. Research shows our wildlife has drastically declined over the last 20 years to alarming levels, even our most common species are seriously under threat. Local councils and the government needs to really take this issue seriously. Insetting on agricultural land is a long term disaster, with an agricultural land shortage of 10% estimated by 2020. The damage being inflicted on our rural areas is at a tipping point.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

‘Development will not be permitted within or adjacent to national sites unless it can be shown that doing so would not be harmful to the nature conservation interests of the site. Permission will not be granted for proposals that are likely to materially harm the nature conservation interests of local sites unless clear justification is provided that the need for development clearly outweighs the impact on biodiversity.’

The Friends of Normandy Wildlife who have locals experts in this field have produced an excellent response in this area and one that I cant surpass. What I can say it is would appear that an increase in pets, people, transport etc will have an adverse impact on the nature conservation of the area.

However all the habitats within or adjoining the proposed development site are Priority Habitats of Principal Importance under the NERC Act, plus a number of protected species (European Protected Species, Species of Principal Importance and those protected under The Wildlife and Countryside Act (1981) as amended) have been recorded within either the proposed development site or 500m to 1km of the proposed development site.

These include Hedgehogs, Dormice, Great Crested Newts, Barn Owls, Stag Beetles, Skylarks, Common Toads, Common Lizards, Grass Snakes, Adders, Slow worms, Badgers and Bats (including potential roosts within a number of veteran and mature oaks and other trees across the proposed development site and within the woodland blocks).

We also object to the inexact wording used. This policy replaces G5(10) which was worded: “Open spaces, whether public or private, which contribute to the character of an area, in terms of the views they create, the feeling of openness they allow, are protected.” This has been modified as far as this policy is concerned: “Open space (encompassing all open space within urban areas, land designated as Open Space on the Policies Map and all land and water that provides opportunities for recreation and sport) will be protected from development in accordance with the NPPF.” The old policy, although shorter, is felt to be more all-encompassing. What if an open space does not appear in the policy map? An example would be a large roundabout surrounding a small green – according to this policy, it can now be built upon.

Policy I4: Green and blue infrastructure

I OBJECT to this policy in its current form. It says that the Council will conserve and enhance biodiversity, but this is at odds with the rest of the draft local plan which proposes to build on green belt land and to inset, infill and urbanise villages (which currently include wildlife corridors which help to protect and promote biodiversity across the borough).

Whilst I support the aims of protecting and promoting biodiversity and open spaces, this policy, together with the rest of the proposed local plan, will not achieve those aims.

I strongly object to Guildford Borough Council's Draft Local Plan June 2016.

It would ruin what makes Guildford and Surrey special, the lovely amount of green we live amongst.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
The University broadly supports this policy and would highlight the opportunities at Blackwell Farm (Policy A26) for the creation of a network of high quality, flexible and useable green spaces as part of the masterplan, retaining and making best use of existing green assets such as woodland areas and incorporating measures intended to enhance biodiversity. These features will provide opportunities for play, leisure and relaxation through the provision of on-site SANG. Opportunities also exist to provide blue infrastructure networks through the provision of small-scale bodies of water as part of the drainage strategy.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I support this policy.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

POLICY I4 Green and Blue infrastructure
OBJECT The Policy shows concern for conserving and enhancing biodiversity, which is welcome. I also note and welcome the intention to extend the principle beyond Biodiversity Opportunity Areas. However the current plan to build on large areas of countryside and to inset villages will have the opposite effect. The Policy appears therefore to be a box-checking exercise with no real teeth to it.

There is no mention of the value of wildlife gardening to biodiversity or the important role that larger gardens play in a village setting.

There is no mention of the impact of the plan on food production, or monitoring the loss of agricultural land.

Biodiversity Opportunity Areas (BOAs) seem to have been heavily influenced by the proposal of new identified settlement boundaries, in this draft local plan. The proposal in themselves have not been fully considered; they threaten landscape and biodiversity.

Biodiversity will be seriously damaged by the many greenfield development sites proposed. We are suspicious of the use of the phrase “where possible”, which is a let-out.

Important habitats for biodiversity (outside BOAs) include many which are not adjacent to BOAs. There is no proper concern for protection of such areas.

4.6.45 is misleading. The primary ostensible role of SANGs is to divert recreational use, and dog-walkers in particular, away from the TBHSPA.

It is extremely doubtful whether new SANG will achieve its primary purpose. For example, dog walkers are being encouraged to use sites occupied by ground-nesting Skylarks. It is wrong to claim, in effect, that SANG will produce net gains in biodiversity when it will be used to justify the destruction of existing wildlife on greenfield sites by building on it.

Land used for SANG should be made attractive in order to divert recreational use away from the SPA; but this cannot be achieved by a SANG which is adjacent to the SPA or many of the sites proposed.

I object to the introduction of 4.6.49a which appears to be an afterthought to weaken the policy.

Existing biodiversity and recreational use is being ignored by Guildford Borough Council and developers in selecting sites.

In practice, SANG is being used in order to avoid any restriction on housebuilding due to the SPA; and is effectively a Trojan horse. Furthermore, all such sites are by definition already green spaces with either biodiversity or recreational uses.

Pollution: I strongly object to the new draft plan proposing additional 2000 homes at Wisley, 2000 at Gosden Hill Farm, nearly 600 in The Horsleys and 400 at Garlicks Arch as it will have a great impact on the local road network which at peak times is already struggling. The large increase in volume of traffic will cause an increase in nitrogen dioxide and particulates in the environment – already a cause for concern in several areas in the borough. Additional noise and air pollution will be inevitable with this increase in traffic and it will have a significant impact on our environment.

Policy I4: Green and Blue infrastructure

Object (not effective in respect of NPPF paragraph 182)

We are strongly supportive of the principles and aims set out in draft Policy I4. However, we recommend some adjustments to the current wording of the draft policy and supporting text in order to ensure consistency with the NPPF.

The absolute requirement for new development to provide ‘net gains’ in biodiversity in all cases is not enshrined in the NPPF, which makes reference to delivering net gains in biodiversity ‘where possible’. Whilst we support the delivery of net gains in biodiversity where possible, and see this as a wholly positive aspiration, the Local Plan must nonetheless be consistent with national policy. The draft policy wording should therefore be amended to ensure consistency with the NPPF.

The draft policy wording states that “where proposals fall within or adjacent to a BOA, biodiversity measures should support that BOA’s objectives.” Again, whilst it is good practice for proposals to seek to support the objectives of the BOA into which they fall, these areas are broad and strategic in nature, and in many instances it is likely that alternative biodiversity enhancements are more appropriate for particular sites and proposals. This statement should therefore be amended to enable greater flexibility for schemes to deliver the most appropriate biodiversity measures at a particular location; the addition of ‘where appropriate’ at the end of the above sentence would allow for this. This would also be consistent with GBC’s interpretation at paragraph 4.8, bullet point 1 of the ‘Green and Blue Infrastructure Topic Paper’.

The draft wording also states that “permission will not be granted for proposals that are likely to materially harm the nature conservation interests of local sites unless clear justification is provided that the need for development clearly outweighs the impact on biodiversity.” We broadly support this position, although in our view the policy should also make reference to the need to provide impact avoidance insofar as is possible in the first instance, and where unavoidable impacts are then likely, mitigation and/or compensation measures taken where necessary, in accordance with the NPPF.

Policy I4: Green and Blue Infrastructure
It is surprising to find this policy in the same document that proposes a very substantial increase in the number of houses, the removal of Green Belt protection from fifteen villages in the borough, the construction of two thirds of the proposed housing on land that is currently in the Green Belt, and a 2,000 unit housing development built right up to the boundaries of the AONB. With this level of development, it is difficult to countenance the suggestion that this policy will have any credible effect on green and blue infrastructure. Therefore OBJECT to the clear inconsistency of the Local Plan as a whole.

8) I object to the fact that air quality concerns have not been taken seriously- air pollution in many parts of the borough, and particularly at the M25/A3 junction, is in excess of EU-permitted levels. Additional traffic will exacerbate this situation, impacting the health of all current and future residents. No account is being taken of the acid deposition on the Thames Basin Heaths SPA and the irreversible impact of the habitat degradation.

9) I object to the fact that the proposed plan does not meet the needs and desires of local communities, as evidenced through the Ockham Parish Plan. The top two responses as to why local residents enjoy life in Ockham are (1) access to the countryside and clean air and (2) the peace and quiet afforded by wide open spaces. Over 90% wish to see both the historic features of the village maintained and the village's green spaces, including the FWA/TFM, protected.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID4
**POLICY 14 Green and blue infrastructure**

I OBJECT. This policy is a box-ticking exercise with no teeth to it. It sits oddly with the plan’s onslaught on the Green Belt. The plan to build on large areas of countryside and to inset villages will cancel out any benefits from extending the principle of enhancing biodiversity beyond Biodiversity Opportunity Areas.

There is no mention of the value of wildlife gardening to biodiversity or the important role that larger gardens play in a village setting.

There is no mention of the impact of the plan on food production, or monitoring the loss of agricultural land.

I OBJECT TO POLICY I4 (GREEN & BLUE INFRASTRUCTURE):

• No teeth. Policy cancelled out by huge developments across the countryside. No mention of opportunity costs of loss of Green Belt services and amenities (e.g. farming).

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/323  Respondent: 10799169 / Neal Basson  Agent:
Impact on Areas of Outstanding Natural Beauty
The impact of the proposed housing estates would be to blight the surrounding areas of outstanding natural beauty. Many of the proposed sites are so close to such areas that it would no longer be appropriate to refer to these as such, as they would become reducing areas of green countryside, surrounded by urban sprawl.

Most of the areas proposed for potential developments are contiguous with AONB and it is my understanding that statutory protection is afforded to areas contiguous with AONB.

Impact on Wildlife
The impact on wildlife in the Horsleys would be devastating. In my own garden, I have had grass snakes, hedgehogs, weasels, toads and deer and have observed red kites and woodpeckers. These species would be under threat form loss of habitat, and in some cases, predatory cats, the population of which would increase with the proposed rise in homes.

POLICY I4 Green and Blue infrastructure
OBJECT The Policy shows concern for conserving and enhancing biodiversity, which is welcome. We also note and welcome the intention to extend the principle beyond Biodiversity Opportunity Areas. However the current plan to build on large areas of countryside and to inset villages will have the opposite effect. The Policy appears therefore to be a box-ticking exercise with no real teeth to it.

There is no mention of the value of wildlife gardening to biodiversity or the important role that larger gardens play in a village setting.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
There is no mention of the impact of the plan on food production, or monitoring the loss of agricultural land.

The Council needs to completely rethink its priorities and very carefully consider the views and requirements of the borough’s residents. We need a less contentious and more viable plan, which proposes a sustainable and suitable level of development. The use of brownfield sites should be high on the agenda.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
As has been noted elsewhere, for reasons that are not altogether clear but appear to be connected to central government direction and a desire to maximize the Community Infrastructure Levy, there is an aggressive desire to push development on to the Green Belt at all costs, ignoring or eliminating for other reasons sites which could be used in the town for residential purposes. This has informed recent planning decisions (both the Aldi site and the Waitrose site were originally zoned for residential purposes and were eminently suitable for this) and this bias seems to be informing the Local Plan.

As a result, it is important that the desire for Green and Blue infrastructure does not become an excuse for preventing regeneration of Walnut Tree Close. It is noted that the Council has stated that “The Council is keen to protect the watercourses from inappropriate development that would spoil their character”. The bus station adjacent to the River Wey, and the empty car parks associated with empty factory space, are hardly attractive development – well designed mid height (3-4 storey) apartment blocks would be a great improvement to the river corridor, offer major scope for sustainable regeneration, and would prevent the need for any incursion into the Green Belt to meet reasonable housing needs.

That regeneration zone would be highly sustainable, because it would be within 1 mile of the railway station, adjacent to the A3, and would eliminate an area of huge congestion in the town because if the industrial sites were replaced by housing then the residents would commute by train or walk to work rather than having to drive in to an industrial estate.

It certainly does not seem appropriate to create substantial new parkland on current hard standing. The protections to which this policy refers largely describe existing open space, which is of great importance. But to determine not to utilize brownfield land for residential use at an appropriate density in order to force building on to the Green Belt would seem to be in contradiction of the principles of use of the Green Belt applied in the Gallaher Homes v Solihull court of appeal case, where the hierarchy of use is clearly defined, with urban brownfield required to be used as a first option.

So there is some considerable support for the residential element of this policy, with the note that this should be explicitly amended to permit construction of a regeneration zone on the brownfield areas surrounding the river in the middle of the town, and that this should not be held up pending yet more transport studies (Guildford’s track record on brownfield utilisation is poor), but should be implemented with immediate effect.

It is not clear what form the “parkland” along the River Wey will take but the images available in the Town Centre MasterPlan suggest mown grass similar to the area around Millmead. This misses an opportunity to enhance biodiversity and enable town centre residents to engage with wildlife. Engagement with wildlife should mean much more than throwing bread at ducks and chasing pigeons. To achieve a wildlife corridor through Guildford, that can also benefit the health and well-being of residents living close by, the green space retained beside the river should be managed with the needs of wildlife in mind.

Responses to policy notes:

4.6.33 Villages are generally permeable to wildlife. The lower density of housing and presence of gardens (especially larger gardens) provides a corridor for movement across the residential area. Insetting of villages and the relaxation of planning restrictions in the Green Belt implied by Policy P2 will lead to infilling, “garden grabbing” and consequent loss of biodiversity. It will replace connections and corridors between habitats with barriers and lead to further fragmentation of our natural infrastructure.

4.6.34 In the past Guildford Borough Council recognised the role that wildlife gardening and management of parks and open spaces for wildlife could play in enhancing biodiversity. There seems to have been a shift away from this. These aspects should be recognised in the Plan as well as the importance of BOAs and although 4.6.35 goes part way towards this we have yet to see the GREEN AND BLUE INFRASTRUCTURE SUPPLEMENTARY PLANNING DOCUMENT.

4.6.36 This is long overdue and should include the way that our lanes are managed. The current approach is unsympathetic, sometimes damaging tree roots and scarce native plants. It seems to be oriented towards encouraging faster traffic rather than recognising the traffic-calming effects of natural vegetation (See the original Quiet Lanes Initiative) – management of open spaces and lanes

We await the Countryside Vision with interest.

4.6.37 It appears that Policy I5 has been omitted. (We think this means P5 – more evidence of slapdash work)

4.6.38 We agree with this statement but public access is frequently damaging to biodiversity – the more obvious examples being dogs out of control in the vicinity of ground-nesting birds and trampling of grassland habitats. Public open space must be protected for the reasons given but wildlife needs undisturbed (or at least less disturbed) space too if it is to thrive.
Responses to definitions:

This section starts with a definition that is not a proper definition and is followed by statements that are not definitions at all, apart from the last – suggesting that this part of the document has not been thought through or checked.

4.6.42 “Biodiversity creation and/or enhancement” is not a definition – it requires definition.

Do you mean that you will create new species or encourage them to evolve? Or do you mean that you will increase the number of species living in the Borough, or the population of each species, or both?

The points made are aspirational that have no enforcement to back them.

We support the use of green roofs and walls.

However, building on the countryside and increasing the population by such a large amount will not help vulnerable species. It will put added pressure on remaining habitats and increase light and air pollution, degrading the ability of the borough to support wildlife.

4.6.43 Arrangements with developers have no guarantee of success or longevity. They involve partial mitigation and overall loss of the original biodiversity interest of a site.

4.6.44 This appears to be saying that you will deliberately put playing fields, sports facilities and other leisure activities in BOAs – but these are land uses that reduce biodiversity!

4.6.45 Our understanding of SANG is that it is intended to reduce pressure on Special Protection Areas by providing an alternative area for people to walk their dogs – and hope that they do not prefer to use the SPA. In other words they are intended to attract the type of user that is damaging to vulnerable species such as ground-nesting birds. In the desperation to find SANG land Guildford Borough Council are making use of existing open space that will not attract people away from the SPA and you are ignoring the impact on existing wildlife. For example – GBC decided to include the towpath in the Parsonage Meadows SANG as a way of also facilitating a cycle route. Encouraging cyclists and dog-walkers to use the same narrow path will not encourage dog-walkers to use it rather than the SPA. At Effingham Common GBC plan to designate an important area for wildlife and ground-nesting Skylarks. GBC is riding roughshod over the opinions of the Commoners and local residents. GBC used to put up signage warning dog-walkers not to disturb the Skylarks during the nesting season – but these signs were not put up until well into the nesting season this year and only then after complaints and harassment of Skylarks by out-of-control dogs.

In allocating sites as SANG, GBC has ignored the requirement to consider existing biodiversity and clearly have little or any knowledge or understanding of the issue. The issues relating to Russell Place Farm have been pointed out by a qualified Biologist. Many invertebrates are dependent on the dung of grazing animals and this aspect of our countryside is being steadily driven out of our Borough.

4.6.46 We welcome this acknowledgement of the damaging effects of the proposed building developments. This also has relevance to the manner in which the green spaces next to the River Wey are managed.

4.6.47 We welcome the proposals but are concerned that these may be no more than good intentions. How will GBC ensure that they are carried out fully – and paid for by the developer?

Reasoned Justification:

4.6.50 As the emerging strategy for Surrey and the Green and Blue Infrastructure Supplementary Planning Document (GISPD) are not yet available the plan should not be proposing sites that will be jeopardised. The implication is that this aspect of the plan is not being taken seriously and will carry no weight in site selection despite the guidance in the NPPF.

4.6.51 In fact some GBC contract mowing and lane management is not in line with a strategy that is meant to protect biodiversity.

KEY EVIDENCE

Guildford Borough Policy Statements are statements – not evidence.

Additional evidence should include:
Existing SNCI surveys, including those that took place in 2004-2007.

Biodiversity evidence emerging from Neighbourhood Plans.

Evidence obtained by requests to local naturalists and natural history societies including those with a specialist interest.

**MONITORING**

Simply maintaining open space will not be enough for a significantly enlarged population.

Providing more open space to meet existing shortfalls or the needs of a much larger population will reduce the area of land currently in food production or providing wildlife habitat.

SANG delivery is harming existing biodiversity

It is not clear how you will measure a change in biodiversity just by looking at planning applications. “Net gains in biodiversity provided by development” is a contradiction in terms. There may well be a few examples in England where low density housing has been combined with manufactured habitat at the expense of loss of agricultural land with no surrounding habitat damage - but we see no evidence of that in the Local Plan. Even when a housing development replaces agricultural land it increases pressure on the surrounding countryside. A simple example is where houses border woodland and residents dump their garden rubbish (and often worse) over the garden fence. Increased leisure use on nearby countryside also has an adverse effect on biodiversity.

There is no guarantee that mitigations listed in an application will be carried out and their effectiveness is not guaranteed either. GBC would need to carry out follow-up ecological surveys on all sites. Who would pay for these? Are there enough consultants to carry out the work in sufficient detail? What aspects of biodiversity will be measured?

How frequently are surveys by Natural England intended to take place? How will GBC ensure that NE carry them out? A baseline of existing surveys against which changes will be monitored should be included within the plan and it must be comprehensive for monitoring to be effective.

How frequently will SNCI surveys be carried out? At what expense? The last survey published in 2007 made recommendations for an increase in the size of the Wisley Airfield SNCI and stated that this should be taken into account for planning purposes. This was overridden in the recent planning inspector’s report and the Local Plan includes this particular SNCI as a building site. This is clearly a case of hypocrisy and suggests that the Council has no genuine intention to maintain biodiversity let alone enhance it.

We believe that a survey of SNCIs is currently taking place but that it is limited in scope to the previously known sites. This prevents other sites, where genuine biodiversity enhancement has taken place (often as a result of volunteer community effort), from being recognised in this way. While every stone is being turned over in the quest to find green space to build on, no genuine effort is being made to identify biodiversity hotspots that may have been overlooked in the past. In other words the approach being taken is one that intends to make no net gain, and possibly even reduce, sites of nature conservation interest – in contradiction to the stated aims.

If an existing SNCI (or one proposed on grounds of biodiversity but not formally accepted in a Local Plan) is found to be in poor condition the action taken should be to bring it back into good condition – not to remove its status and build on it.

I object to POLICY I4 Green and blue infrastructure

- Infrastructure considered here as an afterthought, rather than pre-condition of development. Should be a key issue for the rest of the plan.
- Excessive housebuilding in countryside not supported by any funding or provision for infrastructure.
- Heavy focus on building on greenfield sites inefficient and unnecessary: cheap for developers but much more expensive for the public who have to fund the infrastructure.
- Draft CIL scale discourages use of brownfield land first.
- No plan for organic increase in existing traffic congestion, let alone once thousands of houses are built across the countryside. Local roads hardly considered. Green Belt being eroded before road widening/improvement plans certain, encouraging over-development of greenfield sites.
  
  · All Green Belt sites should be removed from the plan until “exceptional circumstances” for development are proven, as stipulated repeatedly in the NPPF. The Green Belt should trump short-term considerations such as perceived housing need, as case law has established

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Policy I4: Green and blue infrastructure
I OBJECT to this policy

The Policy shows concern for conserving and enhancing biodiversity, which is welcome.

There is no mention of the impact of the plan on food production, or of monitoring the loss of agricultural land.

The River Wey must not be subject to overdevelopment which would destroy its naturalness and a green corridor must be preserved.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID4

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

- I object to the destruction of irreplaceable ancient woodland
- I object to the destruction of habitat for wildlife

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/18612  Respondent: 10858977 / Angela Otterson  Agent:

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID4

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to policy I4 green and blue infrastructure.

This policy is a box-ticking exercise with no teeth to it. It sits oddly with the plan’s onslaught on the Green Belt. The plan to build on large areas of countryside and to inset villages will cancel out any benefits from extending the principle of enhancing biodiversity beyond Biodiversity Opportunity Areas.

There is no mention of the value of wildlife gardening to biodiversity or the important role that larger gardens play in a village setting.

ABSENCE OF POLICY ON RIVER WEY

I object to the omission of a policy for the River Wey which was included in the previous local plan. The existing policy G11 from 2003 Local Plan should be included so that development within the River Wey corridor will only be permitted provided that:

1. It protects or improves the special character of the River Wey and the Guildford and Godalming Navigations, in particular their visual, setting, amenities, ecological value, architectural and historic interest;
2. The special character of the landscape and townscape in the corridor is protected or improved;
3. Views both within and from the corridor which contribute to this special character are protected or improved;
4. Where appropriate, public access is provided to and along the River and the Navigations.
5. The Nature Conservation value of the site is protected or improved

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
I object to the proposal in the local plan on the grounds that it would have serious and unwanted impact on the nature reserve nearby. The proposed site is a quality green belt amenity area within countryside and would be spoilt by development.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

---

No protection of the environment

Insufficient consideration of SPA, SSI and Conservation Area issues

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

---

20. I object to the inadequate protection of the environment.

21. I object to the fact that insufficient consideration has been given to the harm that will be caused to the Special Protection Area, the Sites of Special Scientific Interest and the borough's Conservation Area and heritage assets.

22. I object to the impact of poor air quality on the Special Protection Area.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I sincerely hope you, the council, will consider my objections and avoid destroying the Borough’s Green Belt which is precious and I fear for its demise. Our British countryside needs to be protected for future generations of population, animal, bird and plant life. Please protect our environment from increased pollution and flooding.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I would like to object to Local Plan proposal to build 1,800 houses. I understand there're shortage of housing however by building it at Hog's Back we are losing a beautiful landscape. These are ancient woodland both benefit to local residents and wildlife. I remember when I was recovering from a major surgery, just a short walk from home I spent time every
day walking through the wood for recuperation by looking at calm nature, seeing wildlife and got fresh air. It would be shame and heart breaking to lose this site.

I would like you to reconsider to a different site where you don't DESTROY the natural resources and residents' heart.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

For how long do villagers have to keep fighting? Spending vast amounts on legal and expert advice, including ecologists and air quality experts?

OCKHAM RIPLEY HORSLEY AND SEND WILL NOT GIVE UP THIS FIGHT and you will soon have R H S Wisley redevelopment and improved facilities with this charity attracting half a million more visitors per annum, in turn with an extra half a million car movements per year on the A3 in the Ockham, Ripley, Wisley, M25 Junction 10 areas, albeit not necessarily always at peak time, but for some of the time it will be rush hour, particularly exiting from R H S Wisley

With this there is no possibility of dwellings on the green belt too in this area, no room for people, cars, pollution.

We will all suffer from even poorer air quality too. There will be legal actions against G B C for personal injury. The New Mayor of London is now addressing this problem actively. G B C Please take note. 10,000 people die from poor air quality in London each year.

The Green Belt land in Ockham is included as a strategic site in the G B C draft Local Plan

Its habitat includes Skylarks

Dartford Warblers

Great Crested Newts

Red Kites

Rare plants

Rare butterflies

Snakes

Badgers

Other protected species

Why do Surrey Wildlife Trust maintain the conservation areas, SNCI, SPA Thames Basin conservation areas around Ockham?

Surely this is to preserve the wild life and the green environment

Please visit now the Ockham Common, the Former Wisley Airfield, now Three Farm Meadows

It will look very different to six months ago, green and lush and full of crops and trees rare flowers and wildlife

How can you build on this?
Why are rangers protecting the sites?

We are all protecting the sites in Ockham and surrounding villages in the green belt

And so

Why is G B C not?

I await your comments

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID4

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I strongly object to the Guildford local plan on the grounds that it fails to address environmental concerns relating to ecological health—the green belt was created as part of a nationwide ecological network providing breathing spaces for nature as well as people—this important network will be fractured by this development.

I strongly object to the local plan on the grounds that the over development of this area will significantly increase air pollution from the increased vehicles on the roads which will have detrimental impacts on human health in the area. The greenbelt provides a natural mechanism to mitigate the damage caused by carbon emissions in London. The destruction of the greenbelt in this way will destroy this mechanism.

I strongly object to the local plan on the grounds that the over development of this area will significantly increase noise pollution from the increased vehicles on the roads and housing.

I strongly object to the local plan on the grounds that the over development of this green belt area will destroy valuable habits and resources for important species—e.g. the red kite often seen flying over Ripley Green and Barn Owls seen across these areas, to name a few.

I strongly object to the local plan on the grounds of mental health. I believe that the green belt provides an important space for people from the city as well as local people to appreciate the beauty of the landscape as well as providing a space to heal. The links between open rural landscape and mental health have been well documented.

I strongly object to the local plan on the grounds that it will result in a loss of ancient woodland (at Garlicks Arch site) and will therefore result in the loss of native shrubs, rare invertebrates, fungi and many others. Ultimately this will result in the decline in diversity of the local environment.
I strongly object to the local plan on the grounds that this development will result in the destruction of hedgerows, which provide very important habitats for the local wildlife.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

7) I object to the fact that air quality concerns have not been taken seriously – air pollution in many parts of the borough, and particularly at the M25/A3 junction, is in excess of EU-permitted levels. Additional traffic will exacerbate this situation, impacting the health of all current and future residents. No account is being taken of the acid deposition on the Thames Basin Heaths SPA and the irreversible impact of the habitat degradation.

8) I object to the fact that the proposed plan does not meet the needs and desires of local communities, as evidenced through the Ockham Parish Plan. The top two responses as to why local residents enjoy life in Ockham are (1) access to the countryside and clean air and (2) the peace and quiet afforded by wide open spaces. Over 90% wish to see both the historic features of the village maintained and the village’s green spaces, including the FWA/TFM, protected.

I object - This policy is totally contravened by the suggestion to build thousands of homes on greenbelt land. Policies A36, A37, A38, A39, A40 and A41- I object to all:

- I can categorically say based on the results of a survey of local West Horsley residents that these developments are not wanted by the existing residents
- There is absolutely no justification for this number of houses to meet the needs of the local. It is clear these sites (with the exception of A36 and A37) are located to maximize profits for landowners and developers targeting commuters to London, not for the benefits of current residents of the Guildford Borough.
  - 19th August 2014, during an interview on the Radio 4 Today Programme, Jeff Fairburn, the Group Chief Executive of Persimmon Homes outlined that building on Green Belt land is significantly profitable for his company, more profitable than building on Brownfield land. This will be the case for all house builders.

  Hence, the Draft Local Plan is allowing development in Green Belt areas, solely at the expense of local residents, generating substantial profits for house builders, without investment in the local community.
  - Furthermore, I note all but two sites within West and East Horsley has been located within approximately 1 mile of the railway station, effectively positioned in "prime commuting area", clearly demonstrating that the location of proposed housing has identified to maximize profits, at the expense of the local communities in which we live.
I note that there is community levy applied to new homes, but, would be very surprised if the small amount of £300 per square meter in the villages is sufficient to provide appropriate infrastructure.

Furthermore, land, when released from the Green Belt increases in value exponentially, generating windfall profits for a small number of individuals, or even corporations, who may not even be resident in the UK.

- The density the housing far exceeds that currently in place in the village settlement. The proposed density of the housing developments is completely out of character with the village of West Just looking at the style of development being built in other locations in high density configurations shows that this will not be in keeping with the community which has existed here for many years, therefore changing the character and sustainability of the location forever.

- The Raleigh School, which is oversubscribed each Over 400 new houses are listed in the Draft Local Plan which will be within close proximity to the school, therefore increasing further the shortage of schooling, and also "gazumping" those who have lived in the village before them.

- The local medical facilities, which are also extremely busy

- The local shopping facilities - there are very limited numbers of shops in West Horsley, and the nearby facilities in East Horsley are extremely busy, again with very limited Congestion will become unsustainable

- All but Site A36 are located the Local Plans designated "Surface Water Hotspot" area, why build on areas of where surface water already builds up, recent newspaper headlines can surely demonstrate this is a bad idea

- West Horsley is treated with disdain by Guildford Borough Council, why is this one small parish subject to a 35% increase in the number of dwellings whereas Guildford (11%) and Ash / Tongham (16%) are much less affected? Could this be because that's where the majority of local councilors live?

- The density proposed will require houses completely out of character with the local environment.

- The pavements in the area are already riddled with potholes and narrow passageways, hence, not appropriate for further expansion

- The existing roads (specifically East Lane) already have such a high number of dangerous pot holes, and these do not get How can it be considered safe to increase the number of houses, and hence increasing the volume of traffic on the roads during construction and occupation when the existing roads are not fit for purpose.

- The local roads and Specifically I would like to draw your attention that the majority of this housing would be required to transition a section of road which is not wide enough for two lanes of marked traffic to pass to travel from West Horsley to Guildford - this seems ridiculous to place hundreds of additional new homes in an area where the roads cannot cope already (the potholes in the Village are already beyond a joke).

- Public Transport - There is very limited public transport in the area beyond the already crowded trains to London and consistently full parking at Horsley

- The local services - for example the local sewerage system is already stretched and East Lane (behind the Manor Farm proposed development) has been subject to significant disruption due to overloading and the natural high water

Therefore, existing facilities are already full to bursting, the roads to Guildford are unable to cope with the increased traffic, and the trains (and parking) are already full, the impact upon the existing community will be detrimental. The development in West Horsley can therefore not be considered as sustainable.

I consider the attack on the community of West Horsley to be unwarranted. No other community in the borough of Guildford has the targeted number of homes.

In the event that growth in the borough is required this should be considered fairly across the borough.

The spatial vision of the Local Plan states:

> This is achieved by maintaining the extent and function of the Green Belt in such a way as to protect the existing character of the borough through maintaining the clear distinction between urban and rural areas and safeguarding the natural, built and historic environment. All new development will be of exemplary design and bring with it the necessary infrastructure and services required to enable future and existing communities to live sustainable lives..... and over 750 dwellings as extensions to existing villages. These dwellings will offer a variety of housing choice in villages and help contribute to supporting local services and the important role they play in village life.

This statement is breached fundamentally by the presumption to end the Green Belt Protection for West and East Horsley. Furthermore, none of the housing plans are accompanied by plans for the necessary infrastructure to support the housing programs. Any sensible person will tell you its necessary to have infrastructure in place before you build houses where people live, otherwise this places an unfair burden on existing residents.
Furthermore, how is it fair on the existing community of West and East Horsley that 2/3 of the 750 village dwellings are focused in this one area?

To summarise, the Draft Local Plan violates enshrined national law regarding the Green Belt, places unsustainable strains on the local services, changes forever

the nature, spirit and feel of the community, generates profits for corporations, a small number of individuals, these funds may not be kept in the UK, and almost certainly will not be reinvested in the local community. Furthermore, the significant majority of housing is for those individuals who do not currently live in the Borough. There are no positives to take from this plan for the local residents of West Horsley, only inconvenience and imposition of irrevocable change.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to policy I4 green and blue infrastructure. This policy is a box-ticking exercise with no teeth to it. It sits oddly with the plan’s onslaught on the Green Belt. The plan to build on large areas of countryside and to inset villages will cancel out any benefits from extending the principle of enhancing biodiversity beyond Biodiversity Opportunity Areas. There is no mention of the value of wildlife gardening to biodiversity or the important role that larger gardens play in a village setting.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Surrey is a pretty county with important sites of nature and woodland.

These must be protected at all costs for future generations ensuring their well being and sanity. It is being understood more and more that being outside, surrounded by nature, is beneficial to everybody's health and mental well being and that in its turn has a direct impact on doctors' surgeries and hospital queues.

I have a very low opinion of Guildford Borough Council's past performance and its complete inability to maintain the safety of the countryside, to provide properly for the inhabitants. Let's hope some common sense will now prevail and there is a good rethink of the unacceptable GBC Local Plan that has been put before us. I object to it in the strongest terms possible.

I object to policy I4 green and blue infrastructure. This policy is a box-ticking exercise with no teeth to it. It sits oddly with the plan’s onslaught on the Green Belt. The plan to build on large areas of countryside and to inset villages will cancel out any benefits from extending the principle of enhancing biodiversity beyond Biodiversity Opportunity Areas. There is no mention of the value of wildlife gardening to biodiversity or the important role that larger gardens play in a village setting. ABSENCE OF POLICY ON RIVER WEY I object to the omission of a policy for the River Wey which was included in the previous local plan. The existing policy G11 from 2003 Local Plan should be included so that development within the River Wey corridor will only be permitted provided that: It protects or improves the special character of the River Wey and the Guildford and Godalming Navigations, in particular their visual, setting, amenities, ecological value, architectural and historic interest;The special character of the landscape and townscape in the corridor is protected or improved;Views both within and from the corridor which contribute to this special character are protected or improved;Where appropriate, public access is provided to and along the River and the Navigations.
Conservation value of the site is protected or improved.

GREEN BELT SITES

I object to ALL Green Belt sites allocated for development in the local plan object to the identification and allocation of sites in this plan without regard to Green Belt, infrastructure or other constraints. The plan says that “allocating these sites does not grant planning permission for development, however, it does identify the principle of development and uses.” This ignores the tens of thousands of detailed comments the Council have received about individual sites ever since the Issues and Options consultation in 2013. This amounts to a war of attrition by the Council in conjunction with developers, since many busy residents are tired of repeating the same comments as it appears to be a waste of time and effort. The plan has hardly changed since the Council received 20,000 objections to its first draft plan in 2014.13 All Green Belt sites should be removed from the plan until “exceptional circumstances” for development are proven, as stipulated repeatedly in the NPPF. The Green Belt should trump short-term considerations such as perceived housing need, as case law has established.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Representations Relating to Policy I4 ‘Green and Blue Infrastructure’

Thakeham objects to the proposed designation of the site as ‘Open Space’ and the findings of the Council’s Assessment of Sites for Amenity Value document which has informed the designation.

Open Space is defined in the NPPF as follows:

“All open space of public value, including not just land, but also areas of water (such as rivers, canals, lakes and reservoirs) which offer important opportunities for sport and recreation and can act as a visual amenity”

With respect to open space designations in the Pre Submission Plan, Policy I4 states the following:

“Open space (encompassing all open space within urban areas, land designated as Open Space on the Policies Map and all land and water that provides opportunities for recreation and sport) will be protected from development in accordance with the NPPF.”

Pre Submission Local Plan, Policy I4, Page 119

At supporting Paragraph 4.6.55 of the ‘Reasoned Justification’, the Council explain that the identification of Open Spaces has been informed by the Amenity Assessment evidence base document:

“The Council has produced an Amenity Assessment to identify open spaces of public amenity value within villages that are inset from the Green Belt by the plan. This assessment looked at land within proposed village inset boundaries, excluding land where inset boundaries were expanded to take in allocations on the edges of villages. Sites that were assessed as having public value that would be harmed by development are identified as Open Space on the Policies Map and will be protected in line with the NPPF. Open spaces outside inset village boundaries are protected by the Green Belt designation so have not been considered for further protection. Land of public value in the inset villages that is used for sport and recreation is identified through the Open Space Sport and Recreation Study and will be protected in line with the NPPF.” Pre Submission Local Plan, Paragraph 4.6.55

Following a site visit and basic desktop assessment, the Amenity Assessment deemed that the site (GIS Ref. ETH_088) had an amenity value score of ‘High’, accompanied by the following reasoning:

“Site is a grass field which is inaccessible to the public. The site is adjacent to a private sports centre. There is also Public Right of Way along the southern boundary. The site is in an elevated position and offers aesthetic value” Amenity Assessment, Page 118, Site Ref. ETH_088

As the site is private land which is inaccessible to the public and therefore has no amenity value with respect to providing opportunities for sports and recreation, it appears that the site has been designated entirely due to its ‘aesthetic value’ and that as a result the overall amenity value is scored as ‘High’. This is the only basis upon which the site is designated an Open Space within the Pre Submission Local Plan under Policy I4.

The site is well contained by high hedgerow to its southern boundaries adjacent to the public footpath, and is set substantially back from the road frontage of Chinthurst Lane. Due to the location and positioning of the site, there are very limited views towards the site from the public realm on Chinthurst Lane and further afield. The only views into the land are from private properties at first floor level, or from the private sports club. Which although begin adjacent has not been identified within this policy.
To demonstrate the minimal visual amenity value of this site, we have appended a series of images at Appendix 2. These images show that the site is not visible from the public footpath, with the exception of over the entrance gate, and that there is very limited visibility towards the site from the public realm on Chinthurst Lane.

We object to the conclusion within the Amenity Assessment that this site is of high amenity value and we consider that the proposed allocation of the land as Open Space should be removed from the Local Plan.

The designation of sites of no amenity value is not consistent with the NPPF and does not constitute positive planning and would seriously compromise the ability of the Borough to provide much needed housing in sustainable locations within the villages and towns.

For the reasons above, it is our view that the Council should review the evidence basis, including the Amenity Assessment, and that the proposed Open Space allocation affecting this site should be removed to ensure that the plan reflects national planning policy.

This site is set within a highly sustainable location in the village, and would be suitable for residential development in the emerging plan period.

Availability

The NPPG provides the following guidance in regard to considering whether a site is available for development:

“A site is considered available for development, when, on the best information available, there is confidence that there are no legal or ownership problems, such as unresolved multiple ownerships, ransom strips tenancies or operation requirements of landowners. This will often mean that land is controlled by a developer or landowner who has expressed an intention to develop” NPPG Paragraph 021 Ref. 3-020-20140306

As highlighted within this representation, the site is controlled by Thakeham Homes Ltd and we will be actively engaging with the council over the coming months prior to submission of a full planning application for residential development.

Thakeham has a proven track record for delivering a number of high quality residential schemes across Surrey, Sussex and Hampshire and will be seeking to deliver circa 20 dwellings on the site with a view to commencing development on site at the earliest opportunity.

[Note: The respondent has advised that the above paragraph contains an error and should be amended as follows: “Thakeham has a proven track record for delivering a number of high quality residential schemes across Surrey, Sussex and Hampshire and will be seeking to deliver circa 200 dwellings on the site with a view to commencing development on site at the earliest opportunity.”]

Suitability

The NPPG provides the following guidance when considering whether a site is suitable for development:

“Sites in existing development plans or with planning permission will generally be considered suitable for development although it may be necessary to assess whether circumstances have changed which would alter their suitability” NPPG Paragraph 019 Ref. 019-20140306

The site lies within the village of Shalford which is proposed to be inset from the Green Belt. In addition, the site was found to be a suitable location for residential development within the LAA.

The site is also located on the edge of the settlement and is surrounding by existing residential and commercial development on all of its boundaries. There are a number of services and facilities in the local area, including a railway station and an infant school. Physical constraints to development in this location are also minimal. The site lies comfortably within Flood Risk Zone 1, where there is considered to be the lowest level of fluvial flood risk. There are no major ecology constraints and the site lies a significant distance from the Thames Basin Heaths SPA.

Achievability

In determining whether a site is achievable for development, the NPPF provides the following guidance:
“A site is considered achievable for development where there is a reasonable prospect that the particular type of development will be developed on the site at a particular point in time. This is essentially a judgement about the economic viability of the site and the capacity of the developer to complete and let or sell the development over a certain period” NPPG, Paragraph 021 Ref. 021-20140306

Given the acute housing need within the Borough and the relative lack of constraint affecting this site, it is considered that there is a reasonable prospect of residential development being achieved on site by 2021.

As stated above, Thakeham has a proven track record for delivering schemes of a similar size and scale throughout Surrey, Sussex and Hampshire, and has the capacity to deliver the development of the site to provide much needed new homes within the first 5 years of the plan period.

Deliverability

For the reasons above, the site is considered to be available, suitable and achievable, and therefore deliverable in accordance with the NPPG. In summary, we consider that this site has minimal or no amenity value and should not be designated as Open Space, and that the site is deliverable for residential development in the meaning of the NPPG.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents: 2016 07 18 GBC Pre Submission LP Representations Chinthurst Lane Appendix 1.pdf (382 KB)
2016 07 18 GBC Pre Submission LP Representations Chinthurst Lane Appendix 2.pdf (1.2 MB)

Comment ID: PSLPP16/17222  Respondent: 11832961 / The National Trust - London and SE (Rachel Botcherby)
Agent: Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID4
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

We support this policy in principle and the Trust welcomes the specific reference to the River Wey and our planning guidelines in the supporting text. However, the Trust’s main focus is less about the type of development, residential or commercial, but that any development is mindful of and respects the historic character of the river corridor in terms of scale, design, materials, lighting, location and impact on the water table and the structural integrity of the Navigations.

We note from Appendix E that the Council are proposing that the adoption of Policy I4 will supersede Policy G11 relating specifically to the River Wey and the Guildford and Godalming Navigations. The National Trust object to this approach and will strongly resist the loss of Policy G11.

We request that either Policy I4 is updated to include the National Trusts Planning Guidelines or the policy considerations listed in the current Local Plan Policy G11, namely that:

“Development within the River Wey Navigations corridor, as defined on the Proposals Map, will be permitted provided that:

• It protects or improves the special character of the River Wey and the Guildford and Godalming Navigations, in particular their visual, setting, amenities, ecological value, architectural and historic interest;
• The special character of the landscape and townscape in the corridor is protected or improved;
• Views both within and from the corridor which contribute to this special character are protected or improved;
• Where appropriate, public access is provided to and along the River and the Navigations.
• The Nature Conservation value of the site is protected or improved”.

Alternatively, reference to Policy G11 being superseded is removed from Appendix E, leaving Policy G11 in place and extant, until such time as the Council commence work on its Development Management Policies Document. The Trust would be happy to work with the Council to ensure that a suitably worded River Wey Navigations specific policy is included in this document to ensure its long term protection and enhancement as a key heritage asset not just to Guildford
but also reflecting its national significance as one of the earliest waterways to be made navigable which, when combined
with the Godalming Navigation, currently forms the most southerly operational navigations of the inland waterway
network in Britain.

Wildlife corridor

The developments A38, A39, A40 and A41 will have a significant impact on wildlife movement. Open areas are being boxed in between A41 and A39 and the railway line. A38 removes the link between the open areas on one side of it and the open area the other side of East Lane. Currently only one row of houses exists which forms a very limited barrier to wildlife. The development of A38 will make a solid barrier. The same is true for the open countryside either side of A40

Water pressure

The water pressure in East Lane is demonstrably poor. I also understand that the waste systems are struggling to cope. As the Local Plan is proposing a 35% increase in housing in West Horsley this, surely, is taking these facilities way past their breaking point.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the fact that air quality concerns have not been taken seriously - air pollution in many parts of the borough, and particularly at the M25/A3 junction, is in excess of EU permitted levels. Additional traffic will exacerbate this situation, impacting the health of all current and future residents. No account is being taken of the acid deposition on the Thames Basin Heaths SPA and the irreversible impact of the habitat degradation.

I object to the fact that the proposed plan does not meet the needs and desires of local communities, as evidenced through the Ockham Parish Plan. The top two responses as to why local residents enjoy life in Ockham are (1) access to the countryside and clean air and (2) the peace and quiet afforded by wide open spaces. Over 90% wish to see both the historic features of the village maintained and the village’s green spaces, including the FWA/TFM, protected.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object to the inadequate protection of the environment.

I object to the fact that insufficient consideration has been given to the harm that will be caused to the Special Protection Area, the Sites of Special Scientific Interest and the borough's Conservation Area and heritage assets.

I object to the impact of poor air quality on the Special Protection Area.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
20. I object to the inadequate protection of the environment.

21. I object to the fact that insufficient consideration has been given to the harm that will be caused to the Special Protection Area, the Sites of Special Scientific Interest and the borough's Conservation Area and heritage assets.

22. I object to the impact of poor air quality on the Special Protection Area.

23. I object to the erosion of the Green Belt in clear contravention of the Government's and Conservative councillors' election manifesto promises to protect the Green Belt.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

In particular, I object to Send being removed from the Green Belt (Policy P2) as Send provides a buffer between Woking and Guildford.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

29. I object to the impact that additional residents will have on local roads, health services, education spaces and policing needs.

30. I object to the failure of Guildford Borough Council to include the Town Centre Masterplan 2015 in the Local Plan and to find sufficient brownfield sites for development prior to considering sites within the Green Belt.

[Response has been redacted due to statement containing personal data which cannot be disclosed due to the provisions of the Data Protection Act 1998]

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
7 I object to the damage that would be caused by the proposed plan to the wildlife and the ancient woodland with the old oak trees.

8 I object to development in areas which are at risk of flooding. The area at Garlicks Arch has flooded many times in the past and is therefore at greater risk.

9 I object to not protecting the green belt.

10 I object to the villages of Ripley, Send and Clandon being removed from the green belt as there are no exceptional circumstances to remove these villages from the green belt.

I wish my objections to be taken into consideration.

Policy I4 Green and blue infrastructure

I OBJECT. This policy is a box-ticking exercise with no teeth to it. It sits oddly with the plan's onslaught on the Green Belt. The plan to build on large areas of countryside and to inset villages will cancel out any benefits from extending the principle of enhancing biodiversity beyond Biodiversity Opportunity Areas.

There is no mention of the value of wildlife gardening to biodiversity or the important role that larger gardens play in a village setting.

There is no mention of the impact of the plan on food production, or monitoring the loss of agricultural land.

I am writing regarding Policy I4: Green and blue infrastructure.

I would like to suggest that allotments be specifically included in the list of green and blue infrastructure. Allotments meet the needs of relaxation, exercise, recreation, visual amenity, wildlife habitat and agriculture just as much, if not more, than the parks, open spaces, private gardens, agricultural fields and woodland listed so should certainly be included. They are a valuable resource for local communities and should be given the same recognition and protection as other open spaces.

I have only had an allotment since April but have already seen a great deal of wildlife at the site, including seeing a hedgehog from just a couple of feet away, the first one I have seen living wild in my 36 years. I am already reasonably fit and healthy but in the four months I have had my plot I have been much more active and am eating a wider variety of fruits and vegetables. I live on Barrack Road and know a few of my neighbours, but there is not much of a community so it has been really nice to meet fellow plot holders at the allotments who share similar interests and feel part of a welcoming and supportive community.

Sport England supports that the Council's intention to protect existing outdoor sports facilities in accordance with the National Planning Policy Framework within Policy I4.

However, Sport England recommends that a separate policy or reference is required within the Green and Blue Infrastructure policy to cover outdoor and indoor sports facilities. This is because where it is proposed that these facilities are lost to make way for other forms of development, the reprovision of sports infrastructure can be more complex than it is for some other forms of green infrastructure. In seeking to protect sport facilities Sport England will refer to our Playing Fields Policy – Planning Policy Statement: A Sporting Future for the Playing Fields of England see: https://www.sportengland.org/facilities-planning/planning-for-sport/development-management/planning-applications/

Our Playing Fields Policy reflects the wording of Section 74 (see Exception 4 and 5).
Sport England also considers that the Council should do additional work to plan for new sports facilities in line with the guidance in Paragraph 73 of the NPPF which states:

“Access to high quality open spaces and opportunities for sport and recreation can make an important contribution to the health and well-being of communities. Planning policies should be based on robust and up-to-date assessments of the needs for open space, sports and recreational facilities and opportunities for new provision. The assessments should identify specific needs and quantitative or qualitative deficits or surpluses of open space, sports and recreational facilities in the local area. Information gained from the assessments should be used to determine what open space, sports and recreational provision is required.”

Without a robust assessment of need in place in the form of an up-to-date PPS, there is no evidence that new leisure, recreational and cultural facilities are required. Therefore, whilst Sport England supports the provision of new facilities, there is a risk that any policy may be open to challenge and deemed unsound on the basis that it is not fully justified.

With regards to the provision of new infrastructure and facilities, Sport England would require a contribution to both sports pitches and the built provision of sports facilities to meet the increased demand caused by the additional population. Sport England’s Sports Facilities Calculator (SFC) is a very sophisticated planning tool which helps to estimate the level of demand for key community sports facilities that is created by a given population. The SFC has been created by Sport England to help local planning authorities quantify how much additional demand for the key community sports facilities (swimming pools, sports halls and synthetic turf pitches), is generated by populations of new growth, development and regeneration areas. It uses information Sport England has gathered on who uses facilities and applies this to the actual population profile of the local area. This ensures that the calculation is sensitive to the needs of the people who actually live there. Further information on the SFC can be found on our website at:

http://www.sportengland.org/facilities__planning/planning_tools_and_guidance/sports_facility_calculator.aspx

Sport England’s Planning Policy Objective 8 ‘Providing for Sport through New Development’:

“To promote the use of planning obligations as a way of securing the provision of new or enhanced places for sport and a contribution towards their future maintenance, to meet the needs arising from new development.”

Again, these facilities should include existing open space, sports and recreational building and land as stated within paragraph 74 of the NPPF. However, without a robust assessment of need in place in the form of an up-to-date PPS which clearly identifies shortfalls in provision, there is a risk that this policy could not be justified and deemed unsound. Further, without such an up to date strategy, it would be difficult to determine specific proposals through the development management process in line with the council’s local policy. Sport England therefore objects to Policy I4.

Sport England support the view on the dual use of sites, in particular the extended use of school sites for the benefit of the community. Sport England has developed a toolkit regarding accessing schools for community use which may be of use, available via the below link:

http://www.sportengland.org/support__advice/opening_schools.aspx

There is no mention of the value of wildlife gardening to biodiversity or the important role that larger gardens play in a village setting.

I object to the omission of a policy for the River Wey which was included in the previous local plan. The existing policy G11 from 2003 Local Plan should be included so that development within the River Wey corridor will only be permitted provided that: It protects or improves the special character of the River Wey and the Guildford and Godalming Navigations, in particular their visual, setting, amenities, ecological value, architectural and historic interest; The special character of the landscape and townscape in the corridor is protected or improved; Views both within and from the corridor which contribute to this special character are protected or improved; Where appropriate, public access is provided to and along the River and the Navigations. The Nature Conservation value of the site is protected or improved; GREEN BELT SITES I object to ALL Green Belt sites allocated for development in the local plan! object to the identification and allocation of sites in this plan without regard to Green Belt, infrastructure or other constraints. The plan says that “allocating these sites does not grant planning permission for development, however, it does identify the principle of development and uses.” This ignores the tens of thousands of detailed comments the Council have received about individual sites ever since the Issues and Options consultation in 2013. This amounts to a war of attrition by the Council in conjunction with developers, since many busy residents are tired of repeating the same comments as it appears to be a waste of time and effort. The plan has hardly changed since the Council received 20,000 objections to its first draft plan in 2014.13 All Green Belt sites should be removed from the plan until “exceptional circumstances” for development are proven, as stipulated repeatedly in the NPPF. The Green Belt should trump short-term considerations such as perceived housing need, as case law has established.

I object to POLICY I4 Green and blue infrastructure

- Infrastructure considered here as an afterthought, rather than pre-condition of development. Should be a key issue for the rest of the plan.
- Excessive housebuilding in countryside not supported by any funding or provision for infrastructure.
- Heavy focus on building on greenfield sites inefficient and unnecessary: cheap for developers but much more expensive for the public who have to fund the infrastructure.
- Draft CIL scale discourages use of brownfield land first.
• No plan for organic increase in existing traffic congestion, let alone once thousands of houses are built across the countryside. Local roads hardly considered. Green Belt being eroded before road widening/improvement plans certain, encouraging over-development of greenfield sites.
• All Green Belt sites should be removed from the plan until “exceptional circumstances” for development are proven, as stipulated repeatedly in the NPPF. The Green Belt should trump short-term considerations such as perceived housing need, as case law has established.

The proposed boundary changes would devastate the only open green communal area in East Horsley, Kingston meadows and other boundary changes are ridiculous in that they ignore natural boundaries which exist and are currently used (such as a deep drainage ditch) and would seek to move these to further the machinations of the developers. The arguments for the boundary changes are therefore invalid.

By changing the boundary to include area past the A246..and infilling in the spaces, you are threatening the green belt in the same way as new developments and I view this with the same scepticism and unless the boundary changes can be lawfully justified, they are invalid too.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
The Friends of Normandy Wildlife (FNW) strongly object to eight points in the Guildford Borough Council (GBC) Proposed Submission Local Plan: Strategy and Sites, June 2016 (the Plan). These are:

• The late inclusion of A46 in the Plan
• Errors in the Evidence Base regarding Settlement Hierarchy and Settlement Profile of Normandy and Flexford
• Non-compliance by GBC with Policy 14
• The proposed development in Normandy and Flexford (Site A46)
• The proposed development in Flexford (Site A47)
• The Transport Strategy in relation to Normandy and Flexford
• The urban density of housing proposed for A46 and Policy 04
• The insetting of Normandy and Flexford (Policy P2)

FNW object because we believe the Plan to be unsound and unsustainable and does not therefore meet the requirements set out in the National Planning Policy Framework. The proposed development represents a serious encroachment on the Green Belt and would have a significant and deleterious impact on biodiversity and the natural environment including wildlife. These are factors which are highlighted as important in National, County and Borough Council policies relating to planning, yet they have been completely ignored within the Local Plan.

In view of the fact that the proposed development (A46) was put into the Plan after the Regulation 18 consultations in 2013/14 and not published until April 2016 in the Draft Local Plan, residents of Normandy Parish have not had a previous occasion on which to comment upon it. FNW have attempted to address this omission in this response, in so far as the proposed development impacts upon wildlife and wildlife habitats (flora and fauna), both on the Thames Basin Heaths Special Protection Area, and on the countryside which will be enveloped by this development. This may mean that our response combines a Regulation 18 and a Regulation 19 submission.

In our submission, we demonstrate the major significance of Normandy and Flexford for biodiversity, wildlife and nature conservation with its nationally important sites for nature conservation within and adjoining the parish. We highlight the serious detrimental effects the development will have on these areas, and illustrate how the planning proposals (with particular reference to Policies A46, A47 and the Transport Strategy) directly conflict with National planning policies and Guildford Borough Council’s own interpretation of these.

• The area is a haven for wildlife, some of which is already endangered. The introduction of residences would mean the import into an ecologically sensitive area not only of humans and their increased footfall, but also of
pets, and cats and dogs in particular, that can have a devastating effect on wildlife. Protected species on and near the site and wildlife corridors would be destroyed.

7] Seventhly I object to the early exhibition of a SANG in Longreach, West Horsley by a Company, Greenreach Ltd, which is totally owned by developers. How dare the GBC support the concept of this exhibition when we have many wonderful areas of country for recreation? To put this artificial plan forward before the Local Plan has completed its consultation is disgraceful, especially since it has been created by Developers who clearly expect the GBC to favour them.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
I object to POLICY I4 Green and blue infrastructure

- Infrastructure considered here as an afterthought, rather than pre-condition of development. Should be a key issue for the rest of the plan.
- Excessive housebuilding in countryside not supported by any funding or provision for infrastructure.
- Heavy focus on building on greenfield sites inefficient and unnecessary: cheap for developers but much more expensive for the public who have to fund the infrastructure.
- Draft CIL scale discourages use of brownfield land first.
- No plan for organic increase in existing traffic congestion, let alone once thousands of houses are built across the countryside. Local roads hardly considered. Green Belt being eroded before road widening/improvement plans certain, encouraging over-development of greenfield sites.
- All Green Belt sites should be removed from the plan until “exceptional circumstances” for development are proven, as stipulated repeatedly in the NPPF. The Green Belt should trump short-term considerations such as perceived housing need, as case law has established.

I OBJECT to the local plan based on the impact it will have on the special countryside of the borough.

The proposed development at Garlick’s Arch (A43) will have a permanent impact on the character of the Ancient Woodland that surrounds the site on two sides and runs centrally through the site, which includes over 80 ancient oak trees.

I cannot see how any proposal for Suitable Alternative Natural Green Space can possibly mitigate the damage caused to the natural habitats of the bats, ground nesting birds, invertebrates, reptiles and flora and fauna by additional residents and their pets. It remains very uncertain how this can be controlled.

A development of this scale will have a huge impact on light and noise pollution which will affect both local residents and wildlife.

I object to Policy I4 Green and Blue Infrastructure

The policy appears therefore to be a box-ticking exercise with no real teeth to it.

There is no mention of the impact of the plan on food production, or monitoring the loss of agricultural land. “The natural world, its biodiversity and its constituent ecosystems are critically important to our well being and economic prosperity, but are consistently undervalued in conventional economic analyses and decision-making” (Biodiversity 2020 page 11) “As a public authority in England you have a duty to have regard to conserving biodiversity as part of your policy or decision making.” (Government Planning Guidance)

I have some concerns that “enhancing” the River Wey in the town centre will avoid using the available brownfield land around Walnut Tree Close and Slyfield for urban regeneration and sustainable housing that could otherwise be used. It is noted that the largest areas of industrial brownfield land within the borough are near to or adjacent to the River Wey, particularly in the Walnut Tree Close area and in the Slyfield industrial area and could support much more housing than the relatively small numbers indicated in the policy on the town centre, under a town centre regeneration scheme. This would have huge benefits for the community as a whole since relatively run down areas would be subject to regeneration, the river banks would be cleaner and more attractive. John Rigg of Savills and Guildford Vision Group indicated to the GBC Scrutiny Committee that initial commercial projections indicated that the Walnut Tree Close area alone could provide 4000 homes. This is significantly in excess of the current GBC proposals. Both Allies & Morrison and GVG initially indicated that they believed that this site could be available for regeneration within the critical 5 year window required for the local plan.

It is important that the desire for Green and Blue infrastructure does not become an excuse for preventing regeneration of Walnut Tree Close. Such a regeneration zone would be highly sustainable, because it would be within 1 mile of the railway station, adjacent to the A3, and would eliminate an area of huge congestion in the town because if the industrial sites were replaced by housing then the residents would commute by train or walk to work rather than having to drive in to an industrial estate.

Responses to policy notes:
4.6.33 Villages are generally permeable to wildlife. The lower density of housing and presence of gardens (especially larger gardens) provides a corridor for movement across the residential area. Insetting of villages and the relaxation of planning restrictions in the Green Belt implied by Policy P2 will lead to infilling, “garden grabbing” and consequent loss of biodiversity. It will replace connections and corridors between habitats with barriers and lead to further fragmentation of our natural infrastructure.

Responses to definitions
4.6.42 “Biodiversity creation and/or enhancement” is not a definition – it requires definition. The points made are aspirational that have no enforcement to back them. Building on the countryside and increasing the population by such a large amount will not help vulnerable species. It will put added pressure on remaining habitats and increase light and air pollution, degrading the ability of the borough to support wildlife.

4.6.43 Arrangements with developers have no guarantee of success or longevity. They involve partial mitigation and overall loss of the original biodiversity interest of a site.

4.6.45 In the desperation to find SANG land Guildford Borough Council are making use of existing open space that will not attract people away from the SPA and ignores the impact on existing wildlife. In allocating sites as SANG, GBC has ignored the requirement to consider existing biodiversity and clearly have little or any knowledge or understanding of the issue. The issues relating to Russell Place Farm have been pointed out by a qualified Biologist. Many invertebrates are dependent on the dung of grazing animals and this aspect of our countryside is being steadily driven out of our Borough.
Key Evidence
Guildford Borough Policy Statements are statements – not evidence
Additional evidence should include:

- Existing SNCI surveys, including those that took place in 2004-2007.
- Biodiversity evidence emerging from Neighbourhood Plans.
- Evidence obtained by requests to local naturalists and natural history societies including those with a specialist interest.

Monitoring
Simply maintaining open space will not be enough for a significantly enlarged population. Providing more open space to meet existing shortfalls or the needs of a much larger population will reduce the area of land currently in food production or providing wildlife habitat. SANG delivery is harming existing biodiversity. It is not clear how you will measure a change in biodiversity just by looking at planning applications. "Net gains in biodiversity provided by development" is a contradiction in terms. There is no guarantee that mitigations listed in an application will be carried out and their effectiveness is not guaranteed either. GBC would need to carry out follow-up ecological surveys on all sites. The approach being taken is one that intends to make no net gain, and possibly even reduce, sites of nature conservation interest – in contradiction to the stated aims. If an existing SNCI (or one proposed on grounds of biodiversity but not formally accepted in a Local Plan) is found to be in poor condition the action taken should be to bring it back into good condition – not to remove its status and build on it.

This Green Belt was implemented for a reason, to protect from urban sprawl, to ensure Green spaces for generations to come not just for our generation. The Green Belt is not just for the people who live in the villages but for Londoners too for their health and their mental well being. There are plenty of other places to build that are more suitable, this seems to me to be a corrupt way for someone to make money at the expense and misery of everyone else not just for today but for the children and the wildlife of the future.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

The impact on wild life will be very detrimental too and as for the infrastructure of medical and schools provision necessary, has it really been thought out. A & E departments have closed in local hospitals, so ambulance journeys to A & E are now longer and they don’t need traffic congestion.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/18729  Respondent: 15579457 / RSPB South East Office (Heather Richards)  Agent:

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID4

Do you consider this section of the plan (paragraph/policy/map/table) does this comment relate?

Policy I4: Green and blue infrastructure

Do you consider this section of the plan is legally compliant? Yes
Do you consider this section of the plan is sound? Yes
Do you consider this section of the document complies with the Duty to cooperate? Yes

RSPB Comment:
The RSPB welcomes the inclusion of policy I4. In particular we welcome the stated intention that the current and potential biodiversity of land outside Biodiversity Opportunity Areas (BOAs) will be considered. We also welcome the commitment to produce a Green and Blue Infrastructure Supplementary Planning Document. (para 4.6.35)

There appears to be a cross-referencing error in para 4.6.37, which refers to policy “I5”, but no such policy exists. Should this be a reference to policy P5 instead?

The RSPB welcomes the proposal that open space, including SANGs within or adjacent to the BOAs will be designed and managed to support the aims of the BOA. However, it will be important to ensure that SANGs’ primary role as mitigation is not compromised by this work. The RSPB considers that in general increasing the biodiversity of a SANG is likely to increase its attractiveness to the public, but it is important that if there is any potential conflict between mitigation and biodiversity enhancement this should be resolved in favour of the mitigation role. In addition it is essential
that sites that are already important for wildlife are not selected as SANGs due to the immediate conflict between conservation and recreation.

**What changes do you suggest should be made to the document?**

Correct the apparent cross-referencing error highlighted above.

Add a sentence making it clear that the mitigation function of SANG will be prioritised where there is a potential conflict with biodiversity enhancement measures.

*If you are proposing a change to the Proposed Submission Local Plan: strategy and sites, do you wish to express an interest in participating at the Examination?* No.

*Why do you wish to participate at the Examination?*

*Do you consider this section of the document; complies with the Duty to Cooperate?* ( ), *is Sound?* ( ), *is Legally Compliant?* ( )

**POLICY I4 GREEN AND BLUE INFRASTRUCTURE**

I object to policy I4 green and blue infrastructure.

This policy is a box-ticking exercise with no teeth to it. It sits oddly with the plan’s onslaught on the Green Belt. The plan to build on large areas of countryside and to inset villages will cancel out any benefits from extending the principle of enhancing biodiversity beyond Biodiversity Opportunity Areas.

There is no mention of the value of wildlife gardening to biodiversity or the important role that larger gardens play in a village setting.

**ABSENCE OF POLICY ON RIVER WEY**

I object to the omission of a policy for the River Wey which was included in the previous local plan. The existing policy G11 from 2003 Local Plan should be included so that development within the River Wey corridor will only be permitted provided that:

- It protects or improves the special character of the River Wey and the Guildford and Godalming Navigations, in particular their visual, setting, amenities, ecological value, architectural and historic interest;
- The special character of the landscape and townscape in the corridor is protected or improved;
- Views both within and from the corridor which contribute to this special character are protected or improved;
- Where appropriate, public access is provided to and along the River and the Navigations.
- The Nature Conservation value of the site is protected or improved.

**GREEN BELT SITES**

I object to ALL Green Belt sites allocated for development in the local plan.
I object to the identification and allocation of sites in this plan without regard to Green Belt, infrastructure or other constraints. The plan says that ‘allocating these sites does not grant planning permission for development, however, it does identify the principle of development and uses.’ This ignores the tens of thousands of detailed comments the Council have received about individual sites ever since the Issues and Options consultation in 2013. This amounts to a war of attrition by the Council in conjunction with developers, since many busy residents are tired of repeating the same comments as it appears to be a waste of time and effort. The plan has hardly changed since the Council received 20,000 objections to its first draft plan in 2014.13

All Green Belt sites should be removed from the plan until 'exceptional circumstances' for development are proven, as stipulated repeatedly in the NPPF. The Green Belt should trump short-term considerations such as perceived housing need, as case law has established.

We strongly believe in protecting our environment, being members of the Surrey Wildlife Trust and think our heritage assets and wildlife need protection to counterbalance the effects of global warming and environmental changes that are already creating weather events across the UK and locally that have a very negative impact on people around us nearly every year now. We therefore object to the site A45 The Talbot, the A57 The Paddocks and the site A43 Garlick's Arch

I object to policy I4 green and blue infrastructure. This policy is a box-ticking exercise with no teeth to it. It sits oddly with the plan’s onslaught on the Green Belt. The plan to build on large areas of countryside and to inset villages will cancel out any benefits from extending the principle of enhancing biodiversity beyond Biodiversity Opportunity Areas. There is no mention of the value of wildlife gardening to biodiversity or the important role that larger gardens play in a
village setting. ABSENCE OF POLICY ON RIVER WEY

I object to the omission of a policy for the River Wey which was included in the previous local plan. The existing policy G11 from 2003 Local Plan should be included so that development within the River Wey corridor will only be permitted provided that: It protects or improves the special character of the River Wey and the Guildford and Godalming Navigations, in particular their visual, setting, amenities, ecological value, architectural and historic interest; The special character of the landscape and townscape in the corridor is protected or improved; Views both within and from the corridor which contribute to this special character are protected or improved; Where appropriate, public access is provided to and along the River and the Navigations. The Nature Conservation value of the site is protected or improved.

GREEN BELT SITES

I object to ALL Green Belt sites allocated for development in the local plan object to the identification and allocation of sites in this plan without regard to Green Belt, infrastructure or other constraints. The plan says that “allocating these sites does not grant planning permission for development, however, it does identify the principle of development and uses.” This ignores the tens of thousands of detailed comments the Council have received about individual sites ever since the Issues and Options consultation in 2013. This amounts to a war of attrition by the Council in conjunction with developers, since many busy residents are tired of repeating the same comments as it appears to be a waste of time and effort. The plan has hardly changed since the Council received 20,000 objections to its first draft plan in 2014.13 All Green Belt sites should be removed from the plan until “exceptional circumstances” for development are proven, as stipulated repeatedly in the NPPF. The Green Belt should trump short-term considerations such as perceived housing need, as case law has established.

Education

Since the previous consultation on the Draft Local Plan: strategy and sites in July 2014, we have been working with borough council officers under the Duty to Cooperate in order to progress the approach to school provision to support the delivery of Guildford’s growth strategy. This liaison is ongoing and both our councils recognise that it is essential to provide additional school places to meet the increased needs that will arise from the new housing proposed in the emerging Local Plan in a sustainable way and in appropriate locations.

The county council’s role in this process has been to respond to options for school sites, presented by the borough council, in accordance with the objective of meeting the additional educational demands based on the evidence of forecasted need produced by the county council’s schools commissioning team. The key criteria for selection were the location of sites, which need to be as close as possible to the residential development they are intended to serve, and the provision of safe and sustainable access for pupils that, where possible, enables alternatives to car travel.

We are concerned about the designation of all school playing fields as open space. It is inferred in paragraph 4.6.38 of the Local Plan that these areas will be accessible to the public, whereas access and shared use of school facilities will need to be strictly controlled for operational and security reasons. Playing fields are considered to constitute an outdoor recreation facility rather than an amenity space with public access. Moreover, it is our view that designating all school playing fields in this way may not allow for future operational development needs to be met through the expansion of schools on their existing sites. This might lead to additional land, potentially in the Green Belt, being required for the provision of future education facilities.

Whilst the National Planning Policy Framework (NPPF) paragraph 74 states that existing playing fields should not be built on, at paragraph 72, it requires local planning authorities to give great weight to the need to expand schools. In addition, playing fields are considered to be appropriately protected already under statute as they cannot be redeveloped without prior consent from the Secretary of State for Education under Section 77 of the School Standards and Framework Act 1998.

We fully accept that the loss of a school playing field should be wholly exceptional as an option of last resort. However, the county council is increasingly required to expand schools to meet the need for additional school places generated by population growth and new development. Such expansions can sometimes only be accommodated by extending a school onto part of the playing fields. It is considered that this should be facilitated by the Local Plan rather than imposing a requirement to routinely have to make exceptions to policy for even minor extensions to schools. Therefore, we consider that the presumption against the loss of playing fields should be set against the need to provide essential education infrastructure to reflect the NPPF.

Policy R5 (Protection of Open Space) in the 2003 Guildford Local Plan set out an exception for school playing fields “where the proposed new development meets a legitimate educational need that is appropriately met on the site.” We would like to see a similar exception included in Policy 14: Green and Blue Infrastructure, particularly given that a number of school expansions are identified in the Plan’s Infrastructure Schedule as needed to deliver the Plan.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
**Policy I4**

Page 118

Policy I4 seeks to protect open space from development in accordance with the NPPF. However, whilst NPPF paragraph 74 states that existing playing fields should not be built on, paragraph 72, requires local planning authorities to give great weight to the need to expand schools. We accept the need to protect school playing fields, however, this should be more clearly balanced against the need for education facilities. Policy R5 in the 2003 Guildford Local Plan included an exception for school playing fields “where the proposed new development meets a legitimate educational need that is appropriately met on the site.” We would like to see a similar exception included in Policy I4 Green and Blue Infrastructure, particularly given that a number of school expansions are identified in the Plan’s Infrastructure Schedule as needed to deliver the Plan. It should be noted that permission for school expansion schemes that will significantly impact on school playing fields is only very rarely sought by the county council as a last resort and such proposals require approval from the Secretary of State.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

Attached documents:
National Planning Policy Framework (NPPF) paragraph 118 states that "planning permission should be refused for development resulting in the loss or deterioration of irreplaceable habitats, including ancient woodland and the loss of aged or veteran trees found outside ancient woodland, unless the need for, and benefits of, the development in that location clearly outweigh the loss."

Natural England’s standing advice for Ancient Woodland and Veteran Trees (published April 2014), paragraph 4.8.1 states: ‘Ancient woodland is of prime ecological and landscape importance, providing a vital part of a rich and diverse countryside. In particular, ancient woodland:

• is exceptionally rich in wildlife, and supports many rare and threatened species;
• may contain surviving descendants and features from the original natural forests;
• acts as reservoirs from which wildlife can spread into new woodlands;
• has valuable soils due to their undisturbed nature;
• is an integral part of England’s historic landscapes and the biological and visual functioning of a landscape;
• contains a wealth of features of historical and archaeological importance little altered by modern cultivation or disturbance;
• contributes to people's sense of place and imagination.’

Keepers of Time, a statement of Policy for England’s Ancient and Native woodland jointly written by Defra and the Forestry Commission states that “the existing area of ancient woodland should be maintained and there should be a net increase in the area of native woodland.” One of the objectives set out in Keepers of Time is to “take steps to avoid losses of ancient woodland and of ancient and veteran trees and to sustain the total extent of other native woodland (ensuring that gains exceed losses).”

The Government Forestry & Woodlands Policy Statement (2013) confirms the Government’s commitment to Keepers of Time. Keepers of Time recognises a number of threats to ancient woodland, making specific reference to the threat posed by development pressures:

‘There are still occasions where native and ancient woodland is threatened by development, and many woods suffer attrition through incursions at their boundaries. Even if the woodland itself is protected, it can suffer serious disturbance where houses or roads are built right up to its margins, both directly from the impact of development, or indirectly through changes to drainage.’

**Impacts on ancient woodland**

Approximately one quarter of priority UK BAP species are associated with woodland habitats. Forests, woods, and trees make a significant contribution to biodiversity, and ancient sites are recognised as being of particular value. Due to their longevity, ancient woodlands are more species rich, and are often refuges for specialist woodland species that struggle to colonise new areas.

Development within ancient woodland can lead to long-term changes in species composition, particularly ground flora and sensitive fauna, i.e. nesting birds, mammals and reptiles. Majorly adverse impacts occur as a result of the removal of large areas of woodland to make way for new development.

Furthermore development adjacent to ancient woodland results in more intensive land use, meaning that plant and animal populations are exposed to environmental impacts from outside of the woodland. In particular, the habitats will become more vulnerable to the outside influences, or edge effects, that result from the adjacent land’s change of use. Detrimental edge effects can result in changes to the environmental conditions within ancient woodland, consequently affecting the wood’s stable conditions. Detrimental edge effects have been shown to penetrate woodland causing changes in ancient woodland characteristics that extend up to three times the canopy height in from the forest edges.

As part of the Proposed Submission Local Plan, Guildford Borough Council has outlined areas for future development. As indicated by the table included at the end of the document there are areas of ancient woodland included within sites allocated for future development. The Trust is concerned that the large number of ancient woods that have been included within sites for future development leaves these woods open to potential damage and loss.

Creation of new areas of woodland or buffer zones around semi-natural habitats, and more particularly ancient woodland, will help to reduce and ameliorate the impact of damaging edge effects, serving to improve their sustainability. The size of the buffer is dependent on the intensity of land use in the intervening matrix between ancient woods.
Natural England’s standing advice for Ancient Woodland and Veteran Trees, paragraph 6.4, highlights the importance of keeping development away from ancient woodland and buffering it where necessary:

“Development must be kept as far as possible from ancient woodland, with a buffer area maintained between the ancient woodland and any development boundary. An appropriate buffer area will depend on the local circumstances and the type of development. In a planning case in West Sussex the Secretary of State supported the arguments for a 15m buffer around the affected ancient woodland, but larger buffers may be required.”

The size of a number of the site allocations suggests that large scale development could potentially take place. The minimum 15m buffer recommendation to all development is not effective in ensuring that ancient woodland within and/or adjacent to site allocations is not affected by potential future development. Buffers should be constructed on a case-by-case basis rather than a ‘one size fits all’ approach. The Trust recommends that 15m is an absolute minimum and only suitable for small developments; larger buffers should be sought at every opportunity.

**Conclusion**

The Trust is concerned about the potentially adverse impacts that the proposed site allocations will have in relation to areas of ancient woodland within and/or adjacent to site allocations. Ancient woodland is irreplaceable; once lost it cannot be re-created. Ancient woodland should not be included in areas that are allocated for development, whether for residential, leisure or community purposes as this leaves them open to the impacts of development.

The Woodland Trust objects to the inclusion of the below site allocations in the Guildford borough Proposed Submission Local Plan as they are likely to cause damage and/or loss to areas of ancient woodland within or adjacent to their boundaries. For this reason we believe the sites in the table below are unsound and should not be taken forward.

Secondary woodland should also be retained to ensure that ecological networks are maintained and enhanced.

We hope you find our comments to be of use to you. The Woodland Trust is happy to provide any additional information or support regarding the protection of ancient woodland.

If you require any further information regarding points raised within this document, then please do not hesitate to contact us.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID4

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I am a landscape and wildlife photographer and frequent visitor to Albury Heath, Blackheath and surrounding countryside and villages. Surrey has some of the most beautiful and rare countryside and species of flora and fauna in the UK, some of it’s habitats are unique and are of national and worldwide conservation importance.

I wish to object in the strongest terms possible to the application by IGas for production at the above site. As you know, planning applications have to be decided against national and local planning policy. The IGas proposals conflict with policies in the:

• National Planning Policy Framework (NPPF)
• Surrey Minerals Plan
• Guildford Local Plan
• Metropolitan Green Belt

The recent planning officers report defined the proposal as a “major development”. Under the NPPF paragraph 116, planning permission should be refused for major developments in AONBs except in exceptional circumstances and where it can be demonstrated they are in the public interest.

The planning officers accepted the development would have:

“some detrimental effect on the landscape and would not enhance the natural beauty of the AONB during either the construction or operational period.” That the proposal amounted to “significant harm” to the Green Belt by encroaching on openness.

The proposal also breached policies designed to protect the AONB in the Surrey Minerals Plan and Guildford Local Plan.

The Surrey Minerals Plan policies MC2 and MC14 state that minerals developments in the AONB can be approved only if they have been demonstrated to be in the public interest, there is a need for them and there will be no significant adverse impacts on the appearance, quality and character of the landscape.

Policies RE5 and RE6 in the Guildford Local Plan seek to conserve the visual quality or distinctive character of the AONB. Policy RE2 states that new building would be inappropriate unless it prevents sprawl, reserves character or assists urban regeneration.

The planning officers’ report also says that the proposal would harm ancient woodland by creating car parking on the access track. The NPPF says loss or deterioration of irreplaceable habitats, such as ancient woodland has to be outweighed by benefits.

Ancient woodland, however, is exactly that ‘irreplaceable’. Even if ‘translocated’ or ‘compensated’ in some way (as is required by the LPPF), you cannot replace the wildlife habitats provided by ancient and veteran trees like for like, you cannot explain to the birds, mammals and insects who live, eat and breed there that they have to move, or those species that may use it as a stopover on migration, a wildlife corridor between the other important sites in the area, such as the SSSI site at Colyers Hanger and Blackheath. Surrey has 62 SSSIs, 54 of which are listed for their biological interest (https://en.wikipedia.org/wiki/List_of_Sites_of_Special_Scientific_Interest_in_Surrey). We do not know what impact further development and disruption within these areas may have on the delicate balance of nature within them. Nature is
not contained - it moves, flies, burrows, swims, migrates through and between such sites, woodlands which are of national importance and rarity.

You cannot artificially replicate the balance of biodiversity that nature has created over decades if not hundreds of years (despite what the LPPF suggests). Removal of ancient trees and woodland and disturbance of soil beneath them releases carbon dioxide that is locked inside. Further, veteran trees have been shown to be up to 10 times more effective at absorbing carbon than new plantations. It takes further decades if not centuries for new plantations to develop the rich habitat potential of old woods, some delicately balanced, rare and endangered species never recover or take many years to recover or reestablish colonies. Stag beetles, for example, are a protected species that spend around 6 years of their lives unseen, underground in larvae form, in the soil under rotting wood commonly found in woodland. Nightingales return to the exact same tree each year to sing to attract a mate. Owls, bats and other creatures use holes in old trees to nest in. Conservationists and scientists are still researching the rapid declines in our native species and the impact that further declines may have on our ecosystem. The UK has lost 60% of all species in recent years. Most explanations given are urban development, loss of habitat, pollution and other human interventions. Trees, plants and many wildlife species are suffering diseases and attacks that they were not normally susceptible to. If 40,000 humans die from pollution related respiratory and cardio vascular diseases each year, you can imagine the effect on smaller organisms health and immune systems must be devastating.

I reject, in the strongest terms, the conclusion of the planning officer that all of the above negative impacts can simply be outweighed by a national ‘need’ for ‘indigenous’ gas supply.

The recently released DECC Committee on Climate Change report stipulates that UK onshore gas production should only be permitted if three vital conditions are in place (extract - link to full document is provided below):

Test 1: Well development, production and decommissioning emissions must be strictly limited. Emissions must be tightly regulated and closely monitored in order to ensure rapid action to address leaks.
- A range of technologies and techniques to limit methane emissions should be required, including 'reduced emissions completions' (also known as ‘green completions’) and liquid unloading mitigation technologies (e.g. plunger lift systems) should these be needed;
- A monitoring regime that catches potentially significant methane leaks early is essential in order to limit the impact of ‘super-emitters’;
- Production should not be allowed in areas where it would entail significant CO2 emissions resulting from the change in land use (e.g. areas with deep peat soils);
- The regulatory regime must require proper decommissioning of wells at the end of their lives. It must also ensure that the liability for emissions at this stage rests with the producer.

Test 2: Consumption – gas consumption must remain in line with carbon budgets requirements. UK unabated fossil energy consumption must be reduced over time within levels we have previously advised to be consistent with the carbon budgets. This means that UK shale gas production must displace imported gas rather than increasing domestic consumption.

Test 3: Accommodating shale gas production emissions within carbon budgets. Additional production emissions from shale gas wells will need to be offset through reductions elsewhere in the UK economy, such that overall effort to reduce emissions is sufficient to meet carbon budgets.

– none of these conditions, especially Carbon Capture and Storage technologies, are remotely certain to be met.

I implore you to reject this proposal in an AONB as there are no reasonable ‘exceptional circumstances’ and it is clearly not in the national public interest, given our legally binding climate change mitigation commitments, and it is certainly not in the local public interest.

Air pollution and emissions

The period of gas flaring is very concerning for a number of reasons.
The Research Journal of Environmental and Earth Sciences 4(5): 525-528, 2012 states:

‘Gas flares have harmful effects on the health and livelihood of the communities in their vicinity, as they release a variety of poisonous chemicals. Some of the combustion by-products include nitrogen oxides, sulphur dioxide, volatile organic compounds like benzene, toluene, xylene and hydrogen sulfide, as well as carcinogens like benzo(a)pyrene and dioxins. Humans exposed to such substances can suffer from variety of serious ill-health effects.’

No detailed analysis has been produced of the gas to be flared. This is a serious omission from the application.

Evidence of gas flaring from the USA and Australia suggests that the total harm caused by flaring pollutants is more than the sum of the individual components.

Natural gas processing is a significant source of fugitive emissions of both methane and volatile organic hydrocarbons (VOCs). The World Bank estimates that every year, some 360 million tonnes of CO2 is released to the atmosphere through flaring and venting. This has a detrimental effect on the environment, contributing significantly to global warming and acidification of both land and sea. A considerable proportion of this CO2 comes from the production of Oil and Gas. At a crucial point in human history, if we are to avoid runaway climate change ‘keeping it in the ground’ needs to be the concern of every public authority, and indeed the UK’s Climate Change Act 2008 places legal obligations on public bodies to comply with emission reductions targets relating to climate change. These duties require that a public body must, in exercising its functions, act in the way best calculated to contribute to the delivery of emissions reduction targets. Flaring is incompatible with this objective, which is why there are international calls for ‘green completions’, involving the capturing of the gas – this is not proposed at this site.

Gas compressor emissions

Very concerning for the local population is the proposed notion of powering the gas compressor by burning some of the gas from the well 24/7 for 15 years. There needs to be a detailed analysis of the effects of the exhaust emissions of this from a variety of aspects: human health, ecology, local amenity impacts e.g. from those using the nearby playing fields. Moreover, the effect on vegetation and local wildlife species at a time when many native and migratory species and their habitats are in drastic decline is likely to be very significant and totally unacceptable from a conservation point of view.

The environmental heating effect of methane is significantly higher than CO2. It is still a fossil fuel and at a time when we should be reducing UK and World dependence on fossil fuels we do not give a good impression to our European neighbours or the rest of the world by promoting this type of fuel production and adding to our own domestic fossil fuel output and pollutant totals. Given the extreme threats to the earth from climate change (the rebranded friendly term for global warming), rapid melting of the polar regions, more extreme weather - drought (it is estimated that 50 million people will be displaced due to desertification within 10 years), storms and floods (the UK has had some of the worst flooding and storms in history in recent years), earthquakes and forest fires (there have been record temperatures, dry periods/drought conditions in the US, Canada, Amazonia Rainforest and Russia in the last 12 months), etc, our relentless exploitation of our environment and ecosystems has the potential to snowball us into global disaster at a far greater rate than we or scientists first thought. Key ‘canary in the mine’ species are in grave danger of extinction, everyday species such as pollinators, bees, butterflies, many species of birds, are in desperate decline. Our whole ecosystem’s reproduction depends on these species. We must set an example to the rest of the world and make a commitment to ‘green’ energy, not just to less or differently polluting fuels. We cannot continue to ignore the global environmental implications of pollution as well as the local impacts. We cannot continue to ignore the place our plant and wildlife has in our ecosystems, our entire existence depends upon it.

"Methane is a more potent greenhouse gas than carbon dioxide (CO2), trapping more heat in the atmosphere molecule-for-molecule. But it is much shorter-lived: it decays on a timescale of around 12 years, whereas around a fifth of the effect from CO2 remains even after 1,000 years. This means a unit emission of CO2 today will affect the climate in 2100 and beyond. In contrast, the same unit emission of methane will have little effect on climate in 2100, but a stronger effect on the climate of the next few decades" - This means that as well as our current CO2 emissions having a runaway train of environmental effects lasting hundreds of years, gas production will increase the ‘greenhouse gas’ heating effect in the shorter term, which is potentially far more damaging as weather systems, the oceans, wildlife and plant species struggle to adapt to the unnatural rate of change of temperature and seasonal variations and confusion. This also means that the local communities will have to suffer the effects of methane and other greenhouse gas emissions for many years a

The UK is also inexperienced in this field of gas production "the UK has no exploration flow data, let alone production data, it is too early to speculate on the likely productivity of UK wells"
This report shows that there are no certainties, about its potential yield and value to market, about safety, about the stability of our soil and infrastructure, about the expertise and experience of the employees, about the controls and monitoring that will protect the public and what contingencies would be in place should there be a major accident or leak or explosion at the site or during transportation. The safety and health of the public should be an absolute priority, even if this site did not involve destruction of woodland and damage to an AONB. The fact that it is an AONB means that testing out a fledgling gas extraction process, without knowing the consequences, is a recipe for disaster.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

The 24/7 nature of operations means that noise and light pollution, as well as air pollution, will be a constant disturbance to local village residents and to wildlife for a 15 year period, damaging health, wellbeing, property values, access to local amenities, access for emergency vehicles and no let up in emissions so air quality has no chance to recover by even a small amount overnight. This will also affect the nocturnal species in the area, bats, owls, badgers, foxes, nightjars, hedgehogs to name just a few.

The potential long term and constant disturbance and damage caused to local populations and wildlife is entirely unacceptable.

Given the uncertainty of the future of UK regulation with our impending exit from the EU and the widespread environmental protection, of public health regulations, water purity directives, health and safety regulations, wildlife protection regulations, bird protection directives, etc. and the change of Prime Minister (it was David Cameron’s personal ambition to fast track licences for domestic gas production and fracking despite EU opposition and public opinion and protest against it, with complete disregard for all the protective laws in place to preserve AONBs, SSSIs, National Nature Reserves and SAPs and with overwhelming scientific and practical evidence of the hazards it can and has presented both in the US and during testing in the UK, where air and water have been polluted and localised earthquakes have been a result) and Cabinet, possibly even a General Election in the near future it could be potentially dangerous and unlawful to proceed with these plans.

I urge you most strongly and without hesitation to reject this proposal.

I have outlined below some of my main concerns regarding the removal of Green Belt status from the proposed villages:

Loss of valuable open space

I object to the loss of open space which will result from the Countryside, Green Belt and Surrey Hills Area of Outstanding Natural Beauty (AONB) policies. Access to open space provides numerous educational and recreational activities and hence the loss of such land will lead to the irreversible loss of rural leisure and tourism amenities, profitable film locations and room for public facilities such as parks and burial grounds. The numerous beautiful open spaces in the area have led to it becoming one of the most popular areas of the country for road and off-road cycling, even attracting
events such as the annual Prudential RideLondon and the 2012 London Olympics. These events, as well as many further small-scale cycle events demonstrate the popularity of this area as being both rural and accessible from London and they contribute hugely to the local economy. The loss of open land in this area could therefore be detrimental to this and many similar recreational activities, forcing people to go further out from London or Guildford to find the open space they desire.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/16681  Respondent: 15649601 / Laura Bushnell  Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Negative impact on wildlife and biodiversity

Building on the Green Belt will inevitably lead to an irreversible reduction in biodiversity and due to the proximity to the Surrey Hills AONB, this should be a major cause for concern. Many species, such as the Dartford Warbler and Red Kite, currently found in this area are already highly vulnerable and therefore the loss of greenbelt land as well as the increased volume of people and traffic will only worsen this. In addition, a significant increase in the human population will inevitably lead to an increase in the predatory cat population which will cause further losses amongst these species.

1 Introduction

1.1 Future Planning & Development provide planning advice to our client Send Surrey Ltd in respect of their site Land off Heath Drive, Send, Woking, Surrey, GU23 7EP (‘the site’).

1.2 This Statement has been prepared in response to Guildford Borough Council’s Proposed Submission Local Plan (‘the Local Plan’) consultation (Regulation 19) which ends on 24 July 2017. The current consultation is effectively an update
to the Regulation 19 consultation, in July 2016, to which Send Surrey Limited made representations. The July 2016 representations are provided in Appendix 1.

1.3 The updated Regulation 19 Local Plan carries forward the site’s draft Open Space allocation. Our previous Regulation 19 consultation response made the case that this draft allocation was not sound in accordance with the guidance in the National Planning Policy Framework (NPPF). Our representations also made the case that the Local Plan was not sound because it did not allocate sufficient land to meet with the identified housing need in the borough.

1.4 This Statement provides an update with regards to the two main topic areas: Open Space and Housing. Firstly, the statement presents further evidence to demonstrate that the draft Open Space allocation has been wrongly applied. This includes an Opinion from Andrew Tabachnik QC which states that the Open Space allocation is “unequivocally inappropriate and unlawful”. Secondly, the statement presents evidence to demonstrate that the site is deliverable for housing; this includes evidence to demonstrate that any potential site constraints, i.e. ownership, access, trees and ecology, will not impede the delivery of the site. This is also supported by a pre-application response from Guildford from July 2017 that confirms that the principle of residential development is acceptable. Accordingly, both topics will be addressed in the following sections.

2 Grounds for Draft Open Space Allocation to be Removed

2.1 Open Space is defined in the NPPF as: “All open space of public value, including not just land, but also areas of water (such as rivers, canals, lakes and reservoirs) which offer important opportunities for sport and recreation and can act as a visual amenity”.

2.2 Paragraph 72 of the NPPF states “Access to high quality open spaces and opportunities for sport and recreation can make an important contribution to the health and well-being of communities. Planning policies should be based on robust and up-to-date assessments of the needs for open space, sports and recreation facilities and opportunities for new provision. The assessments should identify specific needs and quantitative or qualitative deficits or surpluses of open space, sports and recreational facilities in the local area. Information gained from the assessments should be used to determine what open space, sports and recreational provision is required.”

2.3 The site was initially proposed to be allocated as Open Space under policy I4 in the Submission Version Local Plan (Regulation 19) in 2016. This draft allocation was justified by the evidence prepared in support of the policy, this being the Guildford Open Space, Sport & Recreation Assessment 2016 – 2033 (June 2016) in addition to the Assessment of Sites for Amenity Value (May 2016).

2.4 The evidence base studies have been updated following the previous Regulation 19 Consultation. The Assessment of sites for Amenity Value 2017 was published in June 2017 and the Guildford Open Space, Sport & Recreation Assessment 2017.

2.5 The allocation of the site under Policy IC4 (renamed from I4) remains in the current updated Submission Version of the Local Plan.

2.6 The site has been reclassified as “private space” in the Open Space, Sports and Recreation Assessment. This indicates that it has no open space value for recreation. As such, we understand that the site is only allocated as open space for its amenity value. This was confirmed by the officer dealing with open space policy (Mr Dan Knowles) in an email to Send Surrey Limited on 8 May 2017 (Appendix 2).

2.7 The site is only allocated as Open Space for its amenity value. Fundamentally, this is not in accordance with national planning policy because it does not meet with the purpose of allocating land as Open Space.

2.8 Send Surrey Limited obtained advice from Counsel in February 2017. Our Barrister - Andrew Tabachnik QC - has provided his Opinion on the draft Open Space allocation; this is attached in Appendix 3.

2.9 Andrew Tabachnik QC concludes his Opinion as follows: “I have no hesitation in concluding that the draft allocation of the Site as “open space” is inappropriate and unlawful. The Site does not fulfil the requirements set out in the NPPF, and the evidence base relied upon was materially flawed”.

2.10 Notwithstanding the fundamental fact that the site does not accord with national planning policy, it is also clear that the allocation of the site for its amenity value is unnecessary. The Open Space allocation adds another policy designation simply to satisfy the deficiency in open space provision in Send identified in the evidence base.
2.11 The 2017 amenity assessment indicates that the site is of ‘medium’ value and comments that “Partial development could retain and potentially improve amenity value” (page 139). The amenity value has been downgraded from ‘high’ in the 2016 assessment to ‘medium’, we assume on the basis that the site has been correctly identified as being private land (the site was incorrectly identified as public land in the 2016 evidence base documents).

2.12 It is also important to note that the site’s assessment methodology which is set out in the Amenity Audit Spreadsheet has not been made available to Send Surrey Limited. A request to obtain a copy of this was denied by the Council. We therefore request that the Inspector makes this document available at Examination.

2.13 The analysis of the results in Section 5 of the assessment states:

A number of sites scored either Medium or High for their amenity value, and it is these sites which should be protected as Open Space. A number of sites that scored Medium or High may not require protection as Open Space because their amenity value could be retained or enhanced if the site is developed (or only partially developed).

2.14 The amenity value of our site could be retained or enhanced if the site is developed. The site is clearly developable, and therefore, in accordance with this guidance, it does not require protection as open space. This is further evidenced by the fact that Send Surrey Limited has received pre-application advice from the Council to state that the site is developable subject to retaining the features of amenity value (Appendix 4).

2.15 Furthermore, the site is covered by a group Tree Preservation Order (TPO). This, in itself, protects the features which provide the site’s amenity value, the trees. The TPO is given in Appendix 5.

2.16 Whilst on its own merits the site has some amenity value; this amenity value can only be appreciated in the wider context of the surrounding area. The allocation of open space for amenity value can be justified in built-up or densely populated areas where open space provides visual relief and ‘breathing space’. In this instance however, there is no need for an open space designation. The site abuts the Green Belt on the northern boundary; beyond this boundary there is open countryside, a vast expanse of open space. There is no need to allocate a parcel of land on the edge of the Green Belt as open space. Additionally, the site is on the side of the village, therefore its openness cannot be appreciated; it simply appears to be the edge of the village. Open space should only be designated for amenity when it is in an appropriate location which allows it to be appreciated as such, i.e. a village green.

2.17 Allocating the site for amenity value in this instance is incorrect. It is not central to the village; the visual interest and/or visual relief it provides to residents is very limited; it is not distinguishable by virtue of the fact it lies on the village edge and it abuts the Green Belt which is a vast expanse of open countryside whereby the inherent characteristic is openness.

2.18 Taking into account the above reasons and the group TPO, the allocation of the site for open space on the basis of its amenity value alone is both unsuitable and unnecessary.

4 Summary of Further Recommended Modification of the Plan

4.1 This Statement has provided further evidence to support the removal of the draft Open Space allocation of the site in the Submission Version Local Plan and also to have the site assessed as a housing allocation.

4.2 The evidence presented with regard to the Open Space allocation is unequivocal in that the proposed allocation is inappropriate and unlawful.

4.3 The allocation of the site on the basis of its amenity value alone cannot be justified. Furthermore, the allocation of the site for its amenity value alone is both unsuitable and unnecessary. It is unsuitable because the site is located in an area which does not provide any benefit as open space being on the edge of the built-up area and adjoining Green Belt. It is unnecessary because the existing group TPO is sufficient to ensure that the amenity value of the site, i.e. the trees, is protected.

4.4 With regards to the consideration of the site as a housing allocation, this Statement has demonstrated that there are no over-riding constraints to stop the site being delivered for housing in the short-term. A residential development could proceed on site with suitable access and no harmful impact on trees or biodiversity subject to mitigation measures.
4.5 It has also been demonstrated, with regards to housing, that the site could provide a policy compliant amount of affordable housing and could also provide a housing mix to meet the identified need in the SHMA. The site could also deliver sufficient affordable housing to meet with the current local housing need at ward level.

4.6 The reasons set out in this Statement, it is respectfully requested that the draft Open Space allocation is omitted from the next version of the Local Plan. It is also requested that the site is considered for housing development in accordance with the evidence submitted.

1. The sites contain a substantial number of trees many of which are quite mature and must make a significant contribution to the Borough's carbon reduction target. It seems perverse that planning permissions have been refused because of the impact on the individual trees whilst the wholesale destruction of woods seems inevitable if these sites are included.

It seems difficult to reconcile these two extreme positions.

If included in the plan preservation orders should be placed on appropriate trees as a minimum requirement.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
I object to policy I4 green and blue infrastructure.

This policy is a box-ticking exercise with no teeth to it. It sits oddly with the plan’s onslaught on the Green Belt. The plan to build on large areas of countryside and to inset villages will cancel out any benefits from extending the principle of enhancing biodiversity beyond Biodiversity Opportunity Areas.

There is no mention of the value of wildlife gardening to biodiversity or the important role that larger gardens play in a village setting.

Please refer to policies DM11, DM12, DM13, DM14, DM15 and DM16 of Wycombe District Council's Local Plan. We would also welcome the inclusion of a separate advice note on watercourses, similar to the one produced for Wycombe District Council (River Wye Advice Note) which really values the watercourses as an important asset in its district and provides advice to developers and landowners on how to protect and enhance the river environment. The River Wye Advice Note includes sections on the design of new riverside development (and the inclusion of buffer zones); landscape design of the river bank; public access; surface water run-off and the avoidance of pollution and weirs/barriers to fish passage. We’d be happy to work with the Council on this.</td>
<td></td>
</tr>
</tbody>
</table>
2.2.2 Blue Infrastructure

We welcome the reference to the Water Framework Directive in paragraph 4.6.40. However, we recommend that the following wording is used for the first sentence in this paragraph:

“The Water Framework Directive (WFD) requires all member states to achieve good ecological and good chemical status for all groundwater and surface water waterbodies by 2027 at the latest.”

2.2.3 Policy ID4: Green and blue infrastructure

In policy point (6) we recommend that mention of about non-native invasive species. Developments can result in the spread of non-native invasive species which have devastating ecological and economic impacts. Where identified, these species should be eradicated/controlled under an agreed scheme.

In policy point (7) we recommend that the second sentence is replaced with: “Development proposals that are likely to have an adverse impact on the functions and setting of any watercourse and its associated corridor will not be permitted. Development should seek to conserve and enhance the ecological, landscape and recreational value of the watercourse and its associated corridor through good design and seeking out opportunities to deliver WFD objectives.”

This policy should identify potential opportunities for aligning with Water Framework Directive (WFD) objectives and consider the pressures and aims outlined in the River Basin Management Plan (RBMP). For instance, many of the actions that have been highlighted to bring the River Wey into good ecological status involve re-naturalising the bank by removing hard engineering, encouraging natural buffer zones to the watercourse, removing barriers to fish and eel passage, reducing diffuse pollution and tackling non-native invasive species. Some WFD objectives can only be delivered via catchment wide/cross-boundary planning which the Wey Landscape Partnership (currently hosted by the Surrey Wildlife Trust) was set up to achieve - please see comment above on working in partnership and the Wey Habitat Restoration Strategy.

2.2.4 Buffer zone

Paragraph 4.6.48 to a buffer zone for non-navigable rivers. Please note that all rivers (navigable or not) should be protected and enhanced by an 8m wide minimum undeveloped buffer zone (measured from bank top) on both sides of the river. Bank top is defined as the point at which the bank meets the level of the surrounding land. 8m is the minimum required for main rivers under the Thames Region land drainage byelaws.

However, on a greenfield site where there is plenty of land available, we would expect to see a wider buffer zone of a minimum of 10m on both sides of the watercourse that varies in size and shape to include larger areas. It may be appropriate to look at a much larger buffer on certain sites but this should be assessed on a site by site basis. The provision of a buffer zone should also be supported by a long term ecological management plan.

2.2.5 Key evidence

We note that the WQA is not referenced with the key evidence green box but this document provides evidence to underpin this policy and should therefore be included.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

“watercourses”.

“The Water Framework Directive (WFD) requires all member states to achieve good ecological and good chemical status for all groundwater and surface water waterbodies by 2027 at the latest.”

“Development proposals that are likely to have an adverse impact on the functions and setting of any watercourse and its associated corridor will not be permitted. Development should seek to conserve and enhance the ecological, landscape and recreational value of the watercourse and its associated corridor through good design and seeking out opportunities to deliver WFD objectives.”

Attached documents:
The area is a haven for wildlife, some of which is already endangered. The introduction of residences would mean the import into an ecologically sensitive area not only of humans and their increased footfall, but also of pets, and cats and dogs in particular, that can have a devastating effect on wildlife. Protected species on and near the site and wildlife corridors would be destroyed.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Biodiversity Opportunity Areas (BOAs) seem to have been heavily influenced by the proposal of new identified settlement boundaries, in this draft local plan. The proposal in themselves have not been fully considered; they threaten landscape and biodiversity. Biodiversity will be seriously damaged by the many greenfield development sites proposed. We are suspicious of the use of the phrase “where possible”, which is a letout. Important habitats for biodiversity (outside BOAs) include many which are not adjacent to BOAs. There is no proper concern for protection of such areas.

4.6.45 is misleading. The primary ostensible role of SANGs is to divert recreational use, and dog-walkers in particular, away from the TBHSPA. It is extremely doubtful whether new SANG will achieve its primary purpose. For example, dog walkers are being encouraged to use sites occupied by ground-nesting Skylarks. It is wrong to claim, in effect, that SANG will produce net gains in biodiversity when it will be used to justify the destruction of existing wildlife on greenfield sites by building on it.

Land used for SANG should be made attractive in order to divert recreational use away from the SPA; but this cannot be achieved by a SANG which is adjacent to the SPA or many of the sites proposed.

We object to the introduction of 4.6.49a which appears to be an afterthought to weaken the policy.

Existing biodiversity and recreational use is being ignored by Guildford Borough Council and developers in selecting sites. In practice, SANG is being used in order to avoid any restriction on housebuilding due to the SPA; and is effectively a Trojan horse. Furthermore, all such sites are by definition already green spaces with either biodiversity or recreational uses.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

I object to the insetting of 14 villages from the Green Belt in Guildford, and the proposal that infilling is acceptable within a further 12 villages within the Green Belt. I am also concerned that infilling is also proposed outside the settlement boundaries of 11 further villages. “Infilling” is merely a disguise, a pretence for developing Green Belt land.

Policy ID4: Green and Blue Infrastructure

Thakeham continues to object to the proposed designation of the site as ‘Open Space’ and the findings of the Council’s Assessment of Sites for Amenity Value 2017 (Document Reference T16), which has informed this designation.

Open Space is defined in the NPPF as follows:

“All open space of public value, including not just land, but also areas of water (such as rivers, canals, lakes and reservoirs) which offer important opportunities for sport and recreation and can act as a visual amenity”

NPPF, Page 54

With respect to open space designations in the Proposed Submission Plan, Policy ID4 states:

‘Open space (encompassing all open space within urban areas, land designated as Open Space on the Policies Map and all land and water that provides opportunities for recreation and sport as identified in in the most recent Open Space, Sports and Recreation Assessment) will be protected from development in accordance with national planning policy.’

Supporting Paragraph 4.6.49 provides a definition of Open Space:

‘Open space for the purpose of policy ID4, is defined as all types of open land, both public and private, of public sport/recreation and/or amenity value.’

Within the ‘reasoned justification’ for this policy at paragraph 4.6.55 of the Proposed Submission Local Plan, the Council explain that the Amenity Assessment 2017 has identified and informed the designation of Open Spaces across the Borough:

‘The Council has produced an Amenity Assessment to identify open spaces of public amenity value within villages that are inset from the Green Belt by the plan. This assessment looked at land within the proposed village inset boundaries, excluding land where inset boundaries were expanded to take in allocations on the edges of villages. Sites that were assessed as having public value are identified as Open Space on the Policies Map and will be protected in line with national planning policy to ensure that the value for which the space has been identified is retained. Open spaces outside inset village boundaries are protected by the Green Belt designation so have not been considered for further protection. Land of public value in inset villages that is used for sport and recreation is identified through the Open Space Sport and Recreation Assessment and will be protected in line with the NPPF.’

Following a site visit and basic desktop assessment, the Amenity Assessment 2017 deemed the site (Ref: ETH_088) had an amenity value score of ‘High’, accompanied by the following reasoning:

‘Site is a grass field which is inaccessible to the public. The site is adjacent to a private sports centre. There is also a PROW along the southern boundary. The site is in an elevated position and offers aesthetic value.’

As the site is private land which is inaccessible to the public and therefore has no amenity value with respect to providing opportunities for sports and recreation, it appears that the site has been designated entirely due to its ‘aesthetic value’ and that as a result the overall amenity value is scored as ‘High’. This is the only basis upon which the site is designated an Open Space within the Pre Submission Local Plan under Policy I4.

The site is well contained by high hedgerow to its southern boundaries adjacent to the public footpath, and is set substantially back from the road frontage of Chinthurst Lane. Due to the location and positioning of the site, there are very limited views towards the site from the public realm on Chinthurst Lane and further afield. The elevated position of the site means any views into the site from the tennis club are limited. The only views into the land are from private properties at first floor level, and limited views from the private sports club.

As per previous representations, and to demonstrate the minimal visual amenity value of this site, we have again appended a series of images at Appendix 2 which accompanied representations made in July 2016. These images show that the site is not visible from the public footpath, with the exception of over the entrance gate, and that there is very limited visibility towards the site from the public realm on Chinthurst Lane or the sports club.

We object to the conclusion within the Amenity Assessment that this site is of high amenity value and we consider that the proposed allocation of the land as Open Space should be removed from the Local Plan.
The designation of sites of no amenity value is not consistent with the NPPF and does not constitute positive planning and would seriously compromise the ability of the Borough to provide much needed housing in sustainable locations within the villages and towns.

For the reasons above, it is our view that the Council should review the evidence base, including the Amenity Assessment, and that the proposed Open Space allocation affecting this site should be removed to ensure that the plan reflects national planning policy.

This site is set within a highly sustainable location in the village, and would be suitable for residential development in the emerging plan period. Sites such as this within the village envelope can make an important contribution to meeting housing needs in the locality.

Availability, Suitability & Achievability

Availability

The NPPG provides the following guidance in regard to considering whether a site is available for development:

“A site is considered available for development, when, on the best information available, there is confidence that there are no legal or ownership problems, such as unresolved multiple ownerships, ransom strips tenancies or operation requirements of landowners. This will often mean that land is controlled by a developer or landowner who has expressed an intention to develop”

NPPG Paragraph 021 Ref. 3-020-20140306

As highlighted within this representation, the site is controlled by Thakeham Homes Ltd and we wish to actively engage with the Council over the coming months prior to the submission of a full planning application for residential development.

Thakeham has a proven track record for delivering a number of high quality residential schemes across Surrey, Sussex and Hampshire and will be seeking to deliver circa 20 dwellings on the site with a view to commencing development on site at the earliest opportunity.

Suitability

The NPPG provides the following guidance when considering whether a site is suitable for development:

“Sites in existing development plans or with planning permission will generally be considered suitable for development although it may be necessary to assess whether circumstances have changed which would alter their suitability”

NPPG Paragraph 019 Ref. 019-20140306

The site lies within the village of Shalford which is proposed to be inset from the Green Belt. The site is surrounded by existing residential and commercial development on all of its boundaries. There are a number of services and facilities in the local area, including a railway station and an infant school. Physical constraints to development in this location are also minimal. The site lies comfortably within Flood Risk Zone 1, where there is considered to be the lowest level of fluvial flood risk. There are no major ecology constraints and the site lies a significant distance from the Thames Basin Heaths SPA.

Achievability

In determining whether a site is achievable for development, the NPPF provides the following guidance:

“A site is considered achievable for development where there is a reasonable prospect that the particular type of development will be developed on the site at a particular point in time. This is essentially a judgement about the economic viability of the site and the capacity of the developer to complete and let or sell the development over a certain period”

NPPG, Paragraph 021 Ref. 021-20140306

Given the acute housing need within the Borough and the relative lack of constraints affecting this site, it is considered that there is a reasonable prospect of residential development being achieved on site by 2021.
As stated above, Thakeham has a proven track record for delivering schemes of a similar size and scale throughout Surrey, Sussex and Hampshire, and has the capacity to deliver the development of the site to provide much needed new homes within the first 5 years of the plan period.

ID4 POLICY ID4: Green and blue infrastructure

As previously stated, Sport England considers that the policy is not supported by a sufficiently robust and up to date assessment of needs for sport and recreation. This should be in the form of a Playing Pitch Strategy (PPS) and a built or sports facilities strategy for the borough in accordance with Sport England’s guidance. Sport England does not consider that the council’s open space, sport and recreation assessment based on the out-of-date PPG17 – planning for open space, sport and recreation is adequate and addresses the sport and recreational needs for the borough.

Furthermore, Sport England opposes the addition of the following paragraph:

4.6.49a National planning policy requires great weight to be given to the need to create, expand or alter schools to meet the needs of existing and proposed communities. This will be taken into consideration if development is proposed on open space and the development meets a legitimate educational need that is appropriately met on the site.

Sport England is concerned that this weakens protection of existing sports facilities and playing field land and is inconsistent with Sport England’s planning objectives and para 74 of the NPPF which seek to protect existing sports facilities and playing field land against loss from development.
