Proposed Submission Local Plan Regulation 19 representations (2016 and 2017)

Document part: Policy ID1 - Infrastructure and delivery
Proposed Submission Local Plan Regulation 19 representations (2016 and 2017)

Comment ID: PSLPP16/2803  Respondent: 8555041 / Adrian Platt  Agent:  

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ) , is Legally Compliant? ( )

I object to the total lack of any substantial information on providing adequate infrastructure for the developments proposed. It is simply not good enough to make bland statements about infrastructure, since, before any development of the frightening level proposed is considered, fully costed and detailed infrastructure plans for items such as new schools, Medical Centres etc. must be clear.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/5664  Respondent: 8555297 / Mrs G M Aish  Agent:  

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

The infrastructure in many of the areas specified is completely incapable of taking the large increase in the number of people and cars. Roads are already busy and often grid locked. drainage is unable to cope. and car parking at shops and stations is already saturated. The Plan does not adequately provide for the additional schools. doctor's surgeries. other medical care. libraries. policing. etc. Air quality is already at serious levels of pollution, particularly along the A3 corridor; recent research has shown the serious harm being done to the lungs. particularly of young children. by the high levels, in breach of regulations, of NOx gases and particulates. I object that all these considerat ions have been ignored.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: pslp171/2598  Respondent: 8556385 / Guildford Residents Association, EGRA (Amanda Mullarkey)  Agent:  

Document:  Proposed Submission Local Plan: strategy and sites 2017 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

The strengthening of conditionality in point (3) is supported.

However, it is not clear that the infrastructure proposed would be adequate.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

<td></td>
</tr>
<tr>
<td>Major external development and its impact on local minor roads</td>
<td></td>
<td></td>
</tr>
<tr>
<td>The draft plan contains little information on local infrastructure. Artington parish and neighbouring communities have particular concern that the proposed neighbouring major developments would have a serious impact on the fragile local network of minor roads, especially the B3000.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Although not within Arlington parish, Blackwell Farm has been identified as a potential new 'Urban Local Centre' with a potential for 1800 homes. In addition there is the potential for 100 homes at Broadford Business Park and the major development of Dunsfold New Town. If implemented, these major developments would have a significant impact on existing communities such as Puttenham, Compton, Famcombe, Peasmarsh, Shalford and Artington, particularly with regard to the local road network. Of particular concern is the already overloaded and inadequate B3000 rail bridge, which has been risk-assessed as being unsafe and in urgent need of replacement. This hazardous nature of this narrow humpbacked rail bridge on the 83000 is compounded by its limited visibility. There are no plans or available funding to provide separate provision for cyclists and pedestrians, nor update the bridge to make it suitable for today's volume of traffic, which exceeds 5 million vehicles per year, a num ber being driven by the opening of the Hindhead Tunnel and the A3 bottleneck moving to Guildford resulting in drivers seeking alternative routes to the A3. This number is likely to be greatly exceeded if the potential developments mentioned above proceed resulting in gridlock on the already overloaded local minor roads.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>The existing infrastructure simply does not support the proposed house build, particularly having regard for Guildford's exceptional 'gap town' characteristics, and the draft Local Plan does not recognise the problem. This is clearly untenable. Going forward, the supporting infrastructure must be commensurate with the future housing population. It is crucially important firstly to demonstrate the feasibility of implementing the necessary infrastructure improvements and then, where appropriate, the cost of providing such needs to be factored into the overall development cost. Not to do so would be irresponsible.</td>
<td></td>

II. Infrastructure and delivery, P108.

We welcome the objective of associated infrastructure being available to occupants as soon as it is needed. However stronger control is needed; we suggest that occupancy is not allowed until it can be shown that the infrastructure is in place.

Our Group would welcome the opportunity to be part of the “officer working group” to prioritise the CIL spending for our area.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/3342  Respondent: 8560257 / Patricia Camp  Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Infrastructure - Drains

There is a serious under capacity of existing sewers and the treatment works to cope with the large number of dwellings proposed.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

---

Comment ID: PSLPP16/3343  Respondent: 8560257 / Patricia Camp  Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Schools

I am concerned and object to the issue that more families moving into the village would create fewer places for families already with children approaching school age.

The Raleigh (no room on the site for expansion) is the only primary state school in the village and has been full every year for many years.

Secondary school places are limited in number at the Howard of Effingham and other secondary schools, also full are a greater distance from the village.

Village facilities

West Horsley is a small village with very few facilities, which are not enough for the current population.
Parking is very difficult most times of the day for people using the shops and library. The village does have three disabled parking spaces close to the shops and a small car park. It is very difficult getting appointments and parking at the single Medical Centre serving East and West Horsley plus areas beyond the village.

<tr>
<td>The majority of infrastructure (excluding transport and traffic) has not been assessed by the Society in this response.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>The traffic and transportation studies are (in many parts) very detailed and these were issued on the same day as the consultation commenced.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>The plan at Figure 12 [Figure 4.9 from the Surrey County Council Waverley &amp; Guildford Model Validation Report] shows various routes assessed for journey times.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Given the scope and scale of development in other neighbouring authorities (especially Rushmoor), impact from these other authorities’ land allocations should be taken into account in assessing the Borough’s roads.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>The link from the station to the University, Hospital, Research Park, Park Barn and proposed further development at Blackwell Farm among others, is excluded from the plan on Figure 12 because it is not a classified road.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>This means that some of the analysis fails to take into account the extent of use of ‘secondary’ roads by the employment, infrastructure and residential sectors.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Figure 13 shows the same plan but with Guildford Park Road, Madrid Road, The Chase, etc., marked on it.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>The Guildford Society supports Guildford Vision Group’s proposed linkage by new bridges (‘the GVG Crossing’) of the York Road and Madrid Road routes (see Figure 14, below).</td>
<td></td>
<td></td>
</tr>
<tr>
<td>The proposal would avoid east-west traffic having to use the riverside and town centre road network – enabling greater pedestrian priority in that area. This, coupled with one of the Town Centre Master plan solutions, would derive substantial benefits for the town.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>If the new road were treated as an extension of the A246 to the hospital, university and Park Barn, this would allow more comprehensive planning of the Integrated Transport Network.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Furthermore, at Figure 15, below, we have superimposed the Town Centre Master Plan Scenario 1 solution onto the GVG Crossing to further illustrate the deflection of traffic away from the core town centre area.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>The Society recognises that the Town Centre Master Plan is still work in progress and does not form a settled part of the Reg19 Consultation Draft.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>The Society does believe, however, that the modelling of traffic scenarios must include the proper weighting for the linkage of York Road to Madrid Road.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Part of the solution needs to be an understanding of the roles and interaction between the railway station and the bus network.

Position Statement 3 - Infrastructure

The Society fears there is an infrastructure funding circle that may never be closed, but that developers will continue to require their sites to be assessed on the local impacts of their scheme (development being allowed as long as that impact is not ‘severe’).

The Society believes that the Local Plan must be configured to reflect the constraints where funding commitments have not been made, and where it is either not within the Council’s control (eg., Strategic Highway Network, Network Rail, etc), or beyond its the financial reach. Consequently, the Society believes the Council should:

64.1. Constrain the development within the Local Plan to that level that can be supported by existing infrastructure and through new or improved infrastructure where funding and delivery are either within the gift of the Council or firm commitment and all necessary approvals have been received. 64.2. Establish within the Council’s Corporate Plan the intent to deliver additional infrastructure and to obtain the necessary approvals and funding to be in control of its delivery;

64.3. Relax constraints in the Local Plan as part of the regular review process to enable further delivery of development based upon the prior delivery of infrastructure.

The Society is concerned that essential elements of the Transportation Evidence Base (launched on the same day as the Reg19 Consultation) show that some roads (notably Guildford Park Road, Madrid Road and The Chase) are not adequately analysed as they do not form part of the A-road classification network in Guildford. This is a major route which only stands to become more heavily used as proposed land allocations to the west of Guildford (inside and beyond the Borough) have an effect on this route.

Position Statement 5 – Town centre

The Society is keen to see the comprehensive and aspirational regeneration of the town centre.

The Society believes this should be broadly along the lines of the vision and subsequent study prepared by Allies & Morrison but with some crucial comments as follows:

67.1. The absence of provision (in the Reg19 Consultation Draft) for most uses (including the expected traffic generated by those uses), infrastructure requirements and housing numbers makes the overall Draft Local Plan somewhat unrealistic;

67.2. The reliance on a subsequent Area Action Plan is understandable but, as it is not at all envisioned in the Reg19 Consultation Draft, the Local plan itself may be unsound – for example as it relates to commuter parking versus a presumption in the infrastructure evidence base of a reduction of generation of traffic movements in the town centre;

67.3. There is a risk that the Council is standing across the gap between two railway carriages (the Local Plan and the Town Centre Master Plan); the carriages are not yet coupled together, and Guildford risks being torn apart as the gap widens.

67.4. The Society (along with many other residents’ groups and businesses) strongly supports the principle of the GVG crossing, but this option has not even been fully modelled as part of the wider traffic and transport analysis – largely because the route from the Farnham Road Bridge (A31) to the Cathedral, University, Hospital, Research Park and in the region of 7,500 households, is not classified as an A or B route.

The Society would regret this Local Plan process if it fails to deliver regeneration of the town centre and riverside and so the Plan must include sufficient comfort that this will happen.
What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: pslp171/1876  Respondent: 8561377 / The Guildford Society (Julian Lyon)  Agent:

Document:  Proposed Submission Local Plan: strategy and sites 2017 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1) Paragraph 4.6.1 refers to the Guildford Borough Infrastructure Delivery Plan which we considered at the previous Regulation 19 consultation in 2016.

2) Policy ID1(1) has clearly been carefully reworded to act as a handbrake on development, but the NPPF test to hold back development is calibrated on the basis of Severe Impact. It is not clear that Guildford Borough Council’s approach is defensible and it is likely the course of development would be uncertain and unpredictable. For a plan to set out to be uncertain and unpredictable suggests to the Guildford Society either a gambler’s game of chance or negligence towards the borough and its current and future residents.

3) So much of our infrastructure is a legacy of past failures over several decades. Development controls, such as Section 106 Agreements and Community Infrastructure Levy, are typically intended to mitigate incremental impacts of development and not to have to fix past issues. Policy ID1(2) may not be lawfully enforceable by planning condition or planning obligation due to, at least in part, the need to fix historic problems.

4) Policy ID1(4) refers to the criticality of infrastructure listed in Appendix C, which has been changed for the most part to require developers to fund in full many elements. There is no indication of the impact on other parts of the plan if individual developers demonstrate that they cannot or will not finance infrastructure.

5) At 4.6.2 we agree the use of the Planning Act 2008 definition of infrastructure. We also think that the Town Centre and District and Local Centres should be listed as core infrastructure for the community, area and Borough.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/6182  Respondent: 8562273 / The Clandon Society (Christopher Dean)  Agent:

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

POLICY II - Infrastructure and delivery

We object to this policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the Plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.
The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this Plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the Plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local Plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This Plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. Implementation is critically dependent on providers outside the Council’s control and CIL income. Instead of recognizing this as a key constraint, the Plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

</tbody>
</table>

Residents are being asked to accept very large amounts of development with little or no detail being provided on measures which would relieve existing congestion and limit future problems. Much is made of the need for new infrastructure to support developments and for this to be in place as needed (listed in App. C to the Plan). Even if this happens the Plan admits …”we forecast that there will also be an absolute increase in overall traffic volumes” and also that congestion at junctions will increase (but this is not modelled so we don’t know by how much or where).

The cumulative effects of the developments in the north east of Guildford are certain to have a devastating impact on the A247 through West Clandon (and of course on Send) and it is hard to see how any of the infrastructure proposals in the Plan (App. C) will do anything to mitigate this impact. GBC has little or no control over the plans of Surrey County Council as the local highways authority and it is well known that they have no money available.

The Plan now calls for nearly all the proposed infrastructure to be funded by developers (see C). We question how realistic it is to expect developers not only to pay for all the infrastructure but also to have it in place in a timely fashion. The Plan says that planning permission will be refused if timely provision of infrastructure cannot be secured. Such refusals will almost certainly be settled in the courts. Developers’ business models are based on building and selling houses to create the cash required to provide infrastructure. People will be living on the sites well before infrastructure is complete.

If development were to be refused the land would still have been removed from the green belt and its future rendered uncertain.

All of these developments will draw very large amounts of additional traffic to the A247 through the village and there is no reference to this in the Plan. It would be naïve to think that the employment sites and schools will serve only the developments themselves. Apart from the normal movements of residents to and from the new sites there will be considerable additional traffic on the A247 generated by:

- children from elsewhere being delivered to Gosden Hill schools and collected
- the employees of the offices and industrial sites getting to work and returning home
- the vehicle movements generated by distribution and storage activities
- traffic from Wisley wishing to travel south and returning
- traffic from Gosden Hill wishing to travel south and returning
- traffic from Slyfield wishing to travel south and returning
- private and commercial traffic originating in the south and accessing Gosden Hill, Burnt Common or the A3 and returning (including traffic from Dunsfold)
- SCC’s business plan for Newlands Corner

We point out that although the A247 is classified as an A road it has none of the characteristics and ideally should be downgraded. The road is a well-known problem and a number of domestic planning applications have been turned down on highways objections. It is quite unsatisfactory to even consider putting more traffic on a road that:

- is less than 2 vehicles wide in places
- does not have continuous footpaths
- has several very sharp bends
- has a hump-backed bridge with poor sight lines
- has many properties with very poor exit sight lines
- has a very difficult and dangerous junction with the station access road
- has a dangerous junction with the southbound A3 on-slip road
- is largely unlit
- has a primary school
- is already very congested at times

In summary, the A247 is quite unsuited to coping with additional traffic and it is very clear that the developments proposed in the 2017 Local Plan will increase the amount of traffic on this road over and above that in the 2016 draft to which residents strongly objected. There is nothing in the Infrastructure Schedule which addresses this issue. Indeed several of the infrastructure proposals will themselves lead to significant increases in traffic on the A247.

WHPC view: Objects strongly

In brief: No detailed Infrastructure proposals for the Horsleys are presented, even in response to Thames Water’s statement that their current facilities would not have the capacity to cope.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

POLICIES I1, I2 & I3

These three policies cover Infrastructure & Delivery, Supporting the Department of Transport’s ‘Road Investment Strategy’ and Sustainable Transport for new developments. Whilst WHPC supports the general policy statements as presented in each case, it is the detailed infrastructure proposals for Guildford Borough or lack of for the Horsleys, which are the real issue.

WHPC believes there are serious deficiencies and shortcomings in the infrastructure of Guildford Borough as it is today. The aggressive house building policy advanced by GBC in the Proposed Submission Draft Local Plan will substantially exacerbate many, if not all, problem areas.

WHPC puts forward the following specific comments regarding infrastructure in West Horsley today:

- Thames Water has sent very clear advice in 2014 to stating that their current facilities, i.e. pipelines to the Ripley North Treatment Works and the Treatment Works, are unlikely to have the capacity to cope with one or possibly all the developments proposed for West and East Horsley. A 2 to 3 year lead-in period Thames Water say will be necessary to expand capacity following the granting of planning permission for a development Site.
- Roads across the parish are in poor condition with many potholes. Many roads are unable to sustain their current levels of traffic, particularly the increasing levels of HGV traffic along the B2039.
- Principal through roads traversing West Horsley are narrow and winding, have a series of pinch points, have sections without any pavements and are generally unlit. As a senior SCC councillor remarked at a recent public meeting in the village hall: “West Horsley has lanes, not roads.” West Horsley’s ‘lanes’ are totally unsuitable for high volumes of traffic.
- Many of the drains are blocked or otherwise in extremely poor condition, giving rise to frequent surface water flooding when it rains. The southern edge of the Horsleys Area lies on the ‘spring line’ at the foot of the North Downs and is recognised in the GBC Infrastructure Delivery document as a Surface Water Flooding Hot Spot, viz:
  
  Surface Water Flooding Hot Spots Map â€“ Horsleys (extracted from GBC Infrastructure Delivery document page 22)
- The pavements are in poor condition. As well as being narrow, they are often uneven and/or cracked making it difficult, for example, for people with pushchairs or prams or disabled persons in wheelchairs.
- There are insufficient school spaces for the number of local children needing them, with the result that children are allocated to schools a significant distance away such as Dorking or Woking.
- The Medical Centre in East Horsley is already at capacity in terms of its number of patients.
It is recognised that, as stated in the Proposed Submission Local Plan, the maintenance of adequate infrastructure and its expansion to meet growing needs is the responsibility of the relevant infrastructure provider. This is often not GBC itself but rather, for example, Surrey County Council or utility companies.

In respect of West Horsley, there are only four proposals mentioned in Appendix C:

LRN 22 - East Horsley and West Horsley traffic management and environmental improvement scheme. It is not clear what is proposed here, and its timing and funding have to be considered uncertain. It is stated that funding will, at least in part, come from developer contribution. However, it is not at all clear what development is likely to give rise to such a contribution, but it certainly implies that funding could only come if there were a development; and

HSC 5 - Expansion of East Horsley Medical Centre to provide additional capacity and services for future population in years 5 – 15 of the plan.

SANG 8 – Strategic Alternative Natural Green Space, Long Reach Farm, West Horsley. Years 1-5. Delivered by Landowner at cost of £7,573,822 from Developer contributions. NOTE: Long Reach Farm does not appear on any map.

WHPC Comment: SANG 8 would result, if granted permission, in the loss of open agricultural land in the Metropolitan Green Belt. The land contributes greatly to the openness of the Green Belt.

SANG 9 – Bespoke Strategic Alternative Natural Green Space, Ben’s Wood, West Horsley. Years 1-5. Delivery by Developer with Developer contributions.

There are no proposals in respect of all the existing problems with for example drainage, roads, pavements and schools.

Furthermore, it is inevitable that the proposed developments in West Horsley itself and nearby, in East Horsley and the proposals for Wisley, will put enormous strain on the existing infrastructure. There are no proposals at all to cater for this.

Although an expansion of the Medical centre is proposed in the Infrastructure Schedule, this is not until years 5 – 15 of the Plan. Given that it is already at capacity, WHPC submits this needs to be done much earlier.

Local primary schooling is also a very pertinent issue. There are 11 housing development sites identified in the LAA for West and East Horsley which, if taken together, would result in the building of 593 new houses in the two parishes that today are served by a single primary school - The Raleigh, in West Horsley. Planning guidance suggests that this number of new homes will require the provision of around 150 additional primary school places to accommodate such an increase in population. Today there is no spare capacity at The Raleigh, yet no proposals are made in the Proposed Submission Draft Local Plan to provide for any more school places in the Horsleys.

WHPC submits that the failure to address the inadequacies of the existing infrastructure, never mind GBC’s proposed growth in housing, is a serious deficiency in the Proposed Submission Draft Local Plan. The Plan is therefore UNSOUND.

WHPC OBJECTS to the lack of detailed infrastructure proposals to not only cater for development in West and East Horsley but also throughout the Borough. As drafted the proposals do not meet the stated objective of providing infrastructure to support the proposed developments.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:  WHPC Draft Local Plan response July 2016.pdf (2.2 MB)

POLICIES 11, 12 & 13

These three policies cover Infrastructure & Delivery, Supporting the Department of Transport’s ‘Road Investment Strategy’ and Sustainable Transport for new developments. Whilst WHPC supports the general policy statements as presented in each case, it is the detailed infrastructure proposals for Guildford Borough or lack of for the Horsleys, which are the real issue.

WHPC believes there are serious deficiencies and shortcomings in the infrastructure of Guildford Borough as it is today. The aggressive house building policy advanced by GBC in the Proposed Submission Draft Local Plan will substantially exacerbate many, if not all, problem areas.

WHPC puts forward the following specific comments regarding infrastructure in West Horsley today:

- Thames Water has sent very clear advice in 2014 to stating that their current facilities, i.e. pipelines to the Ripley North Treatment Works and the Treatment Works, are unlikely to have the capacity to cope with one or possibly all the developments proposed for West and East Horsley. A 2 to 3 year lead-in period Thames Water say will be necessary to expand capacity following the granting of planning permission for a development Site.
- Roads across the parish are in poor condition with many potholes. Many roads are unable to sustain their current levels of traffic, particularly the increasing levels of HGV traffic along the B2039.
- Principal through roads traversing West Horsley are narrow and winding, have a series of pinch points, have sections without any pavements and are generally unlit. As a senior SCC councillor remarked at a recent public meeting in the village hall: “West Horsley has lanes, not roads.” West Horsley’s ‘lanes’ are totally unsuitable for high volumes of traffic.
- Many of the drains are blocked or otherwise in extremely poor condition, giving rise to frequent surface water flooding when it rains. The southern edge of the Horsleys Area lies on the ‘spring line’ at the foot of the North Downs and is recognised in the GBC Infrastructure Delivery document as a Surface Water Flooding Hot Spot, viz:

Surface Water Flooding Hot Spots Map â€“ Horsleys (extracted from GBC Infrastructure Delivery document page 22)

- The pavements are in poor condition. As well as being narrow, they are often uneven and/or cracked making it difficult, for example, for people with pushchairs or prams or disabled persons in wheelchairs.
- There are insufficient school spaces for the number of local children needing them, with the result that children are allocated to schools a significant distance away such as Dorking or Woking
- The Medical Centre in East Horsley is already at capacity in terms of its number of patients.

It is recognised that, as stated in the Proposed Submission Local Plan, the maintenance of adequate infrastructure and its expansion to meet growing needs is the responsibility of the relevant infrastructure provider. This is often not GBC itself but rather, for example, Surrey County Council or utility companies.

In respect of West Horsley, there are only four proposals mentioned in Appendix C:

LRN 22 - East Horsley and West Horsley traffic management and environmental improvement scheme. It is not clear what is proposed here, and its timing and funding have to be considered uncertain. It is stated that funding will, at least in part, come from developer contribution. However, it is not at all clear what development is likely to give rise to such a contribution, but it certainly implies that funding could only come if there were a development; and

HSC 5 - Expansion of East Horsley Medical Centre to provide additional capacity and services for future population in years 5 – 15 of the plan.

SANG 8 – Strategic Alternative Natural Green Space, Long Reach Farm, West Horsley. Years 1-5. Delivered by Landowner at cost of £7,573,822 from Developer contributions. NOTE: Long Reach Farm does not appear on any map. WHPC Comment: SANG 8 would result, if granted permission, in the loss of open agricultural land in the Metropolitan Green Belt. The land contributes greatly to the openness of the Green Belt.
SANG 9 – Bespoke Strategic Alternative Natural Green Space, Ben’s Wood, West Horsley. Years 1-5. Delivery by Developer with Developer contributions.

There are no proposals in respect of all the existing problems with for example drainage, roads, pavements and schools.

Furthermore, it is inevitable that the proposed developments in West Horsley itself and nearby, in East Horsley and the proposals for Wisley, will put enormous strain on the existing infrastructure. There are no proposals at all to cater for this.

Although an expansion of the Medical centre is proposed in the Infrastructure Schedule, this is not until years 5 – 15 of the Plan. Given that it is already at capacity, WHPC submits this needs to be done much earlier.

Local primary schooling is also a very pertinent issue. There are 11 housing development sites identified in the LAA for West and East Horsley which, if taken together, would result in the building of 593 new houses in the two parishes that today are served by a single primary school - The Raleigh, in West Horsley. Planning guidance suggests that this number of new homes will require the provision of around 150 additional primary school places to accommodate such an increase in population. Today there is no spare capacity at The Raleigh, yet no proposals are made in the Proposed Submission Draft Local Plan to provide for any more school places in the Horsleys.

WHPC submits that the failure to address the inadequacies of the existing infrastructure, never mind GBC’s proposed growth in housing, is a serious deficiency in the Proposed Submission Draft Local Plan. The Plan is therefore UNSOUND.

WHPC OBJECTS to the lack of detailed infrastructure proposals to not only cater for development in West and East Horsley but also throughout the Borough. As drafted the proposals do not meet the stated objective of providing infrastructure to support the proposed developments.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Lack of road and rail capacity

We object to this scale of growth when there is already insufficient road and railway capacity in Guildford. Locally, one effect of this level of growth (together with that in Waverley) will be to place an undue burden on the single-track lanes in the Tyting area, which is designated as an Area of Outstanding Natural Beauty. Additional traffic will be very unwelcome and change the character of the AONB.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Traffic implications for the Tyting area

The lanes of the Surrey Hills are only suited to carrying a low level of traffic, often being narrow single track roads, as is the case for Halfpenny Lane and White Lane/Guildford Lane in the Tyting area.

The combination of the scale of growth proposed in this 2017 plan and a reduction of capacity in the town centre (as indicated by the plans for the Sustainable Movement Corridor and the Town Centre Regeneration Strategy) threatens to lead to much more peak hour traffic on minor roads around the town as drivers find alternatives routes.

This potential impact on the lanes should be avoided and the character of the lanes protected.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
land. We believe that a clear statement is required to understand whether the policies in the existing 2003 Local Plan will apply under such circumstances or whether the new policies proposed in this document will apply.

9.I OBJECT due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages already suffer from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on local roads.

Many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, West Clandon included, already suffer from traffic congestion. Development around these villages will result in more traffic and more parking problems.

With some 5000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become ever popular, particularly at weekends with hundreds of cyclists passing through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements, as they often need to.

10.I OBJECT to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being significant for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents will see their quality of life significantly deteriorate.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.
Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send, will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is not sustainable.

There is no provision for the increased capacity of Guildford hospital, where is this assessed and remedied?.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Comment ID: psp171/1427  Respondent: 8569857 / Woking Borough Council (Ernest Amoako)  Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Woking Borough Council will be concerned if there are any unmitigated traffic implications of the development proposals in the Guildford Local Plan that would have adverse impacts in the Borough. The development of some of the strategic sites identified in the Local Plan such as the Former Wisley Airfield would potentially have significant traffic implications in Woking if the impacts are not addressed. The implications of developing the proposals in the Plan on the road network such as the A3 corridor would be severe if appropriate mitigation is not identified and delivered as part of developing the sites. Appendix C of the Local Plan sets out the transport infrastructure projects identified to support the delivery of the Plan. This includes a number of projects to improve the A3 corridor and other road networks with indicative costings and funding sources. Woking Borough Council is aware that Highways England is still in the process of testing various options for A3 corridor improvements. The outcome of this work is not yet known. It is expected that the outcome of the work will be reflected in the Local Plan and if necessary used to refine the projects set out in Appendix C. Any adverse impacts should be appropriately addressed to ensure the sustainable delivery of the Local Plan without exacerbating the existing traffic conditions in Woking.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Comment ID: PSLPP16/2200  Respondent: 8570273 / Fiona Curtis  Agent: Fiona Curtis

Do you consider this section of the document; complies with the Duty to Cooperate? ( No ), is Sound? ( No ), is Legally Compliant? ( )

I object to policy I1 Infrastructure and delivery.

Most of the borough’s infrastructure is antiquated, congested and straining to accommodate even current needs and organic growth. Yet this plan’s commitment to building housing estates across the Guildford countryside will mean either major infrastructure investment that no-one is prepared to pay for or else a catastrophic and simultaneous collapse in transport, educational, medical, energy, water and communications services. The plan targets greenfield sites – requiring heavy infrastructure investment – in order to generate CIL income necessary to meet an infrastructure shortfall that is already serious. The current draft CIL scale also encourages development on greenfield sites rather than brownfield and will reduce or negate developer's obligation to sell a percentage of homes at 20% below market value. The policy wording...
says nothing about roads and traffic. The Council’s methodology for assessing infrastructure needs in this area is inadequate, identifying only the tip of an iceberg of existing congestion. Compton Village is already close to tipping point, yet it will see a significant increase in traffic volume, will be completely congested and yet no plans exist to mitigate the problem. The schemes referred to in this policy barely solve existing congestion and are inadequate when development takes place. The full impact on local road networks has not been fully considered. Some proposed development locations would require highway schemes that involve demolishing property and road-widening in residential areas to solve the resultant congestion. The A3 improvements are not guaranteed to take place but they are being used to justify removing large areas from the Green Belt before detailed traffic assessments have taken place. These detailed investigations are being deferred until the planning application stage and will be left to developers to prepare. If a site then proves to be unsustainable its Green Belt protection will have been lost for no reason and unsuitable development will take place by a more insidious process. Compton Village will actually incur increased traffic flow as a consequence of A3 widening according to the study, yet as was pointed out above, no solutions are in place to improve the situation. Adequate infrastructure provision is a pre-condition of sustainable development. But in this

Compton Village is already close to tipping point, yet it will see a significant increase in traffic volume, will be completely congested and yet no plans exist to mitigate the problem. The schemes referred to in this policy barely solve existing congestion and are inadequate when development takes place. The full impact on local road networks has not been fully considered. Some proposed development locations would require highway schemes that involve demolishing property and road-widening in residential areas to solve the resultant congestion. The A3 improvements are not guaranteed to take place but they are being used to justify removing large areas from the Green Belt before detailed traffic assessments have taken place. These detailed investigations are being deferred until the planning application stage and will be left to developers to prepare. If a site then proves to be unsustainable its Green Belt protection will have been lost for no reason and unsuitable development will take place by a more insidious process. Compton Village will actually incur increased traffic flow as a consequence of A3 widening according to the study, yet as was pointed out above, no solutions are in place to improve the situation. Adequate infrastructure provision is a pre-condition of sustainable development. But in this
Development Plan will provide an overall improvement. There will be some local benefits, such as the Ash rail bridge for example, but in general conditions will be as bad and in many places, such as Compton Village, worse. So the statement in the SHAR para 4.2.5 that ‘the combined mitigation as reflected in Scenario5..indicates that at the strategic level it accommodates the additional PSLP demand’ needs qualifying – ‘at the cost of a lot of queuing’ and makes no mention of the impact this will have on pollution, which is already a known problem at the A3 end of Compton. The cumulative effect of the additional traffic generated by the developments in the local plan will be to increase congestion, even with the proposed highway schemes in place. More detailed analysis of the junctions and queuing is required. So we question the conclusion that the developments would have “an acceptable impact on the capacity of the highway networks in terms of the policy test set in paragraph 32 of NPPF”.

Appendix 3 of the Transport Topic Paper shows the phasing of housing development and transport infrastructure. The major scheme being considered for the A3 between the A31 and the A320 is scheduled for delivery in the period 2023/24 to 2027/28. The strategic developments at Blackwell Farm and Gosden Hill Farm are shown as being phased in from 2021/22 onwards. The Garlick’s Arch

By prioritising greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognising this as a key issue, the plan makes too many assumptions, not least being the verbal promise that development will not take place without infrastructure preceding it. It is not clear how this will happen and is not in the Plan, as it should be, if it is achievable. The highways network is under stress at peak times in many parts of the borough. Queuing is the daily experience of drivers going to and from work. The local plan recognises the problems in para 2.14. Much of the road network is single-carriageway, and junctions act as constraints. The key evidence on future traffic conditions is provided in the Strategic Highway Assessment Report (SHAR) which summarises the results of the tests carried out by Surrey County Council at the request of GBC. Five scenarios were examined using SCC’s strategic traffic model. Scenario 1 contains all developments and planning permissions from 2009 to date. As such it corresponds to today’s circumstances, and describes the current unsatisfactory traffic conditions in peak periods. Scenario 5 represents the position at the end of the plan period, including all development and highways schemes in the local plan. The results of the analysis show that there will be widespread congestion in the morning peak hour across the network. The key strategic routes, the A3 through Guildford NE bound, and the M25 between Junctions 10 and 11, are shown to be at or over capacity. The summary network statistics presented in the SHAR, while useful, require some interpretation because the analysis of vehicle-hours is derived from link speeds only, and does not reflect junction delays and queues. The tables that show the ratio of flow to capacity and level of service are especially helpful to gaining an understanding of the conditions on the network in the forecast. Where the forecast traffic volume is above or close to capacity, flow becomes unstable and there is congestion. The SHA results provide evidence that, in 2031, congestion will be worse than it is today on much of the network. It is the case that the traffic modelling does not take into account the potential for increased use of other modes, but the trip rates used for developments already have built in the typical level of use of other modes, and services will be required to meet that need. It is also the case that the model does not allow for park and ride, which would improve matters in the town centre, as discussed below. In order to gain an insight into conditions across the network, it is necessary to combine information from several tables in the SHAR. Table 4.5 shows that the M25 and A3 will be at capacity in Scenario 5. The other roads that will have poor levels of service include those in Table 4.5 but also those in 4.12 (except the A3) and those in Tables 4.3 and 4.4 with levels of service E and F that will not be given some relief by improvement of the A3 in Scenario 5. Paras 4.10.3, 4 and 5 point out that there will be increased congestion. Given that the starting point is unsatisfactory, there can be no expectation that the schemes in the Infrastructure Development Plan will provide an overall improvement. There will be some local benefits, such as the Ash rail bridge for example, but in general conditions will be as bad and in many places, such as Compton Village, worse. So the statement in the SHAR para 4.2.5 that ‘the combined mitigation as reflected in Scenario5..indicates that at the strategic level it accommodates the additional PSLP demand’ needs qualifying – ‘at the cost of a lot of queuing’ and makes no mention of the impact this will have on pollution, which is already a known problem at the A3 end of Compton. The cumulative effect of the additional traffic generated by the developments in the local plan will be to increase congestion, even with the proposed highway schemes in place. More detailed analysis of the junctions and queuing is required. So we question the conclusion that the developments would have “an acceptable impact on the capacity of the highway networks in terms of the policy test set in paragraph 32 of NPPF”.

Appendix 3 of the Transport Topic Paper shows the phasing of housing development and transport infrastructure. The major scheme being considered for the A3 between the A31 and the A320 is scheduled for delivery in the period 2023/24 to 2027/28. The strategic developments at Blackwell Farm and Gosden Hill Farm are shown as being phased in from 2021/22 onwards. The Garlick’s Arch development is shown as starting in 2019/20. Therefore, there will be a period in which the...
existing A3 has to cope with the additional demand arising from those developments before extra capacity is provided. The following comments regarding the strategic sites are taken from the SHAR: Blackwell Farm – there will be congestion at the A31 junction, and the problems at the Tesco junction, and the Egerton road / Gill Avenue junction (para 4.9.5). Traffic is likely to access the Surrey research park and the RSCH through the development (para 4.7.3). Gosden Hill Farm – there will be an increase in traffic through Burpham. There will be pressure on the A3100/B2234 roundabout (paras 4.7.6, 4.7.7 and 4.7.8). Wisley – traffic will increase on minor roads to gain access to the A3 (N and S bound) and other routes (para 4.7.11). The development will add more traffic to the A3. The Burnt Common slips help alleviate the traffic through Ripley according to the model, but queuing on the A3 could mean this does not happen (para 4.7.14). Normandy/Flexford – the report has little to say about the impact of this large development. The increase in flow on Westwood Lane is noted (para 4.5.7). Tables 4.10 and 4.11 show junction delay reducing at the Westwood Land, B3000 junction, but an increasing at the Puttenham Hill/Millbrook junction. Ash – development in Ash is not specifically addressed, but there are major increases in traffic on a number of roads. The new rail bridge will bring relief (but traffic will move to the next junction). Slyfield – there are no remarks relating to SARP, and as there are no additional trips shown in and out of the Slyfield residential zone in Tables 3.3 and 3.4, it is possible that this development has been omitted. There is a significant increase in trips to and from the Slyfield industrial zone, which will impact on the A320 and Clay Lane. Town Centre – the report has very little to say about the town centre. It is evident that the model is forecasting severe congestion on the approaches to the town centre, such as the A281, the A31 Farnham Road, and Woodbridge Road for example. No mitigation measures are planned. And in the Transport Strategy, GBC states that the intention is to adopt Allies & Morrison’s Scenario 2 which would have the effect of significantly reducing the capacity of the town centre road system. The implications have not been examined, but traffic using the A281 from Waverley, for example, would be affected.

The B3000 will be severely affected by development schemes and will not benefit from road improvements. It is essential that the impact of all change to road networks are looked at in conjunction with one another for any survey to be meaningful. The local plan does not state an objective for congestion. The two strategic objectives that are included for infrastructure refer to supporting sustainable development and delivering a balanced system. However, in para 2.15 there is an aspiration expressed about opportunities ‘to improve the performance of the road networks through transport infrastructure and service improvements’, which taken with the previous paragraph includes reducing congestion. The evidence so far shows that this will not happen. The mitigation proposed is not sufficient to overcome the problems that will be caused by the level of growth in the local plan. Congestion will worsen. The network will lack resilience and be vulnerable to disruption due to incidents. Minor roads will have to cope with a lot more traffic, for which they are unsuitable.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attacht documents: Independent Traffic report annex 3.pdf (2.5 MB)
account, such as Dunsfold Park, which may have significant consequences for Guildford, as was pointed out by SCC and GBC in their submissions to Waverley in response to that planning application. The trip rates used in the forecast assume a level of public transport use and an appropriate level of bus services.

B

On the evidence provided by the SHAR based on the 2031 traffic forecasts using the SCC traffic model, congestion will be widespread in peak periods across much of the highway network, including on strategic routes. The A3 and M25 are forecast to be at or over capacity. The cumulative effect of the additional traffic generated by the developments in the plan will be to increase congestion, even with the proposed highways schemes in place. Interpreting the model results is not straightforward, as was pointed out in response to the 2016 consultation. Table 4.12 is significant – showing the roads with the ten largest ratios of flow to capacity for Scenario 3, which includes all the planned development but not the major strategic route improvements on the A3 and M25. There is no equivalent for Scenario 5 (i.e. with the strategic improvements), but we can infer that all the roads in Table 4.12 will be at or over capacity in Scenario 5.

C

With regard to the comments on Policy A6: North Street redevelopment (page 9), the model used for the Strategic Highway Assessment is not sufficiently detailed to provide a satisfactory assessment of conditions on the town centre road network. This has been recognised by GBC and has led to the commissioning of more detailed analysis using a simulation model. Added to which, there is uncertainty over the highway capacity implications of the Sustainable Movement Corridor in the town centre and possible changes to the town centre gyratory, as discussed in the draft Town Centre Regeneration Strategy, which indicates that the intention is to reduce the capacity of the town centre network. The experimental closure of Walnut Tree Close is already being planned. Taking into account the demand forecast on the A281, the A322 and A31 in Table 4.12, the consequences of such a reduction will be far-reaching and must be accounted for.

D

Policy A26: Blackwell Farm has been amended and now the proposed development includes a secondary school with up to six form entry. This will add to morning peak hour traffic which was not included in the 2016 modelling. The SHAR findings indicate that there will be congestion in peak periods on the network that will serve this development. The A3 will be at or over capacity which means that the network will lack resilience, as it does today. The roads connecting to the town centre will continue to be under pressure. The SMC concept is more advanced on this section than elsewhere, but the effect on capacity has yet to be established. There will be queuing on the A31 on the approach to the new signalised junction that will give access to the Blackwell Farm site. The A31 is regarded as a key route by the LEP and LA partners.

E

The improvement to the A3 is obviously critically important to the Gosden Hill Farm development. We do not have the benefit of analysis of the proposed new slip roads giving access off and on to the A3 S–bound carriageway, nor an understanding of the implications of the SMC for the allocation of highway capacity on the local roads. What is self-evident is that the pressure on local roads in Burpham is already intense in peak periods, and these roads are not suited to carrying large volumes of traffic. Under the plan, congestion is very likely to be worse than today. The proposed Policy A24 Slyfield development will also add demand to the A320 and roads in Jacob’s Well.
The change to Policy A29: Land to the south and east of Ash and Tongham involving more houses means that there will be more traffic locally. While this will not be ‘major’ in terms of the borough as a whole, it will be significant locally. Ash and its surroundings will be impacted by the large Wellesley expansion in Aldershot. It is not clear to what extent the modelling reported in the SHAR allowed for this development. The pressure on the A331 and the roads connecting Aldershot to Guildford and Woking will increase.

The M25 is forecast to be at capacity after the planned improvements have been introduced, as shown both in the SHAR and also in the recently published DfT/HE report on the South West Quadrant. This is relevant to Policy A35 Wisley airfield. It should be noted that RHS Wisley is expanding its facilities with the aim of significantly increasing visitor numbers. The DfT/HE Stage 3 report concludes that the focus should not be on widening the existing road further beyond currently planned schemes but on how to reduce pressures and provide parallel capacity to relieve this part of the network. If the M25 and A3 are at capacity, then the Wisley development will add pressure on local roads that are not well-suited to carrying higher volumes of traffic. This is also relevant to the proposed developments at Burnt Common. The consequences for Ripley are likely to be serious. It is noted that Policy A35 now includes a requirement for mitigation of impacts in Ripley and on surrounding roads, which goes some way to recognising that there will be a problem.

A comprehensive up-to-date analysis is required to inform decision-making. This should include analysis of the mid-term stage of the plan, before the A3 improvement is complete, as well as 2034.

B
Section 2 Surface access to airports. The problem is that the improved A3 will be at or over capacity in peak periods under the Plan, and the M25 SW Quadrant study has concluded that the M25 will be overloaded. So surface access to Heathrow from Guildford will continue to be affected by the weaknesses listed in this section. The unofficial East–West route south of Guildford is the B3000 and traffic counts and air quality stats show that the route is over capacity at peak times and close to capacity at all times during the working day. Links permitting travel East–West must be addressed especially if benefits of the proximity to both Heathrow and Gatwick are to be realized. C Rail. This section is welcome. However, it is noted that Crossrail 2 has not yet been secured.

D
Strategic roads. Surely the strategy should be aligned with the position of Highs England set out in the Topic Paper: Transport, where it is evident that the improvement of the A3 will not be completed until 2026/27, or even 2027/28? The removal of schemes SRN1 and SRN6 from the list of key infrastructure for the plan, and redesignating them as ‘aspirational’ is inconsistent with the safety objectives of the borough and surely of Highways England and Surrey County Council (the highway authority). Under the strategy and the Plan, the issues for Beechcroft Drive and the weaving and merging issues on the existing A3 will not be addressed until half way through the plan period.
Section 5 Local roads. While welcoming the aspiration to transform the town centre, the traffic implications have not been dealt with in the strategy or the Plan. Section 1 correctly included the issue of “severance of the town and its constituent neighbourhoods resulting from a combination of the A3 trunk road, railway lines and the River Wey”. The case for a new crossing of the river and railway relieving pressure on the Farnham Road railway bridge should be taken very seriously and examined in depth. There is a real risk that a significant reduction in capacity in the town centre, both the gyratory and Walnut Tree Close, and on routes carrying the SMC, will lead to road users transferring to minor roads around the town that are unsuited to carrying more traffic. Detailed analysis is needed to assess the impact of changes in the town and development outside the town on the network as a whole. I appreciate that the task is huge but it is necessary. Prevention of traffic issues has to be better than trying to cure them afterwards?

F

The M25 SW Quadrant study report recommends that alternative routes are developed to carry orbital traffic, and this could mean more use of the A31/A331 in Guildford. There are local roads where capacity is already an issue and planned growth will add to problems that are not mentioned in this strategy. The scope of this element of the strategy is not wide enough.

G

The bus transit strategy is welcome. However, there is insufficient information on the Sustainable Movement Corridor to gauge either what it might deliver and its potential impact on road capacity. A high quality bus station in the town centre is critical for the future of the town. There is a lack of park and ride on the east of the town and not even an aspiration for future provision.

H

The active modes strategy is welcome. However, many roads in the borough are two-lane carriageways of restricted width, with little scope for allocating space for cyclists, and this has to be either accepted or addressed over the long term.

I

Section 6 Air quality. If traffic is going to increase in aggregate, as the forecasts show, even with the measures being proposed, then air quality will continue to be a concern. The Aecom paper states that Guildford is not in need of an AQMA, but officers and councilors know that this is not true as a site on the B3000 has exceeded EU legal limits for NO2 since monitoring began in 2013. The point has been reached where ‘further monitoring’ or further delay tactics cannot go on and an AQMA must be implemented in order to form a plan of action.

J

Section 7 Road safety. The proposals are welcome, but as stated above, the schemes SRN1 and SRN6 should be reinstated in the Plan for safety reasons.

he needs to see this to make an informed decision, so do we, it would have been better if the results had been available for this consultation.

3. It is recommended that the wider evidence base should be expanded to include the following:

- Local Enterprise Partnerships and Local authorities: Influencing Strategic Transport in the South East, WSP, 2016
- Surrey County Council: Response to Waverley borough Council on WA/15/2395 Dunsfold Park, Dec 2016
- Guildford Borough Council: Guildford Town Centre Highway assessment –Town Centre Highway Layout Concept Testing, WSP, April 2016
- Comprehensive traffic modeling using new software
- Inclusion of other expert evidence ie RGP transport note on the A31 junction, The Landscape Assessment produced for Blackwell Farm and the review of the SHMA by Richard Bate (2016) and Neil MacDonald 2017.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Even taking account of all the proposals in the 2017 Plan, congestion which is already severe is set to get worse over the plan period. Whilst there are expressions like “modal shift” in transport being the solution to the problem. However, the is no clarity about how on earth this is to be achieved. I would have expected to see the necessary radical solutions like mega park & rides at Gosden Hill Farm, and towards Elstead, with a high-tech automated transport solution to the town and Research Park (such as autonomous PODS on an elevated track).

If implemented they would have a dramatic and devastating effect on Guildford and destroy many of the fine aspects that make the town and its immediate environs such a good place to live, work and bring up a family. One of us has been a resident since 1960. While change is inevitable and must be accepted in a controlled, logical and sustainable fashion, this
plan provides too much land for development. Further it does not do enough to tackle a major blight on our community, traffic congestion. This is strangling the life out of our communities. Ultimately the appropriate and essential long term infrastructure must be decided upon and put in place first.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

---

83. I have commented at length on the failings of the Strategic Highway Assessment Report. The full impacts of traffic generated by this Plan have not been recognised and so the highway development proposals are inadequate. It would lead to a need for new roads through the countryside (including the AONB), road-widening and enlargement of junctions including within residential areas, and may require compulsory purchase and demolition of existing buildings some of which may be of historic interest or local character. The cost in financial and environmental terms would be immense and the alternative scenario of greatly increased congestion, unacceptable levels of local air pollution, and deterrent to business and visitors, is likely to persist well into the future affecting future generations as well as current residents and businesses.

84. Much of the infrastructure required is outside the control of Guildford Borough Council in relation to funding, timing and design. The schedule of proposals gives little detail and very broad brush estimates of cost suggesting that little detailed thought has gone into the requirements.

85. As elsewhere in the Plan this policy includes weak wording such as “should” and the “Reasoned justification” suggests (at 4.6.8) that the Council will be prepared to negotiate on infrastructure requirements – implying that significant developments may be delivered without the required infrastructure.

86. Guildford Borough Council should have applied a very significant constraint on the housing number but has refused to do so.

87. The highway aspects of the Infrastructure Development Plan were developed using hotspots identified in “OGSTAR” (the previous Transport Assessment used for the 2014 consultation) as a starting point. However, the site list used for OGSTAR was not even compatible with the former draft Local Plan let alone the current one. Despite this, the Key Evidence mentions the June 2016 Highway Assessment but not OGSTAR. Key developments such as Garlick’s Arch, added at a late stage, are not included the Highway Assessment.

88. I have not investigated other infrastructure requirements in any detail but I do have concerns that over-development in the south-east, including Guildford, will lead to serious water shortages in the near future. The solutions could be very expensive and damaging to the environment. It is only a few years ago that the water table was severely depleted and this is more likely to be repeated as over-development continues.

89. Monitoring should be concerned with delivery and any change in infrastructure adequacy rather than CIL receipts.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
The wording has been amended to give an impression that provision of adequate infrastructure will be enforced. However, the reality is that GBC will not determine the required infrastructure. It will be determined by Surrey Highways for the local road network and they are required to support development – not put obstacles in the way. If the SHAR (2016) and its predecessor are anything to go by, the requirements will be understated or not even recognised. Transport assessments supporting planning applications will be prepared by consultants acting for, and remunerated by, the applicant. Improvements to the strategic road network (e.g. A3) will be determined by Highways England, budget constraints, and ministerial decisions.

A lead Councillor has stated that the proposed Blackwell Farm development will not depend on A3 widening (in response to a question put to the Executive Advisory Board meeting held on 20 April 2017). It seems likely that Highways England have felt the need to offer a reality check on the likelihood of major work on the A3, such as widening or a tunnel, in the foreseeable future – apart from improvements to two slip roads.

The policy states that infrastructure will be secured by planning condition and/or planning obligation but this will require enforcement and I doubt the ability and willingness of GBC to overcome developers’ viability arguments. For the permissions that require a longer timescale there could be non-delivery issues if the original developer abandons the project without fulfilling all the conditions and obligations. Item 4.6.8 still indicates that GBC will be prepared to reduce infrastructure requirements by negotiation; i.e. viability for the developer will take precedence over infrastructure.

No change has been made to the monitoring requirement which is based on CIL receipts and spending alone. This is not sufficient. The actual delivery of specified infrastructure, before a particular development takes place, should be monitored and enforced.

The Transport Topic Paper and associated letters from Highways England suggest to me that further modelling will be undertaken before the Examination and it also seems unlikely that it will be consulted on. I consider that any further modelling should include more detailed information than SHAR (2016) so that it can be subject to scrutiny by GBC and by the public under a consultation process. Failure to do this will further undermine the credibility of the evidence gathering process.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
3. The increase in the already severe congestion on the Strategic Road Network of the A3 and M25. The lack of suitable public transport. The local rail stations of Effingham and Horsley cannot cope with the proposed increase in passenger traffic and car parking is already at capacity.

Policy I1: Infrastructure and delivery

The issue of funding is supported in principle.

HOWEVER I am not at all clear how the issue of town centre infrastructure fits into this Local Plan. LRNI gives a listing of sorts, but no more.

Where is a consistent plan for the non-railway activities of the Railway Station? Surely here there should be some statement of policy related to transport interchange and its relationship with the town centre.

There is potentiall y a very major opportunity, more particularly because the owner of the 'Casino' building adjacent to Bridge Street is reportedly very interested in redevelopment also. The total site - Cinema, ground level car park, 'Casino: is of some significance in itself More importantly, it bridges between the Railway Station and The Friary, which is an entry point to the town centre as a whole.

Decades ago, the then planners identified the need for a high level route from the Station Overbridge to the Friary Centre, removing the pedestrian problems of Bridge Street and the at-level-lights crossing of Onslow Street { which current leading proposals fail to do}. The opportunity to have a

high level platform of size enough to be an attraction in its own right [ shops, entertainment, and the luxury hotel that Guildford so badly needs] while providing a most attractive route into town [ in contrast to so many walkways], is unique and should be seized. That does not emerge here.

The various proposals for the gyratory presumabl y will go outfor consultation in another document. But it has to be said that the present favoured packages are unhelpful. The closing of Bridge Street to vehicles does nothing to tackle the Onslow Street Crossing, or open up the river, while reducing the capacity of the road system [ from where I live, any
journey going North, eg Woking or the M 25, will be greatly handicapped]. The same result in terms of pedestrian safety can be achieved by reducing Bridge Street to two lanes [a solution that was accidentally trialled when building work was recently undertaken], and it is uncertain why anyone should see Bridge Street [which is pretty tatty] as a prime candidate for full pedestrianisation. The visionary solution must be the high level platform!

Policy II

Much of the infrastructure in Guildford Borough is already overstretched. Developments in villages will not be large enough to bring any significant infrastructure and so adding to housing in villages such as the Horsleys (where there is inclusion of a small, £1m, road improvement scheme of unknown financing and no detail) will only add to existing pressures. The local road network, at least in the east of the Borough, has not been given adequate consideration. Nor have the effects of village developments on schools and medical facilities.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

### Comment ID: PSLPP16/17568  Respondent: 8581505 / Burpham Neighbourhood Forum (Jim Allen)  Agent:

**Document:** Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

**Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )**

The wording is weak, in this policy. The first line text “..., Infrastructure needed to support development should be provided........” needs re-wording to read ‘........Infrastructure needed to support development MUST be provided........’.

In respect of CIL in Burpham and other Neighbourhood Plan areas it is a requirement that 25% of the CIL is allotted to the Ward or Parish, whilst non Neighbourhood Plan areas get only 15%. Therefore the third paragraph is incorrect in its terminology and definition.

In the last paragraph it implies that the Thames Basin is the ‘be all and end all of legal responsibilities’. In fact air pollution and noise pollution are also legal responsibilities of GBC.
This must be re-worded.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large
infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.
The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

I OBJECT to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
The Strategic Highway Assessment report (2016) sets out that in respect of the development proposed in the Local Plan, without any mitigation, the greatest potential impacts are seen on the network in the vicinity of Ash / Ash Vale and travelling north into the borough of Surrey Heath. Some of the trips in Ash / Ash Vale will join the A331 Blackwater Valley Road to travel further afield, but it is likely that a reasonable proportion will travel into the neighbouring boroughs of Rushmoor and Surrey Heath. Some of these roads already experience congestion, despite the model suggesting that existing traffic flows are relatively low.

Policy I1 (Infrastructure and delivery) of the draft Plan requires the infrastructure needed to support development to be provided and available when first needed to serve the occupants and users of the development. Infrastructure includes parks, green spaces and play areas, roads and other transport, schools, flood defences, sporting and recreational facilities, and medical facilities. Policy I3 deals with sustainable transport for new developments, and seeks to ensure that new developments will contribute to the delivery of an integrated, accessible and safe transport system.

Specifically of interest to the strategic allocation around Ash and Tongham, further information on key infrastructure projects is provided at Appendix C of the draft Plan, in the Infrastructure Schedule. Infrastructure projects LRN9 through to LRN14 relate to improvements to traffic management and environmental improvements in and around Ash, Ash Vale and Tongham, to be funded through a combination of developer contributions and Enterprise M3 Local Economic Partnership Local Growth Fund awards. For example, the schedule identifies LRN14, which is a junction improvement scheme at the connection of the A331 Blackwater Valley Route with the A31 Hog’s Back (Tongham). It is important to note that this mitigation is required to enable the development proposed in the Local Plan to proceed.

In this context, Rushmoor Borough Council is supportive of the planning policy framework and detailed infrastructure projects as they relate to the road network, subject to certainty regarding the delivery of these improvements as part of the overall package of implementation of development in and around Ash, Ash Vale and Tongham.

In addition, PED6 sets out a potential expansion of Ash Grange Primary School if required to provide spaces for the primary age children who will live in the new homes to the south and east of Ash and Tongham. These infrastructure proposals are supported by Rushmoor Council, mindful of the strategic allocation for residential development in and around the settlements of Ash and Tongham.

I consider that the Local Plan has given insufficient consideration to the overall traffic flows in the Send and Ripley/ Wisley A3/ M25 interchange areas as they would be affected by high increases in traffic volume caused by additional housing, employment and traveller allocations in both Send and at the nearby Wisley and Gosden Hill sites plus the A43a construction of new slip roads at Burnt Common. (transport)

Infrastructure Policies: The infrastructure policies are sensible. Policy I3 “Sustainable transport for new developments” and Policy I4 “Green and blue infrastructure” are important and I support each of them. Blackwell distinguishes itself in each of these areas.

Policy I1: Infrastructure and delivery.

We would caution the premise here that the sole driver for ensuring the adequate supply of publically accessible green infrastructure is as Suitable Alternative Natural Greenspace (SANG), required via the EU Birds Directive. This is not true and therefore misleading.

k. I object that many of the sites proposed are in unsustainable locations as defined in the NPPF.

l. I object to the assumptions in the Plan which projects a major shift to cycling and walking. This is highly unlikely given the absence in the Plan of adequate safe cycling lanes/walking routes – especially in rural areas.

m. I object to the threat to relatively small villages of major housing developments. Such villages will be overwhelmed and will cease to be villages.

n. I object to any villages being ‘taken out of the Metropolitan Green Belt’. The MGB is meant to be a permanent and open feature in itself and protected forever and for future generations.

o. I object to the impact of excessive housing numbers in terms of increased traffic congestion on the M25/A3 and other A roads as well as on rural roads which are congested already and which will become even more used as ‘rat runs’ to the A roads. Small accidents already cause major hold ups on the A3/M25 in particular. There is no tolerance in the Plan for increased road accidents/road closures resulting from more traffic.

p. I object to a failure in the local plan to consider the impact of increased traffic on parking congestion both in Guildford and the villages.

q. I object to the failure to consider adequate protection in the Plan for heritage assets in both Guildford town, the villages and countryside.

r. I object to the failure in the Plan to consider environmental protection as a fundamental objective.

s. I object to the failure to consider in the Plan the impact of 693 homes per annum on Policing requirements/crime prevention.

t. I object to the failure to consider the impact in the Plan on local GP surgeries and increased difficulty in securing doctor appointments.

u. I object to the failure in the Plan to consider and plan for additional school places and how children will journey to these schools – especially at Three Farms Meadows in Ockham.

v. I object to the proposal to build 70% of new housing on the Green Belt which is supposed to be permanent countryside for existing and current generations.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
Policy ID1 – Again, the strengthening of the need for infrastructure to precede or accompany development is excellent.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

---

I OBJECT

Various aspects of Infrastructure are acknowledged as congested, inadequate for the existing population and not able to accommodate much growth. However, greenfield sites – requiring heavy infrastructure investment – are targeted in order to generate CIL income for the council. This is not sensible. The current draft CIL scale also encourages development on greenfield sites rather than brownfield.

The Council’s methodology assessing traffic and roads infrastructure needs is inadequate. It identifies only the tip of the iceberg in terms of existing congestion. Looking at local traffic situations around the Borough it becomes clear that the schemes proposed will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed locations would require highway schemes that involve demolition of property and road-widening in residential areas to solve the resultant congestion. The A3 improvements are not guaranteed to take place but they are being used to justify removing large areas from the Green Belt before detailed traffic assessments have taken place. These detailed investigations are being deferred until the planning application stage and will be left to developers to prepare. If a site then proves to be unsustainable its Green Belt protection will have been lost for no reason and unsuitable development will take place by a more insidious process.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

---

Welcome the Council’s commitment to provide the Infrastructure needed to support new development. We wish to bring to the Council’s attention land adjacent to the existing Artington Park and Ride, which could serve as an extension to the park and ride. Please refer to the accompanying covering letter and plans.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

3. Infrastructure – Transport (Policies I1, I2 and I3)
The words “Roads and Transport Infrastructure” are mentioned in Definitions under Policy I1 (Infrastructure and Delivery), but there are no detailed proposals for the Horsleys in any of the Local Plan documents, including the Infrastructure Delivery Plan. This is extremely surprising, the more so when one reads Thames Water’s advice re its lack of capacity to deal with wastewater, given that the DLP proposes development in the Horsleys in years 1 to 5 of the Plan Period.
a) Infrastructure – Waste Water (Policy I1)
I object to the lack of coherent proposals relating to waste water infrastructure for the Horsleys.
Waste water infrastructure receives a mention in each of the A37 to A41 Site Reviews and in Reasoned Justification under Policy I1, but no detail for the Horsleys has been found in any of the Local Plan documents, including the Infrastructure Delivery Plan.
There are known sewage overflow problems in the Ockham Road North / Green Lane area.
Thames Water has advised Guildford Borough that the area’s wastewater network is unlikely to be able to support the demand anticipated from one or all of the proposed developments. The foul drainage system from West Horsley to the treatment works north of Ripley it is understood will need to be upgraded to cope. Thames Water advises ‘a 2 to 3 years lead-in period’ to install the necessary waste water network and treatment capacity after planning permission for a development site is granted.
b) Policy I3 provides that developers “will be expected” to propose and secure travel plans for their developments and contribute to transport arrangements for the able and disabled. Legally, this is meaningless - this proposed policy lacks ‘teeth’ and is unrealistic where development and major housebuilding companies are involved.
c) Whilst Horsley station has frequent trains to London and Guildford seven days a week, the station car park is normally full on weekdays. An increase in village population will increase pressure on station parking and traffic movements to/from Horsley station, to drop off/collect travellers to London and school children going to Guildford and Leatherhead.
d) Infrastructure – Schools and Medical Facilities (Policy I1)
I object to the lack of coherent proposals relating to schools and medical facilities for the Horsleys.
There is a continuing lack of state primary school places in the Horsleys. The Raleigh School which serves both East and West Horsley is full every year and this has been the situation for many years. Secondary school places are limited in number at the Howard of Effingham School and other secondary schools involve a much longer journey of time and distance from the Horsleys to reach them. Glensk and Cranmore private schools are well supported by many families living in Guildford and other villages up to 14 miles away. Each of these private schools during term time, receives high volumes of traffic going to and from each school at each end of the school day, on Ockham Road North and the A246 respectively. Kingston Avenue Medical Centre, serving all of East and West Horsley and areas beyond, is always extremely busy and residents experience difficulty in making appointments. The planned population increase (in excess of Government ONS forecasts) for the borough will require a major extension of the Royal Surrey Hospital to cope.
e) I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1). There is too much traffic in our villages already and this plan will give rise to super congestion in East Horsley, West Horsley, West Clandon, Ockham, Normandy, Ripley, Send and Worplesdon with no plans displayed or any stated intent to improve the non A roads. The rural roads in this area are narrow, in poor condition and few have footpaths. 5000 plus houses in such a small area will spawn dangerous and unsustainable traffic growth.

<tr>
<td>Pirbright Parish Council note the very extensive infrastructure requirements associated with the scale of development identified within the proposed Local Plan. It is essential that this infrastructure is delivered in a timely manner to support the development proposed, particularly where those locations are less than ideal at present in terms of their location or the availability of supporting services and infrastructure. Where improvements to rail services, roads, footpaths and cycleways cannot be secured in advance of the population that depend on such services, development should be restricted. In some cases this may mean the principle of development in some locations must be questioned where the roads or other infrastructure cannot be provided at a time and in a manner that can support sustainable living.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>We are concerned that inadequate attention has been given to the effects of rural development in and around the villages of Pirbright, Worplesdon and Normandy on the infrastructure of the area, including schools, social infrastructure, sewers, water, roads and rail.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
We would note that this is particularly important in rural areas where there isn’t a network of safe cycleways and alternatives to car transport and where villages, such as Pirbright bear the impact of decisions elsewhere. We are concerned that allocations such as A46 and A47 Normandy and Flexford are not sustainably located and would object to the allocation. Even with the small range of services proposed as part of the proposed allocation, most of the new houses will be served by cars travelling to Guildford, Brookwood Station and other locations, imposing a burden on Pirbright and Worplesdon that exacerbates the existing traffic problems experienced by the rural areas. Although this is not as high profile as the congestion within Guildford, it must be recognised that the rural villages such as Pirbright are suffering increasing congestion and the adverse impact of traffic brought about by development (such as Deepcut, Pirbright Institute, Henley Park and now proposals at Normandy/Flexford) and other pressures. The junctions within and around Pirbright, including Fox Corner, Cemetery Pales and Pirbright Arch to Brookwood are under particular peak-hour stress. As the mainline service from Brookwood into London, the roads within the area will suffer further pressure with development to the west in Normandy.

Infrastructure. Roads, schools, doctors surgeries, hospitals and public transport are all overstretched now let alone with the addition of all these new houses. Roads are busy especially at school times and HGVs of huge sizes use the roads as 'through' roads. Where are all the weight limit signs these days? That would prevent much of the damage that is occurring and save money. The schools are always full, both state and private. Doctors surgeries are always busy and look at the state of the Royal Surrey County Hospital in Guildford at present. Public transport, particularly the railways just now, are in an awful mess and buses don't really count as they are so few and far between.

I object to the lack of proper infrastructure planning for sites (A43 and A42)

The Foreword to the plan by Paul Spooner includes on page 5:

"We recognise that significant infrastructure upgrades are required to support existing communities and the planned growth of the borough. The delivery of sites allocated in this plan is contingent upon the provision of new infrastructure, which is a key theme of our Local Plan”.

The lack of any plan for either physical or green infrastructure improvement clearly contradicts this in respect of both A43 Garlicks Arch and A42 Clockbarn Nursery, Tannery Lane, Send. Development of these sites without the contingent infrastructure would therefore be contrary to the stated aims and themes of the Plan, and should not go ahead.
What changes (2016)/further amendments (2017) do you suggest should be made to the document?

The strengthening of conditionality in point (3) is supported.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: pslp171/2619  Respondent: 8601537 / Downsedge Residents' Association (Rosemary Morgan)  Agent:

Document: Proposed Submission Local Plan: strategy and sites 2017 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

The new paragraph 2.10a stating that “Pressure on existing infrastructure and additional stress caused by planned growth must be addressed if we are to maintain and enhance the borough's prosperity and quality of life. Many people are attracted to Guildford by the quality of life and environment. This places a high demand on school places and access to amenities such as open spaces. The Local and Strategic road networks, rail network and local facilities in village settlements are also facing increasing pressure.” is to be commended but is not specific enough.

Downsedge RA is concerned that the traffic situation in and around Guildford is already at breaking point (e.g. the A3 regularly jams and results in substantial traffic flows through the town centre). The above paragraph states that “pressure on existing infrastructure and additional stress caused by planned growth must be addressed if we are to maintain……..” We would have preferred to see a statement such as “pressure on existing infrastructure and additional stress caused by planned growth will be addressed if we are to maintain……..”

In addition I would observe that the existing infrastructure in the East and West Horsley area - in particular the roads and drainage - are not functioning in an acceptable manner at the present and the prospect of the addition of the potential number of houses in the villages and close by, with the addition of 2,000 at Ockham, 400 at Burnt Common and 2,000 at Gosden Hill Farm requires more than a passing reference to "traffic management" as a solution to the impractical
outcome of adding these large numbers of vehicles. I object to the strategic site proposals indicated and to the larger land areas within the villages.

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

The attachment of large numbers of hoses at a high density to communities of completely different character so as to overwhelm the existing communities is not acceptable. Nor is it acceptable to be virtually silent on the infrastructure implications or the timing of providing properly sized infrastructure given that what is there now in terms of roads, lanes, schools, elderly care, medical facilities are already overloaded.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Comment ID: PSLPP16/17499  Respondent: 8607169 / CPRE Surrey Branch & Guildford District (Tim Harrold)
Agent: Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1. Infrastructure

CPRE objects at the failure to supply a satisfactory infrastructure strategy or delivery plan for Guildford in time for this consultation. In the Surrey Infrastructure Study of January 2016 the total infrastructure cost required was assessed to reach £1.162 billion. The total secured funding was given as £75.8 million and the total expected funding was estimated at £568.2 million. This left a funding gap of £518 million which is equivalent to 55% of the total costs budget. CPRE OBJECTION.

CPRE recognises that many major infrastructure decisions affecting Guildford District are outside the control of GBC and that this makes planning ahead for a long period almost impossible, especially at a time when the economic outlook is so uncertain and difficult to predict. Many decisions which can only be outlined as aspirations depend on infrastructure provision being agreed by Highways England (M25 and A3), Historic England, Natural England, Network Rail, the Surrey County Council, and Thames Water. The constraint of providing SANGS in connection with the Thames Basin Heaths has also to be taken into account.

GBC are making ambitious proposals for housing regardless of the lack of adequate infrastructure in support. Without this being provided before development is begun, there will be a real threat of intensified disruption caused by traffic congestion, particularly at peak times, in many communities. CPRE OBJECTION.

Surrey’s motorways already carry 80% more traffic than the average for the South East and our A roads 66% more than the national average. CPRE has been heavily concerned with traffic management issues across the county for many years. We have served on the M25 Orbit Committee and were involved with the consultation on the Hindhead tunnel, the Cobham Motorway Service Area and the Hard Shoulder Running Initiative for the M25 between Junctions 5 and 7. We have also been concerned for a prolonged period with the various AirTrack rail proposals linking Guildford and Woking to Heathrow which are now in abeyance. We expect to become involved in monitoring the North Downs rail proposal linking Reading to Gatwick via Guildford.

We think it unrealistic for Cross Rail 2 to be discussed at this continuing time of likely austerity as a means of freeing up the overburdened rail link to Waterloo from Guildford and Woking. We do have, however, to recognise the planning challenge that the high percentage of commuters travelling to London for work represents, together with a comparable number coming into both Guildford and Woking for daily employment. It is disheartening to see the inadequacy of the Solum proposal for Guildford’s mainline station which did not sufficiently address the issues that concern commuters or residents most. CPRE OBJECTION.

The detrimental impact of traffic congestion on quality of life across Surrey is a topic of importance to everyone. The location of schools and their school runs are of course a daily cause of traffic problems. The proposal for the Hoe Valley...
school and its associated Leisure and Sporting facilities will be on Green Belt land and will certainly not improve matters on the A320 at Mayford on the road between Guildford and Woking, even if Paragraph 89 of the NPPF allows for greater flexibility to be shown for outdoor sport and recreation within the Green Belt, as long as it does not conflict with its openness. The Woking Traffic Survey acknowledges that this proposed development will have a damaging effect on congestion on the A320 and A322 as well as other local roads. CPRE OBJECTION.

Congestion on A roads leads to the overuse of B roads by speeding traffic that exceeds the relevant limits which are invariably not enforced. The B367 from Ripley to Pyrford is an example of this problem. Speed limits for the Pyrford Conservation Area and elsewhere along this road are not observed except where traffic lights or the narrowness of the road itself, as at Newark lane in Ripley, slows traffic down.

Other roads such as the B380 serve as a link between the A324, the A322 and the A320 and all carry excessive traffic for their size. An example of a C road which is already under severe traffic pressure is Salt Box Road which forms the link between the A320 and the A322 as well as funnelling through traffic between the M3 and the A3. Burdenshot and Goose Rye Road are examples of D roads where safety is a major concern as traffic seeks to find a way through to Worplesdon where a new Park and Ride location is proposed. The question has to be asked in this context as to how this proposal can be considered given the Kemishford bridge access problem and the unsuitability of the bridge near the station at Prey Heath Road with its long history of flooding issues.

CPRE gives these examples of busy roads where house building on the scale envisaged for Guildford and Woking will only make traffic matters much worse. Further analysis is required in both boroughs of the impact of the huge housing projects proposed and the positioning of the school and park and ride facilities they envisage. CPRE OBJECTION.

CPRE questions whether all the development envisaged for Guildford can be considered sustainable and deliverable in the time required. Paying for all this investment will be very hard to achieve through the Community Infrastructure Levy (CIL) which is one of the motivating forces behind GBC’s attempt to accelerate passage of the draft Local Plan and use as much Green Belt land in the process as they can. CPRE again maintains that this approach is misguided as it places too much emphasis on economic priorities at the expense of environmental policies which have served the community well and need to be supported rather than undermined. CPRE OBJECTION.

Document: Proposed Submission Local Plan: strategy and sites 2017 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

CPRE has seen the questionnaire response made by Richard Jarvis on Transport Infrastructure which we endorse with respect to the current plan process. Richard Jarvis is a former senior executive of Atkins with a great deal of experience in this sector. CPRE is confident that his judgement is based on fully up to date information and regular dialogue with those involved at GBC, SCC, and Highways England. He is a member of the Tyting Society Committee and the Guildford Residents Associations Coordination Committee. He is also in regular communication with the Guildford Vision group and the Guildford Society as well as CPRE.

CPRE is concerned with planning ahead in the longer term and wishes to make clear that this would involve safeguarding land for projects which are currently listed as aspirational such as a proposed A3 tunnel at Guildford.

CPRE was involved in a Committee dealing with Modal Shift and the M25 during the preparation of the former draft South East Plan. More focus should be given to this topic now with regard not only to Guildford’s current road traffic problems, both in town and countryside, but also its rail connections to Gatwick and it is to be hoped eventually Heathrow. The proposal to improve the North Downs line will involve a range of complicated issues regarding the
introduction of a surface rail electric supply, level crossings, pedestrian rights of way, bridge maintenance, noise disturbance and air pollution within the Surrey Hills Area of Outstanding Natural Beauty (AONB).

We have been advised of an objection that is to be made by the Beechcroft Drive Residents Association at the omission of any reference in the draft plan to the removal of access for their road to the A3 (Ref SRN1 and SRN6). No alternative access route has yet been proposed. This would probably need to involve the use of a narrow lane running over University of Surrey land to the North which is located near ancient woodland within the Green Belt that is outside the urban area to the West. This topic has been on the agenda for resolution over many years and all stakeholders have recognized that the problem of A3 road access needs addressing, and is essential infrastructure for the Beechcroft Drive community. This is why this topic has always previously been included in the plan. In the CPRE view, it should not have been removed. There is in any case general concern about the whole safety aspect regarding Beechcroft Drive access to the A3 which is long overdue to be tackled. It is not just a question of safety for the residents of Beechcroft Drive but also the highway safety of all users of the A3 driving past this junction which is made dangerous by heavy road and HGV traffic with poor visibility speeding past a blind bend. There are more than 100 daily entries and exits into and out of Beechcroft Drive. The risk of a serious accident involving fast moving traffic is therefore repeated approximately 200 times a day. It is apparent that in these circumstances priority must be given to resolving this issue before a fatality occurs. CPRE would suggest that an on site visit is called for. This is not an “aspiration” matter.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

This policy sounds a reasonable statement of intentions but like most residents groups in Guildford, WBDRA is concerned about the specifics and delivery of much need infrastructure improvements.

Most important of all are Roads and Drainage - what the Council Tax paying residents want is extensive improvements now not to wait until we've added another few hundred house to our already congested roads and overloaded (often overflowing sewage pipes/systems).

There have already been a number of major housing developments in Guildford Borough in the last few years yet no visible improvement to easing the traffic flow is in existence yet. Roads connecting new housing developments to existing roads DO NOT ease traffic flow.

Many parts of the borough experience routine flooding - a combination of (1) inadequate/overloaded drainage systems and (2) increased surface water run-off due to concreting over vast amounts of natural soakaway through the earth.

Several parts of the Borough routinely suffer overflowing sewage both in the streets and in homes (Fairlands Estate is one such example) as the existing pipework and sewage plant cannot cope. This type of Public Health issue must be addressed before even thinking of adding more house to the piped services

To sum up, Infrastructure improvements first please then the housing development can start.

WBDRA OBJECTS to this policy as it fails to make clear the pressing need to deliver Infrastructure improvements PRIOR to any further development taking place.

The policy needs redrafting to reflect the urgent requirement to enhance & improve the Borough's Infrastructure as a matter of urgency.

POLICY I1 - Infrastructure and delivery

We object to this policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on
providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

1) Our residents are being asked to accept very large amounts of development with little or no detail being provided on measures which would relieve existing congestion and limit future problems.

2) Much is made of the need for new infrastructure to support developments and for this to be in place as needed (listed in App. C to the Plan). Even if this happens the Plan admits …“we forecast that there will also be an absolute increase in overall traffic volumes”. This will be most acutely felt at junctions but these effects have apparently not been analysed so that we don’t know the location or impact.

3) We can be sure however that the cumulative effects of the developments in the North East of Guildford will have a devastating impact on the A247 through our village (and of course on Send). It is hard to see how any of the infrastructure proposals in the Plan (App. C) will do anything to mitigate this impact. GBC has little or no control over the plans of Surrey County Council as the local highways authority and it is well known that they have no money available.

4) The Plan now calls for nearly all infrastructure to be funded by developers (see APP. C). We question how realistic it is to expect developers not only to pay for all the infrastructure but also to have it in place in a timely fashion. The Plan says that planning permission will be refused if timely provision of infrastructure cannot be secured. Such refusals will almost certainly be settled in the courts. Developers’ business models are based on building and selling houses to create the cash required to provide infrastructure. People will be living on the sites well before infrastructure is complete.

5) If development were to be refused the land would still have been removed from the green belt and its future rendered uncertain.

6) All of these developments will draw very large amounts of additional traffic to the A247 through the village. It would be naïve to think that the employment sites and schools will serve only the developments themselves. Apart from the normal movements of residents to and from the new sites there will be considerable additional traffic on the A247 generated by:
- children from elsewhere being delivered to Gosden Hill schools and collected
- the employees of the offices and industrial sites getting to work and returning home
- the vehicle movements generated by distribution and storage activities
- traffic from Wisley wishing to travel South and returning
- traffic from Gosden Hill wishing to travel South and returning
- traffic from Slyfield wishing to travel South and returning
- private and commercial traffic originating in the South and accessing Gosden Hill, Burnt Common or the A3 and returning (including traffic from Dunsfold)
- SCC’s business plan for Newlands Corner

We point out that although the A247 is classified as an A road, it has none of the characteristics because it:
- is less than 2 vehicle wide in places
- does not have continuous footpaths
- has several sharp bends
- has a hump-backed bridge with poor sight lines
- has a very difficult junction to access the station
- has a dangerous junction with the Southbound A3 on-slip road
- is largely unlit
- has a primary school
- is already very congested at times

In summary, the A247 is quite unsuited to coping with additional traffic and it is very clear that the developments proposed in the 2017 Local Plan will increase the amount of traffic on this road over and above that in the 2016 draft to which residents strongly objected. There is nothing in the Infrastructure Schedule which addresses this issue. Indeed, several of the infrastructure proposals will themselves lead to significant increases in traffic on the A247.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
2.1 The most frequently expressed concern of residents within the parish is that the current traffic congestion is a major concern which will clearly only be increased by any further development. The A281 is regularly congested from Bramley to Guildford and the roundabout in Shalford where it is joined by the A248 is often congested back into Chilworth and Wonersh from the east and into Peasmarsh along the Broadford Road to the west. The fundamental issues here are:

- the inability of the gyratory system in Guildford to handle the volume of traffic entering and passing through this “gap” town; and
- the potential for bottlenecks created by junctions on major roads to the south of Guildford, such as the roundabouts at Shalford and Bramley and the junction at Rice’s Corner in Chilworth.

Recent and proposed major development in Waverley will only add to the problem with Guildford being a major employer for all these areas as well as a hub for entertainment and communication. We note that the traffic flows on A roads in Surrey already have 64% higher volumes than the UK averages and some roads are already operating beyond their design capacity.

2.2 We note that the Settlement Hierarchy (2014) document assessment of whether both Chilworth and Shalford are “well connected’ grades both villages as ‘poor or neutral’, and this certainly accords with views expressed by residents about the existing rail and local bus services.

2.3 We welcome the Infrastructure Policies within the Plan and in particular under Policy I1 the fact that “where the timely provision of necessary supporting infrastructure is not secured, development may be phased to reflect infrastructure delivery, or will be refused”. We remain concerned that funding from Highways England and SCC may be delayed or reduced and would re-iterate that the Transport Infrastructure is currently not adequate for the borough. We note with concern that there are no proposals to improve the A281 which is the main congested artery through the parish.

2.4 The other most frequently stated concern of residents is that any future development will increase the existing pressure which they already experience on schools, medical services and the utility providers. Whilst there may be availability at certain schools within Guildford Borough or its neighbours, this would result in an increased need to travel, with resulting further traffic congestion during school terms.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

**Comment ID:** PSLPP16/9827  **Respondent:** 8627393 / Worplesdon Parish Council (Gaynor White)  **Agent:**

**Document:** Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

**Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )**

**General comments:**

Infrastructure must come first and the correct delivery sequence must be complied with. Worplesdon Parish Council supports development of the town centre (including Walnut Tree Close) which is a more sustainable location. There should be less retail and more residential development in the town centre providing the correct infrastructure is in place.

Following the precedent set by a nearby local planning authority, the parish council believes that all major developments must install all necessary infrastructure for the complete development at commencement.

Improved sewage works, enhanced transport infrastructure and improved air quality are a prerequisite to any future development.

Paragraph 3.6 of the Infrastructure Study is incorrect. The Hockford Sewage works have been omitted in error.
Locally the following infrastructure improvements would be required:

- Pedestrian facilities to meet proposed development, including a pedestrian crossing on the A323 near Hunts Farm.
- Improved cycling facilities throughout the parish and improved junctions to have the capacity to cater for existing and future traffic levels.
- Worplesdon Parish Council supports the upgrade of the pedestrian bridge between the railway station and the town to fully integrate the station with the town.
- Healthcare

Policy I1: Infrastructure and delivery

Response

Summary

I OBJECT to this policy as it stands. Various aspects of Infrastructure are acknowledged as congested, inadequate for the existing population and not able to accommodate much growth. However, greenfield sites – requiring heavy infrastructure investment – are targeted in order to generate CIL income for the council. This is not sensible. The current draft CIL scale also encourages development on greenfield sites rather than brownfield.

The methodology commissioned by the Council to assess traffic and the corresponding roads infrastructure needs is inadequate for the purpose of the Local Plan and identifies only the tip of the iceberg in terms of existing congestion. Looking at local traffic situations around the Borough it becomes clear that the schemes proposed will not solve congestion and the local road network has not been given sufficient consideration. Under the growth proposed some locations would require highway schemes that involve demolition of property and road-widening in residential areas to solve the resultant congestion. Even the A3 improvements are not guaranteed to take place but they are being used to justify removing large areas from the Green Belt before detailed traffic assessments have taken place. These detailed investigations are being deferred until the planning application stage and will be left to developers to prepare. If a site then proves to be unsustainable its Green Belt protection will have been lost for no reason and unsuitable development will take place by a more insidious process.

With regard to SANG provision, GBC has demonstrated that it has no genuine interest in conserving and enhancing biodiversity and clearly regards the Thames Basin Heaths SPA as an obstacle to be overcome rather than a valued asset. This is underlined at the end of the Policy wording which indicates that the council is more interested in meeting its legal responsibilities than actually protecting wildlife. GBC is failing to take account of existing biodiversity at sites selected for SANG provision.

Detailed response:

Some infrastructure, as identified in Figure 1 of the draft IDP- is within the control and remit of Guildford Borough Council – they have some influence in relation to planning – but much is under the control, and is the fiscal responsibility of, Surrey County Council or Highways England.
It is not realistic to assume that car use can effectively be replaced for all or even many users. Those who are disabled or infirm cannot easily substitute car journeys with bike travel: the elderly; the disabled; those caring for young children (particularly uncertain bike users and those with multiple children to care for); those wishing to use cars for supermarket or other bulky shopping; those who wish to commute to work and have no facilities for showering or changing on arrival; those who have lengthy and tiring commutes at present, for which the car is the final (short) element of a long journey (for those commuting into London from outside Guildford, a daily 3 hour commute is typical; this cannot realistically be extended by extensive cycling). All these factors mean that the replacement of the car with cycle use is likely to be overstated by many studies, particularly given narrow roads which do not allow effective or safe bike lanes.

Funding is not the only - nor the main - obstacle to improving infrastructure within the borough, and this seems not to be recognized. Guildford is a gap town, set in a bowl within the Surrey Hills Area of Outstanding Natural Beauty to the south of the borough, and with large sections of the borough affected by the Thames Basin Heath Special Protection Area to the north. There is a ribbon through the middle of the borough which contains rail and road links to London, but is already heavily congested, is Green Belt, AONB, SPA or more than one of the above. Very little of the borough is available for extensive development of infrastructure or any building. Do we really want solutions that involve driving new roads through our remaining countryside – including the AONB – at huge cost in financial and environmental terms. Such solutions may be the only ones left when the inadequacies of this proposed Local Plan are realised after the event.

Policy indicates note an intention to pool Community Infrastructure Levy from most new build development and to use CIL receipts to assist in provision of infrastructure needed to support the delivery of the plan. As with other aspects of planning, there is a failure to recognize that out of town settlements in particular have particularly high requirements for additional new basic infrastructure in order to exist at all – roads, sewers, water provision, electricity, gas, telephone and broadband links will all need to be provided and in many cases the links to existing services will need to be upgraded before these can be implemented. The ability to divert funds from CIL to other uses will be inherently limited, not least that otherwise the proposed settlements will not be able to function. The Council strategy of taking CIL from new build in the Green Belt seems to be to pay for roads within the town centre, as indicated in the policy which notes that legislation prevents the use of planning obligations to fund existing infrastructure deficits.

In the reasoned justification, it is indicated that the council will be prepared to negotiate if an applicant claims that the infrastructure requirements for their development make it unviable. This means that some developments will go ahead anyway and worsen the infrastructure deficit. The Policy claims that infrastructure needed “should” be provided and available when first needed but I have no confidence in the council enforcing this.

The absolute constraint on developmental capacity within the borough represented by the infrastructure limitations cannot be swept aside, but the council has ignored this and failed to apply a constraint on the housing number.

I am not convinced that the extent of existing traffic congestion has been fully recognised by the SCC transport assessment because the methodology employed waters down the level of traffic observed. This has knock-on effects when modelling the various development scenarios. The result is that the requirements identified (expensive though they may seem) are the tip of the iceberg. One of the easiest issues to understand is the use of average peak hour flows for the baseline data. SCC acknowledge that that this is “typically lower” (see Transport Assessment 4.13.4 but GBC prefer the averaging approach with some eloquent wording in their Headline network metrics (3.9). A much better solution would have been to collect reliable baseline data that allowed for the effects of queuing and modelled each hour (or a shorter time period). Such an approach would have cost more but GBC seem unwilling to go the extra mile for reliable evidence while being content to spend large sums of money on propaganda exercises such as their one-sided video. There are other more technical reasons why the transport assessment methodology fails to fully identify current and planned congestion.

Planned developments for Guildford and Waverley Boroughs were modelled together but growth for the rest of the UK was allowed for only using the DoT forecasts. As a result it is not clear whether adequate allowance has been made for significant developments planned for Woking and other neighbouring Boroughs. This represents an inconsistency in approach with the West Surrey SHMA.
Many of the results for the PM peak are missing (TA 4.1.11 states that “these can be set out in an addendum report at a later date”). I believe that those who need to travel on the roads in peak hours will be every bit as interested in their future journeys home as they are for going to work. Publication of the Transport Assessment was delayed until the start of the consultation period so perhaps the non-inclusion of many PM results was simply a result of running out of time.

The Model Development Validation Report does include some interesting baseline data that may be of interest to residents in terms of local knowledge of traffic.

I am not convinced that it would be practical or desirable to end up in a position where the only solution to traffic congestion is to build many more new roads as by-passes through the Surrey countryside, or turn existing roads into dual carriageways, or demolish buildings (some of which may be historic) in order to accommodate higher capacity junctions in built-up areas.

It is noted that the infrastructure Development Plan was developed using hotspots identified in “OGSTAR” (the previous Transport Assessment used for the 2014 consultation) as a starting point. (See Transport Topic Paper (5.56)). However, the site list used for OGSTAR was not even compatible with the former draft Local Plan let alone the current one. Despite this, the Key Evidence mentions the June 2016 TA but not OGSTAR.

Appendix C (Infrastructure Schedule) is lacking in detail concerning what work will actually be carried out for most of the Local Road Network projects and the cost estimates are clearly at the guesswork stage suggesting that these schemes have not been fully thought through or checked for viability. If more detail is available then why not provide it.

It is not clear whether CIL will be received in time to put the required infrastructure in place for each development – or what penalties will be applied for late payment.

The Monitoring Indicators rely entirely on annual CIL receipts and spending. Surely they should look at actual infrastructure delivery and any changes in its adequacy.
justifying removing large areas from the Green Belt before detailed traffic assessments have taken place. These detailed investigations are being deferred until the planning application stage and will be left to developers to prepare. If a site then proves to be unsustainable its Green Belt protection will have been lost for no reason and unsuitable development will take place by a more insidious process.

With regard to SANG provision, GBC has demonstrated that it has no genuine interest in conserving and enhancing biodiversity and clearly regards the Thames Basin Heaths SPA as an obstacle to be overcome rather than a valued asset. This is underlined at the end of the Policy wording which indicates that the council is more interested in meeting its legal responsibilities than actually protecting wildlife. GBC is failing to take account of existing biodiversity at sites selected for SANG provision.

Some infrastructure, as identified in Figure 1 of the draft IDP- is within the control and remit of Guildford Borough Council – they have some influence in relation to planning – but much is under the control, and is the fiscal responsibility of, Surrey County Council or Highways England.

It is not realistic to assume that car use can effectively be replaced for all or even many users. Those who are disabled or infirm cannot easily substitute car journeys with bike travel: the elderly; the disabled; those caring for young children (particularly uncertain bike users and those with multiple children to care for); those wishing to use cars for supermarket or other bulky shopping; those who wish to commute to work and have no facilities for showering or changing on arrival; those who have lengthy and tiring commutes at present, for which the car is the final (short) element of a long journey (for those commuting into London from outside Guildford, a daily 3 hour commute is typical; this cannot realistically be extended by extensive cycling). All these factors mean that the replacement of the car with cycle use is likely to be overstated by many studies, particularly given narrow roads which do not allow effective or safe bike lanes.

This represents an inconsistency in approach with the West Surrey SHMA.

Many of the results for the PM peak are missing (TA 4.1.11 states that “these can be set out in an addendum report at a later date”). We believe that those who need to travel on the roads in peak hours will be every bit as interested in their future journeys home as they are for going to work. Publication of the Transport Assessment was delayed until the start of the consultation period so perhaps the non-inclusion of many PM results was simply a result of running out of time.

The Model Development Validation Report does include some interesting baseline data that may be of interest to residents in terms of local knowledge of traffic.

We are not convinced that it would be practical or desirable to end up in a position where the only solution to traffic congestion is to build many more new roads as by-passes through the Surrey countryside, or turn existing roads into dual carriageways, or demolish buildings (some of which may be historic) in order to accommodate higher capacity junctions in built-up areas.

It is noted that the infrastructure Development Plan was developed using hotspots identified in “OGSTAR” (the previous Transport Assessment used for the 2014 consultation) as a starting point. (See Transport Topic Paper (5.56)). However, the site list used for OGSTAR was not even compatible with the former draft Local Plan let alone the current one. Despite this, the Key Evidence mentions the June 2016 TA but not OGSTAR.

Appendix C (Infrastructure Schedule) is lacking in detail concerning what work will actually be carried out for most of the Local Road Network projects and the cost estimates are clearly at the guesswork stage suggesting that these schemes have not been fully thought through or checked for viability. If more detail is available then why not provide it.

It is not clear whether CIL will be received in time to put the required infrastructure in place for each development – or what penalties will be applied for late payment.

The Monitoring Indicators rely entirely on annual CIL receipts and spending. Surely they should look at actual infrastructure delivery and any changes in its adequacy.

The local plan does not state an objective for congestion. The two strategic objectives that are included for infrastructure refer to supporting sustainable development and delivering a balanced system. However, in para 2.15 there is an aspiration expressed about opportunities ‘to improve the performance of the road networks through transport infrastructure and service improvements’, which taken with the previous paragraph includes reducing congestion. The evidence so far shows that this will not happen. The mitigation proposed is not sufficient to overcome the problems that will be caused by the level of growth in the local plan. **Congestion will worsen.** The network will lack resilience and be vulnerable to disruption due to incidents. Minor roads will have to cope with a lot more traffic, for which they are unsuitable.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

Furthermore, the infrastructure proposals put forward in the plan are totally inadequate to cope with the current needs of residents in these villages and the additional strain on local services would be unacceptable if these proposals go ahead.

I strongly object to the fact that there has been no forward planning regarding the infrastructure with regard to water supply (water companies need 10 years advance warning of large supply requirements) which is under great pressure in the local area.

I strongly object to a plan that has made no extra provision for the pressure this will put on the local hospital with no provision or planning.

I strongly object to a plan that has made no provision for waste disposal of the large developments.

1. POLICY I

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.
With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?
As a cyclist, a walker and a bus user I am only too aware that the town does not provide adequate provision for non-car modes of transport. The town needs more and better cycle lanes, far more pedestrian crossings (for example on the Epsom Road) and a more sensible ticketing system on buses (eg the 'kangaroo ticket' used in London) to encourage sustainable transport.

Such changes are discussed but sadly not implemented.

Substantial increases in housing numbers will add to congestion, which is already a huge problem in the town. A single incident regularly creates gridlock throughout Guildford.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
Although much is made of the need for new infrastructure to support these developments and for this to be in place as needed, the Plan admits “we forecast that there will also be an absolute increase in overall traffic volumes” and this is assuming all the infrastructure (listed in App. C to the Plan) is in place in a timely fashion. GBC has little or no control over the plans of Surrey County Council as the local highways authority and Highways England for trunk roads. Worryingly, the Plan now has less substantive information about improvements to the A3 South of the M25 from Highways England and it appears that their plans are not yet formed (Policy ID2). In the absence of such information, the infrastructure proposed is specific to each proposed development and does not address cumulative effects. What would be the case with regard to planning approval if SCC and/or HE do not provide timely infrastructure?

The Plan now calls for nearly all infrastructure to be funded by developers (see APP. C). We question how realistic it is to expect developers not only to pay for all the infrastructure but also to have it in place in a timely fashion. The Plan says that planning permission will be refused if timely provision of infrastructure cannot be secured. Such refusals will almost certainly be settled in the courts. Developers’ business models are based on building and selling houses to create the cash to provide infrastructure. People will be living on the sites well before infrastructure is complete. Will GBC prevent development of Gosden Hill until slip roads etc. are provided off and onto the A3? Again, the infrastructure is site specific and does not address cumulative effects.

If development were to be refused the land would still have been removed from the green belt and its future rendered uncertain.

Residents are being asked to accept very large amounts of development with little or no detail being provided on measures which would relieve existing congestion and limit future problems. The cumulative effects of the developments listed below are certain to have a devastating effect on the A247 through our village (and of course on Send) and it is hard to see how any of the infrastructure proposed in the Plan (App. C) will do anything to mitigate the effects of these developments on the A247 and hence our village.

Summary of the Impacts on the A247 – My Objections

All of these developments will draw additional traffic to the A247 through the village. It would be naïve to think that the employment sites and schools will serve only the developments themselves. Apart from the normal movements of residents to and from the new sites there will be considerable additional traffic on the A247 generated by:

- children from elsewhere being delivered to schools and collected
- the employees of the offices and industrial sites getting to work and returning home
- the vehicle movements generated by distribution and storage activities
- traffic from Wisley wishing to travel South and returning
- traffic from Gosden Hill wishing to travel South and returning
- traffic from Slyfield wishing to travel South and returning
- private and commercial traffic originating in the South and accessing Gosden Hill, Burnt Common or the A3 and returning (including traffic from Dunsfold)

The A247 although an A road:
- is less than 2 vehicle wide in places
- does not have continuous footpaths
- has several sharp bends
- has a hump-backed bridge with poor site lines
- has a very difficult junction to access the station
- is largely unlit
- has a primary school
- is already very congested at times

The eradication of 72-hectares of virgin green belt land between West Ward Lane and Glaziers Lane is going to be a complete lottery for those that have houses on this site. It is a very badly though-out idea. Flooding problems in Normandy are well documented, so water running off houses, roads and driveways of 1,150 homes will only make the matter worse. We have enough problems in Glaziers Lane with sewage backing-up out of residents toilets as it is. What happens when new house owners start getting sewage coming up through their new toilets, I wonder! Will Taylor Woodrow give them their money back?

I am fortunate enough in having 4-head teachers as neighbours living very close by and they all tell me every school in Guildford is under subscribed. This is a fact. So why build a school that is not needed in an area that has poor transport links. Thus bringing even more traffic into an all ready over congested area. The building of a school is little more than a sweetener to catch the eyes of the planners. Once again, this is a badly thought-out idea.

I would ask the GBC planners to scrap the idea of such a lot of houses being built in Normandy. The present infrastructure cannot cope with this type of large housing scheme.

The facts I have given are truly relevant to the future of Normandy and its residents.

I strongly object to the Local Plan and the chaos it will bring to Normandy.

11/12/13 Infrastructure and delivery and Dept of Transport Strategy
See my comments under D2/D4

I object to the Draft Local Plan in every respect on these policies.

Plans are too vague and too far in the future to beneficially affect, new residents encouraged by GBC to settle around Guildford, and as for the existing residents, their lives will be made a misery by excessive road widening, footpaths and cycletracks changing the whole image of the Borough.

Buses were not able to travel between the proposed Wisley site and Effingham station. There are not sufficient buses anywhere, and are underused, generally, as people prefer to commute by car.

Station carparks are full already, with no possibility of extension at Horsley or Effingham.

The elderly, children and disabled are not able to walk or cycle long distances. The idea that most people will return to these primitive ways of getting around is unrealistic.

Many roads cannot be widened for footpaths or cycletracks.

The new stations proposed will slow commuter trains to London, but may relieve the other carparks. It is uncertain from documents whether these are a reality or just a dream.

Infrastructure

I object to most of GBC’s plans as they have proposed no realistic infrastructure improvements.

The A3/M25 interchange will cause even more air pollution than already exists, which is well above permitted levels for development.

It will swallow up huge amounts of common land.

It will direct Wisley Garden traffic onto an already over-used junction (Ripley/East Horsley), which, it is suggested will also be the exit and entrance point for the proposed development of Three Farms Meadows, (erroneously re-named Wisley airfield).

The congestion will result in tailbacks even further West in a London-bound direction, along the A3, than there are at present. (often 2 miles before the A3/M25 junction)

Ripley is threatened with ALL the traffic from Wisley, heading West on the A3, going through the village, which was by-passed in order to reduce the traffic.

I object to the plans to close roads around Wisley or to make some one way only. This will be very disruptive to traffic from other places trying to get through Ripley, or on to the A3 or from Ockham to Cobham.
A3: There are no proposals for meaningful improvements to the A3 around Guildford. At present one may be stuck in heavy traffic for 45 minutes on a daily basis, as one covers no more than 2 miles travelling Westwards. A tunnel might help but is there any realistic prospect of that being completed in the Plan period?

Roads: There are no proposals to widen or improve the surface of poor roads in and around Guildford. Many roads cannot be widened, therefore the increased traffic from the planned 12,426 new houses (approximately 24,000 extra cars) will cause grid-locks and serious congestion, within the town and in the small rural roads in and around villages.

Surgeries: There are no proposals for new surgeries in most of the areas GBC proposes to develop.

At present, most surgeries are managing at the limit of their capabilities. Many surgeries have no room to expand, even if they could find sufficient doctors, nor to expand their car-parks.

Schools: Most schools are at full capacity. Not enough new schools have been proposed.

Water and sewage: Many of the sites proposed will have difficulty in bringing in sufficient water supplies. New sewage farms would need to be built at most of the sites. At Wisley, proposals suggest that the Ripley sewage works could accommodate the waste from an extra 2000 houses. It cannot.

Trains; a new station at Burpham is a good idea. It might take the pressure off Horsley and Effingham.

Buses; Suggestions by the Wisley developers that buses might run every 10 minutes to Woking station are ludicrous. It is also unrealistic to run buses to Effingham as the road is too narrow and unsafe.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( No ), is Legally Compliant? ( )

I OBJECT to the fact that so much housing development is included in the Local Plan with so little realistic appreciation of the strain this will place on the transport and other infrastructure and so little evidence of advance planning. Reassurances from the Lead Councillor for Infrastructure that all this will be taken care of at the detailed planning stage
are not adequate; it is irresponsible to base a Local Plan on infrastructure improvement that may or may not be forthcoming - especially when this entails taking land out of the Green Belt. The Leader of the Council has said he will not support the housing numbers in the latest draft of the Plan without the infrastructure improvements, but how can we have faith in future promises from third parties about the infrastructure that may or may not be delivered?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
I OBJECT TO POLICY I1 (INFRASTRUCTURE & DELIVERY) • Infrastructure considered here as an afterthought, rather than pre-condition of development. Should be a key issue for the rest of the plan. • Excessive housebuilding in countryside not supported by any funding or provision for infrastructure. • Heavy focus on building on greenfield sites inefficient and unnecessary: cheap for developers but much more expensive for the public who have to fund the infrastructure. • Draft CIL scale discourages use of brownfield land first. • No plan for organic increase in existing traffic congestion, let alone once thousands of houses are built across the countryside. Local roads hardly considered. Green Belt being eroded before road widening/improvement plans certain, encouraging over-development of greenfield sites.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Comment ID: PSLPP16/8893  Respondent: 8694369 / Nicola Ogilvie Smals  Agent: 
Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1  

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

In order to accommodate the infrastructure upgrades required to accommodate the huge expansion of West Horsley a full study must be undertaken. As a minimum the following infrastructure issues are pertinent:

Primary schools; the Raleigh is already oversubscribed to the extent that many residents of West Horsley south are unable to secure places for their children resulting in twice daily car journeys to neighbouring villages of Effingham and Clandon, expansion of the school is not possible with the current confines of the school grounds therefore expansion of the village will exacerbate the problem of capacity and will therefore increase local traffic to other schools;

Secondary schooling is generally obtained at the Howard of Effingham School, which is itself the subject of uncertainty as a result of the Draft Plan;

Drainage is a notable problem within the village currently, but any proposals must take into account the costs of upgrades;

There are poor provisions for pedestrians outside of East Horsley; West Horsley North does not have street lighting or appropriately sized pavements;

Local facilities such as the medical centre and parking for local shops must also be considered alongside capacity of the car park at Horsley Station.

The CIL as a tariff will pool resources however there are a number of specific local infrastructure improvements that must be taken into account. The infrastructure delivery plan makes little note of these local issues which are of significant importance given the proposed 100% increase in size to West Horsley North.

Site A38 contains an oversubscribed nursery school employing around 30 members of staff including support staff and around 100 children are on the role; it is unclear whether the proposals to develop this site include the retention the existing nursery leased from the land owner or whether it will be forced to close resulting in a loss of employment including many jobs for 18-24 year olds including training; furthermore this nursery school provides an essential service to residents. If the nursery school continues to operate there will be a considerable effect on the setting of the nursery and the planning application will require extensive consideration of size, access and safety issues. If the Nursery School remains, the density of the development at site A38 will be increased further which will be even less in keeping with the scale of the surroundings.

The total number of houses proposed could lead to there being upwards of 5000 additional cars on the local roads. Roads are already very busy and car parking provision is minimal. I therefore foresee severe traffic congestion particularly at the junction of Ockham Road North with the A3, unless there are major road improvements.

Both the local school and medical centre are already at virtually full capacity.

And there might eventually be at least 12000 alltime people living in the area, it is clear that these services would be unable to cope without major new provision.

There would also need to be a big expansion of local shops.

Can the developers be relied upon to finance the expansion of the extra services?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
I object to a totally unrealistic number of houses for the country lanes to absorb.

I object to the 2016 Draft Local Plan as it has had no regard to schools required, additional medical or hospital facilities which would make a plan sustainable.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

There are not sufficient Schools/Academies to educate possibly up to 10,000 children in the area.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

There are insufficient shopping and parking facilities

The roads in the area cannot take any increase in traffic as this contribute to grave danger to all users (car drivers, pedestrians and cyclists, etc)

The air pollution is already at a high level and any increase caused would be well in excess of the legal level.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I write to complain about the latest version of the "local plan" for West Horsley

This plan would represent the largest change, over a short period, experienced by Horsley in the last 1000 years!! Our infrastructure would be incapable of coping with this.
The roads are already congested and public transport cannot take any more.

Other items of concern are :-

Schools
Shops
Medical center
Surface water
Main drainage
Policing
Public open spaces

Other items which would soon start to break down are

Electricity
Mains Water
Gas
Telephone systems ( inc BroadBand )

all these matters will require urgent attention, and should be an integral part of any 'Plan'

_I OBJECT_ to the lack of forward planning by GBC as the Infrastructure delivery schedule is not developed enough to support even the 5 year programme.

This council has a very poor record of delivering infrastructure to support developments. GBC freely admitted in the previous draft plan that “infrastructure provision has not kept pace with housing development.” I feel this remains much the same.

- The current poor state of infrastructure must be remedied in advance of adding further strain by increasing populations.
- Road infrastructure is a very basic need. The road system around Guildford is already gridlocked at peak times and the amount of traffic is beyond the capacity of most feeder roads from the North, West and East of Guildford.
- Primary and Secondary school places will not keep up with demand.
- Doctor’s surgeries with more doctors and facilities need to be built and staffed.
- The Royal Surrey Hospital is already at capacity for the existing population.
• Sewerage system in parts of Guildford – particularly around the NW and Fairlands is not fit for purpose for the current population let alone more housing in the area.

• ROADS: There are no known plans to improve the already serious road congestion on the A322 and A323 – a crucial factor in the refusal of two previous applications. These roads along with the A320, A31 and A3 are all major problems as they all funnel towards the Dennis Roundabout. These roads cannot cope with the extra cars generated by 693 new homes.
• The road system around Guildford is already gridlocked at peak times and the amount of traffic is beyond the capacity of most feeder roads from the North, West and East of Guildford.
• SCHOOLS: primary schools are expanding to meet the current demand on places but won’t be able to offer places to new arrivals in the area. At 11 they will need to move on to Secondary Schools. Can SCC afford to build new schools and pay teacher’s salaries?
• DOCTOR’S SURGERIES are already over-subscribed. The developers may build new surgeries but can SCC afford to pay the doctors and nurses to staff them?
• THE SEWARAGE SYSTEM, in many areas are already at capacity and not fit for purpose for the current population let alone another 693 homes.
• WATER SUPPLY in the NW corner of Guildford is becoming a problem with falling water pressure - the bore holes on the Hogs Back are said to be under strain.
• FLOODING in Worplesdon continues to be a problem.
• ELECTRICITY SUPPLY is not consistent in Worplesdon and other villages in the NW of Guildford.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object because of the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads. Many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are already in a poor condition as a result of insufficient public funds for their maintenance and renewal.

I object to the development proposed in the local plan. It will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.
The Council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road rendering it dangerous, especially when vehicles mount the pavements.

The borough’s infrastructure is already heavily strained. Yet the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording is silent about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours, ignoring the effects of junctions and understating peak demand - hides the problem, which will worsen as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing green field over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. This plan, however, assumes infrastructure will be provided housebuilding without providing evidence that it is likely to materialize. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of Community Infrastructure Levy (CIL) income. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways:

- Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. Without commitments to improve these services, there should be no development of the Garlick’s Arch site.
- Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.
- Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.
- There is no provision of the increased capacity of Guildford hospital.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.
Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

**Inadequate Infrastructure Planning**

I was astounded to discover that the Borough's Infrastructure Delivery Plan failed to address these issues at all, let alone adequately. No planning gain seems to have been outlined in the proposal.

The proposed local plan for the Horsleys is a travesty when set against the criteria of the National Planning Policy Framework (NPPF) that new residential development must respect the character and density of housing in the area and be limited in quantity by the availability of infrastructure and local facilities.

Sadly, the drive behind the plan appears to be to maximise the financial opportunity for developers in the area over addressing the needs and well-being of council tax paying residents.

What I find suspect or flawed in all the documentation is the way the provision of additional amenities in relationship to the plan are apparently regarded by the planners as "Givens". For example new cycle paths, primary schools, roads, Doctors surgeries are shown as part of the infrastructure in support of additional housing. However in reality there is little evidence that Surrey’s budget can support things as they currently are-let alone provide additional support for an enlarged population. As one small example I have lived in East Horsley since 1990 and during that time the paths and service roads at Station Parade, Ockham Road South have never been resurfaced or upgraded. A small example maybe but if the
Council cannot attend to a small issue like that how can it expect to fund an enlarged population and infrastructure as outlined in the plan.

As such I worry that the plan represents a "Civil Service" style response to a Government dictate to provide more homes-at whatever the cost to the Green Belt, Local environment or Village communities.

I'm worried.

I OBJECT TO POLICY I1 (INFRASTRUCTURE & DELIVERY)

- Infrastructure is considered here as an afterthought, rather than a pre-condition of development. Should be a key issue for the rest of the plan.
- Plan for excessive housebuilding in countryside not supported by any funding or provision for infrastructure.
- Plan’s heavy focus on building on greenfield sites inefficient and unnecessary: cheap for developers but much more expensive for the public who have to fund the infrastructure.
- Draft CIL scale discourages use of brownfield land first.
- No plan for organic increase in existing traffic congestion, let alone once thousands of houses are built across the countryside. Local roads hardly considered. Green Belt being eroded before road widening/improvement plans are certain, encouraging opportunistic over-development of greenfield sites.

4.6 Infrastructure Policies.

Policy ID1 (p.122) states that "Infrastructure necessary to support new development will be provided and available when first needed".

Garlick Arch (Site 43) is identified as an area for the introduction of some 400 homes, and a new interchange with the A3 trunk road is proposed (Site 43a). Both of these are likely to give rise to significant extra traffic on the A247, which runs through West Clandon village. There is already some congestion at peak times in the village, as well as numerous accidents due to the narrowness and poor driver visibility in parts of the village. There is no scope for road widening or of line-of-sight visibility in these places, so these proposed developments appear to be in violation of the Plan's policies.
I hope these reservations will be properly taken into account,

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

The villages within the Guildford Borough are already choked with traffic, the roads are in a parlous state, drains are frequently blocked leading to flooding after even a short shower, schools are over-subscribed and medical services are already over-stretched. The arrival of 500 - 600 more families will place an intolerable burden on the local infrastructure and amenities. Even the increased Council Tax income from all these new homes is unlikely to be adequate to cover the additional demand.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

- I object due to the unsuitability of our local roads for heavy vehicles and more traffic including many years of construction traffic
- I object due to the fact that local healthcare facilities will be overwhelmed by large numbers of additional residents – it is already difficult to get an appointment at the GP and the RSCH is failing to meet waiting times for outpatients’
- I object due to the impact of large numbers of additional residents on local policing facilities which will be further Surrey Police are currently unable to cope with dealing with local residents’ concerns [eg breach of law on PROWs on allocation A35] citing lack of resources.
- I object to the impact of large numbers of new residents on school places which has not been properly For example, Send Primary School (in the process of being rebuilt) is being rebuilt with no spare capacity. The proposed redevelopment of the Raleigh School in Horsley [not even in the local plan] is only for redevelopment not for enlargement. Schools planned for Three Farms Meadows will not be operational for the first 500 houses of development. Where will those children go to school? There is no capacity. When the school is built at TFM children will have to be bussed in from elsewhere as it’s not possible to walk… adding to congestion on local roads and the Strategic Road Network. Does one hand know what the other one is doing because it certainly does not look like it to me?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

1. POLICY I1

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists pass through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.
The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
In summary my objections are very much directed to the inadequacy of the Plan to support new housing with the necessary infrastructure and especially relating to the road network which already creaks with the existing amount of traffic. In places the Greenbelt is being sacrificed for homes that will most probably be proven unaffordable which in turn will change the developers plans and promises made to finance new infrastructure.

I propose that as a minimum the planned development at Garlicks Arch be withdrawn and that a detailed road traffic relief plan be undertaken and committed to before any development at all is agreed.

*Section page number Page 79 of 1294  Document page number 80*
Strongly Object

Existing infrastructure is highly constrained, with particular concern to roads, water supply and sewerage.

This again looks like a wish list rather than a plan. The stated infrastructure first cannot be implemented on this policy. Many of the key schemes like the tunnel are aspirational rather than practical. Existing roads are jammed – try going through Guildford at 8.30 am. We need one co-ordinated transport strategy, but this is piecemeal based on developments which may never happen.

**If 14,000 houses are built as this document suggests this policy will not support the 28,000 additional cars on the road. This is implies a serious constraint which needs to be applied in Policy S2.**

CIL strategy as drafted also encourages development on green field sites rather than brownfield.

SANG strategy is flawed. I see no practical way the Thames Basin will be protected by sites like Russell Place Farm as proposed. We also believe the Russell Place Farm SANG already an application before this consultation has been predetermined. It seems GBC approach to SANGS is as a method of building houses on the Greenbelt rather than adding them as a valued community asset.

The Hockford Sewage works have been omitted in error. Without this being seriously upgraded, the whole of the west of Guildford will not be able to get rid of sewerage.

Policy I2: Supporting the Department for Transport’s “Road Investment Strategy”

Object

What happened to integration? This should be part of policy I1.

The A3 tunnel is not funded.

Infrastructure funding and support is needed before housing and employment growth are factored in.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Document:** Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

**Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )**

Policy I1: Infrastructure and delivery

Strongly Object

Existing infrastructure is highly constrained, with particular concern to roads, water supply and sewerage.

We doubt this policy, led as it is by developer contributions (mainly from Greenfield sites requiring significant infrastructure of all types) is deliverable. Many of the key schemes like the tunnel are aspirational rather than practical. Existing roads are jammed – try going through Guildford at 8.30 am.  **We need one co-ordinated transport strategy,** but this is piecemeal based on developments which may never happen. If 14,000 houses are built as this document suggests this policy will not support the 28,000 additional cars on the road.
A strong policy here is not possible and this should be used as a major constraint on building on the greenbelt.

CIL strategy as drafted also encourages development on green field sites rather than brownfield.

SANG strategy is flawed. We see no practical way the Thames Basin will be protected by sites like Russell Place Farm as proposed. We also believe the Russell Place Farm SANG already an application before this consultation has been predetermined. It seems GBC approach to SANGS is as a method of building houses on the Greenbelt rather than adding them as a valued community asset.

We note the wording at the end of the Policy which indicates that the council is more interested in meeting its legal responsibilities than actually protecting wildlife. GBC is failing to take account of existing biodiversity at sites selected for SANG provision.

Paragraph 3.6 of the Infrastructure Study is incorrect. The Hockford Sewage works have been omitted in error.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Strongly Object

I do not believe the maths support developer funding the infrastructure and the affordable housing requirements via any method, including CIL. Indeed it is doubtful they would they would add up to a significant part of either infrastructure OR affordable housing costs required. On this point alone the proposed plan fails.

Since the previous plan, Guildford has been identified as the 4th most congested town in England.

Infrastructure

There are any number of infrastructure pinch points, consideration of which appear to be an after thought with very little in the way of upfront commitment to solving the capacity issues ahead of building extra homes. Road, rail, schools, sewage, waste disposal, GPs, emergency services, to name but a few, all need scaling up or scaling out first, well ahead of considering building significant numbers of new homes. Solving these issues afterwards is not good enough, many are overstretched already.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
I object to the changes in Policy 1D1, particularly the proposals that “delivery of infrastructure will be secured by planning condition and/or planning obligation.” (2) and “If the timely provision of infrastructure necessary to support new development cannot be secured, planning permission will be refused.” (3). This acknowledges that the provision of necessary infrastructure to unlock development may not be “secured” within five years and the Plan therefore runs counter to the NPPF[11], which states that:

“To be considered deliverable, sites should be available now, offer a suitable location for development now, and be achievable with a realistic prospect that housing will be delivered on the site within five years and in particular that development of the site is viable.”

The whole approach underpinning Guildford’s Local Plan is to allocate land for housing that does not currently have the infrastructure needed to support it in the hope that this will be provided downstream by the government (in terms of the A3 widening) or by developers. However, there is a risk that these schemes will not come to fruition: the widening of the A3 is uncertain, being subject to budget constraints and the whims of different government ministers (Annex 3); whilst required local road infrastructure could fail to be delivered if the developer abandons the project without fulfilling all the conditions and obligations, or claims that the cost of delivery is not viable (para 4.6.8 suggests that GBC would be prepared to negotiate reduced infrastructure requirements). This is a particular risk in the case of the Blackwell Farm allocation (A26), where the landowner (University of Surrey) has already demonstrated a poor track record in meeting the commitments it made at the last Local Plan.

I object to the fact that the changes within policy 1D1 (and indeed the whole policy) are based on flawed traffic modelling. Despite recommendations from Highways England (HE) (Annex 4) and other commentators on the Local Plan that the modelling should be revised using the latest OmniTRANS software tool (version 6.0.22), GBC has failed to instruct Surrey County Highways to update its modelling accordingly, and instead appears to have tried to browbeat HE into accepting less reliable modelling assumptions, as is apparent from the minutes to its meeting with HE on September 1 (Annex 5).

A Technical Note prepared by Mouchel on behalf of HE in response to the 2016 Local Plan (Annex 4) concludes that: “the future updated model, using the latest version of the OmniTRANS software, should help to address some of the concerns by including blocking back and true peak hours, but the inability to model merge delays on the A3 will remain a significant limitation. The results from the new version of the model could be significantly different from those presented in the GBC’s current Local Plan evidence Base.” [Page 6 – emphasis mine.]

It is unsound to base housing allocations on traffic scenarios that have been skewed by using outdated traffic modelling software and do not reflect the true situation.

I object to the deletion of infrastructure project SRN6 (Beechcroft Drive new access road/road safety scheme) from this version of the plan. The current access (a 90 degree junction on a blind bend of the A3) is dangerous not just to the residents of Beechcroft Drive, but to all drivers travelling on the A3.

The Manor Farm Master Plan (2004) states: “Benefits secured by legal agreement include… commitment to exploring ways of alleviating Beechcroft Drive access problems.” (Section 8.8). Thirteen years later this access has not been provided. If the University/GBC cannot fund a few metres of road linking Beechcroft Drive to Manor Farm in order to provide safe access for 21 existing residences (some with young families), it is questionable whether they would bother to pay to enforce a controlled section of the new link road from the A31 to Gill Avenue.

Thank you for inviting me to comment on the local plan.

I am very strongly against the building of so many new houses. When the local roads are already far too full, why are we trying to make the situation even worse by bringing in more people and cars. The schools are already too full – I understand it is quite difficult to get the school of one’s choice for our children. It gets more difficult to make appointments with doctors and we are rapidly losing our green and pleasant land and our attractive villages will lose their identity.

I think it would be much more sensible to stop the ever increasing immigration figures so that all these new houses will not be needed.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists pass through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.
Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the lack of proper infrastructure planning for sites (A43 and A42)

The Foreword to the plan by Paul Spooner includes on page 5:

“We recognise that significant infrastructure upgrades are required to support existing communities and the planned growth of the borough. The delivery of sites allocated in this plan is contingent upon the provision of new infrastructure, which is a key theme of our Local Plan”.

The lack of any plan for either physical or green infrastructure improvement clearly contradicts this in respect of both A43 Garlicks Arch and A42 Clockbarn Nursery, Tannery Lane, Send. Development of these sites without the contingent infrastructure would therefore be contrary to the stated aims and themes of the Plan, and should not go ahead.

POLICY I1

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.
Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. **Comment ID:** PSLPP16/4449  **Respondent:** 8734241 / Andrew Ingham  **Agent:**

**Document:** Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Points that need to be addressed include:

**Provision of nursery and school places** - Schools in the area are already heavily oversubscribed, with no additional schools where will the influx of children be educated? Nurseries are already at maximum capacity - parents of young children will not have the choice of going to work if they cannot find affordable child care facilities in the local area.

**Rail Travel** - Those living in Horsley and the surrounding villages, who need to work in London, need viable transport options to commute into work. Peak rail services are already at maximum capacity and overcrowded. Minor problems on the network regularly cause huge difficulties for commuters getting to and from work. Car parks at Effingham Junction and Horsley stations are already full most days and cycling is positively dangerous in the dark given the very poor state of the roads and lack of street lighting. Given the distance of these new developments from the station, lack of paths and lighting, walking is not realistic for most.
**Roads** - No new roads are identified in the plan. Roads in the Horsleys are already inadequately sized, in a dreadful state and continually subject to roadworks and repair which regularly cause delays. Roads are very busy at peak times and could not take the inevitable significant increase in work and school traffic that would result. This would lead to gridlock at rush hour and significant noise and air pollution. Limited traffic controls also mean that speeding is a common problem - the number of accidents and injuries will continue to increase.

**Utilities** - Roads in the area are continually being dug up by utility companies due to deficiencies in the existing infrastructure. These need to be upgraded to cope with the increased demand. Water pressure in many parts is already too low and broadband speeds are not great. There appear to be no plans to roll out fibre based communications in Horsley and so the extra demand on existing telecoms infrastructure will just slow down access for everyone. This will put a stop to any home working aspirations residents might have.

Many people have chosen to live in the area due to its village nature and heritage which makes it special. The surrounding countryside is also a huge benefit to the quality of life and health of local residents and London visitors who flocked to the area in the recent 2012 Olympics. This quality of life is something that should not be underestimated and therefore protected at all costs.

In summary, the plan is not fit for purpose. It does not make sense from an environment and economic perspective to keep adding homes to local villages without consideration for the infrastructure which will slowly erode the viability of the village. That plan is poorly thought through and everyone will suffer. Do we really want or even need the Guildford borough population to be subject to uncontrolled increase year on year?

There are also many other options which should be considered first before the easier and higher profit option of bulldozing green field sites. There are numerous brownfield sites which could be identified with a little effort and developed using innovative solutions. Poorly utilised existing sites such as sprawling car parks around Guildford town centre which could be more efficiently utilised. London is also not very far away and is better sized to accommodate the population numbers proposed.

I object to proposals to put up large swathes of Green Belt land up for development due to the irreparable damage that will be caused. I hope you are able to give my comments the attention they deserve and urge you to rethink the proposals outlined in the plan.

I would urge you to remember that once our outstandingly beautiful countryside and Greenbelt land has been bulldozed to make way for homes, it will be gone forever, for us and our generations to come.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.
Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

*INFRASTRUCTURE AND DELIVERY. Policy 11

I OBJECT, infrastructure is already hopelessly congested and cannot cope with even organic growth. The policy does not seem to mention roads and traffic which is the major cause of congestion, anyone who drives either up or down the A3 at any time of day will tell you how congested it is. Adequate infrastructure MUST be a pre condition of sustainable development. Greenfield sites present huge infrastructure problems and brownfield sites already have it in place, so it is much more sensible to use brownfield sites.*

I object to the very high number of homes required to be built year by year for the duration of the Local Plan.

My reasons are that for every home built there will inevitably be, at least one car per household, and the traffic congestion in this area will of consequence be increased to the point of standstill for long periods during the day, this has happened in the past years.

The increase in traffic congestion is also occasioned by an accident on the Farnham to Guildford road (The Hog's Back), and diverted traffic uses the A323 Aldershot to Guildford road, which runs past the fairlands Estate.

I object to the lack of information about the infrastructure necessary to accommodate the establishment of such a large volume of housing, surely, infrastructure should take priority.

A further and related factor, we believe, is that even allowing for the target housebuilding programme proposed in the Plan, there seems to be insufficient infrastructure projects to support the increased population envisaged in way of schools, transport and health facilities.

• The Plan fails to define the infrastructure requirements that will be needed to support the development of the proposed housing sites. As such it fails to comply with paragraph 157 of the NPPF guidelines, "Crucially, Local Plans should plan positively for the development and infrastructure required in the area to meet the objectives, principles and policies of the Framework". Policy 13 - "Sustainable Transport for new developments" indicates that developers will be expected to propose and secure travel plans for their developments and contribute to the transport arrangements for the able and disabled. The words "will be expected" are pathetically weak and developers will do everything in their power to avoid or minimise such commitments. As with the 2014 draft Local Plan, it is deeply concerning that very little work has been done to quantify the infrastructure requirements that will need to be implemented to support the proposed increase in housing.

• The proposed housing need is unsustainable. Overdevelopment will damage local communities, especially West Horsley, East Horsley, Normandy, Ockham, Ripley, Send and Clandon. These communities do not need the housing numbers proposed. The Key Evidence document “Guildford Borough Economic Strategy 2013 – 2031 makes no case for locating large numbers of dwellings in West and East Horsley or in neighbouring villages. Over 23% of the Plan’s new housing is proposed for the localities of Ripley, Ockham, Send and the Horsleys.

Development on the scale proposed in the Plan will require huge levels of investment to provide the infrastructure to support the resulting influx of thousands of new residents. Currently, the provision of primary and secondary education within the area is under considerable strain with local schools being oversubscribed for places. Children who are unfortunate enough to live outside the catchment areas for these schools must travel considerable distances to receive their education. There is only a vague reference to school provision in the Plan despite the potential for hundreds of new homes falling within its catchment areas. This raises the question as to where GBC thinks the thousands of new children will go to receive their education?

There is one GP surgery serving the Horsleys currently. The Infrastructure Delivery Plan suggests a possible extension to the Kingston Avenue Medical Practice. However, here is no evidence to suggest that development of the scale proposed
in the Plan will lead to additional GP provision within the timescales of the new development. As such the existing surgery would quite literally be swamped and be unable to provide anything like an adequate service.

The construction of 2,500 homes in the Ockham and Horsleys area will substantially increase the congestion on what are poorly maintained “B” and “C” category roads. It is also fair to conclude that the accompanying increase in traffic volume from such a massive population increase will accelerate the speed that these roads deteriorate and therefore, the frequency and cost of maintaining them. In addition the knock on effect of having thousands of new traffic journeys per day will quite literally gridlock the area, and will directly impact on the traffic flow on both the north and southbound A3 carriageways, and quite probably the M25/A3 junction.

Whilst Horsley station has frequent trains to London and Guildford, it is highly unlikely that the current or future train service provider will improve its peak time service to accommodate the increase in commuters.

5,036 houses are proposed between the M25 and Burpham (about 5 miles) which will obviously lead to a merging urbanisation of identities the villages. There is too much traffic in our villages already and this plan will cause more congestion in West Horsley, East Horsley, Normandy, Ockham, Ripley, Send and Clandon, with no plan to improve that. The rural roads in this area are narrow, in poor condition and have no footpaths. 5000 more houses in such a small area means dangerous and unsustainable traffic.

The schools are already full, visits to the surgery require a wait of many days, the station car park is full to bursting, the rush hour traffic is horrendous, the village halls have to limit entry on occasions and the car parking there is very inadequate. Our roads are full of potholes, electricity cables need renewing, as I know from personal experience, and the bus service is neither here nor there. I have no knowledge of the state of the gas or water supply, let alone the sewerage system but in view of the annual growth of population over recent years imagine it must already be under pressure.

To propose building another 500+ houses when current residents are already under strain from lack of the above facilities appears to be sheer folly. And I understand that there is still the possibility of adding to the chaos by developing Wisley airfield. The mind boggles and a great big red flag for danger should be waving over this part of the borough to alert the council, and anyone thinking of moving to this area.

More houses - yes, if really essential, but far less of them and with increased infrastructure to support them and us.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1. I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.
1. I OBJECT to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policies 11, 12, 13 : Infrastructure Policies
As a long term resident I believe the Borough's infrastructure is already stretched, and that the enormous building programme proposed by GBC would serve to worsen existing problems. East Horsley has country lanes not roads. These are unsuited to the volumes of traffic using them already. Any commitment to a massive housing expansion ahead of a plan and finance for the required transport network would make our traffic congestion even worse. A very significant traffic constraint should be applied to the local plan. Furthermore, there are insufficient school spaces already and the medical centre is already at capacity in terms of its number of patients. I object to the infrastructure proposals on the grounds that they fail to meet the needs of the proposed plan, which is it itself a product of inflated forecasts of immigration that are not accurate, necessary or welcome.

I am writing to register my objections to the New Local Plan.

The Plan does not seem to have a clear design for the whole area. If it does not certainly is not making it clear. Firstly the Transport Plan has been produced very late in the day (only released on the day of publication) and without this infrastructure, none of the developments should take place. It seems that Guildford Borough Council is planning a series of large developments along the A3 corridor but has not thoroughly looked at the impact of the is for the surrounding villages. The villages on both sides of the A3 have very inadequate roads to cope with the anticipated amount of traffic and the roads available cannot be improved to the point that will ease the expected congestion. There are many other worries as well; such as environmental concerns, noise pollution, air pollution levels, flood risks, the sheer quantity of housing and industrial units supposedly required, the list goes on ...

It is proposed that around 40% of the new development in the Borough is to be in and around Send and bearing in mind that we represent only 11% of the Borough this seems to be excessive. The main reason for my objection is that it will destroy the Green Belt. Additionally the layout, infrastructure, facilities and local requirements have not been planned which will potentially lead to an unstructured, chaotic new town and it seems that some high level local politicians have a vested interest in doing just this. This must be formally investigated by the Planning Inspectorate before any further Green Belt land is allowed to be destroyed.

Reference Policy 11 – Infrastructure, page 108 et seq

Also with regard to sustainability it should be mentioned that of the homes which have already received approval no CIL contributions have been received due to the lack of an up to date plan. Consequently no funds have been made available to provide/maintain necessary infrastructure. Policy 11 at 4.6.1 of the Plan states “We will use CIL receipts towards providing infrastructure to support development and will facilitate the spending of up to one quarter of CIL receipts originating from each Parish……on local priorities to support development”. It seems that to a greater or lesser extent - no doubt the former – Ash and Tongham will already have been disadvantaged in this respect due to the recent wave of planning applications received and approved. Obviously no retrospection would be available but it does seem grossly unfair that by taking an early hit with developments the area is not benefiting in any meaningful way. However there may be scope for redressing the balance somewhat with the implementation of the provisions of 4.6.7 regarding the use of CIL contributions by GBC “to increase the capacity of existing infrastructure or to repair failing existing infrastructure, if that
is necessary to support development”. Further details of how this would work out in practice will no doubt follow in due course. Hopefully Ash and Tongham area will receive favourable consideration in this area when future developments come forward as they surely will. Presumably any such use of CIL contributions by GBC under these particular provisions will be additional to the allocation to the Parish Council of the “neighbourhood” portion referred to at 4.6.10.

1. I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

1. I OBJECT to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.
Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

The Impact of Additional Residential Housing and Population Increase on Local Facilities

I strongly disagree with the premise in the GBC Local Plan 2016 that Okham and the Horsleys are a suitable location for a large number of additional new houses. The housing numbers proposed for Guildford Borough are for 13040 homes over 15 years from 2016 to 2031. This number is too high. The number is based on a Strategic Housing Market Assessment (SHMA), which the council required to be amended by the Head of Planning. This amendment has not taken place and therefore the number of new builds proposed in the Draft Local Plan has no basis. I object to Guildford Council proposing a Draft Local Plan on the basis of flawed evidence.

As an inhabitant of West Horsley I know at first hand the existing population pressure on local facilities. The primary school in our neighbourhood (The Raleigh) is oversubscribed, in common with the local secondary school, the Howard of Effingham. Indeed, in spite of being a Horsley resident, I was not able to secure a place for my daughter in either school.

The local medical centre is also filled to capacity. Residents of adjacent villages e.g., Ripley, East and West Clandon also use the centre. As a consequence, new residents to the village are known to register with alternative practices e.g., Bookham. In conclusion, the village services that currently exist in the Horsleys are already filled to capacity and do not have the facilities to accommodate the large number of new residents which would result from the increase in residential housing proposed in the Local Plan.

**Impact of Increased Residential Population on Transport**

An increase in the number of residents would result in a heavy increase in both construction related traffic and subsequent traffic arising from an increase in local population.

Most residents of the Horsleys work outside the villages. They either commute into London or Guildford by train, or travel by road to places of work and education. There are very few indigenous employment opportunities in the Horsleys. Essentially they are commuter dormitories. The residents of proposed additional housing are unlikely to be employed in the immediate vicinity of the Horsleys. They will therefore join existing commuters travelling either by road or rail. Horsley station car park is already filled to capacity, and there is no option to extend the car parking facilities for the station. The land is not available for expansion. Likewise, at Effingham Junction, there is little land to spare for additional parking facilities. I would conclude, therefore, there is limited potential for additional commuters to park at the local stations and commute by train. I might add, that Horsley station already serves as a rail hub for adjacent villages (e.g., Shere and Ripley), resulting in heavy road usage at peak commuting time. The housing development proposed in the Local Plan will increase the traffic volume through the village, resulting in additional air and noise pollution.
Key road links to the Horsleys focus on the A246, from Leatherhead toGuildford, and additional rural (narrow and winding) roads linking the villages to Ripley, Cobham and the A3/M25. The A246 currently carries a very high volume of commuter traffic at peak periods creating bottle necks and traffic congestion at both the Givens Grove roundabout on the Leatherhead bypass, and the Merrow roundabout on the outskirts of Guildford. The A3 likewise carries a heavy flow of traffic both into Guildford and north to the M25 at peak hours, with stationary traffic a frequent occurrence. The construction of additional housing in a rural area, which by its location and nature, requires inhabitants to travel predominantly by car, will exacerbate an already congested road network. This will clearly have safety implications, as more congested narrow, rural roads will result in a greater frequency of road traffic accidents and undoubtedly loss of life. It will also increase traffic congestion in local employment hotspots such as Guildford, and Leatherhead.

It makes much more sense to redevelop brownfield sites in Guildford and Woking to accommodate additional housing needs. This would have the advantage of providing new residents with the option of using the existing public transport network, or walking or cycling to work or school. They would also have a full range of urban facilities on their doorstep.

In conclusion, I strongly object to the new housing proposals outlined in the Draft Local Plan.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

1. **POLICY I1**

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.
The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )
Although much is made of the need for new infrastructure to support these developments and for this to be in place as needed, the Plan admits “…we forecast that there will also be an absolute increase in overall traffic volumes” and this is assuming all the infrastructure (listed in App. C to the Plan) is in place in a timely fashion. GBC has little or no control over the plans of Surrey County Council as the local highways authority and Highways England for trunk roads. Worryingly, the Plan now has less substantive information about improvements to the A3 South of the M25 from Highways England and it appears that their plans are not yet formed (Policy ID2). In the absence of such information, the infrastructure proposed is specific to each proposed development and does not address cumulative effects. What would be the case with regard to planning approval if SCC and/or HE do not provide timely infrastructure?

The Plan now calls for nearly all infrastructure to be funded by developers (see APP. C). We question how realistic it is to expect developers not only to pay for all the infrastructure but also to have it in place in a timely fashion. The Plan says that planning permission will be refused if timely provision of infrastructure cannot be secured. Such refusals will almost certainly be settled in the courts. Developers’ business models are based on building and selling houses to create the cash to provide infrastructure. People will be living on the sites well before infrastructure is complete. Will GBC prevent development of Gosden Hill until slip roads etc. are provided off and onto the A3? Again, the infrastructure is site specific and does not address cumulative effects.

If development were to be refused the land would still have been removed from the green belt and its future rendered uncertain.

Residents are being asked to accept very large amounts of development with little or no detail being provided on measures which would relieve existing congestion and limit future problems. The cumulative effects of the developments listed below are certain to have a devastating effect on the A247 through our village (and of course on Send) and it is hard to see how any of the infrastructure proposed in the Plan (App. C) will do anything to mitigate the effects of these developments on the A247 and hence our village.

Summary of the Impacts on the A247 – My Objections

All of these developments will draw additional traffic to the A247 through the village. It would be naïve to think that the employment sites and schools will serve only the developments themselves. Apart from the normal movements of residents to and from the new sites there will be considerable additional traffic on the A247 generated by:

- children from elsewhere being delivered to schools and collected
- the employees of the offices and industrial sites getting to work and returning home
- the vehicle movements generated by distribution and storage activities
- traffic from Wisley wishing to travel South and returning
- traffic from Gosden Hill wishing to travel South and returning
- traffic from Slyfield wishing to travel South and returning
- private and commercial traffic originating in the South and accessing Gosden Hill, Burnt Common or the A3 and returning (including traffic from Dunsfold)

The A247 although an A road:

- is less than 2 vehicle wide in places
- does not have continuous footpaths
- has several sharp bends
- has a hump-backed bridge with poor site lines
- has a very difficult junction to access the station
- is largely unlit
- has a primary school
- is already very congested at times

1. POLICY I1

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular pastime, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment.
without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Attached documents:**
Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

The existing infrastructure of the villages is already overloaded. The roads already inadequate for the traffic using them now and are in poor condition, with many potholes. Many drains are blocked or in poor condition, while the pavements are narrow and in poor condition.
There is insufficient parking space at the shops, village hall, surgery and station.

The number of new houses proposed can be expected to add some 1500 more people to the numbers in the villages and generate an equal number of vehicle movements daily. The majority will not be employed locally, thus adding further to the commuter congestion.

There are insufficient school spaces for the number of local children needing them, forcing them to add to the road congestion by travelling to schools some distance away from Horsley.

The Medical Centre in East Horsley is already full in terms of patient numbers.

The proposals to alleviate these infrastructure problems appear to be more of a "Wish List" than a positive action list and, unless the many objections are heeded, the existing residents, plus the incoming new residents, will just be expected to put up with the problems arising while an existing pair of villages will have been despoiled for the short term gain and the long term future.

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists pass through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.
```
The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. **Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )**
The Draft plan does not include any upgrade of infrastructure, and the current infrastructure will not be able to cope with the proposed increase in housing. Horsley has insufficient infrastructure to cope with the additional housing and people who would move into the area – roads, buses, schools, shops, and medical facilities are limited in the area as it is. Any increase in population would put an impossible load on these local services.

The increase in proposed homes in the area from 1111 to 1644, represents a 67% increase in dwellings for a small village. This kind of development will put an unreasonable strain on roads, drainage, utilities, parking at the station etc. which will not be able to cope.

Roads are generally in poor condition as it is with considerable damage during the past winter which has still not been effectively repaired some 8 months later – particularly East Lane and Ockham Road North and South. These are heavily trafficked as it is and a 67% increase in traffic will mean roads will soon collapse. There was extensive flooding in the area last winter – not only will that have detrimental effect on the roads but on the proposed houses too.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1. The railway station whilst providing a good service, already has a good sized car park, which is always full during the week. As many people commute to London, a 67% increase in population will almost certainly lead to more people using the station. If this was in proportion, then the car park would not be able to cope. Also there is no scope to increase the size of this car park.

1. Public transport in the area is limited – the bus service is infrequent and would not be able to cope with an increase in public using the service.

1. It is likely though that most people will have a car, or more than one car. This will generate a huge increase in traffic and will have a knock on effect to other villages nearby such as Ockham, Clandon, and Effingham.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1. **Infrastructure and delivery**

4.1. The Infrastructure and delivery section of the Local Plan sets out that the fundamental rationale of what is proposed to support the delivery of the Local Plan and in particular it is about the provision of the infrastructure needed to support the development. There are however serious deficiencies in the infrastructure as it is. The infrastructure does not adequately support what is already here.

4.2. In East Horsley:
4.2.1. The roads are in poor condition with many potholes, and are generally unable to sustain the current levels of traffic, particularly the increasing levels of HGV traffic;

4.2.2. The principal through roads traversing the village are narrow and winding, have a series of pinch points, have sections without any pavements and are generally unlit. As a senior SCC councillor remarked at a recent public meeting in the village hall: “East Horsley has lanes, not roads.” East Horsley’s ‘lanes’ are totally unsuitable for high volumes of traffic, in particular for the volume of HGV’s now using them;

4.2.3. Many of the drains are blocked or otherwise in poor condition giving rise to frequent surface water or flooding when it rains;

4.2.4. The pavements are in poor condition. As well as being narrow, they are often uneven and/or cracked making it difficult for example for people with pushchairs or prams or in wheelchairs; Because of poor road drainage road edges become flooded or turn into min streams and pedestrian are regularly covered in water as traffic passes by.

4.2.5. There are insufficient school spaces for the number of local children needing to go to both Primary and Secondary schools with the result that children are often allocated to schools some significant distance away such as Dorking; Merrow; or Leatherhead

4.2.6. The Medical Centre in East Horsley is already at capacity in terms of its number of patients.

4.3. It is recognised that, as stated in the Local Plan, that maintenance of adequate infrastructure and its expansion to meet growing needs is the responsibility of the relevant infrastructure provider. This is often not Guildford Borough Council itself but is for example Surrey County Council or utility companies.

4.4. In respect of East Horsley, there are only two specific proposals in Appendix C: LRN 25 - East Horsley and West Horsley traffic management and environmental improvement scheme. It is not clear what is proposed here, and its timing and funding have to be considered uncertain. It is stated that funding will, at least in part, come from developer contribution. However, it is not at all clear what development is likely to give rise to such a contribution, but it certainly implies that funding could only come if there were a development; and

4.5. HSC 5 - Expansion of East Horsley Medical Centre to provide additional capacity and services for future population in years 5 – 15 of the plan.

4.6. There are no proposals in respect of all the existing problems with for example roads, pavements, drainage, and schools. Furthermore, it is inevitable that the proposed developments in East Horsley itself and nearby, particularly in West Horsley and the proposals for Wisley, will put further strain on the existing infrastructure. There are no proposals at all to cater for this.

4.7. The issue of local primary schooling illustrates the issue very clearly. The 11 sites identified in the LAA for East and West Horsley taken together would result in the building of 593 new houses in the two parishes, which are today served by a single primary school, i.e. The Raleigh, in West Horsley. Planning guides suggest that this number will require the provision of around 150 new primary school places to accommodate such a population increase. Yet today there is no capacity at The Raleigh at all and no proposals are made in the Local Plan to provide for any more schooling in the Horsley’s. It was suggested in a local planning application that primary school children will be expected to travel to Merrow for schooling yet even more traffic on the roads

More comment is made on the transport implication of the Local plan under a separate heading.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

I object to the detrimental impact on transport, local roads and road safety. I specifically object to:

1. The assertion that the development will result in a meaningful shift to cycling and The development is too isolated, and even within the development itself too spread out to anticipate a reduced reliance on private cars;
2. The increased volume of car A proposed development of 2,068 homes would result in an estimated 4,000 additional cars on the roads;
3. The congestion this traffic will cause on the narrow rural roads in Ockham and the surrounding areas, exacerbated by wide vehicles including increased bus and HGV movements;
4. The danger this traffic will be to local cyclists and pedestrians, due to the absence of any cycling paths and the lack of pedestrian footpaths (and the space to provide them);
5. The increase in the already severe congestion on the Strategic Road Network of the A3 and M25. A further planning application at RHS Wisley (with a significant increase in visitor traffic) and a proposed 600 pupil secondary school on the site would add additional congestion at the M25/A3 junction as well as local No development can proceed without significant infrastructure enhancements to the A3 and M25. Partial improvement works on the A3 south of the site are not due to start until 2019 at the earliest;
6. The lack of suitable public The local rail stations of Effingham and Horsley cannot cope with the proposed increase in passenger traffic and car parking is already at capacity.

1. OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists pass through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming even more dangerous for pedestrians. There is a particular problem near the school which is being increased in size so perhaps more children will be walking and there will also be more cars at the south end of west clandon village.

Where the A247 is restricted in its width outside the house called “Summers” vehicles regularly go on to the pavement and often wing mirrors are also clipped by two vehicles passing.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

1. OBJECT to the lack of proper infrastructure planning for sites (Policy I1)
Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

The summer of 2016 has been wet and so we have had no hosepipe bans. I worry that there is not sufficient water in the southeast area to supply more houses.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?.

**Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )**

I object to the lack of common sense being applied to this suggested plan insofar as our infrastructure cannot take many more houses. Schools are full, car parks are full already and the doctors’ surgery has a long appointment wait time. Also, what about the flooding in Horsley, at the moment not under control?

When I lived in Cobham I sometimes could not park at the shops and drove home again empty-handed. This is a sorry way to live.

I object to the suggestion of **traffic managing** in the Horsley area as with maybe 5000 more cars on the local roads we need full access to all the present roads to spread the traffic over the whole area not funnel everyone down the same route.

**Think again if you wish to retain your council seat. You will not be voted for again.**

Drains are blocked, giving rise to local flooding.

The villages of East/West Horsley need a new school site. Traffic and parking for residents must be terrible during the school year, even people in the village cannot get places at the present time, it needs a 3 form entry school with better sports facilities available for the local residents to enjoy, and enhance the children’s learning experience.

The Medical centre is totally inadequate for the village. Only today I tried for an appointment at the surgery.....2 weeks to wait.

We need more parking for the Village Hall, too many commuters use it to avoid high charges in the car park at the station.

Another few hundred houses will swamp the already very well used businesses, although we have 3 hairdressers, 3 Estate agents, please no more of these given permission to start up.

A36 I hope the mail Chown building at Thatchers Hotel will be preserved when you build on that site, it is part of village history.

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.
The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

**Policies ID1 & ID2 Infrastructure – My Objections**

Although much is made of the need for new infrastructure to support these developments and for this to be in place as needed, the Plan admits “…we forecast that there will also be an absolute increase in overall traffic volumes” and this is assuming all the infrastructure (listed in App. C to the Plan) is in place in a timely fashion. GBC has little or no control over the plans of Surrey County Council as the local highways authority and Highways England for trunk roads. Worryingly, the Plan now has less substantive information about improvements to the A3 South of the M25 from Highways England and it appears that their plans are not yet formed (Policy ID2). In the absence of such information, the infrastructure proposed is specific to each proposed development and does not address cumulative effects. What would be the case with regard to planning approval if SCC and/or HE do not provide timely infrastructure?

The Plan now calls for nearly all infrastructure to be funded by developers (see APP. C). We question how realistic it is to expect developers not only to pay for all the infrastructure but also to have it in place in a timely fashion. The Plan says that planning permission will be refused if timely provision of infrastructure cannot be secured. Such refusals will almost certainly be settled in the courts. Developers’ business models are based on building and selling houses to create the cash to provide infrastructure. People will be living on the sites well before infrastructure is complete. Will GBC prevent development of Gosden Hill until slip roads etc. are provided off and onto the A3? Again, the infrastructure is site specific and does not address cumulative effects.

If development were to be refused the land would still have been removed from the green belt and its future rendered uncertain.

Residents are being asked to accept very large amounts of development with little or no detail being provided on measures which would relieve existing congestion and limit future problems. The cumulative effects of the developments listed below are certain to have a devastating effect on the A247 through our village (and of course on Send) and it is hard to see how any of the infrastructure proposed in the Plan (App. C) will do anything to mitigate the effects of these developments on the A247 and hence our village.

**Summary of the Impacts on the A247 – My Objections**

All of these developments will draw additional traffic to the A247 through the village. It would be naïve to think that the employment sites and schools will serve only the developments themselves. Apart from the normal movements of residents to and from the new sites there will be considerable additional traffic on the A247 generated by:

- children from elsewhere being delivered to schools and collected
- the employees of the offices and industrial sites getting to work and returning home
- the vehicle movements generated by distribution and storage activities
- traffic from Wisley wishing to travel South and returning
- traffic from Gosden Hill wishing to travel South and returning
- traffic from Slyfield wishing to travel South and returning
- private and commercial traffic originating in the South and accessing Gosden Hill, Burnt Common or the A3 and returning (including traffic from Dunsfold)

The A247 although an A road:

- is less than 2 vehicle wide in places
- does not have continuous footpaths
I OBJECT in the strongest possible terms to the Guildford Borough Proposed Submission Local Plan (June 2016). This Plan is unsustainable, unworkable and, in many provisions, unnecessary.

I set out below my objections to specific policies and matters within the Plan.

1. I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example The Street in West Clandon and Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and West Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

We are writing to register our objection to a number of elements of the Guildford Local Plan Proposals concerning the Horsleys.

General concerns

My wife and I have lived in East Horsley for over twenty years and during this time we have witnessed a change from a rural environment to one more like an urban environment.

There has been a been a significant increase in traffic. This has put an immense strain on the roads and drains which now need constant attention and are always in a poor state of repair and are sometimes dangerous.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object to infrastructure policies set out in I1, I2 and I3

Infrastructure improvement proposals are inadequate even to meet current needs, let alone the new developments proposed in the Plan

In West Horsley, roads are in poor condition with frequent potholes. Many are unable to sustain even the current levels of traffic, particularly increasing levels of HGVs and online delivery vehicles. The principal roads through the village are narrow, winding lanes, with pinch points, sections without pavements, and are generally unlit. Many of the drains are blocked causing frequent surface water flooding when it rains. Pavements are in poor condition, often narrow, uneven and overgrown by adjacent vegetation. Local schools and the Medical Centre in neighbouring East Horsley are already operating at capacity

I sincerely request that GBC that radically reassess its own policy objectives rather than force through a Plan which clearly does not have the wider support of the residents of Guildford Borough.

Infrastructure Policies I1, I2 and I3: I object to these policies because they do not actually provide adequate planning for the improvement of infrastructure in and around East and West Horsley. I have particular concerns about the inadequacy of the narrow, winding lanes, the poor drainage and frequent flooding of these lanes, the pavements in poor condition and the low arched bridge on Ockham Road North which is regularly struck by large lorries. Local schools are already at capacity and there are no proposals to deal with this. The Medical Centre is also full and the proposal to expand it will not happen early enough. The station car parks are full every day. I do not believe that the infrastructure policies are adequate for the enormous scale of the proposed housing development.

As a resident of East Horsley for the past 20 years, I am writing to express deep concern about the general thrust of the New GBC Local Plan, and in particular about the proposed assault on the existing Green Belt. A very large target number of new houses are being proposed – an actual increase from the previous plan, in spite of objections – and the knock-on effects of such development on a village that is already under severe pressure as regards traffic and parking, and access to local amenities, will materially damage the quality of life for its residents – and leisure visitors. There are, however, two aspects of the new plan which I particularly wish to highlight.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I'm a resident of Horsley Village and I would like to strongly object to your plans to build extensively on the area. The proposed plans will directly affect me and my family. I have two children who go to a nearby school and from drop off I commute to my work place via the A3. The traffic is appalling, the roads are dreadful and the sheer volume of work you're proposing just doesn't stack up given the infrastructure of our peaceful and beautiful village. My family and I moved here for it's connection with the "country life" whilst being accessible. But I would never have imagined that you would even entertain a proposition that would destroy everything Horsley and the nearby villages stand for. As an example of lack of infrastructure to support the plans...We called the doctors before 9am to get a same day appointment (appointments are released on the day) but none were available. This happened first hand TODAY! I took the train to work last week and the carpark was full as was the early train. People were standing as there were no seats available a few stops on. How do you expect to support an influx on people demanding these services. You will ruin this area and our lives as we know it if this goes ahead, even if chopped in half. I strongly urge you to reconsider.

Francesca Milone

I object to the plan to add any significant number of home to the area, let alone 385. There is no infrastructure to cope with developments of this nature in either West, East Horsley, Ockham or Ripley, as follows:

- No room for extra kids at the local schools at infant, junior or senior level.
- The drainage is bad enough already without more homes to cope with. Thames Water has already advised GBC that it would not be able to cope.
- The roads could not cope with more traffic in rush hours – the Ockham Road is very busy with traffic using it to get to the A3 and M25. The A3 northbound is often totally jammed in the mornings with traffic coming onto it from this road. This then clogs up the M25 in both directions. I get stuck in it every morning so I should know! The Local Plan (including the proposed Wisley Development) seems to completely ignore this issue.

Schools

There is only ONE state primary school in West Horsley and NO state secondary schools. The Raleigh School is already oversubscribed and many children living in West Horsley were NOT offered places at their local school in the last few years. There is already a problem here with a lack of places and this already needs resolving WITHOUT adding another 533 homes. How do you propose to deal with this??

Medical services

It is already difficult to get an appointment at Kingston Avenue Medical Centre, the ONLY surgery in East and West Horsley. You cannot dilute this service any more.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

6) I object to the detrimental impact on transport, local roads and road safety. I specifically object to:

1. The assertion that the development will result in a meaningful shift to cycling and walking. The development is too isolated, and even within the development itself too spread out to anticipate a reduced reliance on private cars
2. The increased volume of car traffic. A proposed development of 2,068 homes would result in an estimated 4,000 additional cars on the roads
3. The congestion this traffic will cause on the narrow rural roads in Ockham and the surrounding areas, exacerbated by wide vehicles including increased bus and HGV movements
4. The danger this traffic will be to local cyclists and pedestrians, due to the absence of any cycling paths and the lack of pedestrian footpaths (and the space to provide them)
5. The increase in the already severe congestion on the Strategic Road Network of the A3 and M25. A further planning application at RHS Wisley (with a significant increase in visitor traffic) and a proposed 600 pupil secondary school on the site would add additional congestion at the M25/A3 junction as well as local roads. No development can proceed without significant infrastructure enhancements to the A3 and M25. Partial improvement works on the A3 south of the site are not due to start until 2019 at the earliest.

6. The lack of suitable public transport. The local rail stations of Effingham and Horsley cannot cope with the proposed increase in passenger traffic and car parking is already at capacity.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Comment ID: pslp171/422  Respondent: 8805249 / Peter Warburton  Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Policy D1 provides the general policy framework for infrastructure development in the borough proposed in the local plan, including the accompanying Infrastructure Schedule set out in Appendix C. Other than a few specific changes consequential on the removal of certain projects in the light of the reduced housing target, there are only minor changes made to the infrastructure proposals in the 2017 version of the GBC Local Plan. These changes totally fail to address the inadequacies of the existing infrastructure, nor meet the stated objective of providing infrastructure to support the proposed developments. Accordingly:

I OBJECT to the inadequate provision of infrastructure investment across the borough provided for in the local plan.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

POLICY I1 - Infrastructure and delivery

I OBJECT. Most of the borough’s infrastructure is antiquated, congested and straining to accommodate even current needs and organic growth. Yet this plan’s commitment to building housing estates across the Guildford countryside will mean either major infrastructure investment that no-one is prepared to pay for or else a catastrophic and simultaneous collapse in transport, educational, medical, energy, water and communications services.

The plan targets greenfield sites – requiring heavy infrastructure investment – in order to generate CIL income necessary to meet an infrastructure shortfall that is already serious. This is not sensible. The current draft CIL scale also encourages development on greenfield sites rather than brownfield.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing infrastructure needs in this area is inadequate, identifying only the tip of an iceberg of existing congestion. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that involve demolishing property and road-widening in
residential areas to solve the resultant congestion. The A3 improvements are not guaranteed to take place but they are being used to justify removing large areas from the Green Belt before detailed traffic assessments have taken place. These detailed investigations are being deferred until the planning application stage and will be left to developers to prepare. If a site then proves to be unsustainable its Green Belt protection will have been lost for no reason and unsuitable development will take place by a more insidious process.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritising greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognising this as a key issue, the plan is based on a wing and a prayer.

**Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )**

It is often difficult to park in Guildford and approaches impossible during the winter months.

We do not have the infrastructure to cope with any more building. Do we not have brown field sites which are not used? We build office spaces we don’t need, why not build affordable houses. But we don’t need or want whole new towns or villages.

**Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )**

1. **POLICY I1**

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.
I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists pass through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritising greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the Borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognising this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.
Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

**I OBJECT**, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

**I OBJECT** to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.
The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Such narrow roads mean that any increase in volume of traffic will end up as a permanent traffic jam.

The proposed school submitted for plans with an estimated number of pupils reaching 750 - 1000 could result in something like 800 additional car on the roads that at certain times of the day has already reached its maximum.

I object to these proposals because insufficient information has been given in order for the residents to make a proper assessment.

To build hundreds of houses in the Horsleys is out of all proportion as there is no infrastructure in place to support this increased population. It is an infrastructure overload. Already the Raleigh School is over subscribed, the Medical Centre is oversubscribed, one can not get an urgent doctor’s appointment that day and our busy, pot holed, rush hour roads can not cope. The designation of Station Parade as a “District Centre” is wrong. It results from a complete misreading of the nature of the facilities in the village centre and would inappropriately target the area for future urban developments.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

With regards to the village of West Horsley, the proposal to increase the size of the village by 35% plus infilling (due to the proposed extension to the village boundaries) without any due regard or proposals for the replacement of the already full Raleigh school or how the doctors, car parks, railway station will cope is a complete dereliction of a Planning Officers duty. For instance you would not allow an individual house to be built without any proposals for parking so why are you floating your own rules and proposing to build 385 houses in one small village without any consideration or plans for how the infrastructure will cope?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure. The proposed development under the plan will cause greater congestion in and around our villages. Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The A247 through West Clandon is a real issue of concern as an "A" road with inadequate width, inadequate lighting and inadequate speed control.

Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists pass through the villages on the way to the Surrey Hills. There are no proper cycle lanes on the narrow local roads surrounding the villages and with greater vehicle traffic being generated from the proposed developments there is a real danger that there will be an increase in road accidents involving cyclists directly as a result of the development proposed under the local plan.

The Plan does not provide an achievable strategy for improving capacity on these local roads. To wilfully add traffic load would be quite irresponsible.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon, The Street (A247) generally only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements as has happened most recently on 12th July 2016.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

I OBJECT to the lack of proper infrastructure planning for sites.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick's Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents in the locality will see their quality of life significantly deteriorate in many ways. Without proper planning and funding for healthcare and other facilities, local services will be overwhelmed.
Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no consideration of provision of the increased capacity of Guildford hospital.

The infrastructure is not suitable for the proposed number of houses. The doctors surgery is already overstretched and the schools would not be able to cope. The roads are too narrow and not designed for all the additional housing and traffic.

I hope that you will heed our wishes and not be swayed by outside influences.

A visit to the village would clearly demonstrate that our present roads are failing to meet current traffic requirements. In particular the A247 has pinch points in the centre of West Clandon village that requires lorries travelling in opposite direction to mount the pavement to pass. The present reply to a constructive local petition to address this problem effectively acknowledges the problem but says short of a "Black Water By Pass,, compulsory purchase order scheme nothing meaning full can be done! Many of us agree and it flies int he face of all logical thought for the 2016 Plan to suggest further development in *this* area and in particular Burnt Common and West Clandon parish.

**Do you consider this section of the document; complies with the Duty to Cooperate?** ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)
Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy 11. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy 11 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.
Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I can find no evidence in the plan that GBC have considered the infrastructure requirements necessary for such a dramatic increase in the local population. All local primary schools are fully subscribed, and I can see no proposals to create further capacity. I understand the current plans to redevelop the Howard of Effingham secondary school will only just provide sufficient additional capacity for the local children already making their way through the demographic profile towards secondary education. How many more children will 500+ new homes bring? 250? 500? 1000? Whatever the number, it is clearly going to be a large one and there is nowhere to educate them – and putting additional cars/coaches on the road to transport them elsewhere to school will probably gridlock our local roads. Why not build the houses where the capacity for education exists in the borough? The same applies to doctors and medical facilities. Where in the plan is there a proposal to enhance local services? How will people access these services if they are not local? In addition to children requiring education, the proposed new houses will contain adults requiring work. Where in the Horsley do the jobs for these people exist? Perhaps the planners think that they will be commuters. If so the planners haven’t attempted to travel from Horsley or Effingham Station in the rush hour. The station car parks are already full and the trains crowded even before they pull into our stations. There simply isn’t the room for hundreds more people. Perhaps the planners think that these new residents will drive to work and I understand that there is a proposal to build an additional A3 intersection in the area; perhaps the planners have included this in their proposals in an attempt to alleviate the local gridlock that the additional home owners will create trying to drive their children to non-existent local schools or themselves to work in jobs that aren’t in the area. If so, then these planners clearly haven’t travelled on the A3 northbound towards London or southbound towards Guildford recently, where the traffic is already at a crawl throughout the rush hour periods, even if it is on a rare day when the M25 is flowing adequately. And that brings me to the elephant in the room; the proposals for Wisley airfield. All of the objections raised above also apply there, but multiplied by four times as many proposed houses with a couple of miles of the Horsleys. Once again, no provision for schools, medical facilities, public transport, roads etc etc. This is a disastrous proposal that risks irreversibly damaging a truly beautiful part of Guildford borough. There is no evidence that the real impact has been thought through adequately, and those elected members and officers involved need to take a long, hard look at themselves and their motivations for putting forward what is so obviously a badly flawed plan. Instead, I urge you to revisit the possibility of brown field development, finding locations in the borough that offer the opportunity for local jobs, education and medical capacity, and transport infrastructure. This is not nimby-ism, this is simply asking you to address the GBC local plan in such a way that provides sustainable development without throwing up houses on unsuitable pieces of land, simply because they appear to be ‘underdeveloped’. You will have seen my letter raises a number of direct questions. I look forward to a detailed response to these so that I can better understand why GBC are promoting what appears to me, as a local resident, to be a simply terrible plan.

I do object to the removal of the extended village area from the Green Belt and the density of the Wisley Airfield proposal.

They remain against all the evidence of the ability of the local area to sustain access, transport and employment.

Even with planned new facilities accompanying this proposal is clear that the neither the A3 or the B 2039 can accommodate any more traffic.

Imagine the vehicles needed by 2000 plus homes on the Wisley site seeking employment outside the immediate area and their impact on a road network already over crowded.

The proposed density of the Wisley plan is therefore grossly out of proportion to the character of the villages of Ockham and Horsleys.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy II)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. **Document:** Proposed Submission Local Plan: strategy and sites 2017 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

On infrastructure, the revised plan proposals do not address the additional strain on infrastructure despite the overwhelming objections on this subject in response to the previous consultation. In particular the wording of Policy IDI has been amended to give the impression that provision of adequate infrastructure will be enforced. However, this is not within the gift of GBC. but, in the case of the road network, by Surrey Highways and Highways England both of whom will be influenced by budgetary constraints elsewhere within their jurisdiction. Equally traffic impact assessments will be prepared, and paid for, by applicants and not by GBC and will therefore present a biased outcome in support of any development.

I object to the inclusion of all sites other than brownfield sites oil basis that that GBC will be unable to secure or enforce the provision of the requisite infrastructure provisions either by negotiation with developers or through other government agencies. Any development must be in current urban or brown field site areas where there is already an appropriate infrastructure provision.

**Document:** Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

---
We are all keenly aware of the lack of school places locally and the stress that this causes local parents with many children not being offered their first, second or even third choice state secondary school. Within Horsley may local residents never manage to get their child a place at The Raleigh, with the majority of the new Reception intake each September coming from siblings and those who live literally within the local two or three roads. Others are forced to take to the roads, adding to the already busy local infrastructure to travel to alternative settings.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object to the number of proposed new houses

SHMA numbers should be generated by a mathematical model available for all to see.

Infrastructure in the Horselys already giving cause for concern - Local schools full. Travelling to other areas has impact on roads and is not desirable for primary school children. Schools are important for village communities.

- Roads and parking overloaded, walking difficult on uneven narrow pavements in bad repair.
- Roads in bad repair.
- Drainage is poor. Roads are awash every time it rains. Concern of flooding in many area.
- Station facilities poor.
- Little local work available.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object to the fact that infrastructure requirements have not been properly considered and are inadequate to deal with proposed housing levels. Roads, doctors and schools will be unable to cope.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Policy I 1 and Appendix C - Transport Infrastructure - this has been reviewed in detail by Richard Jarvis BSc, MS, CEng, FICE, FCIHT, who is a qualified civil engineer, and expert in transport planning and his comments appear on the GRA website http://www.guildfordresidents.co.uk/

We can do no better than to quote from his report:-

1. The cumulative effect of the additional traffic generated by the developments in the proposed submission local plan will be to increase congestion, even with the proposed highway schemes in place. More detailed analysis of the junctions and queuing is required. So we question the conclusion that the developments would have "an acceptable impact on the capacity of the highway networks in terms of the policy test set in paragraph 32 of NPPF".

2. The mitigation proposed is not sufficient to overcome the problems that will be caused by the level of growth in the proposed submission local plan. Congestion will worsen. The network will lack resilience and be vulnerable to disruption due to incidents. Minor roads will have to cope with a lot more traffic, for which they are unsuitable.

We are also very disappointed that nothing is said in the Local Plan about the need for a bus interchange so that anyone entering the town centre by bus can change from one bus to another without having to walk more than a few yards. This omission must be corrected.

We must also be mindful of other new development in the borough that may put additional pressure on our roads- for example the proposals from Surrey County Council for the expansion of Newlands Corner- a proposal that is hotly disputed by residents in Merrow.

Conclusion - we object to this policy since the additional traffic generated by the proposed developments would increase traffic congestion. This is unacceptable.

• We made some very specific comments in our July 2016 submission reflecting the views of Richard Jarvis BSE, MS, CEng, FICE, FCIHT who is a qualified Civil Engineer. Once again, we reflect his views on this version and in summary these are: -

• “In terms of its transport aspects the Plan cannot be regarded as sound. GBC has provided vivid descriptions of the conditions on the network today and the evidence is that these will be as poor, and in some cases worse, at the end of the plan period, even with the mitigation measures. Growth and infrastructure have to be better aligned. While the level of growth in homes in this latest draft plan is somewhat lower than that in the 2016 version, it is still substantial and growth is also planned outside the borough. The evidence provided indicates that congestion will be widespread on much of the highway network in peak periods, even with the proposed highway schemes and with the measures to encourage the use of public transport in place”.

• In particular and in addition we are concerned at Policy ID1 in that it states that the delivery of development may need to be phased to reflect the delivery of infrastructure and that the delivery of the infrastructure will be secured by planning condition and planning obligation. It is our clear view that this provision is far too weak and is a watering down of previous assurances provided by senior councillors.

• At the very least, the Local Plan should make it clear that the development of a site may not proceed until all elements of the infrastructure are agreed by Guildford Borough Council, that the developer has agreed and provided a satisfactory guarantee that these conditions will be met and that the essential elements of the agreed infrastructure will be in place to ensure that any additional traffic will not cause severe congestion in the locality.

• We object to Policy ID1 for the above reasons.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Other reasons for my objection:

• The existing infrastructure of roads (which were designed for the age of the horse and cart) parking, transport, water, drainage and sanitation are inadequate for the population as it is now so would not cope with a 35% increase in the population.
• The local medical centre, shops and schools are already stretched.
• The car park at Horsley railway station is already full on weekdays with no capacity to increase the number of spaces. The station entrance is always congested at peak times with cars collecting and dropping off rail passengers.
• Expansion of the peripheral areas of the Borough would have a detrimental effect on Guildford town centre adding to the congestion and pressure already experienced in a centre designed for a population of 8,000.
• Housing and population expansion which ignore water supply and consumption cannot be sustainable given that the South East is an area of severe water stress.

The local infrastructure cannot support the several large 'strategic site' housing developments proposed in the plan and there is no convincing plan to upgrade this. This applies to roads, schools and sewage.

The traffic 'mitigation' schemes offered to date will only go a small way to mitigating the traffic problems that these developments will cause.

I live in Ripley and this plan, if implemented will lead to a significant reduction in the quality of life of me and the other 10,000 people who live in this part of the borough.

The Raleigh school which serves both East and West Horsley is full every year and this has been the situation for many years.

There is evidence that the existing drainage infrastructure is not capable of dealing with current surface and waste water problems and this situation would be considerably exacerbated by concreting over large areas of green belt land to build the proposed new homes.

The local roads already get congested due to everyday local traffic and the proximity to the A3 and M25; the increase generated by the proposed new housing estates would be considerable as most households would have 2 cars, many 3.

Parking at East Horsley’s shops, Public Library, Medical Centre, railway station and village hall is getting more and more difficult and would be much worse if the villages’ population is increased by the occupants of 533 new homes.

Kingston Avenue Medical Centre, serving all of East and West Horsley and areas beyond, is always very busy and making appointments can often be difficult. The planned population increase (in excess of Government ONS forecasts) would put further pressure on these services.
Horsley station car park is always full on weekdays. An increase in village population will increase pressure on station parking and associated traffic to and from the station by commuters and drop off and pick up of school children going to and from schools in Guildford, Leatherhead and sometimes beyond.

1. I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.
The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

1. I OBJECT to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?.

7. Comments relating to Policy I1: Infrastructure and Delivery

I OBJECT to those parts of this Policy which relate to East and West Horsley:

Item 4.6.1 of the draft Local Plan states: “The timely provision of suitable, adequate infrastructure is crucial to the well-being of the borough’s population, and of its economy.” I completely agree with this, but the Plan does not adequately recognise the currently already overloaded infrastructure in West Horsley, nor suggest remedial action. These limitations mean that any further significant increases in housing are not acceptable.

Rather than increase housing, further investment by GBC (and partners such as Surrey) is needed in the Horsleys, in schools, medical facilities (the Medical Centre is at the limit of its capacity), roads, drainage, water supplies, public transport, car parking and youth facilities.

• Schools

The 3 schools in the Horsleys already cause considerable traffic problems and a further increase in school population cannot be supported. The local state primary school (The Raleigh School) serves East and West Horsley and is
oversubscribed - even children living in the Horsleys cannot all obtain a place. The Plan does not take account of the Raleigh’s current proposal to relocate to the site A41, already identified in the Plan, which seems entirely appropriate.

Similarly at secondary age the Howard of Effingham School is oversubscribed. The Surrey County Council is very aware of the problems there have been in allocating Horsley children to places, but the Plan also does not address the Howard’s proposals for relocation. If it were not for a number of children attending independent schools, the situation would be even more critical, but these independent schools contribute considerably to local traffic congestion at each end of the day. Youth facilities are also very limited.

- Road, Rail and Public Transport

The two roads through the Horsleys are narrow, without complete pavements, and are appropriate only for the current size and nature of the villages. Any significant increase in population would exacerbate transport problems - access to, and progress along, the A3 and A246 is slow especially during school term times. Further development in West Horsley would also exacerbate access problems to the A3 and M25. Congestion is already shown to impair air quality.

There is reasonable rail transport to London or Guildford, but at peak times it is necessary to stand for much of the journey to/from London and when there is disruption, passengers joining at Vauxhall or Clapham Junction may not even be able to board the train. Although South West trains is extending capacity this will quickly be overwhelmed if there is further housing development. Bus services in the Horsleys are extremely limited.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Policy I1 states that infrastructure ‘will be secured by planning obligation, planning condition, or from other infrastructure funding, including the Community Infrastructure Levy’. There are some significant problems with infrastructure:

- As previously noted, a significant proportion of the Borough’s housing development is focused on Wisley, Clandon and Horsley. Relevant proposed road improvements are focused on the A3 and £1 million for ‘East Horsley and West Horsley traffic management and environmental improvement scheme between 2019 and 2023’. Given the number of new houses proposed in Horsley and significant impact of nearby development in Wisley and Clandon, it is clear that the plan has insufficient consideration for the traffic consequences in the neighbourhood. For example, Ockham Road North is already busy and narrow so could not accommodate more traffic without jeopardising vehicle and pedestrian safety.
- There are no suggested changes required to mains water, waste water, flooding and education in the Horsley area. I find it difficult to believe that all of these services have 35% spare capacity to cater for the proposed increase in housing.
- There is a vague hope that developers will contribute to resolving some of these issues at Wisley airfield at some point in the next fifteen years.
- It is proposed to expand Horsley Health Centre in 5 – 15 years from unidentified funding. How will health needs be met in the meantime?

This is all the equivalent of crossing one’s fingers and hoping it will somehow resolve itself through unknown contributions to CIL. I object most strongly to a plan that completely ignores significant infrastructure issues especially in those areas with the most proposed development.
In summary, I object to the plan for the reasons set out above. In particular I object to the extent of the proposed development in Horsley. This is exacerbated by extensive development nearby in Wisley and Clandon and does not provide adequate consideration for all aspects of the infrastructure.

Finally, I also note that the plan is very similar to that proposed in 2014 and ignores most of the comments received from the consultation at that time. I trust the Council will listen this time.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Paragraph 2.10a clearly states that ‘pressure on infrastructure must be addressed’. However, there has been no substantive change in the Infrastructure policies to address this. Specifically, nothing has been put forward since last year’s consultation to improve the sustainability of the West Horsley development sites and thus meet National policy requirements.

Every home on the West Horsley sites will need a minimum of one car to enable residents to get to shops, medical centre, library and Horsley Station, regardless of how much pressure is applied to adopt cycling and walking as the preferred means of travel. Additionally education and health care provision will need to be expanded. There is no provision in the plan for any of this other than through a hope that the CIL will enable this. However, the CIL will not raise enough to do this.

POLICY I1

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.
Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. 1. Policy 17.

I am particularly concerned with the transport infrastructure and what plans you have to address the serious traffic problems that already exist in the borough even before any additional houses are built.

You say that the key infrastructure needed to support plan delivery is provided in an infrastructure schedule at Appendix B. However when I look at Appendix B and in particular section 4, Rest of Guildford, the detail on transport intervention required is incredibly sketchy, bordering on non-existent. There are 7 interventions listed with no detail attached whatsoever. None of the interventions address the A322 or A320 or the B and C roads in the north-west sector of the borough which will be significantly impacted by the proposed developments in that area. It seems that the consideration given to the road infrastructure is totally inadequate for a Plan of such huge import.

3. Infrastructure- Transport (Policies I1, I2 and I3)

The words "Roads and Transport Infrastructure" are mentioned in Definitions under Policy I1 (Infrastructure and Delivery), but no detail for West Horsley has been found in any of the Local Plan documents, including the Infrastructure Delivery Plan.

1. I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1). 5,036 houses are proposed between the M25 and Burpham (about 5 miles) which will obviously lead to a merging urbanisation of the identities of the villages. There is too much traffic in our villages already and this plan will cause more congestion in West Horsley, East Horsley, Normandy, Ockham, Ripley, Send and Clandon, with no plan to improve that. The rural roads in this area are narrow, in poor condition and have no footpaths. 5000 more houses in such a small area means dangerous and unsustainable traffic.

2. I object due to the congestion that development will cause to the trunk roads, A3/M25 (Policy I2). The A3 or M25 would have to be improved before any development is Highways England has no plans to even start considering improving the A3 before 2020. Under the current economic climate, it is unlikely any additional funding will be made available for new capital projects. Clearly no real improvements are possible in the timeframe of this Plan.

3. Policy I3 provides that developers "will be expected" to propose and secure travel plans for their developments and contribute to transport arrangements for the able and Legally, this is meaningless- this proposed policy lacks 'teeth' and is unrealistic where development and major housebuilding companies are involved.

4. I object to poor air quality concerns (Policy 13). The huge developments being proposed, particularly in the north east of the borough will lead to considerable further congestion and to greater levels of air pollution, which will have a detrimental effect on local residents and their health. It has been shown that Wisley already has NOX levels above the EU legal limits and by law a school cannot be located in this area as a result.

5. Whilst Horsley station has frequent trains to London and Guildford seven days a week, the station car park is normally full on An increase in village population will increase pressure on station parking and traffic movements to/from Horsley station, to drop off/ collect travellers to London and school children going to Guildford and Leatherhead.

4. Infrastructure- Schools and Medical Facilities (Policy 11)

I object to the lack of coherent proposals relating to schools and medical facilities for the Horsleys.

• There is a continuing lack of state primary school places in the The Raleigh School which serves both East and West Horsley is full every year and this has been the situation for many years. Secondary school places are limited in number at the Howard of Effingham School and other secondary schools involve a much longer journey of time and distance from the Horsleys to reach them. Glenesk and Cranmore private schools are well supported by many families living in Guildford and other villages up to 14 miles away. Each of these private schools during term time, receives high volumes of traffic going to and from each school at each end of the school day, on Ockham Road North and the A246 respectively.

• Kingston Avenue Medical Centre, serving all of East and West Horsley and areas beyond, is always extremely busy and residents experience difficulty in making The planned population increase (in excess of Government ONS forecasts) for the borough will require a major extension of the Royal Surrey Hospital to cope.

5. Infrastructure- Waste Water (Policy I1)

I object to the lack of coherent proposals relating to waste water infrastructure for the Horsleys. These words receive a mention in Reasoned Justification under Policy 11, but no detail for West Horsley has been found in any of the Local Plan documents, including the Infrastructure Delivery Plan.

• There are known sewage overflow problems in the Ockham Road North I Green Lane
• Thames Water has advised Guildford Borough that the area's wastewater network is unlikely to be able to support the demand anticipated from all the proposed The foul drainage system from West Horsley to the treatment works north of Ripley will need to be upgraded to cope. Thames Water advises 'a 2 to 3 years lead-in period' to install the necessary waste water network and treatment capacity after planning permission for a development is granted.

Infrastructure

In many aspects the infrastructure of the Horsleys is already overloaded. Local Schools are full, the medical centre is stretched, drainage is inadequate. Traffic and parking are already an issue and at high levels. There is little scope for improvement currently and the scale of development proposed is completely out of all proportion to the facilities available and the ability to increase those facilities. I note that in the proposal for 2000 houses on Wisley airfield they identify Horsley station as a transport link. Anyone who has bothered to visit Horsley will know that the station car park
is already at near capacity. There is no provision in the Local Plan to improve this infrastructure in proportion to the proposed building.

I urge the Council to revisit the housing number, utilize brownfield sites for housing not commercial development rather than green fields and to live up to their election commitment to protect the Green Belt.

Many of the affected villages, such as WEst Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems. With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Glandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough's infrastructure is already heavily strained. However the plan's determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council's methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy 11. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough's infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic.

It makes implementation critically dependent on providers outside the Council's control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

I object to the large number of proposed homes within the parish boundaries on a number of grounds, as the numbers are too high and unsustainable for the future. A thriving population will only survive if the correct infrastructure is in place to start with. The areas of infrastructure required are, not limited, to the following:

Schooling: There is limited state primary schooling in the Horsley’s with the Raleigh School over subscribed with a waiting list even for children within the village. Secondary school places are limited at the Howard of Effingham School. There are private primary schools available but families outside the village boundaries also support these. Adding to congestion on the main arterial roads.

Medical facilities: The medical Centre in Kingston Avenue is always busy and it has been difficult making appointments in the past. The increase in population will only add to this pressure. Parking at the Centre is also limited. The nearest main hospital – The Royal Surrey, would also require major expansion to cope with the increased population within the borough.

Access to essential facilities: There is one small grocers store at the southern end of the village, which may close later this year due to retirement of the owner. However, even now the parking is limited.

Many people use the shops and library in East Horsley that has been designated in the plan as a ‘District Centre’. This is a complete misreading of the facilities in the village centre. Parking has already become increasingly difficult and these facilities will be woefully inadequate to support the proposed increase in population.

Roads and Transport Infrastructure –Policy I1, I2 and I3

Transport: Listen to the local traffic news any day of the week and there are issues on the A3 into Guildford. As someone who travels up the A3 daily to Teddington, I can speak from experience to say the road is busy from Ockham Park up to the M25 at 6:30 every morning. Where do you think all these extra people are going to work? The majority of them will travel on the A3 in either direction causing extra congestion. The condition of the local roads which will need to support this extra traffic, Long Reach, Ockham Road North and the A246 are in need of repair and Long Reach in particular is in no state for extra traffic and would be difficult to widen due to the established trees along its length.

Whilst the trains run a frequent service to both London and Guildford, access to the station car park is hazardous and the parking on a weekday can be limited.

We are a two-person household but can sometimes have three cars at the property when the work vehicle is being used. We do have sufficient parking for this to be possible on site. However, looking at the density of the proposed build this amount of off-street parking is unlikely to be available to the new builds and the extra vehicles will add considerable pressure to the local roads. Parking on my road has become crowded and unsightly in the 3 years we have lived at the property. This is only likely to get worse across the village with the proposed developments.

Waste Water Infrastructure is inadequate with frequent flooding of gardens and roads. It takes me approximately 30 minutes to drive to work in good conditions. However, on Christmas Eve 2013 it took me 4 hours to get back due to flooding. The flooding remained a problem and delayed my daily commute for more than a month.

- Thames Water has advised Guildford Borough that the area’s wastewater network is unlikely to be able to support the demand anticipated from all the proposed developments. The foul drainage system from West Horsley to the treatment works north of Ripley will need to be upgraded to cope. Thames Water advises ‘a 2 to 3 years lead-in period’ to install the necessary wastewater network and treatment capacity after planning permission for a development is granted.

Policy 11 - Infrastructure and delivery

OBJECT. There is a hopeless mismatch between the housing aspirations and infrastructure. Apart from a few hopes around the A3 junctions, nothing is suggested that might help in any material way. This is true throughout Guildford but particularly in the NW sector. In 2011, Guildford was labelled the 42nd most congested city in Europe. There are already serious problems with the A3 and the local roads, of which the northwest sector with the A320, A322 and A323 is probably the worst. But still there are sites in the plan for this sector. See in particular site A22, Keens Lane.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )
I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.
Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
that this could provide land for additional housing. If this were to happen, it would give an extremely beneficial opportunity to provide an alternative pedestrian route from East Lane to the Railway Station avoiding the use of the Ockham Road. With rain, the latter is frequently running like a river because of inadequate drainage creating a water splash from passing vehicles that is difficult to avoid. Commuters in the dark evenings are especially vulnerable. The speed of passing vehicles, many of commercial size, can also be of concern given the limited width of the road.

I hope you will find these views helpful.

As anyone who driven on the roads around Guildford in peak times can see, the cumulative effect of the additional traffic generated by the developments in draft Local Plan will be to increase congestion even with the proposed highway schemes in place. I therefore dispute the conclusion that the developments would have ‘an acceptable impact on the capacity of the highway networks in terms of the policy test set in paragraph 32 of NPPF’. The mitigation proposed is not sufficient to overcome the problems that would be caused by the growth anticipated in the draft Local Plan. Congestion would only worsen; the network would lack resilience and be vulnerable to disruption due to incidents; and minor roads would have to cope with a lot more traffic for which they are wholly unsuitable.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the detrimental impact on transport. The local roads are small, narrow country roads, already threatened by the current level of traffic through Ockham, the Horsleys, Ripley and Effingham. Adding another several thousand residents to this road infrastructure would be totally unacceptable in terms of safety, pollution and added congestion. Walking and cycling along the roads would be even more dangerous than it already is. In addition, the local rail stations of Horsley and Effingham cannot cope with the proposed increase in passenger traffic and car parking.

• **Infrastructure**: the draft Plan asserts that provision of appropriate infrastructure is at the heart of the Council’s strategy and that all new development will have appropriate supporting infrastructure. Yet this is manifestly not the case. There is no way that the A3, as it currently is, can take the strain of extra traffic from 4000+ new houses. It is already seriously over-congested and traffic slows to a crawl at several points during each day. The draft Plan talks about requiring developers to fund improved access for traffic from their new developments but the A3 is national, not local, infrastructure and the traffic demands of the developments proposed require very substantial new investment in a major traffic project, not just a few extra roundabouts. It would be irresponsible to press ahead with the Gosden Hill and Wisley developments without a firm commitment to major improvements to the A3. The draft Plan makes clear that, while such a project is on the Department of Transport long list, it is not yet a firm commitment and we won’t know before 2020 whether it will get on the next list of firm commitments and what the timing might be. With expectations of lower national growth and lower revenues for central government now, post-Brexit, projections for 2020 and beyond must be very uncertain. If there is to be any development along the A3 corridor it should be shelved until there is a firm commitment from DoT for a major upgrade. Otherwise, you condemn this area of the borough to about 20 years of gridlock.

The proposals for Garlick's Arch are another example of where infrastructure concerns have not been properly examined. The idea of making a 4-way junction here off the A247 is seriously flawed. There is no way that the A247 through Clandon village could be a sensible feeder road for a junction of this size. There is a serious pinch point in the centre of the village which is unpassable if 2 lorries are coming in opposite directions. Lorries regularly mount the pavement which is well-used at certain times of day with children being walked to the village school. It is already an accident waiting to happen and the Council is aware from e-petitions and protests about the strength of concern in the village about it. To propose actually increasing traffic through the village is unthinkable.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Attached documents:**

**Comment ID:** pslp171/2215  **Respondent:** 8831809 / Ann Taylor  **Agent:**

**Document:** Proposed Submission Local Plan: strategy and sites 2017 / Policy ID1

Do you consider this section of the document: complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

• **Road Infrastructure**: the draft Plan acknowledges that new developments have to be supported by appropriate infrastructure but the cumulative impact of the developments mentioned above on both the A3 and the A247 is not recognised.

A247: there are already serious traffic issues in our village, notably at the pinch point in the heart of the village (and only a 100 yards or so from the school) where two cars can pass but not wider vehicles. Residents of the village have been vociferously urging traffic calming measures for some years now. The road cannot realistically support any significant increase in traffic, let alone the very major impact from the Burnt Common and Garlick’s Arch developments which will inevitably send a lot more traffic through the village, increasing both domestic and more particularly commercial traffic given the nature of the new proposals for Burnt Common. Some of the commercial traffic will be very large vehicles given what is proposed for the latter site and will be dangerous when negotiating the pinch point. The 4-way junction being considered for the A3 at Burnt Common will not alleviate any of these problems but simply further increase traffic through the village, in particular from the Gosden Hill development which is to be linked directly to the A3.

A3: the draft Plan recognises the pressure already on the A3 through Guildford, although it seem to seriously underplay the throttling impact this road has on the town on a regular basis – only today I have spent half an hour in gridlocked traffic for no apparent reason other than the volume of traffic feeding into the 2-lane section. Getting developers to finance the local infrastructure to join up developments to the A3 is not going to improve the flow of traffic on the A3 itself: it can only increase the pressure on it. It is hard to believe that 4 major developments are being proposed along a road which is already over-stretched.
There should be no commitment to such a huge increase in traffic volumes unless there is a correspondingly firm commitment from Highways England to a major upgrade to the A3 to support the development and to ensure that Guildford is not overwhelmed with traffic delays.

All of our local Schools are already full, our Medical facilities are already overstretched and our village Parking facilities (including the railway station and local shops) are already inadequate with no space for improvement. All local roads are narrow and were built at a time when the stage coach/ pony & trap were the typical mode of transport rather than today’s 4x4’s, long-wheel courier vans and supermarket delivery vehicles. Much of the Horsleys are built on clay with the consequence that drainage is inadequate.

**OBJECTION 3: PARKING**

Parking is already constrained in the village. Currently, builders, visitors, people making deliveries, etc., park on pavements, obstructing the use of pavements by pedestrians and cyclists. This creates creating potential dangers because pedestrians and cyclists are having to go onto the road as the pavements are blocked by cars and trucks. This situation continues to worsen with the number of houses currently in West Horsley.
OBJECTION 4: TRAFFIC

The increased traffic as a result of the further developments will result in increased congestion and further compromise the quality of life in the area.

OBJECTION 5: INFRASTRUCTURE

The current infrastructure, with respect to roads, public transport, schools and medical services (to name a few) cannot cope with current level of housing. What is being proposed will only exacerbate the situation.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

We support the LP's intention to ensure that the necessary infrastructure is in place to support the development needs. We support the approach of this policy, save for the priority given to the Thames Basin Heath SPA over all other site specific contributions, as this absence of flexibility is inconsistent with the Council's approach to all other S106 obligations. It is appropriate for the Council to review its current SPA policy through this LP, in accordance with the NPPF and the weight it attaches to, for example, sustainability, economic considerations and housing delivery.

Draft Policy P5 contemplates situations where the integrity of the SPA may be protected through different liner thresholds or alternative mitigation measures and the reasoned justification to the policy that the Council's established precautionary principle may be reviewed by its JSPB in the future. Furthermore, the legal requirement, enshrined in European Law, may well change as a consequence of the UK leaving the European Union.

We therefore suggest that the fourth para of Policy 11 be deleted.

Despite the concerns of many residents living in East and West Horsley about the size of future housing developments little has changed in the present plan.

Still no thought has been given to the poor existing infrastructure to accommodate such a large development.

1 Existing schools cannot cope without the school population being greatly increased

2. Our Health Centre is already stretched as well as the fact that the Royal Surrey Hospital will find the extra size in population difficult to cope with.
3. Travelling arrangements will be greatly increased and parking in the village is difficult now without the thought of such a large number of extra cars entering the village.

4. The roads in the village have difficulty now coping with the volume of traffic. The thought of the development alone on Wisley Airfield and traffic from there through our villages as well as onto junction 10 of the M25 road is more than worrying.

5. Our local roads in particular East Lane, which I have raised for more than two years about the terrible condition it is in has been ignored. Difficult as it is for motorists to navigate I almost saw a cyclist fall off two days ago. This road also suffers from flooding when we get a lot of rain.

My concern is that once the villages of East and West Horsley are removed from the green belt little by little large developments will happen and future generations will not thank us for allowing this to happen.

INFRASTRUCTURE

West Horsley is a small village with few local facilities. There is currently just one shop at the southern end of the village, where local car parking is very limited. Most people in West Horsley already have to travel, largely by car, to East Horsley for their day-to-day shopping, banking and health needs. The existing car parking facilities in East Horsley are already at capacity and any increase in the local population will only add to the existing problems. Any new development would not “support the continued viability” of the existing village infrastructure, as has been said by GBC in the past. In my opinion it would only serve to overload the same beyond breaking point!

State educational provision, both at junior (The Raleigh) and senior (The Howard of Effingham) school level, is already under strain and has been a thorny issue for Surrey County Council and the local community for some years. The Raleigh School, which endeavours to serve both West Horsley and East Horsley, is full every year and has been so for the twenty years that I have lived in the village. Its site is already fully developed and the opportunities for any further expansion are limited.

Personally I also have some doubts as to whether or not further expansion, from two form entry to three form entry into a junior school, is the correct approach for young 5 year old school starters, but perhaps that’s a debate for another day. The Raleigh has however recently indicated to local residents that it does not feel that it can further increase capacity on its existing site and is considering its options for relocating, raising further concern about possible future erosion and harm to the Green Belt.

Secondary school places are already restricted in number at the Howard of Effingham School for children from West Horsley and all other available secondary schools are considerably further afield in either Guildford or Woking. Potential residential development in Effingham and Bookham will only further exacerbate the problems for local West Horsley children, as children from these proposed developments would, by being physically closer to the school, have priority of entry. This, however, could then have the repercussion of pushing West Horsley children out of its potential catchment, with no currently sustainable local alternative.
I note that a new junior school and senior school is now being proposed at the former Wisley airfield development site, although this would not be delivered (if ever) until well into the plan period and certainly significantly after the currently proposed residential development in West Horsley is well underway or, indeed, completed.

In the Independent school sector, both Glenesk and Cranmore private schools are supported not just by local Horsley families, but also by many families from Guildford and other surrounding villages, some travelling quite some distance. In term time each of these schools significantly contributes to the local traffic problems on Ockham Road North and the A246 respectively.

The Horsley Medical Centre is already at capacity, as it serves both East and West Horsley, and any additional residential development would necessitate an expansion of this facility. Possible future extension is mentioned in the Draft Guildford borough Infrastructure Delivery Plan 2016 but sparse detail, save for an envisaged timescale, is given. This is again unacceptable.

Furthermore, the proposed explosion in population (well in excess of Government ONS forecasts) within the borough will also put further strain on the Royal Surrey Hospital and its ability to cope must be questioned too.

Finally, I also believe that the existing utilities infrastructure in the area would be further stretched, probably beyond acceptable limits.

Surface water drainage along East Lane has been a continual problem for many years throughout the autumn and winter months. The addition of further built environment and associated hard landscaping would only exacerbate these problems. The area encompassing West Horsley has already been identified and acknowledged by GBC within the map on page 22 of the Draft Guildford borough Infrastructure delivery Plan 2016 as being, by some distance, the borough’s single largest Surface Water Flooding Hotspot Location. One can only further question the flawed GBC logic of proposing such large numbers of new homes in West Horsley without apparently even addressing the potential flood issues that could be exacerbated by such hard landscaping that would inevitable ensue.

Furthermore, I understand that Thames Water have already advised GBC that the area’s water network is unlikely to be able to support the demand anticipated from all the local developments. Water pressure in the area is already poor.

Finally, I also understand that there may also be a serious under capacity of existing foul water sewers. The foul drainage system from West Horsley to the treatment works north of Ripley will, I understand, all need to be upgraded to cope with the increased demand. Thames Water has apparently advised that a two or three year lead-in period will be needed to install the necessary waste water network and treatment capacity after planning permission for any significant development is granted. Unfortunately I’m sure that housing developers will not be waiting that period before they want to build / sell their new houses! This is clearly unacceptable and again shows a flaw in the proposals put out for consultation by GBC.

I note that GBC states in Item 4.6.1 of the Proposed Local Plan that “Timely provision of suitable, adequate infrastructure is crucial to the well-being of the borough’s population, and its economy. Guildford Borough Infrastructure baseline 2013 summarises the capacity and quality of existing infrastructure, including planned improvements. Historically infrastructure provision and upgrading has not always kept pace with the growth of population, employment and transport demands, and in parts of the borough some infrastructure is currently at, or near to, capacity or of poor quality.” I have no doubt that West Horsley must fit into this category.

I was initially pleased to note that Policy II: Infrastructure and delivery; states its aim as being “To support delivery of this Local Plan, infrastructure needed to support development should be provided and available when first needed to serve the occupants and users of the development...”. However it then goes on to say “where the timely provision of necessary supporting infrastructure is not secured, development may be phased to reflect infrastructure delivery, or will be refused.”

I don’t think that GBC can have it both ways. Either it is to be provided and available when first needed or it’s not. I think that the policy wording proposed should be reconsidered.
I would ask for an AMENDMENT to the first paragraph of the Policy 11: Infrastructure and delivery; so as to read “We will ensure that infrastructure needed arising from a proposed development is provided and available when first needed to serve the occupants and users of the development and so as to ensure that no adverse impact or reduction in capacity is suffered by the existing residents of the settlement. This will be secured by planning obligation, planning condition, or from other infrastructure funding, including the Community Infrastructure Levy.” I would ask that the final sentence of this paragraph be deleted.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Finally, any significant new housing in West Horsley, and certainly anything like the extent proposed, would necessitate vast improvements to existing infrastructure, including education and health provision, roads, drainage and water services. If the development proposals are adopted, in part or whole, advanced provision of such facilities and capacity improvements must be a pre-condition of any such development. Local services cannot support any such development without its prior provision.

There is no proposed development of other facilities to accompany the massive proposed increase in houses. Most will probably have at least two cars per household.

- This increase in vehicles will have an adverse impact on already inadequate roads, and other services. The Raleigh School is proposing to relocate to a green field site and, one assumes, (although their information letter does not mention it), to take more pupils. They claim this new location will alleviate traffic congestion, but this will only be in Northcote Road/Crescent, and Nightingale Avenue/Crescent. There will be even more traffic that at present in East Lane and Ockham Road North. (I am interested to read that a recent planning application for a school in Effingham has been turned down).

- These additional householders will generate additional traffic. There is already insufficient space at the railway station for commuters cars, and there is no room there to create additional parking. Where are these commuters to park?

- There is already insufficient space at the shopping precinct for shoppers cars, and there is no room there to create additional parking. Where are these shoppers to park?

- The doctor's surgery will be overwhelmed. I already have to wait one week for an appointment to see a GP, and longer if I wish to see a specific GP.
• The additional housing will create problems with rain drainage. The area is already subject to flooding in the frequent 'once in 100 years' deluges that we now seem to be experiencing every two or three years.

• If the proposed development of Wisley Airfield goes ahead these problems will made even worse.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

The plan targets greenfield sites – requiring heavy infrastructure investment – in order to generate CIL income necessary to meet an infrastructure shortfall that is already serious. This is not sensible. The current draft CIL scale also encourages development on greenfield sites rather than brownfield.

The Council’s methodology assessing traffic and roads infrastructure needs is inadequate. It identifies only the tip of the iceberg in terms of existing congestion. Looking at local traffic situations around the Borough it becomes clear that the schemes proposed will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed locations would require highway schemes that involve demolition of property and road-widening in residential areas to solve the resultant congestion. The local plan states no objective for congestion.

The A3 improvements are not guaranteed to take place but they are being used to justify removing large areas from the Green Belt before detailed traffic assessments have taken place. These detailed investigations are being deferred until the planning application stage and will be left to developers to prepare. If a site then proves to be unsuitable its Green Belt protection will have been lost for no reason and unsuitable development will take place by a more insidious process.

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1. I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy II)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I object to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.
Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Extending the Boundaries and making the Horsleys a town is beyond me – we have pretty country villages here. It’s just not feasible considering all the infrastructure that would be needed. I can’t imagine how this can be done as there is always a waiting list for the Doctors, excess parking for the station, overload in the schools. The topic is a complete waste of resources!

The condition of our roads is appalling with pot holes etc, and the intention to overload them even more is madness.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to policy I1 Infrastructure and delivery.

Most of the borough’s infrastructure is antiquated, congested and straining to accommodate even current needs and organic growth. Yet this plan’s commitment to building housing estates across the Guildford countryside will mean either major infrastructure investment that no-one is prepared to pay for or else a catastrophic and simultaneous collapse in transport, educational, medical, energy, water and communications services.

The plan targets greenfield sites – requiring heavy infrastructure investment – in order to generate CIL income necessary to meet an infrastructure shortfall that is already serious. The current draft CIL scale also encourages development on greenfield sites rather than brownfield and will reduce or negate developer's obligation to sell a percentage of homes at 20% below market value.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing infrastructure needs in this area is inadequate, identifying only the tip of an iceberg of existing congestion. Compton Village is already close to tipping point, yet it will see a significant increase in traffic volume, will be completely congested and yet no plans exist to mitigate the problem.

The schemes referred to in this policy barely solve existing congestion and are inadequate when development takes place. The full impact on local road networks has not been fully considered. Some proposed development locations would require highway schemes that involve demolishing property and road-widening in residential areas to solve the resultant congestion. The A3 improvements are not guaranteed to take place but they are being used to justify removing large areas from the Green Belt before detailed traffic assessments have taken place. These detailed investigations are being deferred until the planning application stage and will be left to developers to prepare. If a site then proves to be unsustainable its Green Belt protection will have been lost for no reason and unsuitable development will take place by a more insidious process. Compton Village will actually incur increased traffic flow as a consequence of A3 widening according to the study, yet as was pointed out above, no solutions are in place to improve the situation.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritising greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly.
This plan, however, assumes infrastructure will follow on the heels of housebuilding. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognising this as a key issue, the plan makes too many assumptions, not least being the verbal promise that development will not take place without infrastructure preceeding it. It is not clear how this will happen and is not in the Plan, as it should be, if it is achievable.

The highways network is under stress at peak times in many parts of the borough. Queuing is the daily experience of drivers going to and from work. The local plan recognises the problems in para 2.14. Much of the road network is single-carriageway, and junctions act as constraints.

The key evidence on future traffic conditions is provided in the Strategic Highway Assessment Report (SHAR) which summarises the results of the tests carried out by Surrey County Council at the request of GBC. Five scenarios were examined using SCC’s strategic traffic model.

Scenario 1 contains all developments and planning permissions from 2009 to date. As such it corresponds to today’s circumstances, and describes the current unsatisfactory traffic conditions in peak periods.

Scenario 5 represents the position at the end of the plan period, including all development and highways schemes in the local plan.

The results of the analysis show that there will be widespread congestion in the morning peak hour across the network. The key strategic routes, the A3 through Guildford NE bound, and the M25 between Junctions 10 and 11, are shown to be at or over capacity. The summary network statistics presented in the SHAR, while useful, require some interpretation because the analysis of vehicle-hours is derived from link speeds only, and does not reflect junction delays and queues. The tables that show the ratio of flow to capacity and level of service are especially helpful to gaining an understanding of the conditions on the network in the forecast. Where the forecast traffic volume is above or close to capacity, flow becomes unstable and there is congestion. The SHA results provide evidence that, in 2031, congestion will be worse than it is today on much of the network.

It is the case that the traffic modelling does not take into account the potential for increased use of other modes, but the trip rates used for developments already have built in the typical level of use of other modes, and services will be required to meet that need. It is also the case that the model does not allow for park and ride, which would improve matters in the town centre, as discussed below.

In order to gain an insight into conditions across the network, it is necessary to combine information from several tables in the SHAR. Table 4.5 shows that the M25 and A3 will be at capacity in Scenario 5. The other roads that will have poor levels of service include those in Table 4.5 but also those in 4.12 (except the A3) and those in Tables 4.3 and 4.4 with levels of service E and F that will not be given some relief by improvement of the A3 in Scenario 5. Paras 4.10.3, 4 and 5 point out that there will be increased congestion. Given that the starting point is unsatisfactory, there can be no expectation that the schemes in the Infrastructure Development Plan will provide an overall improvement. There will be some local benefits, such as the Ash rail bridge for example, but in general conditions will be as bad and in many places, such as Compton Village, worse. So the statement in the SHAR para 4.2.5 that ‘the combined mitigation as reflected in Scenario5...indicates that at the strategic level it accommodates the additional PSLP demand’ needs qualifying – ‘at the cost of a lot of queuing’ and makes no mention of the impact this will have on pollution, which is already a known problem at the A3 end of Compton.

The cumulative effect of the additional traffic generated by the developments in the local plan will be to increase congestion, even with the proposed highway schemes in place. More detailed analysis of the junctions and queuing is required. So we question the conclusion that the developments would have ‘an acceptable impact on the capacity of the highway networks in terms of the policy test set in paragraph 32 of NPPF’.

Appendix 3 of the Transport Topic Paper shows the phasing of housing development and transport infrastructure. The major scheme being considered for the A3 between the A31 and the A320 is scheduled for delivery in the period 2023/24 to 2027/28. The strategic developments at Blackwell Farm and Gosden Hill Farm are shown as being phased in from 2021/22 onwards. The Garlick’s Arch development is shown as starting in 2019/20. Therefore, there will be a period in...
which the existing A3 has to cope with the additional demand arising from those developments before extra capacity is provided.

The following comments regarding the strategic sites are taken from the SHAR:

Blackwell Farm – there will be congestion at the A31 junction, and the problems at the Tesco junction, and the Egerton road /Gill Avenue junction (para 4.9.5). Traffic is likely to access the Surrey research park and the RSCH through the development (para 4.7.3)

Gosden Hill Farm – there will be an increase in traffic through Burpham. There will be pressure on the A3100/B2234 roundabout (paras 4.7.6, 4.7.7 and 4.7.8).

Wisley – traffic will increase on minor roads to gain access to the A3 (N and S bound) and other routes (para 4.7.11). The development will add more traffic to the A3. The Burnt Common slips help alleviate the traffic through Ripley according to the model, but queuing on the A3 could mean this does not happen (para 4.7.14)

Normandy/Flexford – the report has little to say about the impact of this large development. The increase in flow on Westwood Lane is noted (para 4.5.7). Tables 4.10 and 4.11 show junction delay reducing at the Westwood Land, B3000 junction, but an increasing at the Puttenham Hill/Millbrook junction.

Ash – development in Ash is not specifically addressed, but there are major increases in traffic on a number of roads. The new rail bridge will bring relief (but traffic will move to the next junction).

Slyfield – there are no remark relating to SARP, and as there are no additional trips shown in and out of the Slyfield residential zone in Tables 3.3 and 3.4, it is possible that this development has been omitted. There is a significant increase in trips to and from the Slyfield industrial zone, which will impact on the A320 and Clay Lane.

Town Centre – the report has very little to say about the town centre. It is evident that the model is forecasting severe congestion on the approaches to the town centre, such as the A281, the A31 Farnham Road, and Woodbridge Road for example. No mitigation measures are planned. And in the Transport Strategy, GBC states that the intention is to adopt Allies & Morrison’s Scenario 2 which would have the effect of significantly reducing the capacity of the town centre road system. The implications have not been examined, but traffic using the A281 from Waverley, for example, would be affected.

The B3000 will be severely affected by development schemes and will not benefit from road improvements. It is essential that the impact of all change to road networks are looked at in conjunction with one another for any survey to be meaningful. The local plan does not state an objective for congestion. The two strategic objectives that are included for infrastructure refer to supporting sustainable development and delivering a balanced system. However, in para 2.15 there is an aspiration expressed about opportunities ‘to improve the performance of the road networks through transport infrastructure and service improvements’, which taken with the previous paragraph includes reducing congestion. The evidence so far shows that this will not happen. The mitigation proposed is not sufficient to overcome the problems that will be caused by the level of growth in the local plan. Congestion will worsen. The network will lack resilience and be vulnerable to disruption due to incidents. Minor roads will have to cope with a lot more traffic, for which they are unsuitable.

**Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )**
4.6 Infrastructure Policies

Development on the scale proposed within East and West Horsey would have a significant impact on the infrastructure of the villages.

The road and rail networks cannot sustain the influx of people in such numbers. The roads, as previously stated are effectively lanes, with often limited pavements and the parking at both Effingham and Horsley station is at capacity with no opportunity for expansion.

Flooding is already a concern in the village and comments from Thames Water have raised doubts as the ability to expand the waste water network.

Existing community facilities, such as the Medical centre are at capacity and local schools are over-subscribed. Indeed the development proposals close to The Raleigh School would inevitably mean that significant parts of our community wouldn’t have access to their local primary school.

We object to this Policy.

In conclusion, we believe that our community needs appropriate, demand driven housing, for example to enable older residents to downsize thereby freeing up much needed family housing in the area. A development, similar to Frenchlands Gate would enable this to happen. The Thatchers site would be appropriate but the density of housing stock proposed is significantly in excess of that currently (8.1 per hectare) and so would need to be addressed.

Some housing is inevitable and can be absorbed by existing communities but the scale proposed in our area by The 2016 Local Plan is disproportionate.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT to the lack of consideration for infrastructure overload in the Local Plan.

GBC’s Transport Assessment was not even available to councillors before the vote taken to approve the current draft of the Local Plan. It was only published several weeks after the draft of the Local Plan was approved. The pressures placed on infrastructure by the developments proposed in the Local Plan have not been given adequate consideration. Approximately 70% of the proposed 13,860 houses are targeted at the Green Belt, within 1 to 2km of the A3 which will destroy the open amenity of the borough and produce gridlock on the A3 and surrounding roads including the A247 which are all already at 100% capacity. This will severely affect the quality of life of existing and new residents and it is highly irresponsible and unprofessional to develop a Local Plan without appropriate medical, education and transport infrastructure in place.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: pslp171/712  Respondent: 8839745 / Ripley Parish Council (Suzie Powell-Cullingford)  Agent:

Document: Proposed Submission Local Plan: strategy and sites 2017 / Policy ID1
In essence these proposals would lead to clear coalescence between the villages of Ripley, Send, Send Marsh and Burnt Common. The traffic utilising our rural road network is already at capacity during peak hours and simply will not cope with the proposed additional residential and industrial sites, irrespective of the proposed new A3 slip roads adjoining the Garlicks Arch site. Any additional traffic travelling in an East/West direction will not be sustainable, in particular HGV vehicles and the enormous articulated lorries required by Travelling Showpeople.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

POLICY II

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy II)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition. This will increase the risk of serious accidents.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon where I live, already suffer from intolerable traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements. As I say above my daughter who uses an electric wheelchair and often visits complains about the danger.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to
build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network, phone and broadband and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital; where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
Worryingly, the Plan now has even less substantive information about improvements to the A3 South of the M25 from Highways England and it appears that their plans are not yet formed (Policy ID2). In the absence of such information, the infrastructure proposed is specific to each proposed development and does not address cumulative effects. What would be the case with regard to planning approval if SCC and/or HE do not provide timely infrastructure? It is clearly impossible to go ahead with the proposed developments absent guarantees that appropriate infrastructure is in place.

The Plan now calls for nearly all infrastructure to be funded by developers (see APP. C). We question how realistic it is to expect developers not only to pay for all the infrastructure but also to have it in place in a timely fashion. The Plan says that planning permission will be refused if timely provision of infrastructure cannot be secured. Such refusals will almost certainly be settled in the courts. Developers’ business models are based on building and selling houses to create the cash to provide infrastructure. People will be living on the sites well before infrastructure is complete. Will GBC prevent development of Gosden Hill until slip roads etc. are provided off and onto the A3? Again, the infrastructure is site specific and does not address cumulative effects.

If development were to be refused the land would still have been removed from the green belt and its future rendered uncertain.

Residents are being asked to accept very large amounts of development with little or no detail being provided on measures which would relieve existing congestion and limit future problems. The cumulative effects of the developments listed below are certain to have a devastating effect on the A247 through our village (and of course on Send) and it is hard to see how any of the infrastructure proposed in the Plan (App. C) will do anything to mitigate the effects of these developments on the A247 and hence our village.

**Summary of the Impacts on the A247 – My Objections**

All of these developments will draw additional traffic to the A247 through the village. It would be naïve to think that the employment sites and schools will serve only the developments themselves. Apart from the normal movements of residents to and from the new sites there will be considerable additional traffic on the A247 generated by:

- children from elsewhere being delivered to schools and collected
- the employees of the offices and industrial sites getting to work and returning home
- the vehicle movements generated by distribution and storage activities
- traffic from Wisley wishing to travel South and returning
- traffic from Gosden Hill wishing to travel South and returning
- traffic from Slyfield wishing to travel South and returning
- private and commercial traffic originating in the South and accessing Gosden Hill, Burnt Common or the A3 and returning (including traffic from Dunsfold)

The A247 although an A road:

- is less than 2 vehicle wide in places
- does not have continuous footpaths
- has several sharp bends
- has a hump-backed bridge with poor site lines
- has a very difficult junction to access the station
- is largely unlit
- has a primary school
- is already very congested at times

You will recall that in prior responses I explained that my wheelchair-bound disabled daughter often visits us and travels from Clandon station to our home along the A247 and that any increase in traffic ill increase the danger to her in making that journey. I see no attempt to deal with this point.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

The Council Leader has promised that no development will take place without improvement in the infrastructure, this must come first. The infrastructure is overloaded, drainage is inadequate, the roads and car parks are overloaded with little scope for improvement. Both the local schools and the medical facilities are full.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Are planners not aware that local amenities are already stretched to capacity: schools, medical facilities etc? Also that our local roads at certain times are already, not only very congested, but in a shameful, third-world state. Hundreds more cars would be a nightmare.

1. Policies ID1 & ID2 Infrastructure – My Objections

Although much is made of the need for new infrastructure to support these developments and for this to be in place as needed, the Plan admits …“we forecast that there will also be an absolute increase in overall traffic
The Plan now calls for nearly all infrastructure to be funded by developers (see APP. C). We question how realistic it is to expect developers not only to pay for all the infrastructure but also to have it in place in a timely fashion. The Plan says that planning permission will be refused if timely provision of infrastructure cannot be secured. Such refusals will almost certainly be settled in the courts. Developers’ business models are based on building and selling houses to create the cash to provide infrastructure. People will be living on the sites well before infrastructure is complete. Will GBC prevent development of Gosden Hill until slip roads etc. are provided off and onto the A3? Again, the infrastructure is site specific and does not address cumulative effects.

If development were to be refused the land would still have been removed from the green belt and its future rendered uncertain.

Residents are being asked to accept very large amounts of development with little or no detail being provided on measures which would relieve existing congestion and limit future problems. The cumulative effects of the developments listed below are certain to have a devastating effect on the A247 through our village (and of course on Send) and it is hard to see how any of the infrastructure proposed in the Plan (App. C) will do anything to mitigate the effects of these developments on the A247 and hence our village.

**B.5. Summary of the Impacts on the A247 – My Objections**

All of these developments will draw additional traffic to the A247 through the village. It would be naïve to think that the employment sites and schools will serve only the developments themselves. Apart from the normal movements of residents to and from the new sites there will be considerable additional traffic on the A247 generated by:

- children from elsewhere being delivered to schools and collected
- the employees of the offices and industrial sites getting to work and returning home
- the vehicle movements generated by distribution and storage activities
- traffic from Wisley wishing to travel South and returning
- traffic from Gosden Hill wishing to travel South and returning
- traffic from Slyfield wishing to travel South and returning
- private and commercial traffic originating in the South and accessing Gosden Hill, Burnt Common or the A3 and returning (including traffic from Dunsfold)

The A247 although an A road:

- is less than 2 vehicle width in places
- does not have continuous footpaths
- has several sharp bends
- has a hump-backed bridge with poor site lines
- has a very difficult junction to access the station
-is largely unlit
-has a primary school
-is already very congested at times

Policy I1: Infrastructure and delivery

13.1. I OBJECT to the Plan making proposals for areas of development without simultaneously having the necessary information on the existing infrastructure (or lack of it) and associated costs of improving it, which is a necessary element of information in the decision making process. Consequently I submit that the Plan is severely flawed.

13.2. When you do eventually gather this information you will find in relation to East and West Horsley that it is already creaking in terms of capacity for school places, medical facilities, parking at the station, drainage, flooding of roads (including Ripley Lane and access to the Ockham/A3 roundabout) and the sewage network (particularly Pincott Lane where we have to call out the sewage company about every 6 months to make repairs to the mains sewage). There are also sewage problems in the Ockham Road North and Green Lane area. Any material volume of additional housing will necessitate major infrastructure upgrades.

13.3. The policy regarding schools is too vague. In West Horsley there is a lack of state primary school places. There are long journey times to secondary schools. There are high volumes of traffic to the two private schools, Glensk and Cranmore.

13.4. West Horsley uses the “Horsley Station” at East Horsley. This station car park is already full during week days, and will not cope with the increased housing proposed in the Horsley area, but also at Wisley Airfield.

fail to understand how anyone involved in this plan who presumably has been out and visited the proposed areas (hopefully more than once) has realised that the infrastructure of this area simply cannot absorb any more traffic - it is almost a physical impossibility to get through Ripley at certain times of day, the queues which back up from Guildford along the A3 are getting worse almost daily and the more local roads such as mine which is Tithebarns Lane is a race
track and as such, extremely dangerous at busy times with cars and lorries driving at speed and using the road as a shortcut to avoid Ripley. The bridge over the stream next to my house is not wide enough to accommodate two vehicles passing and when a school bus, lorry or tractor are involved, it is worse.

The parking at Clandon station is almost impossible - to arrive to a totally full car park is unacceptable. The next station is either London Road or Guildford mainline both of which can take a considerable time to get to and frequently the same problem awaits - where do you propose the extra residents from new houses go? Medical facilities the same - the Villages Medical Centre is very well run and efficient but cannot do the impossible and increase their patient intake and continue to provide the same level of service to the community. A similar issue will arise with schools in the local area.

It appears that when a landowner who owns land alongside a road such as the A3 or in an area that is deemed to need a certain amount of new housing, and essentially has had enough and wants to sell, he works with a developer and they put together a plan that not only has colossal benefits to themselves, they also seem able to come up with a proposal that the council in turn finds irresistible because a promise is made to include something that will "benefit" the community.

I sincerely hope that this Plan may be re-considered and the many points that will inevitably be raised, become resolved.

**I object** to policy I1 Infrastructure and delivery

Everybody is clear, Guildford is struggling with its current infrastructure, its old, congested and straining to accommodate even current needs and organic growth. Yet this plan’s commitment to expanding the borough by 25% will mean major infrastructure investment that no-one is prepared to pay for and has no guarantee of delivery in the duration of the plan.

The plan targets greenfield site which require large infrastructure investment in order to generate income to the council necessary to meet an existing infrastructure shortfall prior to the new houses being built. This is like companies banking income from the following year in the current year to balance the books – it is foolish at best, illegal at worst. The way the CIL is structured also encourages development on greenfield sites rather than brownfield as the rates are cheaper for developers. This is against the strategy of Brown Field first.

The policy wording says nothing about roads and traffic. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that involve demolishing property and road-widening in residential areas to solve the resultant congestion. The A3 improvements are not guaranteed to take place and He will not be looking at what is possible until at least 2018. With current financial issues with Brexit, big new developments against a back-drop of declining economy is Eastern Promise. However they are being used to justify removing large areas from the Green Belt before detailed traffic assessments have taken place. These detailed investigations are being deferred until the planning application stage and will be left to developers to prepare. If a site then proves to be unsustainable its Green Belt protection will have been lost for no reason.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritising greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly.
This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. The council are not in control of this as it is based on outside funding from developers. The plan is based on a wing and a prayer.

The highways network is under stress at peak times in many parts of the borough. Queuing is the daily experience of drivers going to and from work. The local plan recognises the problems in para 2.14. Much of the road network is single-carriageway, and junctions act as constraints.

The mitigation proposed is not sufficient to overcome the problems that will be caused by the level of growth in the local plan. Congestion will worsen. The network will lack resilience and be vulnerable to disruption due to incidents. Minor roads will have to cope with a lot more traffic, for which they are unsuitable.

Infrastructure. Many of the villages in the GBC area suffer from a lack of infrastructure. Examples of this are roads and bridges which are no longer adequate for the volume of traffic, pavements which are too narrow, schools which are full to bursting, drains which are never cleared, which fill up and overflow into the roadway. There are plenty more examples but GBC's plans always fail to address these issues before considering the impact of additional housing.

I OBJECT to the failure of GBC to deal with infrastructure issues before embarking on grandiose housing schemes.

The problems that would arise are considerable – I list a few:

• The increase in traffic congestion and pollution. There is no detail given in the GLA 2016 for the improvement of the traffic management.
• Increase in pressure on parking spaces at the station, shops, surgery and village hall. Residents already have problems finding a place to park when using local facilities. If we cannot park, we will not use the local shops or attend lectures and events at the village hall. Here again the Guildford Local Plan 2016 does not provide a solution.
• The local schools are already full.
• Thames Water has stated that the existing drainage system would need to be upgraded.

• The secondary school which is earmarked for 1,500 pupils is not necessary. To build another school even if it does not cost GBC for the building, being a sweetener from the developer, it costs the taxpayer to run the school. There are already two secondary schools in Guildford that have vacancies in both schools, along with a number of other schools which have vacancies. The local GP surgery cannot cope at the moment; I have to wait four weeks to see my doctor at the present time. There is no point saying get more doctors as there is already a shortage of doctors. The local services will not be able to cope either.

I object to the detrimental impact on transport, local roads and road safety. I specifically object to:

The assertion that the development will result in a meaningful shift to cycling and walking. The development is too isolated, and even within the development itself too spread out to anticipate a reduced reliance on private cars.

The increased volume of car traffic. A proposed development of 2,068 homes would result in an estimated 4,000 additional cars on the roads.

1. The congestion this traffic will cause on the narrow rural roads in Ockham and the surrounding areas, exacerbated by wide vehicles including increased bus and HGV movements.
2. The danger this traffic will be to local cyclists and pedestrians, due to the absence of any cycling paths and the lack of pedestrian footpaths (and the space to provide them).
3. The increase in the already severe congestion on the Strategic Road Network of the A3 and M25. A further planning application at RHS Wisley (with a significant increase in visitor traffic) and a proposed 600 pupil secondary school on the site would add additional congestion at the M25/A3 junction as well as local roads. No development can proceed without significant infrastructure enhancements to the A3 and M25. Partial improvement works on the A3 south of the site are not due to start until 2019 at the earliest.
4. The lack of suitable public transport. The local rail stations of Effingham and Horsley cannot cope with the proposed increase in passenger traffic and car parking is already at capacity.

Little practical weight appears to have been given to the demands on an already overloaded infrastructure. There is a blithe assumption that much of the infrastructure needs can be financed by individual developers whereas it is the nature of many of the larger infrastructure projects which would be necessitated that they would require early funding and could not be easily linked to individual projects the timing of which will be staggered.

The housing targets seem unnecessarily aggressive compared with projected population trends.

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT to The Infrastructure proposals for the following reasons: i1

Schools: In the Horsleys, there are insufficient school spaces for the number of local children needing them, with the result that children are often allocated to schools a significant distance away. There are 11 housing development sites identified in the LAA for East and West Horsley, which taken together would result in the building of 593 new houses in
the two parishes that are today served by a single primary school - The Raleigh, in West Horsley. Planning guidance suggest that this number of new homes will require the provision of around 150 additional primary school places to accommodate such an increase in population. Today there is no spare capacity at The Raleigh, yet no proposals are made in the Proposed Submission Local Plan to provide for any more schooling in the Horsleys.

Secondary school places are limited in number at the Howard of Effingham School and other secondary schools involve a much longer journey of time and distance from the village to reach them. Ockham Road North and the A246 are already congested with traffic at the beginning and end of the school day, and if parents have to drive long distances to other schools this will become unmanageable.

There is no new provision made within the Draft Local Plan and its supporting evidence to address this, which as a parent I find totally unacceptable.

Medical facilities: It is already difficult to get an appointment at the Medical Centre in East Horsley. The doctors have tried to accommodate residents by opening at different times, and are doing all that they can. but with the level of development proposed they will no longer be able to operate effectively and we will see more and more people having to attend the Royal Surrey and Woking Hospitals walk in clinics. To my knowledge GBC has not put forward any plans to increase healthcare facilities in the villages or indeed to expand the Royal Surrey Hospital.

Other facilities: The shops and library in East Horsley have been designated in the plan as a ‘District Centre’. This is a complete misreading of the scale of the facilities in the village centre. It is one short row of shops. Parking is already difficult and will be woefully inadequate to support the proposed increase in population. If every new house has only one car, that would mean 3,000 more cars within a three mile radius of the Horsley Villages. That would have a severe impact on our local roads, including a potential increase in traffic accidents and higher levels of pollution, leading to detrimental effects on health and increased pressure on NHS facilities.

Transport: The traffic on the A3 into Guildford is already congested and it is often difficult to join the M25 at Junction 10 if you are travelling in the Heathrow direction. If all the new houses are built, the majority of the residents will need to travel to work and there seems to be no provision for managing this extra traffic., causing extra congestion.

Whilst the trains run a frequent service to both London and Guildford, the car parks are already full and the surrounding roads hazardous each time a train comes in.

Waste Water Infrastructure: This is inadequate in the Horsleys and the surrounding area, with frequent flooding of gardens and roads. The map within GBC Surface Water management Plan, 2014 clearly illustrates that the Horsley’s are the largest area within the Borough to be called a surface flooding ‘Hot Spot’. However, no provision is made within the Draft Local Plan to address this, and this area is not even mentioned as a cause for concern. GBC has a responsibility to direct development away from areas affected by flooding, and also to protect the natural flood plain.

In addition, Thames Water has advised Guildford Borough Council that the area’s wastewater network is unlikely to be able to support the demand anticipated from all the proposed developments. The foul drainage system from West Horsley to the treatment works north of Ripley will need to be upgraded to cope. Thames Water advises ‘a 2 to 3 years lead-in period’ to install the necessary wastewater network and treatment capacity after planning permission for a development is granted.

I believe that the failure to address this issue is a serious deficiency in the Proposed Submission Local Plan and I therefore OBJECT to the infrastructure proposals.

These three policies cover Infrastructure & Delivery. Whilst we support the general policy statements as presented, it is the detailed infrastructure proposals for Guildford Borough which give me cause for concern.

I believe there are serious deficiencies and shortcomings in the infrastructure of Guildford Borough as it is today and that the aggressive housing policy as proposed by GBC in the Proposed Submission Local Plan will exacerbate this problem.

I would make the following comments specifically about infrastructure in East Horsley today:

- Roads across the parish are in poor condition with many potholes. Many roads are unable to sustain their current levels of traffic, particularly the increasing levels of HGV traffic;
- The principal through roads traversing East Horsley are narrow and winding, have a series of pinch points, have sections without any pavements and are generally in poor condition. As a senior sec councillor remarked at a recent public meeting in the village hall: "East Horsley has lanes, not roads." East Horsley's 'lanes' are totally unsuitable for high volumes of traffic, in particular for the volume of HGV's now using them;
- Many of the drains are blocked or otherwise in poor condition giving rise to frequent surface water flooding when it rains;
- The pavements are in poor condition as well as being narrow, they are often uneven and/or cracked making it difficult, for example, for people with pushchairs or prams or in wheelchairs;
- There are insufficient school spaces for the number of local children needing them, with the result that children are often allocated to schools a significant distance away such as Darking or Woking; and
- The Medical Centre in East Horsley is already at capacity in terms of its number of patients.

Furthermore, I would observe that the traffic at the A3/M25 Interchange (Junction 10 of the M25) is already at a point where significant delays and congestion occur every morning. My personal experience is that this congestion has worsened significantly over the past few years. Whilst the plan references improvement to this junction, these may ease the current issues, but adding the housing proposed for the Horsleys, Wisley Airfield, Ripley and Send will likely result in no improvement, but rather worsening of an already unacceptable situation.

In respect of East Horsley, there are only two specific proposals in Appendix C:

LRN 25 - East Horsley and West Horsley traffic management and environmental improvement scheme. It is not clear what is proposed here, and its timing and funding have to be considered uncertain. It is stated that funding will, at least in part, come from developer contribution. However, it is not at all clear what development is likely to give rise to such a contribution, but it certainly implies that funding could only come if there were a development; and

HSC 5 - Expansion of East Horsley Medical Centre to provide additional capacity and services for future population in years 5-15 of the plan.
There are no proposals in respect of all the existing problems with for example roads, pavements, drainage, and schools. Furthermore, it is inevitable that the proposed developments in East Horsley itself and nearby, particularly in West Horsley and the proposals for Wisley, will put further strain on the existing infrastructure. There are no proposals at all to cater for this.

Although an expansion of the Medical centre is proposed in the Infrastructure Schedule, this is not until years 5-15 of the Plan. Given that it is already at capacity, EHPC believes that this needs to be done earlier.

Local primary schooling is also a very pertinent issue. There are 11 housing development sites identified in the LAA for East and West Horsley, which taken together would result in the building of 593 new houses in the two parishes that are today served by a single primary school - The Raleigh, in West Horsley. Planning guidance suggest that this number of new homes will require the provision of around 150 additional primary school places to accommodate such an increase in population. Today there is no spare capacity at The Raleigh, yet no proposals are made in the Proposed Submission Local Plan to provide for any more schooling in the Horsley's.

I believe that the failure to address the inadequacies of the existing infrastructure to meet the needs of what is there already is a serious deficiency in the Proposed Submission Local Plan.

I accordingly OBJECT to the infrastructure proposals on these grounds. I further OBJECT to the proposals for infrastructure in that they do not meet the stated objective of providing infrastructure to support the proposed developments.

POLICY 14 Green and blue infrastructure is supportive of this policy.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

-----

1. **Local Roads**: The roads are already in a poor state of repair and struggle to cope with the existing levels of daily traffic. At certain times of the day, several roads in the village are especially congested. Many local roads have no footpath or very narrow footpaths with the majority unlit. It can therefore be quite dangerous to use these footpaths, especially in winter and at night. There is absolutely no scope for additional roads or widening of roads due to existing houses meaning that the current problem will just be exacerbated if development on the scale suggested is allowed to take place. If it is assumed that every new home has at least 2 cars, this means that there will be, potentially, 6,000 more cars within a 3-mile radius of East and West Horsley. The impact on local roads will be horrendous.

2. **Public transport**: The West Horsley bus service is very limited and only operates 3 times per day, weekdays only and not at peak commuter times. The bus service operating from Guildford to Leatherhead travels along the A246 at the southern end of the village but is really only of use to residents living at that end of the village. Although the train service from Horsley to London and Guildford is generally good/frequent, parking at Horsley Station is already under significant pressure and the car park is often full. There is no land adjacent to the existing car park for additional parking. There is already a problem with rail passengers parking in the East Horsley Village Hall car park (thereby denying bona fide village hall users from parking there) and I would imagine this will only increase.

3. **Drainage/Flooding**: Little has been mentioned of the impact that development would have on the drainage and sewerage systems which are already wholly inadequate. The roads near where I live (Ockham Road North and East Lane) regularly flood after heavy rain and the whole area is at serious risk of flooding. In particular, the
site behind Ockham Road North in East Horsley is, in places, a level 3 flood risk area with local residents often having standing water in their gardens after rain. Building on such land will only exacerbate the problem.

4. **Medical Facilities**: The single medical practice in East and West Horsley is already heavily over-subscribed and it is very difficult to get an appointment.

5. **Schools**: The same comment applies to schooling in the area with both local primary and secondary schools over-subscribed.

6. **Pollution**: The large increase in the volume of traffic will cause an increase in nitrogen dioxide and particulates in the environment which is already a cause for concern in several areas in the borough.

**Employment**: It is all very well suggesting that all these houses are to be built in East and West Horsley and Ockham but where are all the new inhabitants going to work? I do not believe that GBC has given proper and sustained thought to this. There are very few local jobs available and the lack of public transport means that most inhabitants will need to travel by car to and from work, this creating further congestion, noise and pollution.

**Document:** Proposed Submission Local Plan: strategy and sites 2017 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

**Infrastructure**: It would seem, to me anyway, that GBC has ignored the biggest single mass of objections to the plan and that is the lack of adequate infrastructure. Thousands upon thousands of residents have complained about this but it would appear that the amount of proposed development far exceeds any foreseeable provision of additional infrastructure. West and East Horsley, to put it bluntly, will be unable to cope with additional development because the scope for infrastructure improvement is so limited. The existing infrastructure is already fully stretched and struggling to cope with the current number of residents. In particular, the roads are of especial concern because there is absolutely no scope for additional roads or widening of roads meaning that existing problems will just be exacerbated if development is allowed to take place. Additional infrastructure concerns are lack of public transport, already limited parking at Horsley station, poor existing drainage, limited/stretched medical services and already over-subscribed local schools.

**Document:** Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object that infrastructure has not been properly assessed and is inadequate to deal with current housing levels - ie roads, doctors, schools will be unable to cope.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

Attached documents:
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1. Medical Facilities: The single medical practice in East/West Horsley is already heavily over-subscribed and it is very difficult to get an appointment.

1. Schools: The same comment applies to schooling in the area with both local primary and secondary schools over-subscribed.

1. Drainage/Flooding: Little has been mentioned of the impact that development would have on the drainage and sewerage systems which are already wholly inadequate. The roads near where I live (Ockham Road North and East Lane) regularly flood after heavy rain and the whole area is at serious risk of flooding. In particular, the site behind Ockham Road North in East Horsley is, in places, a level 3 flood risk area with local residents often having standing water in their gardens after rain. Building on such land will only exacerbate the problem.

1. Pollution: The large increase in the volume of traffic will cause an increase in nitrogen dioxide and particulates in the environment which is already a cause for concern in several areas in the borough.

9. Employment: It is all very well suggesting that all these houses are to be built in East and West Horsley and Ockham but where are all the new inhabitants going to work? I do not believe that GBC has given proper and sustained thought to this. There are very few local jobs available and the lack of public transport means that most inhabitants will need to travel by car to and from work, this creating further congestion, noise and pollution.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

POLICIES I1, I2 & I3

These three policies cover Infrastructure & Delivery, Supporting the Department of Transport’s ‘Road Investment Strategy’ and Sustainable Transport. Whilst I support the general policy statements as presented in each case, it is the detailed infrastructure proposals for Guildford Borough which give me cause for concern.

I support EHPC comments that there are serious deficiencies and shortcomings in the infrastructure of Guildford Borough as it is today and that the aggressive housing policy as proposed by GBC in the Proposed Submission Local Plan will exacerbate this problem.

I concur with East Horsley Parish Council (EHPC) who have made the following comments specifically about infrastructure in East Horsley today:

- Roads across the parish are in poor condition with many potholes. Many roads are unable to sustain their current levels of traffic, particularly the increasing levels of HGV traffic;
- The principal through roads traversing East Horsley are narrow and winding, have a series of pinch points, have sections without any pavements and are generally unlit. As a senior SCC councillor remarked at a recent public meeting in the village hall: “East Horsley has lanes, not roads.” East Horsley’s ‘lanes’ are totally unsuitable for high volumes of traffic, in particular for the volume of HGV’s now using them;
Many of the drains are blocked or otherwise in poor condition giving rise to frequent surface water flooding when it rains;

• The pavements are in poor condition. As well as being narrow, they are often uneven and/or cracked making it difficult, for example, for people with pushchairs or prams or in wheelchairs;

• There are insufficient school spaces for the number of local children needing them, with the result that children are often allocated to schools a significant distance away such as Dorking or Woking;

• The Medical Centre in East Horsley is already at capacity in terms of its number of patients. It is recognised that, as stated in the Proposed Submission Local Plan, the maintenance of adequate infrastructure and its expansion to meet growing needs is the responsibility of the relevant infrastructure provider. This is often not GBC itself but rather, for example, Surrey County Council or utility companies.

In respect of East Horsley, there are only two specific proposals in Appendix C:

LRN 25 - East Horsley and West Horsley traffic management and environmental improvement scheme. It is not clear what is proposed here, and its timing and funding have to be considered uncertain. It is stated that funding will, at least in part, come from developer contribution. However, it is not at all clear what development is likely to give rise to such a contribution, but it certainly implies that funding could only come if there were a development; and

HSC 5 - Expansion of East Horsley Medical Centre to provide additional capacity and services for future population in years 5 – 15 of the plan.

There are no proposals in respect of all the existing problems with for example roads, pavements, drainage, and schools. Furthermore, it is inevitable that the proposed developments in East Horsley itself and nearby, particularly in West Horsley and the proposals for Wisley, would put further strain on the existing infrastructure. There are no proposals at all to cater for this.

Although an expansion of the Medical centre is proposed in the Infrastructure Schedule, this is not until years 5 – 15 of the Plan. Given that it is already at capacity I concur with EHPC that this needs to be done earlier.

Local primary schooling is also a very pertinent issue. There are 11 housing development sites identified in the LAA for East and West Horsley, which taken together would result in the building of 593 new houses in the two parishes that are today served by a single primary school - The Raleigh, in West Horsley. Planning guidance suggest that this number of new homes will require the provision of

around 150 additional primary school places to accommodate such an increase in population. Today there is no spare capacity at The Raleigh, yet no proposals are made in the Proposed Submission Local Plan to provide for any more schooling in the Horsley’s. I support the EHPC position believes that the failure to address the inadequacies of the existing infrastructure to meet the needs of what is there already is a serious deficiency in the Proposed Submission Local Plan.

I object to the infrastructure proposals on these grounds.

I further object to the proposals for infrastructure in that they do not meet the stated objective of providing infrastructure to support the proposed developments.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
I oppose the plans to build so many more houses without providing the infrastructure required

- The current infrastructure is barely adequate for the existing number of residents, cars etc (e.g. Kingston Medical Centre in the Horsleys struggles to provide appointments when required, schools for East & West Horsley children are oversubscribed and there are no plans to build new schools or extend existing ones in the area, there are bottlenecks on some of the roads in the area such as the A3 and in East Horsley, it’s difficult to find a parking space in the village now to visit the local shops let alone when the population of the area has significantly increased. West Horsley has no Post Office and will lose its only general store in September. There is also a specific problem in the Horsleys in relation to flooding, with the last few years seeing regular instances of roads in the village flooded (e.g. East Lane / The Street, the main road through West Horsley has become impassable on a number of occasions; Ripley Lane in West Horsley regularly floods and the Ockham junction at the A3 remained inaccessible for over a week one recent Christmas due to floods. This will only get worse with more houses and the pressure this will bring.

- There are no plans for new infrastructure in the DLP to address these issues in the Horsleys.

- Clearly, existing infrastructure will be massively overstretched if the number of houses being proposed are built.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: pslp171/1532  Respondent: 8850977 / Sam Pinder  Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I’m disappointed that the latest version of the local plan doesn’t address the issues around sustainability and infrastructure. Again, it is important that the Inspector visits the locations being considered for large developments as part of the local plan, to understand the impact of placing a development for hundreds or thousands of homes would have on the local area. In East and West Horsley, there are enormous pressures on local state primary and secondary schools, doctors’ surgeries and transport. This would get significantly worse if the number of houses proposed in the local plan for rural areas goes ahead.

I urge the inspector to reject the local plan, which shows a complete lack of understanding of the local area and would be detrimental to the openness of the Green Belt in this area. There is a need for new homes in this area, but these need to be affordable and located in places where there is appropriate infrastructure to support the homes, not plonked in the middle of a rural village that only has 1,100 homes in the first place. There has been so much local opposition to these plans with so many letters and emails identifying flaws in the plans and their underlying methodology that it would be appalling if the local plan in is current state were approved. I trust an inspector would not be so foolish as to approve a plan just because he or she thinks that starting again from scratch would be worse – allowing an ill thought out and illegal plan to be adopted would be far worse and the wrong decision for an honest and independent person to make.

existing infrastructure to meet the needs of what is there already is a serious deficiency in the Proposed Submission Local Plan.

I object to the infrastructure proposals on these grounds.

I further object to the proposals for infrastructure in that they do not meet the stated objective of providing infrastructure to support the proposed developments.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Policy 11, 12, 13 Infrastructure

With specific regard to East Horsley village and its immediate vicinity, the current infrastructure is already struggling to cope. There are insufficient school places, the demands on the medical centre is stretched, the drainage system is inadequate, and the narrow roads and lanes are dangerous due to level of traffic. Currently the roads through East Horsley are used as major rat runs from the A246 to/from the A3 and A24 and especially when there are delays on the M25. If the housing development as proposed for The Horsley proceed, this will add over 500 houses with no policy to address the current lack of infrastructure. The proposal to build 2000 homes on Wisley Aerodrome will, apart from the problems above, put additional demands on Horsley and Effingham railway stations. There is often already insufficient off street parking at Bishopsmead and Station Parades, which will be the closest retail outlets. I OBJECT ON THE GROUNDS THERE IS INADEQUATE CURRENT PROVISION AND FUTURE ABILITY TO MEET SUCH A DEMAND ON THE INFRA STRUCTURE

The roads are full to capacity and cant take any more traffic.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
1. I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
Despite the Garlick's Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick's Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
The shortfall in local services.
I was unable to get my son into the Howard school due to a shortfall of places.
This despite having lived in the village for 25 years.
I wouldn't go through the pain process to try and get my younger son in in two years time.
So, a fairly basic problem there.
The ability to get in to the Doctor's surgery without using an emergency slot is challenging at best and often a lot worse than that.
The state of the local roads is just appalling as is the roadside maintenance clogging up footpaths.
And seriously you want to grow the population.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

---

Infrastructure already overloaded

Existing local roads are already unable to cope with existing traffic and are poorly maintained. They are too narrow with frequent potholes, sunken manhole covers and uneven, overgrown pavements (where indeed these even exist) making it dangerous for cyclists and pedestrians and often causing unnecessary damage to vehicles. Because they are narrow due to existing residential development there is little scope to improve the roads by widening. Junction 10 of the M25 at its intersection with the A3 has always been busy but since the opening of motorway services nearby it has been almost continuously congested.

Local schools are oversubscribed and crying out for relocation to larger sites (and their locations could then be redeveloped with residential property) - this does not appear to have been considered or addressed in these proposals. Local doctors and dentists likewise are stretched to full capacity and would be unable to cope with such an increase in local population.

The local train services are inadequate (as too are the parking facilities at local stations) and current bus services are laughable.

With our predominantly clay soil drainage is a problem and remedial work over recent years has done very little to solve the problems of sudden heavy rainfall and flash flooding.

The telephone system is antiquated and due to the incidence of private roads in the area, cable services are unlikely to be available any time soon so broadband service is generally poor.

Even without the proposed development at Ockham on the old airfield site, this level of proposed new development would place intolerable pressure on local roads, transport links and other infrastructure services.

I object to policy I1 Infrastructure and delivery

I OBJECT to this policy as it stands. Various aspects of Infrastructure are acknowledged as congested, inadequate for the existing population and not able to accommodate much growth. However, greenfield sites – requiring heavy infrastructure investment – are targeted in order to generate CIL income for the council. This is not sensible. The current draft CIL scale also encourages development on greenfield sites rather than brownfield.

The methodology commissioned by the Council to assess traffic and the corresponding roads infrastructure needs is inadequate for the purpose of the Local Plan and identifies only the tip of the iceberg in terms of existing congestion. Looking at local traffic situations around the Borough it becomes clear that the schemes proposed will not solve congestion and the local road network has not been given sufficient consideration. Under the growth proposed some locations would require highway schemes that involve demolition of property and road-widening in residential areas to solve the resultant congestion. Even the A3 improvements are not guaranteed to take place but they are being used to justify removing large areas from the Green Belt before detailed traffic assessments have taken place. These detailed investigations are being deferred until the planning application stage and will be left to developers to prepare. If a site then proves to be unsustainable its Green Belt protection will have been lost for no reason and unsustainable development will take place by a more insidious process.

With regard to SANG provision, GBC has demonstrated that it has no genuine interest in conserving and enhancing biodiversity and clearly regards the Thames Basin Heaths SPA as an obstacle to be overcome rather than a valued asset. This is underlined at the end of the Policy wording which indicates that the council is more interested in meeting its legal responsibilities than actually protecting wildlife. GBC is failing to take account of existing biodiversity at sites selected for SANG provision.

Some infrastructure, as identified in Figure 1 of the draft IDP- is within the control and remit of Guildford Borough Council – they have some influence in relation to planning – but much is under the control, and is the fiscal responsibility of, Surrey County Council or Highways England.

It is not realistic to assume that car use can effectively be replaced for all or even many users. Those who are disabled or infirm cannot easily substitute car journeys with bike travel: the elderly; the disabled; those caring for young children (particularly uncertain bike users and those with multiple children to care for); those wishing to use cars for supermarket or other bulky shopping; those who wish to commute to work and have no facilities for showering or changing on arrival; those who have lengthy and tiring commutes at present, for which the car is the final (short) element of a long journey (for those commuting into London from outside Guildford, a daily 3 hour commute is typical; this cannot realistically be extended by extensive cycling). All these factors mean that the replacement of the car with cycle use is likely to be overstated by many studies, particularly given narrow roads which do not allow effective or safe bike lanes.

Funding is not the only - nor the main - obstacle to improving infrastructure within the borough, and this seems not to be recognized. Guildford is a gap town, set in a bowl within the Surrey Hills Area of Outstanding Natural Beauty to the south of the borough, and with large sections of the borough affected by the Thames Basin Heath Special Protection Area to the north. There is a ribbon through the middle of the borough which contains rail and road links to London, but is already heavily congested, is Green Belt, AONB, SPA or more than one of the above. Very little of the borough is available for extensive development of infrastructure or any building. Do we really want solutions that involve driving new roads through our remaining countryside – including the AONB – at huge cost in financial and environmental terms. Such solutions may be the only ones left when the inadequacies of this proposed Local Plan are realised after the event.

Policy indicates note an intention to pool Community Infrastructure Levy from most new build development and to use CIL receipts to assist in provision of infrastructure needed to support the delivery of the plan. As with other aspects of planning, there is a failure to recognize that out of town settlements in particular have particularly high requirements for additional new basic infrastructure in order to exist at all – roads, sewers, water provision, electricity, gas, telephone and broadband links will all need to be provided and in many cases the links to existing services will need to be upgraded before these can be implemented. The ability to divert funds from CIL to other uses will be inherently limited, not least that otherwise the proposed settlements will not be able to function. The Council strategy of taking CIL from new build
In the Green Belt seems to be to pay for roads within the town centre, as indicated in the policy which notes that legislation prevents the use of planning obligations to fund existing infrastructure deficits.

In the reasoned justification, it is indicated that the council will be prepared to negotiate if an applicant claims that the infrastructure requirements for their development make it unviable. This means that some developments will go ahead anyway and worsen the infrastructure deficit. The Policy claims that infrastructure needed “should” be provided and available when first needed but we have no confidence in the council enforcing this.

The absolute constraint on developmental capacity within the borough represented by the infrastructure limitations cannot be swept aside, but the council has ignored this and failed to apply a constraint on the housing number.

We are not convinced that the extent of existing traffic congestion has been fully recognised by the SCC transport assessment because the methodology employed waters down the level of traffic observed. This has knock-on effects when modelling the various development scenarios. The result is that the requirements identified (expensive though they may seem) are the tip of the iceberg. One of the easiest issues to understand is the use of average peak hour flows for the baseline data. SCC acknowledge that that this is “typically lower” (see Transport Assessment 4.13.4 but GBC prefer the averaging approach with some eloquent wording in their Headline network metrics (3.9). A much better solution would have been to collect reliable baseline data that allowed for the effects of queuing and modelled each hour (or a shorter time period). Such an approach would have cost more but GBC seem unwilling to go the extra mile for reliable evidence while being content to spend large sums of money on propaganda exercises such as their one-sided video. There are other more technical reasons why the transport assessment methodology fails to fully identify current and planned congestion.

Planned developments for Guildford and Waverley Boroughs were modelled together but growth for the rest of the UK was allowed for only using the DoT forecasts. As a result it is not clear whether adequate allowance has been made for significant developments planned for Woking and other neighbouring Boroughs. This represents an inconsistency in approach with the West Surrey SHMA.

Many of the results for the PM peak are missing (TA 4.1.11 states that “these can be set out in an addendum report at a later date”). We believe that those who need to travel on the roads in peak hours will be every bit as interested in their future journeys home as they are for going to work. Publication of the Transport Assessment was delayed until the start of the consultation period so perhaps the non-inclusion of many PM results was simply a result of running out of time.

The Model Development Validation Report does include some interesting baseline data that may be of interest to residents in terms of local knowledge of traffic.

We are not convinced that it would be practical or desirable to end up in a position where the only solution to traffic congestion is to build many more new roads as by-passes through the Surrey countryside, or turn existing roads into dual carriageways, or demolish buildings (some of which may be historic) in order to accommodate higher capacity junctions in built-up areas.

It is noted that the infrastructure Development Plan was developed using hotspots identified in “OGSTAR” (the previous Transport Assessment used for the 2014 consultation) as a starting point. (See Transport Topic Paper (5.56)). However, the site list used for OGSTAR was not even compatible with the former draft Local Plan let alone the current one. Despite this, the Key Evidence mentions the June 2016 TA but not OGSTAR.

Appendix C (Infrastructure Schedule) is lacking in detail concerning what work will actually be carried out for most of the Local Road Network projects and the cost estimates are clearly at the guesswork stage suggesting that these schemes have not been fully thought through or checked for viability. If more detail is available then why not provide it.

It is not clear whether CIL will be received in time to put the required infrastructure in place for each development – or what penalties will be applied for late payment.

The Monitoring Indicators rely entirely on annual CIL receipts and spending. Surely they should look at actual infrastructure delivery and any changes in its adequacy.
The local plan does not state an objective for congestion. The two strategic objectives that are included for infrastructure refer to supporting sustainable development and delivering a balanced system. However, in para 2.15 there is an aspiration expressed about opportunities ‘to improve the performance of the road networks through transport infrastructure and service improvements’, which taken with the previous paragraph includes reducing congestion. The evidence so far shows that this will not happen.

The mitigation proposed is not sufficient to overcome the problems that will be caused by the level of growth in the local plan. Congestion will worsen. The network will lack resilience and be vulnerable to disruption due to incidents. Minor roads will have to cope with a lot more traffic, for which they are unsuitable.

18 POLICY I1 INFRASTRUCTURE AND DELIVERY

18.2 I object to ASP 3 new A3/A3100/B2215/A247 Burpham-Burnt common all-movements junction, formed by a new connector road linking between new A3/A3100 Burpham junction (SRN4) and the B2215 London Road, in combination with the new A3 northbound on-slip (SRN9) and the new A3 southbound off-slip (SRN10) under Infrastructure and Delivery.

18.3 If development gets the go ahead for the strategic site at Gosden Hill it would be logical to construct a 4 way A3 interchange at Burpham. It is not feasible to pass the problem down the line to Send which will already be bearing the brunt of traffic generated from a planned 4,000 homes. The A247 link road to Woking already at capacity will become gridlocked.

18.4 I object to SRN4 New A3/A3100 Burpham junction with relocated A3 southbound off-slip and new A3 southbound on-slip. This will place an unbearable problem onto the A247 whereby traffic will be passing directly through Send from the A3 and M25 and the proposed new development at Wisley.

18.5 I object to SRN9 A3 northbound on-slip at A247 Clandon Road (Burnt Common) and SRN10 A3 southbound off-slip at A247 Clandon Road (Burnt Common). This will place an unbearable problem onto the A247 which is already at capacity.

18.6 I object TO THE PROPOSED LINK ROAD OFF THE A31 TO THE Research Park, Hospital and Tesco where increased traffic already exceeds allowed expansion permitted when Manor Farm development was approved in 2003. This will impinge on the AONB, historic views of the town and be harmful to wild life including protected and rare species.

Policy 11 - Infrastructure and Delivery

I object. The plan targets greenfield sites which requires heavy infrastructure. Most of the infrastructure is old and congested and cannot cope with the increased demands that will be placed upon it. The infrastructure improvements would need to come first and the plan needs to reflect this.

Comment ID: PSLPP16/8692   Respondent: 8858657 / Oliver Cass   Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1. Local infrastructure

There are significant shortcomings in the infrastructure of Guildford Borough as it stands today and the aggressive housing policy as proposed by GBC in this Document will exacerbate this problem.

The local infrastructure is not set up to deal with significant population growth and additional housing. Current examples in East and West Horsley include:

1. Through roads already very busy at peak times, have multiple pot holes, and have pavements which are either very narrow, do not exist at all, or are in extremely poor condition. This makes the village unsuitable for high volumes of any kind of traffic, let alone the volume of HGVs now using it. As a mother of 3 young children using the pavements daily to walk to school, it is unfortunately only a matter of time before the deteriorating traffic, road and pavement combination will result in a serious incident.
2. Drainage system already very prone to overflows, eg, on Ockham Road North from the railway bridge to the junction with East Lane, every time there is heavy rain, resulting in the road becoming akin to a river. Road repairs last year have done absolutely nothing to alleviate the problem as the capacity of the drain under the road cannot cope with the volume of water following rainfall. The only solution, with the existing level of housing (and therefore surface run-off) is to completely overhaul the drainage system. If additional housing stock is constructed the already unacceptable surface run-off and flash flooding problem will become worse.
3. Schools already significantly over-subscribed with local children
4. Limited bus service.
5. Train service to London already very busy. Additional commuters would make it likely that not everyone getting on at Horsley station at peak time would get a seat, despite the journey being 50 mins into London Waterloo.

There are no proposals in respect of any of the existing problems with roads, pavements, drainage, transport and schools.

It is inevitable that the proposed developments in East Horsley and in West Horsley and Wisley, will put further strain on the existing infrastructure. The failure to address the serious inadequacies of the existing infrastructure to meet the needs of what is there already is a completely fundamental and very serious omission in GBC’s Document.

Furthermore, and as I also described in my comments about removing East Horsley from the Green Belt, East Horsley is an attractive village for people wishing to relocate from more built up areas, due its village feel. That includes the village school, The Raleigh. Our family, and many of our friends chose to move to Horsley precisely because of the primary school, which manages to retain a village feel, yet is of ample size to provide the facilities required for children from Reception – Year 6. The existing school would not be able to cater for an increase in demand, and unless we wish to remove the current attractiveness of this village school, nor should we consider an increase in the numbers.
I therefore object to the infrastructure proposals contained in GBC’s Document.

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1) Many villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. Many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time with road surfaces are in a very poor condition. The proposed development under the plan will cause greater congestion in and around many villages. The Plan does not provide an achievable strategy for improving capacity on these local roads. I object to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village and neighbouring villages will become even more congested. Every week thousands of cyclists pass through these villages following the promotion of the area in the 2012 Olympic cycle road trials. The narrow rural roads do not have cycle lanes or even proper pedestrian footpaths. In West Clandon much of the length of The Street has a narrow footpath on only one side of the road making it very dangerous, especially when vehicles mount the pavements. The proposed significant levels of development will result in the roads becoming ever more dangerous for pedestrians and cyclists.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure, as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income instead of recognising this as a key constraint.

It is highly likely that developers faced with large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development unviable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I am concerned about the lack of planning for infrastructure requirements and whether the projects identified will be implemented when required, if at all. Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the
existing residents in the locality will see their quality of life significantly deteriorate as utilities and services, such as the electrical network, sewers, Doctors’ Practice and Police, in the Ripley and Send area are at, or very close to capacity. The lack of plans to improve these services should be a bar to development of the Garlick’s Arch site.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( No ), is Legally Compliant? ( )

Soundness

There is insufficient detail to explain how the revised plan will deal with existing traffic pressures in North East Guildford and fails to address the cumulative effect on traffic flows on the A247 of new housing at Gosden Hill, Wisley Airfield and Garlick’s Arch combined with greater commercial use at Burnt Common.

Surrey County Council's proposals for 100,000 visitors a year to Newland Corner makes the traffic problem worse in this part of the borough and has not been factored into transport requirements in the plan.

The narrow A247 through West Clandon will simply not be able to cope with the volumes of traffic that would result from being the only main road over the railway outside of central Guildford.

Infrastructure and delivery policies 11. 12, 13. 14

Whilst I support the general principle of the policy statements as presented in each case there are currently serious deficiencies and shortcomings of the existing infrastructure in the GBC borough at the present time without the additional problems likely to be incurred with the excessive house building proposed in the Local Plan.

Most of the borough's infrastructure is antiquated, congested and straining to accommodate current needs and and organic growth. The Local Plan is targeting greenfield sites which require a lot of infrastructure investment as a pre-condition of sustainable development. It would be more appropriate to assess infrastructure needs and tailor development accordingly.

As the Local Plan does not address current existing infrastructure needs (such as poor road conditions, insufficient school places and medical centre capacities), it is not possible to support additional infrastructure proposals for the proposed new developments. Therefore I OBJECT to these policies.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
The addition of additional facilities such as schools, doctor's surgery and shops on Wisley Airfield would not take the burden off Ripley as they would be for the Inhabitants of the new village. These new inhabitants who would still use Ripley as a route to avoid the traffic jams on the A3.

I also like the idea of being able to walk from my home in Elm Corner to shops, a surgery and a pub on the Airfield. However without major investment (like another lane on each side of the M25 from Reigate to Woking) in the road way infrastructure the plan does not work as the area would become one large traffic jam similar to that experienced by the Weybridge inhabitants who have suffered for years from overdevelopment.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I OBJECT to this policy as it stands. Various aspects of Infrastructure are acknowledged as congested, inadequate for the existing population and not able to accommodate much growth. However, greenfield sites – requiring heavy infrastructure investment – are targeted in order to generate CIL income for the council. This is not sensible. The current draft CIL scale also encourages development on greenfield sites rather than brownfield.

The methodology commissioned by the Council to assess traffic and the corresponding roads infrastructure needs is inadequate for the purpose of the Local Plan and identifies only the tip of the iceberg in terms of existing congestion. Looking at local traffic situations around the Borough it becomes clear that the schemes proposed will not solve congestion and the local road network has not been given sufficient consideration. Under the growth proposed some locations would require highway schemes that involve demolition of property and road-widening in residential areas to solve the resultant congestion. Even the A3 improvements are not guaranteed to take place but they are being used to justify removing large areas from the Green Belt before detailed traffic assessments have taken place. These detailed investigations are being deferred until the planning application stage and will be left to developers to prepare. If a site then proves to be unsustainable its Green Belt protection will have been lost for no reason and unsuitable development will take place by a more insidious process.

With regard to SANG provision, GBC has demonstrated that it has no genuine interest in conserving and enhancing biodiversity and clearly regards the Thames Basin Heaths SPA as an obstacle to be overcome rather than a valued asset. This is underlined at the end of the Policy wording which indicates that the council is more interested in meeting its legal responsibilities than actually protecting wildlife. GBC is failing to take account of existing biodiversity at sites selected for SANG provision.
Some infrastructure, as identified in Figure 1 of the draft IDP- is within the control and remit of Guildford Borough Council – they have some influence in relation to planning – but much is under the control, and is the fiscal responsibility of, Surrey County Council or Highways England.

It is not realistic to assume that car use can effectively be replaced for all or even many users. Those who are disabled or infirm cannot easily substitute car journeys with bike travel: the elderly; the disabled; those caring for young children (particularly uncertain bike users and those with multiple children to care for); those wishing to use cars for supermarket or other bulky shopping; those who wish to commute to work and have no facilities for showering or changing on arrival; those who have lengthy and tiring commutes at present, for which the car is the final (short) element of a long journey (for those commuting into London from outside Guildford, a daily 3 hour commute is typical; this cannot realistically be extended by extensive cycling). All these factors mean that the replacement of the car with cycle use is likely to be overstated by many studies, particularly given narrow roads which do not allow effective or safe bike lanes.

Funding is not the only - nor the main - obstacle to improving infrastructure within the borough, and this seems not to be recognized. Guildford is a gap town, set in a bowl within the Surrey Hills Area of Outstanding Natural Beauty to the south of the borough, and with large sections of the borough affected by the Thames Basin Heath Special Protection Area to the north. There is a ribbon through the middle of the borough which contains rail and road links to London, but is already heavily congested, is Green Belt, AONB, SPA or more than one of the above. Very little of the borough is available for extensive development of infrastructure or any building. Do we really want solutions that involve driving new roads through our remaining countryside – including the AONB – at huge cost in financial and environmental terms. Such solutions may be the only ones left when the inadequacies of this proposed Local Plan are realised after the event.

Policy indicates note an intention to pool Community Infrastructure Levy from most new build development and to use CIL receipts to assist in provision of infrastructure needed to support the delivery of the plan. As with other aspects of planning, there is a failure to recognize that out of town settlements in particular have particularly high requirements for additional new basic infrastructure in order to exist at all – roads, sewers, water provision, electricity, gas, telephone and broadband links will all need to be provided and in many cases the links to existing services will need to be upgraded before these can be implemented. The ability to divert funds from CIL to other uses will be inherently limited, not least that otherwise the proposed settlements will not be able to function. The Council strategy of taking CIL from new build in the Green Belt seems to be to pay for roads within the town centre, as indicated in the policy which notes that legislation prevents the use of planning obligations to fund existing infrastructure deficits.

In the reasoned justification, it is indicated that the council will be prepared to negotiate if an applicant claims that the infrastructure requirements for their development make it unviable. This means that some developments will go ahead anyway and worsen the infrastructure deficit. The Policy claims that infrastructure needed “should” be provided and available when first needed but I have no confidence in the council enforcing this.

The absolute constraint on developmental capacity within the borough represented by the infrastructure limitations cannot be swept aside, but the council has ignored this and failed to apply a constraint on the housing number.

I am not convinced that the extent of existing traffic congestion has been fully recognised by the SCC transport assessment because the methodology employed waters down the level of traffic observed. This has knock-on effects when modelling the various development scenarios. The result is that the requirements identified (expensive though they may seem) are the tip of the iceberg. One of the easiest issues to understand is the use of average peak hour flows for the baseline data. SCC acknowledge that that this is “typically lower” (see Transport Assessment 4.13.4 but GBC prefer the averaging approach with some eloquent wording in their Headline network metrics (3.9). A much better solution would have been to collect reliable baseline data that allowed for the effects of queuing and modelled each hour (or a shorter time period). Such an approach would have cost more but GBC seem unwilling to go the extra mile for reliable evidence while being content to spend large sums of money on propaganda exercises such as their one-sided video. There are other more technical reasons why the transport assessment methodology fails to fully identify current and planned congestion.

Planned developments for Guildford and Waverley Boroughs were modelled together but growth for the rest of the UK was allowed for only using the DoT forecasts. As a result it is not clear whether adequate allowance has been made for significant developments planned for Woking and other neighbouring Boroughs. This represents an inconsistency in approach with the West Surrey SHMA.
Many of the results for the PM peak are missing (TA 4.1.11 states that “these can be set out in an addendum report at a later date”). We believe that those who need to travel on the roads in peak hours will be every bit as interested in their future journeys home as they are for going to work. Publication of the Transport Assessment was delayed until the start of the consultation period so perhaps the non-inclusion of many PM results was simply a result of running out of time.

The Model Development Validation Report does include some interesting baseline data that may be of interest to residents in terms of local knowledge of traffic.

We are not convinced that it would be practical or desirable to end up in a position where the only solution to traffic congestion is to build many more new roads as by-passes through the Surrey countryside, or turn existing roads into dual carriageways, or demolish buildings (some of which may be historic) in order to accommodate higher capacity junctions in built-up areas.

It is noted that the infrastructure Development Plan was developed using hotspots identified in “OGSTAR” (the previous Transport Assessment used for the 2014 consultation) as a starting point. (See Transport Topic Paper (5.56)). However, the site list used for OGSTAR was not even compatible with the former draft Local Plan let alone the current one. Despite this, the Key Evidence mentions the June 2016 TA but not OGSTAR.

Appendix C (Infrastructure Schedule) is lacking in detail concerning what work will actually be carried out for most of the Local Road Network projects and the cost estimates are clearly at the guesswork stage suggesting that these schemes have not been fully thought through or checked for viability. If more detail is available then why not provide it.

It is not clear whether CIL will be received in time to put the required infrastructure in place for each development – or what penalties will be applied for late payment.

The Monitoring Indicators rely entirely on annual CIL receipts and spending. Surely they should look at actual infrastructure delivery and any changes in its adequacy.

---

I object, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I object to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces. Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past
through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule.

Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.
There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the policy on Infrastructure and delivery.

Comments regarding the current overloading of all aspects of infrastructure were made during previous consultations. There is no reason to believe that there will be any improvement in delivery of infrastructure capability in the future and it is obvious that the only additional infrastructure being considered is that required for new development. That means that the current infrastructure deficit will continue throughout the plan period. It also means that current underperformance will be accentuated by the addition of new developments and, particularly for road transport aspects of infrastructure, the disruption resulting from development works will exacerbate the current situation.

The sustainability of development in West Horsley is particularly questionable and the evidence of this is apparent from its position in the settlement hierarchy table produced by GBC (A.XII).

In conclusion, I object to the way in which the distribution of proposed new housing across the borough has changed from 2016 to 2017 as it increases the pressure on the Metropolitan Green Belt in the area of the borough which is most sensitive to loss.

For the Guildford area and for Ash and Tongham the proportion of homes is roughly the same from 2016 to 2017. Housing allocation for the Western rural area of the borough has reduced by 25% and the Eastern area has increased by
14%. Thus, of the total house allocation for the borough during the plan period, 48% is planned to be built in the Eastern rural areas. This inevitably means that additional Green Belt land will be utilised and the indication is that around 58% of all the new development in the borough will be built on Green Belt land. This does not accord with statements that the Green Belt will be protected, nor that a "brown field first" policy will be implemented.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Document:** Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

**Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )**

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon, The Street only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements. I have personally witnessed HGVs mounting the pavements on many occasions because they are unable to pass oncoming traffic any other way on this narrow road. Only last week one HGV only narrowly missed one of our neighbours who was walking with her children on the way to school.

1. I OBJECT to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.
Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
If development were to be refused the land would still have been removed from the green belt and its future rendered uncertain.

Residents are being asked to accept very large amounts of development with little or no detail being provided on measures which would relieve existing congestion and limit future problems. The cumulative effects of the developments listed below are certain to have a devastating effect on the A247 through our village (and of course on Send) and it is hard to see how any of the infrastructure proposed in the Plan (App. C) will do anything to mitigate the effects of these developments on the A247 and hence our village.

Summary of the Impacts on the A247 – My Objections

All of these developments will draw additional traffic to the A247 through the village. It would be naïve to think that the employment sites and schools will serve only the developments themselves. Apart from the normal movements of residents to and from the new sites there will be considerable additional traffic on the A247 generated by:

- children from elsewhere being delivered to schools and collected
- the employees of the offices and industrial sites getting to work and returning home
- the vehicle movements generated by distribution and storage activities
- traffic from Wisley wishing to travel South and returning
- traffic from Gosden Hill wishing to travel South and returning
- traffic from Slyfield wishing to travel South and returning
- private and commercial traffic originating in the South and accessing Gosden Hill, Burnt Common or the A3 and returning (including traffic from Dunsfold)

The A247 although an A road:

- is less than 2 vehicle wide in places
- does not have continuous footpaths
- has several sharp bends
- has a hump-backed bridge with poor site lines
- has a very difficult junction to access the station
- is largely unlit
- has a primary school
- is already very congested at times

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I am writing to object strongly to Guildford’s local plan for West Horsley and and planning for the surrounding areas which also affects West Horsley.

Reasons for objection:

The lack of infrastructure that already exists. We only have one infant and junior school, one medical practice and a few local shops. The school is already full to capacity. The Local Plan does not consider or propose expanding any of these services. Other resources will also be swamped.

The roads are already busy and the country roads are poorly maintained. There are few parking facilities. At weekends the roads are crowded with cyclists who delay traffic and cause endless frustration to drivers. The impact of the additional traffic caused by the proposed developments for West and East Horsley and other villages will increase the chaos and danger on the roads. Already the traffic has increased through West Horsley Village. Larger vehicles are starting to use the road, particularly when the M25 is blocked (quite a frequent occurrence). The A3 already carries too much traffic causing endless delays around the Guildford area for most of the day. The M25 is stop/start traffic or traffic is at a complete standstill, again for a lot of the day. This must already be polluting our environment.

If public transport was increased this would impact on severely on the current traffic situation.

Our local roads, particularly Ripley Lane are subject to flooding when there is heavy rain. Thames Water has already advised Guildford Borough Council that the wastewater network is unlikely to be able to support the demand from all of the proposed developments.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
village and with greater vehicle traffic being generated from these developments there is a real danger that there will be
an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will
result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and
risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the
road making it very dangerous, especially when vehicles mount the pavements.

10. I OBJECT to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns
over the planning of the infrastructure requirements and that the projects identified will be implemented when required,
if at all.

Despite the Garlick's Arch site (A43) being a significant site for development, no infrastructure projects have been
identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing
residents' in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and
sewers. No plans to improve these services should mean no development of the Garlick's Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages
Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity
and suffering from funding cuts or freezes. Any further development without funding will place further stress upon
existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will
stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
Finally I would like to comment on the sites in East and West Horsley where I live. My comments above on Policies in the Plan will make clear that I think it unreasonable and grossly bad planning to propose a 35% increase in the number of homes in West Horsley. Certainly the Horsleys need some new affordable homes but they do not need 533 new homes, a vast number of which will be large houses for commuters. There are inadequate bus services and the trains are already full. (it is impossible to park at Horsley or Effingham stations some days) The medical services are at full stretch and the Raleigh Primary School and Howard of Effingham Secondary School are already turning pupils away. Both villages already suffer from flooding and the addition of 533 new homes will exacerbate the problem.

Of the six major sites proposed, the Manor Farm site (RefA 38) and the Ockham Road North site (RefA 39) are perhaps the least objectionable since the Manor Farm site is fairly self-contained and presents little scope for further expansion while the Ockham Road site is close to the shops, medical centre and station, so offering the possibility of reduced car use and a suitable sit for smaller homes for people wishing to downsize (always assuming the drainage problems on that site could be overcome). The East Lane site (A41) is the most objectionable since it would destroy an open area of countryside and potentially lead to much further development.

West Horsley is a rural village. It is not semi urban and it would be madness to develop a semi urban village five miles from Guildford with no viable proposals regarding infrastructure.

Guildford does not really need 13,860 new homes. The Plan should be put on hold and reviewed post-Brexit with a view to determining a reduced target based on updated assumptions that can be disclosed and debated. We could then hopefully identify a sensible number of homes to be developed in the villages without destroying the Green Belt.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

Attached documents:
temporary school room 'containers' to accommodate current numbers. The additional strain on the system which will arise has not be addressed by Surrey CC nor does GBC seem to have allowed suitable land area for addition of schools and playgrounds.

I therefore object to the proposed numbers of houses GBC are planning.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
• So in essence, with regard to the villages of East Horsley and West Horsley, the Guildford Local Plan imposes an unsupportable burden on drainage infrastructure, schools, the roads network, medical services, shopping provision, parking facilities and public transport. Therefore, I STRONGLY OBJECT to the Guildford Local Plan, as currently drafted, on the basis that allowances for these issues are barely addressed and there is no consideration whatsoever for the need to expand local utilities and services to accommodate the proposed increase of residents in East and West Horsley.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the plan due to the impact upon local schools and our medical facilities.

Our local schools in the area are already full and oversubscribed. There doesn’t appear to be any extra school places planned to accommodate the extra children that would move into these new houses.

It is a similar situation in our medical centre. Unless you are extremely unwell and in need of immediate medical attention, it is currently almost impossible to get a timely appointment.

Comment ID: PSLPP16/14983  Respondent: 8880321 / Elizabeth Baker  Agent: 
Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

The consultation does not deal adequately with infrastructure demands, solutions to which are needed in advance of, not following, development. Anyone who has travelled along the A3 in the morning and afternoon rush hours will know how inadequate that road now is around Guildford. The A246 is similarly congested, especially at school times, and the additional housing in areas that use this as an artery will make short journeys intolerably slow. Trains between London and Guildford and the intermediate stations are overcrowded, parking at stations is inadequate and expensive.

Potential Sites for Development
Sitese in East and West Horsley:
Schools
There are 3 primary age schools in the Horsleys already (two independent and one state), these cause considerable traffic problems and a further increase in school population cannot be supported. The local primary school (The Raleigh School) serves East and West Horsley and is oversubscribed - even children living in the Horsleys cannot all obtain a place. It’s location creates long tailbacks because it is accessed from 2 roads both of which are cul-de-sacs. At secondary age the Howard of Effingham School is oversubscribed and the Horsleys are not in the catchment area for the George Abbott School in Merrow. The council has recently refused an application to rebuild the Howard of Effingham at a nearby site so there is little prospect of expanding the school without further compromising the facilities provided. The Surrey County Council is very aware of the problems there have been in allocating Horsley children to places for secondary education. Even halving the proposed development of over 500 additional homes in East and West Horsley will result in hundreds of
additional school-aged children in need of a school place. This is simply unrealistic and unsustainable.

Road and Rail Transport
The two roads through the Horsleys are narrow and in many places are without pavements but are appropriate for the size and nature of the villages as they currently are. Both roads are crossed by low narrow railway bridges and both suffer from other pinch points. As the majority of additional residents would have to commute to work either by driving through the villages to the A3 or A246 or to get to the station, a significant increase in population would exacerbate transport problems. Already access to, and progress along, the A3 and A246 is very slow especially during school term times. The consultation document identifies A3/M25 access problems in relation to development of Wisley airfield and the same would apply to further development in East and West Horsley.

Whilst there is reasonable rail transport to London or Guildford and a less efficient service to Leatherhead and Epsom, due to rail congestion the service between Horsley and London now takes longer than it did in the 1920s. Even with more home–working than was the case some years ago, at peak times it is necessary to stand for much of the journey from London and when there is disruption, passengers may not even be able to board the train due to overcrowding. Although Southwest trains is extending capacity this will quickly be overwhelmed. The 500 homes could create an equal number of additional passengers.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Comment ID: PSLPP16/15583  Respondent: 8880321 / Elizabeth Baker  Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object.
There will be significantly increased congestion to local village roads resulting from proposed development and there is no plan for road infrastructure

Over 5000 new homes are proposed between the M25 and Burpham. There is too much traffic in our villages already and this plan will result in substantially increased congestion with no plans to remedy this. Roads are narrow and mostly without footpaths. 5000 more houses in this area, coupled with pollution from the correspondingly busier A3 and M25, will have a profound impact upon declining air quality.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

1. Local Facilities and Infrastructure

The consultation is flawed as it does not set out for comment the infrastructure changes that would be needed at the time of building new homes to support the nature and extent of development proposed.

<td>I object to the threat the Local Plan poses to transport, local roads and road safety. I specifically object to:</td>
<td></td>
</tr>
<tr>
<td></td>
<td>1. The assertion that the development will result in a meaningful shift to cycling and walking, the development is too isolated and, even within the development itself too spread out to anticipate a reduced reliance on private cars.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>1. The increased volume of car traffic. A proposed development of 2,068 homes would result I an estimated 4,000 additional cars on the local roads.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>1. The congestion this traffic will cause on the narrow rural roads on Ockham and the surrounding areas, exacerbated by wide vehicles including increased bus and HVG movements.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>1. The danger this traffic will causes to local cyclists and pedestrians, due to the ab ensue of any cycle paths and the lack of pedestrian footpaths (and the space to provide them).</td>
<td></td>
</tr>
<tr>
<td></td>
<td>1. The increase in the already severe congestion on the Strategic Road Network of the A3 and M25. A further planning application at RHS Wisley (with a significant increase visitor traffic) and a proposed 600 pupil secondary school on the site would add additional congestion at the M25/A3 junction as well as local roads. No development can proceed without significant infrastructure enhancements to the A3 and M25. Partial improvement works on the A3 south of the site are not due to start until 2019 at the earliest.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>f. The lack of suitable public transport. The local rail stations of Effingham and Horsley cannot cope with the proposed increase in passenger traffic and car parking is already at capacity.</td>

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )
I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.
There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

I object to development without improvements to local infrastructure

Local facilities eg doctors, schools, transport facilities in Horsley are already stretched. Any development planned must take account of required improvements to local infrastructure. The number of homes currently planned for West and East Horsley is entirely unsustainable.

I would like to end by saying I appreciate it would be naïve and unrealistic to expect the villages of our borough to stay exactly the same. I would support limited new development in West and East Horsley, WITHIN the existing village boundaries and on existing developed sites like the Ramada Thatcher’s Hotel (Ref A36, ID 2044) and the Bell and Colvill Garage (Ref A37, ID 16) as long as the local infrastructure is improved to cope.

I would NEVER support the building of homes on the Green Belt and I object to the village boundaries being extended to increase the availability of land for housing. However, I would support the building of a new Raleigh School in East Lane (Ref A41, ID 2063) as I believe this need to be exceptional (the current site is not sustainable for the existing population of the village) and there is no other local site previously developed which would be large enough or suitable for a new school.

In conclusion, I urge the council to revise the local housing needs and amend the Local Plan so that development of Brownfield sites is undertaken and the Green Belt protected for future generations.

I copy in my local councillors here who were elected on their promises of protecting the Green Belt and supporting their local communities. I hope they do so.

There is no infrastructure to support large housing developments - limited shops, medical facilities and schools, the proposal would bring several thousand more people to the area with attendant cars - the Guildford area road systems and major transport links such as the A3 and M25 are already full to capacity during the day and there is very limited public transport. Train services and parking at the local station is at capacity and the proposed development sites would in any case involve car use to get to the station.

DRAINS, WATER SUPPLY, FLOOD RISK, CONGESTION

Our drains, our water supply, our medical facilities and our roads cannot cope with the proposed number of new homes. Building this number of homes will lead to flood risk here and downstream (leading towards Ripley and further afield towards and along the Wey and Thames). The planned development on Green Belt is therefore unsustainable.

To propose fairly extensive building and an increase in the local population without considering the infrastructure is a gross error of planning. The schools are full and there is, apparently, no money for school building. The station car parks are full. there is no obvious room to expand shopping facilities or parking areas to shops. The doctors' surgery is at capacity also the roads are frequently clogged up. If anything, expansion of the infrastructure is almost a greater problem than expanding housing provision. Hence, I object most strongly to the new local plan.

2. The congestion that development will cause to the local village roads and the lack of road infrastructure (Policy 11)

5,036 houses are proposed between the M25 and Burpham (about 5 miles) which will obviously lead to a merging urbanisation of identities the villages. There is too much traffic in our villages already and this plan will cause more congestion in West Horsley, East Horsley, Normandy, Ockham, Ripley, Send and Clandon, with no plan to improve that. The rural roads in this area are narrow, in poor condition and have no footpaths. 5000 more houses in such a small area means dangerous and unsustainable traffic.

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1. I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

   Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

   Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

   I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

   Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

   With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

   The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

   The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

3  General comments

Medical facilities. The current medical centre in Kingston Avenue, East Horsley is always extremely busy and it is difficult to make appointments. If the population increases there will be a shortage of GPs, which is already a national problem. An increase in the size of the medical centre will put corresponding pressure on local hospitals particularly the Royal Surrey County Hospital in Guildford.

1. Infrastructure We understand that some infrastructure plans outlined in the last Guildford Plan have still not been implemented. This does not give us much confidence that the 2016 Plan will be able to achieve its goals for schools, roads, drains, surgeries etc. No Plans have yet been published to reassure residents that these have been considered and funds are available.

1. Transport. The transport to support more housing is not sufficient. The roads are not suitable for more buses. The Station Car Parks are full and there are no safe cycle paths. Many roads do not have pavements for pedestrian access to public transport.

**POLICIES I1, I2 & I3**

These three policies cover Infrastructure & Delivery, Supporting the Department of Transport’s ‘Road Investment Strategy’ and Sustainable Transport. Whilst we support the general policy statements as presented in each case, it is the detailed infrastructure proposals for Guildford Borough which give us cause for concern.
I OBJECT to the infrastructure proposals and believe that they do not meet the stated objective of providing infrastructure to support the proposed developments. There are serious deficiencies and shortcomings in the infrastructure of Guildford Borough as it is today and that the aggressive housing policy as proposed by GBC in the Proposed Submission Local Plan will exacerbate this problem.

The following comments can be specifically made about infrastructure in East Horsley today:

- Roads across the parish are in poor condition with many potholes. Many roads are unable to sustain their current levels of traffic, particularly the increasing levels of HGV traffic;
- The principal through roads traversing East Horsley are narrow and winding, have a series of pinch points, have sections without any pavements and are generally unlit. As a senior SCC councillor remarked at a recent public meeting in the village hall: “East Horsley has lanes, not roads.” East Horsley’s ‘lanes’ are totally unsuitable for high volumes of traffic, in particular for the volume of HGV’s now using them;
- Many of the drains are blocked or otherwise in poor condition giving rise to frequent surface water flooding when it rains;
- The pavements are in poor condition. As well as being narrow, they are often uneven and/or cracked making it difficult, for example, for people with pushchairs or prams or in wheelchairs;
- There are insufficient school spaces for the number of local children needing them, with the result that children are often allocated to schools a significant distance away such as Dorking or Woking; and The Medical Centre in East Horsley is already at capacity in terms of its number of patients. It is recognised that, as stated in the Proposed Submission Local Plan, the maintenance of adequate infrastructure and its expansion to meet growing needs is the responsibility of the relevant infrastructure provider. This is often not GBC itself but rather, for example, Surrey County Council or utility companies.

There are no proposals in respect of all the existing problems with for example roads, pavements, drainage, and schools.

Furthermore, it is inevitable that the proposed developments in East Horsley itself and nearby, particularly in West Horsley and the proposals for Wisley, will put further strain on the existing infrastructure. There are no proposals at all to cater for this.

Schools and Medical facilities.

As you must know, our schools are full and our Medical Centre stretched. You are making no promises that new schools are to be built, so I am assuming children living in all these new houses will have to travel out of the area to attend other schools. Not ideal in any way, and that means more traffic on the roads, and speeding through the village on our narrow roads, already a problem.

I understand that mention has been made of land at the tennis and cricket club at the top of Pennymead Drive. Are we not to have any recreational areas. Similarly the land at Kingston Meadow, which is enjoyed by everyone for sport, walking with dogs and for the village to come together to celebrate special occasions such as Jubilees and the Queen’s Birthday. I am completely lost for words that GBC can consider building so many houses in a lovely area and spoil it for everyone.
At one time it was considered safe to be within a Green Belt area, so why are you allowed to now relax those rules. I understand that people need housing, and I have no objection to houses being built in small pockets around the village eg. The Telephone Exchange Land, and I understand the need maybe for housing on Wisley Airfield, BUT ONLY PROVIDED the aforementioned facilities are put in place, SCHOOLS, DOCTORS SURGERY, POST OFFICE, SHOPS AND RECREATIONAL FACILITIES.

Please please, give more consideration before you ruin a very lovely part of our country and turn us into a suburban community instead of a rural one.

The Local Plan makes no mention of infrastructure which is of immense importance to all residents. ROADS are narrow and dangerously congested (the railway bridge has recently been damaged by a huge transporter) and cyclist are numerous.

STREET LIGHTING is minimal.

PAVEMENTS in many areas are narrow or non-existent.

PARKING is a huge problem.

THE MEDICAL PRACTICE is overloaded.

LOCAL SCHOOLS are over subscribed.

DRAINAGE is inadequate.

Local facilities are totally inadequate for the kind of expansion that is suggested.

The Medical Centre in East Horsley is already working to maximum capacity. It has proved extremely difficult to recruit doctors to the area in the last couple of years. We are currently functioning thanks to the use of locum doctors, and this situation is likely to get worse. The building is also at maximum capacity and will struggle to cope with the massive increase in patient numbers. This increased population is
The roads are already struggling to cope with traffic, with inadequate parking in the villages. This development will massively increase the number of vehicles using the villages and roads. The quality of our roads is shameful, several of them resembling dirt tracks with current traffic, never mind the proposed increases.

Schools are full, and the presence of private schools in the area should not be included in the provision of education as they are not likely to contribute enough capacity. A possible economic downturn may lead to significant increased demand for state school places in the next few years as private education becomes less affordable for many families.

I would strongly like to object to the Guildford Local Plan to build 500 new houses around the Horsleys.
The infrastructure of our villages cannot cope with many more residents. The schools are full, the Doctor's surgery is almost impossible to get an appointment with.

The trains into London are to full capacity as is the parking facility at the train station.

5. The Plan fails to address the need for a corresponding development of amenities and services in the planned building. Apart from constraints mentioned in No.4 (above) the wastewater network is not able to support the additional development (Thames Water advice to Guildford Borough); Flooding is also becoming a problem in the village, and further development of open land will exacerbate this issue which will lead to higher costs for the Borough Council; the local state school (Rayleigh School) is already over-subscribed with no room for expansion; Secondary education is equally constrained in the local catchment area and private schools in the area are at or near to full capacity. To my knowledge Surrey County Council has no plan to create further school places.

- Infrastructure – I drive almost daily sometimes a few times a day down the road that leads from The Duke of Wellington Pub to Horsley station

The road is narrow at the best of times extremely narrow in places so much so that even 2 big cars may have difficulty passing through let alone lorries.

The road system is also crowded and was not built to sustain the number of dwellings currently existing let alone more.

East Horsley if the plans went through would be a magnet from the new developments around for shops/station/doctor etc and none of these are built to sustain the current level of population let alone an increase. On top of this the school system is also overstretched at the moment to add extra children would break it

The Gas/Electric/Water/Drains system I understand are already at or close to breaking point and would have to try and operate on an unsustainable level.

The appears to have been no real consideration given to the local infrastructure to build extra Schools/Doctors/Hospitals etc this is all totally unacceptable.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**
1. Schools

Local schools are already full and turning away children who apply. Where will you build more schools in the area? Where will you find the land for these schools, their playing fields and their parking? More impact on our rural environment....

1. Medical Facilities

It is already difficult to get an appointment with our doctor within about 10 days. The medical practice in Horsley would have to be enlarged, which would necessarily also involve enlarging or renewing the building and providing extra parking areas, encroaching on the adjacent recreation area.

On a more personal note, our property is in The Street adjacent to the Bell & Colville site where, according to your plan, 40 new homes are proposed. This is a Conservation Area. Are you proposing to abolish the Conversation Area? How would you provide access to The Street and/or the busy A246 Leatherhead/Guildford road? How would this access impact on the children attending the adjacent Cranmore School?

We strongly object to these proposals, and ask you to think again.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

3) Aspects of your current infrastructure are undeniably poor. As an example the footpath from the Forest Road junction to the village is perilous particularly for elderly and disabled people. I challenge any of your members to use a walking frame along this stretch without putting your life in your hands.

Your future ideas of supporting infrastructure are unclear. Apparently you intend to build an infrastructure at Wisley on an adhoc basis i.e. a school, class by class. In the meantime the burden of the necessary facilities will fall on Horsley to maintain.

Shopping facilities are very limited in the Horsleys. A huge increase in traffic is likely for East Horsley where parking is already a problem at the local shops and railway station.

Extremely limited public transport in the area suggests a further 2000 cars in the Horsley area. There is inadequate parking for the present proposals and no clear evidence of new car parking facilities in the plan.

The local state schools are oversubscribed and Doctor's appointments difficult to access.
In conclusion we consider the Local Plan as currently envisioned would seriously overburden the Horsley area infrastructure, infringe seriously the Green Belt. Indeed the need for such a disproportionate increase in housing is not proven.

Please substantially reduce the extent of the GBC proposals and carefully reconsider these plans.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

---

All of our local Schools are already full, our Medical facilities are already overstretched and our village Parking facilities (including the railway station and local shops) are already inadequate with no space for improvement. All local roads are narrow and were built at a time when the stage coach / pony & trap were the typical mode of transport rather than today’s 4x4’s, long-wheel courier vans and supermarket delivery vehicles. Much of the Horsleys are built on clay with the consequence that drainage is inadequate.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

---

1. I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, a large number of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition, and have not been tendered. I object to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as Ripley, already suffer from parking problems. Further development around these villages will only result in more traffic and more parking problems.

With some 5000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested, with traffic accidents more likely to happen. I mention this as Surrey has become a mecca for cycling, particularly at weekends hundreds of cyclists passing through Ripley, Send and Clandon on the way to the Surrey Hills. Trade to local businesses such as the coffee shops in Ripley have benefitted from this pursuit, along with employment and wealth creation from local Small to Medium Enterprises (SME’s). I am like many a keen cyclist, and I am concerned that
the Surrey Hills will be damaged beyond recognition should this development be brought forward, thus losing it’s brand value, attraction and status. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road traffic accidents involving cyclists as a result of the development proposed under the local plan. This comes at a time when many of the local schools are trying to encourage cycling within their School’s Travel Plans (STP’s).

Most of the local rural roads also do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians. To example, in Clandon, where footpaths do exist, they are often very narrow in places with construction lorries mounting pavements in order to pass, and this has been already well documented by West Clandon Parish Council.

2. I object to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, I share the view that my family and I along with all other existing residents’ in the locality will see our quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site. The farm land around the South bound extension, floods regularly. Should this development go ahead, I expect that the flood waters will be pushed closer to my property and will present greater risk for flooding.

I also note that without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and very likely to be overwhelmed. It is well documented that many local services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

I am also concerned with the general reduction in future Police funding (Surrey Police identified that it needed to save £28.4m over the four years of the spending review between March 2011 and March 2015). Savings have been made, but their scope with new developments will increase, creating extra pressure. This will have further impact to all local residents as local Police will have 13,860 new homes during the plan period.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Comment ID: PSLPP16/9301  Respondent: 8892737 / David Eagle  Agent:
Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy I1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.
Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

**I OBJECT** to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.
Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

A. Policies ID1 & ID2 Infrastructure – My Objections

Although much is made of the need for new infrastructure to support these developments and for this to be in place as needed, the Plan admits …”we forecast that there will also be an absolute increase in overall traffic volumes” and this is assuming all the infrastructure (listed in App. C to the Plan) is in place in a timely fashion. GBC has little or no control over the plans of Surrey County Council as the local highways authority and Highways England for trunk roads. Worryingly, the Plan now has less substantive information about improvements to the A3 South of the M25 from Highways England and it appears that their plans are not yet formed (Policy ID2). In the absence of such information, the infrastructure proposed is specific to each proposed development and does not address cumulative effects. What would be the case with regard to planning approval if SCC and/or HE do not provide timely infrastructure?

The Plan now calls for nearly all infrastructure to be funded by developers (see APP. C). We question how realistic it is to expect developers not only to pay for all the infrastructure but also to have it in place in a timely fashion. The Plan says that planning permission will be refused if timely provision of infrastructure cannot be secured. Such refusals will almost certainly be settled in the courts. Developers’ business models are based on building and selling houses to create the cash to provide infrastructure. People will be living on the sites well before infrastructure is complete. Will GBC prevent development of Gosden Hill until slip roads etc. are provided off and onto the A3? Again, the infrastructure is site specific and does not address cumulative effects.

If development were to be refused the land would still have been removed from the green belt and its future rendered uncertain.

Residents are being asked to accept very large amounts of development with little or no detail being provided on measures which would relieve existing congestion and limit future problems. The cumulative effects of the developments listed below are certain to have a devastating effect on the A247 through our village (and of course on Send) and it is hard to see how any of the infrastructure proposed in the Plan (App. C) will do anything to mitigate the effects of these developments on the A247 and hence our village.

B. Policies having an impact on the A247 – My Objections

The following objections are made because of the impact they will have on the A247 and hence the village of West Clandon.

B.i. Policy A25 – My Objections
Gosden Hill development of 1700 houses. Reference to a potential link road from the development to the A247. The clear implication is for an access from the development to the A247 with enormous traffic implications for the A247.

South bound off- and on-slip roads to service the development and replace the existing off-slip road to Burpham. The only North bound access to the A3 will be via the existing slip road off Clay Lane. (See later, Burnt Common).

4-entry form secondary school, a primary school, a retail centre and a park and ride for up to 700 cars.

When developed, the new employment site at the north side of Gosden Hill Farm (site allocation A25) will be treated as an Office and Research & Development Strategic Employment Site (7000sq.m). This could mean several hundred employees.

B.ii. Policy A43 – My Objections

5) Garlick’s Arch development of 400+ houses and facilities for travelling showmen (implies storage yards and long vehicles). This will generate traffic on the A247.

B.iii. Policy A43a – My Objections

6) Provision of a Northbound on-slip road and a Southbound off-slip road to the A3 to join the A247. These are stated to be required to relieve Ripley from the effects of the development of Wisley. It is not clear how this could work unless traffic from Wisley wishing to go South either goes up to the A3/M25 roundabout and comes back down the A3 or direct access to the A3 (as claimed by the promoters of the Wisley development) Southbound is provided at Wisley/Ockham. In either case, slip roads at the A247 seem unnecessary. It is more likely that these slip roads are to provide access to the Garlick’s Arch and Burnt Common developments. The slip roads will have the effect of creating an all-ways junction with the A3 at Burnt Common making it a centre for future development and a traffic magnet with clear implications for the A247.

7) Burnt Common strategic industrial employment site for light industry, storage and distribution activities. It is to be designated an Industrial Strategic Employment Site which means that it is a preferred site for industrial development including waste management facilities. The site is 9ha which it is stated allows for considerable future expansion. This will generate large amounts of traffic including heavy vehicles on the A247.

B.iv. Policy A58 – My Objections

8) Slyfield development of 1000+ houses. (A road from Slyfield to Clay Lane and thus to the A3 has already been agreed.) This will generate traffic on the A247 from those wishing to go due South.

B.v. Policy A24 – My Objections

9) Slyfield development of 1000+ houses. (A road from Slyfield to Clay Lane and thus to the A3 has already been agreed.) This will generate traffic on the A247 from those wishing to go due South.

B.vi. Policy A35 – My Objections

10) The Wisley development of a new village / town with at least 2000 houses, 4-entry form secondary school and employment land. The development does not seem to meet the NPPF requirement that developments that generate significant movement will be located where the need to travel will be minimised and the use of sustainable transport modes can be maximised. The provision of slip roads at the A3/A247 junction to relieve the impact of this development on Ripley will have potentially severe effects on the A247.

B.vii. Policies A37, 38, 40, 42, 44 & 45 – My Objections

11) Some 295 houses in various smaller developments in West Horsley, 100 in Send and 15 in Ripley. These will generate traffic on the A247 to access the A3.

B.viii. Policy P2 Introduction – My Objections
The removal of green belt protection from the prison site meaning that it is likely to come forward for housing development. The nearest feasible access to the A3 is at the A247 junction.

B.ix. Non-plan Items– My Objections

Surrey County Council’s business plan for Newlands Corner (not referenced in the Local Plan) to attract 100,000 more visitors a year. A significant proportion of these can be expected to use the A247.

Waverly B. C. has approved the development of 1,800 homes at Dunsfold which has the potential to feed traffic trying to avoid Guildford, onto the A247 to access the A3 (not referenced in the Local Plan).

B.x. Summary of the Impacts on the A247 – My Objections

All of these developments will draw additional traffic to the A247 through the village. It would be naïve to think that the employment sites and schools will serve only the developments themselves. Apart from the normal movements of residents to and from the new sites there will be considerable additional traffic on the A247 generated by:

- children from elsewhere being delivered to schools and collected
- the employees of the offices and industrial sites getting to work and returning home
- the vehicle movements generated by distribution and storage activities
- traffic from Wisley wishing to travel South and returning
- traffic from Gosden Hill wishing to travel South and returning
- traffic from Slyfield wishing to travel South and returning
- private and commercial traffic originating in the South and accessing Gosden Hill, Burnt Common or the A3 and returning (including traffic from Dunsfold)

The A247 although an A road:

- is less than 2 vehicle width in places
- does not have continuous footpaths
- has several sharp bends
- has a hump-backed bridge with poor site lines
- has a very difficult junction to access the station
- is largely unlit
- has a primary school
- is already very congested at times

D. Cumulative impact of changes – My Objections

Changes to the Plan have done nothing to alleviate the problems (particularly of traffic and congestion) raised in residents’ previous responses. Indeed it is now clear that the problems will be made much worse. There do not appear to be any changes which would be of benefit to the Clandons and indeed the cumulative effect of what is in the Plan and
some external factors not in the Plan will have a much worse impact on the A247 through West Clandon and Send than the 2016 draft. Note that the A247 is the only road over the Guildford to Waterloo railway, North of Guildford that doesn’t involve travelling through the town centre.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

</tbody>
</table>

Partially as a result of the planning controls but also as a result of topography with large areas forming flood plains draining ultimately to the Mole and Wey and limited crossing points of these rivers and streams the area has limited road infrastructure and Surrey County Council acknowledged this recently saying the area had lanes not road without the usual architecture of drainage and highway design found in sustainable urban areas. The width of the roads is limited and without wide scale compulsory purchase and reconstruction upgrading of these roads to a safe and sustainable design is not possible and the complexity of such a scheme is not deliverable.

The village school was unable to accept either of our children with the only option available, 20 minutes away at Merrow and the level of subscription is unlikely to abate. The medical centre is also full and the retail parades maintain a balance of facilities.

The community infrastructure is stressed but balanced with roads that already present significant risks to pedestrians and other users. Wing mirror strikes of pedestrians are all too frequent as cars pass along the Ockham Road North and cars have to mount the pavement to let HGV traffic pass. The village has been cut off by flooding from the A3 during exceptional rainfall and these weather events are likely to increase.

The classification of Ockham Road North and South as an "A" class road is out of necessity rather than design, the necessity being that no other route is available to designate, it is now unsafe and in need of traffic calming measures and the proposals to place a further burden on it by permitting a substantial increase in local development is not tenable.

The railway line is held out as a possibility of sustainable transport but each train is full as it leaves Horsley each weekday morning with passengers having to standing from Effingham and Cobham for nearly three quarters of an hour to London and passengers unable to board by Surbiton. It is noticeable that more passengers travelling from Guildford are electing to use this line as Guildford grows and the mainline is overwhelmed. The capacity needs to be protected for those travelling further from the sustainable centre of Guildford.

1.1 We object to policy II Infrastructure and delivery
1.2 Most of the borough’s infrastructure is antiquated, congested and straining to accommodate even current needs and organic growth. Yet this plan’s commitment to building housing estates across the Guildford countryside will mean either major infrastructure investment that no-one is prepared to pay for or else a catastrophic and simultaneous collapse in transport, educational, medical, energy, water and communications services.

1.3 The plan targets greenfield sites – requiring heavy infrastructure investment – in order to generate CIL income necessary to meet an infrastructure shortfall that is already serious. This is not sensible. The current draft CIL scale also encourages development on greenfield sites rather than brownfield.

1.4 The policy wording says nothing about roads and traffic. The Council’s methodology for assessing infrastructure needs in this area is inadequate, identifying only the tip of an iceberg of existing congestion. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that involve demolishing property and road-widening in residential areas to solve the resultant congestion. The A3 improvements are not guaranteed to take place but they are being used to justify removing large areas from the Green Belt before detailed traffic assessments have taken place. These detailed investigations are being deferred until the planning application stage and will be left to developers to prepare. If a site then proves to be unsustainable its Green Belt protection will have been lost for no reason and unsuitable development will take place by a more insidious process.

1.5 Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritising greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly.

1.6 This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognising this as a key issue, the plan is based on a wing and a prayer.

1.7 The highways network is under stress at peak times in many parts of the borough. Queuing is the daily experience of drivers going to and from work. The local plan recognises the problems in para 2.14. Much of the road network is single-carriageway, and junctions act as constraints.

1.8 The key evidence on future traffic conditions is provided in the Strategic Highway Assessment Report (SHAR) which summarises the results of the tests carried out by Surrey County Council at the request of GBC. Five scenarios were examined using SCC’s strategic traffic model.

1.9 Scenario 1 contains all developments and planning permissions from 2009 to date. As such it corresponds to today’s circumstances, and describes the current unsatisfactory traffic conditions in peak periods.

1.10 Scenario 5 represents the position at the end of the plan period, including all development and highways schemes in the local plan.

1.11 The results of the analysis show that there will be widespread congestion in the morning peak hour across the network. The key strategic routes, the A3 through Guildford NE bound, and the M25 between Junctions 10 and 11, are shown to be at or over capacity. The summary network statistics presented in the SHAR, while useful, require some interpretation because the analysis of vehicle-hours is derived from link speeds only, and does not reflect junction delays and queues. The tables that show the ratio of flow to capacity and level of service are especially helpful to gaining an understanding of the conditions on the network in the forecast. Where the forecast traffic volume is above or close to capacity, flow becomes unstable and there is congestion. The SHA results provide evidence that, in 2031, congestion will be worse than it is today on much of the network.

1.12 It is the case that the traffic modelling does not take into account the potential for increased use of other modes, but the trip rates used for developments already have built in the typical level of use of other modes, and services will be required to meet that need. It is also the case that the model does not allow for park and ride, which would improve matters in the town centre, as discussed below.
1.13 In order to gain an insight into conditions across the network, it is necessary to combine information from several tables in the SHAR. Table 4.5 shows that the M25 and A3 will be at capacity in Scenario 5. The other roads that will have poor levels of service include those in Table 4.5 but also those in 4.12 (except the A3) and those in Tables 4.3 and 4.4 with levels of service E and F that will not be given some relief by improvement of the A3 in Scenario 5. Paras 4.10.3, 4 and 5 point out that there will be increased congestion. Given that the starting point is unsatisfactory, there can be no expectation that the schemes in the Infrastructure Development Plan will provide an overall improvement. There will be some local benefits, such as the Ash rail bridge for example, but in general conditions will be as bad and in many places worse. So the statement in the SHAR para 4.2.5 that ‘the combined mitigation as reflected in Scenario5...indicates that at the strategic level it accommodates the additional PSLP demand’ needs qualifying – ‘at the cost of a lot of queuing’.

1.14 The cumulative effect of the additional traffic generated by the developments in the local plan will be to increase congestion, even with the proposed highway schemes in place. More detailed analysis of the junctions and queuing is required. So we question the conclusion that the developments would have “an acceptable impact on the capacity of the highway networks in terms of the policy test set in paragraph 32 of NPPF”.

1.15 Appendix 3 of the Transport Topic Paper shows the phasing of housing development and transport infrastructure. The major scheme being considered for the A3 between the A31 and the A320 is scheduled for delivery in the period 2023/24 to 2027/28. The strategic developments at Blackwell Farm and Gosden Hill Farm are shown as being phased in from 2021/22 onwards. The Garlick’s Arch development is shown as starting in 2019/20. Therefore, there will be a period in which the existing A3 has to cope with the additional demand arising from those developments before extra capacity is provided.

1.16 The following comments regarding the strategic sites are taken from the SHAR:1.16.1 Blackwell Farm – there will be congestion at the A31 junction, and the problems at the Tesco junction, and the Egerton road /Gill Avenue junction (para 4.9.5). Traffic is likely to access the Surrey research park and the RSCH through the development (para 4.7.3)1.16.2 Gosden Hill Farm – there will be an increase in traffic through Burpham. There will be pressure on the A3100/B2234 roundabout (paras 4.7.6, 4.7.7 and 4.7.8).1.16.3 Wisley – traffic will increase on minor roads to gain access to the A3 (N and S bound) and other routes (para 4.7.11). The development will add more traffic to the A3. The Burnt Common slips help alleviate the traffic through Ripley according to the model, but queuing on the A3 could mean this does not happen (para 4.7.14).1.16.4 Normandy/Flexford – the report has little to say about the impact of this large development. The increase in flow on Westwood Lane is noted (para 4.5.7). Tables 4.10 and 4.11 show junction delay reducing at the Westwood Land, B3000 junction, but an increasing at the Puttenham Hill/Millbrook junction.1.16.5 Ash – development in Ash is not specifically addressed, but there are major increases in traffic on a number of roads. The new rail bridge will bring relief (but traffic will move to the next junction).1.16.6 Slyfield – there are no remark relating to SARP, and as there are no additional trips shown in and out of the Slyfield residential zone in Tables 3.3 and 3.4, it is possible that this development has been omitted. There is a significant increase in trips to and from the Slyfield industrial zone, which will impact on the A320 and Clay Lane.1.16.7 Town Centre – the report has very little to say about the town centre. It is evident that the model is forecasting severe congestion on the approaches to the town centre, such as the A281, the A31 Farnham Road, and Woodbridge Road for example. No mitigation measures are planned. And in the Transport Strategy, GBC states that the intention is to adopt Allies & Morrison’s Scenario 2 which would have the effect of significantly reducing the capacity of the town centre road system. The implications have not been examined, but traffic using the A281 from Waverley, for example, would be affected.

1.17 The local plan does not state an objective for congestion. The two strategic objectives that are included for infrastructure refer to supporting sustainable development and delivering a balanced system. However, in para 2.15 there is an aspiration expressed about opportunities ‘to improve the performance of the road networks through transport infrastructure and service improvements’, which taken with the previous paragraph includes reducing congestion. The evidence so far shows that this will not happen.

1.18 The mitigation proposed is not sufficient to overcome the problems that will be caused by the level of growth in the local plan. Congestion will worsen. The network will lack resilience and be vulnerable to disruption due to incidents. Minor roads will have to cope with a lot more traffic, for which they are unsuitable.

I object to stretching Infrastructure to breaking point: Local services are already under strain and a significant increase in population would stretch these beyond breaking point. These include

- Parking at local station: parking after rush hour is already difficult;
- Doctor's surgery: where getting appointments is already difficult
- Local schools: where it is already difficult to get places
- Additional traffic on roads: sadly I already refuse to let allow my children walk to the local shops as there are already many vehicles drives too quickly along these narrow village roads - even more will increase the risk of serious accidents; and surrounding major roads (A3/M25) already suffer from long delays throughout rush hour but also at weekends and are not able to cope with additional demand with further expanding capacity

9. POLICY I1

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1).

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time.

In addition, the road surfaces are in a poor condition. I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of
large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Comment ID: PSLPP16/14759  Respondent: 8896161 / Carol Wilson  Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Policy I1: Infrastructure and delivery

I OBJECT to the Plan making proposals for areas of development without simultaneously making plans for the necessary infrastructure to be in place at the time it would be needed. Consequently I submit that the Plan is severely flawed. In many cases it is unclear if the improvements would ever be made – so Green Belt would be sacrificed unnecessarily.

The choice of large potential sites for building seems to be preferred by GBC possibly so as to get funding for infrastructure. I object to this sacrifice of beautiful land for huge housing estates. We do not need them. Small is what we need.

It seems that the effect on all of the infrastructure of a 77% increase in homes in Ockham and the Horsleys has not been considered or the cost calculated properly. We are at capacity already in terms of:

State Schools - all full. Private schools expensive and traffic problem from non-locals

Medical services – both GP and Hospital – long waiting times for both, as full

Station parking – no spaces by 9.00am on weekdays. Same at Effingham.
Sewage – pipes old and falling apart, our road (Pincott Lane) has to have 6 monthly clean and repair. Overflows frequently as poor fall and easily blocked. Raw sewage goes straight into the water courses. There is no capacity downstream at the sewage works.

Roads – small unlit country roads with no paths – we like this. Not suitable for influx of thousands of extra cars. (2 per household)

Surface water drainage – with a natural spring line where the chalk meets the clay, and poor flow we have regular flooding of roads. Ripley Lane and Ockham Road have been closed regularly after rain over recent years.

Parking at shops – Difficult now, impossible with 70% increase in numbers. Even worse if the ‘centre’ is enlarged – no room for that anyway.

The area will sink under the load if these proposals are implemented. The whole area would be ruined for ever.

The County Council has said it has no funds available to cover upgrades.

We cannot cope with the increased housing proposed in the Horsley area, let alone with Wisley Airfield as well.

• Be limited in size by the availability of all necessary local facilities, infrastructure and transport which is already inadequate. The Draft Plan contains insufficient proposals to increase the schooling, roads and transport, medical facilities, parking, drainage, mains utilities or any other infrastructure required to avoid serious over-use and overcrowding which will be caused by the increase in dwellings and residents in Horsley. At the same time it proposes to remove the only hotel in the village, and the insertion of office space, retail and leisure facilities (a Rural District Centre) which will completely change the character of the villages, and attract yet more traffic. Parking spaces at local shops, the medical centre, Village Hall and railway stations are already at a premium with no room for expansion.

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Whilst the individual proposals A36 and A37 look modest in size, when taken together with the other sites proposed for the Horsleys (A38-41), the total number of houses proposed is too high for these rural villages. It would have been clear to see, if GBC had merged the separate maps and presented them as one overall picture for clarity. Object strongly therefore to Site allocations A36-A41. Not only are they proposed for sites currently within the Greenbelt, but the infrastructure of the villages cannot support this quantity of new housing. We already have insufficient parking at the station, overstretched and archaic waste water removal systems (which apparently the water board wont be able to sort for several years for the current usage alone – has anyone from GBC actually witnessed the flooding that regularly occurs from sudden downpours for example?…and climate change predicts this will keep happening!), overstretched medical facilities, and overstretched schools. The heavy plant required for such large building proposals will further damage the road infrastructure, which GBC already struggles to maintain (largely due to water damage resultant from high water tables and poor waste water capacity)

The housing density of the proposed sites is also far too great and completely out of character with the current building density and style of the villages. For example, the proposed 100 houses for policy A39 would occupy less space than about half the number of pre-existing houses adjacent to this site. Given that these houses would presumably be targeted by families (due to proximity to the Raleigh school for example) the ensuing garden space for children would be woefully small for example. And the school itself could not support the increased numbers – People who have chosen to live in a village and school their children here have done so wanting a village school environment – they do not wish the school to be doubled in size because the village has been forced to double in size. These proposals would potentially harm the
quality of education the children of our villages receive. The A38 site proposed would mar the open feel of the current village of West Horsley, and would therefore detrimentally impact the village. The Site A36 is likely to change the visual entrance to East Horsley detrimentally, and this right-angled bend already suffers severe congestion at peak times – building here will undoubtedly exacerbate this unless very careful and thoughtful traffic flow measures are considered.

Adding to the argument against the housing proposals based on lack of adequate infrastructure, is the argument concerning safety to road users. The village roads are narrow in places and there is already a problem with oversized lorries using our villages for the building work currently active in both West and East Horsley. The danger to current road users from the vastly increased traffic through the villages, both in terms of the heavy lorries that will be required to undertake the developments proposed in the current draft local plan and the subsequent increase in number of cars on the roads, will be exacerbated. GBC is surely aware of the great and ever-increasing number of recreational cyclists using our village roads and surrounding lanes, especially after the Olympic route through Surrey promoted this sport. Developmental building as proposed, ensuing road closures which are bound to happen, heavy plant using the roads (often discourteously and at speed) and causing damage to the road surfaces, will all contribute to increasing the hazards for cyclists as well as causing misery and congestion for village inhabitants/drivers on these roads.

I object to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

The Local Plan does propose some additional schools but they seem insufficient to address the scale of development.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
The Horsleys’ schools, roads, car parks, drainage, medical practice and local facilities are already fully stretched by existing demands. It is more than likely that additional pressure resulting from 590+ new houses could not be absorbed.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.
The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

1. I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

   Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

   Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

   I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

   Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems. The A247 in particular is narrow and twisting and, in places, impossible for two large vehicles to pass each other. The footpaths are narrow and, therefore, dangerous for pedestrians. This country lane through a pretty village is already used by far too great a volume of traffic and it cannot take any more.

   With some 5000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.
The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

1. I OBJECT to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision for any increased capacity for Guildford hospitals. Where is this assessed and remedied? The Royal Surrey is already extremely busy causing inevitable delays in patients being treated.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Most of the borough’s infrastructure is antiquated, congested and straining to accommodate even current needs and organic growth. The plan’s commitment to build housing across the Guildford countryside will mean either major infrastructure investment, which no one will believe will happen and for which there are no funds, or else a catastrophic collapse in transport, educational, medical, energy, water and communication services.

9. POLICY I1

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.
The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen. Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable. There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
The Raleigh school is full in northcote crescent, and doesn’t have room for any more classrooms or kids. Any more cars going down there for drop off would cause gridlock.

At The Medical centre East Horsley, parking is already impossible and almost as hard as getting an appointment, it can’t take any more patients in my view and the small road to it cannot take any more cars.

The new plan is very flawed and ill thought through with regards to East and West Horsley in particular, please build at slyford where you have all the room in the world and its near to the employment area of Guildford it has good public transport and brand new schools with room for expansion.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
• I object to the increase in the already severe congestion on the Strategic Road Network of the A3 and M25. A further planning application at RHS Wisley (with increased visitor traffic) and a proposed 600 pupil secondary school would add further congestion at the M25/A3 junction as well as local roads. No development can proceed without Infrastructure enhancements to the A3 and M25.
• I object to the lack of suitable public transport. There is no regular bus service to the local railstations of Effingham Junction and Horsley; these stations cannot cope with the proposed increase in passenger traffic, and car parking is already at capacity.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT TO POLICY I1 (INFRASTRUCTURE & DELIVERY) • Infrastructure considered here as an afterthought, rather than pre-condition of development. Should be a key issue for the rest of the plan.

• Excessive housebuilding in countryside not supported by any funding or provision for infrastructure.
• Heavy focus on building on greenfield sites inefficient and unnecessary: cheap for developers but much more expensive for the public who have to fund the infrastructure.

• Draft CIL scale discourages use of brownfield land first.
• No plan for organic increase in existing traffic congestion, let alone once thousands of houses are built across the countryside. Local roads hardly considered. Green Belt being eroded before road widening/improvement plans certain, encouraging over-development of greenfield sites.

The scale of development in East and West Horsley

The Local Plan has earmarked six main development sites in these two villages which would result in a total of 533 new houses as well as a further 60 houses on smaller sites within East and West Horsley. This represents an increase of over 20% in the number of dwellings and would place an intolerable burden on the existing infrastructure. All local facilities (such as roads, schools, surgeries, parking spaces for shopping etc.) are already under enormous pressure and further development on the proposed scale is wholly impractical.
What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Comment ID: PSLPP16/14027  Respondent: 8903169 / Andrew Hooks  Agent:

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

The proposed scale of development in West Horsley will result in dramatic permanent change to the character of the area, and is unsustainable given the local infrastructure. The local schools are over-subscribed and full every year; the doctors surgery in East Horsley is invariably busy today and appointments hard to come by; the roads (especially Ockham Road North/South and East Lane) are very busy at peak times; and the basic services, especially sewerage/drainage, are already incapable of dealing with the current demand as the widespread flooding that invariably accompanies periods of heavy rainfall in the village shows (further development will mean more surface water runoff, and more immediate demand on outdated sewers and storm drains which in turn will mean more flash flood episodes around the village).

<td>I am not qualified to comment on the levels of affordable housing, sustainability, and climate change. But I would comment that the services in the Borough are already operating at capacity – the schools near us are full (we had to go private), the Medical Centre at East Horsley is full (we regularly have to wait up to a month to get a GP appointment, and the walk-in surgeries fill up before the doors even open), the traffic situation is poor and the train services are not geared towards a greatly increased local population. Were any development to proceed in the Horsley area I would suggest that the Council would need to upgrade the road network, parking facilities, medical facilities, schools, and rail links first. At most development should be heavily restricted to being within existing village boundaries and on brown field sites.</td>

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists pass through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.
Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Another issue I am concerned about is drainage. I understand that the existing drainage system will not be able to cope with the added burden on it from the many proposed houses. The foul drainage system will need to be upgraded to cope. Also, when there are heavy downpours, which in our changing climate seem to happen frequently, many of the local roads here flood. Vehicles on the Ockham Road North, for example, end up driving down the middle of the road to avoid the huge puddles running along large stretches of the road on both sides. With more traffic, vehicles will not be able to do this, leading to more cases of pedestrians getting soaked by the traffic passing at speed through the puddles, not to mention the harm that may be done to vehicles driving through the water, and the inconvenience of having to take a different route where flooding is impassable. I have been on the receiving end of such a soaking and seen others also get soaked by drivers! What does the council propose to do about this?

I am also concerned about parking and road safety. Where are all the additional cars going to park? There isn’t enough room for a big increase in the number of cars that will result from the proposed developments. Our roads will become too congested as well as polluted and it will become extremely difficult to find a parking place when needed. The shops and cafes will become overcrowded too. There will be a huge impact on our villages. The peaceful character of our villages will be destroyed by these proposed developments.

How will the medical facilities in this area cope? It is already much harder to get a doctor’s appointment in this area than it used to be where I previously lived in Wimbledon. With more houses, and therefore more people using the medical facilities, the doctors surgery won’t be able to cope. People will have to wait longer for appointments which could lead to an adverse affect on some people’s health. This is very worrying.

- I object to the fact that infrastructure (roads, doctors, schools) has not been properly assessed and is inadequate to deal with current housing levels. Nor have water supplies been adequately assessed, both in and out, in some of these low lying areas.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**
I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists pass through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. I object to the lack of planned infrastructure. Roads aside, there is no provision for these new residents – our local GP practices, hospitals and schools run at full capacity. With houses filling every spare piece of land no provision has been made for the supporting infrastructure.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/13808  Respondent: 8907457 / Russell Hills  Agent:
I object to there being no provision in the council's plans for minimal improvement in infrastructure in Horsley which I believe is presently only just sufficient for the existing population and which would require more policing, medical surgeries, transport in the event that further development went ahead. Recently village who pensioners I have spoken to elderly residents have expressed their distress at the prospect of being unable to park at the local shops as is difficult enough for them to do so already.

Sewerage is a cause for concern. With such a Substantial increase in housing with no improvement in sewers they could well burst as I believe they have in other developments of this sort leaving raw sewage floating above ground. Raw sewage has already been on the roads in Horsley.

I object also to the development of Horsley on the grounds of low water pressure which I believe already affects a fair number of properties and with an increased demand the situation is likely only to become worse.

I object to the increase in traffic which such a development will bring about. The small country roads are unlikely to cope with a significant increase in traffic. They are already potentially hazardous to both drivers, pedestrians and horse riders. A while ago the Parish Council removed the cat's eyes and painted side lines on the roads for pedestrians so that they could walk in the road if necessary (you know where I mean) where it is still pretty dangerous! Also there are a lot of horses kept in Horsley and being a country village horse riders regularly use the roads. I am told that riders have already found large trucks are 'spooking' their horses.

Within Horsley it only takes a moderate amount of rainfall to commonly render some of the main village roads impassable despite the authority’s best attempts to improve the drainage. I object to a large increase in local traffic which such a development would create which will potentially lead to worse even hold ups than usual. An significant increase in traffic will be tragic for the area traffic flow and horse riders alike.

I am extremely concerned for the large number of elderly people who have lived their most of their lives here. Such substantial changes in their environment could seriously affect their health (which it has in other areas of the UK) The stress that some of them would experience would be enormous!

Section page number: Page 288 of 1294
1. **Settlement Boundaries in The Horsleys**

The changes suggested for the settlement boundaries for East and West Horsley are not acceptable. The Horsleys do not have the infrastructure to cope with the increased numbers of houses that are proposed:

- The local schools, particularly the Raleigh School, are already full
- Parking at the local shops is already difficult
- The railway station car parks at Horsley and Effingham are already full
- It is difficult to get appointments at the local Doctors’ surgery and there is very limited parking there.
- The weather over the last few years has shown us what a terrible state our drainage is in giving rise to frequent surface water flooding when it rains. Covering green fields in housing and concrete will lead to more flooding. For some weeks after Christmas 2013 we were unable to access the A3 from East Horsley without travelling along the A246 to Guildford because of flooding in Ockham Road North.
- More houses means more cars – usually at least 2 per house. The state of the roads in East and West Horsley is appalling and more cars will mean more potholes. The roads in this area were mostly built as country lanes. Ockham Road South in particular is already very dangerous with the present level of traffic and two lorries cannot pass each other – it is hard enough for two large 4-wheel-drive vehicles to pass let alone two lorries.
- Looking at the sites suggested for development in East and West Horsley it seems that the Plan intends to join the two villages into an urban conurbation thus destroying the different and rural characters of the two separate villages. The impact is magnified by the closeness of the Wisley Airport site affecting every single resident in East and West Horsley and all our local services and infrastructure which will NOT be able to cope

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Furthermore, construction would not stop at houses as more public buildings/services would have to be built to deal with the larger capacity of people; for example, already there are not enough local school places and children are having to be ferried to schools further afield and it can take a month to get a doctor's appointment at the medical centre, not to mention the extra traffic on the already pothole riddled roads of Surrey. I do hope that you will stop and think about the core issues and the consequences of your actions rather than blindly continuing to build on our beautiful countryside.

Whatever the final housing number agreed for the new Local Plan there must be a commitment from GBC to deliver (in entirety) the necessary infrastructure to support this increase. Roads, doctors, schools etc must all be delivered (by the developers if required) before any new houses are permitted to be occupied or sold. The phrase "timely provision" referred to in Policies I1 & I2 must be understood to mean “before occupation of any new houses”. In particular for Ash & Tongham this would mean LRN9 - LRN16 and in particular LRN21 from Appendix C should all be delivered prior to any further new housing.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

• I object to the lack of immediate provision of new schools.
• I object to the lack of any immediate provision for Doctors Surgeries.
• I object to the burden the developments would put on the current road networks.
• I object to the proposed changes to the road access to the A3 at Burtncommon. The layout is confused and will lead to gridlock as traffic attempts to leave the A3 south and clashes with traffic on the Clandon Road.
I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.
Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

1. I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy II)

5,036 houses are proposed between the M25 and Burpham (about 5 miles) which will obviously lead to a merging urbanisation of identities the villages. There is too much traffic in our villages already and this plan will cause more congestion in West Horsley, East Horsley, Normandy, Ockham, Ripley, Send and Clandon, with no plan to improve that. The rural roads in this area are narrow, in poor condition and have no footpaths. 5000 more houses in such a small area means dangerous and unsustainable traffic.

To impose such a huge increase in the number of homes would be madness. Our country lanes would not be able to cope with the increased traffic without widening and new roads would simply add to the problem, many of them subject to flooding. Drainage would have to be renewed on a large scale.
There are also existing problems with meeting the increasing places in our few schools; our medical services are stretched to their limit; and parking for our few shops is getting worse. Bus and rail services would also have to be revised to cope.

Comment ID: PSLPP16/15970  Respondent: 8914465 / John & Elizabeth Maycock  Agent:
Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

The lack of primary school places in West Horsley is already clear. The Raleigh School is already full every year. Even if the school moves site, as has apparently been proposed, this is not going to happen in sufficient time to solve the places problem created by the new developments and in its own way will add to the other problems under discussion - especially road traffic. Howard of Effingham secondary places are also limited and, in any event, create transport requirements. The two private schools in The Horsleys are well patronised already and again already pose their own traffic problems for the villages.

There is no specific provision in the Local Plan for an increase in school places and it is deficient in the respect. I object to this lack of policy, which is a necessity if increasing the population in the villages

Medical Facilities
The existing practice in East Horsley is almost at capacity now. The proposed population increase in the Local Plan across the Borough exceeds Government ONS forecasts. It must also mean that some enlargement of the Royal Surrey Hospital will also soon be necessary. Against all of these obvious consequences of the proposed developments, the Infrastructure Development Plan only refers to a possible extension to the medical practice in East Horsley.

I object to the lack of policy in this area.

Drainage

The size of developments proposed will impose a burden on the current drainage infrastructure. I understand that there have already been sewerage overflow problems in the Ockham Road North/Green Lane area. Surface water drainage across the West Horsley Parish is already overloaded as can be seen during any heavy downpour and prolonged rain brings flooding very quickly. The consequence of more development is more surface water run off which will compound the problems. A serious upgrade across the two villages is necessary now and will be essential if these developments are to take place.

I understand that Thames Water has already advised Guildford Borough Council that the area’s waste water network is unlikely to support the demand anticipated from all the proposed developments. I further understand that the foul drainage system from West Horsley to the treatment works north of Ripley will need to be upgraded to cope and that Thames Water requires a 2-3 year lead time to deal with this after it has obtained the necessary planning permissions to do the work.

I object to the lack of any positive proposals in this area of infrastructure. It is not credible to propose the developments set out in the Local Plan without putting forward positive proposals for the requisite improvements to infrastructure. Pious hope is purely political expediency.

6 I object to the planned mass housing additions within East and West Horsley, totalling 550 houses. The existing schools, medical facilities, shops, transport etc will not cope, and any attempt to satisfy the horrendous increase in demand will destroy the existing ambience of the 2 villages.

7 Further to 6, where would all the extra facilities so required be sited? The road system for the two villages is already inadequate, and lots of residents do not want the character of the villages changed to be that of a 'New Town', like Harlow or Bracknell.

The local infrastructure cannot cope with a significant increase in housing stock and therefore population. The local schools and medical centre are oversubscribed. The roads and pavements are suited to a small rural community. The proposal looks to increase the housing in West Horsley by 35%. This is totally unacceptable and the village infrastructure cannot cope with an increase of this magnitude.

There is inadequate provision of infrastructure investment across the borough provided in this local plan.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
A46 & A47

I am happy to support the removal from the Plan of these two sites as the Council obviously now agrees with residents that the infrastructure to cope with developments on this scale is totally inadequate, particularly considering the roads involved (Westwood Lane is a C road and Glaziers Lane a D road), sewage, long term flooding problems, electricity supply and healthcare. The sites in question are Green Belt land which is important to protect the environment.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1. **POLICY I1**

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.
The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Attached documents:**
POLICY 11/12/13 Infrastructure and delivery, Supporting the Department of Transport's Road Investment Strategy, and Sustainable Transport

OBJECT.

The infrastructure of East Horsley is the main reason for objecting to the Council's proposals. The roads are already congested without the additional new homes and subsequent increased usage. They are generally narrow, with potholes, cracks and other signs of wear. During heavy rains, the drains block and flooding results. The pavements do not run along every road through the village, where they do, they are narrow and often cracked and uneven. The local primary school (the Raleigh) is already at capacity, resulting in local children being sent miles from their homes for schooling. In addition, Horsley Medical Centre is at capacity. How can 593 new homes (from the 11 development sites identified for East and West Horsley) be shoe-horned into such a village without disastrous results? The proposals are unsustainable because they do not meet the objective of providing infrastructure to support the new homes. Regarding Wisley Airfield, it is not sustainable to build dormitory towns and simply call them sustainable. Shifting to cycling and walking discriminates against vulnerable members of the community - the disabled, those with small children, the very old, or the infirm, or those who are ill. Alternatives impact on already congested roads or over-subscribed peak hour rail services.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Comment ID: PSLPP16/17840  Respondent: 8920129 / Allan Siva  Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

POLICIES I1, I2 & I3

The principal through roads traversing East Horsley are narrow and winding, have a series of pinch points, have sections without any pavements and are generally unlit. In reality “East Horsley has lanes, not roads.” East Horsley’s ‘lanes’ are totally unsuitable for high volumes of traffic, in particular for the volume of HGV’s now using them. It is inevitable that the proposed developments in East Horsley itself and nearby, particularly in West Horsley and the proposals for Wisley Airfield site, will put further strain on the existing infrastructure. There are no proposals at all to cater for this.

I therefore OBJECT to the proposals for infrastructure in that they do not meet the stated objective of providing infrastructure to support the proposed developments.

Ripley and surrounding areas already suffer from severe congestion all day long, especially along Newark Lane and Rose Lane where these junction with Ripley High Street. Any development in and around Ripley, let alone development of a disproportionate scale such as proposed under The Plan will add to this congestion. There is no sustainable strategy in The Plan for enhancing capacity on local roads.

Moreover, country lanes around Ripley and surrounding villages are narrow with road surfaces in poor condition. I object because the development proposed in The Plan will cause more traffic to use these narrow roads with a further deterioration in the road surfaces.

There is already insufficient parking space in Ripley. Development in and around Ripley will result in more congestion and parking problems.

Ripley has been a historic hub for cyclists for some 150 years and is on the iconic “Olympic Cycling Route” used by hundreds of cyclists on the way to the Surrey Hills. Ripley and surrounding villages regularly host vast numbers of cyclists – especially for the annual London-Surrey Classic, with tens of thousands of amateurs passing through the village followed by a top level professional cycle race. It is unbelievable that Guildford Borough Council should propose a local plan which, by increasing road traffic on rural roads, risks increasing road accidents involving cyclists, thereby jeopardising our Olympic legacy.

The rural roads do not have kerbs or pedestrian footpaths. These roads are already dangerous for pedestrians and risk becoming even more so due to increased traffic levels as a result of the proposed levels of development.

The delivery of improvements to infrastructure is required in conjunction with development in accordance with Policy I1. The planning of infrastructure is, in my opinion, inadequate and I have concerns that the planned infrastructure projects will happen at all.

The Garlick’s Arch site (A43) is a major development, but no infrastructure projects are included in the Infrastructure Schedule. The lives of local people will be adversely impacted by the lack of planning for infrastructure improvements prior to development.

In particular, with utilities in Ripley and Send at, or very close to capacity (electrical network and sewers) there should be no major development in or around these villages before such utilities are improved.

It is already difficult to get an appointment at the Villages Medical Centre, Send and I fear that extra housing will result in services being overwhelmed. Police services will also be overstretched if the proposed 13,860 homes are built during the plan period.

**Traffic Management**

At certain times of day the two main roads, A3 Portsmouth Road and A31 Hog's Back are at saturation point and stationary without the addition of just under two thousand houses on Blackwell Farm, with views to and from an Area of Outstanding Natural Beauty. This is Green Belt land in a sensitive area and should not in my view ever be built on. The views from this land are spectacular and there is no way that properties built here will ever be in the truly affordable price range which in any case has a relevance to the area of build. It lays very close to the University of Surrey and its Research Park, the latter in the Manor Farm area abutting Blackwell Farm. Currently in the Guildford Borough area there are about 1500 private houses rented out to students and the stock of this type of property is on the increase to the detriment of families requiring homes. This University must provide a lot more accommodation on its own land for which it already has planning permission. This Area of Outstanding Natural Beauty should be preserved for future generations.

There is no way of stopping many of the new houses being proposed from being bought up by landlords/investors to rent to even more students. This is another good reason for not allowing lots more houses to be built near this University. There is a lack of children growing up in this area due to the number of houses let to students and more accommodation must be built on University land if that organisation wants to keep on expanding in terms of students and as an institution. They must act responsibly and cater for their own needs by doing more building of accommodation for students, thus freeing up houses for families.

Every morning traffic queues across the A31 Hog's Back and is normally stationary towards Guildford. (I have BBC traffic recordings of this happening on a daily basis). To build just short of 2,000 houses and add this to the mix is a ridiculous suggestion. There are developments going on and planned for the future in the Aldershot and Farnborough areas that will place more traffic on the already busy A31 road and make matters worse. Even more reason not to aggravate the situation on the approaches to Guildford. Currently this traffic problem is driving traffic onto minor roads in housing estates. Future development in this area is unsustainable because of traffic flows even now. There must be massive infrastructure improvements to our road system BEFORE any development takes place.

In connection with any approved development at Blackwell Farm there are proposals to put in a junction just west of the A3 and on the A31 near Down Place. In view of the fact that in the mornings traffic is already stationary, sometimes for
miles, a traffic light controlled junction at this location can only just extend traffic queues making matters much much worse.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local
road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Me and my two children are keen cyclists. Our house is situated on the A247 and we and cycle on this road every day. The road is already too busy and not suited to the current volume of traffic and LGVs. It’s only a matter of time before someone is knocked off their bike and killed on The Street.

I also strongly object against the need for any additional new schools and doctor’s surgeries.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

**Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )**

Infrastructure already overloaded: drains, water supply, medical facilities and our roads are already inadequate and could not possibly cope with the proposed number of new homes. Building this number of homes would lead to flood risk here and downstream, along the Wey and Thames.

The sewerage system is already inadequate as many will testify. To give just one instance, and there are many, after heavy rain (and not "exceptional rain") the main sewer running parallel to Ockham Road overflows and a manhole cover in a field in Slade Farm is displaced, depositing raw sewage in the field and adjacent ditch.

The single school in West Horsley is already very much over-subscribed, with further development meaning even more existing residents' children would not be eligible. The knock-on effect of the proposed development would be greatly increased traffic on local roads for school runs to outlying schools.

The single medical centre shared between the Horsleys is similarly over-subscribed and resources and staff overstretched. Such a significant increase in population as proposed would stretch this to breaking point.

Parking spaces near the shops of the Horsleys are very limited, as they are at the station. The impact of such a disproportionate increase in population as proposed would overstretch these facilities even further, make it difficult if not impossible for many residents, including those older and infirm who depend on them, to go to the shops, medical centre and chemist.

The Street, from the A246 to West Horsley, is very narrow, and could not be widened. This road is already difficult to negotiate and even dangerous in places for other drivers when used by buses, lorries and other large vehicles, particularly at night and in bad weather. This would be exacerbated by the inevitable increase in traffic which would result if the proposed development were to take place.

This road is not only a problem for drivers, it is even more dangerous for pedestrians. On these narrow stretches the pavements also are very narrow; it is impossible to walk two abreast and so a particular problem for those with children and for wheelchairs. Like the road itself, the pavements could not be widened.

There is such severe flooding in Ripley Lane that it is completely impassable several times a year. There is also frequent severe flooding after heavy rain on The Street, East Lane, and Long Reach, so much so that they are impassable to anything other than a 4x4.

Designation of Station Parade as District Centre This shows a lack of understanding of the nature of the village centre and would endanger its character by potential future urbanisation.

Proposal for large mixed development on former Wisley Airfield The potential impact on the Horsley villages and further afield would be massive and damaging in terms of character

I object to the proposed removal of the Former Wisley Airfield (FWA/TFM) from the Green Belt. The site serves a vital role in protecting against urban sprawl from London. Development on the site would create an urban corridor stretching from London to Guildford.

2,000+ dwelling development, with urban-style buildings up to five storeys high and a population density higher than most London boroughs.

I object to the detrimental impact on transport, local roads and road safety because of the following:

The development is too isolated, and even within the development itself too spread out to expect reduced reliance on the private car.
The increased volume of car traffic. A proposed development of 2,068 homes would result in an estimated 4,000 additional cars on the roads.

The congestion this traffic would cause not only on the narrow rural roads in Ockham but also the knock-on effect on the immediate and wider local area, exacerbated by wide vehicles including increased bus and HGV movements.

The danger this traffic would pose to local cyclists and pedestrians, due to the lack of cycling paths and pedestrian footpaths and the space to provide them.

The increase in the already severe congestion on the Strategic Road Network of the A3 and M25. A further planning application at RHS Wisley (with a significant increase in visitor traffic) and a proposed 600 pupil secondary school on the site would add additional congestion at the M25/A3 junction as well as local roads. No development can proceed without significant infrastructure enhancements to the A3 and M25. Partial improvement works on the A3 south of the site are not due to start until 2019 at the earliest.

The lack of suitable public transport. The local rail stations of Effingham and Horsley cannot cope with the proposed increase in passenger traffic and car parking is already at capacity.

I object to the continued inclusion in the plan of a site - the former Wisley Airfield - where the planning application has already been unanimously rejected by GBC’s Planning Committee.

(After 14 months of consideration, and various extensions and amendments, Wisley Property Investments Ltd’s planning application was unanimously rejected by GBC on 8th April 2016 on the recommendation of GBC Planning Officers, who cited the same grave concerns highlighted in this letter).

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1. I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested.

Only today 12th July, 2016 there was a serious collision of two cars at a narrow point of the A247 in West Clandon where both cars ended up on the pavement. The collision happened shortly after 9:00 – I know this because my wife had just walked past this exact point only moments before on her way to school with our 3 children. It doesn’t bear thinking about what would have happened if the crash had happened a few minutes earlier…..These narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians AND you have given no consideration to this point.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1. I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

1. I OBJECT to the lack of proper infrastructure planning for sites
Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
### Schools:

Local schools are already at capacity – where will newcomers go to school? No extra places are planned in the Horsleys, and the school places proposed at Wisley Airfield will not planned until many years into the project.

There is talk of a new school at a site near to Lollesworth lane west Horsley, but this should have been talked about well before the local plan went out for consultation.

### Medical facilities:

Similar situation to the schools.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
I object to any development without the necessary infrastructure being put in place prior to development. I object to developments not providing their planned infrastructure, i.e. schools, health centres as part of the development, prior to properties being sold.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

1. I object because the infrastructure proposals are inadequate. Where are the new roads going to come from?

1. I object because the medical services will be under increased strain. It is difficult getting a doctors appointment as it is.

1. I object because the parking at the railway station will be overwhelmed.

1. I object because the parking provision at the village centre will be unable to cope.

10. I object because local schools will be unable to cope.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object because the infrastructure is already overloaded.

Local Schools are full. Medical facilities stretched. Drainage is inadequate, roads and car parks are overloaded with little or no scope for improvements. Large increases in the volume of traffic will cause an increase in nitrogen dioxide and particulates in the environment – already a cause for concern in this area.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Infrastructure

In many aspects the infrastructure of the Horsleys is already overloaded. Local Schools are full, the medical centre is stretched, drainage is inadequate. Traffic, parking and rail routes are already heavily congested. There is little scope for improvement currently and the scale of development proposed is completely out of all proportion to the facilities available and the ability to increase those facilities. I note that in the proposal for 2,000 houses on Wisley airfield they identify Horsley station as a transport link. There is no provision in the Local Plan to improve this infrastructure in proportion to the proposed building.

I urge the Council to revisit the housing numbers, utilize brownfield sites for housing rather than green fields and critically to fulfil their election commitment to protect the Green Belt and to retain the Horsleys within it.

Inadequate Infrastructure

Schools:

Many complaints have been made against former drafts of this Local Plan that the infrastructure will not cope with such a huge building regime and we received platitudes from the planning department that developers will not be allowed to
Exceptions to the Duty to Cooperate

proceed unless certain provisions are in place. We all know that no developer will provide a school before they have built
and sold a certain number of houses, but where do children go in the meantime? All local schools are full. This provision
is still not addressed.

This is a chicken and egg situation. I live in East Horsley. Any development in the Horsleys and Ripley and at Three
Farms Meadow (former Wisley Airfield) will seriously affect our villages. Should the developments in the Horsleys,
although huge by village proportions, go ahead, will these smaller developers be expected to provide new primary and
secondary school places for the children who live in their houses? Or will the developers at Wisley be expected to provide
these school places as they are clearly going to make vastly more profit that the smaller developers? Has anyone
considered the situation as a whole? Is one person going to be appointed as project manager to oversee all of the
developments in the Borough and be responsible to ensure infrastructure is in place when it is needed? Will this project
Manager have the power to enforce any infrastructure projects?

Medical

We recently had a village AGM and a representative from the local Doctors Surgery repeatedly told us that recruiting
GPs is an impossible task as they cannot afford to live here. I am sure this is equally true in other parts of the Borough.
Recent recruits had been very fortunate in that the partner of the proposed GP had been relocated to the area. This is no
way to ensure an adequate supply of local GPs. Similarly can the Royal Surrey County Hospital cope with an increased
population caused by an extra 12,500 houses in Guildford Borough alone?

Roads and transport

Much has been said about the inability of local roads to cope with any increase in traffic. The size and condition of the
roads has not changed and local station and shop parking is already at saturation point. Locally the bus service is non-
existent and therefore will not help alleviate the number of cars on the road. No sensible solutions have been proposed.

Air Quality

A huge increase in road traffic, and there is no doubt that development on this scale which bring huge increases in car
numbers to Guildford Borough, will only cause the air quality to reduce further. Much of the major development is along
the A3 trunk road which is already renowned for its poor air quality, particularly at the A3/M25 interchange and at the
section on the A3 from Send going through Guildford to beyond the A31. We already have daily very long queues on the
A3 going into Guildford – this will only get much worse and the air quality will deteriorate ever more.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
EHPC believes there are serious deficiencies and shortcomings in the infrastructure of Guildford Borough as it is today and that the aggressive housing policy as proposed by GBC in the Proposed Submission Local Plan will exacerbate this problem.

We would make the following comments specifically about infrastructure in East Horsley today:

- Roads across the parish are in poor condition with many potholes. Many roads are unable to sustain their current levels of traffic, particularly the increasing levels of HGV traffic;
- The principal through roads traversing East Horsley are narrow and winding, have a series of pinch points, have sections without any pavements and are generally unlit. As a senior SCC councillor remarked at a recent public meeting in the village hall: “East Horsley has lanes, not roads.” East Horsley’s ‘lanes’ are totally unsuitable for high volumes of traffic, in particular for the volume of HGV’s now using them;
- Many of the drains are blocked or otherwise in poor condition giving rise to frequent surface water flooding when it rains;
- The pavements are in poor condition. As well as being narrow, they are often uneven and/or cracked making it difficult, for example, for people with pushchairs or prams or in wheelchairs;
- There are insufficient school spaces for the number of local children needing them, with the result that children are often allocated to schools a significant distance away such as Dorking or Woking; and
- The Medical Centre in East Horsley is already at capacity in terms of its number of patients.

It is recognised that, as stated in the Proposed Submission Local Plan, the maintenance of adequate infrastructure and its expansion to meet growing needs is the responsibility of the relevant infrastructure provider. This is often not GBC itself but rather, for example, Surrey County Council or utility companies.

In respect of East Horsley, there are only two specific proposals in Appendix C:

LRN 25 - East Horsley and West Horsley traffic management and environmental improvement scheme. It is not clear what is proposed here, and its timing and funding have to be considered uncertain. It is stated that funding will, at least in part, come from developer contribution. However, it is not at all clear what development is likely to give rise to such a contribution, but it certainly implies that funding could only come if there were a development; and

HSC 5 - Expansion of East Horsley Medical Centre to provide additional capacity and services for future population in years 5 – 15 of the plan.

There are no proposals in respect of all the existing problems with for example roads, pavements, drainage, and schools.

Furthermore, it is inevitable that the proposed developments in East Horsley itself and nearby, particularly in West Horsley and the proposals for Wisley, will put further strain on the existing infrastructure. There are no proposals at all to cater for this.

Although an expansion of the Medical centre is proposed in the Infrastructure Schedule, this is not until years 5 – 15 of the Plan. Given that it is already at capacity, EHPC believes that this needs to be done earlier.

Local primary schooling is also a very pertinent issue. There are 11 housing development sites identified in the LAA for East and West Horsley, which taken together would result in the building of 593 new houses in the two parishes that are today served by a single primary school - The Raleigh, in West Horsley. Planning guidance suggest that this number of new homes will require the provision of around 150 additional primary school places to accommodate such an increase in population. Today there is no spare capacity at The Raleigh, yet no proposals are made in the Proposed Submission Local Plan to provide for any more schooling in the Horsley’s.

EHPC believes that the failure to address the inadequacies of the existing infrastructure to meet the needs of what is there already is a serious deficiency in the Proposed Submission Local Plan.

EHPC accordingly OBJECTS to the infrastructure proposals on these grounds. It further OBJECTS to the proposals for infrastructure in that they do not meet the stated objective of providing infrastructure to support the proposed developments.
What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: pslp171/89  Respondent: 8929057 / East Horsley Parish Council (Nick Clemens)  Agent:

Document:  Proposed Submission Local Plan: strategy and sites 2017 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Policy D1 provides the general policy framework for infrastructure development in the borough proposed in the local plan, including the accompanying Infrastructure Schedule set out in Appendix C.

As we have detailed in our previous letter of 13th June 2016, EHPC considers the level of investment proposed in the plan to be totally inadequate in meeting the serious deficiencies in infrastructure across the borough. Moreover, where significant investment is specified in the Infrastructure Schedule in many cases it is unclear whether public sector funding is going to become available to support the level of investment needed: for most major infrastructure projects funding from developers will typically not be sufficient but until such infrastructure is in place many of the larger developments proposed in the Local Plan will not be sustainable.

Other than a few specific changes consequential on the removal of certain projects in the light of the reduced housing target, there are only minor changes made to the infrastructure proposals in the 2017 version of the GBC Local Plan. These changes totally fail to address the inadequacies of the existing infrastructure, nor meet the stated objective of providing infrastructure to support the proposed developments. Accordingly:

**EHPC strongly OBJECTS to the inadequate provision of infrastructure investment across the borough provided for in the local plan.**

Concluding remarks:

As we have set out in this letter, EHPC has major concerns about the revised 2017 Local Plan in general, in particular the excessively high housing targets that are being set, the failure to recognise the constraints to this development and the large-scale destruction of Green Belt land particularly in its most vulnerable areas in the north east of the borough. Accordingly:

**EHPC strongly OBJECTS to the revised 201.7 Local Plan**

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1. **POLICY II**

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy II)
Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.
Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

I note that the local road strategy allows for 30 electric car charging points, but I would suggest that this is likely to be an underestimate in the coming 20 years, given the rapid increase in acceptance and adoption of electric/hybrid cars in recent years.

I object to Policy I1: Infrastructure and Delivery as very little consideration appears to have been given to this essential element and no detail of how such significant housing developments will be supported and sustained should they proceed. No account appears to have been taken of the degree of flooding that occurs.

I object to the traffic congestion any additional development will cause to our local villages due to inadequate road infrastructure. The A3 is at a standstill daily heading north to London and south at Stag Hill and that is without any additional development within the area.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object most strongly to the traffic congestion any additional development will cause to our local villages due to inadequate road infrastructure. As it is now, whenever there is a traffic accident on the A3 or M25, vehicles try to cut through all the local roads (at speed quite often) which results in major congestion and danger through all the small villages in the area. The A3 is at a standstill daily heading north to London and south at Stag Hill and that is without any additional development within the area.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Infrastructure: as residents know only too well, the infrastructure of the Horsleys is already sorely inadequate and could emphatically not support any further increase in households and residents. Drains, water supply, medical facilities and roads are already overstretched and could not possibly cope with the proposed number of new homes. Building this number of homes would lead to flood risk here and downstream along the Wey and Thames.

Drainage and sewerage: the sewerage system is already inadequate as many will testify. To give just one instance, and there are many, after heavy rain (and not "exceptional rain") the main sewer running parallel to Ockham Road overflows and a manhole cover in a field in Slade Farm is displaced, depositing raw sewage in the field and adjacent ditch. The area around the site off Green Lane is a major flood risk, with raw sewage pouring into the roads, on the occasion of the last major flood at Christmas 2013.

Schools: the single school in West Horsley is already very much over-subscribed, with further development meaning even more existing residents' children would not be eligible. The knock-on effect of the proposed development would be greatly increased traffic on local roads for school runs to outlying schools.

Medical centre: the single medical centre shared between the Horsleys is similarly over-subscribed and resources and staff overstretched. Such a significant increase in population as proposed would stretch this to breaking point.

Parking: parking spaces near the shops of the Horsleys are very limited, as they are at the station. The impact of such a disproportionate increase in population as proposed would overstretch these facilities even further, make it difficult if not impossible for many residents, including those older and infirm who depend on them, to go to the shops, medical centre and chemist.
Flooding: the land between Silkmore Lane and Ripley Lane is rated as low flood risk however those familiar with the area know that there is such severe flooding in Ripley Lane that it is completely impassable several times a year. There is also frequent severe flooding after heavy rain on The Street, East Lane, and Long Reach, so much so that they are impassable to anything other than a 4x4. The run-off inevitable from further development would exacerbate this.

Wildlife: no consideration has been shown of the potential impact of the proposed development on wildlife in the Horsleys. There would inevitably be loss of habitat, and disturbance caused by such an increase in residents and households and concomitant traffic.

‘National planning policy does however ask us to take opportunities to enhance wildlife through our Local Plan.’ you say, yet there have apparently not even been any wildlife impact assessments.

I urge the council to withdraw this plan and to consult with residents to develop a sustainable plan of proportionate development which should not damage existing settlements

The desirable character of most of the villages in Guildford Borough, such as East and West Horsley, very much depends on their remaining at or close to their present size and not being overwhelmed by new housing estates. Local facilities in our villages that are already fully stretched include roads, schools, water and sewerage, shops, medical services, and associated car parking spaces. These constraints mean there is no room for any significant increase in population in our villages.

Ultimately (and I recognise this is outside the remit of Guildford Borough - but it needs to be taken into account in assessing whether the Borough’s proposals make any sense), it would be crazy to either allow the UK population to expand indefinitely at anything the current rate; or to encourage incomers to settle anywhere in the overcrowded South-East region (other than perhaps in inner London, and a few other town centres). The region has very limited natural resources (in particular drinking water, in the droughts that are an increasing risk from climate change). This and other infrastructure constraints make it imperative to spread the burden into other parts of the UK, where there is also better scope for more housing and a much higher need for an invigorated local economy.

At the present moment much of the South-East is still, despite all the pressures, a reasonably good place to live. But it will lose its remaining attractions if more and more people are crammed in.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
Policies 11,12,13 INFRASTRUCTURE

GBC’s rampant expansionist policy will be building on a crumbling infrastructure! The goal of ‘sustainability’ is very unlikely to be achieved. GBC’s plans for our infrastructure seem to rely on others.

THE ROADS & PAVEMENTS

NOW driving and cycling on our local roads is an unpleasant experience. At present most people in this area wish to travel north/south. However most of our main roads (A246, A25, A31) go east/west! The roads going north/south are generally totally unsuited to carry the current amount of traffic especially with the enormous lorries. In Horsley we have a prime example of this problem. Ockham Road South and Ockham Road North are frequently in gridlock; these roads are narrow, pot-holed with several pinch points. Short of knocking down a vast number of large houses (most worth over a million pounds) there is limited scope for improvements!

The pavements are very narrow and uneven. Pedestrians have an unpleasant and hazardous trip with many lorries mounting the pavement. NOW it is an unpleasant walk to the station or the shops. It is particularly unpleasant for people with prams, pushchairs and wheel chairs. One is very concerned for children walking along these paths.

SCHOOLS

NOW we do not have sufficient school places to meet local needs. Children often have to be given places miles away in Dorking or Woking.

MEDICAL FACILITIES

NOW the medical services are struggling to cope with demand.

Generally I am very concerned about the infrastructure in the area as it is already over stretched and scope for improvement is very limited.

I would urge that any assessment of the current situation is not done in school holidays or main holiday times. It is important to do this work at prime times of the day and the year!

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1. I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy 11)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.
Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

1. I OBJECT to the lack of proper infrastructure planning for sites (Policy 11)

Policy 11 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Attached documents:**
I object to the lack of concrete and properly thought-through proposals in relation to infrastructure. The current infrastructure is struggling now, and there would be substantial increase in pressure on local schools (th., Raleigh School and Howard of Effingham are both oversubscribed and full), medical surgeries, roads, parking provision and drainage. Whilst limited additional provision of certain aspects of the infrastructure is suggested within the proposals, there remain significant problems, for example, in relation to increased road traffic (including for leisure use such as cycling, already a real problem in the area at weekends) and parking, that will mean local residents and businesses are put to considerable inconvenience. This in turn is likely to result in some local businesses foundering due to difficulties with access.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

2.5 Infrastructure

New developments will pay a levy to ensure impact on infrastructure will be mitigated, but this levy cannot be used to improve the current situation. Traffic in and around Guildford is problematic as the normal situation. Efforts to persuade residents to walk, cycle or use public transport have met with limited success.

Surrey County Council has estimated a shortfall of £3 billion to provide the infrastructure required to support projected housebuilding in the area and admit: “We cannot ask our residents to fund something that is completely out of the reach of the council taxpayer”.

With the majority of new developments outside Guildford town centre, the plan will generate more journeys to put additional strain on an already malfunctioning infrastructure.

3.4 Infrastructure

The growth in the vision is predicated on the delivery of the necessary infrastructure, yet the infrastructure schedule is light on detail and vague on costs. There is little action in the west of Guildford in particular to alleviate the poor rush hour experience of drivers along the arterial routes into Guildford (A320, A322 and A323). Any action improving egress from the A3 and A31 will lead to increased congestion on these routes.

Whilst we support the sentiment that “infrastructure needed to support development should be provided and available when first needed to serve the occupants and users of the development” this ignores the fact that current infrastructure is not sufficient to support the existing population.
Below is a representation of Guildford traffic averages at 8:30 am on a Monday morning. Roads are coloured green and overlaid with red if congestion is taking place (courtesy of Google Maps).

Appendix C is very short on detail and for the Aldershot Road in Guildford – already severely impacted in the peak morning hour, there is no respite. The projected developments at Ash and Flexford will add further traffic to the route from Fairlands to Guildford.

In terms of monitoring, the measure of CIL receipts and spending is completely ineffective and unlikely to measure the satisfaction of residents. A much better measure would be average speeds during rush hour on the arterial routes through Guildford.

26. In Guildford borough, it is widely accepted that there is an infrastructure deficit particularly in roads and the provision of health services. The needs of current residents are not taken into account in policy ID1. All infrastructure should be in place before development of strategic sites takes place to ensure that the developer pays so as not to jeopardise the needs of current residents.

There is no infrastructure in place for such excessive building. The roads, schools, doctors' surgeries, etc, are at breaking point at the moment. Wood Street Village and Worplesdon in general have a great problem with flooding. Proposing to vastly increase the villages to such an extent will only add to urban sprawl and exacerbate the problems that already exist. At peak times Guildford comes to a halt with most roads being blocked by the vast amount of traffic.

Policy 11: Infrastructure and delivery

I OBJECT. The infrastructure needs to be considered now, not left until planning applications for sites are received. By that time there will be a presumption in favour of development on sites included in the plan.

The Strategic Highways Assessment is not fit for purpose and should be removed from the evidence. Its methodologies grossly underestimate current traffic levels and therefore the impact of further development.

Policy ID1: Infrastructure and delivery

I OBJECT since the changes have not addressed my concerns. The infrastructure needs to be considered now, not left until planning applications for sites are received.

The Strategic Highways Assessment is not fit for purpose. Its methodologies grossly underestimate current traffic levels and therefore the impact of further development.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
1. Lack of Adequate Infrastructure Plans

By your own admission your infrastructure plans are incomplete and subject to uncertainty as to timing and availability of money for infrastructure investment. Consequently many of your developments proposed in the LAA fail to meet the basic principle of sustainable development enshrined in policy S1, and should be withdrawn for that reason. For instance, you are proposing an increase of up to 623 new dwellings in the Horsleys (an increase of over 30%) without any corresponding increase identifiable in your Plan in local primary school capacity (the existing schools already being oversubscribed). Similarly, no corresponding improvements are proposed to local road capacity or local public transport.

In the same vein, you designate the former Wisley airfield as a site for intensive residential development without any assurance that the necessary infrastructure improvements will be in place before the site is occupied. Your IDP admits, for example, that new schools are only likely to be made available after residential developments have been largely completed; this would therefore impose worsened education provision on existing residents as well. Similar considerations apply at Wisley to medical provision, public transport, roads and access, and flood prevention and drainage; there is no guarantee when, if indeed ever, that any of the required infrastructure improvements will be made.

The lack of adequate infrastructure plans therefore makes a mockery of your claim that the developments in the Local Plan are sustainable.

Infrastructure
We strongly support the need for improvement in the infrastructure of East and West Horsley. However, the GBPSLP is focused on the Infrastructure required to support potential future development. This ignores the fact that the current infrastructure is not functioning in an acceptable manner.

The Infrastructure in the Horsleys is not only failing to meet the current needs of users but some aspects, such as roads, have no obvious possibility for improvement. The boundaries of the 82039, which runs through East Horsley, are such that widening is not possible. The number, vehicle size and speed of the current traffic using this road is already far greater than the original design could have envisaged. The inability of the roads, drainage, schools and medical facilities to adequately support the existing homes within East and West Horsley is evident, and has been acknowledged at Borough and County level. We do not believe that Community Infrastructure Levy is intended or designed to deal with these existing constraints. **We therefore object** to the development proposals in the Horsleys on the grounds that infrastructure constraints have not been applied, and no data has been produced to demonstrate how the existing issues can be dealt with.

In addition, the impact of the proposed 2,000 houses at Ockham on the site of the former Wisley airfield would have a dramatic affect on the roads, station parking and rail transport overloading for residents of East and West Horsley. It would also create a settlement of questionable sustainability besides removing an environmentally sensitive and strategically placed tract of land from the Green Belt. We therefore **object** to the identification of this as a strategic development site and request its removal from the plan.

*Policy ID1*

We object to the policy on Infrastructure and delivery.

Comments regarding the current overloading of all aspects of infrastructure were made during previous consultations. There is no reason to believe that there will be any improvement in delivery of infrastructure capability in the future and it is obvious that the only additional infrastructure being considered is that required for new development. That means that the current infrastructure deficit will continue throughout the plan period. It also means that current underperformance will be accentuated by the addition of new developments and, particularly for road transport aspects of infrastructure, the disruption resulting from development works will exacerbate the current situation.

The sustainability of development in West Horsley is particularly questionable and the evidence of this is apparent from its position in the settlement hierarchy table produced by GBC (Appx.XII)

In conclusion, we object to the way in which the distribution of proposed new housing across the borough has changed from 2016 to 2017 as it increases the pressure on the Metropolitan Green Belt in the area of the borough which is most sensitive to loss.

For the Guildford area and for Ash and Tongham the proportion of homes is roughly the same from 2016 to 2017. Housing allocation for the Western rural area of the borough has reduced by 25% and the Eastern area has increased by 14%. Thus, of the total house allocation for the borough during the plan period, 48% is planned to be built in the Eastern rural areas. This inevitably means that more Green Belt land will be utilised and the indication is that around 58% of all the new development in the borough will be built on Green Belt land. This does not accord with statements that the Green Belt will be protected, nor that a "brown field first" policy will be implemented.

Infrastructure

13.1 object to policy 11 on infrastructure as inadequate. The proposed new housing will pose a burden on an infrastructure already seriously stretched. Quite apart from the pressures on schools, medical facilities, roads and parking the lack of capacity in the basic utilities of electricity, water and sewage are not adequately addressed with no clear plan for where adequate funding for the major investment needed will come from. It looks piecemeal, not planned.

Comment ID: PSLPP16/17311  Respondent: 8967233 / University of Surrey (University of Surrey)  Agent: Terence O'Rourke (Luke Vallins)

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

The University broadly supports this policy. The University recognises the importance of delivering new infrastructure to support major new development in the borough, the need to make best use of existing infrastructure, and the potential opportunities for improvement of this infrastructure.

The University notes the infrastructure requirements identified in relation to Blackwell Farm in Appendix C.

The introduction of CIL is noted and supported provided this sets appropriate chargeable rates taking account of viability and the extent to which new infrastructure is provided by the developer as an integral part of the scheme proposals.

Further comments are made in relation to policy I2 below.

M&G supports Strategic Objective 11 under Economy which is stated as: “11. Reinforce Guildford’s role as Surrey County’s premier town centre destination whilst protecting and enhancing its cultural facilities and heritage assets.”

However, Guildford’s future prosperity and success as a primary shopping centre should not be taken for granted. The Council’s evidence base document the Retail and Leisure Study 2015 provides a useful context: “1.4 By way of context, although Guildford town centre serves an important role as the largest centre in terms of retail floorspace in Surrey, it is facing strong competition from neighbouring centres where significant new retail and leisure developments are in the pipeline (Section 4).”

M&G recommends that the Plan should acknowledge the competitive nature of retail and recognise the need to make optimum use of the North Street site which is being proposed as the major opportunity to meet this objective (11). There is capacity to facilitate a greater quantum of food and drink and residential and higher density of development than currently allowed for in policy A6. The draft plan should therefore be amended to provide for this additional capacity.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

1. Infrastructure

CPRE objects at the failure to supply a satisfactory infrastructure strategy or delivery plan for Guildford in time for this consultation. In the Surrey Infrastructure Study of January 2016 the total infrastructure cost required was assessed to reach £1.162 billion. The total secured funding was given as £75.8 million and the total expected funding was estimated at £568.2 million. This left a funding gap of £518 million which is equivalent to 55% of the total costs budget. CPRE OBJECTION.

CPRE recognises that many major infrastructure decisions affecting Guildford District are outside the control of GBC and that this makes planning ahead for a long period almost impossible, especially at a time when the economic outlook is so uncertain and difficult to predict. Many decisions which can only be outlined as aspirations depend on infrastructure provision being agreed by Highways England (M25 and A3), Historic England, Natural England, Network Rail, the Surrey County Council, and Thames Water. The constraint of providing SANGS in connection with the Thames Basin Heaths has also to be taken into account.
GBC are making ambitious proposals for housing regardless of the lack of adequate infrastructure in support. Without this being provided before development is begun, there will we believe be a real threat of intensified disruption caused by traffic congestion, particularly at peak times, in many communities. CPRE OBJECTION.

Surrey’s motorways already carry 80% more traffic than the average for the South East and our A roads 66% more than the national average. CPRE has been heavily concerned with traffic management issues across the county for many years. We have served on the M25 Orbit Committee and were involved with the consultation on the Hindhead tunnel, the Cobham Motorway Service Area and the Hard Shoulder Running Initiative for the M25 between Junctions 5 and 7. We have also been concerned for a prolonged period with the various AirTrack rail proposals linking Guildford and Woking to Heathrow which are now in abeyance. We expect to become involved in monitoring the North Downs rail proposal linking Reading to Gatwick via Guildford.

We think it unrealistic for Cross Rail 2 to be discussed at this continuing time of likely austerity as a means of freeing up the overburdened rail link to Waterloo from Guildford and Woking. We do have, however, to recognise the planning challenge that the high percentage of commuters travelling to London for work represents, together with a comparable number coming into both Guildford and Woking for daily employment. It is disheartening to see the inadequacy of the Solum proposal for Guildford’s mainline station which did not sufficiently address the issues that concern commuters or residents most. CPRE OBJECTION.

The detrimental impact of traffic congestion on quality of life across Surrey is a topic of importance to everyone. The location of schools and their school runs are of course a daily cause of traffic problems. The proposal for the Hoe Valley school and its associated Leisure and Sporting facilities will be on Green Belt land and will certainly not improve matters on the A320 at Mayford on the road between Guildford and Woking, even if Paragraph 89 of the NPPF allows for greater flexibility to be shown for outdoor sport and recreation within the Green Belt, as long as it does not conflict with its openness. The Woking Traffic Survey acknowledges that this proposed development will have a damaging effect on congestion on the A320 and A322 as well as on other local roads. CPRE OBJECTION.

Congestion on A roads leads to the overuse of B roads by speeding traffic that exceeds the relevant limits which are invariably not enforced. The B367 from Ripley to Pyrford is an example of this problem. Speed limits for the Pyrford Conservation Area and elsewhere along this road are not observed except where traffic lights or the narrowness of the road itself, as at Newark lane in Ripley, slows traffic down.

Other roads such as the B380 serve as a link between the A324, the A322 and the A320 and all carry excessive traffic for their size. An example of a C road which is already under severe traffic pressure is Salt Box Road which forms the link between the A320 and the A322 as well as funnelling through traffic between the M3 and the A3. Burdenshot and Goose Rye Road are examples of D roads where safety is a major concern as traffic seeks to find a way through to Worplesdon station which is located within Woking Borough, where a new Park and Ride location is proposed. The question has to be asked in this context as to how this proposal can be considered given the Kemishford bridge access problem and the unsuitability of the bridge near the station at Prey Heath Road with its long history of flooding issues.

CPRE gives these examples of busy roads where house building on the scale envisaged for Guildford and Woking will only make traffic matters much worse. Further analysis is required in both boroughs of the impact of the huge housing projects proposed and the positioning of the school and park and ride facilities they envisage. CPRE OBJECTION.

CPRE questions whether all the development envisaged for Guildford can be considered sustainable and deliverable in the time required. Paying for all this investment will be very hard to achieve through the Community Infrastructure Levy (CIL) which is one of the motivating forces behind GBC’s attempt to accelerate passage of the draft Local Plan and use as much Green Belt land in the process as they can. CPRE again maintains that this approach is misguided as it places too much emphasis on economic priorities at the expense of environmental policies which have served the community well and need to be supported rather than undermined. CPRE OBJECTION.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Attached documents:**
Policy ID1 (Infrastructure and Delivery)
Several changes have been made to Policy ID1 following the consultation in June 2016 on the Guildford Borough Proposed Submission Local Plan: Strategy and Sites (2016). However we maintain that Policy ID1 should make reference to the tests set out at paragraph 204 of the Framework to ensure that obligations meet the following tests:

- Necessary to make the development acceptable in planning terms;
- Directly related to the development; and
- Fairly and reasonably related in scale and kind to the development.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

1. Guildford needs to have a positive outlook towards improving the environment for all of its residents this includes the air quality as well as the development of the borough and its standing within the greater It could be that because of the special circumstances that Guildford finds itself only limited housing can be achieved.
2. There is considerable evidence that car manufacturers are lying about the emissions from vehicles and Guildford should take a stance to address this by applying a levy to the car manufacturers for the pollution that their deception is causing and in so doing improving the environment form the
3. The aspiration for a tunnel under the A3 will remove through traffic from the rush hour crisis but it will not remove the need for residents of Guildford to access and egress the A3, and therefore not assist with the improvement of the traffic
4. The proposals for SANG’s to offset the need for access to Whitmoor Common appear to be misguided at It would be better to reduce the housing density and provide park space and open land within developments hence reducing traffic on already congested roads. Why travel to a SANG when you could walk your dog or cycle around your own estate?
5. Infrastructure improvements should be carried out by the developers before commencing work on any development to demonstrate to the current residents that they are engaging with local community and cognisant of the needs of those All too often the developer is only concerned with delivery and walking away ignoring the issues that they leave behind them. If this approach means that a development is not viable then the point is proven. This approach has been carried out by another local authority successfully and therefore the precedent is already set.

The SHMA exaggerates the number of dwelling that are required in the development. This is referenced by Neville Byran’s letter in the Surrey Advertiser dated 10 June 2016.

Guildford is unfortunately a dormitory town for London and the growth of London should be met by the London Boroughs and not fed out into the surrounding Home Counties.

There appears to be double counting of the University’s requirements plus the growth that the University has experienced in the last few years is expected to continue. With the view that further education courses are becoming more expensive this continued growth is unlikely to happen.
The DCLG Planning Policy for Travellers Sites dated August 2015 should apply in all cases.

I make the following conclusions about the Section 19 Local Plan

1. The SHMA figure needs to be reduced by having constraints applied to
2. The quoted 6% of Green Belt proposed to be developed is misleading, and has been used to justify an election promise that has been ignored.
3. There is no indication of the duty to co-operate with all the surrounding boroughs and statutory authorities.
4. The arbitrary movement of the urban boundary to move sites out of the green belt is a political expediency to reduce the green belt land
5. He plan is unsound.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/14020  Respondent: 8974177 / Nigel Mitchell  Agent:

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

The current infrastructure in Guildford Borough is woefully inadequate, note that every Friday evening and most weekdays the A3 is congested from Burpham to the A31 junction.

Recently there were roadworks on Ladymead which required the closure of one lane, this caused traffic congestion on the A322 back and beyond the Keens Lane roundabout for 6 weeks during the daytime.

• The sewage treatment works are at capacity.
• The Hospital is at capacity, even though it is losing money.
• There is a lack of electricity supply in the area.

We are led to believe that there is a lack of places in senior schools for the current primary school pupils, which is being addressed by the proposal for additional schools at the strategic sites, but this will add to the congestion on the roads.

The public transport system is not being improved, indeed there will be areas within the borough where there will be no buses in the near future, resulting in additional traffic.

Healthcare provision, Doctors, Dentists, Opticians, improvements or extension of the RSCH have not been addressed in the Local Plan.

Infrastructure improvements should be installed before any development works commence; this will have two benefits showing that the developer is aware of the needs of the existing residents and the provision of the upgraded infrastructure for the new residents. The developer will then be seen as being part of the community both existing and new.

II Infrastructure and DeliveryObject

This policy will not deliver the required infrastructure improvements required to support the existing residents and proposed developments within the Local Plan.

Developers need to be encouraged to install infrastructure improvements before developing a site and by so doing demonstrate that they are engaging with the community in a responsible and fair way.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy II)

This will cause more congestion to the villages of Ripley, Send and Clandon, which have poor condition narrow roads and no footpaths, which are dangerous. More houses will increase this danger and unsustainable volumes of traffic

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Policy I1: Infrastructure and delivery

I OBJECT to this policy.

• Various aspects of Infrastructure are acknowledged as congested, inadequate for the existing population and not able to accommodate much growth. However, greenfield sites – requiring heavy infrastructure investment – are targeted in order to generate CIL income for the council. This is not sensible. The current draft CIL scale also encourages development on greenfield sites rather than brownfield.

• The methodology commissioned by the Council to assess traffic and the corresponding roads infrastructure needs is inadequate for the purpose of the Local Plan and identifies only the tip of the iceberg in terms of existing congestion. Looking at local traffic situations around the Borough it becomes clear that the schemes proposed will not solve congestion and the local road network has not been given sufficient consideration. Under the growth proposed some locations would require highway schemes that involve demolition of property and road-widening in residential areas to solve the resultant congestion. Even the A3 improvements are not guaranteed to take place but they are being used to justify removing large areas from the Green Belt before detailed traffic assessments have taken place. These detailed investigations are being deferred until the planning application stage and will be left to developers to prepare. If a site then proves to be unsustainable its Green Belt protection will have been lost for no reason and unsuitable development will take place by a more insidious process.

Attached documents:

Comment ID: PSLPP16/17139  Respondent: 8993793 / Berkeley Homes (Southern) Ltd.  Agent: The Howard Partnership Trust (Vicky Lochead)

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Berkeley Homes has a long-term interest in several plots of land in the village of Effingham and have been working with Howard of Effingham School to develop proposals to deliver a new school and much needed new housing for the area. These plans were supported in the Draft Local Plan (2014) but were refused planning permission by Guildford Borough Council in March 2016 and are expected to be considered at an Inquiry in Spring 2017. Given the requirement for those proposals to demonstrate very special circumstances as a departure from policy, we expect the suitability of those plans to be established through the planning inquiry, rather than the Local Plan. Nevertheless, we have some observations on the Proposed Submission Local Plan, which are set out below.

You will be aware that the Local Plan will be tested by the Inspector against the four tests of soundness (National Planning Policy Framework (NPPF) para 182), namely that it is positively prepared, justified, effective and consistent with National Policy. We set out below why we are of the view that the Proposed Submission Local Plan does not meet these tests in relation to the Spatial Strategy (Policy S2), Affordable Homes (Policy H2), the Green Belt (Policy P2), and Infrastructure Delivery (Policy I1).

We understand that Howard of Effingham School will be submitting their own representations on education specific issues relating to Policy I1 on infrastructure delivery.

Policy I1 sets out the Council’s proposed approach to infrastructure delivery and cross-refers to Appendix C which is a schedule of infrastructure items. Infrastructure delivery is regarded as a crucial element of Local Plan making by Government and is one of the five strategic policy areas identified by the NPPF (para 156) that Local Plans should cover, namely:

“the provision of health, security, community and cultural infrastructure and other local facilities”.

In our view, Policy I1 takes a narrow view of infrastructure provision without providing a proper reasoned justification for the items identified in Appendix C or their relationship to the overall Spatial Strategy for the Borough. Neither the Proposed Submission Local Plan itself nor the supporting documents provide a proper assessment of the potential approaches to infrastructure provision, particularly on education and, as far as we are aware, there has been no work undertaken to identify the deliverability of this infrastructure compared to the site and housing trajectory. Secondary school allocations, for example, now rely almost entirely on the delivery of large strategic sites, which are to be delivered later in the plan period and then over several years.

We are, therefore, of the view that Policy I1 is neither justified, nor effective.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Policy ID1 sets out the Council's proposed approach to infrastructure delivery.

Neither the Proposed Submission Local Plan itself nor the supporting documents provide a proper assessment of the potential approaches to infrastructure provision, particularly on education and, as far as we are aware, there has been no work undertaken to identify the deliverability of this infrastructure compared to the site and housing trajectory. Secondary school allocations, for example, now rely almost entirely on the delivery of large strategic sites, which are to be delivered later in the plan period and then over several years. We are, therefore, of the view that Policy 101 is neither justified, nor effective.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
Please catalogue my objection to developing this area of green belt, outstanding national beauty and area of great landscape value.

I feel that this would be a wholly inappropriate development within the green belt. Primarily because it would be visible from and adjoin protected AONB and area of great landscape value. As soon as that happens the AONB is blighted. The character of the area, totally rural and picturesque, would be significantly harmed.

The local infrastructure could also not cope with it, despite the Highways Agency’s plans to improve the A3 and A31 junction. There is so much traffic along that stretch of the A31 and A3 that when just one thing is altered tremendous tail backs are created. For example this week the Surrey Sports Park diverted traffic slightly, and the queue to get to the hospital, research park, A3 and Park Barn was queued back nearly into town. It also took half an hour to leave Park Barn. This side of Guildford is already unable to cope with the volume of cars on the roads and could not cope with any more.

I also object on the grounds how it will negatively affect the flora, fauna and habitat within the local woodland, common land and farmland. For example there are nesting Skylarks each year in the land proposed to be developed, as well as many other species of animals and flora.

There has also not been a significant study in to how this will affect the areas of Park Barn where there has already been some localised flooding over the years. Currently the fields act as a run off for the Hogs Back, and where these to be developed there is concern about the risk of flooding among residents.

The harm to the local area far outweighs any special circumstances that the local council may deem fit and I urge the planners to reject plans at this site, despite the five year plan for house building.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
### Comment ID: PSLPP16/5119  Respondent: 9009025 / Peter Elliott  Agent:

**Document:** Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

**Do you consider this section of the document; complies with the Duty to Cooperate?** ( ), **is Sound?** ( ), **is Legally Compliant?** ( )

I would also like to object to the secretive and high-handed way in which the SHMA process has been The annual house building target is more than double what was agreed in 2010, and more than double what could be explained by the population growth figures for Guildford for the last twenty years. Also, unlike last time, no constraints have been applied for infrastructure or environmental factors, with no explanation offered as to why. GBC has repeatedly refused to involve their electorate in discussing this matter, and has steadfastly refused to explain what factors could account for this huge hike in the annual house building target. All we do know is that G.L. Hearn, who did the SHMA, has a vested interest in setting the figure as high as possible, to generate work for their associates at Constructionline. Government guidelines state that the community should be able to feel confident that the SHMA figure is fair and objective. For the reasons given, GBC has failed woefully in this regard.

Furthermore, I object to the fact that the infrastructure has not been properly assessed, and is inadequate to deal with current housing levels. Anyone who knows Guildford will tell you that traffic congestion here is dire, with long stationary queues of traffic on the A31 and A3 a daily occurrence, and the smallest incident can result in total gridlock. How the planning department can propose adding another possible 26,000 cars to the situation beggars belief, even taking account of the modest improvements to the infrastructure proposed.

**Do you consider this section of the document; complies with the Duty to Cooperate?** ( ), **is Sound?** ( ), **is Legally Compliant?** ( )
I object to the lack of proper infrastructure planning for sites (A43 and A42)

The Foreword to the plan by Paul Spooner includes on page 5:

“We recognise that significant infrastructure upgrades are required to support existing communities and the planned growth of the borough. The delivery of sites allocated in this plan is contingent upon the provision of new infrastructure, which is a key theme of our Local Plan”.

The lack of any plan for either physical or green infrastructure improvement clearly contradicts this in respect of both A43 Garlicks Arch and A42 Clockbarn Nursery, Tannery Lane, Send. Development of these sites without the contingent infrastructure would therefore be contrary to the stated aims and themes of the Plan, and should not go ahead.

Policies ID1 & ID2 Infrastructure – My Objections

Although much is made of the need for new infrastructure to support these developments and for this to be in place as needed, the Plan admits “…we forecast that there will also be an absolute increase in overall traffic volumes” and this is assuming all the infrastructure (listed in App. C to the Plan) is in place in a timely fashion. GBC has little or no control over the plans of Surrey County Council as the local highways authority and Highways England for trunk roads. Worryingly, the Plan now has less substantive information about improvements to the A3 South of the M25 from Highways England and it appears that their plans are not yet formed (Policy ID2). In the absence of such information, the infrastructure proposed is specific to each proposed development and does not address cumulative effects. What would be the case with regard to planning approval if SCC and/or HE do not provide timely infrastructure?

The Plan now calls for nearly all infrastructure to be funded by developers (see APP. C). We question how realistic it is to expect developers not only to pay for all the infrastructure but also to have it in place in a timely fashion. The Plan says that planning permission will be refused if timely provision of infrastructure cannot be secured. Such refusals will almost certainly be settled in the courts. Developers’ business models are based on building and selling houses to create the cash to provide infrastructure. People will be living on the sites well before infrastructure is complete. Will GBC
prevent development of Gosden Hill until slip roads etc. are provided off and onto the A3? Again, the infrastructure is site specific and does not address cumulative effects.

If development were to be refused the land would still have been removed from the green belt and its future rendered uncertain.

Residents are being asked to accept very large amounts of development with little or no detail being provided on measures which would relieve existing congestion and limit future problems. The cumulative effects of the developments listed below are certain to have a devastating effect on the A247 through our village (and of course on Send) and it is hard to see how any of the infrastructure proposed in the Plan (App. C) will do anything to mitigate the effects of these developments on the A247 and hence our village.

**Summary of the Impacts on the A247 – My Objections**

All of these developments will draw additional traffic to the A247 through the village. It would be naïve to think that the employment sites and schools will serve only the developments themselves. Apart from the normal movements of residents to and from the new sites there will be considerable additional traffic on the A247 generated by:

- children from elsewhere being delivered to schools and collected
- the employees of the offices and industrial sites getting to work and returning home
- the vehicle movements generated by distribution and storage activities
- traffic from Wisley wishing to travel South and returning
- traffic from Gosden Hill wishing to travel South and returning
- traffic from Slyfield wishing to travel South and returning
- private and commercial traffic originating in the South and accessing Gosden Hill, Burnt Common or the A3 and returning (including traffic from Dunsfold)

The A247 although an A road:

- is less than 2 vehicle wide in places
- does not have continuous footpaths
- has several sharp bends
- has a hump-backed bridge with poor site lines
- has a very difficult junction to access the station
- is largely unlit
- has a primary school
- is already very congested at times

- The draft plan appears to acknowledge that ‘suitable, adequate infrastructure is crucial’ but does not adequately recognise the limitations of the current infrastructure for the current population, much less a rapidly increased number of homes in the first 5 years of the plan.
- See above comments re school places, medical facilities, youth facilities and local parking.
- The local roads, not wide and with narrow and partial pavements, will become even busier, especially at peak times, leading to congestion and pollution. The roads are already in a poor state so additional traffic generated by increases in housing will substantially worsen the situation.
- The existing sewer system, which is already known to be struggling (in the past raw sewage has poured on to the roads around Green Lane in West Horsley during the heavy rains), will be unable to cope if a large number of additional houses is built.
- Some of the sites suggested for housing are at risk of flooding – notably the land at the rear of Ockham Road North. Many pictures have been taken in the past.

I object to the planning based on the visible inability of the local infrastructure to cope with the already increased number of local residents. I catch the train form Horsley station into London daily. Previously there would be room for all passengers on the platform, today there a lot more passengers boarding at Horsley and often no seats available- this is after the platform extension and before any development has started. It is clear that by adding another 500 houses in Horsley and 2000 at Wisley the rail network will NOT be able to service the needs of the local community.

In addition other local amenities of West and East Horsley, car parking, doctors surgery, primary school, sports clubs are full to bursting and cannot maintain with the current level of demand.

The Local Plan makes no reference to providing increased infrastructure to compensate for the extra cars, children and people.

Local roads are narrow and get busy during at school times, many children in the area walk, scooter and cycling to school. Increase the population will cause further congestion and puts children’s lives in danger.

**Attached documents:**
These three policies cover Infrastructure & Delivery, Supporting the Department of Transport’s ‘Road Investment Strategy’ and Sustainable Transport. Whilst I support the general policy statements as presented in each case, it is the detailed infrastructure proposals for Guildford Borough which gives me cause for concern.

I believe there are serious deficiencies and shortcomings in the infrastructure of Guildford Borough as it is today and that the aggressive housing policy as proposed by GBC in the Proposed Submission Local Plan will exacerbate this problem.

I would make the following comments specifically about infrastructure in East Horsley today:

- Roads across the parish are in poor condition with many potholes. Many roads are unable to sustain their current levels of traffic, particularly the increasing levels of HGV traffic;
- The principal through roads traversing East Horsley are narrow and winding, have a series of pinch points, have sections without any pavements and are generally unlit. As a senior SCC councillor remarked at a recent public meeting in the village hall: “East Horsley has lanes, not roads.” East Horsley’s ‘lanes’ are totally unsuitable for high volumes of traffic, in particular for the volume of HGV’s now using them;
- Many of the drains are blocked or otherwise in poor condition giving rise to frequent surface water flooding when it rains;
- The pavements are in poor condition. As well as being narrow, they are often uneven and/or cracked making it difficult, for example, for people with pushchairs or prams or in wheelchairs;
- There are insufficient school spaces for the number of local children needing them, with the result that children are often allocated to schools a significant distance away such as Dorking or Woking; and
- The Medical Centre in East Horsley is already at capacity in terms of its number of

It is recognised that, as stated in the Proposed Submission Local Plan, the maintenance of adequate infrastructure and its expansion to meet growing needs is the responsibility of the relevant infrastructure provider. This is often not GBC itself but rather, for example, Surrey County Council or utility companies.

In respect of East Horsley, there are only two specific proposals in Appendix C:

LRN 25 - East Horsley and West Horsley traffic management and environmental improvement scheme. It is not clear what is proposed here, and its timing and funding have to be considered uncertain. It is stated that funding will, at least in part, come from developer contribution. However, it

is not at all clear what development is likely to give rise to such a contribution, but it certainly implies that funding could only come if there were a development; and

HSC 5 - Expansion of East Horsley Medical Centre to provide additional capacity and services for future population in years 5 – 15 of the plan.

There are no proposals in respect of all the existing problems with for example roads, pavements, drainage, and schools.

Furthermore, it is inevitable that the proposed developments in East Horsley itself and nearby, particularly in West Horsley and the proposals for Wisley, will put further strain on the existing infrastructure. There are no proposals at all to cater for this.

Although an expansion of the Medical centre is proposed in the Infrastructure Schedule, this is not until years 5 – 15 of the Plan. Given that it is already at capacity, EHPC believes that this needs to be done earlier.

Local primary schooling is also a very pertinent issue. There are 11 housing development sites identified in the LAA for East and West Horsley, which taken together would result in the building of 593 new houses in the two parishes that are
today served by a single primary school - The Raleigh, in West Horsley. Planning guidance suggest that this number of new homes will require the provision of around 150 additional primary school places to accommodate such an increase in population. Today there is no spare capacity at The Raleigh, yet no proposals are made in the Proposed Submission Local Plan to provide for any more schooling in the Horsley’s.

I believe that the failure to address the inadequacies of the existing infrastructure to meet the needs of what is there already is a serious deficiency in the Proposed Submission Local Plan.

I accordingly object to the infrastructure proposals on these grounds. I further object to the proposals for infrastructure in that they do not meet the stated objective of providing infrastructure to support the proposed developments.

Attached documents:

---

Comment ID: PSLPP16/2911  Respondent: 9056513 / Edmund Crawford  Agent: 

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Education/Employment

The local schools are all oversubscribed and new schools would also have to be built on Green Belt local land to cater for the ever increasing demand caused by the new developments. There are no employment opportunities in the area and the prospects of any in the future are negligible. Thus new residents would also have to commute.

Infrastructure

The roads in the area are typical of Green Belt countryside. They are narrow and consist of many bends and ditches. For a suggestion to provide walkways and cycle paths is laughable as particularly in winter months, these would be dark and dangerous as street lighting is not used in these areas. If introduced there would be a problem of light pollution and would not be in keeping with the rest of the community. The increase in housing would bring potentially 5000 more cars to the area, increasing the problems locally and at the Wisley Interchange M25/A3 also at the A3 Painshill Interchange. These junctions are at a standstill most mornings as early as 6am. Proposals for improvements to these areas are already too late and by the time they are implemented standing traffic would be an all-day occurrence. This will lead to more pollution, that we need our countryside, mainly trees to absorb, as any reduction in the amount of trees would increase the level of noise and pollution.

The resulting increase in housing and residents would further damage our wildlife and eco system with irreversible effects. The local road conditions are poor and dangerous at present with the volumes that we currently have. Sewer problems are ever present and no increase in volume can be catered for. The renewal of these to Ripley would cause major upheaval and create massive problems to local people and wildlife.

There are no industries and only very small scale employers in the area and the likelihood is that this will not change. Thus, all new residents will need to commute to employment. Roads, trains and a poor bus service are already at capacity. The Doctor’s surgery is full, and parking at the local shops and station are also at full capacity. We would require a new Police and Fire Station to the area due to its increasing size. Increased demand would mean that Guildford and Painshill Fire Stations would not be sufficient.

I could write my thoughts endlessly but would like to sum up by saying:

The housing density for this area is wholly inappropriate and damaging to our community. The infrastructure, roads and transport links are poor. Drainage, foul and surface water is unable to cope with more development of this size and
nature. The Plan is not made to deal with local issues and the developers /land owners only have one aim, profit at all cost.

Guildford Borough Council appears to have the same motive. All that they see is more Council Tax revenue and to hell with the consequences. I also note that most of the areas earmarked for development i.e. East & West Horsley do not seem to have any members of Guildford Borough Council living in the area so are being vigorously attacked as they do not want these developments on their doorstep. I have to raise these points as if we let our Green Belt land be developed our future generations will see it as “our fault” and I do not want that legacy. So I urge the Council to reconsider other options and therefore reject the proposals outright.

POLICY I1 Infrastructure and delivery

OBJECT Various aspects of Infrastructure are acknowledged as congested, inadequate for the existing population and not able to accommodate much growth. However, greenfield sites – requiring heavy infrastructure investment – are targeted in order to generate CIL income for the council. This is not sensible. The current draft CIL scale also encourages development on greenfield sites rather than brownfield.

The Council’s methodology assessing traffic and roads infrastructure needs is inadequate. It identifies only the tip of the iceberg in terms of existing congestion. Looking at local traffic situations around the Borough it becomes clear that the schemes proposed will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed locations would require highway schemes that involve demolition of property and road-widening in residential areas to solve the resultant congestion. The A3 improvements are not guaranteed to take place but they are being used to justify removing large areas from the Green Belt before detailed traffic assessments have taken place. These detailed investigations are being deferred until the planning application stage and will be left to developers to prepare. If a site then proves to be unsustainable its Green Belt protection will have been lost for no reason and unsuitable development will take place by a more insidious process.

POLICY ID1 INFRASTRUCTURE AND DELIVERY

A new Transport Topic Paper has been published by GBC. Items 3.16 and 3.17 (page 10) mention Highways England concerns regarding the Strategic Highway Assessment Report 2016 and two letters. These letters can be accessed from the “Get Involved” website by searching for the Highways England response to the consultation. It seems clear that further modelling will be undertaken before the Examination and it also seems unlikely that it will be consulted on. We consider that any further modelling should include more detailed information so that it can be subject to scrutiny by GBC and the public.

The wording of ID1 has been amended to give an impression that provision of adequate infrastructure will be enforced. However, the reality is that GBC will not determine the required infrastructure. It will be determined by Surrey Highways for the local road network and they are required to support development – not put obstacles in the way. If the Strategic Highway Assessment Report is anything to go by, the requirements will be understated or not even recognised. Transport assessments supporting planning applications will be prepared by consultants acting for, and remunerated by, the applicant. Improvements to the strategic road network (e.g. A3) will be determined by Highways England, budget constraints, and ministerial decisions.

Cllr Furniss has stated that the proposed Blackwell Farm development will not depend on A3 widening (in response to a question from Karen Stevens to the Executive Advisory Board meeting held on 20 April). It seems likely that Highways England have felt the need to offer a reality check on the likelihood of major work on the A3, such as widening or a tunnel, in the foreseeable future – apart from improvements to two slip roads.

The policy states that infrastructure will be secured by planning condition and/or planning obligation but this will require enforcement and we doubt the ability and willingness of GBC to overcome developers’ viability arguments. For the permissions that require a longer timescale there could be non-delivery issues if the original developer abandons the project without fulfilling all the conditions and obligations. Item 4.6.8 still indicates that GBC will be prepared to reduce infrastructure requirements by negotiation. I.e. viability for the developer will take precedence over infrastructure.

No change has been made to the monitoring requirement which is based on CIL receipts and spending rather than actual, and timely, delivery of infrastructure.

I object to ASP 3 new A3/A3100/B2215/A247 Burpham-Burnt common all-movements junction, formed by a new connector road linking between new A3/A3100 Burpham junction (SRN4) and the B2215 London Road, in combination with the new A3 northbound on-slip (SRN9) and the new A3 southbound off-slip (SRN10) under Infrastructure and Delivery.

If development gets the go ahead for the strategic site at Gosden Hill it would be logical to construct a 4 way A3 interchange at Burpham. The A247 link road to Woking already at capacity will become gridlocked.

I object to SRN4 New A3/A3100 Burpham junction with relocated A3 southbound off-slip and new A3 southbound on-slip. This will place an unbearable problem onto the A247 whereby traffic will be passing directly through Send from the A3 and M25 and the proposed new development at Wisley.
I object to SRN9 A3 northbound on-slip at A247 Clandon Road (Burnt Common) and SRN10 A3 southbound off-slip at A247 Clandon Road (Burnt Common). This will place an unbearable problem onto the A247 which is already at capacity.

Policy I1: Infrastructure and Delivery

Object (not positively prepared nor effective in respect of NPPF paragraph 182)

WPI supports entirely the provision of phased infrastructure required to mitigate the impacts of developments and enable the delivery of the Local Plan. The provision of new hard and soft and Green Infrastructure at the Wisley new settlement is central to the promotion and delivery of the proposed allocation.

The present draft policy wording is ineffective and unjustified, as it seeks infrastructure based solely on when it is first needed by occupants. This is overly narrow and rigid, and pays little attention to wider infrastructure delivery factors. A proportional approach should be included, which enables the phased delivery of infrastructure, commensurate to overall scheme delivery, the overall Infrastructure Delivery Plan (IDP) supporting the Local Plan, and with due regard to scheme viability, and hence delivery. The present wording which requires ‘timely’ infrastructure delivery, pays no attention to development viability, and hence the situation whereby the necessary infrastructure has to be phased alongside development delivery.

Infrastructure provision and delivery will ultimately be the responsibility of a number of organisations, developers and landowners as well as public authorities. Whilst Section 106 and CIL funding is important, subject to the relevant tests of the CIL Regulations (122/123), the Local Plan will only be delivered on the basis of wider funding streams. This is clearly outlined within the Surrey Infrastructure Study (2016) produced by SCC. This outlines:

- Total infrastructure costs for GBC estimated to be £1.16bn
- £75m is secured funding
- Expected funding is as much as £569m
- Which leaves a shortfall of £518m
- Deficits in primary and secondary education
- County wide requirement for further community facilities, doctors (an additional 11 GPs), outdoor sport and recreation and social care beds
- Most of the infrastructure cost is highway and rail, specific for Guildford Borough
- Specific to the Wisley new settlement, the Junction 10 (M25/A3) is costed at £175m, with funding. The proposed Guildford Strategic Corridor (A3) is listed at £300m.

WPI strongly supports the delivery of new infrastructure. In the representation in respect of the proposed allocation of the Wisley new settlement (draft allocation A35), WPI notes that the delivery of the new settlement will meet many of the priorities listed in the Surrey Infrastructure Study. Appendix 5 outlines the education needs for the Wisley new settlement, in support of the requirement for a primary and secondary school on site.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I object to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.
This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

Horsley Infrastructure is Overloaded.

The proposed addition of 593 new houses in the Horsleys excluding the Wisley airfield is not accompanied with a plan to improve the additional infrastructure. The medical facilities are stretched - even to get an emergency appointment right now takes over a week! The primary school is full and there is no secondary school in the Horsleys with children being sent miles away as all the local schools (Howard of Effingham etc are way oversubscribed). It sorely looks like they
assume everyone buying these houses will send their kids to private school and have private GPs, which is absolutely not the case. Roads and parks are overloaded and crowded etc

1. I object to the lack of proper infrastructure planning for sites (A43 and A42)

The Foreword to the plan by Paul Spooner includes on page 5:

“We recognise that significant infrastructure upgrades are required to support existing communities and the planned growth of the borough. The delivery of sites allocated in this plan is contingent upon the provision of new infrastructure, which is a key theme of our Local Plan”.

The lack of any plan for either physical or green infrastructure improvement clearly contradicts this in respect of both A43 Garlicks Arch and A42 Clock barn Nursery, Tannery Lane, Send. Development of these sites without the contingent infrastructure would therefore be contrary to the stated aims and themes of the Plan, and should not go ahead.

1. Transport
The sites in the eastern part of Ash, that are currently rural, are partly serviced by narrow roads without pavements (Foreman Road and Harpers Road), and unsuitable for pedestrian use. The proposed road schemes in the area are unfunded and undated, so may never happen, and do not address the congestion in the narrow section of Ash Street between the Greyhound and the Coop.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1. Primary education.

You state that 1-2 extra forms of entry will be needed, most likely at Ash Grange school as it is nearest to the bulk if the new development. As FOEs have to be whole numbers, this means turning a 1 FOE school to a 3 FOE school. Has the feasibility and cost of this been seriously considered? What consultations have taken place? Who will pay? This is a matter of some urgency as the classrooms have to be built and staffed before the first children arrive, which will be within the next 3 years. I would also mention potential difficulties with parent parking, already a problem in the area near the school. If instead you added one of the FOEs to the Walsh school, you would have the same issues at that school.

2. NHS General practices.

Your (almost illegible) map of GPs in the borough shows none in the western part of the borough, despite the existence of a large practice in Ash Vale (the only one in the area). Can this practice deal with a 30% increase in patients? Will they use the land offered in the Ash Lodge Drive development? How much will it cost? Who will pay? The Ash Vale practice has poor access, with very limited parking, and is not on a bus route. It is also too far from the proposed new developments for people to walk.

1. POLICY II

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy II)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.
Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy 11. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy 11 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.
Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

Policy 11 - Infrastructure and delivery

OBJECT. There is a hopeless mismatch between the housing aspirations and infrastructure. Apart from a few hopes around the A3 junctions, nothing is suggested that might help in any material way. This is true throughout Guildford but particularly in the NW sector. In 2011, Guildford was labelled the 42nd most congested city in Europe. There are already serious problems with the AJ and the local roads, of which the northwest sector with the A320, A322 and A323 is probably the worst. But still there are sites in the plan for this sector. See in particular site A22, Keens Lane.

I object strongly to development of Sites A36-41 (East and West Horsley) as stipulated in the Guildford Borough Council Draft plan. The plan states that the proposals will have particular regard to 'the distinctive settlement pattern of the village and the important relationship between the built development and the surrounding landscape'. Over 23% of the Plan’s new housing is proposed in the immediate localities of Ockham, Ripley, Send and the Horsleys (of which 65% is allocated to Former Wisley Airfield (FWA/TFM), an area that at present has only 0.3% of the population of GBC. I don't see how this can be justified as the proposal recommends increasing the number of properties in the West Horsley alone by over 34% without any significant investment in infrastructure to the surrounding areas. For example, both local primary and secondary schools are hugely overcrowded and oversubscribed and want to instigate plans to expand to at least enable them to meet existing demands.

I object to the fact that the proposed plan does not meet the needs and desires of local communities, as evidenced through the Ockham Parish Plan. The top two responses as to why local residents enjoy life in Ockham are (1) access to the countryside and clean air and (2) the peace and quiet afforded by wide open spaces. Over 90% wish to see both the historic features of the village maintained and protect the village’s green spaces, including the FWA/TFM. The size and
condition of roads, drainage and supplementary transport links, particularly the train services will not cope with such a huge increase in demand without significant investment.

I OBJECT. Various aspects of Infrastructure are acknowledged as congested, inadequate for the existing population and not able to accommodate much growth. However, greenfield sites – requiring heavy infrastructure investment – are targeted in order to generate CIL income for the council. This is not sensible. The current draft CIL scale also encourages development on greenfield sites rather than brownfield. The Council’s methodology assessing traffic and roads infrastructure needs is inadequate. It identifies only the tip of the iceberg in terms of existing congestion. Looking at local traffic situations around the Borough it becomes clear that the schemes proposed will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed locations would require highway schemes that involve demolition of property and road-widening in residential areas to solve the resultant congestion. The A3 improvements are not guaranteed to take place but they are being used to justify removing large areas from the Green Belt before detailed traffic assessments have taken place. These detailed investigations are being deferred until the planning application stage and will be left to developers to prepare. If a site then proves to be unsustainable its Green Belt protection will have been lost for no reason and unsuitable development will take place by a more insidious process.

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object most strongly to the traffic congestion any additional development will cause to our local villages due to inadequate road infrastructure (Policy11). As it is now, whenever there is a traffic accident on the A3 or M25, vehicles try to cut through all the local roads (at speed quite often) which results in major congestion and danger through all the small villages in the area. The A3 is at a standstill daily heading north to London and south at Stag Hill and that is without any additional development within the area.

I object to the developments proposed at Garlick’s Arch, Wisley Airfield, Gosden Hill and Clandon Golf Course I object to the lack of proper infrastructure planning for those sites.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Policy I1: Infrastructure and Delivery

On reading this policy it sounds OK. But, the reality of this Local Plan is that despite its statement that “infrastructure needed to support development should be provided and available when first needed to serve the occupants and users of the development” many of the proposed developments will not in fact deliver infrastructure at the time that it is needed. Schools, medical facilities, road improvements, parking etc. are all likely to be delivered (if at all) well after they are first needed. Agreements can be made with developers that, for example, a school will be available for use after 500 dwellings have been built. Under those circumstances, it is not uncommon that the houses are built in phases, and – by an amazing coincidence – there is a pause after 499 houses have been completed.

The only way to know in advance how infrastructure delivery is going to pan out is to have a genuinely detailed plan for infrastructure that covers specifications, binding costs and timescales. Anything less is a recipe for disaster, and unfortunately the Infrastructure Schedule at Appendix C of the Plan falls well short of this requirement. **I therefore OBJECT** to this policy.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

---

OBJECT (on 2 distinct grounds)

1. Paragraph 5 of this Policy states that “When determining planning applications, and attaching appropriate planning conditions and/or planning obligations, regard will be had to the delivery and timing of delivery of the key infrastructure, or otherwise alternative interventions which provide comparable mitigation”. There are two fundamental points here:

   a) “Key infrastructure” is exactly that – it is “key” ie. essential. Residents don’t want planners to “have regard for” the delivery and timing of such infrastructure; instead they want a genuine guarantee that infrastructure will be in place when it is required, and not a day later.

   b) Because “key infrastructure” is essential (by definition), its absence cannot be “mitigated by alternative interventions”.

This paragraph seriously weakens the provisions of paragraph 2 of the Policy, and it needs to be deleted. Any form of words that hints that there could be an acceptable formula for delaying the delivery of infrastructure will simply be an open invitation for developers to pursue exactly that goal. **I object to this Policy on the grounds that it is simply aspirational and is too weak to withstand challenge at Planning Appeals.**

1. As a separate point, Appendix C to the draft Local Plan lists a series of infrastructure projects with a total cost of well in excess of £1 billion, whose joint effects would have a very significant impact on a large proportion of the borough’s residents. In addition, there will inevitably be very considerable interactions between the various individual projects, and with most if not all of the major development projects that are proposed. These interactions will arise both from the “static” physical influences of one upon another, and in the relative timings...
of the various projects. Moreover, the timescale (and even potentially the very existence) of many of the more significant projects is outside the control of Guildford Borough Council. Overall, this collection of infrastructure projects needs to be planned and phased very carefully indeed. In short, there needs to be an infrastructure masterplan which is formally agreed between the various contributors. Otherwise instead of being a well-constructed programme of inter-related improvements, the required infrastructure developments will depend more on an “it’ll be alright on the night” approach – which would lead to painful long term chaos for residents. The Plan presents no evidence from which to draw confidence that an adequate level of planning has taken place; even the introductory remarks in Appendix C state that it “is not an exhaustive list of all the infrastructure that will be provided or improved in the borough during the plan period”. Moreover, I have not even been able to find a simple map that presents in one place a basic layout of the various projects from which one could readily infer at least some of the likely interactions between them. I object to this Policy on the grounds that a great deal of work remains to be done before borough residents can even consider the overall proposals before them in a rational way. A properly considered, detailed infrastructure masterplan (including phasings, formal commitments by the contributors, and a proper examination of the impacts of any changes in the relative schedules) will be essential before even considering embarking on an “adventure” such as this.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

---

9. I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure.

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

---

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.
With some 5000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Crandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

10. I OBJECT to the lack of proper infrastructure planning for sites

Policy 11 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all. Despite the Garlick's Archsite (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents' in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick's Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )
The infrastructure in the area is unable to support a development on the site: Keens Lane is only 4.4m wide at the junction of Sime Close and Timbers (the 16th century property on the north side of the road). The roundabout at the eastern end of Keens Lane is dangerous because of traffic from Guildford treating it as a chicane. Worplesdon Road is currently one of the worst roads in the area for traffic congestion during rush hours. Any hardstanding from a development west of Findlay Drive will increase the already significant run off into Sime Close which floods the side of Syndey Court every time it rains, and consequentially silting up of the soakaway.

I understand Gravetts Lane was flooded on 23rd June after the rain the night before and the sewers were bubbling up with the need for a major clean up to be carried out. There is insufficient infrastructure and power which would require a huge upgrade for both gas and electricity in the area. Additionally core services such as Schools, Drs, Hospitals etc - already desperately overstretched - would need to be majorly invested in.

I hope my concerns may be taken into account.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

**Do you consider this section of the document; complies with the Duty to Cooperate?** ( ), is Sound? ( ), is Legally Compliant? ( )
Transport
The Local Plan rightly highlights the pivotal role the provision of transport infrastructure will have to play in the successful delivery of the policies contained within it. Transport issues act as a major constraint, holding back Guildford’s ability to maintain and build its existing economy, which in turn can deter further investment. In particular excessive congestion and poor accessibility to the town centre and key employment sites such as the Surrey Research Park act as a constraint on growth. The Local Plan represents a key opportunity to formulate a coherent plan to ensure that growth can be delivered and sustained across Guildford. It needs to be flexible enough to enable the strategically focused programmes developed by key stakeholders such as the LEP, Surrey County Council, Highways England, Network Rail and the University of Surrey to create accessibility and infrastructure improvements, which will unlock development opportunities, increase housing supply and improve the capacity of Guildford to generate wealth and high quality jobs. Enterprise M3 therefore welcomes the Strategic Objective 12 to facilitate the timely provision of necessary infrastructure to support sustainable development, together with the commitment given through Policy I1 towards the delivery of infrastructure. This commitment demonstrates the importance of working with partners to ensure a programme of infrastructure provision for the Borough is delivered both within and beyond the Plan period.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
3. I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

There is too much traffic in our villages already and this plan will cause more congestion in Ripley, Send and Clandon, with no plan to improve that.

The rural roads in this area are narrow, in poor condition and have no footpaths. 5000 more houses means dangerous and unsustainable traffic.

13. I object to the lack of proper infrastructure planning for sites (Policy I1)

The Plan does not identify adequate infrastructure improvements to support the huge scale of development, especially at Garlick’s Arch (A43) which has no infrastructure projects in the Infrastructure Schedule to support it. Local services, utilities and sewerage, doctors etc. are at or close to capacity.

There are no plans to improve the capability of the medical and police/emergency services to cover the 5000+ houses in the north east of the borough.

I write to object most strongly to the proposals to build on Guildford’s greenbelt land. Past Governments made the policy of greenbelt to protect it for the country, the people and the wildlife and for new Governments to erase these policies makes the making of any policy a farce if, in time, it can be overwritten.

Building new homes is treating the symptoms of over population. All it will bring about is more population and more housing needs. The causes need to be treated, the Government and local authorities should be addressing the causes of over population, not eternally accommodating it. The infrastructure of Guildford cannot take any more population. The Aldershot road is always heavily congested in the morning and evening, the A322 around the Brookwood area is regularly congested and more housing in Guildford would add to this problem, the same for Burpham, Jacobs Well etc. Concreting over the land creates more flooding, with all the rain this summer the flooding is more than evident.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
We write again, as we did in 2014, to protest strongly against the new Local Plan and the effect it will have on East and West Horsley. We came to this locality ten years ago, having lived in Guildford for over 30 years, with the hope of spending our retirement in a village community and in an area guarded by green-belt legislation.

This new Local Plan is, once again, an attack on the green belt, in that much of the area is now being changed as a result of a new “village boundary”. The large number of new houses planned for our two villages will have a huge adverse effect on the present community and the balance we now have of shops, schools and light industry. Our narrow road system already suffers from too much traffic, and the dangers will be heightened.

This Local Plan, ill-judged like its predecessor, and published despite strong local opposition, gives the impression of an act of planning vandalism against a semi-rural part of the Borough. What more do people have to do to voice their dissent?

It is evident that if the development of the Wisley airfield proceeds, all we say will be exacerbated greatly. We strongly object to that too.

Surely the Borough has a duty to protect its inhabitants, having regard to where they now live and the manner of living they now enjoy. Your Plan takes no account of that. Please will you listen to our objections.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object.

If you want to build more houses then you should improve the infrastructure first i.e. road, public transport, the hospital, the university, schools, amenities, more doctors surgeries, more NHS dentists etc. and build affordable houses please.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Secondly I believe that the level of development proposed for the Horsleys will place already stretched local infrastructure under even greater pressure. I myself live in East Horsley and have been unable to get my children into the only primary school within the village. I was also unable to park at Horsley station last week as the car park was already full by 9.30am. This suggests that the local area does not have the vital infrastructure to support such a level of development, and has limited scope for expansion.

I object to the fact that infrastructure requirements have not been properly considered and are inadequate to deal with proposed housing levels. Roads, doctors and schools will be unable to cope.

Attached documents:

Comment ID: PSLPP16/4684  Respondent: 10580385 / Brenda Aldred  Agent:
6. INFRASTRUCTURE POLICIES

Policies I1, I2 & I3

I consider that there are serious deficiencies and shortcomings in the infrastructure of Guildford Borough as it is today and that the proposed housing policy will exacerbate this problem.

1. Roads in the East Horsley Parish are mostly lanes in poor condition with many narrow and winding with pinch points, this, along with poor pavements and lack of streetlighting makes the roads unsuitable for more traffic that increased housing will bring.
2. The schools are oversubscribed.
3. The Medical Centre at full
4. Although it is stated that the maintenance of adequate infrastructure to meet growing needs is the responsibility of the relevant infrastructure provider this is not always clear who that is - developers, local councils or utility providers. There are no proposals in respect of all the existing problems with for example roads, pavements, drainage, and schools. Although an expansion of the Medical centre is proposed in the Infrastructure Schedule, this is not until years 5 - 15 of the Plan.

Local primary schooling is also a very pertinent issue and no proposals are made in the Draft Local Plan to provide for any more schooling in the Horsley's.

I therefore OBJECT to the infrastructure proposals as they do not meet the stated objective of providing infrastructure to support the proposed developments within the Plan.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
The Plan appears to focus on committing to an unsustainable increase in housing, while largely ignoring making the magnitude of commitments required for Sustainable Development. Unlike housing, where there is direct revenue from selling the property, infrastructure projects are notoriously hard to fund and usually take a long time to deliver.

I am not anti-development. I support the evolutionary infrastructure changes, such as site A41 allowing the relocation and expansion of the Raleigh School, which would come with increased housing. I support the equivalent in Effingham for the Howard School. Overall, I would also support more radical developments, such as the Wisley site for 2000 homes on a brownfield site. However, only if this comes with a binding commitment to infrastructure development, not just for the site, but for the surrounding areas – such as increased rail and bus services to allow the volume of people into commute. I suspect it will extend urban London out beyond the M25 and catalyse detrimental changes in the future, but it is probably the lesser evil to changing multiple villages around the green belt.

I appeal to the planning team to reconsider the approach, adjusting the increase in housing to where the impact is lessened (probably with lowest net infrastructure development cost), or to put a blanket percentage increase on all areas (which will probably come at a higher net infrastructure development cost).

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

3. Whilst promising schools to be built accordingly I fear the possibility of approx. 20,000 new pupils even the proposed new schools will not manage.

4. The local surgeries are full to bursting with patients now, along with hospital beds. How can this problem warrant the proposed figure of new dwellings?

5. The small country roads in and around the villages are in a state of poor repair. I have read the proposals and there seems inadequate provision for the likely hood of 40,000 more vehicles traveling these small rural lanes. The current infrastructure will not cope.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: pslp171/232  Respondent: 10616321 / Petrina Jeffreson  Agent:
I object to the lack of proper infrastructure planning for sites (A43 and A42)

The Foreword to the plan by Paul Spooner includes on page 5:

"We recognise that significant infrastructure upgrades are required to support existing communities and the planned growth of the borough. The delivery of sites allocated in this plan is contingent upon the provision of new infrastructure, which is a key theme of our Local Plan”.

The lack of any plan for either physical or green infrastructure improvement clearly contradicts this in respect of both A43 Garlicks Arch and A42 Clockbarn Nursery, Tannery Lane, Send. Development of these sites without the contingent infrastructure would therefore be contrary to the stated aims and themes of the Plan, and should not go ahead.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Attached documents:**

---

6) I object to the detrimental impact on transport, local roads and road I specifically object to:

1. The assertion that the development will result in a meaningful shift to cycling and walking. The development is too isolated, and even within the development itself too spread out to anticipate a reduced reliance on private cars
2. The increased volume of car traffic. A proposed development of 2,068 homes would result in an estimated 4,000 additional cars on the roads
3. The congestion this traffic will cause on the narrow rural roads in Ockham and the surrounding areas, exacerbated by wide vehicles including increased bus and HGV movements
4. The danger this traffic will be to local cyclists and pedestrians, due to the absence of any cycling paths and the lack of pedestrian footpaths (and the space to provide them)
5. The increase in the already severe congestion on the Strategic Road Network of the A3 and a further planning application at RHS Wisley (with a significant increase in visitor traffic) and a proposed 600 pupil secondary school on the site would add additional congestion at the M25/A3 junction as well as local roads. No development can proceed without significant infrastructure enhancements to the A3 and M25. Partial improvement works on the A3 south of the site are not due to start until 2019 at the earliest
6. The lack of suitable public transport. The local rail stations of Effingham and Horsley cannot cope with the proposed increase in passenger traffic and car parking is already at capacity

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.
The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
The Guildford Road (from Bailes Lane to Saint Mark's Church) has become saturated with traffic as a result of the lack of effective road planning around Guildford.

Three accidents have taken place in the vicinity of the church this year— including one fatality.

The existing primary school causes serious traffic congestion as a result of a broad catchment area.

The access and parking to Wanborough station is currently lacking in investment.

Hence the proposal to develop a secondary school requires significant transport infrastructure to support parents, children and residents. Exposing more children to transport and environmental risks would be folly of a high order. I OBJECT to the Local Plan on this point.

Consequently I urge the Council to withdraw this foolish and inadequate plan for Normandy. The consultation has highlighted the need for essential investment in the local transport infrastructure. This investment is already overdue and increases in transport demand should be factored into any future considerations. This inevitable is a precursor of a major housing development that will destroy the village I love.

9. I object to the lack of proper infrastructure planning for sites (Policy I1)
The Plan does not identify adequate infrastructure improvements to support the huge scale of development, especially at Garlick’s Arch (A43) which has no infrastructure projects in the Infrastructure Schedule to support it. Local services, utilities and sewerage, doctors etc. are at or close to capacity. There are no plans to improve the capability of the medical and police/emergency services to cover the 485+ houses in planned for Send. The Village Medical Centre is Send is the service for Send, Send Marsh, Burnt Common and Ripley. The impact of the proposed growth cannot be understated.

I object to a totally unrealistic number of houses for the country lanes to absorb.

I object to the 2016 Draft Local Plan as it has had no regard to schools required, additional medical or hospital facilities which would make a plan sustainable.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
The infrastructure in Horsley is still based on the needs of a small village; the roads/lanes are too narrow, the parking is limited and the extra cars created by the occupants of 593 houses + the 2000 at Wisley will resort in gridlock (they will all commute, there is little business in Horsley)

Drainage/sewerage system is antiquated and cannot cope with the current demands; when it rains water flows down from the A246 through the Horsleys all the way down to the A3 roundabout. If it rains heavily it floods and is impassable; 2500 extra houses with all the water running off the concrete surfaces will require major infrastructure development to cope with it.

There is one primary school in Horsley, a stretched medical centre, no NHS dentist, the shopping facilities are mainly met by a small Budgens convenience shop - who will develop these facilities (on what land) to meet the demands of the new homeowners?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

1. School:

My understanding is that the proposal to virtually double the size of Normandy is the need for a school in west Guildford. Keith Witham has researched all schools in the area and every one is undersubscribed, Kings Manor by as much as 57%. The birth rate in the area has decreased over the past 3 years or so and I fail to see the need for another school when the present schools are not at capacity.

1. Amenities:

Whilst I acknowledge we have a Church, a Doctors’ Surgery and a railway station, that is about the limit of useful amenities in the area. It can take 3 weeks for a non urgent appointment at the Surgery! What is it going to be like with a population double the size? The railway station car park is extremely limited in parking spaces, not actually counted but my guess is a maximum of 10. Cannot see how this can be enlarged with the car park being surrounded with houses and businesses.

I do understand that there is a need for more housing in the area and personally I have no objection to a couple of small pockets of new houses, but to build on the scale at present proposed by Taylor Wimpey is ludicrous. Taylor Wimpey are only interested in making a vast profit without a thought of the local residents, or the great difficulties it will be to travel around with a huge increase in population.

I strongly urge the Planning Committee to view the site.

POLICY I1 - Infrastructure and delivery

I OBJECT. Most of the borough’s infrastructure is antiquated, congested and straining to accommodate even current needs and organic growth. Yet this plan’s commitment to building housing estates across the Guildford countryside will mean either major infrastructure investment that no-one is prepared to pay for or else a catastrophic and simultaneous collapse in transport, educational, medical, energy, water and communications services.

The plan targets greenfield sites – requiring heavy infrastructure investment – in order to generate CIL income necessary to meet an infrastructure shortfall that is already serious. This is not sensible. The current draft CIL scale also encourages development on greenfield sites rather than brownfield.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing infrastructure needs in this area is inadequate, identifying only the tip of an iceberg of existing congestion. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that involve demolishing property and road-widening in residential areas to solve the resultant congestion. The A3 improvements are not guaranteed to take place but they are being used to justify removing large areas from the Green Belt before detailed traffic assessments have taken place. These detailed investigations are being deferred until the planning application stage and will be left to developers to prepare. If a site then proves to be unsustainable its Green Belt protection will have been lost for no reason and unsuitable development will take place by a more insidious process.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritising greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly.[1] This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s constrol and on the vagaries of CIL income. Instead of recognising this as a key issue, the plan is based on a wing and a prayer.
Residents have been incredulous at the Council’s failure to apply infrastructure constraints to housing numbers, in response first to the Issues and Options paper and then to the 2014 draft local plan. There were 20,000 responses each time.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

I object to the lack of proper infrastructure planning for sites (A43 and A42)

The Foreword to the plan by Paul Spooner includes on page 5:
"We recognise that significant infrastructure upgrades are required to support existing communities and the planned growth of the borough. The delivery of sites allocated in this plan is contingent upon the provision of new infrastructure, which is a key theme of our Local Plan”.

The lack of any plan for either physical or green infrastructure improvement clearly contradicts this in respect of both A43 Garlicks Arch and A42 Clockbarn Nursery, Tannery Lane, Send. Development of these sites without the contingent infrastructure would therefore be contrary to the stated aims and themes of the Plan, and should not go ahead.

Objections to Guildford Borough Proposed Submission Local Plan (June 2016)
I object in the strongest possible terms to the Guildford Borough Local Plan (June 2016), which would have catastrophic effects on the local community, environment and infrastructure should it be approved.

I set out below my objection to specific policies and matters within the Plan.

1. **I object to the Local Plan as the pressure on local services will be overwhelming and unsustainable**

The development of 13,860 homes will have a permanently detrimental impact on existing local communities by over development, particularly for the villages of Ripley, Send and Clandon. The doctors’ surgeries and the schools already struggle to accommodate existing residents and such an acute explosion of the population will have disastrous consequences for the community.

I live in Ripley and can never get a GP’s appointment for that day yet the Villages Surgery at Send are no longer booking any appointments for future days as they are too busy. One needs to phone at 8.30am to book an appointment for that day but the phone is always engaged. When one at last gets through no appointments remain and one cannot book for the next or subsequent days for routine appointments.

I have eight month old twins and a three year old and I have had to take them to the Royal Surrey Hospital A&E for problems as I have been unable to see a doctor at my local GP’s surgery.

To so massively increase the burden on this surgery as a result of the Plan would be frankly ludicrous as the surgery is already oversubscribed and this would cause a collapse of the local health system.

There are no railway stations near the sites of Wisley Airfield (A35) and Garlick’s Arch (A43) therefore residents will be reliant on motor vehicles. The local congestion though Ripley village at rush hour is already horrendous, with gridlocked traffic in both directions along the Portsmouth Road. Yet there are no plans to improve the infrastructure for Garlick’s Arch in the Infrastructure Plan. The increase in pollution for my neighbours and myself will be astronomical and detrimental to our children’s health. Such an increase in noxious nitrous oxide fumes would shorten the life expectancy of all residents but I feel the disastrous effect on children’s health, with inevitable increases in asthma, is particularly irresponsible.

It would be infinitely preferable for all constituents and road users if areas such as Guildford and Woking had brownfield sites developed as a robust infrastructure already exists.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Attached documents:**
The access road to Send Hill from Potters Lane is a narrow single track road and not suitable for 40 houses and 2 travellers sites. This junction is treacherous with no clear vision if you are coming from Send Hill into Potters Lane. With speeding motorists using Potters Lane as a cut through to and from the A3, any additional traffic will make this junction even more hazardous. My wife and daughter narrowly missed being involved in an accident today on the bend heading from Potters Lane to the Send Hill turning – a large lorry and a Fiat 500 had been involved in an incident where the Fiat had been badly damaged by the lorry where the road is very narrow. The previous week my wife was nearly involved in a head on collision on the same bend with a lorry in the middle of the road as the lorry was too large for the narrow lane, the lorry’s tyre skid marks can be seen on the road. My daughter’s car has been damaged by a passing car coming from Send Hill, where her wing mirror was broken, and my wife has had the same experience, these are not isolated incidents as Send Hill and Potters lane are too narrow for the traffic using them. The proposed development would not be in keeping with the beautiful and peaceful surroundings of the area including the cemetery and the adjoining properties in Send Hill. I understand that the Send Hill Development was not part of any previous consultations and I am concerned about the impact of this level of development on residents and cemetery users.

I also object to the plans for the land at Garlick’s Arch, Send Marsh/Burnt Common and Ripley, land for new north facing slip roads to/from A3 at Send Marsh/Burnt Common and Clockbarn Nursery, Tannery Lane. The infrastructure of Send Village is not able to cope with the existing daily traffic as it is, especially at peak times with commuters and school runs. Most days there is congestion along Send Road. My daughter worked in Ripley for six years and it regularly took her 50 minutes to travel from her house in Westfield to work during peak travel times. This was one of the reasons she chose to move jobs. There are no realistic alternative routes for motorists to take from Send Road and many cars chose to cut through Potters Lane to avoid sitting in traffic, many of which are large lorries who are too big for the road or speeding commuters in cars, which pose daily danger to the residents of Potters Lane, any increase in traffic will only add to the danger.

I would be grateful if you could pass my comments onto the Planning Inspector and confirm safe receipt of this email. I do hope you will take on board my feedback and the feedback of the residents of Send who very much care about the village and its surroundings and who have lived in the village for many years.

I object to the fact that infrastructure requirements have not been properly considered for the last 30 years for Send and surrounding areas. Existing roads are inadequate to deal with proposed housing levels.

It is very clear that the roads, doctors and schools will be unable to cope with the massive increases.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/9131  Respondent: 10721601 / Vivienne Holden  Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Our infrastructure in Send, Ripley and Send Marsh and Clandon being already overloaded such that the smallest disruptions cause gridlock over much of our essentially rural roads network please also note that:

- I object to an expanded A3 interchange at Burnt Common,
- I object to housing and business development proposed for land described as Garlick's Arch,
- I object to housing development at Clockbarn Nursery,
- I object to housing development at Send Hill,

all of these sites being unsuitable and in the Green Belt.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1. I OBJECT to the congestion that this development will cause to the local village roads and the lack of existing road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the use of the old Portsmouth Road generally as a ‘rat run’ when congestion at the M25 junction blocks the A3 bypass as it does frequently. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads and nor does it provide a coherent strategy for enabling through traffic to pass without becoming ensnared in local Guildford traffic.

At the present time, Guildford Council appears to be unable to even maintain the existing road infrastructure, which is in appalling condition, and it is therefore difficult to see where the funds will come from for the major investment in road improvements, bypasses and upgraded junctions that will be required to achieve the proposed Local Plan.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time.
With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

Many of the narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in these roads becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk of injury to the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements. There is the local school with young children walking along the road on a Monday to Friday basis, which is dangerous with the current level of traffic prior to any increased traffic that would result from further housing on the proposed scale.

I therefore OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

1. I OBJECT to the congestion that this development will cause to the local village roads and the lack of existing road infrastructure (Policy I1)

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

There is no clear consideration to the infrastructure requirements. The current infrastructure is already at breaking point and becoming inadequate. Further proposed housing levels, roads, doctors and schools will be unable to cope. No adequate consideration has been given for the proposed growth of housing and residents. The A3 and surrounding roads including the A247 are all already at 100% capacity and grid locked at peak times.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

- I OBJECT to the impact on the infrastructure around the villages. The roads around Send and Ripley are already congested and cannot cope with the current needs. The Local Plan does not incorporate a detailed transport infrastructure strategy that would demonstrate how the road network would support the additional pressure on the roads and other amenities if the proposed development went ahead.

I object to what appears to be the gridlocking of Send. Send will be choked by large lorries, many more cars, and therefore dangerous levels of pollution, on top of the close proximity of the A3 and M25. This appears to be a deliberate policy of GBC.

I further object in the above context to the planned 4-way interchange onto the A3 at Burnt Common. Send would be obliterated by the sheer, unsustainable weight of traffic. Who are these people and what sort of people are they who can propose such horror for the entire population of Send?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
1. I object to the proposed developments at Wisley Airfield, Gosden Hill and Blackwell Farm because the knock-on effect will cause chaos to the surrounding area as the infrastructure needs seem not to have been considered honestly.

2. I object to the fact that 70% of the proposed 13,860 houses are targeted at the Green Belt strung along the A3 which will destroy the open amenity of the borough and produce gridlock on the A3 and surrounding roads.

I am writing to express my strong objections to all planning involving large (20+) developments within the Send area. The road system is extremely congested for 2 hours each morning and 3 hours each afternoon into evening with the three lane A3 full to capacity often with 6Km queues both ways encouraging vehicles to then use the Portsmouth Road Burnt...
Common roundabout to Ripley grid-locking that as well. The plans for Wisley Airfield, Gosden Hill Farm and Garlick’s Arch are all planning to use the Burnt Common area leading to the proposed new 4 way A3 access. Absolute madness without full infrastructure changes to ALL local roads, schools, medical centres etc. The Brexit vote clearly showed that British people are sick and tired of unthinking and uncaring bureaucracy from Government which is being fulfilled by pressurised councils. The Brexit vote demonstrated people will now stand up to this; it is now Guildford Borough Council’s opportunity to also say NO.

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

I OBJECT to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.
Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
- Our village schools have no means of taking in more pupils.

- infrastructure has not been thought through and the necessary funding is not in place.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/146  Respondent: 10750593 / Jo Williams  Agent:

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

It is clear to see that the traffic congestion through Ripley and Send is not caused by residents, it is caused by those using the villages, Ripley and Send in particular, as a cut through to Cobham/Byfleet/Weybridge and surrounding areas because of the congestion at the A3 Cobham junction, especially in the mornings. A recommendation would be to consider what improvements could be made here and introduce different traffic calming/deterrents in the villages instead. For one, on the mornings when the traffic lights are not working around the Cobham junction on the A3, slip the cars flow more freely. Creating one way traffic flows in Ripley, especially at Newark Lane, would also make a significant difference to traffic flow - the one way being exit from Newark Lane into Ripley village and remove the option for vehicles to turn from the village into Newark Lane - this is the rat run through to Cobham/Byfleet etc...it would be easy to put a small roundabout in place here to keep traffic moving more readily. Another suggestion, prohibit lorries from delivering to stores in the village between key commuting times as they prevent the easy flow of traffic - it's not rocket science, there are plenty of other options and I haven't seen any evidence of alternatives being considered.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Comment ID: PSLPP16/13090  Respondent: 10756033 / John Herbert  Agent:

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the changes to Green Belt boundaries, This is not justified by any very special circumstances. 3) Finally, test and challenge the proposed scale of development (hopefully largely reduced through 1) and 2) above) on the smaller communities scattered throughout the borough. Each area has to take some of the strain however large service facilities planted within smaller communities that have no need for the scale of service provided naturally leads to unnecessary traffic, congestion and public aggravation that can be avoided by placing the facilities more centrally to where they are required.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

We object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy II)

There is too much traffic in our villages already and this plan will cause more congestion in Ripley, Send and Clandon, with no plan to improve that.

The rural roads in this area are narrow, in poor condition and have no footpaths. 5000 more houses will lead to even more dangerous conditions and unsustainable traffic.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Comment ID: PSLPP16/6942  Respondent: 10756449 / Richard and Valerie Overton  Agent:

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

The Plan does not identify adequate infrastructure improvements to support the huge scale of development, especially at Garlick’s Arch (A43) which has no infrastructure projects in the Infrastructure Schedule to support it. Local services, utilities and sewerage, doctors etc. are at or close to capacity.

There are no plans to improve the capability of the medical and police/emergency services to cover the 5000+ houses in the north east of the borough.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )
1. I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure.

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

**Do you consider this section of the document; complies with the Duty to Cooperate? ( )**, is Sound? ( ), is Legally Compliant? ( )

I OBJECT to the lack of proper infrastructure planning for sites.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick's Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents' in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick's Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity.
and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition. This will increase the risk of serious accidents.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon where I live, already suffer from intolerable traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.
The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network, phone and broadband and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Although much is made of the need for new infrastructure to support these developments and for this to be in place as needed, the Plan admits “…we forecast that there will also be an absolute increase in overall traffic volumes” and this is assuming all the infrastructure (listed in App. C to the Plan) is in place in a timely fashion. GBC has little or no control over the plans of Surrey County Council as the local highways authority and Highways England for trunk roads. Worryingly, the Plan now has less substantive information about improvements to the A3 South of the M25 from Highways England and it appears that their plans are not yet formed (Policy ID2). In the absence of such information, the infrastructure proposed is specific to each proposed development and does not address cumulative effects. What would be the case with regard to planning approval if SCC and/or HE do not provide timely infrastructure?
The Plan now calls for nearly all infrastructure to be funded by developers (see APP. C). We question how realistic it is to expect developers not only to pay for all the infrastructure but also to have it in place in a timely fashion. The Plan says that planning permission will be refused if timely provision of infrastructure cannot be secured. Such refusals will almost certainly be settled in the courts. Developers’ business models are based on building and selling houses to create the cash to provide infrastructure. People will be living on the sites well before infrastructure is complete. Will GBC prevent development of Gosden Hill until slip roads etc. are provided off and onto the A3? Again, the infrastructure is site specific and does not address cumulative effects.

If development were to be refused the land would still have been removed from the green belt and its future rendered uncertain.

Residents are being asked to accept very large amounts of development with little or no detail being provided on measures which would relieve existing congestion and limit future problems. The cumulative effects of the developments listed below are certain to have a devastating effect on the A247 through our village (and of course on Send) and it is hard to see how any of the infrastructure proposed in the Plan (App. C) will do anything to mitigate the effects of these developments on the A247 and hence our village.

**Summary of the Impacts on the A247 – My Objections**

All of these developments will draw additional traffic to the A247 through the village. It would be naïve to think that the employment sites and schools will serve only the developments themselves. Apart from the normal movements of residents to and from the new sites there will be considerable additional traffic on the A247 generated by:

- children from elsewhere being delivered to schools and collected
- the employees of the offices and industrial sites getting to work and returning home
- the vehicle movements generated by distribution and storage activities
- traffic from Wisley wishing to travel South and returning
- traffic from Gosden Hill wishing to travel South and returning
- traffic from Slyfield wishing to travel South and returning
- private and commercial traffic originating in the South and accessing Gosden Hill, Burnt Common or the A3 and returning (including traffic from Dunsfold)

The A247 although an A road:

- is less than 2 vehicle wide in places
- does not have continuous footpaths
- has several sharp bends
- has a hump-backed bridge with poor site lines
- has a very difficult junction to access the station
- is largely unlit
- has a primary school
- is already very congested at times

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**
Having lived in West Horsley for the last 12 years, I have been recently presented with some facts about the suggested Guildford borough plan 2016.

The areas marked for development are vast and clearly inappropriate for the Horsleys. The volume of the housing that could potentially be developed would severely compromise an already struggling village in my opinion.

The majority of the residents in both west and east horsley are retired or elderly individuals and young families. The health center is already at its maximum as are the parking areas in and around the village on weekdays & weekends. Has there been any consideration at all as to the effect a further 500 homes (or 1500 cars) will have on the infrastructure of the village?? How will the existing long standing residents of this beautiful village get around when many have their only means of transport as a car?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I am utterly opposed to the suggestions for the local plan on the basis that it is simply not a viable suggestion to the village, its roads, and its long standing residents. I believe we should be thankful to have such a beautiful village in Surrey, and that the Horsleys should firmly remain part of the green belt – not subject to mass development.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)
Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1. Infrastructure such as water and sewage systems, electricity and gas infrastructure, roads, schools at all levels, railway transportation and parking; all need to be substantially up-graded before the local housing stock can be expanded by many thousands of units as proposed.
2. Health centres and hospital are already being operated at above capacity. Major medical and hospital investments together with new retirement homes are required in this area before a large increase in the population can be allowed.
3. East Horsley cannot accommodate another 533 housing units as proposed for the reasons stated above.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I also find it surprising that Guildford Borough Council are prepared to make such far reaching decisions when they did not have their own Transport Assessment to guide them. It suggests they want their plan to go through, no matter the consequences to the residents of Send Village. The infrastructure of Send and Ripley will not cope with such a high increase in population as envisaged under these new plans. I fear for the future of the children in our village. Have you even considered how they will all be educated? As for health care, I know as both a patient, but also a former employee of our GP surgery, that this facility could not cope with this huge increase in patients.

Our drains, our water supply, our medical facilities and our roads cannot cope with the proposed number of new homes. Building this number of homes will lead to flood risk here and downstream (along the Wey and Thames). The planned development on Green Belt is therefore unsustainable.

Policy I1 – Infrastructure and Delivery

I OBJECT. The infrastructure in the borough – roads, water, sewerage, schools, medical services – is already stretched. There appears to be no plan for providing the necessary infrastructure so that it is ready for the demands which would be placed upon it were the plan ever to be implemented.

Many of the sites – particularly in the villages – are effectively on greenfield sites, with no existing infrastructure. GBC must know that adding infrastructure is not simply a matter of digging a hole and connecting to an existing service. A whole range of services will need massive upgrading to cope with the increased demand, but there is no indication of how this is going to happen.

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT to the lack of proper infrastructure planning for sites.
Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick's Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents' in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick's Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

The need for a secondary school is not necessary. Surrey is expanding its secondary schools. St Peters and County Ash Manor and Kings College are under subscribed.

No provision has been made in the plan for the increased traffic that will be generated by these changes. With [text unreadable] expanding, huge volumes of commuter journeys from outside the borough could occur. The A323 will be overloaded. The pavements are narrow and uneven and on a windy day could easily blow a pedestrian into the road.

Having lived in Normandy since 1963 I have noticed the increase in traffic noise already and it will only get worse.

Nearly 500 extra houses for East and West Horsley could result in a possible 1000 more cars on our narrow country roads, fighting for parking spaces at our shops, the station, the doctors and school areas. And if you query the figure of 1000 cars, I assure you that on the estate where I live almost every house has two cars in their drive, some have three.

No provision is made in the plan for extra school places [Raleigh is already full], extra medical facilities [our doctor’s surgery just copes at the moment but it is sometimes impossible to park there], improved public transport [4-5 busses a day through West Horsley at present] and if wanting to use the train service to London will people walk to the station, I doubt it!!

1. I object to the detrimental impact on transport, local roads and road Ispecifically object to:

   1. The assertion that the development will result in a meaningful shift to cycling and walking. The development is too isolated, and even within the development itself too spread out to anticipate a reduced reliance on private cars
   2. The increased volume of car A proposed development of 2,068 homes would result in an estimated 4,000 additional cars on the roads
   3. The congestion this traffic will cause on the narrow rural roads in Ockham and the surrounding areas, exacerbated by wide vehicles including increased bus and HGV movements
   4. The danger this traffic will be to local cyclists and pedestrians, due to the absence of any cycling paths and the lack of pedestrian footpaths (and the space to provide them)
   5. The increase in the already severe congestion on the Strategic Road Network of the A3 and M25. A further planning application at RHS Wisley (with a significant increase in visitor traffic) and a proposed 600 pupil
secondary school on the site would add additional congestion at the M25/A3 junction as well as local roads. No development can proceed without significant infrastructure enhancements to the A3 and M25. Partial improvement works on the A3 south of the site are not due to start until 2019 at the earliest.

6. The lack of suitable public transport and The local rail stations of Effingham and Horsley cannot cope with the proposed increase in passenger traffic and car parking is already at capacity.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.
Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

I am writing with my objection to the new local plan. I’m objecting on the grounds of transport links, access to medical and educational facilities, as well as the complete disregard for the greenbelt. Firstly, the Tannery Lane proposal of 45 homes would bring the already grid locked Send Road (at peak times) to a halt as a potential 90 additional cars turning onto Send Road would cause traffic chaos. The site at the top of Send Hill also has no capacity for additional traffic. Both of these roads are accessed by Send Road or tiny lanes with few passing points. The lack of decent public transport in Send means that cars are essential with a lot of families needing 2 or more vehicles. The entrance on to the A3 is something that is required already. Adding 400 homes to Garlicks Copse will no longer alleviate the existing traffic burden and will add extra local traffic on Portsmouth Road / Send Road which you will still have to get across to get to
the new junction. There is no possibility of scaling up the capacity of either the doctors surgery or the school to accommodate the proposed volume of new residents.

I am writing to protest most strongly against the New Local Plan for at least 533 more houses proposed for East and West Horsley as the infrastructure would not be able to cope.

It would mean:-

1) an even longer wait to get an appointment with a doctor

2) the local schools would not have spaces an increase in the number of children

3) There would not be enough car parking spaces at Horsley station - the present car park is not adequate for what is required now.

4) sometimes one cannot get into the car park behind the shops - with more houses it would be even more difficult.

5) the exit from Thatcher's Hotel on to the A246 would become even more dangerous.

I object to the increase in housing proposed in the Ripley, Send Marsh, Send and the lack of infrastructure planning relating to sites A43, A58, A35 and A42

The Foreword to the plan by Paul Spooner includes on page 5:

"We recognise that significant infrastructure upgrades are required to support existing communities and the planned growth of the borough. The delivery of sites allocated in this plan is contingent upon the provision of new infrastructure which is a key theme of our Local Plan”.

The lack of any plan for either physical or green infrastructure improvement clearly contradicts this in respect of both A43 Garlick’s Arch and A42 Clockbarn Nursery, Tannery Lane, Send. Development of these sites without the contingent infrastructure would therefore be contrary to the stated aims and themes of the Plan, and should not go ahead.

Proposing housing at sites A43, A58, A35 and A42 has been increased significantly since the 2016 version of the Plan. This will have a significant impact on the already highly congested local rural road network around Ripley which is already used as a short cut between the M25 and Woking. This is in contradiction to section 2.14a of the Plan which states...
“Whilst most local roads are single carriageway, with a lane in each direction, it is at their junctions that the flow of traffic is most often impeded during peak periods, in some cases resulting in significant delays.”

Despite this there are no proposals to improve the local roads and only limited junction improvements on the A3 the result of which will be to exacerbate Ripley’s use as a ‘rabbit run’. The effect of this neglect will be to increase congestion on the Trunk and Local road network and developers will be long gone with their profits before the borough Council has to face up to the inadequacies of this key infrastructure provision.

**Village facilities**

The infrastructure of the West Horsley, as well as East Horsley cannot support a potential effective doubling of the households and residents.

The villages are extremely rural in character. East Horsley has one public house, a church, a hotel, very few shops, and not one state school. The two boys only private schools already produce significant traffic problems at each end of the school day on Ockham Road North and the A246.

Secondary school places are limited at the Howard of Effingham School and other secondary schools are a greater travelling distance from the village.

West Horsley alone includes no less than 41 listed buildings, some dating back to the 15th century. West Horsley has one shop, no post office and one highly over-subscribed school.

The single medical centre shared between East and West Horsley is similarly over-subscribed and residents have difficulty in getting appointments. Such a massive increase in population as proposed would stretch this service to beyond breaking point. The planned population increase for the Borough would also mean a major extension of the Royal Surrey Hospital to allow it to cope.

Parking facilities are extremely limited in the shopping areas of East and West Horsley, as well as Horsley station. The impact of such a large increase in population as proposed would overstretch these facilities. It would make it difficult if not impossible for many of the older and less mobile inhabitants to reach the shops, and most importantly the medical centre and chemist.

**Roads**

Traffic generation from the proposed development would be considerable, with most households having two cars, many with three.

The Street, which constitutes the only entry to West Horsley from the A246, is very narrow, and it would not be possible to widen it. This road is already often perilous, particularly when large lorries, buses and tractors pass through. To increase such traffic, which would result if the proposed developments were to proceed would be wholly irresponsible.

**Transport**
• West Horsley’s bus service through the village is extremely limited and only operates two/three times per day Monday to Friday.
• The bus service running from Guildford to Leatherhead travels along the A246 at the southern end of the village and is really only of use to residents living within a maximum of eight to ten minutes walk from the bus stops at the Bell and Colvill roundabout.
• Parking at Horsley station is limited and sometimes full on a weekday. There is no land to create additional parking for the increased need that the proposed expansion would bring.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

POLICY I 1 Infrastructure and delivery

OBJECT Various aspects of Infrastructure are acknowledged as congested, inadequate for the existing population and not able to accommodate much growth. However, greenfield sites – requiring heavy infrastructure investment – are targeted in order to generate CIL income for the council. This is not sensible. The current draft CIL scale also encourages development on greenfield sites rather than brownfield.

The Council’s methodology assessing traffic and roads infrastructure needs is inadequate. It identifies only the tip of the iceberg in terms of existing congestion. Looking at local traffic situations around the Borough it becomes clear that the schemes proposed will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed locations would require highway schemes that involve demolition of property and road-widening in residential areas to solve the resultant congestion. The A3 improvements are not guaranteed to take place but they are being used to justify removing large areas from the Green Belt before detailed traffic assessments have taken place. These detailed investigations are being deferred until the planning application stage and will be left to developers to prepare. If a site then proves to be unsustainable its Green Belt protection will have been lost for no reason and unsuitable development will take place by a more insidious process.

We OBJECT to policy I1 Infrastructure and delivery

We OBJECT to this policy as it stands. Various aspects of Infrastructure are acknowledged as congested, inadequate for the existing population and not able to accommodate much growth. However, greenfield sites – requiring heavy infrastructure investment – are targeted in order to generate CIL income for the council. This is not sensible. The current draft CIL scale also encourages development on greenfield sites rather than brownfield.

The methodology commissioned by the Council to assess traffic and the corresponding roads infrastructure needs is inadequate for the purpose of the Local Plan and identifies only the tip of the iceberg in terms of existing congestion.
Looking at local traffic situations around the Borough it becomes clear that the schemes proposed will not solve congestion and the local road network has not been given sufficient consideration. Under the growth proposed some locations would require highway schemes that involve demolition of property and road-widening in residential areas to solve the resultant congestion. Even the A3 improvements are not guaranteed to take place but they are being used to justify removing large areas from the Green Belt before detailed traffic assessments have taken place. These detailed investigations are being deferred until the planning application stage and will be left to developers to prepare. If a site then proves to be unsustainable its Green Belt protection will have been lost for no reason and unsuitable development will take place by a more insidious process.

With regard to SANG provision, GBC has demonstrated that it has no genuine interest in conserving and enhancing biodiversity and clearly regards the Thames Basin Heaths SPA as an obstacle to be overcome rather than a valued asset. This is underlined at the end of the Policy wording which indicates that the council is more interested in meeting its legal responsibilities than actually protecting wildlife. GBC is failing to take account of existing biodiversity at sites selected for SANG provision.

Some infrastructure, as identified in Figure 1 of the draft IDP- is within the control and remit of Guildford Borough Council – they have some influence in relation to planning – but much is under the control, and is the fiscal responsibility of, Surrey County Council or Highways England.

It is not realistic to assume that car use can effectively be replaced for all or even many users. Those who are disabled or infirm cannot easily substitute car journeys with bike travel: the elderly; the disabled; those caring for young children (particularly uncertain bike users and those with multiple children to care for); those wishing to use cars for supermarket or other bulky shopping; those who wish to commute to work and have no facilities for showering or changing on arrival; those who have lengthy and tiring commutes at present, for which the car is the final (short) element of a long journey (for those commuting into London from outside Guildford, a daily 3 hour commute is typical; this cannot realistically be extended by extensive cycling). All these factors mean that the replacement of the car with cycle use is likely to be overstated by many studies, particularly given narrow roads which do not allow effective or safe bike lanes.

Funding is not the only - nor the main - obstacle to improving infrastructure within the borough, and this seems not to be recognized. Guildford is a gap town, set in a bowl within the Surrey Hills Area of Outstanding Natural Beauty to the south of the borough, and with large sections of the borough affected by the Thames Basin Heath Special Protection Area to the north. There is a ribbon through the middle of the borough which contains rail and road links to London, but is already heavily congested, is Green Belt, AONB, SPA or more than one of the above. Very little of the borough is available for extensive development of infrastructure or any building. Do we really want solutions that involve driving new roads through our remaining countryside – including the AONB – at huge cost in financial and environmental terms. Such solutions may be the only ones left when the inadequacies of this proposed Local Plan are realised after the event.

Policy indicates note an intention to pool Community Infrastructure Levy from most new build development and to use CIL receipts to assist in provision of infrastructure needed to support the delivery of the plan. As with other aspects of planning, there is a failure to recognize that out of town settlements in particular have particularly high requirements for additional new basic infrastructure in order to exist at all – roads, sewers, water provision, electricity, gas, telephone and broadband links will all need to be provided and in many cases the links to existing services will need to be upgraded before these can be implemented. The ability to divert funds from CIL to other uses will be inherently limited, not least that otherwise the proposed settlements will not be able to function. The Council strategy of taking CIL from new build in the Green Belt seems to be to pay for roads within the town centre, as indicated in the policy which notes that legislation prevents the use of planning obligations to fund existing infrastructure deficits.

In the reasoned justification, it is indicated that the council will be prepared to negotiate if an applicant claims that the infrastructure requirements for their development make it unviable. This means that some developments will go ahead anyway and worsen the infrastructure deficit. The Policy claims that infrastructure needed “should” be provided and available when first needed but we have no confidence in the council enforcing this.

The absolute constraint on developmental capacity within the borough represented by the infrastructure limitations cannot be swept aside, but the council has ignored this and failed to apply a constraint on the housing number.
We are not convinced that the extent of existing traffic congestion has been fully recognised by the SCC transport assessment because the methodology employed waters down the level of traffic observed. This has knock-on effects when modelling the various development scenarios. The result is that the requirements identified (expensive though they may seem) are the tip of the iceberg. One of the easiest issues to understand is the use of average peak hour flows for the baseline data. SCC acknowledge that that this is “typically lower” (see Transport Assessment 4.13.4 but GBC prefer the averaging approach with some eloquent wording in their Headline network metrics (3.9). A much better solution would have been to collect reliable baseline data that allowed for the effects of queuing and modelled each hour (or a shorter time period). Such an approach would have cost more but GBC seem unwilling to go the extra mile for reliable evidence while being content to spend large sums of money on propaganda exercises such as their one-sided video. There are other more technical reasons why the transport assessment methodology fails to fully identify current and planned congestion.

Planned developments for Guildford and Waverley Boroughs were modelled together but growth for the rest of the UK was allowed for only using the DoT forecasts. As a result it is not clear whether adequate allowance has been made for significant developments planned for Woking and other neighbouring Boroughs. This represents an inconsistency in approach with the West Surrey SHMA.

Many of the results for the PM peak are missing (TA 4.1.11 states that “these can be set out in an addendum report at a later date”). We believe that those who need to travel on the roads in peak hours will be every bit as interested in their future journeys home as they are for going to work. Publication of the Transport Assessment was delayed until the start of the consultation period so perhaps the non-inclusion of many PM results was simply a result of running out of time.

The Model Development Validation Report does include some interesting baseline data that may be of interest to residents in terms of local knowledge of traffic.

We are not convinced that it would be practical or desirable to end up in a position where the only solution to traffic congestion is to build many more new roads as by-passes through the Surrey countryside, or turn existing roads into dual carriageways, or demolish buildings (some of which may be historic) in order to accommodate higher capacity junctions in built-up areas.

It is noted that the infrastructure Development Plan was developed using hotspots identified in “OGSTAR” (the previous Transport Assessment used for the 2014 consultation) as a starting point. (See Transport Topic Paper (5.56)). However, the site list used for OGSTAR was not even compatible with the former draft Local Plan let alone the current one. Despite this, the Key Evidence mentions the June 2016 TA but not OGSTAR.

Appendix C (Infrastructure Schedule) is lacking in detail concerning what work will actually be carried out for most of the Local Road Network projects and the cost estimates are clearly at the guesswork stage suggesting that these schemes have not been fully thought through or checked for viability. If more detail is available then why not provide it.

It is not clear whether CIL will be received in time to put the required infrastructure in place for each development – or what penalties will be applied for late payment.

The Monitoring Indicators rely entirely on annual CIL receipts and spending. Surely they should look at actual infrastructure delivery and any changes in its adequacy.

The local plan does not state an objective for congestion. The two strategic objectives that are included for infrastructure refer to supporting sustainable development and delivering a balanced system. However, in para 2.15 there is an aspiration expressed about opportunities ‘to improve the performance of the road networks through transport infrastructure and service improvements’, which taken with the previous paragraph includes reducing congestion. The evidence so far shows that this will not happen. The mitigation proposed is not sufficient to overcome the problems that will be caused by the level of growth in the local plan. Congestion will worsen. The network will lack resilience and be vulnerable to disruption due to incidents. Minor roads will have to cope with a lot more traffic, for which they are unsuitable.

I object to the evidence provided in terms of Employment Land Needs Assessment 2015 (ELNA). The number of foreign students has been wrongly used to inflate the need.

I object to evidence of infrastructure assessment. Infrastructure overload is a major concern. Unnecessary road deaths have occurred at London Road South B2215 due to inadequate road management, maintenance, etc... GBC is culpable and to increase traffic load with such poor management standards risks further unnecessary road deaths. Congestion during rush hour, inclement weather, road obstacles, etc. drives the entire area into gridlock.

I object to proposed inadequate assessment of infrastructure solutions. Our property on London Road already suffers from the volume and scale of traffic causing damage to the structure of the property. The noise and pollution already adversely affects my small children. This is unacceptable.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

1. I object to the extra congestion that these developments will cause to our local village roads and the lack of road infrastructure (Policy I1)

Our roads are struggling already in our local villages and this plan will exacerbate the amount of traffic in Ripley, Send and Clandon, with no proposed plans to improve the current roads.

The rural roads in this area are narrow, in poor condition, unlit and have no pavements. 5000 more houses means dangerous and unsustainable traffic.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

1. I object to the lack of proper infrastructure planning for sites (Policy I1)
The Plan does not identify or provide for adequate infrastructure improvements to support the massive scale of development, especially at Garlick’s Arch (A43) which has no infrastructure projects in the Infrastructure Schedule to support it. Local services, utilities and sewerage, doctors etc. are at or close to capacity.

There are no plans to improve the capability of the medical and police/emergency services to cover the 5000+ houses in the north east of the borough.

Currently the Council still has to repair holes in the road that have been unattended since the winter of 2014. Telephone and internet connections have been frequently cut off. Repairs to the water supply has cut off supplies. Already the police are unable to cope with numerous robberies that occur each month and some children cannot get into the local school.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**
1) Residents are being asked to accept very large amounts of development with little or no detail being provided on measures which would relieve existing congestion and limit future problems.

2) Much is made of the need for new infrastructure to support developments and for this to be in place as needed (listed in Appx. C to the Plan). Even if this happens the Plan admits “we forecast that there will also be an absolute increase in overall traffic volumes”. This will be most acutely felt at junctions but these effects have apparently not been analysed so that we don’t know the location or impact.

3) We can be sure however that the cumulative effects of the developments in the north east of Guildford will have a devastating impact on the A247 through the villages of West Clandon and Send. It is hard to see how any of the infrastructure proposals in the Plan (Appx. C) will do anything to mitigate this impact. GBC has little or no control over the plans of Surrey County Council as the local highways authority and it is freely admitted by SCC that they have little money available.

4) The Plan now calls for nearly all infrastructure to be funded by developers (see Appx. C). I question how realistic it is to expect developers not only to pay for all the infrastructure but also to have it in place in a timely fashion. The Plan says that planning permission will be refused if timely provision of infrastructure cannot be secured. Such refusals will almost certainly be challenged in the courts. Developers’ business models are based on building and selling houses to create the cash required to provide infrastructure. People will be living on the sites well before infrastructure is complete, even assuming there are funds to provide it.

5) If development were to be refused the land would still have been removed from the Green Belt and its future rendered uncertain.

6) All of these developments will draw very large amounts of additional traffic to the A247. It would be naïve to think that the employment sites and schools will serve only the developments themselves. Apart from the normal movements of residents to and from the new sites there will be considerable additional traffic on the A247 generated by:

- children from elsewhere being delivered to Gosden Hill schools and collected
- the employees of the offices and industrial sites getting to work and returning home
- the vehicle movements generated by distribution and storage activities
- traffic from Wisley wishing to travel south and returning
- traffic from Gosden Hill wishing to travel south and returning
- traffic from Slyfield wishing to travel south and returning
- private and commercial traffic originating in the south and accessing Gosden Hill, Burnt Common or the A3 and returning (including traffic from Dunsfold)
- SCC’s business plan for Newlands Corner

I would like to point out that although the A247 is classified as an A road, it has none of the characteristics because it:
- is less than 2 vehicles wide in places. Larger vehicles routinely mount the only pavement.
- does not have continuous footpaths
- has several sharp bends
- has a hump-backed bridge over the railway, with poor site lines
- has a dangerous junction to access the station
- has a dangerous and unlit junction with the southbound A3 on-slip road
- has a primary school accessed by narrow pavements
- is largely unlit
- is already very congested at times, more so when delays on the A3 are severe

In summary, the A247 is quite unsuited to coping with additional traffic and it is very clear that the developments proposed in the 2017 Local Plan will increase the amount of traffic on this road over and above that in the 2016 draft to which residents strongly objected. There is nothing in the Infrastructure Schedule which addresses this issue. Indeed several of the infrastructure proposals will themselves lead to significant increases in traffic on the A247.

1. POLICY II

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy II)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an even more popular past time, particularly at weekends hundreds of cyclists pass through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the
village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough's infrastructure is already heavily strained. However the plan's determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council's methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen. Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy 11. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough's infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council's control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy 11 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick's Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents' in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick's Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

</tbody>
</table>

Our villages are already suffering from severe congestion for much of the day. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition. I object to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.
The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

I believe the additional traffic flows will bring increased numbers of accidents, and increase in noise, pollution and injury of the public. In the case of West Clandon, the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

3. I object to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy 11)

This will cause more congestion to the villages of Ripley, Send and Clandon, which have poor condition narrow roads. This is currently a rural area and many no roads have no suitable pedestrian footpaths or safe crossing points. I have made complaints about the dangers of these roads to pedestrians and that the lack of footpaths discourages healthy maans of transport like cycling and walking and the situation will not be improved by more cars and unsustainable volumes of traffic

In view of flawed new evidence, Guildford’s proposal for more than 12,426 homes (plus a buffer of 1,155 homes) is excessive and will result in needless loss of Green Belt and green character, and increased congestion, that cannot be justified in our heavily constrained borough.

Traffic congestion, which is already severe, is set to get worse over the plan period.

New Local Plan 2016 - The Horsleys Main Sites

I have received outline details of the proposed building of houses in and around East and West Horsley in the New Local Plan.

I feel able only to make general comments and observations as follows.
I accept and understand the need for further housing now and in the future but the type, number and location must be carefully chosen.

Due regard must be given to the provision of different types of housing to match the population needs.

Whilst the numbers may be dictated by the demand it is essential that improvement of the infrastructure must go hand in glove with further house building. Special attention must be paid to availability of schools and doctors. The layout and condition of the roads around and through the villages is also a significant issue. Inevitably an increase in households will mean an increase in traffic on already congested and difficult road layouts. Such are the physical problems in certain places (e.g. Ockham road South) I would suggest that this issue alone may incur a natural limit on the number of new households which can sensibly be accommodated. What might help to alleviate this problem would be if it was possible to control the passage of so many heavy commercial/industrial vehicles.

The locations of further development must be chosen sensitively with due regard for the Green Belt status and any encroachment kept to an absolute minimum.

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition. This will increase the risk of serious accidents.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon where I live, already suffer from intolerable traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.
Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network, phone and broadband and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital; where is this assessed and remedied?

**Policies I1, I2 and I3**

There are serious deficiencies and shortcomings in the infrastructure of East and West Horsley as it is today. Barely a day goes past without a complaint being made on social media about it – be it schools, roads, medical facilities and so on, The aggressive housing policy as proposed by GBC in the proposed Local Plan (see my comments on Policy S1 above) can only exacerbate this problem.

I would make the following comments specifically about infrastructure in The Horsleys today:

- Roads across the parishes are in poor condition with many potholes.
- The principal through roads are narrow and winding and have a series of pinch points where it is difficult for vehicles to pass one another. As a senior SCC councillor remarked at a recent public meeting in the village hall: “East Horsley has lanes, not roads.”
- These ‘lanes’ are totally unsuitable for high volumes of traffic. They struggle to cope with current levels of traffic at times, particularly the increasing numbers of large vehicles such as HGVs using them.
- They are used by schoolchildren to walk or cycle to school. Increases in traffic volumes without improvements in infrastructure must increase the risk of accidents to them.
- The pavements are in poor condition. As well as being narrow, they are often uneven and/or cracked making it difficult, for example, for people with pushchairs or prams or in wheelchairs;
- There are also sections with no or narrow pavements and which are poorly lit.
- Many of the drains are blocked or otherwise in poor condition giving rise to frequent surface water flooding when it rains.
- There are insufficient school spaces for the number of local children needing them, with the result that children are often allocated to schools a significant distance away such as Dorking or Woking; and
- The Medical Centre in East Horsley is already at capacity in terms of its number of patients.

In respect of East Horsley, I believe there are only two specific proposals in Appendix C:
LRN 25 - East Horsley and West Horsley traffic management and environmental improvement scheme. The proposal is unclear to me. It says that funding will, at least in part, come from developer contribution. Funding is needed now to sort out the existing problems I have mentioned previously - not from some unspecified source at an unspecified future date.

HSC 5 - Expansion of East Horsley Medical Centre to provide additional capacity and services for future population in years 5 – 15 of the plan. As stated above it is already at capacity and, with an ageing population, this problem will not decrease. Such expansion is therefore needed now!

Local primary schooling is also a very pressing issue which I know East Horsley Parish Council has raised with you in its objections. East and West Horsley are currently served by a single primary school - The Raleigh in West Horsley – which has no spare capacity as far as I am aware. The 11 housing development sites identified in the LAA for East and West Horsley would result in 593 new houses in the two parishes. Planning guidance suggest that to accommodate the children from these new homes around 150 additional primary school places will be required. No proposals are made in the Proposed Submission Local Plan to provide for any more schooling in The Horsleys.

The proposed developments in The Horsleys and Wisley will put further strain on the existing infrastructure, increasing traffic, patient numbers, requirement for school places and so forth. Thus existing problems will be exacerbated. There are no proposals to solve these or at least to improve the situation.

I OBJECT to the infrastructure proposals as I believe that the failure to address the current inadequacies of the existing infrastructure is a serious shortcoming in the Proposed Submission Local Plan.

Also I OBJECT to the proposals for infrastructure in that they do not meet the stated objective of providing infrastructure to support the proposed developments set out in the Site Policies.

I object to the amount of extra traffic and pollution these proposals will bring. It currently takes me 3 minutes at 8.45am to exit from Boughton Hall Ave, cross the carriageway and join the Portsmouth Road to join Send Barnes Lane going into Woking. I then queue all the way down the hill into Send. At night I have the same long journey. Any problems on the A3 send traffic along the Portsmouth Road too. The volume is already set to rise, regardless of many objections following the Councils permission for the building of Send Marina.

Prior to any new development it’s impact on the currently overstretched road network, schools, medical services, transport and other infrastructure services needs to be properly assessed and then satisfied in advance or at least as an integral part of the Planning Approval. Your Plan relies on the future introduction of an Infrastructure Levy to be raised against all developments based on the scale of development involved. The proceeds of this levy would be used by the local authority to either fully fund or subsidise improvements to facilities and infrastructure. The Plan contains no detailed methodology by which this would be achieved.

• The scale of the development is disproportionate to the current number of dwellings (77% increase!) and given the proposed massive development at Wisley Airfield a short distance away I believe this will place an unreasonable burden on the Horsley’s for which current stressed infrastructure (roads, schools, parking, other amenities) would not be able to cope.

• From a HSE perspective volumes of traffic would significantly increase on roads already struggling to cope and one assumes would become significantly more dangerous for pedestrians and cyclists alike as traffic density increases.

I want to protest that the application for the development of Blackwell Farm and the ensuing traffic problems this will cause on the A3. This part of the A3 is over burdened with traffic and is already dangerous. The amount of extra traffic this development will cause is unsupportable given the present road infrastructure. Heavy congestion both North and South on the A3 around this development will be immense and the fact that the health services and schools are already under severe pressure means that there is no case at all for such a huge development without the supporting road, health and educational infrastructure being put into place at the time of the development. The roads around this site are not only congested but environmentally they cause huge amounts of pollution and so I would like to strongly protest that this application to develop this site is not sound.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
through the village on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

1. I object to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have serious concerns over the planning of the infrastructure requirements and whether the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
The amended Plan has reduced the proposed number of new homes and stated a percentage would be affordable, there is no mention of what affordable would be, compared to Guildford property prices affordable even with benefit of various government schemes would price out local people.

Traffic proposals are key to any developments, the Draft Plan makes reference to several ideas, all subject to government funding, any development should also be subject to the road infrastructure being in place, hospital provision to provide for a growing and aged population, better access for emergency services. One suggestion in the plan is to have a traffic flow through the business park past the hospital and towards Tesco roundabout, these areas are insufficient for an increased flow, already at capacity at peak times, what impact would volume from 1800 plus homes have?

Not many families would travel by bus or from proposed rail station as the services are likely to be infrequent. Many residents would travel by car to rail station increasing CO2 emissions adding to delays in the Park area. The Onslow Park & Ride has to be accessed by car and is too far from the proposed schemes for an improved take up.

The Draft Plan makes little reference to leisure and recreational increased facilities for the expanding population at family affordable prices, not the inflated hire costs at Surrey Sports Park which can be paid by adults but not the young of the Borough. Where are the next football pitches, open spaces to kick around, basketball and netball courts which are free to use to encourage young people to be active.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
- Water, Gas, Electricity, Sewage and Drainage – I do not believe that there is sufficient capacity to cater for the additional developments.
- Highway Safety – The roads in East and West Horsley are relatively narrow and the visibility is often poor, therefore any substantial increase in traffic would lead to more accidents. I recommend that a full traffic and capacity study should be carried out prior to any development being approved. Any necessary highway improvements should also be submitted for comment. We are often subjected to speeding cars and lorries past our house.
- Pavements in East Lane, Ockham Road South and North are narrow and as a consequence a hazard for pedestrians, especially women with prams and toddlers. The additional traffic would make matters worse.
- There is not any provision on the roads in Horsley for cyclists. I was witness to a fatal cycling accident outside my house.
- There is not sufficient parking at the railway station at present so any increase of population would exacerbate the situation. I also understand that the trains at peak hours are very crowded with standing room only.
- There is often insufficient parking in the village centre.
- A large number of new houses would completely change the character of the village.

The above comments are primarily concerned with East and West Horsley. The major development proposed at Wisley Airport would further exacerbate these issues.

Of the sites proposed the area south I most strongly object to the area A41 south of East Lane. It destroys the character of the road having open land on the south side and would lead to an increase of pressure of more development to link with the remainder of housing on East Lane on the southern side.

On the above grounds I object to the Draft Local Plan.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT to placing further loading on an already overloaded local infrastructure.

The proposed addition of over 70% to the number of houses within two or three miles of Horsley (East and West Horsley, and nearby Ockham) has major implications for almost every aspect of life here in the village - public transport, schools, doctors and the medical centre, drainage and water supply, and roads and parking. Road traffic in this part of Surrey is already close to twice the national average. The main roads serving East Horsley are already too narrow for passing lorries, and cars are often squeezed on to the pavement. Be assured that no amount of analysis will alter the bare fact that the roads serving Horsley are not, and cannot be made, suitable for the level of building in the area that you envisage.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

INFRASTRUCTURE POLICIES This section of the Proposed Submission Local Plan sets out details covering a range of infrastructure policies.

POLICIES I1, I2 & I3 These three policies cover Infrastructure & Delivery, Supporting the Department of Transport’s ‘Road Investment Strategy’ and Sustainable Transport. Whilst I support the general policy statements as presented in each case, it is the detailed infrastructure proposals for Guildford Borough which give us cause for concern.

I believe there are serious deficiencies and shortcomings in the infrastructure of Guildford Borough as it is today and that the aggressive housing policy as proposed by GBC in the Proposed Submission Local Plan will exacerbate this problem. I would make the following comments specifically about infrastructure in East Horsley today:

- Roads across the parish are in poor condition with many potholes. Many roads are unable to sustain their current levels of traffic, particularly the increasing levels of HGV traffic;
- The principal through roads traversing East Horsley are narrow and winding, have a series of pinch points, have sections without any pavements and are generally unlit. As a senior SCC councillor remarked at a recent public meeting in the village hall: “East Horsley has lanes, not roads.” East Horsley’s ‘lanes’ are totally unsuitable for high volumes of traffic, in particular for the volume of HGV’s now using them;
- Many of the drains are blocked or otherwise in poor condition giving rise to frequent surface water flooding when it rains. Any substantial development as indicated within the Local Plan will increase hard surfaces in the area and therefore the rainfall runoff will increase into local watercourses and exasperate localised flooding.
- The pavements are in poor condition. As well as being narrow, they are often uneven and/or cracked making it difficult, for example, for people with pushchairs or prams or in wheelchairs;
- There are insufficient school spaces for the number of local children needing them, with the result that children are often allocated to schools a significant distance away such as Dorking or Woking; and
- The Medical Centre in East Horsley is already at capacity in terms of its number of patients.
- Train services to and from Horsley to London on the ‘Guildford via Cobham’ line are already at full capacity at peak times. The current service has to be substantially improved BEFORE allowing further development. Such improvements should include additional train services and additional stations to support new communities.

It is recognised that, as stated in the Proposed Submission Local Plan, the maintenance of adequate infrastructure and its expansion to meet growing needs is the responsibility of the relevant infrastructure provider. This is often not GBC itself but rather, for example, Surrey County Council, South West Trains or utility companies. Surely GBC must see the infrastructure improved first before approving any new developments.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
IOBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

I OBJECT to the lack of proper infrastructure planning for sites (Policy I1)
Policy 11 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick's Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick's Arch site. Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object to the Local Plan based on the fact that the infrastructure of Send and Send Marsh is wholly inadequate, and cannot cope with the increase volume of traffic and population. Our schools, nursery and The Villages surgery are under immense pressure already, and could not cope with such a proposed increase in population. The road system would also be unable to take the increased volume, with the very real risk of not only gridlock, but increased risk of accidents to drivers, cyclists and pedestrians (including children at Send Primary and St Bede’s schools). However, any further development of the road system would destroy the Send Marsh and Send village, which act as the essential buffer between Woking and Guildford. The plan is entirely unsuited to the area, and so I urge you to abandon it.

The Infrastructure of Normandy cannot support the development of site A46.

**Highways**

Site A46 is bounded by Glaziers Lane (060) and Westward Lane (C16). Both of these are 'Lanes' by definition- not roads. Lane is defined as a narrow way or road. In particular Glaziers Lane is unclassified. It is narrow with blind bends with a steep blind hump back bridge (over a railway line) at skewed angle. In the main there is only a foot path on one side of the lane but this changes from one side to the other and back again at the most dangerous positions possible -
one by a sharp blind bend with no sight lines forcing people to cross actually on the bend and hope no vehicles are coming as the sight line doesn't materialise until you are halfway across the lane (the site of a fatal road accident some years ago). The other at the base of the hump back bridge where there is no sight line of oncoming vehicles due to the blind summit. Because of the narrowness of much of the footpath it is difficult to push a pram along without having at times to go into the road. Neither Glaziers Lane nor Westwood Lane were designed for the volume of traffic they currently take, let alone a massive increase that would be generated by developing A46.

Westward Lane has a very narrow railway arch under which the lane passes. This is only one lane wide and is skewed with poor sightline visibility. This also has a height restriction preventing larger vehicles such as buses and lorries from using.

Although unsuitable, both Glaziers Lane and Westward Lane take traffic between A31 Hogs Back and A323 Aldershot/Guildford Road particularly at peak times. Whenever there are traffic problems on A31 or A323, (with increasing frequency), traffic diverts through Normandy causing traffic chaos.

The proposed development of site A46 would create a massive increase in vehicle movements on a daily basis throughout the day. The vehicle movements and parking of parent's cars because of the very large school would be massive and should not be underestimated. Traffic chaos would prevail and also the problems caused by hundreds of parked cars due to parents taking and collecting children at the school.

Most children would not be able to come by rail (the station platforms are only long enough for 4 carriages) and these are usually full of passengers in the mornings and evenings. It would not be safe or possible to bus hundreds of children in and out of school each day either - the number of coaches required on these narrow busy roads would be dangerous.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

If smaller homes are built with small plot sizes then there will be more congestion. There will be more pressure on the local infrastructure. Our schools are already full and services stretched. There are not enough Police to care for the proposed influx of people. There will be more pollution and less countryside for those families to enjoy. The proposed building expansion is unsustainable.

I consider myself very lucky to live in the Guildford area. As your proposed planning document states we have low unemployment. It has a character of its own and yet is within striking distance of the job opportunities in London, bringing wealth from the city to the surrounding area. If the village flavour of the Horsleys and surrounding settlements are changed, then those people sustaining Guildford, will go elsewhere.

The Borough Council should be proud of the environment they have created. I urge you not to spoil the character and sense of community that Surrey has worked hard to achieve. As Joni Mitchell sings in her song 'Big Yellow Taxi'- 'You don't know what you've got till it's gone'.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )
I am not aware of anyone in this county, let alone this nation, who voted for destroying the Green Belt. We already live in one of the most overcrowded parts of the country. Roads are congested, schools are full to capacity and hospital waiting times are a joke. Just to drive out of our village in the morning can take up to 15 minutes to cover a few hundred metres. This is stressful and will only get far worse with more houses, particularly on the scale proposed.

Further housebuilding will not only worsen an already congested road network, but the overcrowding will create further pressure on schools, hospitals, and other services. What is GBC doing to consider the wellbeing of their constituents?

High volumes of traffic and congestion have obvious negative effects. These include road collisions, the severance of communities, the costs of delays and the unreliability of journey times to people and businesses. Environmental and health impacts include traffic noise, air pollution and amenity issues. Some parts of the major roads in Surrey (including those around the Horsleys) operate significantly beyond their capacity, resulting in traffic congestion, and forcing drivers down rural / country lanes to avoid main roads, leading to further congestion, road accidents and pollution.

**Policy I1: Infrastructure and delivery – Object**

**Infrastructure & Services for East and West Horsley**

The local plan proposes an huge increase in the number of houses is the Horsleys yet no plans on how the local infrastructure will be expanded or improved to accommodate the increase.

There is no mention of how infrastructure is to be funded. There is no plan or details for management of increased traffic in the villages. There is no mention of how the water drainage and the foul drainage system infrastructure will be upgraded to cope with the increase demand placed on these services.

Specific existing issues which this plan will exacerbate include:

- There is only a very limited bus service and no buses at weekends.
- It is difficult to get a Doctor’s appointment at the Medical Centre in East Horsley, it can be a 2 week wait. The walk-in clinic where appointments are released on the day starts to queue before 8.00am in the morning for 8.30am surgery opening time.
- The junction of Ockham Road North and Kingston Avenue, the location of East Horsley Medical Centre, is already difficult to negotiate.
- Parking is full every weekday at Horsley and Effingham stations.
- Ockham Road North between Horsley Station and East Lane is repeatedly flooded in moderate rainfall. Pedestrians are forced to take cover in driveways. Converting land to housing will exacerbate this issue
- East Lane between Edwin Close on Long Reach repeatedly floods in moderate rainfall.
- The Raleigh School does not have enough places to meet the current demands. No plans have been published for creating further school places for children of all ages in the Horsleys. The traffic in out of all of the schools in the immediate area causes a lot of congestion. Parked cars for events at Glenesk School cause a lot of parking and traffic problems on East Lane.
- West Horsley will have no facilities, the small village shop is about to close. The Post Office closed a few years ago and is now housing. Presumably GBC regard this as a success according to the proposals in this plan.
• The number of houses proposed and the increase in size of the village is out of character with the rural landscape. The density of housing on the proposed sites is very high and not in keeping with the rest of the village. West Horsley has a mix of low density housing in roads and streets off East Lane and The Street, these have been added gradually and sympathetically over the decades. West Horsley is defined by its openness of hedgerows and agricultural land with a number of historic buildings.

Pollution:

The large increase in volume of traffic will cause an increase in nitrogen dioxide and particulates in the environment – already a cause for concern in several areas in the Borough

Schools:

Local schools are already at capacity – where will newcomers go to school? No extra places are planned in the Horsleys, and the school places proposed at Wisley Airfield will not planned until many years into the project.

There is talk of a new school at a site near to Lollesworth lane west Horsley, but this should have been talked about well before the local plan went out for consultation.

Medical facilities:

Already very difficult to get an appointment and the car park is always full

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
1.1 I object to policy I1 “Infrastructure and delivery” on the grounds that;

1.2 Most of the borough’s infrastructure is antiquated, congested and straining to accommodate even current needs and organic growth. Yet this plan’s commitment to building housing estates across the Guildford countryside will mean either major infrastructure investment that no-one is prepared to pay for or else a catastrophic and simultaneous collapse in transport, educational, medical, energy, water and communications services.

1.3 The plan targets greenfield sites – requiring heavy infrastructure investment – in order to generate CIL income necessary to meet an infrastructure shortfall that is already serious. This is not sensible. The current draft CIL scale also encourages development on greenfield sites rather than brownfield.

1.4 The policy wording says nothing about roads and traffic. The Council’s methodology for assessing infrastructure needs in this area is inadequate, identifying only the tip of an iceberg of existing congestion. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that involve demolishing property and road-widening in residential areas to solve the resultant congestion. The A3 improvements are not guaranteed to take place but they are being used to justify removing large areas from the Green Belt before detailed traffic assessments have taken place. These detailed investigations are being deferred until the planning application stage and will be left to developers to prepare. If a site then proves to be unsustainable its Green Belt protection will have been lost for no reason and unsuitable development will take place by a more insidious process.

1.5 Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritising greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly.

1.6 This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognising this as a key issue, the plan is based on a wing and a prayer.

1.7 The highways network is under stress at peak times in many parts of the borough. Queuing is the daily experience of drivers going to and from work. The local plan recognises the problems in para 2.14. Much of the road network is single-carriageway, and junctions act as constraints.

1.8 The key evidence on future traffic conditions is provided in the Strategic Highway Assessment Report (SHAR) which summarises the results of the tests carried out by Surrey County Council at the request of GBC. Five scenarios were examined using SCC’s strategic traffic model.

1.9 Scenario 1 contains all developments and planning permissions from 2009 to date. As such it corresponds to today’s circumstances, and describes the current unsatisfactory traffic conditions in peak periods.

1.10 Scenario 5 represents the position at the end of the plan period, including all development and highways schemes in the local plan.

1.11 The results of the analysis show that there will be widespread congestion in the morning peak hour across the network. The key strategic routes, the A3 through Guildford NE bound, and the M25 between Juncions 10 and 11, are shown to be at or over capacity. The summary network statistics presented in the SHAR, while useful, require some interpretation because the analysis of vehicle-hours is derived from link speeds only, and does not reflect junction delays and queues. The tables that show the ratio of flow to capacity and level of service are especially helpful to gaining an understanding of the conditions on the network in the forecast. Where the forecast traffic volume is above or close to
capacity, flow becomes unstable and there is congestion. The SHA results provide evidence that, in 2031, congestion \textit{will be worse than it is today on much of the network.}

1.12 It is the case that the traffic modelling does not take into account the potential for increased use of other modes, but the trip rates used for developments already have built in the typical level of use of other modes, and services will be required to meet that need. It is also the case that the model does not allow for park and ride, which would improve matters in the town centre, as discussed below.

1.13 In order to gain an insight into conditions across the network, it is necessary to combine information from several tables in the SHAR. Table 4.5 shows that the M25 and A3 will be at capacity in Scenario 5. The other roads that will have poor levels of service include those in Table 4.5 but also those in 4.12 (except the A3) and those in Tables 4.3 and 4.4 with levels of service E and F that will not be given some relief by improvement of the A3 in Scenario 5. Paras 4.10.3, 4 and 5 point out that there will be increased congestion. Given that the starting point is unsatisfactory, there can be no expectation that the schemes in the Infrastructure Development Plan will provide an overall improvement. There will be some local benefits, such as the Ash rail bridge for example, but in general conditions will be as bad and in many places worse. So the statement in the SHAR para 4.2.5 that ‘the combined mitigation as reflected in Scenario5...indicates that at the strategic level it accommodates the additional PSLP demand’ needs qualifying – ‘at the cost of a lot of queuing’.

1.14 The cumulative effect of the additional traffic generated by the developments in the local plan will be to increase congestion, even with the proposed highway schemes in place. More detailed analysis of the junctions and queuing is required. So we question the conclusion that the developments would have “an acceptable impact on the capacity of the highway networks in terms of the policy test set in paragraph 32 of NPPF”.

1.15 Appendix 3 of the Transport Topic Paper shows the phasing of housing development and transport infrastructure. The major scheme being considered for the A3 between the A31 and the A320 is scheduled for delivery in the period 2023/24 to 2027/28. The strategic developments at Blackwell Farm and Gosden Hill Farm are shown as being phased in from 2021/22 onwards. The Garlick’s Arch development is shown as starting in 2019/20. Therefore, there will be a period in which the existing A3 has to cope with the additional demand arising from those developments before extra capacity is provided.

1.16 The following comments regarding the strategic sites are taken from the SHAR:

1.16.1 Blackwell Farm – there will be congestion at the A31 junction, and the problems at the Tesco junction, and the Egerton road /Gill Avenue junction (para 4.9.5). Traffic is likely to access the Surrey research park and the RSCH through the development (para 4.7.3)

1.16.2 Gosden Hill Farm – there will be an increase in traffic through Burpham. There will be pressure on the A3100/ B2234 roundabout ( paras 4.7.6, 4.7.7 and 4.7.8).

1.16.3 Wisley – traffic will increase on minor roads to gain access to the A3 (N and S bound) and other routes (para 4.7.11). The development will add more traffic to the A3. The Burnt Common slips help alleviate the traffic through Ripley according to the model, but queuing on the A3 could mean this does not happen (para 4.7.14)

1.16.4 Normandy/Flexford – the report has little to say about the impact of this large development. The increase in flow on Westwood Lane is noted (para 4.5.7). Tables 4.10 and 4.11 show junction delay reducing at the Westwood Land, B3000 junction, but an increasing at the Puttenham Hill/Millbrook junction.

1.16.5 Ash – development in Ash is not specifically addressed, but there are major increases in traffic on a number of roads. The new rail bridge will bring relief (but traffic will move to the next junction).

1.16.6 Slyfield – there are no remark relating to SARP, and as there are no additional trips shown in and out of the Slyfield residential zone in Tables 3.3 and 3.4, it is possible that this development has been omitted. There is a significant increase in trips to and from the Slyfield industrial zone, which will impact on the A320 and Clay Lane.
1.16.7 Town Centre – the report has very little to say about the town centre. It is evident that the model is forecasting severe congestion on the approaches to the town centre, such as the A281, the A31 Farnham Road, and Woodbridge Road for example. No mitigation measures are planned. And in the Transport Strategy, GBC states that the intention is to adopt Allies & Morrison’s Scenario 2 which would have the effect of significantly reducing the capacity of the town centre road system. The implications have not been examined, but traffic using the A281 from Waverley, for example, would be affected.

1.17 The local plan does not state an objective for congestion. The two strategic objectives that are included for infrastructure refer to supporting sustainable development and delivering a balanced system. However, in para 2.15 there is an aspiration expressed about opportunities ‘to improve the performance of the road networks through transport infrastructure and service improvements’, which taken with the previous paragraph includes reducing congestion. The evidence so far shows that this will not happen.

1.18 The mitigation proposed is not sufficient to overcome the problems that will be caused by the level of growth in the local plan and consequently congestion will worsen. The network will lack resilience and be vulnerable to disruption due to incidents. Minor roads will have to cope with a lot more traffic, for which they are unsuitable.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( No ), is Legally Compliant? ( )

I object to ASP 3 new A3/A3100/B2215/A247 Burpham-Burnt common all-movements junction, formed by a new connector road linking between new A3/A3100 Burpham junction (SRN4) and the B2215 London Road, in combination with the new A3 northbound on-slip (SRN9) and the new A3 southbound off-slip (SRN10) under Infrastructure and Delivery.

If development gets the go ahead for the strategic site at Gosden Hill it would be logical to construct a 4-way A3 interchange at Burpham. It is not feasible to pass the problem down the line to Send which will already be bearing the brunt of traffic generated from a planned 4,000 homes. The A247 link road to Woking already at capacity will become gridlocked.

I object to SRN4 New A3/A3100 Burpham junction with relocated A3 southbound off-slip and new A3 southbound on-slip. This will place an unbearable problem onto the A247 whereby traffic will be passing directly through Send from the A3 and M25 and the proposed new development at Wisley.

I object to SRN9 A3 northbound on-slip at A247 Clandon Road (Burnt Common) and SRN10 A3 southbound off-slip at A247 Clandon Road (Burnt Common). This will place an unbearable problem onto the A247 which is already at capacity.

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1
11. I object to the lack of proper infrastructure planning for sites

The Plan does not identify adequate infrastructure improvements to support the scale of development, especially at Garlick’s Arch which has no infrastructure projects in the Infrastructure Schedule to support it. Local services, utilities and sewerage, doctors, hospitals etc. are already at capacity. It is already extremely difficult to get a GP appointment in the local surgeries without a long wait.

Are there plans to improve the capability of the emergency services, police, ambulance, fire brigade to cover the extra houses in the north east of the borough?

I wish my objections to be taken into consideration and that the Plan is amended.

1. I object to the lack of provision for Doctors’ Surgeries. The existing Surgeries are already full and quick appointments or consultations are very difficult if not impossible to arrange, even for the very ill. Adding more demand without more provision is reckless and risks serious damage to residents’ health and well-being.

2. I object to the lack of immediate provision for new schools. We live in an affluent area of a relatively affluent Country. We should be educating our children to the highest standards and we need to make school as inclusive to all as possible. Over-crowded schools are a catalyst for unrest and lead to disenfranchised and disenchanted children, with undue pressure on over-worked teaching staff and a knock-on negative effect on families and communities. We need to make more places available, not “shoe-horn” more children into the same schools

Schools and Medical facilities.

As you must know, our schools are full and our Medical Centre stretched. You are making no promises that new schools are to be built, so I am assuming children living in all these new houses will have to travel out of the area to attend other schools. Not ideal in any way, and that means more traffic on the roads, and speeding through the village on our narrow roads, already a problem.

**Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )**

The proposed developments in East Horsley, West Horsley and Ockham area represent a very significant increase in the number of homes given a total over-estimation of the real population growth projections and housing needs. Development at this scale will irrevocably change our Villages and cause considerable adverse effects on traffic, parking at local shops and railway stations, access to local school places, the medical facility and access to doctors. I do not think that the Local Plan provides a rational and fair basis for allocating housing to East Horsley, providing the required infrastructure improvements, or protecting East Horsley’s Green Belt and Village classification. It is not in the interests of East Horsley residents and I will help fight it all the way through the courts if needed until changed. I object in the strongest terms to these Local Plan proposals.

**Document:** Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

**Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )**

Our drains, our water supply, our medical facilities and our roads cannot cope with the proposed number of new homes. Our roads are already busy and parking is limited. This includes parking at the railway station, and at the local shops where it is very often difficult to find a space. Our roads are frequently flooded in bad weather too, which could only be made worse by more pressure on the drainage system that so many new houses would undoubtedly cause.

The only medical practice is in East Horsley, serving both East and West Horsley as well as surrounding areas. It is an extremely busy practice and it can often be difficult to get an appointment. With the proposed increase in population this medical practice would be stretched even further.

This leads me on to mention the state schools in our area. The local primary and secondary schools, the Raleigh and the Howard, are very good and very popular. There have been times where children living in the village have been unable to get a place there. This is already a big problem for local families, and we really do not have capacity in our existing schools to cope with the number of families that the proposed housing would bring to the village.

In conclusion, I ask Guildford Borough Council to revise the housing number, and to amend the Local Plan to maintain our existing village boundaries and green belt status.

Local healthcare facilities overwhelmed

Many local health services, such as the Villages Medical Centre, Send, are being stretched already, and it’s becoming more difficult to get doctor/nurse appointments without unacceptable delays. This would become significantly worse should the draft local plan be implemented. I object to the additional stress that would be caused should the proposals be implemented.

Lack of proper infrastructure planning for sites

Local infrastructure is already stretched, and there appears little or no planning or implementation of improvements prior to the proposed plan. This is particularly true at Garlick’s Arch. I object to the lack of proper infrastructure planning of local services such as doctors and schools.

Sites planned in unsustainable locations

Many strategic sites, such as Garlick’s Arch and Wisley Airfield, are in unsustainable locations. They are not located near any railway stations, and would not be within easy reach of local villages. With infrequent bus services, residents would be reliant on the use of motor vehicles resulting in further pollution and congestion. I object on the grounds of the sites being unsustainable.

Whilst School Places do not affect me personally and others are probably more qualified to speak on the subject. As I understand it many did not get their children in to their first choice of St Bede's, these developments will just make it harder which will mean more traffic on the roads for school runs.

What does affect me is the inability to get a doctors appointment in a reasonable time at the Villages Medical Centre - these developments will add to that pressure, without I would imagine more resources being made available

WE OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

WE OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.
The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy II. By prioritizing Greenfield over urban, Brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of house building as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy II requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean NO development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

3. I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

There is too much traffic in our villages already and this plan will cause more congestion in Ripley, Send and Clandon, with no plan to improve that.

The rural roads in this area are narrow, in poor condition and have no footpaths. 5000 more houses means dangerous and unsustainable traffic.

I would like to lodge my objection to the Proposed Local Plan.

I object on the following grounds:

Education. The Raleigh already operates at full capacity with no land to expand into. Places are in demand and extra housing means even more demand. Where would those children go to school and what of the others who would usually fall into the catchment area? Would that shrink to accommodate the increased demand? Furthermore, Surrey County Council has no plans to build new schools in the area.

Roads. The roads in the villages are busy and sometimes dangerous. There's already many housing works taking place with vans and lorries delivering and construction blocking or reducing access. Part of the beauty of the villages is that it's commutable distance to many places of work but isolated enough to have a countryside feel to it. Don't take that away.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.
With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even
more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past
through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the
village and with greater vehicle traffic being generated from these developments there is a real danger that there will be
an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will
result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents,
noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one
side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant
Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to
build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment
without securing the means for its provision. Placing housing in the established urban areas would reduce the need for
enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion -
averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get
worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local
road network has not been given sufficient consideration. Some proposed development locations would require highway
schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought
buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable
(and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s
infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however,
assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically
dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a
key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large
infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing
conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns
over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if
at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been
identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing
residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and
sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages
Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity
and suffering from funding cuts or freezes. Any further development without funding will place further stress upon
existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will
stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

Why is that each year I find myself having to write to the council in protest at plans drawn up under your guidance? We live in West Clandon, a beautiful village of historical significance and charm. We use our local facilities and support local businesses in and around the Guildford area, but in order to do this we have to work in areas other than Guildford as there is simply not the infrastructure in our local area to provide jobs for the current level of housing (or suitable, reliable transport links in and out of Guildford), let alone an aggressively expanded plan which you are putting forth once again.

Policy I1: Infrastructure and delivery

I OBJECT to this policy as it stands

Various aspects of infrastructure are acknowledged as congested, inadequate for the existing population and not able to accommodate much growth.

The methodology commissioned by the Council to assess traffic and the corresponding roads infrastructure needs is inadequate for the purpose of the Local Plan.

With regard to SANG provision, GBC has demonstrated that it has no genuine interest in conserving and enhancing biodiversity and clearly regards the Thames Basin Heaths SPA as an obstacle to be overcome rather than a valued asset. GBC is failing to take account of existing biodiversity at sites selected for SANG provision.

Areas identified as SANGS should not be developed and urbanised.

I would like to inform you of our objections to the New Local Plan 2016, especially in relation to the proposed developments at Wisley Airfield and also to the proposals for more than 500 new homes in East and West Horsley. We believe that these proposals, which would remove the Horsleys from the Green Belt, are a significant over-development and would totally swamp an already overloaded infrastructure - I've had my wing mirror knocked more than once at the Ockham Road South 'pinch-point', heaven help us if it has to withstand the traffic required to construct an entire new town!

I object to policy I1 Infrastructure and delivery

Most of the borough’s infrastructure is antiquated, congested and straining to accommodate even current needs and organic growth. Yet this plan’s commitment to building housing estates across the Guildford countryside will mean either major infrastructure investment that no-one is prepared to pay for or else a catastrophic and simultaneous collapse in transport, educational, medical, energy, water and communications services.

The plan targets greenfield sites – requiring heavy infrastructure investment – in order to generate CIL income necessary to meet an infrastructure shortfall that is already serious. This is not sensible. The current draft CIL scale also encourages development on greenfield sites rather than brownfield.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing infrastructure needs in this area is inadequate, identifying only the tip of an iceberg of existing congestion. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that involve demolishing property and road-widening in residential areas to solve the resultant congestion. The A3 improvements are not guaranteed to take place but they are being used to justify removing large areas from the Green Belt before detailed traffic assessments have taken place. These detailed investigations are being deferred until the planning application stage and will be left to developers to prepare. If a site then proves to be unsustainable its Green Belt protection will have been lost for no reason and unsuitable development will take place by a more insidious process.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritising greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly.

This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognising this as a key issue, the plan is based on a wing and a prayer.

The highways network is under stress at peak times in many parts of the borough. Queuing is the daily experience of drivers going to and from work. The local plan recognises the problems in para 2.14. Much of the road network is single-carriageway, and junctions act as constraints.

The key evidence on future traffic conditions is provided in the Strategic Highway Assessment Report (SHAR) which summarises the results of the tests carried out by Surrey County Council at the request of GBC. Five scenarios were examined using SCC’s strategic traffic model.

Scenario 1 contains all developments and planning permissions from 2009 to date. As such it corresponds to today’s circumstances, and describes the current unsatisfactory traffic conditions in peak periods.

Scenario 5 represents the position at the end of the plan period, including all development and highways schemes in the local plan.

The results of the analysis show that there will be widespread congestion in the morning peak hour across the network. The key strategic routes, the A3 through Guildford NE bound, and the M25 between Junctions 10 and 11, are shown to be at or over capacity. The summary network statistics presented in the SHAR, while useful, require some interpretation because the analysis of vehicle-hours is derived from link speeds only, and does not reflect junction delays and queues. The tables that show the ratio of flow to capacity and level of service are especially helpful to gaining an understanding of the conditions on the network in the forecast. Where the forecast traffic volume is above or close to capacity, flow
becomes unstable and there is congestion. The SHA results provide evidence that, in 2031, congestion will be worse than it is today on much of the network.

It is the case that the traffic modelling does not take into account the potential for increased use of other modes, but the trip rates used for developments already have built in the typical level of use of other modes, and services will be required to meet that need. It is also the case that the model does not allow for park and ride, which would improve matters in the town centre, as discussed below.

In order to gain an insight into conditions across the network, it is necessary to combine information from several tables in the SHAR. Table 4.5 shows that the M25 and A3 will be at capacity in Scenario 5. The other roads that will have poor levels of service include those in Table 4.5 but also those in 4.12 (except the A3) and those in Tables 4.3 and 4.4 with levels of service E and F that will not be given some relief by improvement of the A3 in Scenario 5. Paras 4.10.3, 4 and 5 point out that there will be increased congestion. Given that the starting point is unsatisfactory, there can be no expectation that the schemes in the Infrastructure Development Plan will provide an overall improvement. There will be some local benefits, such as the Ash rail bridge for example, but in general conditions will be as bad and in many places worse. So the statement in the SHAR para 4.2.5 that ‘the combined mitigation as reflected in Scenario5...indicates that at the strategic level it accommodates the additional PSLP demand’ needs qualifying – ‘at the cost of a lot of queuing’.

The cumulative effect of the additional traffic generated by the developments in the local plan will be to increase congestion, even with the proposed highway schemes in place. More detailed analysis of the junctions and queuing is required. So we question the conclusion that the developments would have “an acceptable impact on the capacity of the highway networks in terms of the policy test set in paragraph 32 of NPPF”.

Appendix 3 of the Transport Topic Paper shows the phasing of housing development and transport infrastructure. The major scheme being considered for the A3 between the A31 and the A320 is scheduled for delivery in the period 2023/24 to 2027/28. The strategic developments at Blackwell Farm and Gosden Hill Farm are shown as being phased in from 2021/22 onwards. The Garlick’s Arch development is shown as starting in 2019/20. Therefore, there will be a period in which the existing A3 has to cope with the additional demand arising from those developments before extra capacity is provided.

The following comments regarding the strategic sites are taken from the SHAR:

- **Blackwell Farm** – there will be congestion at the A31 junction, and the problems at the Tesco junction, and the Egerton road / Gill Avenue junction (para 4.9.5). Traffic is likely to access the Surrey research park and the RSCH through the development (para 4.7.3)
- **Gosden Hill Farm** – there will be an increase in traffic through Burpham. There will be pressure on the A3100/ B2234 roundabout (paras 4.7.6, 4.7.7 and 4.7.8).
- **Wisley** – traffic will increase on minor roads to gain access to the A3 (N and S bound) and other routes (para 4.7.11). The development will add more traffic to the A3. The Burnt Common slips help alleviate the traffic through Ripley according to the model, but queuing on the A3 could mean this does not happen (para 4.7.14)
- **Normandy/Flexford** – the report has little to say about the impact of this large development. The increase in flow on Westwood Lane is noted (para 4.5.7).
- **Tables 4.10 and 4.11** show junction delay reducing at the Westwood Land, B3000 junction, but an increasing at the Puttenham Hill/Millbrook junction.
- **Ash** – development in Ash is not specifically addressed, but there are major increases in traffic on a number of roads. The new rail bridge will bring relief (but traffic will move to the next junction).
- **Slyfield** – there are no remark relating to SARP, and as there are no additional trips shown in and out of the Slyfield residential zone in Tables 3.3 and 3.4, it is possible that this development has been omitted. There is a significant increase in trips to and from the Slyfield industrial zone, which will impact on the A320 and Clay Lane.
- **Town Centre** – the report has very little to say about the town centre. It is evident that the model is forecasting severe congestion on the approaches to the town centre, such as the A281, the A31 Farnham Road, and Woodbridge Road for example. No mitigation measures are planned. And in the Transport Strategy, GBC states that the intention is to adopt Allies & Morrison’s Scenario 2 which would have the effect of significantly reducing the capacity of the town centre road system. The implications have not been examined, but traffic using the A281 from Waverley, for example, would be affected.
The local plan does not state an objective for congestion. The two strategic objectives that are included for infrastructure refer to supporting sustainable development and delivering a balanced system. However, in para 2.15 there is an aspiration expressed about opportunities ‘to improve the performance of the road networks through transport infrastructure and service improvements’, which taken with the previous paragraph includes reducing congestion. The evidence so far shows that this will not happen.

The mitigation proposed is not sufficient to overcome the problems that will be caused by the level of growth in the local plan. **Congestion will worsen.** The network will lack resilience and be vulnerable to disruption due to incidents. Minor roads will have to cope with a lot more traffic, for which they are unsuitable.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

ROADS, TRANSPORT AND INFRASTRUCTURE

I object to the lack of any solid proposals for roads to support any of the developments. Proper highway surveys have not been undertaken and the majority of stated potential undertakings are no more than aspirational at best and unachievable at worst. I do not believe such major structural requirements should be so ignored or again, handed as conditions to developers. It is not enough insurance and gives developers a potential free hand to begin housebuilding without these being in place. The result will be chaos.

I object to the fact that in its entirety this Draft Local Plan ignores the huge problems that will be generated throughout the Borough on the road networks and hubs, as well as through villages and on country roads.

I object that insufficient consideration has been given to the problems which will arise from pressure on public services, sewerage etc.
I object that not enough attention is paid to environmental aspects, particularly air quality which is poor currently and will be made a great deal worse as a result of increased traffic.

I object that there are misleading and incorrect references to bus timetables and services for the villages. These have been made to appear much more efficient than they actually are.

I object that there are references to increasing use of cycling as a means of transport when the lack of provision of cycle paths and the impossibility of providing them along tortuous, unlit narrow roads often bearing heavy traffic makes this a nonsense.

POLICY II INFRASTRUCTURE AND DELIVERY

I object to policy II Infrastructure and delivery

Most of the borough’s infrastructure is antiquated, congested and straining to accommodate even current needs and organic growth. Yet this plan’s commitment to building housing estates across the Guildford countryside will mean either major infrastructure investment that no-one is prepared to pay for or else a catastrophic and simultaneous collapse in transport, educational, medical, energy, water and communications services.

The plan targets greenfield sites – requiring heavy infrastructure investment – in order to generate CIL income necessary to meet an infrastructure shortfall that is already serious. The current draft CIL scale also encourages development on greenfield sites rather than brownfield and will reduce or negate developer's obligation to sell a percentage of homes at 20% below market value.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing infrastructure needs in this area is inadequate, identifying only the tip of an iceberg of existing congestion. Compton Village is already close to tipping point, yet it will see a significant increase in traffic volume, will be completely congested and yet no plans exist to mitigate the problem.

The schemes referred to in this policy barely solve existing congestion and are inadequate when development takes place. The full impact on local road networks has not been fully considered. Some proposed development locations would require highway schemes that involve demolishing property and road-widening in residential areas to solve the resultant congestion. The A3 improvements are not guaranteed to take place but they are being used to justify removing large areas from the Green Belt before detailed traffic assessments have taken place. These detailed investigations are being deferred until the planning application stage and will be left to developers to prepare. If a site then proves to be unsustainable its Green Belt protection will have been lost for no reason and unsuitable development will take place by a more insidious process. Compton Village will actually incur increased traffic flow as a consequence of A3 widening according to the study, yet as was pointed out above, no solutions are in place to improve the situation.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy II. By prioritising greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly.

This plan, however, assumes infrastructure will follow on the heels of housebuilding. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognising this as a key issue, the plan makes too many assumptions, not least being the verbal promise that development will not take place without infrastructure preceeding it. It is not clear how this will happen and is not in the Plan, as it should be, if it is achievable.

The highways network is under stress at peak times in many parts of the borough. Queuing is the daily experience of drivers going to and from work. The local plan recognises the problems in para 2.14. Much of the road network is single-carriageway, and junctions act as constraints.

The key evidence on future traffic conditions is provided in the Strategic Highway Assessment Report (SHAR) which summarises the results of the tests carried out by Surrey County Council at the request of GBC. Five scenarios were examined using SCC’s strategic traffic model.

Scenario 1 contains all developments and planning permissions from 2009 to date. As such it corresponds to today’s circumstances, and describes the current unsatisfactory traffic conditions in peak periods.

Scenario 5 represents the position at the end of the plan period, including all development and highways schemes in the local plan.

The results of the analysis show that there will be widespread congestion in the morning peak hour across the network. The key strategic routes, the A3 through Guildford NE bound, and the M25 between Junctions 10 and 11, are shown to be
at or over capacity. The summary network statistics presented in the SHAR, while useful, require some interpretation because the analysis of vehicle-hours is derived from link speeds only, and does not reflect junction delays and queues. The tables that show the ratio of flow to capacity and level of service are especially helpful to gaining an understanding of the conditions on the network in the forecast. Where the forecast traffic volume is above or close to capacity, flow becomes unstable and there is congestion. The SHA results provide evidence that, in 2031, congestion will be worse than it is today on much of the network.

It is the case that the traffic modelling does not take into account the potential for increased use of other modes, but the trip rates used for developments already have built in the typical level of use of other modes, and services will be required to meet that need. It is also the case that the model does not allow for park and ride, which would improve matters in the town centre, as discussed below.

In order to gain an insight into conditions across the network, it is necessary to combine information from several tables in the SHAR. Table 4.5 shows that the M25 and A3 will be at capacity in Scenario 5. The other roads that will have poor levels of service include those in Table 4.5 but also those in 4.12 (except the A3) and those in Tables 4.3 and 4.4 with levels of service E and F that will not be given some relief by improvement of the A3 in Scenario 5. Paras 4.10.3, 4 and 5 point out that there will be increased congestion. Given that the starting point is unsatisfactory, there can be no expectation that the schemes in the Infrastructure Development Plan will provide an overall improvement. There will be some local benefits, such as the Ash rail bridge for example, but in general conditions will be as bad and in many places, such as Compton Village, worse. So the statement in the SHAR para 4.2.5 that ‘the combined mitigation as reflected in Scenario 5..indicates that at the strategic level it accommodates the additional PSLP demand’ needs qualifying – ‘at the cost of a lot of queuing’ and makes no mention of the impact this will have on pollution, which is already a known problem at the A3 end of Compton.

The cumulative effect of the additional traffic generated by the developments in the local plan will be to increase congestion, even with the proposed highway schemes in place. More detailed analysis of the junctions and queuing is required. So we question the conclusion that the developments would have “an acceptable impact on the capacity of the highway networks in terms of the policy test set in paragraph 32 of NPPF”.

Appendix 3 of the Transport Topic Paper shows the phasing of housing development and transport infrastructure. The major scheme being considered for the A3 between the A31 and the A320 is scheduled for delivery in the period 2023/24 to 2027/28. The strategic developments at Blackwell Farm and Gosden Hill Farm are shown as being phased in from 2021/22 onwards. The Garlick’s Arch development is shown as starting in 2019/20. Therefore, there will be a period in which the existing A3 has to cope with the additional demand arising from those developments before extra capacity is provided.

The following comments regarding the strategic sites are taken from the SHAR:

Blackwell Farm – there will be congestion at the A31 junction, and the problems at the Tesco junction, and the Egerton road /Gill Avenue junction (para 4.9.5). Traffic is likely to access the Surrey research park and the RSCH through the development (para 4.7.3)

Gosden Hill Farm – there will be an increase in traffic through Burpham. There will be pressure on the A3100/B2234 roundabout (paras 4.7.6, 4.7.7 and 4.7.8).

Wisley – traffic will increase on minor roads to gain access to the A3 (N and S bound) and other routes (para 4.7.11). The development will add more traffic to the A3. The Burnt Common slips help alleviate the traffic through Ripley according to the model, but queuing on the A3 could mean this does not happen (para 4.7.14)

Normandy/Flexford – the report has little to say about the impact of this large development. The increase in flow on Westwood Lane is noted (para 4.5.7). Tables 4.10 and 4.11 show junction delay reducing at the Westwood Land, B3000 junction, but an increasing at the Puttenham Hill/Millbrook junction.

Ash – development in Ash is not specifically addressed, but there are major increases in traffic on a number of roads. The new rail bridge will bring relief (but traffic will move to the next junction).
Slyfield – there are no remark relating to SARP, and as there are no additional trips shown in and out of the Slyfield residential zone in Tables 3.3 and 3.4, it is possible that this development has been omitted. There is a significant increase in trips to and from the Slyfield industrial zone, which will impact on the A320 and Clay Lane.

Town Centre – the report has very little to say about the town centre. It is evident that the model is forecasting severe congestion on the approaches to the town centre, such as the A281, the A31 Farnham Road, and Woodbridge Road for example. No mitigation measures are planned. And in the Transport Strategy, GBC states that the intention is to adopt Allies & Morrison’s Scenario 2 which would have the effect of significantly reducing the capacity of the town centre road system. The implications have not been examined, but traffic using the A281 from Waverley, for example, would be affected.

The B3000 will be severely affected by development schemes and will not benefit from road improvements. It is essential that the impact of all change to road networks are looked at in conjunction with one another for any survey to be meaningful. The local plan does not state an objective for congestion. The two strategic objectives that are included for infrastructure refer to supporting sustainable development and delivering a balanced system. However, in para 2.15 there is an aspiration expressed about opportunities ‘to improve the performance of the road networks through transport infrastructure and service improvements’, which taken with the previous paragraph includes reducing congestion. The evidence so far shows that this will not happen. The mitigation proposed is not sufficient to overcome the problems that will be caused by the level of growth in the local plan. Congestion will worsen. The network will lack resilience and be vulnerable to disruption due to incidents. Minor roads will have to cope with a lot more traffic, for which they are unsuitable.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the number of homes that the Plan intends to deliver as this will be unacceptable as our local schools are already over subscribed, it is already extremely difficult to get a doctors appointment now without any extra people coming to our village!

I object to the proposal in the local plan on the grounds that Send Hill is a single track country road and too narrow to provide sufficient access to the site or accommodate the potential new levels of traffic the proposed development would bring.

I object to the proposal in the local plan on the grounds that the existing road and parking infrastructure is already inadequate and would certainly be made worse with the planned development. The number of heavy lorries using Potters Lane is already a grave danger to the residents but nothing has been done to alleviate this problem and now the planners want to make the situation much worse by their proposals.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1
I am writing yet again about the plan for more building of houses in these villages. Has anyone given any real thought about the infrastructure?

The roads are already in a bad state of repair, parking is very limited both in the village and at Bishopsmead. The schools are full as is the doctors’ surgery. How can extra homes be accommodated?

As for the proposed building at Wisley Airfield. Do you know it is a flood plain? Also that part of the A 3 is very congested with the run in to the A 25.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )
** I object to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

This will cause more congestion to the villages of Ripley, Send and Clandon, which have poor condition narrow roads and no footpaths, which are dangerous. More houses will increase this danger and unsustainable volumes of traffic

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

1. I OBJECT to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?.

<td>I wish to strongly object to the proposal to build residential properties at the Thatchers hotel site, the Ockham Road North and South sites and Manor Farm/East Lane West Horsley. East and West Horsley are lovely small villages but with limited infrastructure. Shops Schools medical facilities are already overwhelmed and the road network already sees long queues at the village junctions with the Guildford/Epsom Road during the morning and evening rush hour. These proposals will destroy the Horsleys and must be rejected. The recent referendum has shown how dissatisfied people are with the political elite who have shown no understanding of the anger communities feel when they see their village/town taken away from them by forcing population growth. Guildford should take heed and take measures to protect its lovely villages.</td>

<td>I object to the latest plan to remove our greenbelt for development. I was going to highlight all my concerns but after seeing the Ripley action groups website their specific points say it all. I do not understand why councils/government do not look to build more towns well away from existing villages/towns as they did years ago with Milton Keynes. Building within existing villages totally over runs them and there are never amenities put in place to cope with schooling, doctors surgeries and traffic management. If there is an incident on either the A3 or the M25 it becomes totally gridlocked in Send Marsh/Send/Ripley as all the A3 traffic comes off and through Ripley.</td>

| Lack of proper infrastructure planning for sites  
I object to the lack of planning and implementation of infrastructure. For example at Garlick’s Arch. Without improvements to the infrastructure prior to development, the existing residents’ quality of life will significantly deteriorate in many ways. How will the local services such as doctors and schools cope? |
| Lack of Utilities Capacity  
Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. I object to the development of Garlick’s Arch on the ground that there is little capacity in these networks. |
| **What changes (2016)/further amendments (2017) do you suggest should be made to the document?** |
## Local healthcare facilities will be overwhelmed
Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. I object due to the further stress it will put upon existing health services.

## Local policing facilities will be overwhelmed
Police services are seeing funding reduced. The development of the likes of Garlick’s Arch and Wisley Airfield will stretch the police services further and I object.

## Local social welfare facilities will be overwhelmed

## Local shops/restaurant facilities will be overwhelmed

I object to the fact that infrastructure requirements have not been properly considered and are inadequate to deal with proposed housing levels. Roads, doctors and schools will be unable to cope.

I object to the fact that 70% of the proposed 13,860 houses are targeted at the Green Belt strung along the A3 which will destroy the open amenity of the borough and produce gridlock on the A3 and surrounding roads including the A247 which are all already at 100% capacity.

I believe that the developments would create very congested roads. There would be too much pressure on services such as the medical centre. There would not be enough car parking spaces at the station or shops. There would be greater risk of flooding. There would be much higher levels of pollution. There would be a lack of school places in the area. Finally it would be dreadful to destroy our beautiful countryside.

I strongly object that the present infrastructure and is lack of ability to cope with the people who are already resident here and that this has not been addressed. Our doctors, The Villages Medical Centre, is over stretched as it is. The local schooling is not able to accommodate the children who live within a reasonable distance to access their education within their community.

I cannot see that this local plan addresses this and that there is perhaps another agenda that us, as local residents are not party to.

Concerns

West Horsley is a rural community. The plan almost doubling the amounts of housing would cause the destruction of the character of the village putting intolerable stress on the local infrastructure. Already schools and Gp's struggle with servicing the community

The local infrastructure just cannot cope with any more housing or retail development in the area on this scale. There is a severe drainage issue in this area, with standing water already making driving hazardous during wet weather. The various schools in the area generate high levels of traffic, and the route through the villages have become rat runs from the A3 to the A246 and beyond. Try making a right turn out of Ockham Road South onto the A246 during rush hour. It’s a serious accident waiting to happen with cars attempting to use the driveway of the Duke of Wellington pub as a cut through to avoid the mounting queues of waiting cars. The proximity to the petrol station also situated on that junction makes it an extremely dangerous manoeuver. Increased traffic from more housing, and more businesses will be intolerable for the community. The local schools are stretched to bursting point and the doctors’ surgery is also overloaded and there doesn’t seem to be any mention in the local plan of improving these vital services.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

---

• Nowhere in the plan is there any provision for any additional infrastructure. With 533 houses, based on current demographics, will mean a huge leap in demand for public services which cannot cope. These will include:
  ◦ No singular development is large enough to ensure the developers invest in any of the infrastructure of the area.
  ◦ Schools place both Primary and Senior: If 50% have 2 children, where are the 533 additional school places going to be when the schools are already heavily oversubscribed?
  ◦ Transport and parking: If 20% of homes have a commuter to London (106 people), where are they going to park? There is no room at the station car park. There is one bus every two hours!
  ◦ Drainage: Although an element of investment has been made to improve drainage in West Horsley the roads still flood. The already fragile drainage just will not cope and we will have road closures for weeks again into the village.
  ◦ Roads: The roads in the village are not build to carry more traffic, a 20% plus increase in traffic will not only lead to significant congestion but damage to the environment.
  ◦ Lighting: There are approx. 235 new homes planned for on or just off East Lane, with the increased proportion of children in to the area the roads will be highly unsafe as there is no street lighting and completely inadequate foot paths.
  ◦ Medical: The doctors surgery is already bursting at the seams, if the mix of older people and families, as I would expect, moving to the new homes this is going to going to result in much more than 20% increase in patients.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
• The Ockham development with 2000+ homes is almost going to double the number of homes, while there has been limited mention of infrastructure, this has not extended to the impact on road and load public transport network etc.

No responsible decision can be taken with a view to such unwanted expansion of the village without out addressing satisfactorily the above issues. They are too important to be brushed over and ignored.

I trust that you will take my views and that of the other local residents into serious consideration when finalising the plan.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

There are significant shortcomings in the infrastructure of Guildford Borough as it stands today and the aggressive housing policy as proposed by GBC in this Document will exacerbate this problem.

The local infrastructure is not set up to deal with significant population growth and additional housing. Current examples in East and West Horsley include:

1. Through roads already very busy at peak times, have multiple pot holes, and have pavements which are either very narrow, do not exist at all, or are in extremely poor condition. This makes the village unsuitable for high volumes of any kind of traffic, let alone the volume of HGVs now using it. As a mother of 3 young children using the pavements daily to walk to school, it is unfortunately only a matter of time before the deteriorating traffic, road and pavement combination will result in a serious incident.

2. Drainage system already very prone to overflows, eg, on Ockham Road North from the railway bridge to the junction with East Lane, every time there is heavy rain, resulting in the road becoming akin to a river. Road repairs last year have done absolutely nothing to alleviate the problem.

3. Schools already significantly over-subscribed with local children

4. Limited bus service.

5. Train service to London already very busy. Additional commuters would make it likely that not everyone getting on at Horsley station at peak time would get a seat, despite the journey being 50 mins into London Waterloo.

There are no proposals in respect of any of the existing problems with roads, pavements, drainage, transport and schools.

It is inevitable that the proposed developments in East Horsley and in West Horsley and Wisley, will put further strain on the existing infrastructure. The failure to address the serious inadequacies of the existing infrastructure to meet the needs of what is there already is a serious omission in GBC’s Document.

Furthermore, and as I also described in my comments about removing East Horsley from the Green Belt, East Horsley is an attractive village for people wishing to relocate from more built up areas, due its village feel. That includes the village school, The Raleigh. Our family, and many of our friends chose to move to Horsley precisely because of the primary school, which manages to retain a village feel, yet is of ample size to provide the facilities required for children from Reception – Year 6. The existing school would not be able to cater for an increase in demand, and unless we wish to remove the current attractiveness of this village school, nor should we consider an increase in the numbers.

I therefore object to the infrastructure proposals contained in GBC’s Document.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
Finally... overall I am utterly frustrated at a Council which should be protecting the local areas from inappropriate development which seems to have lost site of its duty and is trying to achieve new housing in the area at the detriment of the locals, with no regard to the over burdened infrastructure and all to achieve some target imagined up as being needed by someone and seeing these little villages as the place to damage to achieve it.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Attached documents:**
All of the above would impact Send's infrastructure significantly. This infrastructure is already fully maximised. We are already experiencing traffic congestion daily through Send and surrounding areas. Schools would be impacted, schools that have limited places already. The Villages Medical Centre is already extremely busy with about 2 weeks notice needed to book appointments with GPs.

Any additional housing on this scale will increase road congestion, the impact on schools and the surrounding medical facilities. All social care facilities would be impacted.

This proposal would increase pollution and noise which is already substantial from the A3. Reduce our country side and influence and impact its inhabitants significantly. We are trying to teach everyone, including our children, to preserve the environment, help reduce pollution and not to increase the impact on our greenbelt. This housing proposal would have the opposite effect.

I am a resident near the Burnt Common roundabout and drive through Burnt Common several time a day. It is congested, busy, any additional traffic would make the situation much worse and impact our village negatively. Garlick's Arch and the woodland surroundings serve as a buffer to the A3, removal would bring the A3 into the village, there is no benefit from this for local residents. We do not want more traffic, noise, pollution. We live in a village because we want to be surrounded by countryside. Countryside that has been there for hundreds of years and should be enjoyed by many generations to come.

I object in the strongest possible way to the above policies, the additional housing proposed in Burnt Common, Garlick's Arch, Send Hill and Winds Ridge and the removal of Send from greenbelt.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

The Plan has huge deficiencies in infrastructure provision and investment, particularly in transport. The proposed provision of more than 12,000 homes will put undue pressure on already crowded roads, schools and medical facilities. How can a relatively small, northern part of Surrey absorb some 40,000 new inhabitants without causing chaos and ruining the character of the neighbourhoods? Add in the thousands and thousands of extra inhabitants in all the other northern Surrey boroughs, as proposed in other Local Plans, and the whole area will be completely swamped, overdeveloped and snarled with traffic, making it just an extension of urbanised Greater London. It is irrational to look at one borough as if it were an island and ask it to design a Plan for what it sees as its needs without considering the impact of demands and pressures from all surrounding areas and vice versa. Consider in full the impacts, for example, on the A3 and M25. That is why the entire Local Plan exercise is so fundamentally flawed.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
Comment ID: PSLPP16/139  Respondent: 10876961 / Geoffrey Willot  Agent:

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I have to express my views on the plan because, as a long time resident in Horsley, I believe the proposals would, if implemented, have a terrible effect on the villages. The villages could not cope with the effect on roads, schools, medical services and, I suspect, water supplies and drainage, unless they were expanded greatly. Even more important for me would be the impact on the rural environment and wildlife. The number of houses is inappropriate for the village communities. We have had 'in fill' for years and have managed to absorb and welcome these homes and new people but further expansion, especially on this scale, would change the villages enormously for the worse and so I must express my strong opposition to the plan.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Comment ID: PSLPP16/18479  Respondent: 10877025 / Maureen Stephens  Agent:

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

This will cause more congestion to the villages of Ripley, Send and Clandon, which have poor condition narrow roads and no footpaths, which are dangerous. More houses will increase this danger and unsustainable volumes of traffic

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Comment ID: PSLPP16/16707  Respondent: 10877057 / Jennifer Dodd  Agent:

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

3) The magnitude of the proposed increase in the Horsleys housing would create unacceptable density in the area with irreversible environmental destruction and a major impact on the local infrastructure.

4) Without major investment to expand our medical, educational, parking and drainage facilities these villages risk being overwhelmed by the influx of vehicles and people. Our local roads are already over used and dangerous in places.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
None of these proposals are in the best interests of Send and its residents and any change to its Green Belt status would greatly diminish the character and identity of the village. In addition, the general strain on the infrastructure of the village in terms of roads, schooling and medical services would be overwhelming. Already in Send, traffic is heavy at certain times of day, schools over-subscribed and The Villages Medical Centre struggles to provide timely appointments for the residents currently registered.

I trust these objections are received and noted in accordance with procedure and look forward to news arising from the reassessment which will surely be necessary once the full extent of the resistance of local residents to the Local Plan proposals is known to GBC.

1. Provision for another full Village

The facilities in East Horsley village are getting very stretched and there is no room to expand. Provision must be made for a purpose built “village” area with its own shops including its own medical centre, Village Hall, Schools (nursery as well as primary), Creche/Day Care facilities youth centre, etc. There is now only Lloyds Bank in East Horsley - the only bank in the Village with an ATM.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

- We are currently experiencing problems with flooding roads, much drainage problems and sewage overflow arising as a result. With the proposed increased building, this will exacerbate the flooding, drainage and sewage problems even more.

- The schools, medical facilities, shops and parking are already operating at full capacity. How do you propose the place will function with your proposed addition of over 600 houses in the next five years? It is just simply not sustainable.

- Horsley railway station car park is full most of the time on weekdays – where are commuters going to park? In this connection, you need to take into account the proposed increased number of people living in Ockham and the Horsleys as well. It is no point increasing the housing in the area if people cannot get to work in an efficient manner.

- The roads in the area have considerable difficulty accommodating the Repton local bus service because the roads are narrow and there is no room to widen the roads either. Traffic constantly comes to a halt to allow the Repton bus to get through. This is particularly bad when the school rush hour is also on at the same time.

- East Horsley Medical Centre is already operating at full capacity. We have to wait days and sometimes even a fortnight to get an appointment to see a doctor. The car park for the surgery is frequently operating at full capacity during full surgery hours.

There is inadequate state primary and secondary school places to accommodate children resulting in many children having to travel distances. This adds significantly to the traffic problems in the area during the school rush hour.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object to the fact that infrastructure requirements have not been properly considered and are inadequate to deal with proposed housing levels. Roads, doctors and schools will be unable to cope.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time; particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

I OBJECT to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick's Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents' in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick's Arch site.
Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

3. I object to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy P1)

I have been a resident in Ripley since 2010 and the weight of traffic has dramatically increased. I am a cyclist so notice this first hand.

At a time of reduced bus services through Ripley and no train stations nearby the cars from the extra houses will clog the already busy roads as the local transport facilities are already inadequate.

I OBJECT to the fact that infrastructure requirements have not been properly considered at any point in this proposed Local Plan, and are inadequate to deal with proposed increase in housing levels. Roads, public transport, availability at doctor’s surgery and places within schools will be unable to cope with the increase in housing and population.

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

The expansion of West Horsley village is unsustainable. There is only one small shop, no post office and a sparse week day only bus service through the village which would not be sufficient to serve the high volumes of housing being proposed. The development of nearly 400 homes (an increase of 35% on the current number of dwellings) on the 4 proposed sites are at a far higher density than currently exist. No sound reasons have been given for the proposed changes to the settlement boundaries, which appear to be aimed solely at increasing the land available for additional development.

Public Transport: Horsley rail station is a very busy station. The car park is usually full on week days; unless it is expanded it will not support such a large increase in vehicles. There would also be increased traffic to & from the station to drop off & pick up travellers including school children going to Guildford and Leatherhead. At an exhibition about the proposed development of Wisley airfield I was told that there were no plans to increase the car park capacity at Horsley station.

Schools: What is the estimated increase in the number of school places? Any provision for additional places must be in place before any houses are built. Surrey County Council has a statutory duty to ensure appropriate school commissioning and provision. The Raleigh school serves both East and West Horsley and is full every year plus a waiting list. Will the new Howard of Effingham School have greater capacity? If yes, will it meet the needs of the increased population West Horsley? If no, then this needs to be urgently addressed. What consultation has there been between Guildford Borough Council and Surrey County Council?

Local facilities: (Shops, health services, playgrounds, library, community buildings and spaces) There is one local store in West Horsley and parking for 4-5 vehicles. The shopping area at East Horsley is vibrant, thriving and well used. However, parking can be difficult with the car park often close to capacity. This would only be exacerbated by an increase in traffic and I believe would ultimately put people off shopping there. If people cannot park they will take their custom elsewhere meaning a huge loss of custom to the local businesses.

I am not against all development and I agree that more housing, especially smaller properties and affordable housing is needed but it MUST be in keeping with the locale and not at the cost of the current landscape and community. And the infrastructure needs to be in place before any housing is built.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
17. I object to the impact of further congestion on local village roads and lanes.

18. I object to the impact of excessive development on the A3 and M25 on air quality. The air quality in many parts of the borough is greater than EU permitted levels and will damage the health of residents and future residents.

19. I object to the fact that 70% of the proposed 13,860 houses are designated on Green Belt land along the A3. This will result in gridlock on the A3, the A247 and the surrounding roads which are already at capacity.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

29. I object to the impact that additional residents will have on local roads, health services, education spaces and policing needs.

30. I object to the failure of Guildford Borough Council to include the Town Centre Masterplan 2015 in the Local Plan and to find sufficient brownfield sites for development prior to considering sites within the Green Belt.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road and Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.
Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy 11. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy 11 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. ### POLICY I1

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.
The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
I object to the lack of proper infrastructure planning for sites (Policy I1)

The Plan does not identify adequate infrastructure improvements to support the huge scale of development, especially at Garlick’s Arch (A43) which has no infrastructure projects in the Infrastructure Schedule to support it. Local services, utilities and sewerage, doctors etc. are at or close to capacity.

There are no plans to improve the capability of the medical and police/emergency services to cover the 5000+ houses in the north east of the borough.

1. Infrastructure in Overload

The local infrastructure just cannot cope with any more housing or retail development in the area on this scale. There is a severe drainage issue in this area, with standing water already making driving hazardous during wet weather. The various schools in the area generate high levels of traffic, and the route through the villages have become rat runs from the A3 to the A246 and beyond. Try making a right turn out of Ockham Road South onto the A246 during rush hour. It’s a serious accident waiting to happen with cars attempting to use the driveway of the Duke of Wellington pub as a cut through to avoid the mounting queues of waiting cars. The proximity to the petrol station also situated on that junction makes it an extremely dangerous manoeuvre. Increased traffic from more housing, and more businesses will be intolerable for the community. The local schools are stretched to bursting point and the doctors’ surgery is also overloaded and there doesn’t seem to be any mention in the local plan of improving these vital services.
The Impact of Additional Residential Housing and Population Increase on Local Facilities

I strongly disagree with the premise in the Draft Local Plan that Okham and the Horsleys are a suitable location for a large number of additional new houses. The housing numbers proposed for Guildford Borough are for 13040 homes over 15 years from 2016 to 2031. This number is too high. The number is based on a Strategic Housing Market Assessment (SHMA), which the council required to be amended by the Head of Planning. This amendment has not taken place and therefore the number of new builds proposed in the Draft Local Plan has no basis. I object to Guildford Council proposing a Draft Local Plan on the basis of flawed evidence.

As an inhabitant of West Horsley I know at first hand the existing population pressure on local facilities. The primary school in our neighbourhood (The Raleigh) is oversubscribed, in common with the local secondary school, the Howard of Effingham. Indeed, in spite of being a Horsley resident, I was not able to secure a place for my daughter in either school.

The local medical centre is also filled to capacity. Residents of adjacent villages e.g., Ripley, East and West Glandon also use the centre. As a consequence, new residents to the village are known to register with alternative practices e.g., Bookham. In conclusion, the village services that currently exist in the Horsleys are already filled to capacity and do not have the facilities to accommodate the large number of new residents which would result from the increase in residential housing proposed in the Local Plan.

Impact of Increased Residential Population on Transport

An increase in the number of residents would result in a heavy increase in both construction related traffic and subsequent traffic arising from an increase in local population.

Most residents of the Horsleys work outside the villages. They either commute into London or Guildford by train, or travel by road to places of work and education. There are very few indigenous employment opportunities in the Horsleys. Essentially they are commuter dormitories. The residents of proposed additional housing are unlikely to be employed in the immediate vicinity of the Horsleys. They will therefore join existing commuters travelling either by road or rail. Horsley station car park is already filled to capacity, and there is no option to extend the car parking facilities for the station. The land is not available for expansion. Likewise, at Effingham Junction, there is little land to spare for additional parking facilities. I would conclude, therefore, there is limited potential for additional commuters to park at the local stations and commute by train. I might add, that Horsley station already serves as a rail hub for adjacent villages (e.g., Shere and Ripley), resulting in heavy road usage at peak commuting time. The housing development proposed in the Local Plan will increase the traffic volume through the village, resulting in additional air and noise pollution.

Key road links to the Horsleys focus on the A246, from Leatherhead to Guildford, and additional rural (narrow and winding) roads linking the villages to Ripley, Cobham and the A3/M25. The A246 currently carries a very high volume of commuter traffic at peak periods creating bottle necks and traffic congestion at both the Givons Grove roundabout on the Leatherhead bypass, and the Merrow roundabout on the outskirts of Guildford. The A3 likewise carries a heavy flow of traffic both into Guildford and north to the M25 at peak hours, with stationary traffic a frequent occurrence. The construction of additional housing in a rural area, which by its location and nature, requires inhabitants to travel predominantly by car, will exacerbate an already congested road network. This will clearly have safety implications, as more congested narrow, rural roads will result in a greater frequency of road traffic accidents and undoubtedly loss of life. It will also increase traffic congestion in local employment hotspots such as Guildford, and Leatherhead.
It makes much more sense to redevelop brownfield sites in Guildford and Woking to accommodate additional housing needs. This would have the advantage of providing new residents with the option of using the existing public transport network, or walking or cycling to work or school. They would also have a full range of urban facilities on their doorstep.

In conclusion, I strongly object to the new housing proposals outlined in the Draft Local Plan.

I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

5,036 houses are proposed between the M25 and Burpham (about 5 miles) which will obviously lead to a merging urbanisation of identities the villages. There is too much traffic in our villages already and this plan will cause more congestion in West Horsley, East Horsley, Normandy, Ockham, Ripley, Send and Clandon, with no plan to improve that. The rural roads in this area are narrow, in poor condition and have no footpaths. 5000 more houses in such a small area means dangerous and unsustainable traffic.

DRAINS, WATER SUPPLY, FLOOD RISK, CONGESTION

Our drains, our water supply, our medical facilities and our roads cannot cope with the proposed number of new homes. Building this number of homes will lead to flood risk here and downstream (along the Wey and Thames). The planned development on Green Belt is therefore unsustainable.

In conclusion, I must ask you to revise the housing number, and to amend the Local Plan to utilise brownfield land rather than green field sites.

<td><strong>Disproportioned number of new houses for local facilities:</strong> I strongly object to the number of new houses proposed within the Horsleys and surrounding villages namely Ripley, Send and Clandon. Within the Horsleys, the schools, doctors and train stations are struggling to cope with the current demand. My family commute to London from Horsley and the trains and car parking are almost at maximum capacity. Assuming that every new house has at least two cars, this means potentially 6000 more cars within a three mile radius of the villages. The impact on the local roads will be tremendous. Parking at Horsley &amp; Effingham junction stations (which are already full), at the shops, at the medical centre and at the village hall will be affected.</td>

LOCAL INFRASTRUCTURE

It would appear that little consideration has been given to such a potentially high level of new development with respect to the impact on local schools, roads, local medical facilities etc. All such services are already stretched. A significant proportion of our local village roads are fairly narrow and traffic builds up regularly. There are problems with the limited choice of local schools and getting an appointment with the doctor at a local clinic is not always easy. So just on this aspect alone, I object to the extent of the potential development in our immediate area.

I feel that the current infrastructure and services will not support the proposed scale of development. The Plan states a proposal to increase the number of cycle-lanes whilst people are forced to drive due to insufficient bus services to the outlying villages leading to an increase in the number of cars using the roads, although the Park 'n Rides do help to reduce the traffic into Guildford town centre. I have lived in Surrey for forty years and seen the insidious erosion of the Green Belt. Future development must take increased flood risks seriously and ensure that infrastructure and services are put in place before/alongside developments not afterwards. Smaller, more affordable houses should be built in preference to larger houses, especially on in-fill sites. This would dilute the strain on local areas while truly respecting the villages, Green Belt, landscapes and heritage sites that make the area a desirable location to live in.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Utilities - Burpham

The current utilities, in particular the sewage system, electricity supply and water are already at capacity for the existing residents. I don't believe the size and operation of the sewers in particular have been taken into account. There would be a requirement for significant upgrade, not considered here nor the impact of how such massive sewers would get beneath the A3 and back to the sewage plant on Slyfield.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

I strongly object to the lack of immediate provision for new schools.

I strongly object to the lack of any immediate provision for Doctors Surgeries.

I strongly object to the lack of any immediate provision for a new hospital. The Royal Surrey hospital already serves a vast length of the A3 road as the next hospital going south is Portsmouth. The Royal Surrey hospital and other major hospitals situated in the county of Surrey are already stretched to the ultimate limits.

I strongly object to the lack of any immediate provision for new roads to link local and neighbouring towns. The existing roads are already grid locked not only at peak times but now throughout the day with the slightest incident that brings chaos to the local roads. Junction 10 of the M25 the main hub for Heathrow and Gatwick airports is now regularly at a standstill throughout the day. The proposed 2016 Draft Local Plan would result in many thousands more vehicles (ie cars and commercial vehicles) attempting to get on the M25 at junction 10 and also using the local roads that link towns.
I strongly object to the lack of any immediate provision for new transport links. With grid locked roads new railway tracks will have to be laid. The London underground system will now need to expand into the Guildford Borough especially with a link to the airports also local towns and neighbouring borough towns as all of the current road structure will become impossible to use.

The village school is over-subscribed so has no places for additional pupils. This would mean any additional children in the area would have to go to schools further afield, thus causing even more congestion on the already too busy local roads during rush hour. With all the extra proposed traffic, Send could possibly be gridlocked all day.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Again, it appears that no thought has gone into the infrastructure required for this excessive number of properties. The villages of Send and Ripley are already heavily congested during peak times with pollution from excessive traffic and yet you appear to intend to increase this by a massive amount. Schools are already heavily oversubscribed and doctor surgeries require you to know you’re going to be ill before booking an appointments as they’re so busy.

I see no intention for providing better footpath or cycle lanes or anything else to improve existing road systems.

1. Infrastructure already at breaking point. No regard has been given to the infrastructure which is already inadequate to meet the current level of population in the Horsleys, never mind an increased population. The schools are oversubscribed, parking in the village is a nightmare, the Medical Centre is over stretched with big waiting times to get doctors’ appointments, the trains are overcrowded and the roads around the Horsleys are gridlocked at peak times now. The quality of life for those currently living in the Horsleys and for those who move to the new houses proposed will drastically deteriorate if these new housing proposals go ahead.
In summary; The local infrastructure in Send... Our schools are already oversubscribed; our -t doctor's surgery is extremely busy (it can take up to 3 weeks to see your preferred doctor), limited local shops. There is very limited public transport; our roads are already heavily congested, pollution levels are increasing.

Whilst I appreciate there is a need for housing within the borough. Send village has had a number of new houses built recently; currently 23 homes are being built at the old Vision Engineering site, Send Road.

If the population within the borough is to grow by around 20,000 within the plan period we will not need the proposed 13,000 odd houses proposed by GBC in the Local Plan. If you work on the basis of 2.4 persons per home around 8000 houses would be needed. Could not a large percentage of these houses be built on brownfield sites? Perhaps it is because GBC/Developers don’t like brownfield sites, as it is easier/cheaper to build on the Green Belt. No industrial waste to clear away!

I personally feel that the excessive amount of new housing and warehousing, which has been proposed for our village is untenable. I ask that my comments are shown to the Planning Inspector and receive confirmation of receipt of my letter.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
I OBJECT to the complete lack of any infrastructure proposal to support the increase in housing. The local schools in Send and Ripley are over capacity and were, in 2014, when the previous Plan was promoted. There is only one doctor's surgery which covers the Send and Ripley areas. It was at capacity in 2014, and still is.

Also, I strongly oppose the GBC plans to propose a major housing building programme in both East/West Horsley and on the old Ripley Airfield. I find the whole scheme totally abhorrent. My reasons are as follows:-

1 The local infrastructure is already overloaded and up to its limits. The schools are full. The medical services at Horsley Medical Centre are stretched to capacity and the drainage on the roads cannot cope. As it is; the roads flood with heavy rain.

2 The local railway stations will not be able to cope with approx an extra 1500 persons. The rush hour trains are already full and there will be insufficient car parking space. There certainly is no adequate bus service in the area.

3 The proposals to build what amounts to another Surrey village on Ripley Airfield is ridiculous. 2100 new houses means at least 4000 cars.

I object to the Proposed Local Plan because Send Road is already a highly congested and crossing from one side to the other is hazardous. I know this first hand as my mother lived on one side of the road and was too nervous to cross to the other side to use the local shop. Similarly, some years ago her elderly neighbour was knocked down and killed on this same stretch of road. Send is a small village, not a major conurbation. The traffic through Ripley would, similarly, destroy the village, if the proposed 2,500 houses and industrial units suddenly be incorporated in to the village.

I object to the lack of proper infrastructure planning for sites (A43 and A42)

The Foreword to the plan by Paul Spooner includes on page 5:

"We recognise that significant infrastructure upgrades are required to support existing communities and the planned
growth of the borough. The delivery of sites allocated in this plan is contingent upon the provision of new infrastructure, which is a key theme of our Local Plan”.

The lack of any plan for either physical or green infrastructure improvement clearly contradicts this in respect of both A43 Garlicks Arch and A42 Clockbarn Nursery, Tannery Lane, Send. Development of these sites without the contingent infrastructure would therefore be contrary to the stated aims and themes of the Plan, and should not go ahead.

The most distressing element of this plan is that such a large proportion of the overall proposed development is being targeted on this small part of the borough. It is simply disproportionate and there is little understanding being shown by those elected to represent our views. I trust, therefore, that these objections will be given your full attention and that the Plan is amended accordingly.

I welcome the clearer wording regarding timing, phasing and application of planning conditions and obligations. It is imperative that no developments should be approved without clear, acceptable and funded plans in place to provide adequate and effective infrastructure of all types and that even where approval has been given, development must follow provision of infrastructure and not proceed without such infrastructure.

There is concern about the inability of current infrastructure to meet current and future needs. The policy recognises that the “Infrastructure provider” will maintain infrastructure in most cases, and developers can only offer a contribution via Community Infrastructure Levy. Until the current infrastructure can meet existing needs adequately, further development should be very targeted to meet only absolute essentials.

1. I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy II)

If all the 5,000 proposed new homes are from the Wisley junction of the M25 and Burpham are built there would be an additional 10,000 new cars using what is already an over congested local roads. Ripley is constantly gridlocked at peak times and the A3 constantly queues back to Burpham.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

There is too much traffic in our villages already and this plan will cause more congestion in Ripley, Send and Clandon, with no plan to improve that. The rural roads in this area are narrow, in poor condition and have no footpaths. The Plan will make the roads dangerous and accidents will become common place.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the lack of proper infrastructure planning for sites (Policy I1)

The Plan does not identify adequate infrastructure improvements to support the huge scale of development, especially at Garlick’s Arch (A43) which has no infrastructure projects in the Infrastructure Schedule to support it. Local services, utilities and sewerage, doctors etc. are at or close to capacity. There are no plans to improve the capability of the medical and police/emergency services to cover the 5000+ houses in the north east of the borough.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

The detailed infrastructure proposals for Guildford Borough give cause for concern. There are serious deficiencies and shortcomings in the infrastructure of Guildford Borough as it is today and the aggressive housing policy as proposed by GBC in the Proposed Submission Local Plan will exacerbate this problem.

I would make the following comments specifically about infrastructure in East Horsley today:

- Roads across the parish are in poor condition with many potholes. Many roads are unable to sustain their current levels of traffic, particularly the increasing levels of HGV traffic;
- The principal through roads traversing East Horsley are narrow and winding, have a series of pinch points, have sections without any pavements and are generally unlit. As a senior SCC councillor remarked at a recent public meeting in the village hall: “East Horsley has lanes, not roads.” East Horsley’s ‘lanes’ are totally unsuitable for high volumes of traffic, in particular for the volume of HGV’s now using them;
- Many of the drains are blocked or otherwise in poor condition giving rise to frequent surface water flooding when it rains; • The pavements are in poor condition. As well as being narrow, they are often uneven and/or cracked making it difficult, for example, for people with pushchairs or prams or in wheelchairs;
- There are insufficient school spaces for the number of local children needing them, with the result that children are often allocated to schools a significant distance away such as Dorking or Woking; and
- The Medical Centre in East Horsley is already at capacity in terms of its number of patients.

It is recognised that, as stated in the Proposed Submission Local Plan, the maintenance of adequate infrastructure and its expansion to meet growing needs is the responsibility of the relevant infrastructure provider. This is often not GBC itself but rather, for example, Surrey County Council or utility companies.

In respect of East Horsley, there are only two specific proposals in Appendix C:

**LRN 25 - East Horsley and West Horsley traffic management and environmental improvement scheme.** It is not clear what is proposed here, and its timing and funding have to be considered uncertain. It is stated that funding will, at least in part, come from developer contribution. However, it is not at all clear what development is likely to give rise to such a contribution, but it certainly implies that funding could only come if there were a development; and

**HSC 5 - Expansion of East Horsley Medical Centre to provide additional capacity and services for future population in years 5 – 15 of the plan.**
There are no proposals in respect of all the existing problems with for example roads, pavements, drainage, and schools. Furthermore, it is inevitable that the proposed developments in East Horsley itself and nearby, particularly in West Horsley and the proposals for Wisley, will put further strain on the existing infrastructure. There are no proposals at all to cater for this.

Although an expansion of the Medical centre is proposed in the Infrastructure Schedule, this is not until years 5 – 15 of the Plan. Given that it is already at capacity, this needs to be done earlier.

Local primary schooling is also a very pertinent issue. There are 11 housing development sites identified in the LAA for East and West Horsley, which taken together would result in the building of 593 new houses in the two parishes that are today served by a single primary school - The Raleigh, in West Horsley. Planning guidance suggest that this number of new homes will require the provision of around 150 additional primary school places to accommodate such an increase in population. Today there is no spare capacity at The Raleigh, yet no proposals are made in the Proposed Submission Local Plan to provide for any more schooling in the Horsleys.

The failure to address the inadequacies of the existing infrastructure to meet the needs of what is there already is a serious deficiency in the Proposed Submission Local Plan. I therefore object to the infrastructure proposals on these grounds, and to the proposals for infrastructure in that they do not meet the stated objective of providing infrastructure to support the proposed developments.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

<tr>
<td>I OBJECT to this policy as it is inadequate in addressing the scale of insufficient infrastructure in greenfield sites. The problem does not lie on our strategic road network but on the small arteries through our villages. The capacity of these roads is inadequate for existing population and cannot accommodate any growth. In particular, West Horsley already has an unacceptable traffic situation especially around commuter and school journeys, with two overused roads where traffic pays no regard to speed limits. It is only a matter of time until there is a serious incident. These existing roads cannot support additional capacity.</td>

<td>There is no allowance for the infrastructure - the school is overloaded as is the GP surgery, car parks etc… there are not enough green spaces for playgrounds in West Horsley and the roads cannot take any more traffic. in addition, the roads are liable to flooding as are the fields. I don’t think it is necessary to build on a field or green space especially when there are brownfield sites available.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
I am concerned that because the landowners want to sell and the developers want to build, the Council will go ahead without considering the local people. They are keen to tick boxes for housing needed in our area. The Green Belt exists to prevent this so that green spaces can be respected and preserved for reason of health - less car pollution and also mental health with more space to help people to feel well and have a chance to go into open spaces. The council need to think about playgrounds and footpaths and bridleways. The landowners have been very bad at allowing people to access footpaths. The green belt belongs to the community and should be preserved not eroded. This plan would mean that the green belt boundary would be moved and so would lead to much more development with houses popping up everywhere. Everyone will want to make a quick buck.

East Horsley. Similar to West Horsley - there is not the infrastructure to support further development and the roads are impassible as it is. Near the Hotel-Ramada development is a possibility if done sensibly and to support local people rather than large 5 bedroomed houses that our children won’t be able to afford.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the detrimental impact on transport, local roads and road safety. I specifically object to:

1. The assertion that the development will result in a meaningful shift to cycling and walking. The development is too isolated, and even within the development itself too spread out to anticipate a reduced reliance on private cars
2. The increased volume of car traffic. A proposed development of 2,068 homes would result in an estimated 4,000 additional cars on the roads
3. The congestion this traffic will cause on the narrow rural roads in Ockham and the surrounding areas, exacerbated by wide vehicles including increased bus and HGV movements
4. The danger this traffic will be to local cyclists and pedestrians, due to the absence of any cycling paths and the lack of pedestrian footpaths (and the space to provide them)
5. The increase in the already severe congestion on the Strategic Road Network of the A3 and M25. A further planning application at RHS Wisley (with a significant increase in visitor traffic) and a proposed 600 pupil secondary school on the site would add additional congestion at the M25/A3 junction as well as local roads. No development can proceed without significant infrastructure enhancements to the A3 and M25. Partial improvement works on the A3 south of the site are not due to start until 2019 at the earliest
6. The lack of suitable public transport. The local rail stations of Effingham and Horsley cannot cope with the proposed increase in passenger traffic and car parking is already at capacity

This proposed level of planning does not seem to take into account

1) The increased risk of flooding to nearby homes and roads when fields are being built on. (Garlicks Arch at Burnt Common)

2) The lack of public transport.

3) The increased volume of traffic on roads which cannot cope with now.

4) The fact that children are already unable to get into schools of choice

5) The Health services are already under pressure in the area.

**Comment ID:** PSLPP16/14778  **Respondent:** 10920129 / Steven Marshall  **Agent:**  
**Document:** Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Transport OBJECT. As I have already stated, the infrastructure of East Horsley is the main reason for objecting to the Council's proposals. The roads are already congested, are generally narrow, with potholes. During heavy rains, the drains block and flooding results. The local primary school, the Raleigh, is at capacity as is the local secondary school, the Howard of Effingham. I understand that Horsley Medical Centre is also at capacity. Forcing a further 593 new homes (from the 11 development sites identified for East and West Horsley) into the village will have terrible results for everyone who lives here. Add in the proposed development of a new town at Wisley airfield and it is apparent that the infrastructure cannot cope.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the lack of any evidence for the alleged housing need numbers

I object to the lack of any provision for new schools. Every year children from the villages of Send and Ripley are being sent to schools miles away from home. This leaves parents in the impossible position of travelling miles to school and some inevitably with very long journeys, how can this be good for the child not withstanding the carbon impact it has.

I object to the fact that the Doctors surgeries in the area are already stretched and there does not appear to be any immediate provision for this to be rectified.

I object to the planned new on/off ramp on the A3 traffic is already horrendous through the village and there only has to be an accident anywhere near the M25 junction for a vast amount of cars to exit the A3 and drive through the villages to
try and beat the traffic. On some mornings it is a horrendous experience just trying to get out onto the Portsmouth Road in Send.

I object to GBC ignoring the problem of lack of infrastructure in the Send, Ripley, Clandon, Garlick’s Arch (A43), Wisley Airfield (A35) and Gosdon Farm (A25) areas. The existing infrastructure is poor because:

1. Roads. Our small country roads and lanes are narrow (some single track), have no footpaths and are in poor condition. They are already prone to congestion in some areas (e.g. Send, Ripley and Clandon). The resulting huge amount of extra traffic that these developments will produce will be a total disaster and make the area very dangerous to travel, by car or otherwise.

2. Medical facilities. The local medical facilities are already at full capacity and some are refusing new patients.

3. Schools. Local schools are oversubscribed and some local children already have to travel out of the area to go to school.

4. Public transport. Bus routes are few and far between and often cancelled. The small local stations are always overcrowded and car parking is over spilling into residential roads.

Consequently there is obviously no room for all the extra traffic and people these developments will produce.

I OBJECT TO POLICY I1 (INFRASTRUCTURE & DELIVERY)

- Infrastructure considered here as an afterthought, rather than pre-condition of development. Should be a key issue for the rest of the plan.
- Excessive housebuilding in countryside not supported by any funding or provision for infrastructure.
- Heavy focus on building on greenfield sites inefficient and unnecessary: cheap for developers but much more expensive for the public who have to fund the infrastructure.
- Draft CIL scale discourages use of brownfield land first.
- No plan for organic increase in existing traffic congestion, let alone once thousands of houses are built across the countryside. Local roads hardly considered. Green Belt being eroded before road widening/improvement plans certain, encouraging over-development of greenfield sites.

I object because of concern about poor air quality. The massive developments being proposed in the north east of the borough will lead to worse road congestion and therefore to higher levels of air pollution.

I object to the population density of the proposed developments, which are often higher than most city boroughs. This is not a sensible way to treat the countryside.

Policy I:

I object to the failure of the Council to identify sufficient brownfield sites within the Guildford urban area, which must be targeted first for development before countryside and the Green Belt. I also object to the failure of the Council to include the Town Centre Masterplan 2015 within the plan.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1. I object to the lack of provision to improve the current infrastructure which is currently inadequate.
2. I object to the lack of additional parking provisions in the villages – again which are currently inadequate.
3. I object to the 4 way junction to the A3 which will force more traffic through the already overloaded roads, which incidentally are in a very poor state of repair.

1. I object to the Garlick’s Arch development as it does not provide for sufficient Utilities capacity which is currently almost at capacity.
2. I object to the designated 400 houses at Garlick’s Arch as this is in addition to the 13,000 odd already proposed for the Borough.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

INFRASTRUCTURE

- Sewer flooding at Bridge End, Ockham Lane continues to occur. Thames Water and the Environment Agency and GBC have been made aware of this since Nothing has been resolved and the surcharging manholes continue.
- Ripley treatment works is over capacity and the sewer network is in There is not the capacity to add any further development at all. It is already overloaded and cannot cope as it stands.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Policy I1: Infrastructure and delivery

I would like to object to the proposed developments as in my view they are unsustainable. The facilities in West Horsley are already very limited, we have one convenience store, one newsagent and a garage/MOT centre. In terms of public transport there is a very limited bus service that runs on weekdays only so for most people their needs are met by driving to East Horsley or elsewhere. We have one primary school, The Raleigh School, which is full every year meaning some local parents have to take their children further afield. Clearly West Horsley does not have the facilities to accommodate high volumes of new housing development.

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

When the Wimpey estate was built it adversely affected the local school, the doctors surgery and the whole ambience of the village. Has anyone considered enlarging the school and building a larger surgery to cope with the hundreds of extra people? This is quite apart from the roads and the bus services. Would a train service take the strain off the roads? Where is the nearest useful station, can the railway be extended? It is much simpler to put the housing on brownfield sites in the towns before even thinking about despoiling the green and pleasant countryside.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT to the lack of understanding of the infrastructure constraints of the proposed new households on the Horsley villages and to the absence of any effort to deal with them

If around 2,600 new houses were built in the Horsleys, Ockham and Wisley airfield this could easily result in around 5,000 more cars within a three mile radius of the villages.

Traffic

This would have a huge impact on local roads which as outlined above have little scope to be widened (e.g. pinch point at Lynx Hill on Ockham Road South and the restricted area on East Lane) or otherwise altered to cater for such an increase.
Although it is proposed to upgrade the current A3 junction at Burntcommon to a full 4-way junction. SCC traffic modelling anticipates increased use of Guilshall Lane, Hungry Hill Lane and Tithebarns Lane (all not suitable for increased traffic volume) for traffic accessing the A3 at Burntcommon in order to travel to Guildford and beyond.

The SCC report states that “consequently, it indicates that further thought may have to be given to managing traffic in this area as part of a transport assessment should the development be progressed”.

A local plan when proposing new housing on a substantial scale must surely plan for the implications of increased traffic both on the major roads such as the A3 and the minor village roads. The current draft local plan has not given such issues enough consideration

Parking

Parking at Horsley & Effingham junction stations (which are already full), at the shops, at the Horsley medical centre and at the village hall will not be able to cope with this additional demand.

Flooding

The site behind Ockham Road North in East Horsley is partially a level 3 flood risk area, and local residents are well aware of how much standing water there is in their gardens after rain. Building on such land will only exacerbate the problem. Other areas of the Horsleys are also flooded when it rains become the drains are inadequate. Substantially more houses will exacerbate the problem but no attention has been paid to drainage in the local plan.

- Schools and medical facilities

Amenities

Local schools and medical facilities are already at capacity.

No extra school places are planned in the Horsleys and the school places proposed at Wisley Airfield will not planned until many years into the project. 2600 new houses could easily mean 2600 children looking for school place!

I trust the Council will review its Local Plan basing it on a model which is available for inspection and with more attention to the infrastructure implications and use of brown field sites rather than destroy our precious Green Belt.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
And to that GBC wants to add at least 6000 people with roughly 3000 cars???
A few new entrance and exit ramps won’t mend that traffic density, not to mention the air pollution, nor all the
other resulting problems.

This latest Guildford Local Plan won’t keep northern Surrey a desirable living area with reliable household incomes
which support the local community, but will destroy it into an overpopulated suburban area with the foreseeable amount
of social problems.

Please reconsider the decision with your conscience.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure
(Policy I1)
Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.
Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

Over the years, the village increase in size and so has the traffic most of which is heading to the traffic jams on the A3 and M25. I therefore OBJECT to the inclusion of a further A3 junction at Burnt Common.

As a long time resident I believe that the area cannot take any increase in population or traffic. AND I OBJECT to the proposal to put large industrial buildings on Garlick's Arch farmland.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Our villages are at their limits when it comes to infrastructure - roads, schools, doctors' surgeries etc. What we find incredible is that the Plan says very little about how this infrastructure is going to be upgraded for the planned growth - and who is going to pay for it? In East Horsley the Medical Centre is full and when one can get an appointment to see a doctor there is never anywhere to park. The Raleigh School is full. The main road through the village (Ockham Road North and South) cannot cope with the current traffic flows, let alone any increase. Any time we have significant rainfall the road floods. It is also very dangerous for pedestrians to walk along the narrow and uneven pavement, particularly at night. Where are the specific proposals in the Plan to deal with the very real issues facing residents? Where are the specific plans to upgrade the infrastructure to cope with forced growth that is being proposed?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object due to the congestion that development will cause to the local village roads due to the lack of road infrastructure (Policy I1)
There is far too much traffic in our villages already and this plan will cause dramatically more congestion in Ripley, Send and Clandon, with no plan to alleviate it.

The rural roads in this area are in poor condition, narrow and many have no footpaths. To add 5000 more houses would result in dangerous and unsustainable traffic with nearly 10,000 additional cars as well as delivery vehicles to service them.

Thank you for your letter of 2nd June in which you invited comments on the Proposed Local Plan.

Firstly, in general, the proposal to build a substantial number of new houses at several sites around Guildford will inevitably increase the congestion currently existing on many roads but especially on the A3. It will of course also put severe pressure on the infrastructure. The possibility that in several years time extra lanes will be added to the A3 as well as other measures referred to in the plan that are intended to mitigate congestion and deal with the changes to infrastructure are inadequate. In our opinion the rapid expansion of the urban area leading to loss of green belt is unacceptable.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Comment ID: PSLPP16/10803  Respondent: 10932801 / Angela Grenham  Agent:

Policy I1-I4

I object to the above policies primarily because they appear to suggest that infrastructure is not being considered as a pre-condition of development. The Local Plan does not provide confirmed plans for the improvements to infrastructure which would be required to support even a proportionate amount of new housing. Much of the local infrastructure is already inadequate or at capacity, evidenced by congested and poor-conditioned rural roads, frequent flooding issues, lack of healthcare facilities and the need for First Responders and defibrillators due to distance from accident and emergency facilities.

It is essential that infrastructure improvements are confirmed and fully funded before decisions are taken on proportionate housing development.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/1723  Respondent: 10933793 / Julia Tilbury  Agent:

POLICY I1 - Infrastructure and delivery

I OBJECT. Most of the borough's infrastructure is antiquated, congested and straining to accommodate even current needs and organic growth. Yet this plan's commitment to building housing estates across the Guildford countryside will mean either major infrastructure investment that no-one is prepared to pay for or else a catastrophic and simultaneous collapse in transport, educational, medical, energy, water and communications services.
The plan targets greenfield sites—requiring heavy infrastructure investment—in order to generate CIL income necessary to meet an infrastructure shortfall that is already serious. This is not sensible. The current draft CIL scale also encourages development on greenfield sites rather than brownfield.

The policy wording says nothing about roads and traffic. The Council's methodology for assessing infrastructure needs in this area is inadequate, identifying only the tip of an iceberg of existing congestion. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that involve demolishing property and road-widening in residential areas to solve the resultant congestion. The A3 improvements are not guaranteed to take place but they are being used to justify removing large areas from the Green Belt before detailed traffic assessments have taken place. These detailed investigations are being deferred until the planning application stage and will be left to developers to prepare. If a site then proves to be unsustainable its Green Belt protection will have been lost for no reason and unsuitable development will take place by a more insidious process.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy 11. By prioritising greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council's control and on the vagaries of CIL income. Instead of recognising this as a key issue, the plan is based on a wing and a prayer.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

*Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )* 

Many years ago it was decided to build the A3 as it would solve all our problems, it is now full up.

Also many years ago, it was decided to build the M25 as this would solve all our problems all the way around London, it is now full up.

It is blindly obvious that the south east of England has reached capacity on the roads and on the railways. What is needed is vast investment in the Midlands and the north of England so people move up there. Bring on the Northern Powerhouse!!

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

1. **I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)**

The Plan does not provide an achievable strategy for improving capacity on the road infrastructure between Guildford and the M25.
The roads through Ripley, Send and Clandon already suffer from congestion as cars fight their way to get to the A3 and M25. The proposed development of 13,680 new houses in the area will mean, at a minimum, 13,680 new cars on the road and will mean grid-lock at peak times: week-day mornings between 6am to 9:30am, week-day afternoons from 3:00pm to 6:30pm. This is not sustainable from the increase in congestion as well as the greater pollution impact.

I object to the proposed development detailed in the local plan which will result in more traffic using narrow rural roads as well as a further deterioration in the road surface. Our roads do not have pedestrian footpaths and the proposed levels of development will result in the roads becoming ever more dangerous for pedestrians.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

1. I object to the lack of proper infrastructure planning for sites (Policy II)

I object. I have grave concerns that no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to any development taking place, the existing residents in the local areas of Ripley, Send and Clandon will experience a deterioration in quality of life in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1
Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy II)

Our villages are already suffering from severe congestion for much of the day) for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.
Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I object to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces. Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists pass through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians. The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough's infrastructure is already heavily strained.

However the plan's determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number. The policy wording says nothing about roads and traffic. The Council's methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

I object to the impact that additional residents will have on local roads, health services, education spaces and policing needs.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

5. Infrastructure and Environment

The scale of development proposed for the Horsleys, together with other planned development in adjacent areas, threatens severe strain on local facilities and thus unacceptable impairment of residents' quality of life. Serious probable impacts include:

- Traffic: allowing for 2 cars per new house, potentially up to a 1,000 additional vehicles in the Horsleys alone will require access to, and use of, the Ockham Road(s), Forest Road and the A246. The existing congestion on these routes will likely be severely exacerbated. These routes cannot easily be widened without unacceptable encroachment on existing households, and increasing the speed limit would constitute an unacceptable risk to safety. No serious assessment of the impact on the existing local transport network appears to have been included.

- Parking: The car parks at both Horsley and Effingham Stations are already full on week days, likewise the car park at the Horsley Medical Centre, and close to full at most times of day at the two main shopping parades in East Horsley. No thought appears to have been given to the Development at Wisley Aerodrome would likely further exacerbate the situation, given that these stations are the closest to that site.

- Pollution: The large increase in the volume of traffic in the Horsleys resulting from the proposed plan will materially increase existing nitrogen dioxide and particulate emissions. Again, no consideration appears to have been given to this impact.
• Medical Facilities: The Horsleys are served by just one outpatient medical centre (with 4 permanent full time practitioners), and it is now common to have to wait two weeks or longer for a GP appointment. Adding potentially 1,000 new residents (allowing for at least two residents for each new home) risks straining the existing service to breaking point. The Plan appears to take no account of this impact.

- Schools: Schools in the Horsleys are at, or close to, capacity. No new school places appear to be planned to provide for the increased demand resulting from the creation of new households. No account appears to have been taken of this.

**I OBJECT**, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

**I OBJECT** to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment...
without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

1. **Congestion on the trunk roads, A3/M25**
   I object to the development of the strategic sites due to A3 and M25 already being at capacity during peak hours. Highways England has no plans to look at improving the A3 before 2020. It is therefore not sustainable to identify sites for further development which will worsen the congestion on these motorways and trunk roads.

2. **Congestion on the local village roads and lanes**
   Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. I object to further development which will cause greater congestion in and around our villages.

3. **Unsuitability of our local roads for heavy vehicles and more traffic**
   Many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition. I object to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

4. **Poor air quality concerns**
   Further congestion, particularly in built up residential areas will only lead to greater levels of air pollution. I object to further development, which will result a fall in the air quality.

1. **Lack of Utilities Capacity**
   Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. I object to the development of Garlick’s Arch on the ground that there is little capacity in these networks.

2. **Sites being planned in unsustainable locations**
   Many of the strategic sites e.g. Wisley Airfield and Garlick’s Arch, are in unsustainable locations. They do not benefit from railway stations within easy walking distance and bus services across rural villages are forever reducing. Residents will have few options, but to be reliant on motor vehicles. I object on the grounds that these sites are not sustainable.

3. **Parking issues in local villages caused by larger population**
   Many of the affected villages, such as Ripley, already suffer from parking problems. Further development around these villages will only result in more traffic and more parking problems. To which I object.

4. **Local healthcare facilities will be overwhelmed**
   Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. I object due to the further stress it will put upon existing health services.

5. **Local policing facilities will be overwhelmed**
   Police services are seeing funding reduced. The development of the likes of Garlick’s Arch and Wisley Airfield will stretch the police services further and I object.

6. **Local social welfare facilities will be overwhelmed**

7. **Local shops/restaurant facilities will be overwhelmed**

8. **No protection of heritage assets**

9. **No protection of the environment**
10. Overdevelopment of sites. I object to the existing overdevelopment of Ripley - it is a small village and should remain so.

11. Not meeting the needs of local communities. I object to the fact that you seem to insist on ignoring what the local communities are telling you. We pay to live here - you need to start listening.

I object to the fact that you can’t possibly have thought of the impact on the infrastructure in Send – the surgery, the school and most of all, the roads won’t be able to cope.

All of the above I beg you to consider very carefully, but the over-riding impact of these objections has to be the traffic through Send. Believe me, Send cannot take anymore.

No genuine consideration has been given to the local infrastructure.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
Local schools are under serious pressure and are unable to meet the needs of local students.

We have insufficient local health provision from GP practices.

Our local hospital is already overstretched and could not meet the needs of an increased population.

Despite repeated planning application our local hospital is constantly refused planning permission to extend its parking facilities for local people on the grounds of its proximity to the A3.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy 11).

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration of road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.
This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough's infrastructure is already heavily strained. However the plan's determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council's methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy 11. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough's infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council's control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable. Policy 11 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick's Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents' in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick's Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

I object to the lack of proper infrastructure planning for sites (A43 and A42)

The Foreword to the plan by Paul Spooner includes on page 5:

"We recognise that significant infrastructure upgrades are required to support existing communities and the planned growth of the borough. The delivery of sites allocated in this plan is contingent upon the provision of new infrastructure, which is a key theme of our Local Plan”.

The lack of any plan for either physical or green infrastructure improvement clearly contradicts this in respect of both A43 Garlicks Arch and A42 Clockbarn Nursery, Tannery Lane, Send. Development of these sites without the contingent infrastructure would therefore be contrary to the stated aims and themes of the Plan, and should not go ahead.

1. POLICY I1

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.
This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
• The plan gives no significant thought to the increase in traffic on the local roads due to either the proposed school or the housing. The plan merely seems to indicate that work would need to be done by the developer and does not take a view on whether it would be feasible to actually accomplish this. Certainly, if the majority of residents in the proposed development and the majority of pupils and staff travelled in and out by using Glaziers Lane and Westwood Road, I cannot see how the junctions with the A323 would cope, nor how they could actually be “improved” in order to cope with the additional traffic.

• Another infrastructure consideration that seems to have almost been overlooked is the capacity for wastewater disposal in Normandy. We have recently have had to have a non-return valve installed to prevent wastewater from backwashing through our drains, which is an effect of the exiting wastewater provision being unable to cope with the exiting demand – let alone with an additional 1100 homes and a 7 form secondary school!

• Much is made of the ability for the pupils and residents of the new village to use the existing Wanborough railway station. However, for the pupils that are envisaged to come in from the proposed Blackwell Farm development, they won’t be able to commute by train until 2033 for at east 10 years – at the touted Guildford West station won’t be built until then!

In short, I do not believe that any of this add up to the so called “exceptional circumstances” that GBC have said themselves would need to be tabled in order to warrant the release this parcel of land from Green Belt.

There is already far too much traffic in our villages and this plan will further create more congestion in Ripley, Send and Clandon. The existing roads are in poor quality and in particular the rural roads are extremely narrow and in some areas there is no provision for footpaths or cycle lanes.

I object to the lack of proper infrastructure planning for sites (Policy l1)
The Plan does not identify suitable infrastructure improvements to provide the huge scale of development, especially at Garlick's Arch (A43) which has no infrastructure projects in the infrastructure schedule to support it. Local services, utilities and sewerage, medical services and school are already nearing full capacity.

I wish these objections to be fully taken into consideration and that the plan is amended accordingly.

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy l1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the
village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy II. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy II requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

I live along Long Reach, West Horsley, a road that is not suitable for heavy vehicles. This road is very narrow and plagued with pot holes, this year alone I have damaged 5 tyres on my car !!! It is not always possible to see where the pot holes are when it has rained and the road is flooded. Long Reach floods every time we have any rain. Will new drainage be put in to support Long Reach?

I am concerned that the land proposed to build on in Long Reach has natural gas pipes under the fields. This certainly doesn't give me confidence regarding our safety.

How will the local schools, medical centre cope with this huge increase of population? Will my granddaughter be able to attend school in the village with such a huge increase of population?

I am strongly apposed to the volume of proposed Development Sites. This is a small village, which does not have the infrastructure to cope with this huge increase of population.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.
The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

1. **I OBJECT to the lack of proper infrastructure planning for sites (Policy I1)**

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

I **OBJECT**, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I **OBJECT** to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past...
through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

NO INFRASTRUCTURE
I object to the detrimental impact on transport, local roads and road safety. I specifically object to:

1. The assertion that the development will result in a meaningful shift to cycling and walking. The development is too isolated, and even within the development itself too spread out to anticipate a reduced reliance on private cars.
2. The increased volume of car traffic. A proposed development of 2,068 homes would result in an estimated 4,000 additional cars on the roads.
3. The congestion this traffic will cause on the narrow rural roads in Ockham and the surrounding areas, exacerbated by wide vehicles including increased bus and HGV movements.
4. The danger this traffic will be to local cyclists and pedestrians, due to the absence of any cycling paths and the lack of pedestrian footpaths (and the space to provide them).
5. The increase in the already severe congestion on the Strategic Road Network of the A3 and M25. A further planning application at RHS Wisley (with a significant increase in visitor traffic) and a proposed 600 pupil secondary school on the site would add additional congestion at the M25/A3 junction as well as local roads. No development can proceed without significant infrastructure enhancements to the A3 and M25. Partial improvement works on the A3 south of the site are not due to start until 2019 at the earliest.
6. The lack of suitable public transport. The local rail stations of Effingham and Horsley cannot cope with the proposed increase in passenger traffic and car parking is already at capacity.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local
road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
I strongly object to the local plan on the grounds that the resultant increase in traffic will impact negatively on road safety and will result in more collisions on the road. This road network struggles to cope with current levels of traffic now and the proposed plans for an A3 ramp at Burnt Common will not alleviate traffic in Ripley, Send or Clandon.

I strongly object to the local plan on the grounds that the reduction in recreational spaces will have negative impacts on young people especially and reduces the space available for sport and exercise.

I strongly object to the local plan on the grounds that it will result in a greater demand on school places in under fives, primary and secondary. This will make it much harder for parents to send their child to their first choice school and therefore more difficult for parents to ensure their child’s needs are catered for.

I strongly object to the local plan on the grounds that this development will result in overcrowding in schools and a demand for more school building at a time when school finances have been cut and schools therefore cannot afford this kind of expansion.

I strongly object to the local plan on the grounds that the plans for development are of poor quality and layout – the layout plans are unsustainable in the long-term and poorly thought through.

I strongly object to the local plan on the grounds that the plans show a lack of planning for pedestrian footpath and therefore the plan is both inconvenient and dangerous for pedestrians. This is especially important in an area where there is a significant elderly population who are unable to drive (see Ripley Good Neighbours).

I strongly object to the local plan on the grounds that the plan shows an overdevelopment of sites that is both unnatural and unsightly. The plans show developments that are concentrated and cramped.

I strongly object to the local plan on the grounds that local restaurants and shops will be completely overwhelmed and will be unable to cater for the increased demand resulting from these developments. The local plan shows very little consideration for this.

I strongly object to the local plan on the grounds that the welfare facilities of these areas in the plan will be totally overcome by the increased demand and will disserve both current residents and those who would live in the developments proposed in the plan. There is very little room to expand these facilities and little mention of this in the plan.

I strongly object to the local plan on the grounds that the current policing of the area would not be able to cope with the increased population of these proposed areas and at a time when funding has been reduced, would be unable to provide an acceptable service. This would be extremely problematic and potentially dangerous for the local residents of Clandon, Ripley and Send.

I strongly object to the local plan on the grounds that the local health care service would be unable to cope with this proposed increase in population and, similarly, at a time when funding has been reduced, would be unable to provide an acceptable service. The Send Villages Medical Centre is already overloaded with patients and lack staff and space to cater for even more patients.

I strongly object to the local plan on the grounds that parking in these villages and the surrounding areas is limited and is already very difficult. An associated increase in population as proposed in the local plan will only increase these difficulties. Ripley, Send and Clandon suffer from a lack of parking and the increases in population of these areas associated with the development plans will only worsen this problem.

Lastly I wish to strongly object specifically from the perspective of a 23 year old - whilst I understand the important need for more housing across the country I wish to make clear how important this space is to me, and many of my age group. The beautiful yet unembellished nature of this space just outside of London is unique. I hope, like many, to be able to enjoy this space and appreciate what these historic villages have to offer for the rest of my life.

I object to the lack of proper infrastructure planning for sites (Policy I1)

The Plan does not identify adequate infrastructure improvements to support the huge scale of development, especially at Garlick’s Arch (A43) which has no infrastructure projects in the Infrastructure Schedule to support it. Local services, utilities and sewerage, doctors etc. are at or close to capacity.

There are no plans to improve the capability of the medical and police/emergency services to cover the 5000+ houses in the north east of the borough.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

OBJECT TO PRESSURE ON GENERAL INFRASTRUCTURE with it now being far more difficult to get appointments at the Send Barns surgery. I had to drive down to book an appointment for my teenage daughter as when phoned at 8 am being unable to get through that would be my only option for an emergency appointment. This has never been case in the recent past. Send’s infrastructure cannot cope.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )
The timing for all the building proposed seems crazy to me ie build houses, then consider sewage/water arrangements, then build roads and when all this is done a tunnel under all this new build might be considered - then where would the tunnel entrance be when all suitable land has been built on. How stupid is that?

6) I object to the detrimental impact on transport, local roads and road safety. I specifically object to:

1. The assertion that the development will result in a meaningful shift to cycling and walking. The development is too isolated, and even within the development itself too spread out to anticipate a reduced reliance on private cars
2. The increased volume of car traffic. A proposed development of 2,068 homes would result in an estimated 4,000 additional cars on the roads
3. The congestion this traffic will cause on the narrow rural roads in Ockham and the surrounding areas, exacerbated by wide vehicles including increased bus and HGV movements
4. The danger this traffic will be to local cyclists and pedestrians, due to the absence of any cycling paths and the lack of pedestrian footpaths (and the space to provide them)
5. The increase in the already severe congestion on the Strategic Road Network of the A3 and M25. A further planning application at RHS Wisley (with a significant increase in visitor traffic) and a proposed 600 pupil secondary school on the site would add additional congestion at the M25/A3 junction as well as local roads. No development can proceed without significant infrastructure enhancements to the A3 and M25. Partial improvement works on the A3 south of the site are not due to start until 2019 at the earliest
6. The lack of suitable public transport. The local rail stations of Effingham and Horsley cannot cope with the proposed increase in passenger traffic and car parking is already at capacity

1. POLICY II

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy II)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.
Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy 11. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy 11 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.
Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

**Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )**

Please note this email which comprises my objections to the Guildford Local Plan 2016.

Firstly, I believe that Guildford Borough Council has not followed correct procedure, in that significant changes have been made to the plan without due consultation, especially as regards housing and road junctions. Specifically relating to Send, where I live, the highways infrastructure, forming a main link to and from the M25 and A3 and one of the few places to cross the river, is already under pressure and cannot cope with further influx of traffic. Increased traffic flow would impact adversely on village life and Send residents’ parking would be affected.

POLICY I1 Infrastructure and delivery – I OBJECT. Various aspects of Infrastructure are acknowledged as congested, inadequate for the existing population and not able to accommodate much growth.

However, greenfield sites – requiring heavy infrastructure investment – are targeted in order to generate CIL income for the council. This is not sensible. The current draft CIL scale also encourages development on greenfield sites rather than brownfield.

The Council’s methodology assessing traffic and roads infrastructure needs is inadequate. It identifies only the tip of the iceberg in terms of existing congestion. Looking at local traffic situations around the Borough it becomes clear that the schemes proposed will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed locations would require highway schemes that involve demolition of property and road-widening in residential areas to solve the resultant congestion. The A3 improvements are not guaranteed to take place but they are being used to justify removing large areas from the Green Belt before detailed traffic assessments have taken place. These detailed investigations are being deferred until the planning application stage and will be left to
developers to prepare. If a site then proves to be unsustainable its Green Belt protection will have been lost for no reason and unsustainable development will take place by a more insidious process.

I OBJECT to the fact that the Local Plan takes no account of schools, doctors surgeries and roads that are already operating at full capacity. Another 4000 houses in this area with a conservative estimate of a further 8000 cars would be catastrophic.

I object to the proposed local plan:

1. The reduction in the number of new homes in the Green Belt is insufficient. There is still an enormous number of new dwellings proposed for construction in the Green Belt, particularly when considered in proportion to the number of existing homes.
2. It is proposed that the area east of the borough takes an even higher number of dwelling in the Green Belt than before.
3. Many other councils have chosen not to constrain overall housing growth to protect the Green Belt, yet Guildford has not. Although the objectively-assessed housing target has been reduced since the 2016 plan to 12,466 dwellings by 2034, this still represent a 25% growth for Guildford, which is disproportionate.
4. Nothing has changed since last year’s consultation to address the sustainability aspects of the West Horsley development sites, as is required by national policy requirements. No matter how much people are encouraged to
travel on foot or by cycling, each new home will need at least one car to give access to Horsley station, shops, medical centre, library, etc.; this is easily demonstrable.

5. More apartments are needed in Guildford, not more retail space. The rise of on-line shopping and the reduction in physical shopping is clearly documented and many authoritative reports support that view that the trend will continue.

6. No changes have been made to the proposal to inset both East and West Horsley from the Green Belt. Policy P2 states that the Metropolitan Green Belt will continue to be protected against inappropriate development. I object to the village’s removal from the Green Belt by inserting and extending the 2003 Local Plan Settlement Area boundaries.

7. The overload of local social and physical infrastructure is not addressed. Increased demand for access to medical facilities, schools, station parking, roads, and particularly disposal of waste water remains at large.

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Infrastructure and facilities already stretched. Even without the plan in place we are struggling with the current infrastructure.

I object to the current plan which has little to no plans for improving infrastructure and facilities.

As the local demographic is changing rapidly we are experiencing oversubscribed schools, medical services unable to cope, full roads and busy trains.

Our medical services, roads, schools and local shops won’t be able to cope with the suggested increase of 600 houses in the Horsleys over the next 5 years.

a) Horsley Medical Practise

In my view, the medical practise in particular is already beyond capacity. Getting an appointment is a struggle to say the least. I can’t see how a massive increase in houses is going to help improve the practise functioning properly without any plans for another medical practise in the area.

b) Primary and secondary state schools

The Raleigh school and the Howard of Effingham schools are bursting at their seams in their current state. I am well aware that new locations and buildings need to be found without the suggested local plan in place. I therefore support new locations and buildings for both allowing a better and suitable building to serve the numbers of children in the area. I can not imagine what it will mean with the suggested local plan in place and no plans for facilitating future generations of children with decent schooling. Shameful planning!

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Comment ID: PSLPP16/14632  Respondent: 10992225 / Emma Ringshaw  Agent:

Document:  Proposed Submission Local Plan: strategy and sites 2016 / Policy ID1
Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon, The Street only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements. I have personally witnessed HGVs mounting the pavements on many occasions because they are unable to pass oncoming traffic any other way on this narrow road. Only last week one HGV only narrowly missed one of our neighbours who was walking with her children on the way to school.

1. I OBJECT to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**
I object to the lack of proper infrastructure (policy I1). The sewerage system cannot cope, the schools are full and healthcare at breaking-point.

I object to the extra congestion that the development will cause to all local roads. The councillors should visit Ripley during morning rush-hour.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I OBJECT to the fact that the Local Plan takes no account of schools, doctors surgeries and roads that are already operating at full capacity. Another 4000 houses in this area with a conservative estimate of a further 8000 cars would be catastrophic.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.
Roads through West Clandon are extremely busy at rush hour and peak commuter periods. The development will only result in additional traffic through these routes, posing serious threats to life and health of villagers using the pavements and paths in the village. Heavy vehicles frequently mount the curbs and pavements at speed in these areas. Traffic is so heavy Station users in Clandon can wait for more than 10 minutes to pull out in busy periods, causing massive congestion in the village.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.
Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the large number of additional homes, 693 per year for 15 years because the borough is already overcrowded with significant traffic congestion, air and noise pollution.

I object to any further development along the A3 corridor which is threatening an urban sprawl from the M25 to the Hogs Back with the villages being merged together.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

Although much is made of the need for new infrastructure to support these developments and for this to be in place as needed, the Plan admits “…we forecast that there will also be an absolute increase in overall traffic volumes” and this is assuming all the infrastructure (listed in App. C to the Plan) is in place in a timely fashion. GBC has little or no control over the plans of Surrey County Council as the local highways authority and Highways England for trunk roads. Worryingly, the Plan now has less substantive information about improvements to the A3 South of the M25 from Highways England and it appears that their plans are not yet formed (Policy ID2). In the absence of such information, the infrastructure proposed is specific to each proposed development and does not address cumulative effects. What would be the case with regard to planning approval if SCC and/or HE do not provide timely infrastructure?

The Plan now calls for nearly all infrastructure to be funded by developers (see APP. C). We question how realistic it is to expect developers not only to pay for all the infrastructure but also to have it in place in a timely fashion. The Plan says that planning permission will be refused if timely provision of infrastructure cannot be secured. Such refusals will almost certainly be settled in the courts. Developers’ business models are based on building and selling houses to create...
the cash to provide infrastructure. People will be living on the sites well before infrastructure is complete. Will GBC prevent development of Gosden Hill until slip roads etc. are provided off and onto the A3? Again, the infrastructure is site specific and does not address cumulative effects.

If development were to be refused the land would still have been removed from the green belt and its future rendered uncertain.

Residents are being asked to accept very large amounts of development with little or no detail being provided on measures which would relieve existing congestion and limit future problems. The cumulative effects of the developments listed below are certain to have a devastating effect on the A247 through our village (and of course on Send) and it is hard to see how any of the infrastructure proposed in the Plan (App. C) will do anything to mitigate the effects of these developments on the A247 and hence our village.

**Summary of the Impacts on the A247 – My Objections**

All of these developments will draw additional traffic to the A247 through the village. It would be naïve to think that the employment sites and schools will serve only the developments themselves. Apart from the normal movements of residents to and from the new sites there will be considerable additional traffic on the A247 generated by:

- children from elsewhere being delivered to schools and collected
- the employees of the offices and industrial sites getting to work and returning home
- the vehicle movements generated by distribution and storage activities
- traffic from Wisley wishing to travel South and returning
- traffic from Gosden Hill wishing to travel South and returning
- traffic from Slyfield wishing to travel South and returning
- private and commercial traffic originating in the South and accessing Gosden Hill, Burnt Common or the A3 and returning (including traffic from Dunsfold)

The A247 although an A road:

- is less than 2 vehicle wide in places
- does not have continuous footpaths
- has several sharp bends
- has a hump-backed bridge with poor site lines
- has a very difficult junction to access the station
- is largely unlit
- has a primary school
- is already very congested at times

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.
Policy 11 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

Thirdly, I object to development due to traffic congestion. As it is, we cannot get to a station during rush-hours because of congestion. The A3 is regularly backed up, in both directions, making travelling anywhere an increasing frustration.

Fourthly, I object to the strain on local services. We are unable to get an appointment within a reasonable amount of time for a doctor. Schools are already under strain, police services are already dangerously low and there seems no further money to accommodate this.

I object because the infrastructure is already overloaded
Local Schools are full. Medical facilities stretched. Drainage is inadequate, roads and car parks are overloaded with little or no scope for improvements. Large increases in the volume of traffic will cause an increase in nitrogen dioxide and particulates in the environment – already a cause for concern in this area.

I object to the 2016 Draft Local Plan due to the lack of essential infrastructure.

In particular I feel that the proposed housing developments at Wisley and Gosden Hill, Merrow should not go ahead until the present traffic problems around the area, particularly on the A3, have been addressed.

If a tunnel is an option then the plans for this must be made before any developments in the area take place.

POLICIES I1, I2 & I3

These three policies cover Infrastructure & Delivery, Supporting the Department of Transport’s ‘Road Investment Strategy’ and Sustainable Transport. Whilst we support the general policy statements as presented in each case, it is the detailed infrastructure proposals for Guildford Borough which give us cause for concern.

I believe there are serious deficiencies and shortcomings in the infrastructure of Guildford Borough as it is today and that the aggressive housing policy as proposed by GBC in the Proposed Submission Local Plan will exacerbate this problem.

I OBJECT to the lack of understanding of the infrastructure constraints of the proposed new households on the Horsley villages and to the absence of any effort to deal with them.

- Traffic and parking

If around 2,600 new houses were built in the Horsleys, Ockham and Wisley airfield this could easily result in around 5,000 more cars within a three mile radius of the villages. This will have a huge impact on local roads which have little scope to be widened (e.g. pinch point at Conisbees on Ockham Road South and the restricted area on East Lane) or otherwise altered to cater for such an increase. Parking at Horsley & Effingham junction stations (which are already full), at the shops, at the medical centre and at the village hall are not able to cope with additional demand.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

There is already a strain on public services and infrastructure in Send/Ripley. It can be difficult to get a GP/NHS dentist appointment, and the roads are typically poor condition and heavily congested. As a commuter the Send Marsh Rd/Portsmouth Rd junction already gets particularly congested, as does the Send Marsh Rd/A247 junction. The A3 to M25 Wisley interchange is a nightmare, and would not be able to deal with additional traffic (plans suggest some widening of this junction but nothing has been planned yet?). With further developments I would likely have to move elsewhere as my commute would be unbearable.

Similarly, the proposal to change the boundaries of the current settlements of East and West Horsley does not appear to have been tested on the ground and appears solely aimed at releasing land for development. The arguments for changing specific boundaries are in some cases contradictory, and in some cases fail to meet the test of identifying more sustainable boundaries than those currently defined. I therefore object to the proposal to change the boundaries of the settlements.

In addition I would observe that the existing infrastructure in the East and West Horsley area - in particular the roads and drainage - are not functioning in an acceptable manner at the present (viz. crowded, potholed and flooded under even mild rain conditions) and the prospect of the addition of the potential number of houses in the villages and the proximate addition of 2,000 at Ockham, 400 at Burnt Common and 2,000 at Gosden Hill Farm needs to be severely tested by the application of infrastructure constraints and I object to the strategic site proposals indicated and to the larger land areas within the villages.

DRAINS, WATER SUPPLY, FLOOD RISK, CONGESTION

Our drains, our water supply, our medical facilities, car parks and our roads just cannot cope with the proposed number of new homes. Building this number of homes will lead to flood risk here and downstream (along the Wey and Thames). The planned development on Green Belt is therefore unsustainable.

As a commuter I know that the car parks at both Effingham Junction and Horsley stations are full every working day. Believe you me I have seen the congestion that exists. Additional houses mean more cars which just won’t be able to be accommodated at either station. It can be estimated that even if 25% of these new households use the stations to commute to London then we are talking about accommodating 675 extra cars at either Horsley or Effingham station. Does Guildford Council have an answer to car parking on this scale? Of course not.

As an East Horsley resident I am opposed to the removal of the Horsleys from the Green Belt along with consideration of Three Farms Meadows (the former Wisley Airfield) for a new town of 2,100 homes for the following reasons:
1. West Horsley. The number of new homes will swamp the village and change its nature irrevocably. I am not opposed to the development of the Bell and Colville site for housing but am opposed to including any of the green belt land behind that site for potential development.

1. East Horsley. The open land around Horsley Towers should remain within the Green Belt. Horsley Towers is of immense historical interest and to build on its surrounding green fields would wreck the prospect of this attractive site. The same argument applies to the possible development of the Thatchers Hotel site. I am not opposed to the development of the former BT brownfield site opposite Bishopsmead Parade in East Horsley, for housing.

1. Land at the Great Ridings Wood end of Norrells Drive, East This large field is adjacent to the above Wood which was donated to and is managed by the Woodland Trust. The field preserves the Wood from suburban encroachment and should be retained as such.

1. Points (a), (b) and (c) above should be retained as such in accordance with National Planning Policy Framework paragraph 83 which states that ‘Once established, Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan. At that time, authorities should consider the Green Belt boundaries having regard to their intended permanence in the long term, so that they should be capable of enduring beyond the plan period.” The draft Local Plan mentions “exceptional circumstances” in paragraph 4.123, but presents no evidence that such exceptional circumstances exist. Moreover ministerial guidance has been published that makes it clear that unmet housing need should not normally be taken as such exceptional circumstances. Therefore the existing Green Belt should remain as currently defined.

1. Former Wisley Airfield. This is a large area of Metropolitan green Belt and is valuable farmland – and precious for agricultural use. It provides protected open space near the M25 and is a barrier to outward development from London. Creating a town – almost the size of the Horsleys combined – would cause irrevocable harm to the Green Belt as well as overwhelming local roads and facilities. The A3/M25 junction area is already overwhelmed with traffic for much of the day and has the highest pollution levels outside London.

In conclusion, I ask GBC to revise the housing number, and to amend the Local Plan to utilise brownfield/previously used land rather than green field sites – of which there are significant amounts of the former within the Borough.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Attached documents:**
Infrastructure

The infrastructure of the Horsleys is already overloaded. Local Schools are full, the medical centre is stretched, drainage is inadequate. Traffic and parking are already an issue and at high levels. There is little scope for improvement currently and the scale of development proposed is completely out of all proportion to the facilities available and the ability to increase those facilities. I note that in the proposal for 2000 houses on Wisley airfield they identify Horsley station as a transport link. Anyone who has bothered to visit Horsley will know that the station car park is already at near capacity. There is no provision in the Local Plan to improve this infrastructure in proportion to the proposed building.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
I object to the lack of proper infrastructure planning for sites (Policy 11)

The Plan does not identify suitable infrastructure improvements to provide the huge scale of development, especially at Garrick's Arch (A43) which has no infrastructure projects in the Infrastructure Schedule to support it. Localservices, utilities and sewerage, medical services and schools are already nearing full capacity.

I wish these objections to be fully taken into consideration and that the Plan is amended accordingly.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.
The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

1. **I OBJECT**, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I **OBJECT** to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

1. **I OBJECT** to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

**Attached documents:**
Finally, I object to the Plan because of its potential effect on our infrastructure in East and West Horsley. There are several aspects to this—schools, medical facilities, car parking, drainage, access to transport facilities, all are stretched at the moment. I will focus on just one aspect—roads in East Horsley. I live close to the Ockham Road South. This is already far too narrow to allow two lorries to pass without mounting the pavement. Frequently I am forced to drive on the pavement when builders' lorries and pick-ups come in the opposite direction. It is just not good enough to say that this is the responsibility of Surrey County Council. Does Guildford Borough Council not subscribe to a joined-up planning policy? By ignoring the limitations of the existing infrastructure supporting the Village, the Borough Council is planning a serious deterioration of the Quality of life here.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Infrastructure:

West Horsley does not have any of the infrastructure to support the development proposed. The village is small with few local facilities. There is currently just one shop at the southern end of the village, where local car parking is very limited. Most people in West Horsley already have to travel, largely by car, to East Horsley for their day to day shopping, banking and health needs. The existing car parking facilities in East Horsley are already at capacity and any increase in the local population will add to the already existing problems. Any new development would not “support the continued viability” of the existing village infrastructure, as has been noted by the GBC in the past. Key infrastructure issues include:

- Education that is already under strain;
- The East Horsley Medical Centre is already at capacity and serves both East and West Horsley and some other surrounding villages such as Clandon;
- The utilities infrastructure cannot be further stretched and water pressure is very poor across much of the village already;
- The existing road system is only appropriate for a semi-rural village, many of the roads are little more than lanes and pavements are often only on one side of a carriageway.

Any development will need immediate and considerable investment in infrastructure to support any increase in the village size.

In summary, whilst I accept that some housing development is required across the borough and West Horsley should take its fair share; at present the Local Plan proposes excessive development within West Horsley (in proportion much greater than other locations across the borough) the requirements for which have not been proven in any way. In addition the current proposals do not support sustainable development of the village and the amendment to the Greenbelt runs contrary to National Planning Policy.

As a result I am strongly opposed to the current Local Plan proposals.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1)

Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley and the A247 through West Clandon. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces.

Many of the affected villages, such as West Clandon, already suffer from traffic congestion. Further development around these villages will only result in more traffic and more parking problems.

With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists pass through the villages on the way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added accidents, noise, pollution and injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

This policy as it is inappropriate and inadequate and fails to respond to the challenges raised by the proposed significant Green belt developments. The borough’s infrastructure is already heavily strained. However the plan’s determination to build large housing estates across the Guildford countryside significantly increases the need for infrastructure investment without securing the means for its provision. Placing housing in the established urban areas would reduce the need for enhanced infrastructure as would a more realistic housing number.

The policy wording says nothing about roads and traffic. The Council’s methodology for assessing traffic congestion - averaging it over periods of several hours and ignoring the effects of junctions - simply hides the problem, which will get worse as development proceeds. The schemes referred to in this policy will not solve existing congestion and the local road network has not been given sufficient consideration. Some proposed development locations would require highway schemes that are unlikely ever to happen.

Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritizing greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes
infrastructure will follow on the heels of housebuilding as if by magic. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognizing this as a key constraint, the plan is based on hope. It is also highly likely that developers faced with the imposition of large infrastructure requirements will go to court to invoke the NPPF provision that prevents authorities from imposing conditions that make a development non-viable.

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

The other development issues in the local plan are still the same as before. You want to cram houses into some fields (533 I counted) in East and West Horsley, plus 2200 at Wisley and Ripley is under siege as well. I have protested in the past, but as this is a theoretical amendment, I am protesting again. Sites 38, 39, 40, and 41 are unsuitable. The village is small and the roads are narrow. The required lorry and construction traffic will jam the entire area for years and once it is completed will overwhelm the local facilities. You cannot get a doctor’s appointment for several days at the moment and another 1500 residents certainly wont help and that’s without the Wisley Development. Local schools are already under pressure and Secondary schools particularly. There is no provision for road improvement in Horsley.

The Ockham Road North development by the railway bridge will put hundreds more cars a day onto a difficult road, with narrow pavements, single file in places and significantly increase the risk of a pedestrian being struck by a passing car or lorry wing mirror. The road also floods easily and regardless of flood risk controls in building, the water will continue to fall and has to go somewhere. You cant just keep adding to a 1930’s infrastructure. The whole thing needs to be re thought if you are doing something like this. I did note that none of the Council representatives lived in the area!!!

The other 2 proposals in West Horsley are also overkill. You may have noticed that there is a stop and go bit of road where it is too narrow for cars to pass and only one lane can go at a time. East Street is certainly not suitable for an increase in traffic of this magnitude.
The final proposal in Ockham Road North is at least a bit further out, but still adds a significant volume of traffic to an already over busy road. I have live there for 27 years and the traffic increase is amazing in that time. It frequently takes several minutes to get out of my driveway and of course there is the mother’s jam at Raleigh and Glenesk schools.

In addition I have repeated the very well thought out objection to the Wisley Airfield below and there is nothing significant in the new plan which changes that situation.

The infrastructure in the Horsleys is already overloaded. Local schools are full, medical facilities are stretched and our narrow roads cannot cope with the increased amount of traffic. If we take into account all the new properties proposed our roads will simply not be able to manage the extra volume of traffic.

Although the borough supports ‘Modal Shift’ to solve transport needs there has been no viable option to realise this. No feasible alternatives have been explored particularly in reference to the traffic congestion experienced on the proposed SMC route (tramways etc.).

There has been no assessment of the impact of the proposed Railway Station at Gosden Hill. It is highly likely that this will along with the schools, retail and business developments massively increase traffic into and out of this area.

Pressure on services

1. Hospitals – The current services at the Royal Surrey appear overstretched. Significantly increasing the size of population served will further worsen both services and access. Even at this point in time getting a car parking space at the hospital is very difficult during visiting hours.
2. Schools – The current school system in Guildford is materially overstretched, hence the requirements over the past few years to expand school sites. It is not clear within the proposals that there is sufficient consideration being given to secondary school places in particular. Even with the revised changes the reality is that the schools proposed are not in the right place for demand and lack a clear strategic direction. The Council’s policy in this areas has been flawed over the past few years and the revised plan risks creating a significant continuation of the provision of lower quality schooling for many parts of Guildford with the consequence that demand is not, and will not, be evenly spread – a situation which materially increases traffic volumes and reduces community sentiment.

Comment ID: PSLPP16/1932  Respondent: 11014401 / Peter Doyle  Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

6. I object to the detrimental impact on transport, local roads and road safety. I specifically object to:

1. The assertion that the development will result in a meaningful shift to cycling and walking. The development is too isolated, and even within the development itself too spread out to anticipate a reduced reliance on private cars
2. The increased volume of car traffic. A proposed development of 2,068 homes would result in an estimated 4,000 additional cars on the roads
3. The congestion this traffic will cause on the narrow rural roads in Ockham and the surrounding areas, exacerbated by wide vehicles including increased bus and HGV movements
4. The danger this traffic will be to local cyclists and pedestrians, due to the absence of any cycling paths and the lack of pedestrian footpaths (and the space to provide them)
5. The increase in the already severe congestion on the Strategic Road Network of the A3 and M25. A further planning application at RHS Wisley (with a significant increase in visitor traffic) and a proposed 600 pupil secondary school on the site would add additional congestion at the M25/A3 junction as well as local roads. No development can proceed without significant infrastructure enhancements to the A3 and M25. Partial improvement works on the A3 south of the site are not due to start until 2019 at the earliest
6. The lack of suitable public transport. The local rail stations of Effingham and Horsley cannot cope with the proposed increase in passenger traffic and car parking is already at capacity

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Policy 11 - Infrastructure and Delivery

I object.

The plan targets greenfield sites which requires heavy infrastructure.

Most of the infrastructure is old and congested and cannot cope with the increased demands that will be placed upon it.

The infrastructure improvements would need to come first and the plan needs to reflect this.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

4. I object that nothing has been put forward since last year’s Consultation to improve the sustainability of the West Horsley development sites and thus meet National policy requirements. Every home on the West Horsley sites will need a minimum of one car to enable residents to get to shops, medical centre, library and Horsley Station, regardless of how much pressure is applied to adopt cycling and walking as the preferred means of travel a realistic estimate of 3 cars per home should be considered a minimum given the rural location and age demographics.

I write to strongly object to the proposed building of hundreds of houses in multiple estates around the villages of West and East Horsley. The proposed developments will put enormous strain on the infrastructure and the day-to-day life of the village.

The village does not have enough state school places locally for children at primary and secondary schools, with The Raleigh School in West Horsley and The Howard of Effingham School in Effingham are already well over-subscribed meaning many local children have to travel many miles to other schools outside the local area. I live in the same road as the Raleigh School and during the morning and afternoon school run it is almost impossible to gain access in, or out of Northcote Crescent because of dangerously cars park along the length of Northcote Road and Northcote Crescent. It is also incredibly dangerous for pedestrians at those times, most of whom are small children. In addition private schools,
Cranmore and Glenesk are well supported by children from West and East Horsley but also by families who travel to them every day from many miles away bringing in even more traffic to the village and the main A246 road.

The villages have small parades of shops in both West and East Horsley which are already too busy at most times during the week for parking and more houses are obviously going to make an already difficult situation impossible. West Horsley has no Post Office or Bank so residents have to go into East Horsley. Horsley station which is a main commuter line to London Waterloo is already severely busy 7 days a week with inadequate parking availability, particularly on Monday to Friday. With more residents it is impossible to see how additional parking facilities will be made available in the villages or at the station as there is no space to do so, which in turn will likely mean increased parking charges, which are already inexcusably high at the station.

The local Medical Centre in Kingston Avenue serves West and East Horsley and many villages further beyond the boundaries is already extremely busy. I regularly encounter difficulties getting appointments which is no doubt shared by other village residents and more houses are going to make this service unable to cope. The planned additional houses will also no doubt put strain on the Royal Surrey Hospital.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

6) I object to the detrimental impact on transport, local roads and road safety. I specifically object to:

1. The assertion that the development will result in a meaningful shift to cycling and walking. The development is too isolated, and even within the development itself too spread out to anticipate a reduced reliance on private cars
2. The increased volume of car traffic. A proposed development of 2,068 homes would result in an estimated 4,000 additional cars on the roads
3. The congestion this traffic will cause on the narrow rural roads in Ockham and the surrounding areas, exacerbated by wide vehicles including increased bus and HGV movements
4. The danger this traffic will be to local cyclists and pedestrians, due to the absence of any cycling paths and the lack of pedestrian footpaths (and the space to provide them)
5. The increase in the already severe congestion on the Strategic Road Network of the A3 and M25. A further planning application at RHS Wisley (with a significant increase in visitor traffic) and a proposed 600 pupil secondary school on the site would add additional congestion at the M25/A3 junction as well as local roads. No development can proceed without significant infrastructure enhancements to the A3 and M25. Partial improvement works on the A3 south of the site are not due to start until 2019 at the earliest
6. The lack of suitable public transport. The local rail stations of Effingham and Horsley cannot cope with the proposed increase in passenger traffic and car parking is already at capacity

Our villages are already at capacity and cannot support any further pressure on local roads and additional congestion from proposed development. There simply is not the infrastructure in place to accommodate the local plan as it stands and as a local resident I object to the congestion that development will cause our village (policy I 1).

In the Horsleys the roads are narrow, were not intended for modern-day wider vehicles and at capacity. Pavements are lacking and in some places roads have already become extremely dangerous. Increased numbers of cyclists and through-traffic increase the danger and additional traffic numbers would make the situation critical. The roads are littered with potholes and in a constant state of repair. Key roads currently in use which eliminate pressure of Ockham Rd will either be made one way or blocked completely, making traffic congestion on main roads untenable. 5,000+ new houses in the 5 miles between the M25 and Burpham and the increased traffic would only incur additional congestion in the Horsleys and to other areas with planned development. In addition, major roads in the area such as the M25 and A3 would have to be rerouted to accommodate major proposed development such as Wisley airfield. This in turn would impact upon pollution levels around this area, which are already above accepted EU levels.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
Congestion is already dreadful on this section of the A323 during peak hours, and these developments will undoubtedly result in gridlock, as (1,100+50 as part of 10,000) homes with the demographic of mainly young working couples with 2 children with each household having mostly 2 vehicles with adults needing cars for school run and work commute. This will give rise to approximately 21,000 additional cars (twice a day) somehow trying to thread their way) into the Guildford/Aldershot directions of the A323. Resultant queues will become legendary, and stationary car fumes/pollution will affect the whole neighbourhood adversely.

“Policy G5 (8) Traffic, Parking and Design: The visual impact of traffic and associated access and parking is minimised, especially in sensitive locations”

The noise of so many stationary vehicles with engines running (and often car audio systems blaring) will also impact each of the homes on the Guildford Road. Even without this development, I am unable to sit in my front garden, or to open any of the windows facing south towards the road.

Increased danger to children, as there will be several hundred more, all requiring access of one sort or another to the already busy A323 Guildford Road. There are currently no traffic lights or safe island crossings on my part of the Guildford Road, and so the incidence of fatalities will increase. Even if these were to be put in place, then the additional congestion would be UNTHINKABLE – making the whole scheme UNWORKABLE!

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan.

The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians.

The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

10.1 OBJECT to the lack of proper infrastructure planning for sites (Policy I1)

Policy I1 requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

Despite the Garlick’s Arch site (A43) being a significant site for development, no infrastructure projects have been identified in the Infrastructure Schedule. Without improvements to the infrastructure prior to development, the existing residents’ in the locality will see their quality of life significantly deteriorate in many ways.

Many of the utilities in the Ripley and Send area are at, or very close to capacity, such as the electrical network and sewers. No plans to improve these services should mean no development of the Garlick’s Arch site.

Without proper planning and a commitment to fund new healthcare facilities, existing services such as the Villages Medical Centre, Send will have their services stretched and overwhelmed. Many of these services are already at capacity and suffering from funding cuts or freezes. Any further development without funding will place further stress upon existing health services.

Police services are seeing funding reduced. The development of the proposed 13,860 homes during the plan period will stretch the police services further and is unsustainable.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

| Document: Proposed Submission Local Plan: strategy and sites 2016 / Policy I1 | Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( ) | I OBJECT, due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy I1) Our villages are already suffering from severe congestion for much of the day, for example the Newark Road & Rose Lane junction in the centre of Ripley. The proposed development under the plan will cause greater congestion in and around our villages. The Plan does not provide an achievable strategy for improving capacity on these local roads.

Furthermore, many of the country lanes around the villages of Ripley, Send and Clandon are narrow and wide enough for only one vehicle at a time. In addition, the road surfaces are in a poor condition.

I OBJECT to the development proposed in the local plan, which will result in more traffic using these narrow roads and a further deterioration in the road surfaces. Many of the affected villages, such as West Clandon, already suffer from traffic congestion.
Further development around these villages will only result in more traffic and more parking problems. With some 5,000 houses being proposed close to the village of Ripley, the roads serving the village will become even more congested. Cycling has become an ever popular past time, particularly at weekends hundreds of cyclists past through the villages on their way to the Surrey Hills. With no proper cycle lanes on the narrow local roads surrounding the village and with greater vehicle traffic being generated from these developments there is a real danger that there will be an increase in road accidents involving cyclists as a result of the development proposed under the local plan. The narrow rural roads do not have proper pedestrian footpaths. The proposed significant levels of development will result in the road becoming ever more dangerous for pedestrians. The council has a statutory obligation to protect the public and the additional traffic flows will bring added pollution and risk to injury of the public. In the case of West Clandon the Street often only has a narrow footpath on one side of the road making it very dangerous, especially when vehicles mount the pavements.

10. I OBJECT to the lack of proper infrastructure planning for sites (Policy II)

Policy II requires the delivery of improvements to infrastructure in conjunction with development. I have grave concerns over the planning of the infrastructure requirements and that the projects identified will be implemented when required, if at all.

There is no provision of the increased capacity of Guildford hospital, where is this assessed and remedied?

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
Roads are already congested and frequently grid-locked. Expansion of the housing stock will not sort out the problem. I moved to Guildford in 1951 when it was a delightful market town. There have been too many changes which have sadly damaged it. Careful thought needs to be given before any further expansion is made.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/2892  Respondent: 11024769 / Sarah Runton  Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the detrimental impact on transport, local roads and road safety. The proposed development of 2,068 homes would result in an estimated 4,000 additional vehicles. This will hugely increase congestion, particularly at peak times, on the narrow rural roads in Ripley, Ockham and the Horsley, and will only be exacerbated by the increase in wide vehicles including increased bus and HGV traffic.

This fundamentally contradicts the plan's assertion that the development will encourage more cyclists and pedestrians. One heavy rainfall is all it takes to cause drainage to overflow and local roads to flood. These roads were built for minimum traffic and most don't have pavements are badly lit and there is certainly no room for expansion to include any purpose built cycle lanes or designated cycle routes.

The A3 and the M25 are hugely congested at rush hour in the very area the plan proposes to build this substantial number of dwellings. No development can proceed without significant infrastructure enhancements to the A3 and M25. Partial improvement works on the A3 south of the site are not due to start until 2019 at the earliest.

The problem is further exacerbated by the lack of suitable public transport. The local rail stations of Effingham and Horsley cannot cope with the proposed increase in passenger traffic and car parking is already at capacity.

I trust that these objections will be fully considered.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/11223  Respondent: 11028257 / David Conisbee  Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I object to the lack of provision of local schools hospitals & doctors surgeries and the lack of provision for new roads

The local infrastructure is woefully inadequate at the present time it would collapse under any the slightest increased pressure

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
1 OBJECT TO THE IMPACT ON THE INFRASTRUCTURE AROUND THE VILLAGES

- OBJECT to the impact of the Local Plan on the local infrastructure. The roads around Send and Ripley are already congested and cannot cope with the current needs. The Local Plan does not incorporate a detailed transport infrastructure strategy that would demonstrate how the road network would support the additional pressure on the roads and other amenities if the proposed development went ahead. The plans to improve the A3 are years off (2025 – 30) and, even if they were implemented, would be preceded by years of gridlock on the local roads. Plans to improve local roads (ref LRN20, specifically Send Road and Send Barns Lane) through an investment of £1.5m will be woefully inadequate to cope with the increased traffic.

Additionally, increased traffic through the villages will increase the hazards along the main roads, particularly pedestrians, especially children (using the Send School or catching buses to Guildford schools) and the increasing number of cyclists. This will be exacerbated by HGVs accessing the planned industrial units at Garlick’s Arch.

- OBJECT to Policy A43a (Land for North facing slip roads to/from A3 at Send Marsh/Burnt Common) This would necessitate a 4-way junction at Burnt Common and would inevitably increase the amount of traffic using the local roads in Send. This junction would worsen the problem of drivers using Send as a cut through from Guildford to Woking on local roads that are just not intended for this purpose. As a resident, I am amazed that there hasn’t yet been a serious accident as drivers use Potters Lane for just this purpose with little regard for the 30mph speed limit.

- OBJECT to the proposed development of Gosden Hill Farm (Policy A25) and its inevitable impact on the roads around Send. Despite assurances of an additional railway station, commuters will utilise the opportunity to leave the A3 at the existing Burnt Common roundabout and travel on the faster Woking to Waterloo line, rather than use the slower Guildford line.

- OBJECT to the proposed developments opposite Winds Ridge (Policy A44) and Clockbarn Nursery (Policy A42) due to the impact that the additional traffic will have on small local roads. The first of these will increase the traffic leaving Send Hill onto Potters Lane at what is already a dangerous junction on very narrow lanes. Meanwhile, Send Road is already frequently blocked by HGVs trying to turn into Tannery Lane; this can only be made worse by additional traffic using the same road.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:
5. Infrastructure

The existing infrastructure, particularly roads, water and drainage, are already under considerable strain. Roads and homes are increasingly subject to flooding.

The M25 junction with the A3, and surrounding roads are known traffic black spots and high pollution areas. These systems cannot sustain the impact of such a large increase in population - indeed it could be catastrophic.

Re; GBC Draft Local Plan 2016

--------------------------------------

We wish to add our support to the East Horsley Parish Council letter dated 13.06.2016 which identifies the areas of concern within your proposals.
We do not intend to repeat the points as listed, but do want to record our particular concern regarding the extent of the proposed development in and around the villages of East & West Horsley.

The local facilities serving our villages are insufficient now, without adding to the situation with more housing. We appreciate development is necessary, but the proposed level appears to be excessive, given the size of the villages.

The proposed increase in homes of 77% in the surrounding area will have an adverse affect in several ways:

TRAFFIC: Inevitably an increase in the amount of traffic, which uses narrow roads not intended for such volumes

PARKING: Parking at the shops and station is already overloaded, with no facility to increase.

MEDICAL AND SCHOOLS: Already full to capacity and no means of increasing.

INSETTING: Removal of the Horsleys from the Greenbelt protection will leave us vulnerable to further development on additional sites.

RURAL DISTRICT CENTRE: This seems to be based on designating Budgens as a large supermarket. Not so. It is a convenience store which allows it to open all day Sunday.

I have live in East Horsley for 34 years. We moved here because of its semi-rural location, which seems to now be under threat. Building on Green belt land, if allowed, will result in one great conurbation from London to Guildford.

I object most strongly to the local plan.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

Attached documents:

Comment ID: PSLPP16/13829  Respondent: 11033409 / Rebecca Fraser  Agent:

Do you consider this section of the document; complies with the Duty to Cooperate? ( ), is Sound? ( ), is Legally Compliant? ( )

I am writing to express in the strongest possible terms my objection to the 2016 Plan. In particular I am concerned about the following, none of which appear to have been addressed by any revisions to the 2014 Draft Plan:

Schools:

Local schools are already at capacity and I am aware of several friends who have been unable to secure places at the schools closest and most convenient to them. Where will the additional children go to school? I object to the potential lack of school places.

Doctor’s Surgery:

It already takes between 7 and 14 days to obtain an appointment at the Horsley Medical Centre. With no additional medical facilities planned, this will create completely unsustainable pressure on already stretched facilities which I object to.

Local Road Network:

It seems that the Plan is proposing a strategic site at Wisley Airfield without even knowing what improvements to the local road infrastructure will be required. If that is the case for Wisley Airfield, then it is almost inevitably true for the proposed developments in East and West Horsley as well. I object to this. The local roads and parking at facilities such as Horsley station are already under significant pressure. The roads are already ridiculously busy and parking to visit the local shops already very difficult.

Traffic and Parking:
Assuming that every new house has at least 2 cars, this means potentially 6,000 more cars within a three mile radius of the villages. I object to thousands more cars and lorries on our local roads. The impact on local roads will be tremendous. Parking at Horsley & Effingham junction stations (which are already full), at the shops, at the medical centre and at the village hall will all be affected.

**Transport:**

Misery for commuters with full trains and nowhere to park. I object to fuller trains especially at commuter times.

**What changes (2016)/further amendments (2017) do you suggest should be made to the document?**

I object - I have absolutely no faith that the council will enforce this, especially having seen similar situations, for example in the Salisbury area, where friends describe children being number 400 or so in the waiting list for swimming lessons having moved into new housing estates. I also note the word "should". There is no evidence that infrastructure will be enhanced, and in fact there is no opportunity for such growth in West and East Horsley. Hence, new housing will not be supported by new infrastructure, and hence existing residents will be made to suffer by increasing numbers of users of an already strained set of local services.

Furthermore, West Horsley's two main access points are "single file only" sandwiched between houses, hence, increased traffic will cause traffic nightmare which cannot be resolved through a CIL levy.

Only recently we have seen plots of land developed where old houses have been torn down, and new residences constructed. I am in favour of replacing dilapidated homes, but, must point out that the construction of these projects has damaged the road surfaces in the immediate vicinity. Hence, if one house construction can cause such damage to the road surfaces, imagine what 400 houses can do... Please see the image here.

1. I object due to the congestion that development will cause to the local village roads and the lack of road infrastructure (Policy 11)

There is too much traffic in our villages already and this plan will cause more congestion in Ripley, Send and Clandon, with no plan to improve that. The rural roads in this area are narrow, in poor condition and have no footpaths. 5000 more houses means dangerous and unsustainable traffic.

Pressure on services

I work with parents in the antenatal and postnatal period and repeatedly see how overstretched the Maternity Services are in Guildford. I have also seen first-hand how long waiting lists are for hospital services such as the paediatric dietician. I do not believe that the Royal Surrey has the capacity to meet demand from the planned increase in housing and population, and certainly not within Maternity and Paediatric Services. Current and future residents will suffer from a lower quality of care and longer waiting times as a result of the planned expansion.

Schools are also already under pressure from an increase in the birth rate and have already been expanded (sometimes inappropriately I feel) to help cope with this. Despite the new schools planned, I worry that there will not be the capacity to absorb the number of children living in Guildford in the future with the proposed developments.

Policy I1 states infrastructure will be secured by planning obligation, planning condition, or from other infrastructure funding, including the Community infrastructure Levy.

However, there is a completely inadequate plan for addressing the infrastructure issues I have highlighted above. Roads around Ockham Road North and East and West Horsley are already busy and narrow and could not accommodate further traffic without, in addition to pollution issues, impact on vehicle and pedestrian safety. Relevant proposed road improvements focus on the A3 and £1 million for ‘East Horsley and West Horsley traffic management and environmental improvement scheme between 2019 and 2023’. With the number of houses proposed above but additionally the developments in Wisley and Clandon, this is clearly completely inadequate and too late.

As a health professional, the proposed expansion of Horsley Health Centre in 5-15 years is not acceptable. The number of GPs are reducing with retirements and there is no identified funding for such expansion. What provision will be made at the outset of building developments?

There are no proposals for how increased pressure on mains water, waste water, education and potential flooding will be met in the Horsley area.

In summary, I object to the plan for the reasons set out above, in particular to the proposed developments in East and West Horsley but also noting the extensive development nearby in Wisley and Clandon which doesn’t adequately
consider infrastructure issues. I must ask you to amend the Local Plan to utilise brownfield land rather than green field sites.

Finally, I also note that the plan is very similar to that proposed in 2014 and ignores most of the comments received from the consultation at that time, most of which objections to the proposals. I trust the Council will listen this time.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

No development can be sustainable without the right infrastructure supporting it. In this we support the Council in ensuring that infrastructure is created alongside or before any development. We are also calling for innovative approaches to providing the required infrastructure such as working with existing GP services to expand current premises or create additional GP branches to support the increased development.

• Public transport and community transport should be central to the Local Plan to alleviate congestion pressure.

• Policy ID1.1 good point, fully support it. Including point 3.
• 4.6.29 should look at the enforcement as well as the submission of Transport Assessments and Travel plans by developers
• 4.6.30 should be reinstated like slyfield estate and make it stronger …“including parking for local residents” or “Travel Plans will be required on industrial estates or business parks in order to coordinate parking and transport needs for employees with the needs of surrounding residential areas.”

What changes (2016)/further amendments (2017) do you suggest should be made to the document?
The infrastructure cannot cope with the existing population, never mind one expanded by 20-25%.

Roads are already congested and frequently grid-locked during commute and school times. The merest accident on the A3 grid-locks the town centre due to traffic avoidance.

Sort out the infrastructure first, then consider housing expansion.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

I object to policy I1 Infrastructure and delivery Most of the borough’s infrastructure is antiquated, congested and straining to accommodate even current needs and organic growth. Yet this plan’s commitment to building housing estates across the Guildford countryside will mean either major infrastructure investment that no-one is prepared to pay for or else a catastrophic and simultaneous collapse in transport, educational, medical, energy, water and communications services. The plan targets greenfield sites – requiring heavy infrastructure investment – in order to generate CIL income necessary to meet an infrastructure shortfall that is already serious. The current draft CIL scale also encourages development on greenfield sites rather than brownfield and will reduce or negate developer's obligation to sell a percentage of homes at 20% below market value. The policy wording says nothing about roads and traffic. The Council’s methodology for assessing infrastructure needs in this area is inadequate, identifying only the tip of an iceberg of existing congestion. Compton Village is already close to tipping point, yet it will see a significant increase in traffic volume, will be completely congested and yet no plans exist to mitigate the problem. The schemes referred to in this policy barely solve existing congestion and are inadequate when development takes place. The full impact on local road networks has not been fully considered. Some proposed development locations would require highway schemes that involve demolishing property and road-widening in residential areas to solve the resultant congestion. The A3 improvements are not guaranteed to take place but they are being used to justify removing large areas from the Green Belt before detailed traffic assessments have taken place. These detailed investigations are being deferred until the planning application stage and will be left to developers to prepare. If a site then proves to be unsustainable its Green Belt protection will have been lost for no reason and unsuitable development will take place by a more insidious process. Compton Village will actually incur increased traffic flow as a consequence of A3 widening according to the study, yet as was pointed out above, no solutions are in place to improve the situation. Adequate infrastructure provision is a pre-condition of sustainable development. But in this plan it is an afterthought buried away in Policy I1. By prioritising greenfield over urban, brownfield regeneration, the plan creates insurmountable (and unnecessary) obstacles for itself. Common sense suggests a local plan should first assess the borough’s infrastructure capacity for sustainable development, and then tailor development accordingly. This plan, however, assumes infrastructure will follow on the heels of housebuilding. It makes implementation critically dependent on providers outside the Council’s control and on the vagaries of CIL income. Instead of recognising this as a key issue, the plan makes too many assumptions, not least being the verbal promise that development will not take place without infrastructure preceeding it. It is not clear how this will happen and is not in the
Plan, as it should be, if it is achievable. The highways network is under stress at peak times in many parts of the borough. Queuing is the daily experience of drivers going to and from work. The local plan recognises the problems in para 2.14. Much of the road network is single-carriageway, and junctions act as constraints. The key evidence on future traffic conditions is provided in the Strategic Highway Assessment Report (SHAR) which summarises the results of the tests carried out by Surrey County Council at the request of GBC. Five scenarios were examined using SCC’s strategic traffic model. Scenario 1 contains all developments and planning permissions from 2009 to date. As such it corresponds to today’s circumstances, and describes the current unsatisfactory traffic conditions in peak periods. Scenario 5 represents the position at the end of the plan period, including all development and highways schemes in the local plan. The results of the analysis show that there will be widespread congestion in the morning peak hour across the network. The key strategic routes, the A3 through Guildford NE bound, and the M25 between Junctions 10 and 11, are shown to be at or over capacity. The summary network statistics presented in the SHAR, while useful, require some interpretation because the analysis of vehicle-hours is derived from link speeds only, and does not reflect junction delays and queues. The tables that show the ratio of flow to capacity and level of service are especially helpful to gaining an understanding of the conditions on the network in the forecast. Where the forecast traffic volume is above or close to capacity, flow becomes unstable and there is congestion. The SHA results provide evidence that, in 2031, congestion will be worse than it is today on much of the network. It is the case that the traffic modelling does not take into account the potential for increased use of other modes, but the trip rates used for developments already have built in the typical level of use of other modes, and services will be required to meet that need. It is also the case that the model does not allow for park and ride, which would improve matters in the town centre, as discussed below. In order to gain an insight into conditions across the network, it is necessary to combine information from several tables in the SHAR. Table 4.5 shows that the M25 and A3 will be at capacity in Scenario 5. The other roads that will have poor levels of service include those in Table 4.5 but also those in 4.12 (except the A3) and those in Tables 4.3 and 4.4 with levels of service E and F that will not be given some relief by improvement of the A3 in Scenario 5. Paras 4.10.3, 4 and 5 point out that there will be increased congestion. Given that the starting point is unsatisfactory, there can be no expectation that the schemes in the Infrastructure Development Plan will provide an overall improvement. There will be some local benefits, such as the Ash rail bridge for example, but in general conditions will be as bad and in many places, such as Compton Village, worse. So the statement in the SHAR para 4.2.5 that ‘the combined mitigation as reflected in Scenario5...indicates that at the strategic level it accommodates the additional PSLP demand’ needs qualifying – ‘at the cost of a lot of queuing’ and makes no mention of the impact this will have on pollution, which is already a known problem at the A3 end of Compton. The cumulative effect of the additional traffic generated by the developments in the local plan will be to increase congestion, even with the proposed highway schemes in place. More detailed analysis of the junctions and queuing is required. So we question the conclusion that the developments would have “an acceptable impact on the capacity of the highway networks in terms of the policy test set in paragraph 32 of NPPF”. Appendix 3 of the Transport Topic Paper shows the phasing of housing development and transport infrastructure. The major scheme being considered for the A3 between the A31 and the A320 is scheduled for delivery in the period 2023/24 to 2027/28. The strategic developments at Blackwell Farm and Gosden Hill Farm are shown as being phased in from 2021/22 onwards. The Garlick’s Arch development is shown as starting in 2019/20. Therefore, there will be a period in which the existing A3 has to cope with the additional demand arising from those developments before extra capacity is provided. The following comments regarding the strategic sites are taken from the SHAR: Blackwell Farm – there will be congestion at the A31 junction, and the problems at the Tesco junction, and the Egerton road / Gill Avenue junction (para 4.9.5). Traffic is likely to access the Surrey research park and the RSCH through the development (para 4.7.3) Gosden Hill Farm – there will be an increase in traffic through Burpham. There will be pressure on the A3100/B2234 roundabout (paras 4.7.6, 4.7.7 and 4.7.8). Wisley – traffic will increase on minor roads to gain access to the A3 (N and S bound) and other routes (para 4.7.11). The development will add more traffic to the A3. The Burnt Common slips help alleviate the traffic through Ripley according to the model, but queuing on the A3 could mean this does not happen (para 4.7.14). Normandy/Flexford – the report has little to say about the impact of this large development. The increase in flow on Westwood Lane is noted (para 4.5.7). Tables 4.10 and 4.11 show junction delay reducing at the Westwood Lane, B3000 junction, but an increasing at the Puttenham Hill/ Millbrook junction. Ash – development in Ash is not specifically addressed, but there are major increases in traffic on a number of roads. The new rail bridge will bring relief (but traffic will move to the next junction). Slyfield – there are no remark relating to SAR, and as there are no additional trips shown in and out of the Slyfield residential zone in Tables 3.3 and 3.4, it is possible that this development has been omitted. There is a significant increase in trips to and from the Slyfield industrial zone, which will impact on the A320 and Clay Lane. Town Centre – the report has very little to say about the town centre. It is evident that the model is forecasting severe congestion on the approaches to the town centre, such as the A281, the A31 Farnham Road, and Woodbridge Road for example. No mitigation measures are planned. And in the Transport Strategy, GBC states that the intention is to adopt Allies & Morrison’s Scenario 2 which would have the
effect of significantly reducing the capacity of the town centre road system. The implications have not been examined, but traffic using the A281 from Waverley, for example, would be affected.

The B3000 will be severely affected by development schemes and will not benefit from road improvements. It is essential that the impact of all change to road networks are looked at in conjunction with one another for any survey to be meaningful. The local plan does not state an objective for congestion. The two strategic objectives that are included for infrastructure refer to supporting sustainable development and delivering a balanced system. However, in para 2.15 there is an aspiration expressed about opportunities ‘to improve the performance of the road networks through transport infrastructure and service improvements’, which taken with the previous paragraph includes reducing congestion. The evidence so far shows that this will not happen. The mitigation proposed is not sufficient to overcome the problems that will be caused by the level of growth in the local plan. Congestion will worsen. The network will lack resilience and be vulnerable to disruption due to incidents. Minor roads will have to cope with a lot more traffic, for which they are unsuitable.

What changes (2016)/further amendments (2017) do you suggest should be made to the document?

1. **Congestion on the A3 and M25 trunk roads**

I object to the development of the strategic sites due to the A3 and M25 already being at capacity during peak hours. Highways England has no plans to look at improving the A3 before 2020. It is therefore not sustainable to identify sites for further development which will worsen the congestion on these motorways and trunk roads.

1. **Congestion on the local village roads and lanes**

Our villages are already suffering from severe congestion for much of the day. For example the Newark Lane and Rose Lane junction in the center of Ripley, which at peak hours, is regularly gridlocked due to the volume of traffic, made worse when Ripley High Street (B2215) is used as a detour/ slip road when the A3 is jammed. I object to further development which will cause even greater congestion in and around our villages.

1. **Unsuitability of our local roads for heavy vehicles and more traffic**
