MM1

GRA welcomes this policy amendment.

The reasoned justification text should refer to the new requirement in the revised NPPF para 170 that “planning policies and decisions should contribute to and **enhance** the natural and local environment”. In a Guildford context, the following subsections are particularly relevant:

(a) “…enhancing valued landscapes”…

(b) “…recognising the intrinsic character and beauty of the countryside”… and

(d) “…minimising impacts on and providing net gains for biodiversity, including by establishing coherent ecological networks that are more resilient to current and future pressures”…

**Attached documents:**

---

**Comment:** MM1 - LPMM18/3136  **Respondent:** The Guildford Society (Julian Lyon) 8561377  **Agent:**

**Introduction**

This document represents the response of The Guildford Society *(the Society)* to the Consultation by Guildford Borough Council to the Main Modifications to the Guildford Submission Draft Local Plan *(GSDLP).*

The Society recognises that the Officers and Councillors of Guildford Borough Council have worked very hard to bring the Local Plan to this stage, and we have participated objectively throughout the Local Plan process, seeking to help the Council to arrive at a sound Local Plan for adoption, to shape, control, protect and enhance our places and spaces, our landscape character and our historic architectural and spatial heritage.

We have been dismayed at times throughout the process, that many of our representations have been ignored or dismissed. We have used as one of our litmus tests of engagement and response, the Council-published Settlement Profiles Report, which we see as a fundamental building block supporting the spatial hierarchy of the Local Plan.

We have consistently pointed out major failings in that document, along with inaccuracies and errors of cutting and pasting, which hamper the interpretation and analysis of the site allocation strategy in key areas – notably in the Guildford Urban Area.

This, in our view, is a contributory factor to (or tangible evidence of) a fundamental failure to plan for development in the two most sustainable tiers in the Council’s Spatial Hierarchy, the Town Centre and the Guildford Urban Area.

In responding to this consultation, we are following the guidance of the Council, in that we are responding to the Main Modifications they have brought forward. We are also keen to point out that, as important as the Main Modifications are, there are some parts of the plan where there should have been Main Modifications, and where these are lacking, and we point some of these out in our response.

This is a very important point, especially having in mind the Examination in Public *(the EIP)* and the Inspector’s comments throughout the process. The point is that it is reasonable, in law, in responding to this latest consultation, to refer both to Main Modifications made, and also to Main Modifications that should have been made in order for this Local Plan to be lawfully sound.
The Society’s interventions during the EIP, and its representations, have been made objectively, generally to steer the process towards sound planning practices and principles, never seeking to derail or ‘sink’ the Local Plan, but to make it the best we have believed it can be, based on the drafts prepared by the Council.

Some of our interventions have, however, been based on planning law – Statutes and Regulations – and go to the heart of the soundness of the Plan in legal terms.

The Society firmly believes the consultation (and interpretation of responses) should not be screened to only comment on Main Modifications by way of insertions and deletions, and we are also concerned that some of the Minor Modifications in the latest iteration of the GSDLP are poorly made, do not, in some cases, make sense or are ambiguous to the extent of possibly conveying the opposite or a differential meaning from that intended. We have attempted to pick these out to help the Council improve its Plan.

In our submission, we make several references to the lack of soundness of policies as amended.

Please note paragraph 5.22 of the Planning Inspectorate Procedural Practice in the Examination of Local Plans (see APPENDIX I – Procedural Practice in the Examination of Local Plans, June 2016 (4th Edition v.1)) which notes that, in the interests of fairness, the Inspector will provide an opportunity to appear at the hearings to those who seek an amendment which follows directly from the LPA’s proposed post-submission change(s) to the Plan.

As a point of law, we consider this is important, given that we have seen no written recommendation to the Council from the Inspector as part of the EIP process outlining the scope and scale of Main Modifications required, and as we understand there were direct consultations between the Inspector and a Local Plan Officer at the Council.

Please note, therefore, we will be providing a copy of this response to the Programme Officer for the EIP with a direct request for the hearings to be reopened to consider representations made by the Society and others in response to this consultation.

Julian D S Lyon MBA (dist.) FRICS
Chair, The Guildford Society

Executive Summary

The Guildford Society has engaged actively and objectively with the Local Plan. We have had little or no interaction with Guildford Borough Council since the Guildford Local Plan Forum was disbanded before the Local Election of 2015 and not reinstated by the new leadership.

There is nothing in our responses to the 2016, 2017 and 2018 responses (including this one) that we would not have worked through with the Council had they been prepared to engage. We do understand that the large numbers of responses may have made any direct interaction much more difficult.

We have got to this stage in the process with that desire to be positive still intact. We do find, though, that the Council has not fully embraced the Inspector’s concerns and comments in its Main Modifications document. We therefore find that the Plan is not yet sound.

As the Inspector reminded us at the beginning of the Examination in Public, soundness involves examining the Plan to determine whether it is:

(a) positively prepared – based on a strategy which seeks to meet objectively assessed development and infrastructure requirements;
(b) justified – the most appropriate strategy when considered against the reasonable alternatives, based on proportionate evidence;
(c) effective – deliverable over its period and based on effective joint working;
(d) consistent with national policy – able to achieve sustainable development in accordance with the Framework’s policies
We believe that the Inspector should reopen the Examination on eight counts (each of which would require further Main Modifications):

1. Policy S2 - Housing Numbers - we largely support Guildford Residents Associations position on housing numbers, which, following publication of the latest ONS Household Formation data, seems to be prescient and well-considered. This really needs to be bottomed out, the Woking figures also need to be revisited. The housing target in the Plan is unjustified.

2. Policy S3 – this Policy doesn’t yet do what it needs to do – it does not provide any commitment or pressing urgency to deliver regeneration. The absence of an allocation of key sites makes the Policy bland and relatively ineffective and must guarantee action on Master Planning and delivery of both development and infrastructure.

3. Policy D1 – this Policy speaks of master planning strategic sites but is severely impaired by the failure to include the Town Centre in the master-planning requirements. To this extent the Plan fails to positively plan the Town Centre for development that would deliver regeneration and housing in the topmost hierarchy of sustainable sites

4. The Infrastructure Delivery Schedule needs to reflect requirements for Town Centre Infrastructure to deliver on Policy S3, without which the Plan will be ineffective.

5. There is no policy for bringing forward sites in the Guildford Urban Area during the Plan Period, meaning that the second hierarchical tier is completely unplanned – in other words, there is a failure to positively plan the Guildford Urban Area for development that would deliver regeneration of relatively deprived areas and housing in the second tier of the hierarchy of sustainable sites

6. The Society is adamant that to regenerate the key Town Centre sites as early as practically possible, and within the Plan Period, there must be an allocation or allocations for the Town Centre Regeneration Area, and their omission is unjustified

7. Policy S1 - The UN Intergovernmental Panel on Climate Change (IPCC) Report was published on 8 October under the headline "12 years to limit climate change catastrophe" which is within the Plan period. The scientific consensus calls for "urgent and unprecedented changes" to limit the use of fossil fuels. The plan (MM1 S1) in no way reflects the urgency or importance called for, and, as such, it fails to plan positively.

8. The Plan directs development to the Green Belt, when it cannot be shown that Green Belt development in the latter years of the Plan could not be better provided in the Town Centre and Guildford Urban Area. This is contrary to national policy.

It gives us no pleasure to register these failings of the GSDLP with its Main Modifications, and we would like to work positively with the Council to bring about a sound Local Plan as quickly as is possible.

Omission 1 - Key Facts about the Borough
This section is somewhat out of date and should have been amended – especially in Paragraph 2.3 as the ONS forecasts now date from 2016.

The amendment to Policy S1 itself (Policy para (3)(a)) is acceptable to the Society.

The text amendments to Reasoned Justification Paragraph 4.1.4 do not adequately deal with the impact of case law (eg., CJEU Case C-323/17 People over Wind v Coilite Teoranta).

There should not be a presumption in policy that a blanket mitigation strategy be applied, such as SANG charges, without recourse to individual assessment.

The Society has pressed for town centre housing development to be exempt from any blanket charge of SANG contributions where it can be demonstrated that the impact of such development on the SPAs would be de minimis.
and that a blanket mitigation strategy would be disproportionate. We would prefer to the SANG funding in these cases being diverted to the provision of affordable homes and/or infrastructure.

Since the Examination in Public, the UN Intergovernmental Panel on Climate Change (IPCC) Report was published on 8 October under the headline "12 years to limit climate change catastrophe" which is within the Plan period. The scientific consensus calls for "urgent and unprecedented changes" to limit the use of fossil fuels. The plan (MM1 S1) in no way reflects the urgency or importance called for.

We consider that the Inspector should reopen the examination to ensure that these latest findings are incorporated into the plan philosophy, that best practice towards sustainability is adopted, that this is a dynamic concept as opportunities and necessity will change as the sense of urgency increases during the plan period.

The biggest issue within Guildford is peak-time congestion. This doubles fuel consumption and therefore doubles the amount of carbon being produced. Accordingly, there is disproportionate benefit in reducing the amount of traffic to that typical during school holidays. There should be clear targets and mechanisms identified in the plan aimed at achieving this. Bland statements of desire are meaningless, have proved ineffective in previous plans, and would prove ineffective in this one if allowed to persist.

MM1 S1 the word appropriate could be a helpful addition: “sustainable appropriate development”. This might be helpful in the context of sui genesis proposals such as student housing or Costco retailing, or other things not yet thought of, where there is no real policy but they might be considered inappropriate.

MM23 Policy D1 (12) refers to "including passive solar gain to maximise the use of the sun’s energy for heating and cooling”. This appears a very muddled and dangerous statement. Passive solar gain is a double-edged sword which can lead to the desire for air conditioning, particularly in commercial buildings or residential properties with large south facing glazed areas. There is a real risk that this well-intentioned idea could have the perverse effect of increasing energy demand for cooling particularly in flats and large houses aimed at overseas buyers and others not constrained by the cost of energy.

Comment: MM1 - LPMM18/1188  Respondent: Burpham Neighbourhood Forum (Jim Allen) 8581505  Agent:

Burpham Neighbourhood Forum response to Main Modifications submission Local Plan - September 2018

Introduction

This response Statement is submitted to the Planning Inspector presiding over the examination of the Guildford Local Plan. It sets out the formal response of the Burpham Neighbourhood Forum to the Proposed Main Modifications but should be read in conjunction with our earlier submissions on the Local Plan. Our comments relate to the suitability of these modifications to make the plan sound under current policy and legislation.

Background

Neighbourhood Planning is a flagship Government policy, designed to give local communities more influence over development in their areas. The Burpham Neighbourhood Forum was formally constituted in February 2012 and the Burpham Neighbourhood Plan was formally adopted by Guildford Borough Council in April 2016. The Forum was re-designated for a further five year period in April 2018. The Burpham Neighbourhood Plan was the first Neighbourhood Plan to be successfully adopted in Guildford. The Forum continues to engage proactively in planning related matters in Burpham Ward and members gave evidence at the EiP.

Response to Policy S1;
1. Policy Para (3)(a)
1.1. We support this phrasing as it gives greater clarity to the weight to be accorded to the NPPF in decision making.

2. Reasoned Justification Para 4.1.4

2.1. We agree this change as it gives additional protection to sites and assets with a specific designation.

Comment: MM1 - LPMM18/5049  Respondent: Surrey Wildlife Trust (Mike Waite) 8591041  Agent:

To whom it may concern:

Thank you for this opportunity to comment further on your emerging Local Plan for Guildford Borough. Please consider these comments as both those of Surrey Wildlife Trust and the Surrey Nature Partnership, unless clearly indicated otherwise(*). The Surrey Wildlife Trust last commented on this matter in July 2017. The Surrey Nature Partnership is the government-mandated Local Nature Partnership for Surrey.

Policy S1.

Paragraph 4.1.4. The purpose of these modifications (from the previously consulted draft) appears to reflect changes to the National Planning Policy Framework revised in July 2018. If this is the case the list of features relevant to Guildford to which the presumption (in favour of sustainable development) will not automatically apply is not complete; ‘irreplaceable habitats’ have been omitted.

Attached documents:

Comment: MM1 - LPMM18/5731  Respondent: Sarah Belton 8598561  Agent:

There is prevalent use of the term sustainable development in the main modifications (e.g. MM1), to suggest this means development will be without cost to the environment or amenity of the area/s involved. However, it is meaningless without clear definition of what the term means, especially in terms of real protection from irreversible damage, and is clearly being used permit development in general. The idea of presumption in favour of development (MM1) is also skewing the plan toward development without proper control. MM24 goes some way to addressing these issues, but it like existing implementation of sustainability has been a tick-box exercise without real innovation and impact.

Attached documents:

Comment: MM1 - LPMM18/1321  Respondent: Mr Richard D Jarvis 8599201  Agent:

Supported

Attached documents:
I welcome the strong statement in Reasoned Justification para 4.1.4” that the "presumption in favour of sustainable development...will not automatically apply to habitats sites (including sites protected under the Birds and Habitats Directives) , designated Sites of Special Scientific Interest (SSSIs), development requiring appropriate assessment because of its potential impact on a habitats site [including new residential development within 5 km of the THBSPA], land designated as Green Belt, or Local Green Space, the Surrey Hills Area of Outstanding Natural Beauty, designated heritage assets, or locations identified at risk of flooding.

I would simply point out that all bar one of these caveats apply to the site identified under Policy A64, which is within 5 km of the THBSPA, is adjacent to an SNCI and potentially merits this status itself, is in red-rated Green Belt land, is adjacent to and would have an adverse visual effect on the Surrey Hills AONB, and finally is in a location at risk of flooding. Given all these factors I find it astonishing that this site has been included as a Main Modification when this is so much at odds with Policy S2 and I OBJECT to this lack of consistency.

Attached documents:

Modification MM1, item 4.1.4 appears to me to say that the Guildford Planning Policy is to ignore the NPPF and any SSSI and Bird and Habitat Directive, and the Thames Basin Heath Special Protection Area altogether. Those national and international policies must not be ignored.

Elsewhere, there are changes but in any event I think the Council needs to be careful as to any changes that the meaning of the word “Affordable” is likely to have as the Government and the Ministry of Housing, Communities and Local Government give modifications to the meaning of the word “Affordable”.

Attached documents:

I write on behalf of the Burpham Community Association (BCA).

This statement sets out the formal response of the BCA to the Matters and Issues raised by the Inspector and should be read in conjunction with our earlier submissions to the Local Plan.

The Burpham Community Association was formed in 1973 in response to the proposal to build an incinerator at the nearby Slyfield Industrial Estate. It has since been involved in several major planning issues, including Martin Grant’s application to develop Gosden Hill in the 1980’s and Aldi’s two applications in 2012 and 2013, and subsequent appeals.

MM1 Policy S1 Presumption in favour of sustainable development

Para 4.1.4 The BCA would support this change as it gives added protection to specifically designated sites.
Comment: MM1 - LPMM18/17  Respondent: Miss Hazel Cleasson 8957441  Agent:

Agree with the changes

Attached documents:

Comment: MM1 - LPMM18/4006  Respondent: F. Newton 10729985  Agent:

I object to MM1
The proposed increase in the required number of dwellings is excessive and unsubstantiated. The plan fails to take account of the Borough's need to preserve its high proportion of designated Green Belt land and historic woodland.

The proposed housing increase will have a massive negative impact on the villages of Send and Ripley be devastating for the residents of Send Marsh and Burnt Common.

Attached documents:

Comment: MM1 - LPMM18/1853  Respondent: Mrs Natasha Lock 10845377  Agent:

There is no justification for taking these sites out of greenbelt, there are many other sites in Surrey that are brownfield that could be built on instead. This plan will completely change East and West Horsley with no infrastructure in place to cope with the added population that the development will bring. Our roads flood on a regular basis and they too will not cope with the extra houses planned for our village.

Attached documents:

Comment: MM1 - LPMM18/4933  Respondent: John Harrison 11157345  Agent:

I have lived in Guildford for 24 years and am a recently retired Chartered Surveyor with experience of providing strategic and valuation advice to developers, corporates, banks and local and central government on mixed-use schemes in London and the Southeast with GDVs up to £1 Billion.

I shall address a number of the MM's individually but the principal concern is of a number of omissions, particularly in MM3 S3: Town centre.

Considered master plans can be very effective in helping to bring development forward and encourage site assembly resulting in efficient use of land. Clear guidelines enable adequate certainty for prices to be negotiated and ensure that the winning bidder is not the one who is most intent on gaming the planning system.

The lack of such adopted master plans in Guildford has created a number of current problems. For example in the Walnut Tree Close area, there is a plethora of sui generis student housing applications because this avoids the social housing obligations. A bit of market research shows that nationally the type of self-contained units are proposed fetch around £12,000 a year in the rent making them irrelevant to your typical student I'm not therefore an optimal type of
development. Residential applications on the river frontage there have been for up to 12 storeys which would adversely affect the development potential of sites on the opposite side of the road and is totally out of scale. The ad hoc approach results in no proper steps being taken to enhance the riverside frontage which could create a linear Park.

Similarly, there is no up-to-date master plan for the town centre, nor for the Bedford Road area, where Guildford Vision Group has been urging for the last eight years that the opportunity provided by a number of adjoining sites becoming available simultaneously should be seized. The council does not have to adopt the GVG proposal but it is short sighted to ignore the opportunity completely, and it has not offered a credible alternative means to reduce congestion on the hated one-way system.

Such crucial matters are still absent from the Modified Local Plan although at the Inspector’s request a hasty town centre policy has been added but this is necessarily substantially out of date. Further, it is limited to the town centre and there is no policy for the wider urban area such as that in which I live and where there is very substantial development pressure. This is a major omission and an appropriate, considered “S4” policy should be added. It is for reasons such as these that, I believe the plan is still unsatisfactory and call upon the Inspector to reopen the examination to ensure that the once in 100 year opportunities are properly considered and to avoid the type of skewed development that could take place in Walnut Tree Close which has become some kind of developer Klondike. There are several areas that should be designated strategic sites in order that the town centre is properly planned.

MM1 S1 the word appropriate could be a helpful addition: “sustainable appropriate development”. This might be helpful in the context of sui generis proposals such as student housing or Costco retailing, or other things not yet thought of, where there is no real policy but they might be inappropriate. When I was in practice getting something deemed sui generis was a major victory as it enabled a coach and horses to be driven through most planning policies. This might prevent that happening here.

MM1 Policy (3)(a). The blanket presumption that acceptable mitigation in the form of the SANG tax produces perverse results. The charges are substantial but the additional monitoring fees are no doubt welcome council income. Town centre housing development should be exempt from these provisions where the effect, particularly from flats, is likely to be minimal and could be rendered so by a prohibition on dogs. On a current application, a house near here fronting the Downs (a large and well used dog walking area despite the presence of ground nesting birds) there is still a requirement to pay the tax. Developers swallow it in order to get to consent but then use this in their viability studies to reduce or avoid social housing contributions. This policy is all about the tax and income generation and serves the community badly. It should be applied selectively in a considered manner.

The UN Intergovernmental Panel on Climate Change (IPCC) Report was published on 8 October under the headline “12 years to limit climate change catastrophe” which is within the Plan period. The scientific consensus calls for “urgent and unprecedented changes” to limit the use of fossil fuels. The plan (MM1 S1 and MM24) in no way reflects the urgency or importance called for. The Inspector should reopen the examination to ensure that these latest findings are incorporated into the plan philosophy and that best practice towards sustainability is adopted. The crucial omission are policies aimed at reducing car usage which should not only be included in these MMs, but also MM9 (P2 Greenbelt development), MM14 (E2 Employment) and MM5 (H1 Homes for all) limiting private parking and requiring employee car sharing for example “park and share” rather than park and ride given the decentralised nature of the business parks.

**Comment:** MM1 - LPMM18/5868  **Respondent:** Thakeham Homes (Sarah Sutcliffe) 17345441  **Agent:**

**Re: Guildford Local Plan: Consultation of Main Modifications (MMs)**

These representations are made by Thakeham Homes Ltd (‘Thakeham’) in respect of the land interest at Manor Farm, West Horsley (‘the site’). It should be noted that Thakeham are members of the Guildford Housing Forum (GHF). As a result, these representations should be read in conjunction with those made by the GHF.

Thakeham have been involved in the Examination sessions for the Local Plan, both as members of the GHF and through the submission of Hearing Statements, where concerns were raised regarding the restrictive wording of Policy A38: Land to the west of West Horsley and the implications of certain aspects of Policy H1: Homes for All. Thakeham do not consider that the proposed Main Modifications (MMs) address these concerns, and this alongside wider issues may result in the Council being unable to demonstrate a deliverable supply of housing.

In accordance with additional Representations made on behalf of Thakeham, Thakeham remains of the view that the MMs are not appropriate and further work is therefore necessary to ensure that concerns can be addressed.

**Main Modification 1**

As established through the examination, there is a demonstrable need for additional housing sites to help contribute to meeting the identified housing target as set out in Policy S1 (MM1). The published MMs and additional site allocations have sought to address this need.

Attached documents:

**Comment:** MM1 - LPMM18/5930  **Respondent:** Thakeham Homes (Sarah Sutcliffe) 17345441  **Agent:**

**Re: Guildford Local Plan: Consultation of Main Modifications (MMs)**

These representations have been made by Thakeham Homes Ltd (‘Thakeham’) in respect of the land interest to the east of Chinthurst Lane, Shalford (‘the site’). In addition to these representations. It should be noted that Thakeham are members of the Guildford Housing Forum (GHF). As a result, these representations should be read in conjunction with those made by the GHF.

Thakeham have been involved in the Examination sessions for the Local Plan, both through their involvement in respect of the GHF but also through the submission of Hearing Statements in respect of the above site, where concerns were raised regarding the need for more housing allocations to meet the Borough’s housing need and implications of certain aspects of Policy H1: Homes for All and Policy D2: Sustainability design, construction and energy. Thakeham do not consider that the proposed Main Modifications address these concerns, and this alongside wider issues may result in the Council being unable to demonstrate a deliverable supply of housing.

In accordance with additional Representations made on behalf of Thakeham, Thakeham remains of the view that the MMs are not appropriate and further work is therefore necessary to ensure that concerns can be addressed.
**Main Modification 1**

As established through the examination, there is a demonstrable need for additional housing sites to help contribute to meeting the identified housing target as set out in Policy S1 (MM1). The published MMs and additional site allocations have sought to address this need.

Given the substantial shortfall which was identified throughout the examination hearings there is evidently a need for further housing sites and therefore Thakeham are supportive of the council’s intention to allocate additional sites for housing.

**Sustainability Appraisal**

In support of the MMs, the council has prepared a Sustainability Appraisal Addendum (SA Addendum), dated September 2018. This document sets out the Council’s selection of reasonable alternative sites and provides justification for the Council’s preferred approach.

As part of this approach, the SA Addendum presents seven options for additional housing scenarios. None of these options include the potential for land to the east of Chinthurst Lane, Shalford, as a legitimate reasonable alternative site. Thakeham considers that this approach is unjustified.

The site is discussed briefly within Box 5.2 of the SA Addendum:

‘There is one site – Land to the east of Shalford, Chinthurst Lane (175 homes) - which performs poorly relative to other village Green Belt sites discussed here. Whilst the site is within walking distance of Shalford railway station, and comprises ‘amber-rated’ Green Belt, it falls within the locally designated Area of Greater Landscape Value (AGLV) and the access road is considered unsuitable for the scale of development.’

The SA Addendum therefore recognises the sustainable nature of the site given its proximity to a local transport hub, alongside the site’s limited contribution to the function of the Green Belt. However, the site is then discounted due to its location within the locally designated AGLV and concerns regarding the ability to provide a suitable access to serve the proposed development.

We would suggest that the SA Addendum is flawed as it has failed to assess this site in any detail and has therefore prematurely discounted the site as a plausible possibility of delivering housing. Whilst the site is assessed as ‘amber-rated’ Green Belt and is therefore only considered to be a medium sensitivity location, the council have gone on to conclude that the site should be discounted due to its AGLV designation. This however ignores that the Local Plan evidence base where the Council’s Green Belt and Countryside Study Volume III (2013), notes that “the site is surrounded by defensible boundaries”, and is therefore considered to perform a limited landscape function.

In addition, the council have concluded that the access road is considered unsuitable for the scale of development proposed. However, the council have limited evidence to support this conclusion and do not appear to have assessed opportunities for this constraint to be overcome through future proposals. In our view, this would not be a constraint to development. The site has a significant amount road frontage along its western boundary and it is therefore anticipated that there is sufficient opportunity for appropriate highway upgrades allowing a suitable access to be achieved to support the delivery of the site for approximately 200 dwellings.

This site could therefore deliver much needed housing in the short term within walking distance of local facilities and would therefore provide a suitable extension to the existing built up area with a minimal landscape impact.

For the reasons above, the site is considered to be available, suitable and achievable, and therefore deliverable in accordance with the NPPG. We have appended to this representation an indicative site plan without constraints to illustrate where development could potentially be delivered on the site.

We trust that these representations will be useful and clear, and we would be grateful of confirmation of receipt. In the meantime, please do not hesitate to contact me if you have any queries or require any further information.

Comment: MM1 - LPMM18/4503  Respondent: Aldertons Farm Residents Company Ltd (Paul Norman) 17427713

Agent:

MM1 – Policy S1: Presumption in favour of Sustainable Development – this statement does NOT apply to the proposed residential development allocations for Garlicks Arch, Aldertons Farm, Burnt Common (London Road), Clockharn Nursery or the industrial/commercial development allocation at Send Business Park as all these sites are within the Green Belt and as such are protected against development by both National and Local Planning Policies regarding development within designated sites. Furthermore no Very Special Circumstances have as yet been put forward to justify such developments.

Comment: MM1 - LPMM18/6243  Respondent: Monique Harrison 20834945

Agent:

The UN Intergovernmental Panel on Climate Change (IPCC) Report was published on 8 October under the headline “12 years to limit climate change catastrophe” which is within the Plan period. The scientific consensus calls for “urgent and unprecedented changes” to limit the use of fossil fuels. The plan (MM1 S1 and MM24) in no way reflects the urgency or importance called for. The Inspector should reopen the examination to ensure that these latest findings are incorporated into the plan philosophy and that best practice towards sustainability is adopted. The crucial omission are policies aimed at reducing car usage which should not only be included in these MMs, but also MM9 (P2 Greenbelt development), MM14 (E2 Employment) and MM5 (H1 Homes for all) limiting private parking.

Comment: MM1 - LPMM18/5063  Respondent: Surrey Nature Partnership (Mike Waite) 20840961

Agent:

To whom it may concern:

Thank you for this opportunity to comment further on your emerging Local Plan for Guildford Borough. Please consider these comments as both those of Surrey Wildlife Trust and the Surrey Nature Partnership, unless clearly indicated otherwise(*). The Surrey Wildlife Trust last commented on this matter in July 2017. The Surrey Nature Partnership is the government-mandated Local Nature Partnership for Surrey.

Policy S1.

Paragraph 4.1.4. The purpose of these modifications (from the previously consulted draft) appears to reflect changes to the National Planning Policy Framework revised in July 2018. If this is the case the list of features relevant to Guildford to which the presumption (in favour of sustainable development) will not automatically apply is not complete; ‘irreplaceable habitats’ have been omitted.
Main Modification: MM2          Number of representations: 641

MM2 (1)

GRA asks for the Examination to be re-opened so that the implications of the ONS population and household projections can be considered by the Inspector through a fair and transparent process. The Inspector was very clear throughout the Examination, and when he gave his provisional conclusions, that a further hearing on the housing figure may be necessary if the anticipated revised projections were significantly different. Such a change has transpired: the household formation rates in the new projections suggest housing numbers that are 22-23% lower than the previous projections for the same population increase. GRA does not consider Policy paragraph (1) to be soundly based (NPPF para 35 and footnote 19).

• The method for assessing the Objectively Assessed Need (OAN) is not clear and justified in relation to the 2016 ONS population and household projections. Nor was it sound in relation to the previous population and household projections when adjusted for
  o under-recording of students leaving at the end of their studies (as described by expert Neil McDonald in GRA Reg 19 responses and hearing statement, the latter assessment having been reviewed by the ONS) or
  o inconsistent assumptions relating to the housing needed to support economic growth.

• The proposed amount of Green Belt loss cannot be justified by exceptional circumstances in view of the revised OAN for Guildford.

• Additional development in Guildford Green Belt to contribute to unmet need from Woking would be perverse when Guildford is more constrained than Woking (as described in GRA hearing statement) and can no longer be justified in view of the revised OAN for Woking using the standard formula (263) or the Woking housing figure that was approved at Examination.
  o The test of exceptional circumstances is not met to justify this development in Guildford Green Belt. It would be inconsistent with sustainable development.
  o The Sustainability Appraisal that considered unmet need in the HMA was not founded on a soundly based and up to date Green Belt exceptional circumstances assessment.
  o GRA is troubled by the extent to which Woking’s unmet need was treated as a given at the hearings rather than as a figure yet to undergo scrutiny at examination.
  o GRA suggests any unmet need estimate should be seen in the context of Woking’s ambitious development plans and potential for redevelopment.
  o It is not credible, in light of the new housing need evidence, to base assessment of Woking’s unmet need on the 2015 West Surrey Strategic Housing Market Assessment (SHMA).

• The supply in Table S2a is excessive, notwithstanding the need for resilience, being twice the figure of c360 homes a year required to achieve the Inspector’s ambition for economic growth.
  o The supply is disproportionate given the context of the exceptional circumstances required to justify Green Belt development.
The supply has been identified by turning too readily to Green Belt and has not been assembled pursuing a brownfield first approach consistent with the NPPF or the Inspector’s requirement that no stone should have been left unturned in identifying brownfield opportunities.

The quantum of additional early supply cannot be considered sound in light of the revised OAN. The Sustainability Appraisal relied upon to justify these further Green Belt sites is not soundly based on exceptional circumstances that justify Green Belt loss.

The distribution of supply across spatial locations in Table S2b is not sound being over reliant on Green Belt sites to the extent it reflects a Green Belt first approach. This is exemplified by the way Green Belt potential development areas, including the three strategic sites, were identified very early without putting comparable effort into brownfield site assembly. This bias has been perpetuated with the recently proposed further Green Belt sites where the justification appears to be that these sites have already been appraised.

A reduced OAN increases the opportunity to identify and deliver brownfield sites during the life of the Plan and for this regeneration to make a significant contribution to overall need.

Draft para 4.1.21 already describes that in addition to identifying sites to meet the current OAN, “as part of regeneration efforts, more housing is likely to come forward over the plan”. For the test of exceptional circumstances to be met, these sites should be factored into the spatial locations in Table S2b. The test of exceptional circumstances has not been passed if anticipated regeneration will provide additional homes surplus to OAN.

There is a strong case for taking out at least one strategic Green Belt site. The revised housing figures make table S2b out of date and in need of re-examination.

GRA notes statements made by the Council since the Examination hearings indicating that it took a decision from the outset to opt for a high housing figure in order to fund infrastructure.

An authority may, of course opt to propose for Examination a housing figure that is higher than the OAN. However, in the case of the Draft Guildford Local Plan, the key issue is that a housing figure greater than the OAN has a bearing on whether exceptional circumstances apply that justify removing land from the Green Belt.

The justification given for Green Belt development has been housing need and developers only fund infrastructure to mitigate the excess demand they create.

GRA submits that a housing requirement of 630 plus 42 for Woking’s unmet need is not sound and does not provide a justification for Green Belt loss on the scale proposed, town cramming or the increased congestion that would arise in a constrained gap town.

Appendix 1 of this response is an assessment by expert Neil McDonald of the IMPLICATIONS OF THE 2016-BASED HOUSEHOLD PROJECTIONS ON THE HOUSING NEED OF GUILDFORD BOROUGH.

Crucially, he calculates that updating his previous estimate of the OAN* (460 homes a year) to reflect the new ONS household projections reduces the figure to 360 homes a year (rounded from 361).

* Derived applying 2014 household formation rates to the 2016 population projections

He also submits that there ought to be similar reduction in the GLHearn figure with 629 potentially reducing to 480-490 homes a year.

He sets out that the main reasons for the differences with GL Hearn, as established in the statement of common ground, are:
Their cautious view of the proportion of the Guildford population which will be available for work (i.e. economically active), which he believes is simply not compatible with the Inspector’s ambitious view of the future rate of jobs growth.

GL Hearn’s figures are based on OBR economic activity rates consistent with a jobs growth forecast of 0.23%; those rates are not consistent with the Inspector’s view that planning should be on the basis of jobs growth that is more than 3 times as great at 8%. In contrast, the NMSS analysis is based on Experian forecasts which envisage job growth at a similar rate to that suggested by the Inspector.

GL Hearn’s insistence that the population projections do not include any student growth at all, despite a growth in the 18-23 population that is much larger than the predicted growth in the number of students living in rented accommodation.

The updated OAN of c360 homes a year to support the Inspector’s ambitious rate of economic growth is not out of step with the OAN of 431 derived using the standard method (noting of course that this Plan is being examined under the previous approach).

We wish to reserve the right to comment in the light of what GBC proposes in response to the new ONS household figures. In the meantime, based on economic need to meet the inspector’s ambitious growth assumptions, economic participation rate assumptions consistent with this, the new household projections and the greater proportion of working age within the local population reducing the need to bring workers in, Neil McDonald identifies that the OAN should be revised to 360.

The current figure in the Draft Plan, of 630+42 extra homes a year, is 75% higher than the number of homes needed to support ambitious economic growth and out of step with both the new ONS figures and the new Government formula.

Para 4.1.9b In the last sentence, the meaning of “the policies which are most important for determining a planning application would not be considered up-to-date” should be redrafted to be intelligible to a non-expert and is too imprecise to reflect policy.

MM2 (2a)
Persisting with a 41,000 sq m allocation of comparison retail floorspace:

- is inconsistent with evidence of retail change that has continued since the hearing
- puts existing retail space, including the High Street, at risk
- denies the potential for other uses and cannot be justified when that land could potentially be allocated for other uses that are currently being directed to Green Belt
- does not respond adequately to the approach advocated by the Inspector of promoting mixed use development in the town centre

Agent:

NOTE ON THE IMPLICATIONS OF THE 2016-BASED HOUSEHOLD PROJECTIONS ON THE HOUSING NEED OF GUILDFORD BOROUGH

Introduction
1. The Office for National Statistics (ONS) published the 2016-based household projections for local authorities (the ‘2016 Sub-national Household Projections’ -2016 SNHP’) on 20 September 2018. These are the first set of household projections produced by the ONS. Previously the official household projections were produced by the predecessors of the MHCLG. The last set of projections produced by the MHCLG were the 2014-based projections (the ‘2014 SNHP’). The new projections use more recent data and a different methodology. Generally, the new set suggests slower household growth than the 2014 SNHP.

2. There are two main components to an official set of household projections:

   a. A set of population projections. Both MHCLG and the ONS have based their projections on the last available set of ONS sub-national population projections (SNPPs). The 2014 SNHP was based on the 2014 SNPP and the 2016 SNHP on the 2016 SNPP

   b. Projections of household formation rates. To turn a set of population projections into a set of household projections estimates need to be made of how the population will group itself into households i.e. how household formation rates (or, more strictly, household representative rates ‘HRRs’) will change. Both the MHCLG and ONS methods adopt a trend-based approach. The MHCLG approach disaggregated the population by 5-year age groups, sex and marital status whereas the ONS have only use age and sex groups – and a much shorter trend series. The ONS approach produces lower household formation rates and for some authorities, including Guildford, the difference is significant.

3. Prior to the publication of the 2016 SNHP it was common practice to update the 2014 SNHP using later population projections (the 2016 SNPP, possibly updated to reflect the 2017 Mid-year Population Estimates) and the household formation rates from the 2014 SNHP. That approach usually provides a reasonably reliable indication of a forthcoming new set of household projections. However, as the latest household formation rate projections are so different from the 2014-based set, such estimates have generally over-estimated the household growth which the 2016 SNHP has now projected.

What the new projections mean for Guildford

4. It was common ground between GL Hearn (Guildford Borough’s advisors) and NMSS (who have advised the Guildford Residents’ Associations) that:

   a. Updating the 2014 SNHP with the 2016-based population projections suggested a starting point demographic estimate of Guildford’s housing need of around 420 homes a year 2015-34.

   b. Further updating this estimate to reflect the ONS’s 2017 mid-year population estimates (which showed lower population growth than anticipated in the 2016 SNPP) reduced the demographic starting point to around1 400 homes a year.

   c. The jobs growth rate suggested by the Inspector implies a faster population growth (and hence more homes) than suggested by the demographic projections.

   d. There is no need to make a further market signal/affordability adjustment on top of the uplift required to support economic growth.

5. There were, however, large differences between GL Hearn and NMSS about how the number of extra homes needed to support job growth should be estimated: GL Hearn calculated this at 606 homes a year 2015-34 and NMSS at 460 homes a year. The differences are largely concerned with the assumptions made about the proportion of the population that will be in work or seeking work i.e. economic activity rates.

6. GL Hearn and NMSS also differ on whether the above figures will provide adequate accommodation for the expected increase in the number of students living in rented accommodation in Guildford. NMSS believe that it will; GL Hearn believe that an extra 23 homes a year are needed for students. Adjusting the homes for jobs led figures accordingly, the
GL Hearn estimate of the number of homes needed each year (the OAN) is 629 (i.e. 606 + 23) whereas the NMSS figure is 460 (i.e. 460 + 0).

7. Full details of the comparison between the NMSS and GL Hearn estimates is set out in the table at Appendix 1, which is taken from a statement of common ground agreed between GL Hearn and NMSS.

8. Note that all of the above numbers are based on the household formation rates (HRRs) from the 2014-based household projections. They are now out of date and need to be revised to reflect the 2016-based household projections.

footnote 1 There were small differences between the exact numbers calculated but these were not material.

9. When the key figures are updated to reflect the 2016-based household formation rate projections:

a. The number of homes implied by the unadjusted 2016-based household projections is 325 homes a year (2015-34) – compared with 420 homes a year based on using the 2016 SNPP to update the 2014-based projections. This is a reduction of 23%.

b. The NMSS calculation of the number of homes needed to support the Inspector’s view of the rate of jobs growth is 361 homes a year – compared with 460 homes a year previously estimated. This is a reduction of 22%.

10. There will be similar reductions in the GL Hearn figures, suggesting a revised estimate in the range 480-490 homes a year 2015-34, although the exact number cannot be calculated without the detailed population age profiles for the GL Hearn projections.

**Comment:** MM2 - LPMM18/3255  **Respondent:** Beverley Mussell 8559041  **Agent:**
Please ask the Inspector of the Local Plan to re-open the examination and amend the Plan to take into account the lower housing need figures that have been produced by the Office for National Statistics.

MM2

The current figure of 672 is now proved to be grossly inflated. The actual need is 360.

Even this number will further damage living conditions for residents of Guildford who already suffer high congestion and pollution levels.

Most of the roads into Guildford are packed to a standstill at peak morning and evenings times. The polluted smog that hangs over the whole area from these exhaust fumes doesn't clear at all on still days.

This is increasing childhood asthma rates and the number of sufferers from breathing diseases such as COPD. No one has the answers which provide a better infrastructure to correct this. Why make it worse for no good reason?

How much of the great push for more houses is driven by the banks and financial system?

Who wants a house where you can't breathe clean air?

There is also the matter of inadequate sewerage provision even for the present population.

Why should greenbelt land (which should be sacrosanct anyway) be lost to make Guildford a worse place to live?

Let's not do this when there is no need to.

It is unfair to expect Guildford to build on Green Belt to make up for a housing shortfall in Woking. Let Woking deal with their own shortfall!

Attached documents:

Our Group is a member of the Guildford Residents Association, and we fully support their submission, in particular the request that the Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

The following are detailed comments relating to our own area and to the town centre that is adjacent our area, and which provides almost all our amenities.

4.1.9(c) Taking into account a reduced housing target, Blackwell Farm should be removed from the site allocations. This area of land, on the North Downs and adjacent the AONB, is important as a component of Guildford’s rural setting. It also has the potential for providing much increased leisure activities, including walking. It could be made easily accessible from our area.

Attached documents:
Main Modification 2 – Policy S2 (Spatial Strategy)

It is worth taking a look back at the Sustainability Objectives in table 4.1 of the 2016 Sustainability Appraisal (SA) – table 3.1 of the Sustainability Appraisal (SA Report Addendum, September 2018) (SA Addendum) – which includes:

3. Create and sustain vibrant communities;

4. Maintain Guildford Borough and Guildford Town’s competitive economic role;

9. Provide sufficient housing of a suitable mix taking into account local housing need, affordability, deliverability, the needs of the economy, and travel patterns;

10. Minimise use of best and most versatile agricultural land and encourage the remediation of contaminated land;

11. Conserve and enhance landscape character;

13. Make the best use of previously developed land and existing buildings;

16. Achieve a pattern of development which minimises journey lengths and encourages the use of sustainable forms of transport (walking, cycling, bus and rail)

At 5.2.9 (second and third paragraphs) of the SA Addendum, AECOM say:

“First and foremost the strategy reflects an understanding that there is a hierarchy of places/ potential growth locations within the Borough, and that a sequential approach to allocating development sites must be followed. In other words, capacity should be fully utilised at the most suitable sites (e.g. town centre sites), before moving down to the next tier in the hierarchy, and so on until a residual amount of growth is left to be delivered at sites in the bottom tier, namely village Green Belt sites, which tend to be less suitable for development.

However, the strategy also reflects an understanding that there must be flexibility to deviate from a strict sequential approach, in response to the many issues that can serve to complicate the question of development site suitability. In practice, this means that there can be a need to pass over allocating a site in one tier of the hierarchy, in favour of allocating a more suitable site in a lower tier. Factors that influence development site suitability, unrelated to location in the hierarchy, include (but are not limited to) –
• timescales for delivery (see discussion above, under ‘trajectory’);
• constraints, e.g. in relation to AONB, SPA, flooding, heritage, biodiversity;
• reliance upon, or ability to facilitate provision of, essential infrastructure; and
• policy constraint, e.g. Green Belt sensitivity.”

When we look at the allocations in the GSDLP (Figure 5.2 of the SA Addendum) this shows how scant regard has been given to the spatial hierarchy:
The SA Addendum, at 5.4 (Establishing the reasonable alternative housing scenarios) does not explain what was done to ensure all of the urban and brownfield areas had been considered; rather, it sets out to explain where else in the lower tiers of the hierarchy housing could go.

In the June 2016 SA, Table 6.2, highlighted below, all of the options analysed retained identical numbers for several of the top three bands in the hierarchy: Town centre, Guildford Urban Area and Ash & Tongham Urban Area.

| Table 6.2: Spatial strategy alternatives (N.B. greyed-out rows show the constant) |
|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|

| Sand March (green rated sites) | 50          | 50          | 50          | 50          | 50          | 50          | 50          | 50          |
| Variation on OAH (%) | 0             | 3             | 12           | 14           | 14           | 11           | 27           | 30           |

This is indicative of the failure to identify alternative sites focusing firstly on more challenging brownfield sites in the Town Centre and Guildford Urban Area.

The independent expert, Neil MacDonald, has demonstrated to the Guildford Residents Associations that about 360 homes a year would support the ambitious economic growth proposed by the Inspector.
630 homes per year would appear to be out of step with both the new ONS figures and the Government’s Standard Method.1

The figure of 630 homes is based on some inappropriate assumptions.

The Society has common ground with GRA in its analysis, which is consistent with our own analysis.

All that being said, the Spatial Strategy adopted by the Council, contrary to their own Sustainability Assessments, is to direct development onto the Green Belt, citing exceptional circumstances. This argument barely stood up before the publication of the new household formation projections. It certainly does not do so now, and there may be a strong case for removing one, two or even three strategic (Green Belt) sites from the GSDLP.

For this reason, quite apart from the other reasons we have cited in our response, we believe the Examination should be reopened.

This policy has been almost entirely amended but not rethought. It fails to take full account of the Inspector’s guidance in some key areas, and it maintains a higher level of residential provision than is rational or reasonable – particularly having in mind the ONS data on population and household formation as at 2016.

It was common ground between the Council’s advisors (GL Hearn) and the advisors to the Guildford Residents’ Associations (NMSS) that:

1. Considering the 2016-based population projections provided a base demographic estimate of Guildford’s housing need of circa 420 homes per year from 2015 to 2034.
2. The ONS 2017 mid-year population estimates have reduced that number, suggesting around 400 dwellings per annum.
3. The Inspector chose to apply a jobs growth rate that implied a faster population growth than was suggested by the demographic projections.
4. There is no need to make further market signal/affordability adjustment on top of the uplift required to support economic growth.

There were areas of difference, leading to GL Hearn’s OAN at 629 versus NMSS’s OAN at 460 homes per year.

These figures were taken from the Household Formation Rates from the 2014-based household projections. The Household Formation Rates from the 2016-based household projections are considerably lower.

This change of circumstances would have a substantial impact on the Exceptional Circumstances argument made in the GSDLP for the release of various parcels of Green Belt land.

CONCLUSION

The Society, therefore, calls for a follow-up hearing, as part of the EIP, to arrive at a suitable housing target, having regard to the weight of evidence at the earlier hearings that has been shown to be more plausible having regard to the ONS household formation data published last month.
The Guildford Society had expressed its concerns about the staged increase in housing delivery and is pleased to see paragraph (2) deleted.

There does not appear to be any mechanism in the Submission Local Plan (as Amended) to allow for Grampian Conditions to be applied to ensure housing does not come before (or separately from) the infrastructure upon which it will rely and which it will doubtless otherwise impact.

The Guildford Society considers that Paragraph 2a should have been amended to avoid the interpretation that “at least… 41,000 sq m of comparison retail floor space (gross)” will be provided. This is to misinterpret the Evidence Base (which is highly speculative) and the nature and content of discussions and the Inspector’s guidance during the Examination in Public.

The main issue is that Policy S2 does not spell out, in any coherent or conclusive way, the reasoning behind putting the majority of the housing development, allocated in the GSDLP, in the Green Belt. It is our clear view that the Exceptional Circumstances have not been proven.

We have included at APPENDIX 2 – Landmark Chambers: Exceptional Circumstances a series of Cases which deal with the Green Belt.

It seems to us that there are several cases that need careful analysis:

1. Gallagher Homes Ltd v Solihull Borough Council [2014] EWHC 1283 (Admin), Hickinbottom J, in which it was said that: “Preparing a new local plan is not, of itself, an exceptional circumstance justifying alteration to a green belt boundary”. The case notes continue: “the question of whether circumstances are exceptional for these purposes requires an exercise of planning judgment, what is capable of amounting to exceptional circumstances is a matter of law, and a plan-maker may err in law if he fails to adopt a lawful approach to exceptional circumstances. Once a Green Belt has been established and approved, it requires more than general planning concepts to justify an alteration”.

2. IM Properties Development Ltd v Lichfield DC [2014] EWHC 2440 (Admin), Patterson J, in which, distilled from Gallagher (above), it was said: “or revisions to the green belt to be made exceptional circumstances have to be demonstrated. Whether they have been is a matter of planning judgment in a local plan exercise ultimately for the inspector”. 
3. Calverton Parish Council v Nottingham City Council, Broxtowe Borough Council and Gedling Borough Council [2015] EWHC 1078 (Admin), Jay J, in which it was said: “the fact that a particular site happens to be suitable for housing development cannot, without more, constitute an exceptional circumstance justifying an alteration of the Green Belt”.

4. Hunston Properties Ltd [2013] EWCA Civ 1610; [2014] JPL 599, Kay and Ryder LJJ, Sir David Keane; this case deals with Very Special Circumstances rather than Exceptional Circumstances. “On the facts, the Inspector was obliged to find a housing shortfall. However, the weight to be given to such a housing shortfall (and whether it constituted ‘very special circumstances’ for the purposes of NPPF 87) was a matter of planning judgment. The weight to be attached to the shortfall may, as a matter of planning judgment, be reduced where a shortfall is inevitable due to a district being subject to policies which restrict development (such as AONBs, National Parks or Green Belts)”.

5. R (Luton BC) v Central Bedfordshire Council [2014] EWHC 4325 (Admin), Holgate J, in which it was said: “…paras. 87-88 of the NPPF provide guidance regarding the approach to be adopted if there is a proposal for development of an area within the Green Belt set out in a local plan: “very special circumstances” have to be shown. This is a stricter test than that in para. 83 in respect of changing the boundaries of the Green Belt in the local plan.

6. R (Lee Valley Regional Park Authority) v Broxbourne Borough Council [2015] EWHC 185 (Admin), Ouseley J, in which it was said: “A shortfall in housing land supply can, as a matter of policy, be a very special circumstance, although the occasions when it is likely to suffice by itself to warrant the grant of permission for housing development in the Green Belt are expected to be few and far between”.

7. R (Wildie) v Wakefield Metropolitan BC [2013] EWHC 2769 (Admin), Stephen Morris QC, “Given that inappropriate development is by definition harmful, the proper approach [is] whether the harm by reason of inappropriateness and the further harm, albeit limited, caused to the openness and purpose of the Green Belt was clearly outweighed by the [countervailing benefit arising from the development] so as to amount to very special circumstances justifying an exception to the Green Belt policy”. Furthermore, “whilst principally a case on the content of the “very special circumstances” test, Doncaster is also a case on the adequacy of the reasons given for a finding of very special circumstances. Although this is a case of an inspector's decision and so does not directly relate to the Article 31 duty upon a local authority, nevertheless it does demonstrate the need for sufficient reasons so as not to be left in doubt as whether the very special circumstances test has been correctly applied”.

8. Turner [2016] EWCA Civ 466, Arden, Floyd and Sales LJJ, in which it was found: “The concept of “openness of the Green Belt” is not narrowly limited to the volumetric approach suggested by Mr Rudd. The word “openness” is open-textured and a number of factors are capable of being relevant when it comes to applying it to the particular facts of a specific case. Prominent among these will be factors relevant to how built up the Green Belt is now and how built up it would be if redevelopment occurs (in the context of which, volumetric matters may be a material concern, but are by no means the only one) and factors relevant to the visual impact on the aspect of openness which the Green Belt presents.” The findings continued: “Openness of aspect is a characteristic quality of the countryside, and “safeguarding the countryside from encroachment” includes preservation of that quality of openness. The preservation of “the setting … of historic towns” obviously refers in a material way to their visual setting, for instance when seen from a distance across open fields. Again, the reference in para. 81 to planning positively “to retain and enhance landscapes, visual amenity and biodiversity” in the Green Belt makes it clear that the visual dimension of the Green Belt is an important part of the point of designating land as Green Belt.” Furthermore: “The openness of the Green Belt has a spatial aspect as well as a visual aspect, and the absence of visual intrusion does not in itself mean that there is no impact on the openness of the Green Belt as a result of the location of a new or materially larger building there. But, as observed above, it does not follow that openness of the Green Belt has no visual dimension”.

All of these extracts are small snippets from the cases, and so they do not amount to a legal view or an emphatic position. They do, nonetheless, indicate to us that the failings of the Spatial Hierarchy mean that the plan falls short of its Exceptional Circumstances test.

CONCLUSION

This Policy S2 is not yet amended in a form and to an extent where it is sound. The principal reason for this is that the evidence undermines the figures in the Plan and, in turn, damage or destroy the ‘Exceptional Circumstances’ argument for amending the Green Belt boundaries – a fundamental plank of the GSDLP.
Paragraph 4.1.9a is broadly acceptable as a statement of case and fact (separating it for a moment from the housing numbers themselves). This paragraph should not seek to confuse the provision of student accommodation with the provision of housing per se. The failure of the plan to differentiate is already leading to developments that could, and perhaps should have delivered market homes, being brought forward exclusively for students. This provision of student homes does not alter the underlying need for market homes and should be deleted. The policy and plan should, if functioning well, allow graduates and post-graduates to live and remain in the area should they choose to pursue their careers and build their lives in Guildford Borough.

Paragraph 4.1.9aa refers to outdated housing numbers, highlighting Woking’s undersupply of homes during the Plan period at 630 homes, whereas the ONS 2016 household formation data project that household formation over the plan period will be 146 homes per year fewer.

4.1.9ab is incorrect for the reasons given above.

4.1.9ac should be informed by the most recent population data. What this table continues to highlight is the abject failure of the Council, during the plan-making process, to follow its own spatial hierarchy, to work to bring forward Town Centre and Urban Area housing, and to take all reasonable steps to avoid having to develop green belt sites other than those where previously developed land makes development hierarchically more suitable, and where such development is sustainable.

**SUGGESTED RE-WORDING**

4.1.9b The Society does not agree with the wording of “…the policies which are most important for determining a planning application would not be considered up to date”. This is misleading and inappropriate. We would suggest this be worded as follows: “where the Housing Delivery Test indicates that the delivery of housing is substantially below the housing requirement over the previous three years, some policies, including policies which are most important for determining a planning application may not be considered up-to-date”.

4.1.10 The Society generally supports the principle of using the ‘Liverpool’ approach but considers the housing numbers themselves need to be adjusted (see above). We are, however, concerned at the soundness of a Plan which seeks to spread its current shortfall over the life of the Plan but where much of the development in the Plan is predicated on the delivery of the A3 (Policy ID2) which is outside the Council’s control.
CONCLUSION

The Council must show it is able, within its control, to deliver sufficient housing throughout the Plan period for the Liverpool method to be appropriate. In this instance, reliance on the A3 (beyond the Council’s control) must put this at risk and the Society advocates a stronger Town Centre Policy framework to require the Council to put themselves in a position (in policy terms) where they can replace undeliverable (or Grampian-constrained) housing in the Town Centre and Urban Areas during the plan period.

4.1.11 The Society accepts the paragraph as amended.

Monitoring Indicators

These need to be adjusted to take account of the most recent household formation forecasts.

Comment: MM2 - LPMM18/6025  Respondent: C Sheard 8562561  Agent:

MM2 Policy S2 Planning for the Borough- our spatial development strategy

I object most strongly to the increase in housing numbers proposed to contribute towards Woking Borough Council’s unmet needs. The latest ONS projections released in September 2018 show a considerable reduction on the figures released earlier on which presumably this Plan is based. The difference between the latest and earlier figures risks rendering the whole Plan unsound and totally undermines the Council’s case for infringing on the Greenbelt. Rather than being increased, the overall housing need should be reset to a figure closer to the ONS projections say around 330 dwellings per annum which would still give the Council a contingency of 10% or so above the actual projected need of ca 300 households per year which would give the Council some breathing space for any years in which it fell short of its target.

Comment: MM2 - LPMM18/5982  Respondent: Cobham Conservation and Heritage Trust (David Bellchamber) 8565217  Agent:

Submission Local Plan: Strategy and Sites

The Trust writes to comment on the current form of the Local Plan to say that it considers it to be unsound (including with the modifications suggested). Among the relevant points are that:

1. The housing numbers need to reflect the latest ONS figures and projections which are substantially reduced from those used for the examination, not only for Guildford Borough Council but also for Woking Borough Council.

2. The council has not properly observed its own hierarchy of development. The Plan has placed too much reliance in developing sites in the Green Belt and other places in the borough before sufficiently taking into account opportunities for using brownfield sites, and the huge potential for development in the town centre of Guildford, especially when the future change of uses from the likes of retail and office to residential is considered. The result is that there are not the exceptional circumstances to warrant the taking of land out of the Green Belt for many if not all the areas suggested in the Plan.
3. There is insufficient consideration of infrastructure requirements to support proposals and in particular too much reliance on improvements to the A3 for which clear commitments for projects and funding are needed from Highways England and are therefore beyond the council’s control.

4. The view of the Trust is that the public hearings should be re-opened to allow re-examination.

**Attached documents:**

**Comment:** MM2 - LPMM18/3206  **Respondent:** Tyting Society (David Thorp) 8565601  **Agent:**

The Tyting Society is a Residents Association representing 88 households, some 2 kilometres from the centre of Guildford, and sited in AONB land. Our particular concerns relate to MM2 and MM3, which are outlined below.

The scale of the increase in housing included in the plan would have an important impact deleterious on our local Tyting area, which is accessed by two narrow single tracked lanes. Increased traffic will be difficult to handle without loss of their existing character.

We ask that the housing target be reduced, for the reasons set out below. We are also concerned about the specific development proposed at Hornhatch Farm in Chilworth, just south of our area (MM43).

MM2 - policy S2. The examination should be re-opened because the housing figures should be revised in the light of the new ONS forecasts of population and households. The stated housing requirement is not a sound basis for the Local Plan or justification for such an extensive loss of Green Belt land.

MM2 - there is a strong case for taking out a strategic site and more scope for better town centre provision. This makes table (S2), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 - independent expert, Neil MacDonald, has demonstrated that 360 homes per year would support the ambitious economic growth rate proposed by the Inspector. 630 homes a year is out of step with the new ONS figures and the Government's new standard methodology. 630 is based on inappropriate assumptions that inflate the figures due to excessive allowance for student homes and their low economic participation.

MM2 - it is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained. The number of houses needed in Woking has also been reduced and has also not been re-examined.

**Attached documents:**

**Comment:** MM2 - LPMM18/1776  **Respondent:** Mrs Diana Brighton 8566145  **Agent:**

Dear Sirs

I am writing in response to the modifications you propose to the development of the former Wisley Airfield. I think that the proposed modifications will still be to the detriment of the area and do not negate the results of the enquiry held last year.

To start with:

**The number of houses the Council is proposing for this site is wrong because it is based on outdated figures.** I believe that the hearing should be re-opened so that the latest ONS figures and household projections can be taken into

30 of 2575
account. These figures particularly need revision because they are allowing for meeting some of Woking’s unmet need. This should not be allowed because it will need the release of green belt land. The council is not following its own strategies which require that developments take place first in the town centre, the urban area and brownfield sites and only then to land in villages and green belt land.

<td></td>
<td></td>
</tr>
<tr>
<td>3. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. The Clandon Society Objections and Concerns Which I Share

The A247
I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247.

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1 million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1 million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247
The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. The Guildford Residents’ Association’s Objections and Concerns Which I Share

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.
Dear Sir or Madam,

Effingham Parish Council (EPC) thanks Guildford Borough Council (GBC) for the opportunity to comment on the main modifications to the Local Plan (LP), 2018. EPC has participated in the consultation process from the start and we had thought that the plan, as it was before the examination in June/July, was broadly satisfactory and should have been acceptable to national planning authorities.

We are, therefore, surprised that legislation allows for the LP process to pass to an unelected planning official to take control of the last critical modifications. We are particularly concerned that the planning official has the powers to:

- Make a higher housing target.
- Demand a contribution to Woking’s unmet need.

We had understood that the Government planning processes required a greater amount of local involvement. This is what we had expected after completing and returning to GBC the many consultations and surveys into the LP over the last few years. We are particularly concerned to see that years of consultation between GBC and their residents can be overturned by an unelected official without any democratic redress. With regard to these two matters EPC:

1. objects to the new housing target which has increased beyond what was ‘agreed’ by GBC and its residents through previous consultations. We would ask, therefore, that the housing target be reduced to what it was previously.

2. objects to the contribution to Woking’s unmet need. This is the first time this has come up as a subject for consultation. Woking’s unmet housing need should be met by Woking, if not in their current LP then in the longer term. Is it not bizarre that Woking’s unmet need can be so easily shifted on to other authorities? Woking should meet its own need in full.

Comment: MM2 - LPMM18/1932  Respondent: Mrs Fiona Curtis 8570273  Agent: Mrs Fiona Curtis

MM2  Spatial development strategy and housing numbers

I would request that the Inspector takes into account the recent findings of Analyst, Neil MacDonald who has looked at Guildford’s ‘needs’ in light of the new ONS data using both old and new methodology. These findings suggest the housing target way exceeds the number needed even with an uplift to boost the economy and taking on Woking’s unmet need. The new data might also suggest that Woking no longer has an unmet need, in which case this should be removed along with Greenbelt sites. GGG has calculated an actual need of 301 new dwellings and GRA, of 360. A figure in that region would mean that development could be met using brownfield sites alone without the inclusion of Greenbelt/Greenfield sites for which there appears to be no demonstration of exceptional circumstances.

Tables S2a and S2b are out of date and should be reviewed.
Retail figures are too high, they must reflect National changes in shopping trends and High Streets must be designed to be more versatile, flexible and include a higher population of residents than is currently planned for to keep ensure the town thrives on all levels.

Attached documents:

**POLICY S2**

BARTON WILLMORE CONSULTANTS have concluded that the correct housing number for Guildford Borough is in fact 431 - not 789 as proposed!

Attached documents:

**Comment:** MM2 - LPMM18/2177  **Respondent:** G Mansbridge 8571137  **Agent:**

**Comment:** MM2 - LPMM18/4528  **Respondent:** Gillian Cameron 8571585  **Agent:**

**Comment:** MM2 - LPMM18/5847  **Respondent:** Mr Gordon Farquharson 8571617  **Agent:**

MM2

The Examination should be re-opened in the light of the latest ONS figures for housing. 630 p.a. is excessive now and it is not justified to use so much Greenbelt land.

Woking’s figures are also reduced and it is not reasonable for Guildford to lose greenbelt land to cover its reduced needs.

There should be increased development in the Town Centre rather than on Greenbelt land.

Attached documents:

MM2- As a member of the Merrow Residents Association, I have access to the expert advice from Neil MacDonald from NMSS who has been contracted by the Guildford Residents’ Association to give advice on the ONS data. The MRA has access to and is entitled to make use of that advice as a contributing member of the GRA. Mr MacDonald suggests there there large differences between GL Hearn and NMSS about how the number of extra homes needed to support job growth should be estimated: GL Hearn calculated this at 606 homes a year 2015-34 and NMSS at 460 homes a year. The differences are largely concerned with the assumptions made about the proportion of the population that will be in work or seeking work i.e.

economic activity rates. GL Hearn and NMSS also differ on whether the above figures will provide adequate accommodation for

the expected increase in the number of students living in rented accommodation in Guildford. NMSS believe that it will; GL Hearn believe that an extra 23 homes a year are needed for students.
Adjusting the homes for jobs led figures accordingly, the GL Hearn estimate of the number of homes needed each year (the OAN) is 629 (i.e. 606 + 23) whereas the NMSS figure is 460 (i.e. 460 + 0). It is the view of Mr MacDonald that when the key figures are updated to reflect the 2016-based household formation rate projections:

- the number of homes implied by the unadjusted 2016-based household projections is 325 homes a year (2015-34) – compared with 420 homes a year based on using the 2016 SNPP to update the 2014-based projections. This is a reduction of 23%.
- the NMSS calculation of the number of homes needed to support the Inspector’s view of the rate of jobs growth is 361 homes a year – compared with 460 homes a year previously estimated. This is a reduction of 22%.

There will be similar reductions in the GL Hearn figures, suggesting a revised estimate in the range 480-490 homes a year 2015-34, although the exact number cannot be calculated without the detailed population age profiles for the GL Hearn projections.

Based on the new information from ONS and NMSS, and the material reductions in housing need that these point to, I take the view that it is essential that the Examination of the Local Plan is re-opened by the Inspector to allow the latest ONS and NMSS data to be examined and discussed.

**Guildford Local Plan Examination: comments on main modifications**

**MM2**

The revised ONS projections make it clear that the housing number for Guildford and the Housing Market Area should be reduced very significantly. I object to the process continuing without a very significant reduction in the housing number. The examination must be re-opened.

Attached documents:

**Comment:** MM2 - LPMM18/5684  **Respondent:** Douglas French 8574369  **Agent:**

**SCOPE OF CONSULTATION**

I object to the rules imposed by the Council on this consultation which exclude any comment that strays outside the main modifications made to the latest draft. This sees the local plan in segmented compartments whereas a modification to one component of the plan can have a bearing on the acceptability or otherwise of another component and also on the aggregate effect of the plan on a particular location. In this case the objections stated above are exacerbated by the addition of 40 houses and a travellers’ site on Send Hill, 60 houses at Clockbarn in Tannery Lane and a 25% increase in the size of Send Business Centre, notwithstanding its location in the sensitive Wey Navigation conservation area, its severely restricted road access, its extremely poor public transport connections and the fact that there is no demand, as evidenced by the amount of industrial space in Send that has been vacant for an extended period.

**IMPACT ON SEND**
The aggregate impact of all these developments results in a concentration on Send and Send Marsh which by any standard is excessive and unreasonable considering that they are at the bottom of the spatial hierarchy as defined in the Sustainability Appraisal. Send appears to account for approximately 56% of proposed development in the villages and no reasons are offered even to try to justify why this percentage is so high.

The draft plan should be thought through again with a view to the amount of development required by the Borough being verified more reliably by Guildford Council than it has been so far, having proper regard to the expert evidence and up to date data now available from better sources. This should be followed by a more even distribution of development between a wider selection of villages. Until this is done the draft plan will fail on all key criteria.

**HOUSING NUMBERS – POLICY S2 and TABLE at MM2**

There is a serious discrepancy on projected housing numbers which undermines the credibility of all of the proposals based on them. At the Public Examination the figure being used by the Inspector was 789 houses per annum, which itself represented an increase over the previous estimate for reasons which were not transparent. Since then the respected consultancy, Barton Willmore, has said that on their calculations the figure should be 431. They disclosed their methodology unlike G L Hearn acting for Guildford Council who had refused to disclose theirs. The September 2018 figure from the Office of National Statistics claimed that appropriate growth in Guildford Borough can be achieved with 460 houses a year. Both these totals from highly respected sources are massively less than the figure of 789 on which the Inspector has based his requirement for the current modifications. It should be particularly noted that the ONS have brought their forecast down from the 652 which it calculated in 2014 to 460 now because of the many factors which have changed in the intervening period and must be taken into account. The ONS estimates that by the end of the plan period Guildford Borough overall will have 4,662 additional households compared to the 7,717 which was assumed during the Public Examination. I strongly object, therefore, to the continued use of 789 per annum, and the extrapolations from it, when highly respected sources have compelling evidence that it is wrong.

**Comment:** MM2 - LPMM18/2852  **Respondent:** Ian Reeves 8575649  **Agent:**

I am writing to protest most strongly to the latest Draft Guildford Local Plan which has substantially increased Green Belt Development in Send and Send Marsh. I would like my comments to be seen by the Planning Inspector.

The recent Planning Inspectors Report on the Guildford Local Plan was devastating heaping yet more development on Send and Send Marsh villages than the previous Plan. This is now the fourth consultation period since the process began.

In essence, the Planning Inspector has directed Guildford Borough Council in the area of more homes particularly in the first five years. Not surprisingly this has led to a plan incorporating more development on our Green Belt areas, when adequate sites exist in Brown Field sites, to the delight of developers. Yet the most recent ONS growth figures for Guildford are substantially lower than those previously used in the GBC Local Plan projections. We are informed that under the transitional provisions of the NPPF ( whatever that means ) the new standard method used by the ONS does not apply to the examination of the Guildford Local Plan, i.e. the Inspector is likely to ignore them! Why?? Who is he to trample all over local residents concerns!

The new housing plan calls for increases to the Garlicks Arch area, adjacent to Send Marsh (MM41) Policy A43 from 400 to 550 homes and reintroduction of 120 homes to Aldertons Farm, Send Marsh (MM44) Policy A63. This latter area was withdrawn from an earlier plan for very good reasons. With Clock Barn (60) and Winds Ridge (40) it adds 770 houses to the 1700 currently in Send and Send Marsh villages, an increase of 45%. More importantly the Garlicks Arch and Aldertons Farm sites are set at each end of the village of Send Marsh which is taking an unrealistic ' Hit of
Development’, scheduled for the first five years of the plan on Green Belt Land! This is not sustainable and will put pressure on an already stressed infrastructure.

In addition to all this the land at Burnt Common, the only link between Send Marsh and Send (MM42) Policy A58 has been increased from 7,000 sq. metres of Industrial Development and Storage to a minimum of 14,800 sq. metres. Did we, the local residents, do something terrible to deserve this level of victimisation? Furthermore we hear that Woking is predicting a shortfall of development piling more pressure on Send/Send Marsh as one of their neighbouring villages when Guildford Borough Council has sufficient Brown Field sites to include in the first five years of the Local Plan and not pander to the developers who of course want to maximise profits and build on our Green Belt!

This leads me on to (MM9) Green Belt Policy. Although these latest modifications to the Local Plan claim to protect the Green Belt except in very special circumstances GBC make an exception for limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be ‘within the village’. This introduces a subjective test, considerable uncertainty and effectively negates Green Belt protection. Any land on the edge of our village could be picked off for development, an open invitation to developers and speculators at the expense of residents. All sites in the proposed housing increases in Send Marsh are on Green Belt land.

Comment: MM2 - LPMM18/1185  Respondent: John Baylis 8579905  Agent:

COMMENTS ON MM2

I have the following comments on MM2

New lower population and household figures have been produced by the Office for National Statistics. These correct flaws which inflated Guildford’s housing figures by overestimating how many students stay and have children after their course finishes.

Guildford Residents Association’s adviser, a leading national expert, has shown **Guildford can achieve ambitious economic growth with an extra 360 homes a year**. This is still a big number, recognising we need homes, but is much more realistic than the 672 extra homes a year currently proposed in the Draft Plan which would lead to excessive loss of countryside, congestion and town cramming.

The new figure of 360 homes means **development in the Green Belt on the scale proposed in the Plan can no longer be justified**. The new lower figure would also make it **more achievable to bring forward well-planned, sensitively-designed housing in the town centre** in a timely way.

I ask the Inspector to re-open the examination and amend the Plan to take account of the new lower figures.

Attached documents:

Comment: MM2 - LPMM18/6070  Respondent: D & M Planning Limited (Jesse Chapman) 8581153  Agent:

REPRESENTATIONS SUBMISSION LOCAL PLAN: STRATEGY AND SITES - MAIN MODIFICATIONS RELATING TO HALSEY COTTAGE GLAZIERS LANE NORMANDY GUILDFORD GU3 2DG

I write further to our previous representations, dated 21 July 2017 (of copy of which is attached as Appendix I herewith and to which we received no reply), relating to, in the main, the above site.
Housing Numbers

It is noted that, in line with the Inspector’s comments relating to the Guildford Housing figures, there is an increase in the overall housing provision for the period 2015 – 2034 from 12,426 to 12,600 new homes.

Although this figure is 1,260 fewer homes than the number previously set out by the Borough, this increase is welcomed in order to address the Council’s shortfall in new dwellings.

Comment: MM2 - LPMM18/1189  Respondent: Burpham Neighbourhood Forum (Jim Allen) 8581505  Agent:

Response to Policy S2;

3. Policy Para’s (1) to (3)

3.1. We are concerned that these figures still do not represent a reasonable calculation of housing need; noting that the reason Woking cannot meet their needs is their refusal to release Green Belt. It is therefore inequitable to expect Guildford to release further Green Belt land having released so much for its own requirements. We look forward to you revisiting these figures once the September technical data is released as the Inspector stated during the EiP.

Reasoned Justification Para 4.1.9a to 4.1.10.

The Statement fails to take note of ‘where it is practical to do so’ - it is not practical to do so without moving into Green Belt. Woking Borough ‘using’ Green Belt from Guildford to protect Woking Green Belt is inequitable and counterproductive as it provides no incentive for any borough to meet its own needs.

Para 137 (c) of the new NPPF states that a statement of Common Ground is required as part of the justification for Green Belt release. No such statement of Common Ground has been drawn up between the two boroughs. Therefore allocating housing from Woking is currently incompatible with the wording of the 2018 NPPF. This should be considered in its entirety, or not at all, as part of the examination of this Local Plan. We raise this issue because we note with interest that the Main Modifications make specific reference to the new requirements of the 2018 NPPF.

Reasoned Justification Para 4.1.9a to 4.1.10.

The Statement fails to take note of ‘where it is practical to do so’ - it is not practical to do so without moving into Green Belt. Woking Borough ‘using’ Green Belt from Guildford to protect Woking Green Belt is inequitable and counterproductive as it provides no incentive for any borough to meet its own needs. Para 137 (c) of the new NPPF states that a statement of Common Ground is required as part of the justification for Green Belt release. No such statement of Common Ground has been drawn up between the two boroughs. Therefore allocating housing from Woking is currently incompatible with the wording of the 2018 NPPF. This should be considered in its entirety, or not at all, as part of the examination of this Local Plan. We raise this issue because we note with interest that the Main Modifications make specific reference to the new requirements of the 2018 NPPF.

Para 4.1.9ab Table S2a Sources of supply

In 2015, Thames Water declared an available sewer capacity for 4,000 new homes across the borough. This table reveals that the BNF's estimate of 2,000 homes with permissions or completed since 2015 (please see our hearing statement) was an underestimation. As 3,675 homes have been approved or completed since 2015, a Burpham Neighbourhood Forum sewer capacity for just 325 homes remains, which equates to less than half a year’s sewer capacity for the proposed 672
homes per year. This is clearly well short of the infrastructure requirement for five year land supply, let alone the total volume of new homes proposed over the plan period.

Thus the Local Plan in practical terms is unsound as no proposal in this Plan provides for such rapid upgrade to the water infrastructure. We note that Thames Water on the 3rd September released its business plan for the 2020 - 2025 period which did not include financial provision for any new capacity pertaining to Guildford.

Further information can be found at the following link https://www.getsurrey.co.uk/news/surreynews/guildford-council-bear-full-cost-15122956

Please note, in practical terms the enlargement of pipe sizes for additional capacity takes three years and increase of treatment capacity takes five to ten years. Thus the Local Plan cannot be considered sound, as the water infrastructure simply cannot be upgraded within the five year ‘land supply requirement’ window.

Para 4.1.9ac Table S2b Sources of Supply

We welcome the reduction in the housing figure on Gosden Hill. However this in isolation does not in itself give reassurance that a defensible Green Belt boundary can be achieved. It is unclear whether the site allocation boundary will be amended to reflect the housing reduction on this site. Para 4.1.9ac Table S2b Sources of Supply We welcome the reduction in the housing figure on Gosden Hill. However this in isolation does not in itself give reassurance that a defensible Green Belt boundary can be achieved. It is unclear whether the site allocation boundary will be amended to reflect the housing reduction on this site.

Para 4.1.10

We support the spread of ’alleged demand’ for housing over the life of the Plan (The Liverpool Method) as this will give Woking additional time to reappraise their true ability to absorb their own objectively assessed needs. We note that Woking have not expressed any concern about their sewer capacities. Exceptional circumstances exist in respect of water infrastructure in Guildford Borough, but no similar circumstances exist within Woking.

Further to the Office for National Statistics (ONS) release of 2016 household projection figures; 20th September 2018, the projected number of households per year to the end of the Plan period is now down to approximately 420 from 672 per annum. With the required 5 year supply at the start of the Plan included in the main modifications, (over 3,000 additional plots have been added to the proposed allocations) the total number of proposed dwellings now tops 15,000 the vast majority proposed to be built in the Green Belt. In reality over 40% of the Green Belt allocation could be removed in light of this new material and compelling evidence, which equates to one of the strategic sites. It is our contention that the Gosden Hill site allocation should be removed from the Plan because it would require more off site infra-structure work than of any of the proposed allocations to make it sustainable and viable. At the very least, in light of the new evidence from ONS, it is now necessary to re-visit the exceptional circumstances arguments that have been made to justify the release of this and other allocations from the Green Belt. We look forward to receiving the Inspector’s guidance on this matter.

Note: Should a tunnel be deemed necessary under Guildford, this site should be protected for the tunnel’s entrance.

Further, this Plan makes no mention of the fact that the water treatment across the borough is lacking in capacity. We remain concerned that the Plan pays little regard to infrastructure other than roads.

Monitoring Indicators.

These plots identified as 'traveller plots’ make no mention of these travellers 'departing' to allow for others arriving and depart. It is implied that these pitches are for permanent occupants, thus the problem of traveller incursions elsewhere will remain unmitigated. The policy should include 'time limited plots’, to ensure that there is a regular turnover of occupants to make pitches available to other travellers. We are concerned that the indicator seeks to make provision for groups of ‘unknown planning status’. This is an extremely wide definition which would be open to abuse and should be removed.
Conclusion:
We are grateful for the opportunity to provide comment on these proposed modifications to the Local Plan. However they do not demonstrate sufficient robustness in finding additional housing capacity in the town centre or other brownfield locations to meet the first five year land supply requirements.

In light of the publication by the ONS on 20th September 2018 of the revised household projections we trust that the Inspector will arrange further hearings to discuss the implications of this new evidence for Guildford’s housing requirements and the reduced need to release land from the Green Belt.

Attached documents:

Comment: MM2 - LPMM18/5942  Respondent: Jennie Kyte 8585601  Agent:

MM2 (Policy S2)  Planning for the borough – our spatial development strategy"

The Plan is unsound because it is based on out-of-date unsound data.

To take account of the latest population projections for Guildford and the new standard OAN methodology, the Examination of the Local Plan for this policy should be re-opened. It has been shown by Neil McDonald, an expert, that 360 homes per year would fulfill need and economic growth. The decrease in the housing figure means that less Green Belt needs to be built upon.

Furthermore Woking’s need should decrease with the new ONS figures.

Attached documents:

Comment: MM2 - LPMM18/2785  Respondent: Liz Hyland 8586721  Agent:

I am a member of the Burpham Neighbourhood Forum, I understand that the latest ONS figures show much lower population projection numbers and therefore the projected housing numbers have significantly reduced. I feel that the Burpham Neighbourhood Forum and the Guildford Residents Association should be allowed to make representation to the Inspector on this subject. There should no longer be any need to consider the Gosden Hill Development where there would be no defensible Green Belt Line.

Guildford is one of the most congested towns in the country and the proposed transport strategy does little to improve this. Failure to address this issue can only threaten the economic viability of Guildford.

With the future of Retail changing so significantly further sites for residential development should be identified in the town centre.

Attached documents:

Comment: MM2 - LPMM18/5087  Respondent: Elizabeth Critchfield 8586785  Agent:
The ONS publication of revised housing figures nullifies the proposed figure of 672 homes per year in the Local Plan. Neil MacDonald, the expert advisor to the Guildford Residents' Association, has shown that 360 homes a year would support the economic growth proposed by the Inspector.

Guildford should not be expected to give up its Green Belt to provide homes for Woking. I ask that the Examination be re-opened as the revised housing figures render the Plan unsound.

---

Comment: MM2 - LPMM18/3575  Respondent: Linda Parker-Picken 8587105  Agent:

**MM2 Spatial development strategy and housing numbers** – the latest ONS figures are for a reduced population increase of 301pa. Guildford could now expect to have around 5,500 fewer households at the end of the plan period that was predicted by the data that formed the basis of the debate at the Examination.

It is not sensible to attempt to provide for Woking’s shortfall in meeting its housing targets by allocating further housing in Send which is situated between Woking and Guildford; and which will turn it into a community almost one and a half times its current size and no longer a small village with a buffer of green land between it and Woking.

Modifications should only be made if the Plan is found unsound, which was not the case. However, additions were made in the Send area as below. Send parish now accounts for 56% of proposed development supply in villages (based on the table at MM2). This community cannot support all this development, which will completely change the character of the parish, with its three distinct settlements of Send, Send Marsh and Burnt Common, as reflected by our parish logo:

---

Comment: MM2 - LPMM18/1549  Respondent: Michael R. Murphy 8589953  Agent:

My initial objection is to: MM41,MM42,MM44,MM9, MM27.

POLICY S2.

At the public examination the figure for Guildford.B.C housing need used by the inspector was 789 per year. This figure was obtained by G.B.C Consultants and was greatly exaggerated by including Surrey University Student figures. These Consultants and GBC refused to disclose how this figure was calculated.

The figure now published by a highly respected consultancy Barton Wilmore has said the correct figure is 431 houses per year.

The data from the Office of National Statistics, doing population forecasts says the appropriate growth in GBC can be achieved by 460 houses per year.

This latest data makes a mockery of G.B.C consultants figures which have always been very suspect.

I trust the Inspector and GBC will now drastically reduce the housing need to reflect the true figures, and particularly in our already very congested village of Send.
Paragraph 4.1.9ac. The Surrey Wildlife Trust maintains its objection to the net number of homes indicated for the new settlement allocation at Former Wisley Airfield. The Trust remains of the opinion that long-term adverse impacts on sensitive biodiversity interests, both on-site and within the Ockham & Wisley Commons SSSI (which it manages on behalf of Surrey County Council), are unavoidable under this scenario.

Comment: MM2 - LPMM18/5050  Respondent: Surrey Wildlife Trust (Mike Waite) 8591041  Agent:

I maintain my OBJECTIONS to the Guildford Local Plan and request that the Examination in Public is reopened so that the latest ONS statistics are used in calculating housing numbers required.

I was not informed of this latest consultation as required. How many of those of us who objected last time were omitted when it came to GBC informing objectors about this consultation?

I support the representations made recently over the Local Plan by the Wisley Action Group. These representations were made I understand on advice received by Richard Harwood QC.

I support the recent representations made by the Guildford Greenbelt Group regarding the Local Plan. In particular, I agree with its comments regarding development at Blackwell Farm, Garlick’s Arch, Send Marsh Road and Burnt Common and Three Farms Meadows/former Wisley airfield.

Detailed Comments:

1. MM2. The housing target is wrong. The latest ONS figures on household projections should be used to calculate housing numbers.
2. Guildford cannot and should not be required to take Woking’s unmet need.
3. GBC has not followed its spatial strategy which requires that development should take place in the town centre, the urban area and on brownfield land before moving in on the villages and Green Belt.

Comment: MM2 - LPMM18/5650  Respondent: The House of Commons (Anne Milton MP) 8591329  Agent:

Further to the responses I have submitted previously in the Local Plan process, I write now in response to the consultation on the main modifications required by the Planning Inspector. There are 3 major concerns that I still have:

Firstly, that the Planning Inspector should revisit the housing numbers in the light of the new ONS figures. We are fortunate to have these most recent figures and therefore are in a position to reflect these in the Local Plan. I am sure the
Inspector will do this as not to do so would seem absurd and make a nonsense of the whole Local Plan process. (Policy S2)

Secondly whilst it is entirely right that Local Authorities work together and collaborate, taking Woking’s so called unmet need does not further this aim. Guildford has been ambitious in its plan and has gone to considerable lengths to meet our own housing requirements, particularly bearing in mind that 89% of the Borough is Green Belt. However, meeting Woking’s unmet need would place even further strain on Guildford, would not necessarily be the best place to build houses and would be beyond that which Guildford residents feel is either fair or reasonable. It is simply a step too far. (Policy S2)

Comment: MM2 - LPMM18/23  Respondent: Mr Niels Laub 8593185  Agent:

In order to arrive at a robust and sustainable housing target, I believe the following measures need to be taken:

Demographic indicators or population change

1. An appropriate factor should be applied to the population projections to allow for “un-attributable population change” or the discrepancy between the population projections for Guildford and the actual population as recorded in the 2011 Census. Taking into account the latest 2016 Based SNPP figures, the objectively assessed housing need based on demographic indicators would be reduced to 192 dwellings per annum if an appropriate allowance for UPC were to be applied.

2. Alternatively, overseas students should be simply removed from statistics used to arrive at net international migration on the grounds that they are only here on a temporary basis to study and not here to settle. The International Student Migration Research Update, published by the ONS last August, concluded that the International Passenger Survey, on which international migration statistics are based, is likely to underestimate student emigration.

3. All students, including domestic students, who are only here on a temporary basis to study, should be removed both from the statistics used to arrive at Population Projections for Guildford and from statistics used to generate DCLG Household Projections. The student population represents a churn in the population and needs to be dealt with separately. They are not permanent residents.

Provision of purpose built student accommodation

1. The accommodation needs of students should be considered quite separately from housing targets and a robust target should be made for the provision of purpose built student accommodation both on campus and in the immediate vicinity of the campus (for instance on the south side of Stag Hill) to provide the students with easy access to university facilities while avoiding the need to commute.

1. A plan should be put in place to withdraw the student population from the local housing market thereby making available a substantial existing stock of affordable housing in the town centre for key workers such as council employees, hospital staff, teachers, shop assistants, policemen, firemen, and young professionals.

The application of constraints

1. The Green Belt should be considered as an appropriate constraint on the supply of housing in Guildford in view of paragraph 035 in the PPG which states that “unmet housing need is unlikely to outweigh the harm to the Green Belt and other harm to constitute the “very special circumstances” justifying inappropriate development on a site within the Green Belt”. The only reason Guildford Borough Council has given for building on the green belt is “to meet unmet housing need” and, according to the PPG, this is unacceptable.

Attached documents:
It is extraordinary to consider that, if you take natural growth (births and deaths) and net internal migration (movement within the UK), the 2016 Based SNPP published on 24th May, forecast the population of Guildford to actually decline by 2355 from 2016 - 2026. It therefore follows that the overall projected increase in Guildford’s population must be entirely due to the projected growth in net international migration. Considering the fact that the publicly stated policy of the current Conservative government is to reduce net international migration, it seems anomalous that the council should set such a high housing target.

Attached documents:
Travel constraints

4. Access to the site relies on an entrance off Glaziers Lane which at any point in my view would be dangerous. Glaziers Lane, a D Road, is already a busy cut through for traffic wishing to pass from A 322/A323 and A31/A3. There is no height restriction and as a result it takes most of the lorry traffic as opposed to Westwood Lane. The bridge over the railway is hump backed and squint. Lorries move into the centre of the road in order to pass over it and at speed.

The proposal to add a junction to the A31 slip road joining the A3 will further add to the problems as traffic is backed up as stated above already from the junction between A31 to A3 and this will just add to the problem (Policy MM37 Land for access road between A31 Farnham Road and Blackwell Farm, Hogs Back, Guildford)

5. It is proposed to put 105 dwellings on this site. At minimum one could expect this to generate 210 further cars fighting to either get on the A323 or the A31. Although it will be close to Wanborough Station, access to the station is only achieved over the railway bridge to the south with a further bridge to be crossed once on the platform. Safety for pedestrians is an issue which is why most either get dropped off at the station in cars or park there. The car park is very small with only space for about 10 cars to park. There is no spare land either to provide pedestrian access from the road or provide further parking for cars

6. Facilities for primary school, doctor’s surgery, and village hall are all situated 2KM away encouraging further car use. There are no shops, pub or garage in the Parish except for Hunts Hill Farm in Normandy which sells its own organic meat. Nearest shops are in Ash Wharf and Fairlands both 5KM distant

7. Even though the County Council have recently carried out high quality maintenance of the path from the Normandy Crossroads to the station the pathway is only one sided over the bridge and requires pedestrians to cross over at a point adjacent to this land. Again, pedestrian safety has always been an issue

8. There are infrequent bus services to or from Flexford which has a skeleton service

9. The Wanborough train service involves half hourly service at peak times and hourly outside those times Until a few years ago there was no service on a Sunday at all

10. Both the A323 and A31 which are the roads that lead in and out from Flexford are full. The A323 has been assessed as such by SCC approximately 2 years ago. The A31 to Guildford is often at standstill from the A31/ B3000 junction which serves Flexford. The A323 is often backed up to the Normandy Xroads leading to Guildford in the am. When an accident occurs on either road it is not unusual to be gridlocked on both Westwood Lane and Glaziers Lane.

The heaviness of the traffic has increased more than usually expected after the Summer holidays along the A roads and one has to assume that this is due to the new developments in Aldershot (3850 new homes in first phase under construction) and at Deepcut (1450 new homes presently under construction) on Ex-Army Land. On top of this the frequency of traffic down both Glaziers Lane and Westwood Lane again at speed is noticeable since the end of school summer holidays as cars held up in jams on the A roads seek alternative routes. There aren’t any.

General Infrastructure

11. There is one farm shop ‘no pub or petrol selling garage. Ownership of a car is pretty well essential. The Christmaspie cycle trail is not one that can be easily used for work. It is mainly scenic and meanders through Wood Street Worplesdon and Park Barn. The roads/pathways in very poor condition therefore it is not used for that purpose and was not intended to be so

Flooding

12. An assessment has been commissioned by GBC of Flexford because of the habitual flooding and back flush experienced by those who live in the area. The ponds and lakes that feature along the length of the railway line at this point are key to the fact that the drainage of the land is assisted by a number of streamlets leading into the Hoe stream. The car park at Wanborough Station is often under water. Committees to address the general floodwater problems in the area have been chaired by our MP Jonathan Lord over the last 5 years during which time it has emerged that the soil pipe which serves properties along Glaziers Lane is only 4inches in diameter. As far as I am aware Thames Water have no plans to increase the size of the soil pipe and other drainage facilities. At times overflows/flooding into ditches at Manor Fruit Farm have caused Environmental Pollution
events to occur. This proposal would add to the outflow of sewerage. The land concerned does not presently flood to my knowledge during Spring/Summer months but any building on this land will interfere with natural drainage and pose further stress to an already barely adequate public sewer.

**Wildlife Habitat**

13. The site is situated approximately 2KM from areas designated SNCI at Wyke Church and Normandy Common and less than 2.2KM from the Thames Basin Heath and SSSI. It is also adjacent to the SNCI **incorporating the Flax Pond. This was designated SNCI because of the colony of Great Crested Newts which are a protected species under EU Law. The site is an extremely important area for habitat and in my view, it is disingenuous to suggest that by developing it one opens up the area for a green corridor… you are reducing it!... and cutting down the migratory opportunities for wildlife in the area of Ancient Woodland situated directly opposite to the west of Glaziers Lane i.e. Pusseys Copse.

14. As stated above *. Traditionally this land has been used for grazing farm animals and is designated Grade 3 or Red farmland. Govt guidance states this should not be used for development. Industry forecasts show that the market value for such land as farmland will increase over the next five years because of the impact of Brexit.

**Reasons to develop in the greenbelt**

15. There appear to be no reasons given in this plan to explain the intention to depart from the Guidance given in the NPPF. This parcel of land was described in the original supporting documentation as H10 a necessary retention of greenbelt status to ‘prevent Normandy Wood Street and Flexford from merging’ That remains the case. Given the proposals to inset Normandy and thus extend the settlement area this proposal seeks to merge Normandy and Flexford. The proposal in it’s size represents a 7% increase in households in the Normandy Administrative area quite apart from the additional land made available for development. It also unacceptably extends the development area towards Wood Street thus destroying the openness of the greenbelt as a whole. The administrative area of Normandy forms the only realistic buffer between the town of Guildford which sprawls into Worplesdon and Aldershot which overflows into Ash.

> ‘Once established, Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, through the preparation or updating of plans. Strategic policies should establish the need for any changes to Green Belt boundaries, having regard to their intended permanence in the long term, so they can endure beyond the plan period. ’

NPPF

No such reasons are given despite the fact that the land in question satisfies each and every one of the 5 examples of the ‘five purposes’

16. In contrast land is being set aside in Ash as follows and many of the reasons given for this exceptional step apply to the land East of Glaziers Lane

Some general comments.

I am not convinced that sufficient effort has been directed into maximising the early use of brownfield sites for housing generally and particularly in the town centre. In this context it is noteworthy that many brownfield sites are owned by GBC.

The justification for housing development in the green belt is inadequate and not proven until all available brownfield sites are exploited.

I understand that there are again new projections of numbers for housing issued by the ONS. It would seem essential to consider the impact of these new numbers now.

Over the past couple of decades, there has been a substantial shortfall in infrastructure development, particularly in the town centre. Current plans do not seem to have recognised this adequately.

In conclusion, I find sufficient deficiencies in the current status of the Local Plan that it should be declared unsound.

Comment: MM2 - LPMM18/1322  
Response: Mr Richard D Jarvis 8599201  
Agent: 

para (1) should be amended. It is strongly contested that the housing 'need' figure of 630 dpa is justified. The analysis by Neil McDonald that shows that the latest ONS forecasts of population and households for Guildford justify a much lower need figure. The recent GL Hearn update is not a sound basis on which to proceed. The allowance for affordability is too large. The allowance for student accommodation is unnecessary. The provision for Woking's unmet need should be reconsidered in the light of the revised ONS forecasts for Woking and the relative Green Belt impacts on both Woking and Guildford (and Waverley).

Tables S2a and S2b should be revised to take account of the new evidence, and the use of Green Belt land reduced. Housing in the inner urban area should be increased.

para (3) should included a provision for one or more transit pitches, given the recent experience of Travellers using inappropriate locations, such as park and ride sites.

Monitoring indicators - travellers - add in transit pitch provision.

5.0. Tangley Place Farm (TPF): Land north of Keens Lane allocation (J22).
This land scores highly on the initial Plan sustainability appraisal and is within the PDA for the wider area in the GBCS of the Plan.

Within the sustainability criteria it scores the highest of any of the sites currently under consideration.

5.1 Site factors.

Before considering the Councils reasons for not including this land, it is necessary to correct a few errors in analysis:

• This is a separate site from Keen Lane. It is not in the same ownership and we will develop this ourselves.

• There is no lasting boundary between our land and J22 Keens Lane. This is a further error on the Councils analysis, which they persist in offering to support their reasoning. If there is any boundary at all, this will have to be removed to provide for the surface water outflow proposed.

• The land has a separate access from Tangley Lane. We own the majority of the land to the east of Tangley Lane and as such can effect any road widening if required. (Albeit that our highway consultant considers that only minor alterations to provide footpath links will be required.)

• The land has a public sewer crossing it and has a substantial balancing pond that will take the surface water both from our site and the Keens Lane site.

In all respects the land could be made available as market housing within the first 5-year period. We would carry out development as a local medium sized developer.

5.2 Council reasoning.

“the site sits within a larger land parcel (GBCS land parcel J3) that would need to be removed from the Green Belt in full, were the site to be allocated, in order to ensure a strong, defensible Green Belt boundary

Allocation of the site would involve developing only c.20% of the additional land that would need to be removed from the Green Belt, hence Green Belt release could not be justified, in the Council’s view”

5.3 Why is this relevant?

We are not asking for the whole of the landholding to be released.

We do not understand why the Council consider that the whole parcel should be released from the Green Belt.

The parcelling and land ownership should not be relevant; it is the characteristics of the land itself that should be considered.

There is a considerable and lasting boundary to the west (Tangley Lane) and to the north the farm buildings of TPF provide a sense of enclosure.

Additionally, we would provide a new boundary, which would be designed, planted, embanked (or whatever) to ensure that the boundary of the Green Belt accords with the SPA boundary. We would also covenant or otherwise place in Trust the remaining land between the northern boundary and the farm buildings to ensure that this land always remains within the Green Belt.

This could be dealt with under a S106 agreement.

There is no difference between us planting a new boundary and Ashill planting a new boundary to secure their site northern boundary for the future containment of J22. Furthermore the existence of the SPA boundary as a control over future development is well established in this Plan where the Wisley allocation has similar considerations.
By carrying out planting and strengthened by legal protection, the Green Belt boundary could remain a defensible boundary into the future.

5.4 Summary: site allocation.

The Plan ‘broad spatial strategy’ considers that the sequential approach must be followed. This has underlain the entire Plan process and the Examination. To depart from this methodology at this stage would be fundamentally unsound.

The Council consider that there is a need to be “flexible” (5.2.9) and that factors such as deliverability, and other GB and infrastructure constraints also need to be considered. This added flexibility is not justified save for the need to consider the deliverability of housing sites. The other considerations are ‘part and parcel’ of the sequential approach already in force.

As it appears to all parties that Tiers 1-7 will not provide the land required for the 550 houses required in the next 5 years, then the sequential approach directs us towards the Tier 8 sites.

Of the suggested sites, TPF should be heading the list.

It scores best on the original sustainability analysis, being on the edge of the urban area and close to many facilities. It can be developed completely on its own and the type and style of housing proposed would be unlikely to compete unfavourably with the standard speculative housing proposed by any developer that Ashill might sell their land on to.

The entire site could be developed within the next 5 years.

5.5 Recommendation.

TPF should be allocated for housing, to include provision of a new GB boundary with the SPA

Proposal: 60 houses

Comment: MM2 - LPMM18/2944  Respondent: Roger Newland 8600929  Agent:

For the attention of the Head of Planning Policy at Guildford Borough Council,

Further to my previous comments below I would wish to add my further objection in the strongest possible terms to the proposed amendments to the plan particularly as it relates to Send, Ripley and Ockham.

Firstly I would ask that the Council reconsidered its whole strategy re the use of the green belt and better utilise the centre of Guildford where the Council's failed policies re the North Street sites and have created a large waste land with a feeling of dereliction which would be ideal for a dense housing led redevelopment scheme rather than retail, which is struggling nationally.

There remains no special circumstances to take large swaths of land along the A3 for development which is contrary to planning policy to safeguard the Green Belt. Guildford's infrastructure particularly the road network is already at breaking point and cannot absorb further developments.

Attached documents:
**Comment: MM2 - LPMM18/2946  Respondent: Roger Newland 8600929  Agent:**

**Re Policy S 2** - I would also ask that the Council revisits the entire plan to reflect the latest ONS housing figures and remove all of the excess housing from the Green Belt.

With regard to Send, Ripley and Ockham I believe they are being treated unfavorably, perhaps with local political motivation, and as a consequence the Councils proposals lead to the start of ribbon development along the A3 from London, bounded by the M25, through to the other side of Guildford i.e. Wisley, Garlics Arch, Burnt Common, Gosden Hill Farm and the University and Hogs back sites.

**Attached documents:**

---

**Comment: MM2 - LPMM18/6037  Respondent: Downsedge Residents' Association (Rosemary Morgan) 8601537  Agent:**

**• Reduction in ONS Population Forecasts for Guildford**

Since the Inspector’s Examination significantly revised population forecasts (downwards) for Guildford have been released from the ONS, which mean that the total number of new homes required over the period of the Plan (2015-2034) should be considerably reduced. GRA expert Neil MacDonald has already demonstrated that 360 new homes per year would support the ambitious economic growth proposed by the Inspector. Therefore “exceptional circumstances” to allow the building of new homes in the Green Belt, are clearly not present. If this lower figure was accepted and more homes were built on brownfield sites, then the need to build on Green Belt land would be removed (Policy S2)

**Attached documents:**

---

**Comment: MM2 - LPMM18/3807  Respondent: Stewart Morgan 8604545  Agent:**

Recent ONS revisions to housing need have not been considered in this plan and clearly need to be.

Taking both new ONS figures and unrealised potential brownfield opportunities within the town centre into account, the claim that ‘exceptional circumstances’ exist to enable consideration of significant development in the green belt is clearly completely unjustified.

This plan therefore needs substantial revision if it is to be regarded as a credible and achievable path to a desirable future. It should be a matter of shame to those guiding this work that these and other related deficiencies have been clearly indicated to the council for more than ten years, seemingly with no serious response in all that time. The town is the heart and engine of the borough. Until a thorough, vibrant vision and masterplan for the town centre is articulated and adopted, all this work on the local plan will inevitably fall short of what is required.

**Attached documents:**

---

**Comment: MM2 - LPMM18/269  Respondent: Susan Hibbert 8606113  Agent:**
I wish to make the following comments on two aspects of the proposed changes to the Local Plan:

MM2

The final Local Plan must take into account the revised ONS population profile which reduces the housing need for Guildford. The number of dwellings required should be revised downwards to 460 per annum. This figure is made up of 400 per annum - as has now been agreed by G L Hearn - plus 60 per annum to take account of the ambitious growth forecast by the Inspector.

All possible constraints should be applied to prevent building on the Green Belt, particularly bordering an AONB.

Attached documents:

---

**Comment:** MM2 - LPMM18/5516  **Respondent:** Susan Hibbert 8606113  **Agent:**

MM2: I have already stated in a previous email that I believe it is ridiculous to continue to base Guildford’s housing need on outdated figures. Experts now agree that the previous OAN is approximately twice as high as it needs to be.

Guildford’s infrastructure already creaks under the strain of existing development and its roads are clogged. Appropriate new infrastructure must precede development and development must be only proportional to genuine housing need.

---

**Comment:** MM2 - LPMM18/2656  **Respondent:** CPRE Surrey Branch & Guildford District (Tim Harrold) 8607169  **Agent:**

3. WOKING HOUSING

CPRE objects to the proposed additional allocation of extra housing to Guildford from Woking which will have a damaging impact on the county town's countryside. It is our view that a decision of this kind should not have been made at this juncture before Woking's proposed plan is known.

FORMER WISLEY AIRFIELD, OCKHAM : POLICY A35

GENERAL OBJECTION

MM2

+The housing target is wrong. CPRE is requesting the Inspector to reopen the hearing so that the latest ONS figures and household projections can be taken into account.

+There should be no requirement for Guildford to take Woking's unmet need, particularly as this will require further Green Belt release.

+Guildford Borough Council has not properly followed its spatial strategy which requires that development takes place first in the town centre, the urban area and brownfield sites before moving to land in the villages or Green Belt. The addition of another 500 houses in Send (which will be car dependent) has a severe impact on the Portsmouth Road in Ripley that has not been properly considered.

POLICY A61 LAND AT AARON'S HILL, GODALMING : MAIN MODIFICATION MM36 & MM2
CPRE objects to this development proposal for 200 houses within the Pilgrims Ward of Guildford.

We have asked in our submission for the Inspector under MM2 to reopen the current examination to take account of the new lower population and household figures for Guildford and Waverley that have recently been produced by the Office for National Statistics. CPRE has worked closely in this context with the leading national expert Neil MacDonald both in Waverley District and in collaboration with the Guildford Residents Association (GRA) in Guildford.

We are opposed to the Aaron's Hill development proposals made for both sides of the Waverley/Guildford boundary which total 462 houses. It is clear to us that housing on a scale of 200 dwellings in Guildford District will result in adverse traffic congestion implications for the local road network and in particular Eashing Lane. It seems likely that there would be a substantial increase in vehicles seeking to reach the A3 and beyond on a daily basis. This could be very damaging to the small hamlet of Eashing with its ancient medieval bridge and community of attractive houses.

The submission of Shackleford PC (SPC) makes it clear that Aaron's Hill is currently protected as Green Belt and as part of an Area of Great Landscape Value (AGLV). It is intended that a review of the boundary of the nationally important countryside within and adjoining the Surrey Hills Area of Outstanding Natural Beauty (AONB/AGLV) in this area is to be made once the current study by Natural England of the Suffolk Coastal AONB has been completed. The proposed site is described by the SPC as "manifestly unsuitable for such a large-scale development" especially if the 262 homes proposed for Waverley District go ahead as well. Neither proposed settlement is consistent with the National Planning Policy Framework (NPPF). Development of the Green Belt is only permitted in "exceptional circumstances" that in our view should not be considered relevant in the current situation.

We are informed that the Leader of Guildford Council attended SPC's July meeting at which Ashil was also present and stated that GBC did not believe that the site was suitable for a large development which would be harmful to the area. We fully endorse the comments subsequently made by SPC in their submissions to GBC dated 30th August and 22nd October. We therefore urge that this proposed development be refused.

1. CPRE FUNDAMENTAL OBJECTION MM2
CPRE Guildford District wishes to state at the outset that it objects to the existing plan which calls for housing growth at a rate of 672 extra homes a year. We ask the Inspector to reopen the examination to take account of the new lower population and household figures that have recently been produced by the Office for National Statistics. The previous assessment of 672 additional homes is now out of date. CPRE has worked closely in this context with the leading national expert Neil MacDonald both in Waverley District and in association with the Guildford Residents Association (GRA) in Guildford. Neil MacDonald has demonstrated to GRA and CPRE that Guildford can achieve ambitious economic growth at the far lower figure of only about 360 homes per year. The calculation of this correction in Guildford's housing figure takes account of an overestimation of how many students stay in Guildford and have children after their course finishes.

2. DAMAGE TO GREEN BELT
The high housing figure proposed in the Plan can no longer be justified with its damaging impact on the Green Belt.

A new careful assessment needs to be made of the following strategic sites:

+ Blackwell Farm which adjoins the nationally important countryside of the Surrey Hills Area of Outstanding Natural Beauty and an Area of Great Landscape Value on the town's boundary

+ Wisley which is relatively remote from Guildford but dependent on expensive highway decisions yet to be made by Highways England

+ Gosden Hill which forms part of the attractive green approach to the town and prevents linear development along the A3 CPRE believes that more attention should have been given to the provision of appropriate accommodation in the town with careful limits on building height. Our attention has been drawn to the fact that the requirement to locate brownfield sites for development was not met by GBC until very late in the consultation process.

<th>Comment: MM2 - LPMM18/2000</th>
<th>Respondent: WBDRA, (David Bird) 8608865</th>
<th>Agent:</th>
</tr>
</thead>
<tbody>
<tr>
<td>WBDRA calls for a re-examination of the Guildford Draft Local Plan based on the new evidence which has come to light from the ONS regarding Housing Numbers - this relates specifically to MM2</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Our Residents Group attended the very first public meeting on the Local Plan arranged by Guildford Boro' Council &amp; their consultants GL Hearn</td>
<td></td>
<td></td>
</tr>
<tr>
<td>It was perfectly obvious from the outset that GL Hearn's figures did not stack up, their assumptions seemed amateurish and their logic flawed. Two prime examples were a vast overstatement of the town's Homeless which was wildly at variance with recently published figures in the national media and secondly, in answer to the question who have you (GL Hearn) consulted with re Development Numbers their reply was &quot;Local Estate Agents &amp; Developers&quot;, Based on this, any subsequent figures arising from GL Hearn have been met with extreme scepticism by many Resident Groups and Interest Groups such as Guildford Society &amp; CPRE.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>The local Residents Group (GRA) which comprise of about 30 Residents Groups in the Borough have enlisted the services of Neil MacDonald who has demonstrated that about 360 homes a year would support the ambitious economic growth rate being proposed currently</td>
<td></td>
<td></td>
</tr>
<tr>
<td>630 homes a year would be wildly out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions (such as those mentioned above) and those which inflate the figure eg excessive student homes in town, low economic participation.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>It is also totally wrong to suggest that Guildford should sacrifice Green Belt (or other land) to provide homes for Woking. As far as we know Woking is proposing Green Belt development and Woking’s housing need figure has also been reduced and has not been examined.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>WBDRA has never been a fan of GBCs Housing Development Plans ever since the last Local Plan (2003) and is more concerned about the lack of attention paid to infrastructure in the last 15 years. Guildford has the dubious honour of being Number 6 in the top 10 most traffic congested places in the UK - the top 5 all being cities not market towns.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Guildford can't sustain any more major Housing Development without rapid attention being given to traffic flow through the town. Every road into Guildford in the weekday morning rush hour is virtually at a standstill with major tailbacks for miles daily on all our main roads - the A3, A31, A281, A3100, A320 &amp; others. More large numbers of houses in the Borough are not going to help those who are stuck in these daily tailbacks wasting valuable energy and sitting in some of the worst Traffic Pollution in the South East. If our Council could get something substantial on the table about improving traffic flow, road widening etc - then their housing proposals might find a little more favour with residents. No-one should pay £2000+ per annum in Council Tax to spend hours every week stuck in traffic jams.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>WBDRA respectfully requests a re-opening of the Inspectorate's Examination to readjust Guildford's Housing Figures in line with those recently published by the ONS</td>
<td></td>

<tr>
<td>Thank you for the opportunity to respond to the consultation on the above.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
West Clandon Parish Council has very grave concerns about many of the proposed main modifications within the proposed plan and the subsequent impact on increased traffic problems on The Street, West Clandon (A247) which is already totally inappropriate to be classed as an A road and experiences many difficulties.

The road does not have the capacity to carry the expected increase in traffic. Problems already include:
1. The sharp bend at the Lime Grove junction with The Street (A247) where traffic routinely exceeds the 30mph limit.
2. The dangerous junction with the approach road to Clandon Station where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump.
3. The site lines for the exit of the Onslow Arms car park.
4. The narrowness of the road near Summers.
5. Heavy lorries and buses being unable to pass each other in the narrow parts of the road without mounting the pavement.
6. The sharp bend near Clandon Regis.
7. The narrowness of the road at the Bull’s Head Public House.
8. The speed of traffic past Clandon Junior School and in places the narrow footpath for children walking to school.
9. The sharp bend with poor sight lines in either direction at the Church.
10. The lack of a continuous footpath through the length of the village
11. The speed of traffic
12. The classification as an A-road without it having the capability of an A-road.

Our concerns also include the following:

Policy S2 MM2
We believe the OAN included in the Plan may be overstated. We note the latest ONS household projections and current uncertainties over the methodology to be used in the calculation of the OAN. These issues must be fully explored and outstanding issues resolved before the housing need is finalised if we are to have any confidence in the figure adopted.

We also object to any unmet need for housing in the Woking area being added to the Guildford Plan when the review of the Woking Plan provides an alternative mechanism for correcting any shortfall within the Woking area.

Guildford has been obliged to introduce additional green belt sites in the early years of the plan. Should these prove to be unnecessary, Green Belt will have been damaged without good reason.

There will be greatly increased traffic flow because of the following modifications:

1. MM41. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247.
2. MM35 The development of 1800 houses at Gosden Hill.
3. MM44 The development of 120 houses (new site) at Alderton’s Farm, Send Marsh.
4. MM42 The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic.
5. A43a The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247. We object to the proposed opening of the Burnt Common Rds as this will direct additional traffic along an unsuitable road. In any event this should not be considered until the A3 widening is completed.

As an alternative to access to the A3 at Burnt Common further consideration should be given to South facing slip roads at Ockham Park which will have less negative impact on unsuitable local roads.

In any event Policy ID2 (MM27) generally gives insufficient assurance that developments will not be allowed before the A3 widening scheme is committed in that it appears to allow a series of incremental developments each in itself unlikely to make an already difficult situation much worse. Cumulatively we are concerned that the severe impacts envisaged will occur by stealth.
We are pleased to see allowance made for environmental and traffic mitigation measures on the A247 through Clandon. Funding for this scheme is specifically linked in the Plan to MM41 Garlicks Arch and MM42 Burnt Common. Other schemes likely to have an impact on the A247 include MM35 (Gosden Hill) and A35 (Wisley Airfield) which do not have such a condition at present. This should be rectified in the final plan.

We note however, that while it may be possible to implement measures which have a positive impact on traffic speed and vehicle/pedestrian safety there is no easy solution to the problems of increased traffic volume that the above developments will produce. The development of Park Lane/Merrow Lane as an alternative route to the A3 and the improvement of the Railway Bridge at Merrow Park remain the only long-term solution and provision for a future scheme should be included in the Plan.

Policy S2 MM2
We believe the OAN included in the Plan may be overstated. We note the latest ONS household projections and current uncertainties over the methodology to be used in the calculation of the OAN. These issues must be fully explored and outstanding issues resolved before the housing need is finalised if we are to have any confidence in the figure adopted.

We also object to any unmet need for housing in the Woking area being added to the Guildford Plan when the review of the Woking Plan provides an alternative mechanism for correcting any shortfall within the Woking area.

Guildford has been obliged to introduce additional green belt sites in the early years of the plan. Should these prove to be unnecessary, Green Belt will have been damaged without good reason.

**MM2 POLICY S2 PARA (1) Housing requirement for Guildford**

Shalford Parish Council (‘SPC’) accepts that Guildford Borough Council (‘GBC’) is obliged to contribute to meeting unmet housing need in the Borough of Woking. However, it notes that the figures published by the Office of National Statistics on 20th September 2018 show a considerable reduction in predictions of future population growth. Councillors are aware that some respondents to this consultation suggest that, in the light of this new prediction, GBC and the Inspectorate should review the figures for housing need, with a view to making a reduction in them rather than an increase. **SPC strongly supports this proposal.**

Attached documents:
Common SPA/SSSI and the likely impact on the A322, which is already at capacity. A habitat assessment should be carried out.

Attached documents:

**Comment: MM2 - LPMM18/5438  Respondent: Julian Cranwell 8640353  Agent:**

**Guildford Local Plan: Strategy and Sites - Main Modifications 2018: consultation response**

**MM2**

I object to the identification of the HMA with the tri-borough area of Woking/Guildford/Waverley. This is arbitrary and has never been justified in real-world terms of where residents live, work, shop, commute and study. The need to include Woking’s unmet housing need is therefore based on a false premise enshrined in the SHMA.

It is factually untrue that the OAN has been based on “the latest 2018-based population projections.” September 2018 figures suggest 301 dpa, or just over 5,700 for the plan period. Taking account of the commitments, unallocated LAA sites and windfalls listed, green field development in the protected Green Belt is plainly unnecessary to meet the OAN, especially as new Policy S3 now requires urban brownfield be given priority. No “exceptional circumstances”, as required by the NPPF, have been advanced for any Green Belt development or for “insetting” most of the borough’s villages.

To meet this reduced OAN, the balance of urban development should be shifted radically away from the dying retail sector towards building homes, in line with government policy, uplifting the Guildford Town Centre figure considerably. Promoting the soft option of building in the Green Belt will only disincentivise developers from tackling the much-needed regeneration of central Guildford, directly conflicting with Policy S3.

GBC have claimed that the new ONS figures are inapplicable because the submitted local plan pre-dates the government’s new standard method for calculating housing need. This is splitting hairs. The “Objectively Assessed Need” should be what it says it is – objective. The plan should be based on the best and latest evidence available and needs to adapt in line with the facts.

**Comment: MM2 - LPMM18/1711  Respondent: Paul Roffey 8659681  Agent:**

Dear Sir/Madam,

Many months ago, and way before the June/July consultation regarding amendments to the new local plan, I attended a meeting at West Horsley Village Hall at which Paul Spooner – the leader of GBC – spoke to enlighten us about the progress or otherwise of the threat to increase the housing size of our village by over 30%. He told us that a government inspector, namely Johnathan Bore, had been appointed to oversee and advise on proposed alterations to the latest local plan. [text redacted: the text included a quote that was not wholly accurate] said Mr. Spooner so imagine my complete dismay when I read this week in the Surrey Advertiser that GBC of all people have proposed an additional 555 homes on green belt land. What on earth is going on?

With the latest figures from the ONS confirming that required housing targets are grossly over-estimated, combined with yesterday’s figures that EU nationals wanting to work in London have dropped by 26% (and 22% in the country as a whole), with dire predictions from the Governor of The Bank of England regarding a drop in house values then surely,
surely, surely it is folly to blindly forge ahead with the current plan and its new amendments. An oversupply of housing will cause grief for many hard working young home owners who will be anxious about the prospect of negative equity. I am well aware that a great deal of hard work has gone into cobbled together this plan but that is no reason to persevere with something that is manifestly incorrect. For the sake of accuracy, if not democracy, the EXAMINATION IN PUBLIC must be re-opened.

It seems peculiar to say the least that I was not informed by GBC of this current consultation let alone the fact that I have never had a response to any of my many emails over the years concerning the green belt field next door to my house save for the alleged assurance that all correspondence will be passed to the inspector - I wouldn’t mind betting that he knows nothing about it.

Comment: MM2 - LPMM18/3763  Respondent: Victoria Sinnett 8667713  Agent:

Ref: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments:

1. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.
1. **I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:**

2. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited.

3. There is too much reliance on A3 improvements and these are beyond the council’s control.

4. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit.

5. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

1. **I would like the Inspector to RE-EXAMINE the Local Plan because:**

2. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt.

3. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high.

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. **The Clandon Society Objections and Concerns Which I Share**

**The A247**

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247.

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1 million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1 million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I **believe that traffic will increase significantly because:**

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic.

2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247.

3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh.
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.
Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the
town centre and reduced pressure on the Green Belt.

1. **The Guildford Residents’ Association’s Objections and Concerns Which I Share**

   MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound
   basis for the Plan or justify such extensive Green Belt loss.

   MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes
   table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

   MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic
growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the
   Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student
   homes in town, low economic participation.

   MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is
   more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not
   been examined.

   MM2 Although extra sites are required because some might not come to fruition, the **housing supply** figure in table (S2a)
   is far too high at double the number of homes needed to support ambitious growth of the economy.

   **Attached documents:**

**Comment:** MM2 - LPMM18/3275  **Respondent:** Valerie Thompson 8671969  **Agent:**

   1. **I object** to the "insetting" of any villages around Guildford

     8. **Policy MM2.** There is no reason for Guildford to take any unmet need for housing as Woking used their
     right to claim that "need for housing was not a reason for building on Greenbelt land". Also the ONS
     statistics clearly reveal that about half of the number of houses that had been forecast as necessary is
     actually needed, particularly in the light of new analyses of student movements. **I object** to taking any
     housing from Woking.

   **Attached documents:**

---

**Comment:** MM2 - LPMM18/6105  **Respondent:** Mr Kes Heffer 8672993  **Agent:**

   • Both original and 2018 versions of NPPF require planning authorities to base their Local Plans on data that are
     relevant and up-to-date (see NPPF March 2012, paragraph 158, and NPPF July 2018, paragraph 31). On 20/09/
     2018 the Office of National Statistics released their “2016-based household projections: detailed data for
     modelling and analytical purposes”. Those data are the correct basis for Guildford’s Local Plan. This means that
     the official projected household figures (2015 to 2034) have decreased by 4,507 dwellings from a total 11,142
     (used in the December 2017 draft Plan) to 6,635, a reduction of 40%. The latter figure is relevant to the
     September 2018 draft Plan but has not been used as the basis for housing targets. The extent of this error is
     35.8% (4,507 / 12,600) of the housing requirement of the entire Plan; i.e. more than two of the strategic sites.
     The draft Plan is therefore unsound and GBC would be neglecting their legal duty if the Local Plan continues to
     be based on out of date statistics. The discrepancies between the levels of housing proposed in the Plan and the
ONS household data released on 20th September 2018 are so large that the **Public Examination of the Plan by the Planning Inspector must be re-opened**. Consequently I object to MM2.

- I further object to MM2 because there is a similar flaw in the basis for policy S2 of the draft Local Plan by which Guildford Borough would take up Woking Borough’s so-called “unmet need” to the tune of 42 dwellings per year (some 630 dwellings in total). Woking’s household growth between 2015 and 2034 (inclusive) is now projected by the ONS to be 2,959 households fewer than was originally projected (ie. a drop of 48%). These are huge changes which it would be unconstitutional to ignore.

**Attached documents:**

---

**Comment:** MM2 - LPMM18/1482  **Respondent:** John and Susan Burge 8686913  **Agent:**

1. Number of houses (MM2)

The household growth projections produced by the Office for National Statistics show that some 4,000 less households will be needed than in the current plan. I OBJECT to the continued use of outdated information and must press GBC to reconsider the need for several of their strategic sites.

**Attached documents:**

---

**Comment:** MM2 - LPMM18/1350  **Respondent:** Sir Michael Aaronson 8687041  **Agent:**

I strongly OBJECT to the continued use by GBC of a housing requirement of 630+42 dwellings per annum, when the latest ONS figures for projected household formation in the Borough show this number to be inflated - according to some expert opinion by as much as 75%. I understand that GBC will want to build in some margin of error, but a margin of 75% is disproportionate, and given that the cost of this exaggeration involves the permanent destruction of Green Belt landscape and habitat it is quite unacceptable.

I request that the Examination in Public of the Local Plan be re-opened so that the Inspector may have the opportunity to reconsider the Plan in the light of these new projections, which have appeared since the previous EiP was conducted in June.

Furthermore I do not accept that it is reasonable or just to require Guildford to build on its Green Belt to take up the shortfall in Woking's projection when (a) Woking itself is not building on Green Belt and (b) Woking's housing need figure has also been reduced but this has not been re-assessed at an EiP.

I OBJECT to the statement in Reasoned Justification 4.1.10 "National policy states that where possible the deficit accrued since the start of the plan period should be met within the first five years. Given the step change in housing requirement compared to past delivery rates which have been constrained by Green Belt policy [my emphasis], the accrued backlog at the date of adoption is significant." To blame the backlog of housing delivery in Guildford on Green Belt policy is disingenuous, to say the least. There are no doubt many reasons for this failure, including most notably the failure of a developer-driven housing supply to deliver homes that meet the needs of the Borough’s people. GBC should be taking advantage of the newly-conferred powers it has to borrow money to fund social housing to address the backlog of housing requirement, rather than using specious claims about the Green Belt to justify eroding it in this Local Plan.

**Attached documents:**
I would like to request that the Public Examination of the Guildford Local Plan should be reopened on the following
grounds:

1. (MM2) The ONS latest projection for new households required within the Guildford area is 40% lower than the
   figure upon which the Local Plan is presently formulated.

Consultation response: Guildford Local Plan: Strategy and Sites - Main Modifications 2018

MM2

I object to identifying the HMA with the tri-borough area of Woking/Guildford/Waverley. This is an arbitrary invention
of the SHMA and has never been justified by any reference to an actual housing market catchment in the real world. The
need to include Woking’s unmet housing need is therefore artificial.

The OAN has not been based on “the latest 2018-based population projections.” September 2018 figures suggest
301dpa, or just over 5,700 for the plan period. Greenfield development in the Green Belt is unnecessary to meet the OAN,
especially as new Policy S3 now requires urban brownfield be given priority. No “exceptional circumstances”, as
required by the NPPF, have been advanced for any Green Belt development or for “insetting” most of the borough’s
villages.

To meet this reduced OAN, the balance of urban development should be shifted from the retail sector towards building
homes, in line with government policy, uplifting the Guildford Town Centre figure. Promoting building in the Green Belt
will only disincentivise developers from tackling the regeneration of central Guildford, and is in conflict with Policy S3.

Whatever the OAN methodology, the OAN needs to be objective, based on the best and latest evidence. The plan must be
adapted in line with the new facts.

A general comment that documents should be referred to the current version with a document name and version number
or date, otherwise it is impossible to know what is going on.

Object

1. does not refer to the use of “current” ONS statistics

4.19(a) mentions the latest 2018 ONS population projections but expressly fails to mention the other relevant ONS
statistics such as household projections. This should not be a “pick the stats that suit the argument” operation.
4.1.9(ab) this excludes current/permission associated with allocation and does not include small site so is a significant underestimate of the supply

4.1.11 or the latest IDP. There is no evidence that up to date information is used for example on the delay to the J10 RIS scheme. This is a perfect example of why the plan needs to have a list of current documents which are referenced and updated as new information/evidence becomes available. The reliance on out of date, publicly-available strategic highways information renders the plan unsound see reference to site A35 below.

Comment: MM2 - LPMM18/3783   Respondent: Ian Slater 8731649   Agent:

Ref: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments:

1. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.
2. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:
3. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
4. There is too much reliance on A3 improvements and these are beyond the council’s control
4. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
5. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

1. **I would like the Inspector to RE-EXAMINE the Local Plan because:**
2. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
3. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. **The Clandon Society Objections and Concerns Which I Share**

**The A247**

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

**I believe that traffic will increase significantly because:**

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways
England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247.

6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3.

7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing.

8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.

9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments.

10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.
1. **The Guildford Residents’ Association’s Objections and Concerns Which I Share**

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

**RE: GUILDFORD BOROUGH COUNCIL-LOCAL PLAN CONSULTATION.**

I write further to the publication of the revisions to the draft Local Plan. I object to the proposals for the following reasons:

1. MM2. I still consider that the Housing Target figure is wrong. The hearing on the Local Plan must be reopened in order that the latest ONS figures and household projections can be taken into account.

2. MM2. Why should Guildford be required to take Woking's unmet need especially as by doing so further green belt land will be required?

**Comment:** MM2 - LPMM18/3639  **Respondent:** Tony Edwards 8733857  **Agent:**

**OBJECTIONS to modifications to the Guildford Local Plan**

I should begin by recording the fact that I am appalled at the slip shod way in which these modifications have been presented and the undeniable fact that I was NOT advised of the consultation – despite being advised by e-mail previously.

My first suggestion is that this issue become the subject of a further public examination so that the LATEST [rather than dated] Office of National Statistics figures can be used.
In general may I record the fact that I wholly support the representations made by the Wisley Action Group [WAG] with written advice from leading counsel Richard Harwood QC. I trust GBC has bothered to read them because they present a true picture of the facts in this sorry tale of misrepresentation and unsupported ‘facts’.

Attached documents:

**Comment:** MM2 - LPMM18/1439  **Respondent:** Carol Mullan 8735713  **Agent:**

I object to the scale of new housing planned for Ripley and Send.

This will forever change the nature of our villages and increase road traffic.

Town centres and brownfield sites should always be used first - not green belt sites.

Policy S2

The housing needs figures have been grossly exaggerated and this is surely fuelled by the profits that building the houses would generate.

At the Public Examination the figure for Guildford Borough housing need being used by the Inspector was 789 per year. Since then a respected consultancy, Barton Willmore, has said that the correct figure should be 431. September data from the Office for National Statistics suggests that appropriate growth in Guildford Borough can be achieved with 460 houses a year. Both these totals are hugely less than the total assumed by the Inspector. This could make a massive difference to the proposed developments in Send.

I call for the examination in public to be reopened so that the latest Office of National Statistics can be used.

I support the representation made by WAG which was written with advice from Richard Harwood QC

I wish to request that the Local Plan is reconsidered in light of the revised housing requirements from the ONS. It is a very significant change with only 360, rather than 672, extra homes required. More specifically, with respect to modification number MM2,

- The revised numbers should lead to reduced building needed on the Green Belt.
- If town centre sites could be developed, surely sensible in light of the deteriorating business environment of high street shops, then the requirements to build on the Green Belt could be reduced further.
- I fail to see why Guildford should provide additional homes for Woking.

Ref: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments:

1. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.

1. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:
   2. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
   3. There is too much reliance on A3 improvements and these are beyond the council’s control
   4. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
   5. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

1. I would like the Inspector to RE-EXAMINE the Local Plan because:
   2. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
   3. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. The Clandon Society Objections and Concerns Which I Share

The A247

---

69 of 2575
I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247.

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic.
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247.
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh.
4. The development of 1800 houses at Gosden Hill.
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247.
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3.
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing.
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments.
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247
The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. **The Guildford Residents’ Association’s Objections and Concerns Which I Share**

   MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

   MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

   MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

   MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

   MM2 Although extra sites are required because some might not come to fruition, the **housing supply** figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.
Comment: MM2 - LPMM18/1613  Respondent: Roger Harrington 8749889  Agent:

I am writing in relation to the Guildford local plan and in particular in relation to amendment MM2. I have the following observations:

The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, and Woking’s need figure has also reduced and has not been examined.

Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1 million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic.
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247.
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh.
4. The development of 1800 houses at Gosden Hill.
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247.
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3.
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing.
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments.
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.
Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. The Guildford Residents’ Association’s Objections and Concerns Which I Share

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.
Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

Comment: MM2 - LPMM18/1421  Respondent: Sheila Mellstrom 8772289  Agent:

As a result of the info we have received re the amended local plan, I OBJECT strongly to the following:-

MM2 The suggestion that Guildford takes Woking unmet housing needs which will result in a further loss of green belt land. In particular I OBJECT to the proposal to build another 500 houses in Send, all of whom will be dependant on cars.

Comment: MM2 - LPMM18/5603  Respondent: David French 8772801  Agent:

Ref: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments:

1. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.

2. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:
   2.1. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
   2.2. There is too much reliance on A3 improvements and these are beyond the council’s control
   2.3. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
   2.4. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

3. I would like the Inspector to RE-EXAMINE the Local Plan because:
   3.1. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
   3.2. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. The Clandon Society Objections and Concerns Which I Share

The A247

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.
The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247.

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1 million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1 million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4 ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. The Guildford Residents’ Association’s Objections and Concerns Which I Share

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

Attached documents:
MM2 - We urgently suggest that the examination be reopened in light of the latest figures from the Office of National Statistics. The 630 proposed number has been based on totally inappropriate assumptions and expert Neil MacDonald has demonstrated that a figure of 360 would be more than sufficient. There is now scope to remove some green belt sites and more scope to develop town centre sites in a responsible and sensitive fashion. Further hearings should be held urgently.

Attached documents:

---

I wish to object to the above on the following grounds:

- Inclusion of Three Farms Meadows in plan. The SOS has made it perfectly clear that this is an unsuitable site for development. This is principally because it is in a totally unsustainable location with very poor transport links, and the adverse affect on the AONB, the local community, and all the other reasons that he gave in his judgment. So why is it still included? Please remove it and find somewhere more suitable to meet the local housing need. The fact that it has not already been removed is somewhat suspicious. Other sites have now been added so Three Farms Meadows can now be removed.

- ONS data and therefore planning assumptions for housing has changed radically since the plan was first created. The plan now needs to be revised in line with the correct planning assumptions. Not to do this would be egregious and would easily be challenged. Make the plan on the best information available not the worst.

Attached documents:

---

I object to the proposed amendments to the 2017 draft local plan for the following reasons:-

| I believe the Planning Inspector has misrepresented the residents of Send | The 2017 plan already contained proposals to develop more housing than the original concept and over 30,000 objections were made to this. The amendments now under consideration allow for further increase in housing numbers in an area where the Infrastructure is already struggling to cope. |

Attached documents:

---

Relating to all of the above proposals: At the Public Examination the figure for Guildford Borough housing need being used by the Inspector was 789 per year. Since then a respected consultancy, Barton Willmore, has said that the correct
figure should be 431. September data from the Office for National Statistics, which does population forecasts, suggests that appropriate growth in Guildford Borough can be achieved with 460 houses a year.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

**Attached documents:**
I would like you to note my following comments:

1. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and request that their responses are registered as mine as well.

1. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:
   2. Guildford Borough Council has not properly observed its hierarchy of development. There remain brownfield development opportunities, especially in the town centre, that have not been fully or properly exploited;
   3. There is far too much reliance by the Council on purported A3 improvements which are beyond the council’s control and subject to modification and/or cancellation irrespective of the developments that may be undertaken based on such bare promises;
   4. The town centre policy, S3, is inadequate and does not address the infrastructure deficit; and
   5. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’ as required by the NPPF.

1. I request that the Inspector RE-EXAMINES the Local Plan because:
   2. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt;
   3. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number on which the Local Plan is predicated is excessive; and
   4. Guildford Borough Council has failed adequately to notify or consult on its proposed changes, by comparison with the widely communicated consultation of the original version of the proposed Local Plan.

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. The Clandon Society Objections and Concerns Which I Share

The A247

The A247 is a minor A road that was so-classified many years ago before traffic loads, vehicle sizes and axle loads were anywhere near the specifications of the current day. As such, the current designation of the A247 is unsuitable to cope with the existing traffic requirements, let alone any increase as would be generated by the proposed developments according to the modified Local Plan. In short, the A247 IS NOT FIT FOR USE AS AN A ROAD AS IT STANDS, AND MOST CERTAINLY CANNOT WITHSTAND ANY SIGNIFICANT INCREASE IN TRAFFIC FLOWS.

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send, which is simply unsustainable. In the previous consultation, the Clandon Society, myself and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (e.g., through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247.

I welcome the recognition provided in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, recognition of the problem is merely wind if not coupled with well-considered and adequately funded provision for mitigating such problems. The suggested £1million of developer-funded mitigation measures for the A247 through West Clandon, which may or may not be enforceable, will not change the fact that the A247 through West Clandon does not have the capacity, nor physical characteristics, to deal with the increase in traffic that will be generated by the proposed developments.
The capacity of the existing road cannot realistically be increased because of existing physical constraints including the close proximity to the road of listed structures and other buildings and the limited width available.

The road is already too busy to cross on foot at times during the morning peak, creating problems in accessing the station. In a few years’ time, if the proposed developments proceed, the traffic will become nose-to-tail heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements, leading to near misses with pedestrians and frequent accidents with vehicles, as have been notified previously by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative, modern A road classified route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could properly divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge and it is already the intention to build a station next to the bridge. This would seem to be a far preferable and achievable solution to the likely over-capacity of the A247.

The £1 million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic;
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247;
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh;
4. The development of 1800 houses at Gosden Hill;
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247;
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3;
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing;
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford;
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments; and
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e., through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway);
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still frequently in excess of 30mph;
3. The dangerous junction with the station roads and Oak Grange Road, where the exit sight lines to the North and/or South are limited by the hump and parapet of the bridge over the railway and are the locations of frequent
near misses such that it is only a matter of time before a serious accident occurs. The visibility of traffic emerging from the station roads and Oak Grange Road is also poor for traffic approaching the bridge from the North or South, respectively, because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station. In addition, particularly out of peak traffic periods, traffic speeds frequently far exceed the designated 30mph limit;

4. The sight lines for the exit of the Onslow Arms car park;
5. The narrowness of the road near Summers;
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement and/or causing near misses of even clashes of wing mirrors;
7. The sharp bend near Clandon Regis;
8. The narrowness of the road at the Bull’s Head;
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school;
10. The sharp bend with poor sight lines in either direction at the church;
11. No continuous footpath through the length of the village;
12. The frequently over-limit speed of traffic; and
13. The classification as an A-road without it having the capability of an A-road, rather a B-road at best.

Housing Number and the Green Belt

- The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.
- The Council has long argued that much of the housing required must be built on such sites.
- This argument is not supported either by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.
- The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.
- Coupled with modal shift, these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. The Guildford Residents’ Association’s Objections and Concerns Which I Share

MM2: The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2: There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2: Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2: It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2: Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

This e-mail comments on a number of modifications to policies proposed in the latest revised version of the Guildford Local Plan.

1. **Policy S2, Spatial Development Strategy: Modification MM2**

I have previously argued that the proposed housing numbers in the Local Plan were excessively high, since they were based upon population and household projections that had been inflated due to a period of very high immigration. With Brexit now in prospect the official ONS projections are being reduced substantially with each subsequent revision. As the recent analysis presented by Mr John McDonald has convincingly and authoritatively set out, the latest official numbers now available means that the housing need projections used in the latest Policy S2 must be revised down even further and by a significant margin. This will allow Guildford to establish a more ‘normal’ growth plan for its housing which does not put undue strain on existing communities or their supporting infrastructure.

If necessary, and in order to follow due process, GBC should re-open the Local Plan examination to allow the latest ONS numbers to be used for establishing its housing need projections.

As currently proposed, I **OBJECT to the housing targets as set out in Modification MM2.**

**Attached documents:**

**Comment: MM2 - LPMM18/2508  Respondent: Nick Etches 8796321  Agent:**

Dear Sir/Madam

Ref: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments:

A. I **fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and should like their responses to be registered as mine as well.**

B. I **OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:**

1. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited;
2. There is too much reliance on A3 improvements and these are beyond the council’s control;
3. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit;
4. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

C. I **would like the Inspector to RE-EXAMINE the Local Plan because:**

1. There have been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt;
2. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high.

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:
D. The Clandon Society Objections and Concerns Which I Share

The A247

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247. The only road through East Clandon, “The Street”, is extremely narrow and totally unsuitable for heavy traffic, particularly outside my house where there is frequently a blockage requiring traffic to reverse, and indeed there have been numerous accidents.

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic.
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247.
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh.
4. The development of 1800 houses at Gosden Hill.
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247.
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3.
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing.
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments.

10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

**Problems with the West Clandon section of the A247**

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

In addition to the above, there is the significant probability that southbound traffic seeking to avoid congestion on the A247 will divert via Tithebarns Lane and turn right at the **dangerous and completely blind junction** with Hungry Hill Lane / Ripley Road towards East Clandon, thus increasing traffic through East Clandon which as noted is totally unsuited to heavy traffic. I have previously requested Surrey Council to remedy this dangerous junction but no action has been taken.

**Housing Number and the Green Belt**

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

**E. The Guildford Residents’ Association’s Objections and Concerns Which I Share**

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.
There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

**I believe that traffic will increase significantly because:**

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

**Problems with the West Clandon section of the A247**

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

**Housing Number and the Green Belt**

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. **The Guildford Residents’ Association’s Objections and Concerns Which I Share**

   MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

   MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

   MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

   MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

   MM2 Although extra sites are required because some might not come to fruition, the **housing supply** figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

**Attached documents:**
I would like you to note my following comments:

1. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.

1. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:
   2. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
   3. There is too much reliance on A3 improvements and these are beyond the council’s control
   4. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
   5. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

1. I would like the Inspector to RE-EXAMINE the Local Plan because:
   2. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
   3. New figures and projections for housing numbers have recently been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high.

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. The Clandon Society Objections and Concerns Which I Share

The A247

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247.

I note the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic. For the sake of the safety of village residents (including school children) I believe that the village should have a 20 mph speed limit to slow the traffic down. For that reason, additional traffic should not be encouraged to use the A247. However, sadly, that seems to be an inevitable effect of the latest Plan.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which
could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.
Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. The Guildford Residents’ Association’s Objections and Concerns Which I Share

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

Comment: MM2 - LPMM18/4277  Respondent: Bill Taylor 8800545  Agent:

Ref: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments:

A. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.

B. I OBJECT to the Modified Local Plan as a whole. I believe it is fundamentally unsound because:

1. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited 2. There is too much reliance on A3 improvements and these are beyond the council’s control 3. The town centre policy, S3, is inadequate and does not address the infrastructure
deficit 4. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional
circumstances’.

C. I would like the Inspector to RE-EXAMINE the Local Plan because:

1. There has been a number of major changes made to the Plan by the Council which have changed it significantly,
including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased
commercial development on the Green Belt. New figures and projections for housing numbers have been released by
the ONS which clearly demonstrate that the housing number in the Local Plan is too high. In case Guildford Borough
Council is not prepared to accept my request in Section A above I am including the key points made by those three
organisations in my full objection to the Modified Local Plan below:

D. The Clandon Society Objections and Concerns Which I Share The A247

I live on the A247 and am very concerned that the latest modifications to the Plan will put even more pressure on the
A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns
in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads
e.g. through East Clandon which will be used to avoid the inevitable traffic build ups on the A247

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the
north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a
£1 million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the
A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of
listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in
the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of
congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was
pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the
Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which
could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem
viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1 million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and
East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving
speed control measures.

I believe that traffic will increase significantly because: 1. The development of an industrial estate at Burnt Common. At
greater than 1.4 ha, this is now doubled in size from the previous consultation and presumably will generate at least
double the amount of commercial traffic. 2. The development of 550 houses at Garlick’s Arch (an addition of 150) with
the main entrance/exit on the A247. 3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh. 4.
The development of 1800 houses at Gosden Hill. 5. The opening of North-facing slip roads to/from the A3 at Burnt Common.
The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible
relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3
will divert along the A247. 6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3.
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow
traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It
would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 -
potentially an easier route than any existing routes. A statement from GBC that the North-facing slip roads at Burnt Common
are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the
policy of directing traffic around Guildford. 9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments 10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are: 1. The junction with the current A3 south-bound slip road (modifications are underway) 2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph 3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station. 4. The sight lines for the exit of the Onslow Arms car park 5. The narrowness of the road near Summers 6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement 7. The sharp bend near Clandon Regis 8. The narrowness of the road at the Bull’s Head Public House 9. The Clandon Junior School and the, in places, narrow footpath for children walking to school 10. The sharp bend with poor sight lines in either direction at the church in West Clandon 11. No continuous footpath through the length of the village 12. The speed of traffic 13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt. The Council has long argued that much of the housing required must be built on such sites. This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker. The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites. Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

E. The Guildford Residents’ Association’s Objections and Concerns Which I Share

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss. MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination. MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure e.g. excessive student homes in town, low economic participation.    North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways
   England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the
   A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This
   would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common,
   avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of
   Guildford to use the A247 - potentially an easier route than any existing
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local
   Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around
   Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to
   the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution
   is in addition to any increase caused by new developments
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the
    South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic.
Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and
   parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for
   traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that
   Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site
   behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without
   mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this
requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the
argument becomes even weaker.
The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

In conclusion I would point out that the Inspector raised a considerable number of questions about the sustainability, viability and reasoning of Guildford Borough Council’s Local Plan and, despite modifications, these questions have not been addressed adequately in the modifications proposed by the Council in this consultation.

The Plan is unsound and should be re-examined.

MM2 - there is a strong case for taking out a strategic site and more scope for better town centre provision. This makes table (S2), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 - independent expert, Neil MacDonald, has demonstrated that 360 homes per year would support the ambitious economic growth rate proposed by the Inspector. 630 homes a year is out of step with the new ONS figures and the Government's new standard methodology. 630 is based on inappropriate assumptions that inflate the figures due to excessive allowance for student homes and their low economic participation.

MM2 - it is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained. The number of houses needed in Woking has also been reduced and has also not been re-examined.

Attached documents:

Comment: MM2 - LPMM18/2016  Respondent: Peter Warburton 8805249  Agent:

I object to the main modifications to the Local Plan for the following reasons:

MM2 – The housing target does not use the latest ONS population figures and household formations statistics.

I call for the hearing to be reopened so that the latest ONS figures and household projections can be taken into account.

Attached documents:

Comment: MM2 - LPMM18/6096  Respondent: Alena Thomas 8805633  Agent:

It is a third time I am writing regarding GBC plan and my general feeling is that by now the plan has moved on from bad for the village, surrounding areas, residents, Green Belt to plain nasty towards the village of Send. My feeling and the feeling of people I talk to is distrust and dismay, all this will inevitably jeopardise the trust we put in our executive elected bodies.

I live in Send, my children go to school in Woking and nursery in Horsley. In 2011 I moved from London to escape pollution and congestion. I work in Slough and use M25 and I am constantly on the run to pick up, drop off and get to and from work. I know the roads, I know first hand that it is impossible to get on M25 from Ripley bypass in less than 20 min at 7.20 in the morning. I also worked at Royal Surrey Hospital in 2015 which is on A3 down south from us and it is equally congested in the morning, especially around Guildford. So all these houses that you are eager to build in Send, some 750 of them will each have 2 cars= 1500 extra cars in the morning will join the standstill?

Please, whoever you are, come and join me in the morning on my way to work.

My general objections to the massive burden of development proposed for the area have not changed and I will set them out in brief below before getting more specific about the latest round of proposed actions.

1. I am informed that a respected consultancy called Barton Willmore estimates the annual housing need for Guildford Borough at 431, not much over half the number being used by GBC (789). September data from the ONS suggests that a figure of 460 is accurate, very close to the Barton Willmore figure. In the light of these facts, please reconsider POLICY S2 and the implications for what is needed in Send.

The analysis of ‘need’ for housing in the Borough as a whole is fundamentally flawed, based on a combination of flimsy survey evidence and the misinterpretation of this and other indicators, some of it by consultants lacking an understanding
of the area (student population counted as permanent to inflate the “need”); and on national-level generalisations about
growth of housing demand. Previous objections by myself and others have gone into more detail on this view, and the
fact of local and central government both trying to justify the policy by saying the other is insisting on it and they don’t
really want it and are trying to fight on the residents’ side, speaks volumes.

Attached documents:

**Comment:** MM2 - LPMM18/4901  **Respondent:** Alison White 8810017  **Agent:**

Reference MM2 - current housing figures in the plan are too high and need revising; I can see no reason why Woking’s
unmet housing needs are to be forced on to Guildford. If Woking has a genuine housing need, it should be met by
Woking.

2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph.
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway.

The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park. 5. The narrowness of the road near Summers. 6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement. 7. The sharp bend near Clandon Regis. 8. The narrowness of the road at the Bull’s Head. 9. The Clandon Junior School and the, in places, narrow footpath for children walking to school. 10. The sharp bend with poor sight lines in either direction at the church. 11. No continuous footpath through the length of the village. 12. The speed of traffic. 13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. The Guildford Residents’ Association’s Objections and Concerns Which I Share

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

**Comment:** MM2 - LPMM18/5135  **Respondent:** Julian Masters 8818433  **Agent:**

Ref: Guildford Borough Council’s Modified Local Plan consultation
I would like you to note my following comments:

A. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision
Group and would like their responses to be registered as mine as well.

B. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:
1. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
2. There is too much reliance on A3 improvements and these are beyond the council’s control
3. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
4. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

C. I would like the Inspector to RE-EXAMINE the Local Plan because:
1. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
2. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

D. The Clandon Society Objections and Concerns Which I Share

The A247
I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (e.g. through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247.

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1 million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed its technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1 million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:
1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North...
facing sliproads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247.

6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3.

7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing.

8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.

9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments.

10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt. The Council has long argued that much of the housing required must be built on such sites. This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites. Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

E. The Guildford Residents’ Association’s Objections and Concerns Which I Share

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and
the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure e.g. excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained. Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

Attached documents:

Comment: MM2 - LPMM18/2704  Respondent: Alan Robertson 8819265  Agent:

- MM2 The housing target is wrong, the hearing should be reopened so that the latest ONS figures and household projections can be taken into account
- MM2 There should be NO requirement for Guildford to take Woking’s unmet need particularly as this will require further green belt release.
- The council has not properly followed its spatial strategy which requires that development takes place first in the town centre, the urban area and brownfield before moving to land in the villages or greenbelt. The addition of another 500 houses in Send (which will be car dependent) has a severe impact on Portsmouth Road Ripley which has not been properly considered.

Attached documents:

Comment: MM2 - LPMM18/410  Respondent: Mr Howard Turner 8819457  Agent:

The proposed increase in the required number of dwellings is excessive and is not adequately substantiated. The methodology used to calculate the requirement for housing in the area fails to take account of the Borough’s need to preserve its high proportion of designated Green Belt land and historic woodland, to enhance the air quality for London and its surrounding area.

The proposed housing increase has a disproportionate impact on the villages of Send and Send Marsh/Burnt Common in particular.

Comment: MM2 - LPMM18/1475  Respondent: Mr Stephen Stuart-Matthews 8824833  Agent:

MM2

Housing numbers.

The evidence base underpinning the modified GUILDFORD PLAN is out of date and fundamentally flawed. The NPPF requires Guildford to base its development plan policies on up-to-date and relevant evidence. The number of households
assumed for the plan period is an over estimate. It is still based on out dated projections and ignores government targets and policies on reducing immigration and changes to the the number of new households arising from student net migration.

The current version of the Plan has increased the number of houses from 12,426 (in the previous version) to 12,600 (1.4% increase).

- On 20th September the Office of National Statistics (ONS) released new household growth projections for Guildford for the Plan period. The new figures reduced the projected growth in households from 11,142 (that applied to the previous version of the Plan) to 6,635; a reduction of 4,507 households (40.5% reduction).
- A reduction of 4,507 dwellings equates to well over two “strategic sites” (ie. the largest sites). The currently planned capacities of the following three sites would not be required to meet the target : - Wisley airfield (Site A35, MM40) 2,000 - Gosden Hill Farm (Site A25, MM35) 1,800 - Send Marsh (Site A43, MM41) 550
- In my view the reduced new housing target as above would help alleviate the pressure on the Green Belt and therefore development at Wisley should be shelved.

The evidence base has now introduced a flawed economic factor to support the projected growth in the number of households. The economic growth will be substantially less over the planning period than assumed due to the BREXIT changes and the likely shift of a substantial number of jobs away from the City of London to Europe. The knock on effect to Guildford will be less spending power locally. The move to online shopping will further reduce the requirement for local town centre shops and jobs and growth in household numbers. This is unfortunate but inevitable.

New Government Statistical Data data on household numbers has been published in September 2018. This should be used. On this basis the growth in household numbers will be 40% less than assumed.

It is also vital the council now carefully reconsiders the demographic make up of the household numbers. It is quite possible that much of the growth is due to an ageing population in which case an increase in the number of care homes for the elderly might well address some of the need.

Attached documents:

Comment: MM2 - LPMM18/4333  Respondent: Merrow Residents’ Association (Keith Meldrum) 8825057  Agent:

MM2- I consider that the housing number of 672 is too high and should be lowered to take into account the new data from the ONS and to remove the figure of 42 new households per year to meet Woking’s unmet need now that the housing need in Woking has been re-evaluated.

Attached documents:

Comment: MM2 - LPMM18/5160  Respondent: Merrow Residents' Association (Keith Meldrum) 8825057  Agent:

Response of the Merrow Residents’ Association to the Main Modifications to the Submission Local Plan (2017) Guildford Local Plan: Examination in Public (EIP)

This statement should be read in conjunction with our earlier submissions on the Local Plan.

MM2- We have commented and raised concerns about the OAN in our submissions on the earlier draft versions of the Local Plan. In doing so we were relying on the expert advice from Neil MacDonald from NMSS who has been contracted
by the Guildford Residents’ Association to give advice on the ONS data. The MRA has access to and is entitled to make use of that advice as a contributing member of the GRA.

Mr MacDonald suggests there were large differences between GL Hearn and NMSS about how the number of extra homes needed to support job growth should be estimated: GL Hearn calculated this at 606 homes a year 2015-34 and NMSS at 460 homes a year. The differences are largely concerned with the assumptions made about the proportion of the population that will be in work or seeking work i.e. economic activity rates.

GL Hearn and NMSS also differ on whether the above figures will provide adequate accommodation for the expected increase in the number of students living in rented accommodation in Guildford. NMSS believe that it will; GL Hearn believe that an extra 23 homes a year are needed for students.

Adjusting the homes for jobs led figures accordingly, the GL Hearn estimate of the number of homes needed each year (the OAN) is 629 (i.e. 606 + 23) whereas the NMSS figure is 460 (i.e. 460 + 0). It is the view of Mr MacDonald that when the key figures are updated to reflect the 2016-based household formation rate projections:

• the number of homes implied by the unadjusted 2016-based household projections is 325 homes a year (2015-34) – compared with 420 homes a year based on using the 2016 SNPP to update the 2014-based projections. This is a reduction of 23%.

• the NMSS calculation of the number of homes needed to support the Inspector’s view of the rate of jobs growth is 361 homes a year – compared with 460 homes a year previously estimated. This is a reduction of 22%.

There will be similar reductions in the GL Hearn figures, suggesting a revised estimate in the range 480-490 homes a year 2015-34, although the exact number cannot be calculated without the detailed population age profiles for the GL Hearn projections.

Based on the new information from ONS and NMSS, and the material reductions in housing need that these point to, we take the view that it is essential that the Examination of the Local Plan is re-opened by the Inspector to allow the latest ONS and NMSS data to be examined and discussed.

There is no need to repeat concerns that have been raised about the proposal to increase our housing requirement by 42 households per year to meet Woking’s unmet needs as they have even been expressed by members of the Guildford Borough Council Executive Committee at their meeting on the 4th September. National policy requires that the unmet need from neighbouring authorities could be met where it is practical to do so. We would argue that it is not practical to do so where this will require additional erosion of Guildford’s Green Belt. Guildford has exactly the same Green Belt constraints as Woking and it could just as easily be argued that Woking should be required to accept some of Guildford’s need. We also highlight that based on the recent ONS figures the Woking unmet need is now itself overstated and this is a further argument for Guildford to avoid further Green Belt erosion.

We urge the Inspector to review this element of the Local Plan and eliminate the unmet need figure of 42 new households per year completely.

Comment: MM2 - LPMM18/3682  Respondent: Rebecca Young 8825825  Agent: Lack of Credibility for GBC’s Proposed Housing Numbers.
The latest government formula for predicting housing need and the recent Office For National Statistics figures for Guildford Borough’s requirements both produce much lower numbers than the approximately 630 homes per year in GBC’s draft Local Plan.

I object to the principle that GBC should increase it’s already over inflated housing targets by accepting some of Woking’s “housing need”.

The housing need in the draft Local Plan is significantly overestimated and should be reviewed with full transparency. The GBC Local Plan cannot proceed with credibility until this has been done.

To summarise, I appreciate the need to build more homes, but in order to gain support I believe GBC has to achieve the following:

1) credible numbers for housing need

2) the ability for local residents and parish councils to have influence in deciding where they should be built within a community, with an emphasis on brown field sites.

I hope that my views will be taken into account as part of the public consultation process.

**Comment:** MM2 - LPMM18/4073  **Respondent:** Tim Madge 8826369  **Agent:**

Ref: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments:

1. **I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.**

2. **I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:**
   1. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
   2. There is too much reliance on A3 improvements and these are beyond the council’s control
   3. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
   4. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

3. **I would like the Inspector to RE-EXAMINE the Local Plan because:**
   1. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
   2. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. **The Clandon Society Objections and Concerns Which I Share**

   **The A247**
I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247.

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic.
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go south of Guildford to use the A247 - potentially an easier route than any existing
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments.
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247
The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

**Housing Number and the Green Belt**

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. **The Guildford Residents’ Association’s Objections and Concerns Which I Share**

   MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

   MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

   MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

   MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

   MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.
Comment: MM2 - LPMM18/3842  Respondent: Martin Barker  8826529  Agent:

I believe the Examination of the Local Plan should be reopened in the light of the September 2018 report from the Office of National Statistics. The report indicates that there has been a gross overestimate of the housing requirement for Guildford.

- The housing number of 672 extra houses a year upon which the Local Plan has been based is hugely inflated. The figure should be reduced by about half and certainly to no more than about 360 houses per year.
- In view of this new evidence there is no longer any justification for any Green Belt development.
- With the continued trend by the public to shop online, the town centre development should contain much less space retail stores and instead be used for more housing in the form of flats and attractive riverside development.

Comment: MM2 - LPMM18/2725  Respondent: Mark Blowers  8827169  Agent:

The following are my comments to the modifications to the Local Plan after the Planning Inspector’s Public Examination of the Plan in June/July 2018:

**MM2 NUMBER OF HOUSES**

The modifications to the Local Plan has increased the number of houses from the previous version of the plan. The number of houses had increased from 12,426 to 12,600 a 1.4% increase.

The Office of National Statistics (ONS) has (on 20th September) released new household growth projections for the Plan period of 2015 to 2014. These projections have reduced the growth in households from 11,142 in the previous plan, to 6,635.

The modifications to the Local Plan do not take into consideration this significant reduction in number of houses required. The number of houses required is at the core of the Local Plan and impacts requirements on affordable housing, size and number of proposed sites, impact on infrastructure and the use of Green Belt land. Therefore the public examination of the Planning Inspector must be re-opened.

Comment: MM2 - LPMM18/3230  Respondent: Robert Wood  8827809  Agent:

Ref: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments:

1. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.
I OBJECT to the Modified Local Plan as a whole; I believe it to be fundamentally unsound because:

1. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited; the unsightly mess around the bus station area is surely in dire need of improvement

2. There is too much reliance on A3 improvements and these are beyond the council’s control

3. There is too much reliance on A3 improvements and these are beyond the council’s control

4. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit

5. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

I would like the Inspector to RE-EXAMINE the Local Plan because:

1. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt

2. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

The A247

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247.

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1 million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not, and cannot, have the capacity to deal with the increase in traffic. Also it is not clear to me how that seemingly random figure was arrived at.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1 million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic.
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments.
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.
The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. The Guildford Residents' Association's Objections and Concerns Which I Share

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government's standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking's need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

Comment: MM2 - LPMM18/1377  Respondent: Mr John Dumbleton 8831393  Agent:

I am aware of the differences between GL Hearn and Neil MacDonald of NMSS, the consultant engaged by Guildford Residents Association to analyse the housing figures. It is quite clear that the figures should be re-examined in light of the latest ONS forecasts for Guildford's population and household growth. To retain the current housing requirement in the Plan without re-opening the Examination to consider and debate the ONS forecasts will make the Plan unsound.

Whilst a high housing figure should theoretically result in more infrastructure, that is no reason to provide for more houses in the Local Plan than the real need justifies. In any event, new developments will only provide infrastructure to deal with existing problems insofar as they will have been made worse and will not provide a solution to address the backlog inherent in Guildford's historical shortfall.

Whilst it is national policy that the unmet housing need from neighbouring authorities should be met where it is practical to do so, it cannot be practical or logical that Guildford should have to surrender part of its own Green Belt to meet part of Woking's unmet need to avoid encroachment on its own Green Belt. Guildford has the same Green Belt constraints as Woking. Furthermore, the latest ONS figures for Woking support the proposition that its unmet need is overstated. This element of the Local Plan also needs to be re-examined so that Woking's unmet need figure can be deleted from Guildford's housing requirement.

Attached documents:

Comment: MM2 - LPMM18/1902  Respondent: Jan Chapman 8832257  Agent:
As figures published by the Office of National Statistics in September 2018 predict considerable reductions in future population growth, these reductions should be taken into account in the current review of the Local Plan.

**Attached documents:**

---

**Comment:** MM2 - LPMM18/2964  
**Respondent:** Trevor Brook 8834561  
**Agent:**

I believe the present proposals are fundamentally flawed and need revising in at least the following ways:

- to properly use brownfield sites for housing rather than expanding retail and sacrificing green belt.

**Attached documents:**

---

**Comment:** MM2 - LPMM18/4574  
**Respondent:** R Brind 8837281  
**Agent:**

**GENERAL**

- MM2 The housing target is wrong. The hearing needs to be reopened so that the latest ONS figures and household projections can be taken into account.
- MM2 There should be no requirement for Guildford to take Woking’s unmet need particularly as this will require further green belt release.
- The council has not properly followed its spatial strategy which requires that development takes place first in the town centre, the urban area and brownfield before moving to land in the villages or greenbelt. The addition of another 500 houses in Send (which will be car dependent) has a severe impact on Portsmouth Road, Ripley which has not been properly considered.

**Comment:** MM2 - LPMM18/4968  
**Respondent:** Lynn Yeo 8839521  
**Agent:**

Dear Guildford Borough Council Planning Policy Team,

I am a resident of Send and am writing to object to the changes in the latest Local Plan. I have responded to all previous versions of the Local Plan and am extremely disappointed at the current version which adds insult to injury, by not only disregarding the thousands of responses regarding overdevelopment in Send, but actually significantly increasing the amount of development in Send. Not only have previous objections been ignored, but Guildford Borough Council appear to have decided that even more development would be the correct response to local objections.

**Attached documents:**

**Comment:** MM2 - LPMM18/1419  
**Respondent:** Richard Ayears 8840161  
**Agent:**
I believe the Guildford Borough Council’s Local Plan is unsound because:

I. The council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited.

II. There is too much reliance on A3 improvements and they are beyond the council’s control.

III. The town centre policy, S3, is thus inadequate and also does not address the infrastructure deficit.

IV. Housing numbers should reflect the latest ONS figures and projections. The public hearings should be re-opened on this subject to allow re-examination. GBC does not have to commit to catering for Woking’s under provision.

V. The grounds for green belt development are inadequate because of 1 and 3 and do not represent ‘exceptional circumstances’

Attached documents:

Comment: MM2 - LPMM18/1575  Respondent: David K Reynolds 8840193  Agent:

I ask for the public hearing to be reopened. I object to the following:

MM2. The latest ONS population statistics showing a 40% reduction in households must alter the housing target which makes the plan unsound and deletes Woking’s unmet need. It was fundamentally unfair for this to be foistered on to Guildford. The effect on Ripley High St and Portsmouth Rd of an additional 500 houses in Send has not been properly thought through. The spatial strategy requires town centre and urban brownfield development prior to green belt release. See MM13 below.

Attached documents:

Comment: MM2 - LPMM18/2003  Respondent: Brendan McWilliams 8840353  Agent:

1. The Guildford Residents’ Association’s Objections and Concerns Which I Share

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

120 of 2575
Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

Guildford Borough Council's Modified Local Plan consultation

I feel the current plan does not reflect the vision for the town’s future shared by so many residents, and would lead to a degraded environment in and around our historic town.

I would like you to note the following comments in support of this belief:

1. **I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.**

2. **I OBJECT to the Modified Local Plan as a whole. I believe it is fundamentally unsound because:**
   1. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited.
   2. There is too much reliance on A3 improvements and these are beyond the council’s control.
   3. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit.
   4. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

3. **I would like the Inspector to RE-EXAMINE the Local Plan because:**
   1. There have been several major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt.
   2. New figures and projections for housing numbers have been released by the Office for National Statistics (ONS) which clearly demonstrate that the housing number in the Local Plan is too high.

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. **The Clandon Society Objections and Concerns which I share**

The A247

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road for any increase in traffic. I live on the road and can see lorries mounting the pavement scores of times each day.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads and lanes (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247.

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.
I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents. I have photographs showing lorries mounting the pavement in close proximity to mothers with pushchairs heading for the primary school in West Clandon.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. There is already a proposal to build a station next to the bridge.

The £1 million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

**I believe that traffic will increase significantly because:**

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

**Problems with the West Clandon section of the A247**

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (minor modifications are underway but street lighting required)
2. The sharp blind bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is obscured by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that
Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.

4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers (and my property)
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement, a pavement used twice daily by children walking “sustainably” to the primary school, and by crocodiles of the same schoolchildren walking to the recreation ground.
7. The sharp S-bend near Clandon Regis. Currently most of the warning pillars at the edge of the road have been knocked over.
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow unprotected footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church. The church car park is on the opposite side of the road and pedestrians cannot see oncoming traffic when they cross
11. No continuous footpath through the length of the village
12. The speed of traffic, frequently exceeding the speed limit with speeds in excess of 60mph in a 30mph area having been recorded
13. The classification as an A-road without it having the capability of an A-road.

**Housing Number and the Green Belt**

The recent release of information from the ONS must cause a recalculations of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. **Guildford Residents’ Association’s Objections and Concerns which I share**

   MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

   MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

   MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

   MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when land in Guildford is more constrained, when Woking is proposing Green Belt development, and when Woking’s need figure has also reduced and has not been examined.

   MM2 Although extra sites are required because some might not come to fruition, the **housing supply** figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

**Attached documents:**
Comment: MM2 - LPMM18/6041  Respondent: Moira Tailby 8846177  Agent:

I am writing to object to the adoption of the Main Modifications to the Local Plan and to call for the examination in public to be reopened.

In particular, I object to MM 2. There is no justification to requiring Guildford to take Woking’s unmet need as this would require further encroachment on Greenbelt land. And the figures on which the housing requirement has been based are not the latest figures supplied by the Office of National Statistics.

Attached documents:

Comment: MM2 - LPMM18/1440  Respondent: Elizabeth Toulson 8848417  Agent:

i) Housing numbers: The figures in MM2 are no longer up to date and do not provide a sound basis for the Plan or justify such extensive Green Belt loss - 360 homes not 630.

Attached documents:

Comment: MM2 - LPMM18/2956  Respondent: Rob Sewell 8849313  Agent:

In light of the revised ONS figures, I do think that the new build housing requirements should be revisited.

Attached documents:

Comment: MM2 - LPMM18/3063  Respondent: Sam Pinder 8850977  Agent:

I’m a resident of East Horsley – my address [Response has been redacted due to statement containing personal data which cannot be disclosed due to the provisions of the General Data Protection Regulation 2018/Data Protection Act 2018]

I would like to object to the proposed local plan

1. Number of Houses (MM2) - Last month the ONS released new household growth projections for Guildford for the plan period which significantly reduce the expected growth in the number of households from 11,142 to 6,635. This is such a massive decrease in the projected number of houses that I cannot see any situation in which it could be argued that the previous projections should continue to be used. I object to more houses than are needed being built in this area. I am particularly incredulous that, even though GBC and the Inspector, Jonathan Bore, were both aware of the likely significant reduction in population projections, (as projections were released in May 2018 showing this), they continued with the housing numbers in the local plan and instead of reducing it, the Inspector chose to increase the number of houses required to take on Woking’s unmet need.

2. Re-opening the public examination (MM2) – due to the massive differences between the plan and the latest ONS data, the only course of action can be to re-open the public examination by the Planning Inspector, to take these changes into account and significantly reduce the number of houses in the GBC local plan.

Attached documents:
Comment: MM2 - LPMM18/3821  Respondent: John F. Wood 8852289  Agent:

The examination in public must be reopened, so that the latest Office of National Statistics information can be applied. I fully support the representation made by WAG, which was written with advice from Richard Harwood QC.

Attached documents:

Comment: MM2 - LPMM18/1884  Respondent: Mrs Mary Teague 8855425  Agent:

>>> MM2: The objectively assessed housing need is fundamentally flawed. The Plan takes no account of the material reduction in new household formations forecast by the ONS last month, and is the Plan is accordingly unsound. It is essential that the public examination of the Plan is reopened.

>>> MM2: there should be no requirement for Guildford to take Woking’s unmet need. Woking is self evidently in the midst of large scale high rise residential redevelopment of the Woking town centre, and it is nonsensical to suggest that Guildford green belt has to be sacrificed when Woking's own future plan envisages more town centre residential high rises.

Attached documents:

Comment: MM2 - LPMM18/2029  Respondent: John Coleman 8855649  Agent:

1. **The Guildford Residents’ Association’s Objections and Concerns Which I Share**

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the **housing supply** figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

Attached documents:
Comment: MM2 - LPMM18/5466  Respondent: Ramsey Nagaty 8858113  Agent:

1. Based on the latest ONS data, Guildford can achieve economic growth with an extra 360 homes a year, which is considerably lower than the 672 extra homes a year which have been put forward in the draft Local Plan.

2. The new figure of 360 homes means development in the Greenbelt on the scale proposed in the Plan can no longer be justified and that one or more of the Greenbelt sites could be saved.

4. Housing numbers should reflect the latest ONS figures and projections. The public hearings should be re-opened on this subject to allow re-examination.

5. The grounds for green belt development are inadequate because of 1 and 3

11. I object to the level of Pre-determination at all levels of this local plan preparation.

12. I object to Guildford taking any of Woking unmet housing need. Guildford has more GBelt

13. The Local Plan is unsound because:

1. The council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited.

Attached documents:

Comment: MM2 - LPMM18/4879  Respondent: Deborah Wardrop Griffiths 8858369  Agent:

Policy S2 - MM2

I would ask the Government Inspector to reduce the housing targets. The stated housing requirement is not a sound basis for the Local Plan or justification for such an extensive loss of Green Belt land and should be re-examined as a result of the new ONS forecasts. It has been shown by Neil McDonald that 360 not 630 +42 houses would support the economic growth proposed by the Government Plan inspector. Such a high figure would impact unnecessarily on the Greenbelt.

In our area I am concerned with the possible building in the Hornhatch, Chilworth (MM43) vicinity which would have a damaging effect on Blacksmith and Halfpenny Lanes. These were not created to tolerate heavy traffic flow and already see large amounts of traffic using them to avoid the A 281 into Guildford and the traffic jams that plague residents and visitors every day.

I would ask that GBC heeds the ONS forecasts and would put the following questions to the Council:

Why do we need to accommodate university students in the town centre when this could be done on campus?

Why has the Council not examined the brownfield sites available in the town for development instead of taking the easier option of building on the Green Belt?

Why does Guildford have to pick up Woking’s shortfall in their housing quota? This would negatively impact on our Green Belt and is not appropriate. Woking’s case needs to be re-examined especially as their figures have been reduced.

Attached documents:

Comment: MM2 - LPMM18/5874  Respondent: Clare Bevan 8859553  Agent:
I object to various aspects of the proposed main modification (MM) to the Local Plan (2017) as follows

1. The MM2 housing target is wrong as it does not use the latest ONS population statistics
2. MM2 - if it requires green belt release, why should Guildford take Woking’s unmet need?
3. The addition of another 500 house in Send would have a severe impact on the Portsmouth Road through Ripley which has not been properly considered
4. The addition of land to the sites of the TFM development does not mitigate the density issue as much of the added land is constrained by the VOR
5. Strategic sites such as TFM should not be exempt from design constraints

Attached documents:

Comment: MM2 - LPMM18/5885  Respondent: Claire Yates 8859585  Agent:

MM2 Spatial development strategy and housing numbers – the latest ONS figures are for a reduced population increase of 301pa. Guildford could now expect to have around 5,500 fewer households at the end of the plan period that was predicted by the data that formed the basis of the debate at the Examination.

Modifications should only be made if the Plan is found unsound, which was not the case. However, additions were made in the Send area as below. Send parish now accounts for 56% of proposed development supply in villages (based on the table at MM2). This community cannot support all this development, which will completely change the character of the parish, with its three distinct settlements of Send, Send Marsh and Burnt Common, as reflected by our parish logo:

Attached documents:

Comment: MM2 - LPMM18/1442  Respondent: Mr & Mrs Michael and Jill Simmonds 8861697  Agent:

I write to object to the Guildford Borough Council local plan and ask that the hearing be reopened on account of the following reasons.

MM2. The projection for future housing has been seriously overstated. The need for future retail business has not been correctly estimated in view of online shopping.

MM2. We understand the projections for housing need are grossly exaggerated and too little account has been taken into account in respect of the future need for retail businesses.

Attached documents:

Comment: MM2 - LPMM18/3823  Respondent: David Smith 8862145  Agent:

I want to object to the Local Plan on the grounds detailed in the response made by Guildford Vision Group. In particular, I consider the plan to use Green Belt land before having exhausted Brown Field sites in the Borough is against the rules and common sense, and unnecessary.

Attached documents:
1. The Guildford Residents’ Association’s Objections and Concerns Which I Share

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

Attached documents:

Comment: MM2 - LPMM18/5383  Respondent: Judith Allen 8880353  Agent:

I write to support The Wisley Airfield Action Group's representations and objections to the above which was written with advice from Richard Harwood QC.

I also write to object to the main modifications Guildford Borough Council's Draft Local Plan on the following grounds:

MM2 The housing target is inaccurate and therefore a public hearing needs to be re-opened in order for the latest figures from the Office of National Statistics regarding household projections can be taken into account.

MM2. There is no requirement for Guildford to take Woking's unmet need as this will mean further release of green belt land.

The Council has not followed its policy of requiring development first in the town centre, then urban area, brownfield followed by land in villages and green belt land. 500 houses in Send will be car dependent and have a negative impact on Portsmouth Road, Ripley have not been properly considered.

Attached documents:

Comment: MM2 - LPMM18/5178  Respondent: Pamela French 8883841  Agent:

Ref: Guildford Borough Council’s Modified Local Plan consultation
I would like you to note my following comments:

1. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.

1. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:
   2. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
   3. There is too much reliance on A3 improvements and these are beyond the council’s control
   4. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
   5. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

1. I would like the Inspector to RE-EXAMINE the Local Plan because:
   2. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
   3. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. The Clandon Society Objections and Concerns Which I Share

The A247

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:
1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic.
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247.
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh.
4. The development of 1800 houses at Gosden Hill.
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247.
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3.
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing.
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments.
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway).
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph.
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park.
5. The narrowness of the road near Summers.
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement.
7. The sharp bend near Clandon Regis.
8. The narrowness of the road at the Bull’s Head.
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school.
10. The sharp bend with poor sight lines in either direction at the church.
11. No continuous footpath through the length of the village.
12. The speed of traffic.
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.
The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. **The Guildford Residents’ Association’s Objections and Concerns Which I Share**

   MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

   MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

   MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

   MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

   MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes.

   **Attached documents:**

   **Comment:** MM2 - LPMM18/5199 **Respondent:** Pamela French 8883841 **Agent:**

   MM3 In (5) new town centre development should avoid adverse impact on surrounding residential areas.

   MM3 There should be a policy (S4) on the urban areas beyond the town centre to prevent inappropriate garden grabbing and to encourage a joined-up approach to site assembly in carefully selected residential areas where redevelopment linked to enhancement might be appropriate.

   1. **The Guildford Vision Group’s Objections and Concerns Which I Share**

      MM3 – POLICY S3. Guildford Borough Council must deliver real and coordinated results. The Town Centre must be designated a strategic site or sites

      MM3 – POLICY S3. Guildford must have an effective local plan. Development rules must ensure quality of development across the Town Centre

      MM3 – POLICY S3. Guildford Borough Council should adopt Guildford Vision Group’s proposals, including the new crossing or equivalent effective alternative, to deliver a safer, pedestrianised town centre with transport resilience and opened riverside

      MM23 – POLICY D1. Guildford Borough Council, as a major landowner in the centre, must accept the same obligations as imposed on the other strategic site owners by the council as planning authority.
In conclusion I would point out that the Inspector raised a considerable number of questions about the sustainability, viability and reasoning of Guildford Borough Council’s Local Plan and, despite modifications, these questions have not been addressed adequately in the modifications proposed by the Council in this consultation.

Attached documents:

Comment: MM2 - LPMM18/3804  Respondent: Jan Messinger 8890753  Agent:

I strongly object to having to accept Woking Borough councils housing need. Item MM2 paragraph (1) and (2).

Attached documents:

Comment: MM2 - LPMM18/3805  Respondent: Jan Messinger 8890753  Agent:

I also feel that the housing requirement numbers do not meet the required amount. Basically I think we are being asked to build too many. Where is the increased population? I think the 600+ per year is too high.

Attached documents:

Comment: MM2 - LPMM18/1708  Respondent: Marco Attard 8892449  Agent:

Dear Sir / Madam

I have just been informed that there have been changes to the local plan and unlike the past we have not been updated, I have not been advised of any new consultation although have been in the past!! If you have removed me from your list then this goes against GDPR regulations, as I understand that we can continue to stay on data bases so long as we are given the option to ’opt out’ and not forced to ’opt in’!

I would suggest that something with such importance to the local community should be be examined in public as it has in the past and that the latest statistics from the Office of National Statistic can be used and hopefully relied on?

Attached documents:

Comment: MM2 - LPMM18/3103  Respondent: Carol Wilson 8896161  Agent:

I OBJECT to the following modifications of the GBC Local Plan:

**NUMBER OF HOUSES (MM2)**

- The number of houses has increased to 12,600 in the latest plan.
However, the ONS latest figures show a reduction in the requirement by 4507, some 40% to 6,635. It is therefore essential that the Public Hearing should be reopened so that the latest and significantly lower figures can be used.

A reduction of 4507 means that two to three of the large sites would no longer be required. Such as Wisley MM40, Gosden Hill MM35 and Garlick's arch MM41.

The 655 dwellings on the five smaller sites, added to enable early building numbers could also be eliminated.

There would be no exceptional circumstances for development on the greenbelt.

RE-OPENING THE PUBLIC EXAMINATION (MM2)

The Public Examination of the Plan by the Planning Inspector must be re-opened as the figures have changed so much.

Attached documents:

---

Comment: MM2 - LPMM18/465  Respondent: Mrs K I Mackay 8896641  Agent:

Our response to the proposals is that we submitted our response in the original plan Guildford, Merrow, Burpham, Send, Ripley, West Clandon, West Horsley, Wisley Airfield. There is no infrastructure to support any of these proposed developments on Green Belt Land. There is no justification for taking land out of the Green Belt in order that it can be built on when there are many brownfield sites that can be used. We do not have the time to go through page after page of these proposed alterations to the plan.

The traffic through all of these areas is already more than can be coped with and we have not seen any proposals that would prevent this being an overflow from London. Which is exactly what the developers at Wisley told us when we went to view their first proposal for development. The people in the villages have a right to quality of life, free from pollution and noise generated by traffic.

The National Statistics Office have clearly stated that you have overestimated the housing requirement for this area and they do not expect it to change. They have slashed their forecasts for population growth in the borough by 40%. September 20th 2018, that the figure would be 4,662. This means the housing requirements could be met on existing brownfield sites within the town.

There is no reason that is acceptable that Guildford and the surrounding villages should meet Woking's unmet housing needs when Woking has ignored their residents needs.

We therefore hope that without spending a great deal of tax payers money this housing assessment will be reviewed and that priority will be given to the quality of life for residents and wildlife conservation.

Having seen the photographs A247 West Clandon New Local Plan

Please add these to our correspondence below taken a month ago at the other end of the village by Lime Grove
Dear Sir/Madam

9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. The Guildford Residents’ Association’s Objections and Concerns Which I Share
MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

Re: Guildford Local Plan

Representations on the main modifications published in September 2018

I begin by saying that I agree with everything written by Ockham Parish Council and Wisley Action Group.

I also OBJECT to the modifications to the Guildford Local Plan as proposed for the following reasons:

I wish to point out that a general difficulty with the modifications is that no justification is put forward as to why the modification has to be made. A **main modification** may only be made if the **plan as submitted is unsound** and the modification is required to make it sound. It is not apparent why most of the modifications might be thought to be required to address a soundness failure, let alone to evaluate whether they are.

**MM2**

The housing requirement should be calculated from the starting point of the latest, September 2018, ONS projections rather than the projections released earlier in 2018. These reduce the net increase in households on those projections from 420 per annum to 325 per annum.

The housing requirement figures should therefore be adjusted downwards.

This reduces the case for Green Belt releases and there are not the exceptional circumstances which are necessary to support all of the sites. Fewer Green Belt sites ought therefore to be released, with the **unsustainable site of Former Wisley Airfield/Three Farm Meadows (FWA/TFM) the first to go.**

We note that the Inspector has sought the Council’s views on those ONS figures (ID/10), but given their significance **ought to be asking the examination participants more generally for their views.**

**MM2 – 4.1.11**
The revised housing trajectory projects the first homes coming from FWA/TFM in 2022/23. However, the M25 Junction 10 works are said to need to be completed before any units can be occupied at the site. Given the delays to the Junction 10 project, the trajectory is unrealistically optimistic. The start date for commencement of works on J10/M25 roundabout has been pushed back to begin late 2021 with a completion date to be confirmed!

Site A35 FWA/TFM is highly unlikely to make any contribution to the five year supply.

**Guildford Borough Council’s Modified Local Plan consultation**

Thank you for keeping me informed of the progress of the Local Plan and I would like you to note my following comments:

A. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.

B. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:

1. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
2. There is too much reliance on A3 improvements and these are beyond the council’s control
3. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
4. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

C. I would like the Inspector to RE-EXAMINE the Local Plan because:
1. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
2. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

D. The Clandon Society Objections and Concerns Which I Share

The A247

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (e.g. through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247.

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.
I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1 million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:
1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumable will generate at least double the amount of commercial traffic
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This will allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 – potentially an easier route than any existing
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247
The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:
1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000-place school on the site behind the station
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt
The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.
The Council has long argued that much of the housing required must be built on such sites.
This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.
The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.
Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

E. The Guildford Residents’ Association’s Objections and Concerns Which I Share
MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

2.Given the very large discrepancies between the Plan and the up-to-date ONS household data the Public Examination of the Plan by the Planning Inspector must be re-opened.

Attached documents:

Comment: MM2 - LPMM18/3714  Respondent: John Burgess 8900481  Agent:

Please find below my response to the latest DLPM.

I OBJECT to the DLPM because:
1. Guildford Borough Council’s (“GBC”) proposals are flawed. The latest population and household figures produced by the Office for National Statistics, show a significant reduction in housing requirements for the borough compared to figures used by GBC, rendering the current draft local plan untenable.

The revised figures mean development in the Green Belt on the scale proposed cannot be justified. Insetting of villages and designated sites for housing should be re-examined and reflect revised housing need projections.

8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. The Guildford Residents’ Association’s Objections and Concerns Which I Share

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

Attached documents:

Comment: MM2 - LPMM18/5916  Respondent: Andrew Frackiewicz 8900769  Agent:
I wish to place on record that the comments (applicable) relating to the previous versions of the Guildford Local Plan (Plan) which I made in my previous emails dated 17 July 2016 and 23 July 2017 continue to apply.

Dealing with the modified plan I wish to make the following comments as in my opinion the Plan is unsound and based on out of date data:

Number of Houses (MM2): The current version of the Plan should be based on the latest prediction of household growth projections from the Office of National Statistics, such projections now being some 50% lower than the current plan for some 12,500 houses. I continue to believe that the housing targets for Guildford Borough are excessive and over-stated particularly given the developing political situation including pending withdrawal from the EC.

... 

Finally I believe that the Plan is unsound as it does not consider the latest population statistics and trends, relies on utilising green belt land, does not fully utilise brown field development which would have the benefit of regenerating our ailing town centres and increasing the inflow of Council Tax revenue. I also consider that the many submissions and representations of East Horsley Parish Council together with other adjoining parish councils such as West Horsley, Ockham, etc. as well as the submissions and representations of Wisley Action Group have not been properly considered and/or ignored.

As such I consider that the Plan must be amended and thereafter the Public Examination (MM2) of the Plan re-opened.

Ref: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments:

1. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.

1. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:
   2. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
   3. There is too much reliance on A3 improvements and these are beyond the council’s control
   4. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
   5. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

1. I would like the Inspector to RE-EXAMINE the Local Plan because:
   2. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
   3. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. The Clandon Society Objections and Concerns Which I Share

The A247

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1 million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.
The £1 million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt
The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. The Guildford Residents’ Association’s Objections and Concerns Which I Share

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

Attached documents:

Comment: MM2 - LPMM18/5803  Respondent: Lyndell Mussell 8902689  Agent:

I should like to make the following comments on the on the Draft Local Plan

I am a Guildfordian and I am very concerned as to the future development of Guildford. In particular, the Guildford Borough Council's persistence in calling for a high housing target in the Draft Local Plan. (MM2)

I would respectfully ask the Inspector to re-open the examination and amend the Plan to take into account of the new lower figures. (MM2)

The Guildford Resident Association's adviser has shown that Guildford can achieve ambitious economic growth with an extra 360 homes a year. This a more realistic figure than the 630+42 extra homes a year currently proposed in the Draft local Plan which would lead to excessive loss of countryside, congestion and town cramming. (MM2)

The new figure of 360 means development in the Green Belt on the scale proposed in the Local Plan can no longer be justified. Guildford could then maintain its unique position as an historic country town within the Green Belt. It is already under strain in terms of congestion, pollution and infra-structure, so the adoption of the higher housing target would make
The character of Guildford would be irreparably damaged if it was to become part of an urban development towards London or elsewhere.

The current figure in the Draft Plan of 630+42 extra homes a year is 75% higher than the number of homes needed to support ambitious economic growth and out of step with both the new ONS figures and the new Government formula. This is based on two factors. Firstly, adding extra homes for students even though they are already catered for in the figures. Secondly, inflating the figures by being very pessimistic about how many and how much local people work, so lots of extra workers would have to be brought in. Guildford would be building twice as many homes than the population needs.

In addition, the Inspector's suggestion that Guildford build an additional 42 homes a year in our Green Belt to protect Woking's Green Belt seems perverse when Woking has ambitious growth plans. Its housing need figure has also reduced and has not been assessed at Examination.

Comment: MM2 - LPMM18/4092  Respondent: Tony and Margaret Walker 8907169  Agent:

We wish to register our belief that the Local Plan in its current draft form is unsound. We believe that the Council has not demonstrated that all the brownfield development possibilities, especially in the town centre, are being exploited and consequently cannot properly demonstrate that intentions to build in the green belt are necessary because of “exceptional circumstances”. We believe also that the town centre policy S3 is inadequate, that insufficient weight is given to infrastructure improvement there and that the plan relies too much on upgrades to the A3 that are conjectural, not being under Guildford’s control. Finally, the plan appears to be based on housing projections that we understand are now outdated (and which many have always believed to be overstated), and the public hearings ought to be reopened to review the consequences of this important issue.

Attached documents:

Comment: MM2 - LPMM18/4040  Respondent: Mr David Bullivant 8908289  Agent:

Regarding the modifications of GBC Local Plan, I would like to object to these modifications. Over the last few years we have repeatedly objected to the Local Plan in our area. I have listed on many occasions my objections and am horrified that you have added to the land south of the appeal site, which will completely overlook my property and land and completely ruin our historic hamlet, turning it into a large town of ridiculous proportions. Also, a lot of this land is constrained by the VOR (air traffic control beacon) which prevents any construction within a certain radius.

With regard to the rest of the modifications there are several points which are not acceptable. In view of the latest ONS statistics, which were released a few weeks ago, the GBC has not taken these figures into account and therefore your housing target is wrong, which means the plan is unsound. Also in MM2 - there should be no need for Guildford to take Woking’s unmet need, which would require further green belt release.

For all the above reasons we are calling for the hearing to be reopened, specifically so that the latest Office of National Statistics can be used. I would also like to advise that I support the representation made by WAG (Wisley Action Group), which was written with advice from Richard Harwood QC.

Comment: MM2 - LPMM18/2765  
Respondent: Burpham Community Association (Liz Critchfield) 8908513  
Agent:

MM2 Policy S2 Planning for the Borough – our spatial development strategy.

Para 3.1 These figures do not offer a reasonable calculation of housing need. Guildford has released Green Belt land to provide for its own needs and should not be expected to take up Woking’s unmet need, given their refusal to use their own Green Belt land.

Para 4.1.9(a) The statement refers to taking up unmet housing needs “where it is practical to do so.” We are aware that the Main Modifications refer to the new requirements of the 2018 NPPF which states that a statement of Common Ground is needed to justify Green Belt release. No such statement has been drawn up between Guildford and Woking.

Para 4.1.9ab We concur with the Burpham Neighbourhood Forum’s view that their estimate of 2,000 homes completed or with permissions since 2015 is an underestimation. Since 2015, 3,675 homes have been approved or completed, which leaves a sewer capacity of 325 homes. Clearly this is insufficient for the proposed housing number of 672 homes per annum let alone the total over the plan period. Thames Water has released its business plan for the period 2020-2025 which does not offer any financial provision to update Guildford’s capacity. This renders the Local Plan unsound.

Para 4.1.9ac The reduction in the housing number for Gosden Hill is to be welcomed but we are concerned that there is no indication given that the site allocation boundary will be amended to reflect this. We consider it vital that a defendable Green Belt boundary is achieved.

We feel strongly that the Examination should be re-opened as the housing figures are no longer up to date and do not provide a sound basis for the Plan or justify such extensive Green Belt loss. Given the newly released ONS figures, the expert employed by the Guildford Residents’ Association, Neil MacDonald, has shown that around 360 homes per year would be enough to support the economic growth rate proposed by the Inspector.

There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

Comment: MM2 - LPMM18/2784  
Respondent: Burpham Community Association (Liz Critchfield) 8908513  
Agent:

We consider that the revised housing figures weaken the case for extensive Green Belt development.

Conclusion

The BCA has appreciated the opportunity to comment on the proposed modifications to the Local Plan. Our major concern is the recent publication of new ONS figures, which would significantly reduce the proposed housing figure of 672. We therefore ask that the Examination is re-opened to discuss the implications of this.

Comment: MM2 - LPMM18/4547  
Respondent: Diana Grover 8909761  
Agent:

Ref: Guildford Borough Council’s Modified Local Plan consultation
I would like you to note my following comments:

1. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.

1. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:
2. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited.
3. There is too much reliance on A3 improvements and these are beyond the council’s control.
4. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit.
5. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

1. I would like the Inspector to RE-EXAMINE the Local Plan because:
2. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt.
3. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high.

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. The Clandon Society Objections and Concerns Which I Share

The A247

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247.

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:
1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic.
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247.
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh.
4. The development of 1800 houses at Gosden Hill.
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247.
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3.
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing.
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments.
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway).
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph.
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park.
5. The narrowness of the road near Summers.
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement.
7. The sharp bend near Clandon Regis.
8. The narrowness of the road at the Bull’s Head.
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school.
10. The sharp bend with poor sight lines in either direction at the church.
11. No continuous footpath through the length of the village.
12. The speed of traffic.
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.
The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. **The Guildford Residents’ Association’s Objections and Concerns Which I Share**

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the **housing supply** figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy

**Comment: MM2 - LPMM18/4373  Respondent: Colette Clegg 8910273  Agent:**

I have been informed by our local action group that we need to make any objections/comments regarding the modifications of the GBC Local Plan.

Firstly, I am no longer receiving emails from you with respect to the Local Plan which I have been told is due to GDPR issues. I do not recall having seen an email from you on this topic nor being asked to opt in or out of your mails (I would have opted in). Can you therefore make sure you add my name to continue receiving your emails from immediate effect.

Regarding the modifications of GBC Local Plan, I would like to **object** very strongly to these modifications. Over the last few years I have repeatedly objected to the Local Plan in our area (in particular the inclusion of Three Farms Meadow as a strategic site) as being not suitable but, more importantly, not sustainable given the lack of a viable transport plan for such a large new town. Also the whole plan is based both on out of date ONS statistics, which justify a far higher target than is actually required, and a seemingly self imposed requirement to help fill Woking’s unmet needs (MM2).

**Attached documents:**

---

**Comment: MM2 - LPMM18/4616  Respondent: Anne Elkington 8910817  Agent:**

I would like register my objections to the new local plan, strategy and sites modifications.
1. **NUMBER OF HOUSES (MM2)**

I object to the planned 12,600 new houses. The recent ONS household forecast has reduced by 6,635 (40%) since the previous forecast, and this needs to be reflected in the Plan. This reduction in households is roughly equivalent to two strategic sites plus all five of the new sites that were included after the Local Plan Examination in Public, and cannot be ignored. The Plan should be updated and resubmitted to the Planning Inspector.

**Attached documents:**

**Comment:** MM2 - LPMM18/5765  
**Respondent:** Ockham Parish Council (Peter Bevan) 8916001  
**Agent:**

Ockham Parish Council (OPC) has reviewed these Proposed Main Modifications and has also seen and supports the representations made by the Wisley Action Group on advice from Richard Harwood QC. OPC wishes to make the following objections and comments.

1. **General**
2. MM2: The housing target is not, but should be, based on the latest (September 2018) ONS projections. The target is therefore incorrect and should be adjusted downwards.

   Additionally, Guildford Borough has no requirement to take up Woking’s unmet need for housing.

   The decreased housing requirement reduces the case for Green Belt releases and the exceptional circumstances necessary to support all the selected development sites do not exist.

3. The addition of a further and car dependent 500 houses in Send will severely and adversely impact the Portsmouth Road/High Street in Ripley, a factor which has not fully or properly been considered.

4. The proposed additional releases of Green Belt land do not conform with the Spatial Development Strategy which requires development to take place firstly in the town centre, the urban areas and on brownfield land.

**Attached documents:**

---

**Comment:** MM2 - LPMM18/5422  
**Respondent:** David White 8916193  
**Agent:**

Please note it is my view that the Local Plan is unsound because:
1. The council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited.

2. Housing numbers should reflect the latest ONS figures and projections. The public hearings should be re-opened on this subject to allow re-examination.

3. The grounds for green belt development are inadequate because of 1 and 3 and do not represent ‘exceptional circumstances’

Attached documents:

Comment: MM2 - LPMM18/4897  Respondent: Andrene Aaronson 8916769  Agent:

I am writing in response to the Guildford local plan and with particular reference the Main Modification MM45 relating to Policy A64.

I am greatly concerned at the way that the proposed development completely undermines the main purpose of the Green Belt which is to prevent urban sprawl by keeping land permanently open: building on this site will destroy exactly this openness and yet another piece of the jigsaw which is our precious countryside will be lost. Flexford and Normandy are two settlements, not one, and there are no “exceptional circumstances” which justify this infilling. The two villages are currently separated by the railway and this small area of land is part of an important wildlife corridor running east-west between the villages.

I recognise that we need further affordable housing provision but I am puzzled at the housing number used by GBC to justify the development as it does not appear to square with the latest household formation projections from the ONS.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. The Guildford Residents’ Association’s Objections and Concerns Which I Share

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.
MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

Comment: MM2 - LPMM18/5268   Respondent: Gillian McWilliams 8916929   Agent:

Ref: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments:

1. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.

2. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:
   2.1. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
   2.2. There is too much reliance on A3 improvements and these are beyond the council’s control
   2.3. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
   2.4. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

3. I would like the Inspector to RE-EXAMINE the Local Plan because:
   3.1. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
   3.2. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. The Clandon Society Objections and Concerns Which I Share

The A247

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247
I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

**I believe that traffic will increase significantly because:**

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

**Problems with the West Clandon section of the A247**

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for
traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that
Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site
behind the station.

4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without
mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

**Housing Number and the Green Belt**

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this
requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the
argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much
more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the
town centre and reduced pressure on the Green Belt.

1. **The Guildford Residents’ Association’s Objections and Concerns Which I Share**

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound
basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes
table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic
growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the
Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student
homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is
more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not
been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a)
is far too high at double the number of homes needed to support ambitious growth of the economy.

The narrowness of the road at the Bull’s Head. 9. The Clandon Junior School and the, in places, narrow footpath for children walking to school. 10. The sharp bend with poor sight lines in either direction at the church. 11. No continuous footpath through the length of the village. 12. The speed of traffic. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt. The Council has long argued that much of the housing required must be built on such sites. This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker. The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites. Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. The Guildford Residents’ Association’s Objections and Concerns Which I Share

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.
Re: Guildford Local Plan

Representations on the main modifications published in September 2018

I begin by saying that I agree with everything written by Ockham Parish Council and Wisley Action Group and object to the main modifications as follows:

I wish to point out that a general difficulty with the modifications is that no justification is put forward as to why the modification has to be made. A main modification may only be made if the plan as submitted is unsound and the modification is required to make it sound. It is not apparent why most of the modifications might be thought to be required to address a soundness failure, let alone to evaluate whether they are.

MM2

The housing requirement should be calculated from the starting point of the latest, September 2018, ONS projections rather than the projections released earlier in 2018. These reduce the net increase in households on those projections from 420 per annum to 325 per annum.

The housing requirement figures should therefore be adjusted downwards.

This reduces the case for Green Belt releases and there are not the exceptional circumstances which are necessary to support all of the sites. Fewer Green Belt sites ought therefore to be released, with the unsustainable site of Former Wisley Airfield/Three Farm Meadows (FWA/TFM) the first to go.

We note that the Inspector has sought the Council’s views on those ONS figures (ID/10), but given their significance ought to be asking the examination participants more generally for their views.

MM2 – 4.1.11

The revised housing trajectory projects the first homes coming from FWA/TFM in 2022/23. However, the M25 Junction 10 works are said to need to be completed before any units can be occupied at the site. Given the delays to the Junction 10 project, the trajectory is unrealistically optimistic. The start date for commencement of works on J10/M25 roundabout has been pushed back to begin late 2021 with a completion date to be confirmed!

Site A35 FWA/TFM is highly unlikely to make any contribution to the five year supply.

Ref: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments: A. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well. B. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound
because: 1. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited. 2. There is too much reliance on A3 improvements and these are beyond the council’s control. 3. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

C. I would like the Inspector to RE-EXAMINE the Local Plan because: 1. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt. 2. The A247

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road. The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247. I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1 million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents. What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge. The £1 million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic.

2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A2473. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh.

3. The development of 1800 houses at Gosden Hill.

4. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A2476. The conversion of the Burnt Common roundabout to an all-ways junction with the A37. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford. 9. The
obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are: 1. The junction with the current A3 south-bound slip road (modifications are underway) 2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph 3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station. 4. The sight lines for the exit of the Onslow Arms car park 5. The narrowness of the road near Summers 6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement 7. The sharp bend near Clandon Regis 8. The narrowness of the road at the Bull’s Head 9. The Clandon Junior School and the, in places, narrow footpath for children walking to school 10. The sharp bend with poor sight lines in either direction at the church 11. No continuous footpath through the length of the village 12. The speed of traffic 13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt. The Council has long argued that much of the housing required must be built on such sites. This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker. The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites. Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. The Guildford Residents’ Association’s Objections and Concerns Which I Share

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

Comment: MM2 - LPMM18/4424  Respondent: Annie Cross 8926529  Agent:

I wish to register my OBJECTIONS to aspects of thee GBC Local Plan Main Modifications, as shown below:

**MM2 - Housing Numbers / SHMA**

The ONS has very recently released new Housing Formations Rates which reduce Guildford's projected housing need to 301 dwellings p.a., less than half of the current draft GBC LP figure of 630 +/-, which rises to 671± when including Woking's unmet housing need. This Guildford LP figure is now totally wrong and it would be illogical, and immoral, not to completely revise the GBC draft LP to take account of the new housing need figures. This reduction of over 50% allows GBC to review its previously developed land sites in sustainable locations and remove the "exception circumstances" for irretrievable removal of large sites from the Greenbelt.

**MM2 - Delivery of Development and Regeneration of Guildford Town**

Guildford is not showing initiative in potential housing sites in its sustainable town centre, which has many employment opportunities. It has a large number of surface car parks which could easily accommodate 2-3 storey buildings above. The recently opened (2017?) Waitrose, in the very centre of Guildford, included a large surface car park - and nothing above! A quick look at Google Maps clearly shows the numerous town centre surface car parks, together with Ladymead and the Research Park, only the latter perhaps requiring car use.

Comment: MM2 - LPMM18/5325  Respondent: P. Richardson 8928033  Agent:

Re: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments:

1. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.

1. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:
   2. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
   3. There is too much reliance on A3 improvements and these are beyond the council’s control
   4. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
   5. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

1. I would like the Inspector to RE-EXAMINE the Local Plan because:
   2. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
   3. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. The Clandon Society Objections and Concerns Which I Share

The A247
I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247.

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic.
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247.
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh.
4. The development of 1800 houses at Gosden Hill.
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247.
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3.
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing.
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments.
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247
The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. **The Guildford Residents’ Association’s Objections and Concerns Which I Share**

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the **housing supply** figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.
1. **NUMBER OF HOUSES (MM2) – MAJOR OBJECTIONS**

- Since the release of the draft Local Plan in December 2017 and the release of the present draft, which includes Main Modifications arising from the Inspectors examination in June 2018, the nominal housing target in the Plan has increased by 174 dwellings (1.4%) from a total of 12,426 to 12,600 over the entire 20-year Plan period from 2015 to 2034 inclusive. This is unreasonable when in May the ONS released predicted population projections far lower than previously thought.

- Yet on 20th September the Office of National Statistics (ONS) released new **household growth projections** for Guildford for the Plan period of 2015 to 2034. The new figures reduced the projected growth in households from 11,142 (that applied to the previous version of the Plan) to 6,635; a **reduction of 4,507 households (40.5% reduction)**. This change was no surprise; in May 2018 ONS had already released their **population projections** that clearly anticipated a substantial drop in the household projection. Why on earth did the Council not take this into consideration and reduce their numbers?

- The inclusion in Policy S2 of an annual housing increment of 42 dwellings per year between 2019 and 2034 to support part of Woking’s unmet need is flawed and unsound. In addition to the 40% projected reduction in household numbers for Guildford that were recently published, a similar situation applies to the Woking household projections. Woking’s predicted household growth between 2015 and 2034 sees a reduction nearly 3000 homes (a drop of 48%). This too was indicated in the May 2018 release of predictions by the ONS and confirmed in September. It was therefore obvious that Guildford would not need to cater for Woking’s apparent unmet need. Yet an additional 42 houses per year (totalling 672 in the Plan period) were added to the draft Local Plan.

- At his examination of the previous version of the Local Plan in June/July this year, the Planning Inspector required the profile of house building to be biased towards the early part of the Plan period in order to improve the affordability of housing in Guildford borough. In response the Council added a further five sites totalling **655 new dwellings**:
  - Garlick’s Arch, Send Marsh (Site A43, MM41) 150 and addition to a large site in the Green Belt
  - Aaron’s Hill, Godalming (Site A61, MM??) 200 a green field site (outside the Green Belt zone)
  - Hornhatch Farm, Chilworth (Site A62, MM??) 80 a Green Belt site
  - Alderton’s Farm, Send Marsh (Site A63, MM??) 120 a Green Belt site
  - Strawberry Farm, Flexford (Site A64, MM??) 105 a Green Belt site

  - A **reduction of 4,507 dwellings is equivalent to well over two “strategic sites” plus more**. So removal of the above sites from the plan (excluding the 150 additional houses at Garlick’s Arch as these are counted in figures below) would result in 505 fewer houses.

Removal of the following sites:

- Wisley airfield (Site A35, MM40) 2,000 (a site already rejected by the Secretary of State)
- Blackwell Farm (Site A26, MM36) 1,800
- Garlick’s Arch, Send Marsh (Site A43, MM41) 550 (an increase of 150 from the previous draft)

would result in a further reduction of 4350 households – totalling 4855 (4350+505). This is greater than the 4507 households reduction that the ONS have recently specified. However is mitigated by not needing the additional increment for Woking’s unmet need of 672 homes. So 4855 less 672 is 3183 houses.
• The Local Plan states that “more housing is likely to come forward over the plan period” (“Reasoned Justification”, paragraph 4.1.21). No account has been taken of this to reduce the housing numbers in the plan period. So this gives even more scope for reducing the planned building number for households in the Plan period of 2019-2034.

• One of the major concerns, in particular, creating large strategic sites is acknowledged to be the effect of traffic in the immediate area and on the major roads to which they all adjoin. This could be hugely mitigated by removing at least two of these strategic sites. The transport strategy (MM41) takes no account of the delay in Junction 10 modifications and this will hugely impact sites which depend on this scheme. Neither does the additional housing in the Send Ripley area (Garlick’s Arch, Alderton’s Farm) properly consider the impact on the Portsmouth Road through Ripley.

• Additionally, since the Inspector’s examination, the primary school in Ripley has closed and therefore development in this area (Ripley, Send, Wisley) becomes even more unsustainable.

This increase in the planned number of houses was introduced at a time when a clear signal of the 40% drop in projected households was already apparent and moreover all are on Green Belt or green field sites. **Yet more erosion of our precious open land. These additional sites should be removed from the Plan.** In addition a **major review of all Green Belt sites** in the Plan should therefore be undertaken to align the planned level of housing delivery with the up-to-date household figures and the need for other factors (such as not needing to consider Woking’s unmet need as this doesn’t exist any more) to be taken into account. All these totals exclude trend based housing supply (windfall and rural exception) as well as completions and permissions, whether allocated or not. These numbers should also be included in the Plan and thus reduce the number of houses to be built in the Plan period.

**Given the very large discrepancies between the levels of housing proposed in the Plan and the ONS household data released on 20th September 2018 (which greatly reduces the housing requirement in Guildford and Woking), and the exclusion of windfall numbers, the comments made by Highways England about traffic issues in the A3/ M25 area the Public Examination of the Plan by the Planning Inspector must be re-opened.**

**Comment:** MM2 - LPMM18/5984 **Respondent:** Mark Edwards 8930689 **Agent:**

I am pleased to have the opportunity to comment on the local plan main modifications.

My comments relate to MM2 and the proposed housing requirement of 630 + 42 dwellings/year.

To be sound, a plan must be responsive to the underlying need, capable of execution and allow the exercise of control.
ONS states the number of homes in Guildford to be 56,000 in 2015 and 57,000 in 2018/19. The plan (Appendix 0) envisages the addition of 15,100 homes in the 19 year period; and more relevantly 13,800 in the 15 year period 2019-2034. This is a 24% increase in 15 years.

This compares with a 7.5% increase in the 15 years 2001-15. It is also higher – in absolute/percentage terms - than any period in Guildford’s history, including the arrival of the railways; and at a time when there is less available space than there has ever been. The plan fails to make the case that this level of household growth is needed: by contrast the ONS projects household growth of 5,000 to 2034. It does not even attempt to make a case that it is achievable - which it won’t be.

Further, in attempting to achieve the volume of development envisaged in the plan, Guildford’s planning authorities will be under pressure to accept any old tat that developers come up with (and they will come up with tat). The plan will therefore fail to allow the exercise of control.

The current plan is therefore unsound.

The role of an inspector in a totalitarian state is to impose central diktat. The role of an inspector in a democracy is to rescue the locals from their own foolishness. I would be grateful if the inspector intervenes to get the requirement reduced to a more sensible level. A target of 400/year would represent a 25% increase over recent years and so should be achievable, while at the same time substantially meeting realistic needs and allowing the exercise of planning control.

**Attached documents:**
I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247.

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1 million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1 million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4 ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247
The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. **The Guildford Residents’ Association’s Objections and Concerns Which I Share**

   MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

   MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

   MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

   MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

   MM2 Although extra sites are required because some might not come to fruition, the **housing supply** figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.
Comment: MM2 - LPMM18/4454  Respondent: Annie Ladd 8933537  Agent:

Ref: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments:

1. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.

1. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:
   2. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
   3. There is too much reliance on A3 improvements and these are beyond the council’s control
   4. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
   5. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

1. I would like the Inspector to RE-EXAMINE the Local Plan because:
   2. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
   3. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. The Clandon Society Objections and Concerns Which I Share

The A247

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.
What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1 million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

**Housing Number and the Green Belt**

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. **The Guildford Residents’ Association’s Objections and Concerns Which I Share**

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

**Comment:** MM2 - LPMM18/2076  **Respondent:** Ann Cook 8938881  **Agent:**
Guildford Local Plan: Comments on Proposed Modifications

It is with considerable amazement that I write YET AGAIN to make comments on Guildford's Local Plan. This procedure has been on-going for over FIVE years; I have spent good money buying every edition of GBC's 'Local Plan Strategy and Sites: Issues and Options' right from October 2013. The good citizens of Guildford have sent thousands of comments to the Council regarding the proposals in these documents. However I have seen very little evidence that these comments have been noted in any degree!

NUMBER OF HOUSES (MM2)

I note that in this version of the plan the number of houses has increased by 1.4% from 12,426 to 12,600.

This is at a time when the Office For National Statistics has been projected a reduction in growth of households from 11,142 to 6,635; this 40.5% reduction equates to 2,507 homes. I do not understand the logic of GBC’s proposals.

* I therefore strongly object to the proposals to increase the number of houses to be built as set out in MM2.

* In the light of the ONS figures Public Examination by the Planning Inspector needs to be reopened.

Attached documents:

Comment: MM2 - LPMM18/5257  Respondent: A Jefferies 8944929  Agent:

I call for the examination in public to be re-opened to properly consider the latest ONS household formation statistics. I object to the fact that the spatial strategy has not been implemented and there appears to be a greenfield first policy, as evidenced by the new sites proposed. This is in contravention of policy and renders the plan unsound.

As a young person, I have no desire to live in the middle of nowhere, far from decent, reliable public transport and like most of my generation would prefer to live in the town centre. Building housing in the green belt sacrifices a valuable resource for my generation.

I object to the modifications in the plan and despite the new S3, this does not go far enough

Attached documents:

Comment: MM2 - LPMM18/260  Respondent: Alan Williams 8945505  Agent:

I would like to record my strong objection to the published housing needs in The Local Plan which states that there is a need for a total of 672 new houses to be built every year to satisfy Guildford’s projected population increase. I recall that this has been a long standing and contentious issue throughout the development of the Local Plan over a number of years, and to which we have previously objected. I am disappointed to see that nothing seems to have changed.

In our opinion, and as shared by many other concerned Guildford residents, the housing figure is in error as it includes all overseas students currently (or projected to be) attending secondary education courses at Surrey University. These of course will only be temporary residents and therefore do not need be accommodated in the future housing needs. It is important of course that the students can be accommodated but I think that they should be treated separately and be delinked from the housing target which would then reduce the overall number.
Maintaining a figure of 672 houses per annum would mean developments on some of our beautiful Green Belt, particularly so at Blackwell Farm (as outlined in the Plan) which would be a sad indictment of previously stated policies of GBC to preserve the sanctity of the green belt at all costs, rather than justify encroachment to satisfy what might now be erroneous ‘unmet housing needs’.

I note from recent correspondence from the Guildford Society that there has been a recent review of the housing figure by ONS which has found that the original estimate of 672 was in error and that the correct figure is now closer to 400, which represents a massive 40% reduction. I trust the Inspector will respect this corrected figure and amend the housing numbers accordingly. It would be tragic if 2018 marked the date when future generations of Guildford would look back on the year when some of our beautiful country side was lost for ever due to a numerical error.

Attached documents:

Comment: MM2 - LPMM18/4749  Respondent: Alan Williams 8945505  Agent:

Please bring the following to the attention of the Inspector regarding section MM2 of the Guildford Local Plan, about which I am seriously alarmed. Specifically these concerns regard the excessive housing numbers (670+) stated as necessary for the projected population growth in Guildford over the next 5 years and the destruction of 3 areas of our beautiful green belt in order to meet this target.

At a recent meeting of the Guilford Vision Group, it was confirmed that in fact the ONS have admitted that this number is in error and that a number close to 400 is now the correct figure, a 40% reduction. Surely this must require an urgent review of the necessity of building on the endangered green field sites.

I am also of the opinion, as I think was the Inspector, that insufficient effort had been made by the Council to evaluate brown-field sites within the city centre which would also help to reduce the new housing pressure on the green belt.

As Guildford residents, we have noticed in recent years a substantial increase in Retail developments – e.g. Waitrose and more recently, the new furniture super-store adjacent to the Fire Station where affordable housing could have been built. Nationally the retail sector is in decline due to the rise of on-line shopping so why keep building more in central Guildford instead of affordable homes?

Lastly, any developments on the margins of Guildford will require major upgrades to the already heavily congested A3 highway over which the Council has no control. Surely sorting this out should be a priority before any further house building linked to this highway is considered.

Please relay these comments to the Inspector and all relevant agencies.

Attached documents:

Comment: MM2 - LPMM18/3172  Respondent: Jenny Austin 8946113  Agent:

1 The council has not properly observed its hierarchy of development. Brownfield sites have not been fully explored. It is unsafe to rely on a third party to improve A3, the council has no control over these improvements and cannot guarantee that they will take place.

3 The grounds given for green belt development are inadequate and do not represent exceptional circumstances

4 Public hearings should be reopened to discuss Housing numbers to reflect the latest ONS figures and projections.
Comment: MM2 - LPMM18/2412  Respondent: Joan Wrenn 8946497  Agent:
MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

Comment: MM2 - LPMM18/5980  Respondent: Patrick Sheard 8954977  Agent:

MM2 Policy S2 Planning for the Borough- our spatial development strategy

I object most strongly to the increase in housing numbers proposed to contribute towards Woking Borough Council’s unmet needs. The latest ONS projections released in September 2018 show a considerable reduction on the figures released earlier on which presumably this Plan is based. The difference between the latest and earlier figures risks rendering the whole Plan unsound and totally undermines the Council’s case for infringing on the Greenbelt. Rather than being increased, the overall housing need should be reset to a figure closer to the ONS projections say around 330 dwellings per annum which would still give the Council a contingency of 10% or so above the actual projected need of ca 300 households per year which would give the Council some breathing space for any years in which it fell short of its target.

Comment: MM2 - LPMM18/1506  Respondent: Earl of Onslow and the Trustees of Onslow Estate 8957345  Agent: Nexus Planning (Adam Ross)

Introduction
These representations to the Guildford Borough Local Plan Main Modifications (“the Main Modifications”) are submitted on behalf of CEG, the Earl of Onslow and the Trustees of the Clandon Estate. They supplement the examination Statement submitted in May 2018 and respond specifically to the Main Modifications produced by Guildford Borough Council (“the Council”) in the light of the Inspector’s conclusion that the Council must allocate additional sustainable housing sites to deliver homes in the first five years of the Local Plan (following adoption).
These representations are also submitted further to the submission made to the Council on 31st July 2018 (Appendix 1) relevant to the suitability and deliverability of a scheme for 300 homes on the site we refer to as Land adjacent to Merrow Park and Ride but which is referred to as ‘Clandon Golf’ in the Council’s Sustainability Appraisal Addendum 2018 (for ease of reference we refer to the site as ‘Clandon Golf’ for the purposes of these representations). The information submitted to the Council in July, at the Council’s request, included:

1. a basic capacity plan which demonstrates, in accordance with the Council’s assumptions, that the area of land in question could, at an average density of approximately 29 dpa, deliver 300 homes utilising defensible boundaries formed by existing belts of vegetation which create eastern and southern boundaries (which could be strengthened further if required);

2. a ‘Transport and Highways Feasibility Note’ produced by Systra confirming that 300 homes could be delivered without any reliance on improvements to the A3; and

iii. a ‘Deliverability Statement’ that confirms that this site, which is in single ownership, benefits from an existing vehicular access and already has a developer and technical team on board, could deliver 300 homes by 2023/24 i.e. in the first 5 years of the Local Plan post-adoption.

Our objection to the Main Modifications, in summary, is that the suite of additional housing allocations proposed by the Council to increase housing delivery in the early years of the Local Plan is neither sustainable nor made in accordance with the Council’s own spatial hierarchy. Indeed, the Sustainability Appraisal Addendum 2018 (“the SA Addendum”) confirms that in addition to being a sequentially preferable site on the Council’s own terms (the Clandon Golf site is a Tier 8 option whereas the selected sites are, or should be, in the lowest and least sustainable category -Tier 10), the development options that include development at the Clandon Golf site score materially higher than the options that do not.

Having regard to the Council’s own evidence base and spatial strategy, the intention to allocate a suite of sites that excludes the Clandon Golf site is unjustified and, therefore, unsound. For the reasons explained in detail in these representations, the Council must re-consider its proposed housing allocations and, in accordance with the SA Addendum, allocate one of the three most sustainable development options – all options that include the Clandon Golf site.

**MM2 (paragraph 4.1.9a)**

Paragraph 4.1.9a as proposed to be amended states that ‘Guildford’s objectively assessed housing need has been based on a consideration of the latest 2018-based population projections.’

This is not correct.

The population projections that the Local Plan is now based upon are those published on 24th May 2018 but they are in fact 2016-based. The relevant statistical bulletin from the ONS is titled ‘Subnational population projections for England: 2016-based.’

**Change Required**

Amend paragraph 4.1.9a to identify that Guildford’s objectively assessed need for housing has been based on consideration of:

“...the ’Subnational population projections for England: 2016-based.’”

**MM2 (Table S2b)**

**Introduction**

Table S2b sets out the spatial strategy distribution as amended following the proposed allocation of additional sites to deliver housing in the earlier years of the LP period (MM39, MM41, MM43, MM44 and MM45).
However, the revised table highlights the unsustainability of the Council’s proposed new allocations which exacerbate the extent of development proposed in the least sustainable locations within the Borough. This unsustainable distribution is unnecessary, unjustified and unsound given that the Council’s own evidence base identifies that there are more sustainable, deliverable, and sequentially preferable sites available such as that at Clandon Golf.

The representations to Table S2b focus on the spatial implications of the Council’s approach, its unsustainability and its lack of consistency with the Council’s own spatial hierarchy/approach – all of which make this modification unsound.

**Unsustainable Housing Distribution**

Table S2b confirms that 3,350 homes are proposed to be allocated as ‘Urban extensions to Guildford’. This equates to 31% of the total number being allocated (10,592 homes). This focus (as a minimum) on urban extensions to Guildford is wholly appropriate given that it is the county town of Surrey and, by some distance, the most sustainable location for development in the Borough (and indeed the sub-region). Urban extensions to Guildford are identified as Tier 8 in the Council’s Sustainability Appraisal Report Update 2017.

With the allocation of the additional sites as proposed by the Council in the Main Modifications, the level of housing now proposed in Tier 9 and 10 locations as identified in the Sustainability Appraisal Report Update July 2017 i.e. the least sustainable locations in the Borough, has now increased to 3,450 homes. This equates to 32% of the proposed number of housing allocations in the Borough.

Accordingly, it can be seen that there are now more homes proposed in the least sustainable locations in the Borough as are proposed at the sequentially preferable (based on the Council’s own evidence base/spatial hierarchy) and significantly more sustainable location as urban extensions to Guildford.

As set out in further detail later in our representations, this approach is unjustified, unnecessary and unsound given that there are acknowledged reasonable alternatives as urban extensions at Guildford (such as Clandon Golf) which the Council’s own evidence base confirms are deliverable, sustainable and sequentially preferable to those sites now proposed to be allocated.

**Sustainability Appraisal Addendum September 2018**

To inform the Council’s Main Modifications it instructed AECOM to produce an addendum to the original Sustainability Appraisal. As set out in paragraph 1.2.2 of that document, the aim is to: ‘…present information on the proposed modifications, and alternatives, with a view to informing the current consultation and subsequent plan finalisation.’

From a housing perspective the SA Addendum confirms that its purpose is to: ‘…identify packages of sites to deliver 550 homes in the first five years of the plan period’.

In so doing it acknowledges that:

“First and foremost the strategy reflects an understanding that there is a hierarchy of places/potential growth locations within the Borough, and that a sequential approach to allocating development sites must be followed. In other words, capacity should be fully utilised at the most suitable sites (e.g. town centre sites), before moving down to the next tier in the hierarchy, and so on until a residual amount of growth is left to be delivered at sites in the bottom tier, namely village Green Belt sites, which tend to be less suitable for development.” (emphasis added)

In terms of providing for the additional housing required in the early years of the Local Plan (post-adoption), Table 6.1 of the SA Addendum confirms that it has identified seven potential housing package options for assessment. They are each a combination of various site options, and each option scenario would deliver between 550 and 650 homes in total.

Ultimately the Council’s chosen option, in terms of the package of new sites to be allocated, is Option 3 as identified in the SA Addendum – “Aaron’s Hill and small sites”. For clarity, the additional sites to be allocated are as follows:

- Land at Hornhatch Farm, Chilworth (MM43) – 80 homes
- Land at Aaron’s Hill, Godalming (MM39) – 200 homes
• Land east of Glaziers Lane, Flexford (MM45) – 105 homes
• Land at Alderton’s Farm, Send (MM44) – 120 homes

Whilst not a new site, the Council also proposes to increase the residential component of the existing allocation at Garlick’s Arch, Send Marsh.

In terms of the outcome of this SA Addendum, it states overtly at paragraph 7.2.1 that:

“The appraisal does not identify Option 3 as performing notably well in terms of any of the topic headings, but equally it is not identified as performing notably poorly in terms of any topic. It performs jointly least well in terms of two topic headings - ‘land’ and ‘brownfield’, but no major concerns are highlighted.” (emphasis added)

Indeed, this can be seen with reference to Table 6.1 of the SA Addendum which confirms that the Council’s selected option (Option 3) does not score as the best option against any of the identified topics.

In stark contrast to this, it can be noted from Table 6.1 of the SA Addendum that options that include the Clandon Golf site (Options 1, 4 and 7) score much better than the selected option. This is not particularly surprising given its highly sustainable location as an urban extension to Guildford.

More specifically with regard to the Clandon Golf site, the following can be noted in terms of the conclusions reached in the SA Addendum (as set out in the assessment tables on pages 57 to 73 of that document):

6. **Biodiversity** – Table 6.1 confirms that Option 4, which includes the Clandon Golf site, scores best against this topic assessment area. Options 1 and 7, which also include Clandon Golf, are ranked 2nd. With specific regard to the Clandon Golf site, the SA Addendum notes that:
   • “The outcome is that Clandon Golf does stand-out as the least constrained of the larger site options.”
   • “In conclusion, Option 4 (Clandon Golf + Small sites) performs best, including on the basis that it would lead to least concerns in respect of the SPA’.

7. **Climate change** – Options 1 and 2 are ranked joint first (Option 1 includes Clandon Golf) against this topic assessment area. Dispersal of development amongst smaller villages is not supported. With specific regard to the Clandon Golf site, the SA Addendum notes that it:
   “…is approximately 3km from Guildford town centre, but Merrow Local Centre is approximately 1 km away. The site is adjacent to the Merrow Park & Ride from where there are frequent bus services into Guildford town centre as well as advisory cycle lanes along the majority of Epsom Road between the town centre and the Park and Ride site, with opportunities for improvement.”

iii. **Communities** - Option 1 including Clandon Golf scores best against this topic assessment area. There is no specific commentary associated with the Clandon Golf site.

   1. **Economy** – all options score equally against this topic assessment area with a conclusion that it “…is not possible to differentiate between the alternatives.”
   2. **Employment** - all options score equally against this topic assessment area with a conclusion that “…the alternatives are judged to perform broadly on a par under this heading”.
   3. **Flooding** - all options score equally against this topic assessment area with a conclusion that “…it is not clear that any of the sites give rise to significant flood risk concerns”.

vii. **Health** - all options score equally against this topic assessment area with a conclusion that “…it is not possible to differentiate the alternatives”.

viii. **Historic Environment** - Option 7 (which includes Clandon Golf) is ranked first against this topic assessment area. With specific regard to the Clandon Golf site, the SA Addendum notes that whilst it is adjacent to Clandon Park (a Registered Park and Garden):
   • “…the potential for significant impacts is seemingly low given the intervening A25 dual carriageway and mature screening vegetation”.
   • Whilst there are a cluster of listed buildings 350m to the west of the site “…direct impacts are not thought likely”.
1. **Housing** - Option 6 scores best against this topic assessment area. Options 3 and 7 (Option 7 includes Clandon Golf) are ranked second. The reason for this is identified as being that Option 6 would result “...in a good geographical spread of sites.”

We do not accept or understand the rationale for scoring Option 6 best in this regard, as the Council’s spatial strategy is not one of geographic dispersal but instead adopts a tiered, sequential approach which seeks to focus development in the most sustainable locations before moving to locations that are less sustainable. Accordingly, we do not accept that the scoring of the options against this topic is robust or consistent with the Council’s own spatial strategy.

1. **Land** - Option 7 (which includes Clandon Golf) scores best against this topic assessment area.
   
   With specific regard to the Clandon Golf site, the SA Addendum notes that it is Grade 3b agricultural land (the lowest of all of the identified sites) but that unlike those other sites, Clandon Golf is (as its name would suggest):
   
   “...a golf course rather than land used for agricultural purposes.”

2. **Landscape** - Option 2 scores best against this topic assessment area. Options 1, 3, 5, 6 and 7 (Clandon is part of Options 1 and 7) are ranked second. With specific regard to the Clandon Golf site, the SA Addendum notes that whilst the site, on the Council’s evidence, is red-rated Green Belt and in the AGLV (like the site at Aarons Hill which is a proposed allocation i.e. this is demonstrably not a show-stopper), the Landscape Character Assessment:

   “…does not reference this golf course as a particular asset within the Merrow and Clandon Wooded Chalk Downs character area”.

xii. **Poverty** – all Options are scored equally against this assessment topic and the SA Addendum notes that “...there is no potential to differentiate the alternatives’.

xiii. **Brownfield land** - Options 4, 5, and 6 are equally ranked 1st against this topic assessment area (Option 4 includes Clandon Golf). There is no specific commentary with regard to the Clandon Golf site (or the majority of the other sites).

xiv. **Rural Economy** – all Options are scored equally against this assessment topic, with the SA Addendum concluding that “...it is not possible to differentiate the alternative with any certainty”.

1. **Safer Communities** – all Options are scored equally in this regard, with the SA Addendum noting that “...it is not possible to draw conclusions in relation to safety / security.”

xvi. **Transport** – Options 1, 2 and 7 are ranked joint 1st against this topic assessment area (Clandon Golf is part of Options 1 and 7). With specific regard to the Clandon Golf site, the SA Addendum notes that:

   “Vehicle trips to/from Clandon Golf to/from the south...will pass through part of the Guildford section of the A3 which is due to be improved by the RIS1 Road Period 2 scheme. Those travelling to/from the north towards London and the M25 motorway will not generally be expected to use this section of the A3.”

xvii. **Water** – all Options are scored equally against this assessment topic, with the SA Addendum concluding that “…there is no potential to differentiate the alternatives.”

It is evident from the SA Addendum that the Clandon Golf site, and the development options that include it, generally score the best of those assessed. Indeed it can be seen from the SA Addendum summary conclusions (Table 6.1) that Options 1, 4 and 7 (that all include the Clandon Golf site) are ranked first against 7 of the identified 17 topic areas (see highlighted table at Appendix 1). The Council’s selected option (Option 3) is not ranked first against any of the identified topic areas.

It is evident from the SA Addendum that the Clandon Golf site, and the development options that include it, generally score the best of those assessed. Indeed it can be seen from the SA Addendum summary conclusions (Table 6.1) that Options 1, 4 and 7 (that all include the Clandon Golf site) are ranked first against 7 of the identified 17 topic areas (see highlighted table at Appendix 1). The Council’s selected option (Option 3) is not ranked first against any of the identified topic areas.
Whilst we accept that an SA process is not simply about adding up the results, it is evident that the options that score the best, when looked at in the round i.e. with the greatest number of / most significant positives, and the least number of / least significant negatives, are Options 1, 2 and 7. This is demonstrated visually on the bar chart at Appendix 2 where Options 1, 2 and 7 are the options with the most blue and orange colours (1st and 2nd rankings) and the fewest grey and yellow colours (3rd and 4th rankings).

In our view it is clear from the SA Addendum that of these Option 1 scores the best – “Clandon Golf and Aarons Hill”. This option has the greatest number of 1st rankings, the majority are 2nd rankings, it has very few 3rd rankings and no 4th rankings. The fact that Option 1 performs so well is not surprising, as the two sites included within it are those located in the most sustainable locations of those assessed as identified by the Council’s own spatial approach / hierarchy.

Against this evidential background, it is demonstrably unjustified and unsound for the Council to propose to proceed with an option which, as a matter of fact, allocates housing in the least sustainable locations in the Borough, and an option which identifies a suite of sites which score very poorly in the SA process.

The Council’s Justification for Option 3

As identified above, it is demonstrably the case that the SA Addendum does not support the selection of the Council’s chosen option (Option 3). Instead it very clearly supports an option that includes Clandon Golf (Options 1, 4 and 7). It is additionally the case that the Clandon Golf site, as a Tier 8 site identified in the SA Report Update 2017, is sequentially preferable to Aarons Hill and the smaller sites at the Green Belt villages (all Tier 10 and, therefore, the least sustainable locations in the Borough).

However, it is fair to note that the SA Addendum records (paragraph 5.2.9) that in some instances there can be a need to pass over allocating a site in one tier of the hierarchy in favour of allocating a more suitable site in a lower tier. Specifically, it records that relevant factors that could lead to such ‘leap-frogging’ include:

1. timescales for delivery;
2. constraints (AONB, SPA, heritage etc…)
3. reliance upon, or ability to facilitate provision of, essential infrastructure; and
4. policy constraint e.g. Green Belt sensitivity.

For the reasons expanded upon below, it is evident that none of these provide reasons not to allocate the Clandon Golf site.

Timescales for Delivery

As shown at Appendix 3, we provided the Council with information in July 2018 relating to the potential for housing delivery at the Clandon Golf site. As a site in single ownership, with a developer and technical team already in place and with a vehicular access already constructed, development can progress quickly. Our submission demonstrates how the site could realistically deliver 300 homes by 2023/24. This delivery timetable in not disputed by the Council.

It is evident, therefore, that timescales for delivery provide no reason to ‘leap frog’ the sequentially preferable site at Clandon Golf in favour of less sustainable sites.

Environmental Constraints

The SA Addendum is clear that the Clandon Golf site is not constrained by the AONB, nor is it adversely affected by matters such as impact on the SPA (indeed it scores best of all the sites in this regard), flooding, heritage or biodiversity.

Accordingly it is evident that environmental constraints provide no reason to ‘leap frog’ the sequentially preferable site at Clandon Golf in favour of less sustainable sites.

Infrastructure
As set out in our submission to the Council (Appendix 3), 300 homes at the Clandon Golf site can be delivered without any reliance on improvements to the A3. Furthermore, given the limited scale of development being proposed on the various sites, none are providing any wider infrastructure.

Accordingly it is evident that infrastructure matters provide no reason to ‘leap frog’ the sequentially preferable site at Clandon Golf in favour of less sustainable sites.

Summary

There is no evidential basis to support the Council’s selection of Option 3 as the most appropriate strategy for the delivery of additional homes in the early years of the Plan (post-adoPTION).

As set out above, the SA Addendum clearly supports the allocation of Options 1, 2 or 7. The Clandon Golf site falls within Options 1 and 7. As set out previously, options including Clandon Golf demonstrably score the best based on the Council’s own evidence. In addition Clandon Golf, as an extension to Guildford, is sequentially preferable to all of the alternatives based on the Councils own spatial hierarchy / approach.

Very unusually from our experience the SA Addendum, in outlining the reasons for selecting the preferred option (Option 3), distances itself totally from the decision ultimately made by the Council stating at paragraph 7.2.1 that: “The following text was provided by the Council”

This is unsurprising as the conclusions of the SA Addendum fundamentally do not support the Council’s decision to take forward Option 3.

The SA process is there to inform decision-making, to ensure the delivery of sustainable development. It is also, importantly, there to provide clarity to third parties as to how decisions have been reached, and it is the fundamental evidence base document to demonstrate that a proposal is the most appropriate strategy i.e. justified and, therefore, sound.

In this instance the SA Addendum simply does not support the decision made by the Council in proposing to take forward Option 3.

In explaining why the Council is taking forward an option that is not supported by its own SA process, the Council states simply (SA Addendum paragraph 7.2.1) that it considers that the option it has chosen has ‘…strong delivery certainty’. However, as set out previously, neither the SA Addendum nor the Council itself in any other document suggests that an alternative option, which includes Clandon Golf, would provide any less delivery certainty. Indeed, to suggest so would be perverse given that it is a site in single ownership, with a developer and technical team on board, with a vehicular access already constructed and in a location where there is clear and strong market demand.

Against this background, the Council’s Main Modifications, which take forward the suite of additional housing sites in Option 3, are not consistent with its own evidence base or spatial hierarchy / approach, and are demonstrably unjustified and, therefore, unsound

Re-categorisation of the Aaron’s Hill Site

In the SA Report Update 2017 that accompanied the submission draft Local Plan, the site at Aarons Hill is identified as falling within Tier 10 (Green Belt around villages) – the least sustainable locations in the Borough.

It is referred to as ‘Site H’ and described at paragraph 6.6.16 of that document.

In the SA Addendum 2018 (Table 5.1) the Council has re-categorised the Aarons Hill site, identifying it within Tier 8 i.e. the same category as urban extensions to Guildford. The only justification for this change is set out at footnote 15 of the SA Addendum where the Council identifies that Godalming, whilst falling within Waverley Borough, is considerably larger than any of the Green Belt villages within Tier 10. This is potentially a case for the Aarons Hill site being considered to be more sustainable than the other Tier 10 sites, but not for suggesting that it is equivalent in sustainability terms as urban extensions to Guildford.
The implications of this amendment are significant. Following the Council’s identified sequential approach / hierarchy, development opportunities in Tier 8 should generally be developed before opportunities in Tiers 9 or 10, as they are inherently more sustainable.

The categorisation of Aarons Hill (as an urban extension to Godalming) as comparable in sustainability / sequential terms to the Clandon Golf site (as an urban extension to Guildford) is wholly unjustified.

As identified in the Waverley Local Plan Part 1, Godalming has a population of approximately 22,000 (at 2011). It records that the size and range of services in Godalming are less than Farnham and that it is significantly influenced by Guildford, which is approximately 10km (6 miles) away via good road and rail links.

By contrast, Guildford is the county town of Surrey. The Guildford Local Plan notes that Guildford town had a population of 137,000 in 2011 i.e. it is 6 times larger than Godalming. The Guildford Local Plan also recognises that it is home to two universities, a world leading research institute, a number of UK and European business headquarters and a world class research park. The borough also has a vibrant retail economy of subregional importance.

There is no reasonable or logical basis on which it can be asserted that an urban extension to Godalming is as sustainable as an urban extension to Guildford.

By identifying the Aarons Hill site as being within Tier 8 i.e. the same as Clandon Golf the Council is unfairly and unreasonably favouring the Aarons Hill site in what should be a fair and transparent SA process. As a consequence, the Council’s revised approach is unjustified and therefore unsound, resulting in an unnecessary and unsustainable distribution of development.

**Changes Required**

For the reasons set out in detail above, the revised spatial strategy established by MM2 (and specifically the allocation of the sites identified in MM39, 43, 44 and 45) is unjustified and unsound.

The Council must re-visit the strategy to allocate additional sites to deliver in the first five years of the Local Plan (post-adoption) and base its decisions on clear evidence (most notably the SA Addendum) and its own spatial hierarchy / approach. This will result, on the Council’s own evidence, in the identification of a different development option (and therefore a different suite of sites) to those now proposed. It will also, most importantly, result in a more sustainable distribution of development (on the Council’s own terms).

**Clandon Golf Course**

**Deliverability Statement**

**1.0 Introduction**

1.1 This short note supplements submissions made on behalf of CEG, the Earl of Onslow and the Trustees of the Onslow Estate to the Local Plan examination, where hearing sessions took place in June / July. Following these sessions the Inspector and Council agreed that the Council needed to make Main Modifications to the Plan that would, inter alia, allocate additional sites to deliver housing in the first 5 years of the Plan following adoption i.e. in the period 2019/20 to 2023/24.
1.2 Specifically, this note is provided to assist the Council in its consideration of the potential of the north western part of the Golf Course (referred to as ‘the Site’ for the purposes of this note), located adjacent to the existing Merrow Park and Ride and capable of accommodating approximately 300 homes, to deliver housing in the period to 2024.

2.0 Availability

2.1 The Site is in the single ownership of the Earl of Onslow / the Trustees of the Clandon Estate and is available for development.

2.2 The landowner has already engaged a developer (CEG) to bring land in this highly sustainable location forward for development. CEG has an excellent track record in delivering high quality residential developments on sustainably located greenfield sites at historic towns. By way of example these have recently included:

1. Stamford, Lincolnshire – 400 homes
2. Chichester, West Sussex – 500 homes
iii. Thame, Oxfordshire – 400 homes

2.3 CEG has already appointed a full technical team who commenced work at the beginning of 2018.

3.0 Delivery

3.1 The development being considered (approximately 300 homes) is of a scale whereby it is realistic to assume that there would be two housebuilding outlets on site.

3.2 Against this background we summarise below a delivery timetable:

- Q4 2018 - Adoption of the Local Plan
- Q2 2019 - Submission of outline planning application
- Q1 2020 – Outline planning permission granted
- Q1 2020 – Submission of reserved matters
- Q3 2020 – Approval of reserved matters
- Q4 2020 - Discharge pre-commencement conditions
- Q2 2021 - Start on site

2021/22 – 60 homes
2022/23 – 120 homes
2023/24 – 120 homes

Total Housing Delivery by 2023/24 – 300 homes

3.3 It can be noted that this is a similar (albeit more conservative) timetable to that put forward by the Council for the similarly sized site at Garlicks Arch promoted by a developer similar to CEG (see Appendix 4: Housing trajectory of the Council’s Topic Paper: Housing Delivery December 2017).

3.4 Of fundamental importance, the location of the Site and the scale of development proposed is such that the delivery of this housing is not reliant on the delivery of improvements to the A3.

3.5 As concluded in the attached technical note produced by Systra: “The number of trips associated with the sit, both onto the A3 and through its’ junctions is within normal expected daily variations in traffic flows on the route……Delivery of the site would be feasible early in the Plan period as the site will not be reliant on the delivery of any of the A3 improvement schemes.”

4.0 Suitability / Sustainability

4.1 Whilst not the primary purpose of this note the Council will be aware, having regard to its own evidence, that the Site is a suitable location for housing. Most notably, for ease of reference:
1. the Site it is situated immediately adjacent to the Guildford urban area, the principal settlement in the Borough;
2. extensions to Guildford are identified in the Sustainability Appraisal 2017 as ‘Tier 8’ in the Council’s sequential
   approach to development. Development of the Site, applying this sequential approach, is therefore preferable to
   any new settlement options or development of any Green Belt site options around villages;

iii. unlike most other unallocated sites which were clearly rejected as options by the Sustainability Appraisal 2017, the SA
   2017 identifies the Site as a location where the allocation of development should be considered (SA 2017 page 30);

1. uniquely, the Site is located immediately adjacent to the existing Merrow Park and Ride, providing access to
   existing bus services to Guildford town centre which run every 15-20 minutes and take just 12-15 minutes;
2. the Site would complement and complete the Council’s proposed Sustainable Movement Corridor through
   Guildford (Figure 10.1 of the SA 2017), requiring only a simple southwards extension from the allocation at
   Gosden Hill that could terminate at the Merrow Park and Ride;
3. the Site relates well to the existing Guildford urban edge and is located within easy walking and cycling distance
   of a range of existing education, leisure, retail, employment and community facilities;

vii. the Site is located in close proximity to the proposed new rail station at Guildford East (Merrow), delivery of which is
   due to commence in 2024;

viii. the Site already benefits from planning permission (01/P/01627) for the construction of (an as yet unbuilt) clubhouse
    and health centre of 14,500 sqft

i.e. there is already precedent for built development on the Site;

1. appropriate SANG provision could be made; and
2. the Site is not countryside, with the land already significantly re-modelled / engineered and used as a golf
   course.

3. EXECUTIVE SUMMARY

1.1.1 This Transport & Highways Feasibility Note demonstrates that impact on the A3 of a potential 300 residential units
located at the land adjacent to Merrow Park and Ride would be immaterial. The number of trips associated with the site;
both onto the A3 and through its’ junctions, is within normal expected daily variations in traffic flows on the route, with a
maximum of 58 additional vehicles anticipated (in the PM Peak hour). Delivery of the site would be feasible early in the
Plan period as the site will not be reliant on the delivery of any of the A3 Improvement Scheme.

1.1.2 A large proportion of trips are expected to travel into Guildford Town Centre, and with the site located so close to
the east of the town, there are ample opportunities to facilitate sustainable travel to and from the site, building upon the
existing network which includes high quality walking and cycling links as well as an established Park & Ride providing
regular direct and frequent services.

1.1.3 There are no transport reasons why the site should not be developed, at a reasonable timescale given the negligible
impact on the A3 and the existing walking, cycling and public transport links which can be utilised to provide a
sustainable development.

2. INTRODUCTION

2.1.1 This Transport & Highways Feasibility Note has been prepared by SYSTRA Limited on behalf of CEG, the Earl of
Onslow and the Trustees of the Onslow Estate to demonstrate that development of approximately 300 residential
dwellings could be successfully accommodated in transport terms on the part of the Clandon Golf Course site adjacent to
Merrow Park and Ride, Guildford.

2.1.2 In particular this document demonstrates that the number of trips generated by a development of 300 residential
units in this particular location would not have a material, let alone ‘severe’, impact on the existing operation of the A3,
and therefore that the site could be delivered early in the Local Plan period without reliance on any forthcoming A3
Improvement Schemes.
2.1.3 The Note calculates the trips associated with a potential 300 dwelling development and calculates the number of vehicle trips that could be expected to use the A3.

**Trip Generation**

2.2.1 The potential vehicle trips generated by the site are provided in Table 1. The trip rates have been taken from the ‘Study of Performance of A3 Trunk Road Interchanges in Guildford Urban Area to 2024 Under Development Scenarios (April 2018)’ document; referred to hereafter as the ‘A3 Study of Performance’ which was prepared by Mott MacDonald and commissioned by Guildford Borough Council (GBC).

2.2.2 The highest recorded trip rates within the A3 Study of Performance; ‘Neighbourhood Centre, Mixed Private/affordable housing’ (Table 11: vehicle Trip Rates) have been used at this stage to provide a robust assessment of the potential impacts on the A3.

**2.3 Trip Distribution**

2.3.1 Analysis of Census 2011 Journey to Work (JTW) data for the ‘Guildford 011’ MSOA has been undertaken, with the percentage distribution also compared to the A3 Study of Performance to ensure a consistent approach. The use of JTW figures are useful as this represents one of the main trip purposes during the AM and PM peak periods. A summary of the distribution of traffic is demonstrated in Appendix A with distribution diagrams contained in Appendix B.

2.3.2 The data indicates that the vast majority of JTW trips (92.9%) would travel west from the site, with 7.1% turning east. A summary of the key destinations and resultant trip generation is demonstrated in Table 2.
2.3.3 The data shows that 21.4% of trips would continue into Guildford Town Centre, with 7.5% travelling south along the A281 towards the south of Guildford (including Godalming, Dunsfold, Alford Crossways and Shalford). 4.6% of traffic would travel west along the A31 Farnham Road towards destinations including Farnborough, Aldershot and Farnham, and 10.2% of traffic would travel north across the A3 towards north Guildford, including to the Slyfield Industrial Estate, Jacobs Well and Woking.

2.3.4 Based on the above, as an estimate just 36.4% of total JTW trips would enter the A3 (29.5% travelling northbound towards the M25 and London and 6.9% travelling southbound towards the south coast). A further 16.5% of traffic would cross the A3, which would be distributed between the six key junctions around Guildford and would be dispersed in terms of traffic impact at key individual junctions.

2.4.1 Of the total trips in the AM Peak period, applying the percentages in the Table above, just 39 vehicles would be expected to travel to/from the north on the A3, with 10 vehicles expected to travel to/from the south. Of the southbound trips, 7 would exit at The Chase junction towards the Surrey Research Park & Hospital and would therefore exit the A3 within two junctions. In the PM Peak period, a total of 47 vehicles would be expected to travel to/from the north on the A3, with 11 vehicles travelling to/from the south. Of the Transport & Highways Feasibility Note (300 Units) Land Adjacent to Merrow Park and Ride southbound trips, 7 would exit at The Chase junction towards the Surrey Research Park & Hospital.

2.4.2 Appendix C provides an extract from the Highways England (HE) daily traffic report on the A3 at Guildford (link between A3100 and A320) for the month of March 2018. From this, a neutral week has been analysed over a 7-day period (Monday 12th March 2018 to Sunday 18th March 2018) to establish an average hourly flow on this link. 6,491 two-way vehicles in the AM Peak period and 6,631 two-way vehicles in the PM Peak period are shown, with 72,346 two-
way movements across a 12-hour day. This count provides a useful guide as to the level of peak hour flows on the A3; although it is accepted that there will be some variation in traffic flows on the A3 between different junctions.

2.4.3 Table 3 provides a summary of the base traffic movements on the A3 and the percentage impact of potential Clandon related development traffic on this link.

![Table 3: Summary of Highways England Data and Percentage Impact of Potential Development](image)

2.4.4 With a percentage impact of just 0.6% in the AM Peak period and 0.7% in the PM Peak period, Table 3 demonstrates that the addition of development traffic onto the A3 is clearly marginal, and can be considered well-within the daily variation in traffic flows that would be expected for a trunk road of this nature.

2.5 Traffic Impact on A3 Guildford Junctions

2.5.1 The development will not have a material impact on the A3 as noted above. The junctions leading onto the A3 include the A247 junction, the Clay Lane Junction, the Stoke Junction, the Dennis Junction, the A31 Farnham Road Junction and the Hospital and Cathedral Junction.

2.5.2 Of the traffic which is expected to enter/exit the site, a total of 22 vehicles in the AM Peak period and 25 vehicles in the PM Peak period are anticipated to travel over the A3 to the aforementioned destinations to the north and west of Guildford. Whilst using the A3 junctions, these movements will not be required to enter or exit the A3 directly.

2.5.3 The distribution of traffic means that the 22-25 vehicles will be distributed between the six aforementioned major junctions along this route, and therefore the impact at each junction will be immaterial (for example a maximum of 16 additional movements over an hour at the Clay Lane Junction).

2.5.4 Based on the trip generation and distribution patterns the impact of development traffic at each of the junctions along this route is anticipated to be marginal, and well within the normal, expected daily variation of traffic flows.

Summary

2.5.5 It is reported that the A3 currently experiences high volumes of traffic and periods of congestion at a number of junctions along the Guildford corridor. With such a small volume of traffic calculated to be travelling on or across the A3 from a 300 dwelling development on land adjacent to Merrow Park and Ride it is evident that the effect of development traffic from this site would not have a material impact on the existing operation of the A3, nor any of the junctions accessing onto it. Therefore, this development would be in a valuable position to be delivered in the early stages of the Local Plan, in advance of any planned A3 improvements and would not be dependent on Wider their delivery.

2.6 Wider Traffic Impact

2.6.1 Of the development traffic, 21.4% is anticipated to travel into Guildford Town Centre, with an additional 7.5% travelling through the centre to access the A281 to the south. The total of 28.9% of traffic equates to 39 vehicles in the AM Peak period and 46 vehicles in the PM Peak period.

2.6.2 A total of less than one additional vehicle a minute in the AM and PM Peak periods demonstrates again that the development impact on Guildford Town Centre would be marginal, and within expected daily variations in traffic flows.
2.6.3 It is extremely important to take into account this development’s location in respect of sustainable access for all modes of travel. Located to the east of the town centre and the existing residential area (just 4km from the heart of Guildford) any vehicles travelling into/out of Guildford would not need to travel on, or via the junctions of the A3 and would therefore not have an impact on the A3, or any of the junctions along its route. Further evidence that the delivery of the site is not dependent on any A3 planned Improvement Schemes.

2.6.4 The location of the site immediately to the east of the existing settlement of Guildford also provides an alternative to the A3 for northbound traffic, should the A3 Improvement Schemes cause temporary congestion along this route. The alternative is the A25/ A246 route on which the site is located, which allows direct access to London and the M25, through East Horsley, Effingham, Great Bookham, Fetcham and Leatherhead.

2.7 Sustainability

2.7.1 The site is located approximately 4km to the east of Guildford Town Centre, and 1km to the east of Merrow Local Centre. The site’s location means that travel by sustainable modes is a realistic alternative to the private car. The proximity to Guildford means that travel to/from the town centre can be undertaken by a variety of modes; all of which are direct, safe and well established and do not require crossing the A3 (or any other major roads).

2.7.2 Being on the A25 and located immediately adjacent to the established Merrow Park & Ride, the site is already well connected by way of existing bus links. Buses from Merrow Park & Ride run every 15-20 minutes between 07:30 and 19:20, and travel directly into the centre of Guildford taking just 12-15 minutes. Buses are also available to Clandon Station, taking just three minutes, with ample walking & cycling opportunities also available. A summary of the local walking, cycling and public transport opportunities is demonstrated in Figure 1.

2.7.3 There are significant and comprehensive opportunities to encourage walking and cycling into the town centre, as well as to Merrow’s local centre without significant investment in the existing road network to accommodate such facilities. This aligns with the focus of the Guildford Town and Approaches Movement Study (March 2015), which strategy includes:

- Comprehensive network of walking and cycling routes including improved routes to the rail station;
- Pedestrian facilities, improved crossings, shared surfaces;
- Cycle parking and bike sharing/ cycle hire schemes;
- Park and Ride facilities.
2.7.4 The site is suitably sustainable to encourage walking, cycling and public transport travel without reliance on the private car; particularly for journeys into Guildford Town Centre and local facilities.

Attached documents: Main Modifications Reps Combined_Redacted.pdf (6.1 MB)

Comment: MM2 - LPMM18/4337  Respondent: WAAG (Wisley Airfield Action Group) 8968961  Agent:

**OBJECTIONS REPRESENTATIONS ON THE MAIN MODIFICATIONS PUBLISHED IN SEPTEMBER 2018**

A general difficulty with the modifications is that no justification is put forward as to why the modification has to be made. A main modification may only be made if the plan as submitted is unsound and the modification is required to make it sound. It is not apparent why most of the modifications might be thought to be required to address a soundness failure, let alone to evaluate whether they are.

The Sustainability Appraisal Report Addendum does not address many of the changes: it might not need to, but does mean that the case for them is not made.

**MM2 Spatial development strategy and housing numbers**

The housing requirement should be calculated from the starting point of the latest, September 2018, ONS projections rather than the projections released earlier in 2018. These reduce the net increase in households on those projections from 420 per annum to 325 per annum.

The Main Modifications base the housing requirement on an adjustment for employment growth taking the increase to 606 dwellings per annum and a further 23 dwellings per annum for students. This led to the 630 dpa total for Guildford’s needs in the Main Modifications, with an additional 42 pa for unmet need from Woking. Calculations have varied for the effect of the employment alteration. The NMSS figure was 460 as against the GL Hearn 606 total. The reduction in the projections will significantly affect the total after employment growth. We understand that the GL Hearn calculations would have to go down to about 480-490. If the current student adjustment was made, the Guildford need figure would, on the Council’s calculations, be 500-515, a reduction of 115 to 130 per annum. Over the plan period this would be a reduction of 2200 to 2500 dwellings. The unmet need from Woking should also be reduced.

The housing requirement figures should therefore be adjusted downwards.

This reduces the case for Green Belt releases and there are not the exceptional circumstances which are necessary to support all of the sites. Fewer Green Belt sites ought therefore to be released, with the unsustainable site of Former Wisley Airfield the first to go.

We note that the Inspector has sought the Council’s views on those ONS figures (ID/10), but given their significance ought to be asking the examination participants more generally for their views.

As is discussed below, the retail requirements are unrealistically high, in particular for comparison shopping. More urban land is therefore available for housing development. Since more comparison shopping takes place online, town centres are under pressure and so need a more locally based source of demand. An increase in the residential population of Guildford Town Centre will help the town centre retailers, in particular convenience retailing, A2 services and A3 to A5 food and beverage uses. The housing numbers proposed for the town centre of 863 are considerably below what the town centre is able to accommodate. By increasing pressure on the Green Belt the plan is unsound as not being consistent with national policy. The Town Centre housing figures should be increased to 3,500 and policies put in place to manage that growth.

MM2 – 4.11 and modifications Appendix 1 Housing trajectory
The revised housing trajectory projects the first homes coming from the Former Wisley Airfield in 2022/23. However the M25 Junction 10 works are said to need to be completed before any units can be occupied at the site. Given the delays to the Junction 10 project, the trajectory is unrealistically optimistic. The Wisley site is highly unlikely to make any contribution to the five year supply.

**Attached documents:**

---

**Comment: MM2 - LPMM18/371   Respondent: Dr Graham Hibbert 8970785   Agent:**

I wish to make the following comments on two aspects of the proposed changes to the Local Plan:

**MM2**

The final Local Plan must take into account the revised ONS population profile which reduces the housing need for Guildford. The number of dwellings required should be revised downwards to 460 per annum. This figure is made up of 400 per annum - as has now been agreed by G L Hearn - plus 60 per annum to take account of the ambitious growth forecast by the Inspector.

All possible constraints should be applied to prevent building on the Green Belt, particularly bordering an AONB.

**Attached documents:**

---

**Comment: MM2 - LPMM18/5046   Respondent: Dr Graham Hibbert 8970785   Agent:**

I have briefly written to you before to comment that in view of the new local population and household projects, the housing target in the Draft Local plan should be reduced. I have since had the opportunity to review the proposed amendments to the Local Plan in more detail and make the following additional comments.

Policy MM2 - As I have previously stated, the Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

...  

Policy MM2 – I would ask the Council to reconsider the need for all the current strategic sites and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination. More dwellings in the town centre will help it to live at night and be a more attractive place to visit for entertainment and relaxation purposes.

...  

Policy MM2 - Expert Neil MacDonald, hired by the GRA, has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation. It has undermined people’s trust in the Council that the logic behind the Council’s agents who developed their assessment of the OAN has not been made more open.

...
Policy MM2 - It is just wrong to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

Attached documents:

Comment: MM2 - LPMM18/2065  Respondent: Tim J. Harrold 8971233  Agent:

FORMAL WISLEY AIRFIELD, OCKHAM : POLICY A35

GENERAL OBJECTION

MM2

+The housing target is wrong. CPRE is requesting the Inspector to reopen the hearing so that the latest ONS figures and household projections can be taken into account.

+There should be no requirement for Guildford to take Woking’s unmet need, particularly as this will require further Green Belt release.

+Guildford Borough Council has not properly followed its spatial strategy which requires that development takes place first in the town centre, the urban area and brownfield sites before moving to land in the villages or Green Belt. The addition of another 500 houses in Send (which will be car dependent) has a severe impact on the Portsmouth Road in Ripley that has not been properly considered.

Attached documents:

Comment: MM2 - LPMM18/2074  Respondent: Tim J. Harrold 8971233  Agent:

POLICY A61 LAND AT AARON’S HILL, GODALMING : MAIN MODIFICATION MM36 & MM2

CPRE objects to this development proposal for 200 houses within the Pilgrims Ward of Guildford.

We have asked in our submission for the Inspector under MM2 to reopen the current examination to take account of the new lower population and household figures for Guildford and Waverley that have recently been produced by the Office for National Statistics. CPRE has worked closely in this context with the leading national expert Neil MacDonald both in Waverley District and in collaboration with the Guildford Residents Association (GRA) in Guildford.

We are opposed to the Aaron’s Hill development proposals made for both sides of the Waverley/Guildford boundary which total 462 houses. It is clear to us that housing on a scale of 200 dwellings in Guildford District will result in adverse traffic congestion implications for the local road network and in particular Eashing Lane. It seems likely that there would be a substantial increase in vehicles seeking to reach the A3 and beyond on a daily basis. This could be very damaging to the small hamlet of Eashing with its ancient medieval bridge and community of attractive houses.

The submission of Shackleford PC (SPC) makes it clear that Aaron’s Hill is currently protected as Green Belt and as part of an Area of Great Landscape Value (AGLV). It is intended that a review of the boundary of the nationally important countryside within and adjoining the Surrey Hills Area of Outstanding Natural Beauty (AONB/AGLV) in this area is to be made once the current study by Natural England of the Suffolk Coastal AONB has been completed. The proposed site is described by the SPC as “manifestly unsuitable for such a large-scale development” especially if the 262 homes
proposed for Waverley District go ahead as well. Neither proposed settlement is consistent with the National Planning Policy Framework (NPPF). Development of the Green Belt is only permitted in “exceptional circumstances” that in our view should not be considered relevant in the current situation.

We are informed that the Leader of Guildford Council attended SPC’s July meeting at which Ashill was also present and stated that GBC did not believe that the site was suitable for a large development which would be harmful to the area. We fully endorse the comments subsequently made by SPC in their submissions to GBC dated 30th August and 22nd October. We therefore urge that this proposed development be refused.

---

Comment: MM2 - LPMM18/5723  Respondent: Andrew herzig 8990721  Agent:

On behalf of my wife and me, I am writing to ask you to reconsider the fact that new figures have been produced by the Office for National Statistics which mean that the figures in MM2 for Guildford of 672 extra homes per year are no longer up to date, being excessive. If the newly-produced figures of 360 extra homes per year were adopted, it would enable the planners to reconsider which sites should be used and remove a strategic Green Belt site from the plan. The Blackwell Farm site, which adjoins the Surrey Hills AONB could therefore be removed from the Plan, as the road infrastructure of the area will not support the additional homes planned. The development of the planned extra homes will lead to increased congestion of the A31/A3 junction area, an already overcrowded and frequently problematic junction. The considerations of aesthetic beauty, nature conservation and preservation of the Hogs Back skyline are also exceedingly important to the residents of Guildford, like myself, my family and local neighbours.

... I ask you to urgently reconsider your use of the Blackwell Farm site in the MM2, in the light of this recent publication of the considerably reduced figures by the Office for National Statistics.

Attached documents:

---

Comment: MM2 - LPMM18/711  Respondent: Persimmon Homes Ltd. (Persimmon Homes Ltd.) 8992033  Agent: Michael Williams Planning (Mr Michael Williams)

NOTICE OF SUPPORT:

(1) Policy S2 – Spatial Strategy, as it relates to West Horsley

Our overall conclusion is that additional housing sites are necessary to increase delivery rates early in the Plan period. Clearly, the Modifications are responsive, but they are insufficiently attuned to realistic delivery rates- especially in relation to Wisley Airfield.

For that reason, we (i) endorse the Mods Site A40 Allocation, and (ii) seek early release of this, Persimmon-controlled land at West Horsley, detailed below.

Attached documents:
(1) Policy S2 – Spatial Strategy, as it relates to Ash/ South East flank.

Persimmon Homes Thames Valley has been in regular dialogue with GBC about Strategic Site A29 on the east flank of Ash. The Submission Local Plan’s allocation for 1,750 dwellings is fully supported.

Within the prescribed area the Company has a 4ha parcel, located off Foreman Road, which is capable of providing a first stage “building block” in carrying the strategic allocation forward in its overall arc from Guildford Road south westwards and across the rail corridor.

Persimmon’s 4ha parcel provides the means of providing a new road link across the railway and incremental fulfilment of the long-held objective of doing away with the problematic level crossing at Ash Station.

Clearly, the necessary new road has further distance to go (beyond this site) to reach Guildford Road, but we urge that the Persimmon land be seen as a vital and deliverable piece of the strategic “jigsaw”.

There are no legal, ownership or technical issues that will prevent development. The site is capable of 172 dwellings overall, of which 40% will be affordable; alongside there will be 0.56 acres for POS and 1.62 acres for SANG provision.

We envisage development implementation and completion within a 3 - 5 year timescale. Our technical study findings have been presented to the Council previously. Persimmon accepts fully that a developer/ land owner consortium will be necessary to shoulder the costs of neighbourhood-wide social infrastructure and the rail crossing.

Site location and indicative development layout are set out below.
Comment: MM2 - LPMM18/4688  Respondent: Shelagh Yeomans 8993121  Agent:

MM2 - policy S2. The examination should be re-opened because the housing figures should be revised in the light of the new ONS forecasts of population and households. The stated housing requirement is not a sound basis for the Local Plan or justification for such an extensive loss of Green Belt land

MM2 - there is a strong case for taking out a strategic site and more scope for better town centre provision. This makes table (S2), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 - independent expert, Neil MacDonald, has demonstrated that 360 homes per year would support the ambitious economic growth rate proposed by the Inspector. 630 homes a year is out of step with the new ONS figures and the Government's new standard methodology. 630 is based on inappropriate assumptions that inflate the figures due to excessive allowance for student homes and their low economic participation.

MM2 - it is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained. The number of houses needed in Woking has also been reduced and has also not been re-examined.

Attached documents:

Comment: MM2 - LPMM18/5993  Respondent: Caroline Cunliffe 8995393  Agent:

I am writing to express my concern regarding the Local Plan for Guildford and the modifications in MM2.

Accepting that there is a need for more housing, the Office for National Statistics has recently produced lower population and household figures. Taking this into account, Guildford needs 360 new homes built each year rather than 672 plus 42 homes. This is a reduction of 75%. I would strongly urge therefore that the number of houses to be built should be reduced in line with this new information.

There appear to be areas in the town centre which could be redeveloped in preference to sacrificing the Green Belt, for example, the area opposite the Bus Station.

As any Guildford resident is acutely aware, we have ongoing traffic congestion problems both within and around the periphery of the town. Before any further housing is planned there must be a solution found to the issue of traffic congestion.

Guildford is an attractive, historic town which we should treasure. The geography of its site naturally restricts extensive growth and to attempt to overcome this will ruin the character of Guildford. It is difficult to see how to develop Guildford and sacrifice the Green Belt to accommodate the growth of nearby towns such as Woking.

I urge you to reopen the discussion on the Local Plan in order that a long term, cohesive plan is formed, respecting the unique character of our town.

Attached documents:

Comment: MM2 - LPMM18/78  Respondent: Mr Peter Elliott 9009025  Agent:

The second objection is to the inspector's proposal that Guildford should make up the shortfall in Woking's housing need. Not long after The local plan was made public, I received a letter from Nick Boles, the then Minister for Communities and Local Government, which includes the statement 'This government does not impose top-down housing quotas on
local authorities'. Does this inspector not feel any obligation to honour his Government's commitments? The other objection I have to this proposal is that Guildford should have to sacrifice much loved and supposedly protected countryside for Woking, a nondescript suburban town which has already decided to go down the high rise route, so that a few more high rise blocks would surely not significantly alter the character of that place.

**9079393**  **Agent:** Savills (Ruth Bryan)

### Wisley Property Investments Ltd October 2018

1. **Introduction**

1.1. This Representation has been submitted by Wisley Property Investments Ltd (WPIL) as part of the consultation on the main modifications to the emerging Guildford Borough Local Plan: Strategy and Sites (‘eGBLP’).

1.2. The Representation is in line with representations previously submitted by WPIL to the Strategy and Sites Proposed Submission Regulation 19 consultations held in July 2017 and June 2016. The representations submitted in July 2017 specifically addressed the focused amendments made to the eGBLP. A Full background to the site was provided within the previous representations and is not repeated here.

1.3. The key factor to note however is that WPI is the majority landowner within draft Allocation A35. Wisley Airfield comprises circa 115 hectares (ha), of the circa 132 ha allocation. WPI has been in liaison with the landowners of land at Bridge End Farm (being land to the south of the airfield and within the allocation) and their agents throughout the Local Plan and Examination process.

1.4. Previous representation included full technical justification for the proposed new settlement allocation at Wisley Airfield (draft policy A35) and fully demonstrated that the proposed allocation and removal of the site from the Metropolitan Green Belt is fully justified, and will deliver homes to meet the urgent and pressing needs.

1.5. In respect of the representations made previously by WPIL, a number of objections were made to the submission eGBLP. A number of these objections have now been resolved as outlined below:

**WPIL Previous Representation Objections Withdrawn**

- **Site of Nature Conservation Interest (SNCI)** – following discussions with GBC and comments made by the Inspector during the examination hearings, the SNCI boundary effecting Wisley has been altered. WPIL and GBC have entered into a Statement of Common Ground detailing this which has been submitted to the Inspector. This objection is therefore withdrawn;

- **Affordable Housing** – WPIL outlined that the affordable housing policy should be expressed as a target and that the absence of reference to viability were likely to make Policy H2 ineffective. As demonstrated through the Appeal proposals, WPIL are committed to providing 40% affordable housing at Wisley Airfield. Policy H2 has been modified following the Examination and this objection is withdrawn;

- **Combined Heat & Power** – WPIL previously objected to the requirement for all development to connect or safeguard connection to CHP. The requirements have been amended as part of modification to Policy D2 and WPIL therefore withdraw this objection;

- **Sustainability Appraisal (SA) June 2017** – WPIL outlined that the SA (2017) incorrectly referred to Wisley Airfield as being “medium sensitivity” which was not in line with the evidence base. WPIL do not object to the SA 2017, and are only highlighting this discrepancy;

- **Policy A35 Retail Provision** – WPIL outlined in their objection that the evidence submitted as part of the planning appeal at Wisley Airfield supported a higher level of retail provision than included in Allocation A35. The provision of retail has not been amended, however, a retail provision in line with A35 can be progressed through the proposed resubmission application. WPIL therefore withdraw this objection;
• **Policy A35 Gypsy & Traveller Pitches** – WPIL highlighted that the requirements for tenure of traveller pitches and a flexible requirement for the scale of provision had not been included in the policy. **WPIL withdraw this objection** and will secure appropriate Gypsy and Traveller pitches through the proposed resubmission application.

**WPIL Previous Representation Objections Maintained**

1.6. The only remaining objection from the Regulation 19 consultation is in respect of the emerging Proposals Map identifying Wisley Airfield as a “Safeguarded Waste Site”. **WPIL maintain this objection to the eGBLP.** As outlined previously, this reflects the out of date Surrey Waste Plan (2008) which is currently being updated by Surrey County Council (SCC). WPIL have confirmed to SCC that the Site is not available for a waste development and Officers have confirmed that they will not be allocating the Site in the emerging Waste Plan. GBC should therefore remove this notation from the Proposals Map. This is considered to be a minor alteration to the proposals map which does not relate to any specific policy in the eGBLP and can therefore be altered via a minor modification prior to adoption of the Plan. This objection would not therefore warrant any further main modification.

**Progress of the eGBLP**

1.7. The eGBLP has now been in preparation for a significant amount of time, having been delayed a number of times during its preparation. The lack of an up to date development plan has impacted on housing delivery and delayed deliverable sites from coming forward. WPIL are strongly supportive of the adoption of the eGBLP as soon as possible and GBC should take all necessary steps to secure the adoption of the plan in a timely manner.

**Wisley Airfield Resubmission Application**

1.8. WPIL have begun the process of preparing a resubmission application on Land at Wisley Airfield, which is proposed to be submitted to GBC in mid 2019. Pre-Application discussions with GBC Officers have commenced and are ongoing. The proposed resubmission, and the evidence submitted with the previous application and appeal, demonstrate that the site is deliverable and support the housing trajectory outlined in the eGBLP. WPIL, together with the landowners of land at Bridge End Farm submitted to the Examination an agreed trajectory for housing delivery in line with the eGBLP trajectory, further supporting deliverability. WPIL has secured in principle agreement with Highways England in respect of highways mitigation relating to the appeal scheme. This, together with the an adopted policy allocation area’s associated potential for a revised approach to design and removal from the Green Belt, and local sustainable transport proposals, will address the remaining issues raised by the Inspector at the Appeal.

**2. Representation to Main Modifications**

2.1. This representation is structured in the same order as the Main Modifications and specifically addresses the modifications relevant to Wisley Airfield. The table below sets out WPIL comments and objections (where relevant) to the Main Modifications to the eGBLP. In respect of Policy A35 WPIL comments on the amendments to this policy are outline from paragraph 2.2.

WPIL support the housing target and the inclusion of additional homes to meet Woking’s unmet need.
I wish to object to the Guildford Local Plan on the grounds, amongst others, that it ignores the inadequacy of the highway infrastructure to take the number of houses proposed.

Even now traffic queues tail back, stuck in lanes waiting for the cars ahead to clear before they in turn move forward. Stuck in traffic, exhaust pipes emitting toxic gas in close proximity to schools or residents in the houses which abut the roadside edge, Newark Lane in Ripley is a typical example of this.

Of course people do not die immediately from this effect but the process is accumulative, life is not only shortened but the quality in the latter stages of life is one of ill health brought on by the bronchial affects. Treatment of such adds costs to NHS one which they can ill afford.

This planning is not to be done in isolation of one Government Department, it needs the consultation of all departments Highways England, County Council, Borough Council and the Parish. I see no evidence that there has been this degree of consultation and in such circumstances I maintain my objection.

Comment: MM2 - LPMM18/2102  Respondent: William D Barker OBE 9081089  Agent:

I am writing to object most strongly to the Main Modifications of Guildford Borough Council's Local Plan. Please find my objections listed below.

MM2: The housing target is not correct and thus the hearing needs to be reopened, in order for the latest figures and household projections from the Office of National Statistics to be taken into account.

MM2: There should not be any requirement for Guildford to take Woking's unmet needs: this would require further Green Belt release, the very last option.

MM2: The council’s spatial strategy has not been followed correctly, as this requires development to take place in the following order: town centre, urban area and brown field sites before land in villages or Green Belt. A further 400-500 houses in Send, all of which would be dependent on car travel, would have a major impact on Portsmouth Road, Ripley and beyond. This has not been properly considered.

Attached documents:
Comment: MM2 - LPMM18/39  Respondent: Mr Fridrun Williams 9298657  Agent:

I would like to add my concerns about the local plan as it stands. They have been more or less copied from other like minded citizens, who have already expressed them more succinctly and in more detail. I hope they will be taken into account in the final instance.

In order to arrive at a robust and sustainable housing target, the following measures need to be taken:

Population projections need to be calculated keeping in mind the discrepancy between the population projections for Guildford and the actual population as recorded in the 2011 Census. Taking into account the latest 2016 Based SNPP figures, the objectively assessed housing need based on demographic indicators would be reduced to 192 dwellings per annum if an appropriate allowance for UPC were to be applied.

Students are not permanent residents, as they are only here to study. As such they should not be included in the statistics used to arrive at Population Projections for Guildford or those used to generate DCLG Household Projections. Overseas students should be removed from statistics used to arrive at net international migration on the grounds that they are only here on a temporary basis to study and not to settle – especially after Brexit!

Therefore housing needs of students should be met separately from housing targets. Instead student accommodation should be built on campus and in the immediate vicinity of the campus, so students don’t have to commute. This would free up affordable housing in the town centre.

Attached documents:

Comment: MM2 - LPMM18/40  Respondent: Mr Fridrun Williams 9298657  Agent:

The Green Belt should be considered as an appropriate constraint on the supply of housing in Guildford in view of paragraph 035 in the PPG which states that - “unmet housing need is unlikely to outweigh the harm to the Green Belt and other harm to constitute the “very special circumstances” justifying inappropriate development on a site within the Green Belt”. The only reason Guildford Borough Council has given for building on the green belt is “to meet unmet housing need” and, according to the PPG, this is unacceptable.

Comment: MM2 - LPMM18/1726  Respondent: Mr Fridrun Williams 9298657  Agent:

I am re-submitting my earlier comments below and would like to ask the Planning Inspector to re-open the examination and amend the Plan to take account of the fact that the housing figures quoted are no longer up to date. This has been demonstrated by the expert Neil MacDonald, who stated that the economic growth rate proposed by the inspector could be met by about half the proposed figures.

Therefore there is no justification of the loss of green belt. There seem to be quite a few sites which could be developed in the town centre. Why are they given over entirely to retail developments, when retail is in decline? How many more furniture shops do we need?

In addition why would Guildford have to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained?

Dear Planning committee,

I would like to add my concerns about the local plan as it stands. They have been more or less cobbled together from other like minded citizens and associations, who have already expressed them more succinctly and in more detail. I hope they will be taken into account in the final instance.

In order to arrive at a robust and sustainable housing target, the following measures need to be taken:

Population projections need to be calculated keeping in mind the discrepancy between the population projections for Guildford and the actual population as recorded in the 2011 Census. Comment: MM2 - LPMM18/1038  Respondent: Rod Wild 9298689  Agent:

I OBJECT to the need to cater Woking's unfulfilled needs.

I OBJECT to the housing requirement not being lowered in the face of the new statistics.

I OBJECT to only having a derisory reduction in the number of houses for Site A22, Keens Lane. There are so many reasons not to proceed with this development. Not only Green Belt but the number of times developments in the area have been refused because of the critical nature of the congestion on main roads A322 and A323.

In 1976, the inspector recommended: “The proposed development, in my opinion, would further impair the efficiency of both the A323 and A322 which, as principal roads connecting Guildford to the M3 and the major growth area, must be safeguarded ….”.

In 1983, the County Engineer wrote to the then MP concerning the Surrey Structure Plan: “ Accordingly the County Council as Highway Authority will seek to prevent the grant of any planning permission which would significantly increase traffic to the south of Liddington Hall”.

In 1985, in spite of the above, an attempt was made by the County Council to build on Liddington Hall Farm, which at that time they owned. The Inspector recommended: “In my judgement, the discharge to A322/A323 of traffic from 700
dwellings additional to that arising from expected development at Tilehouse, Stoughton and from general growth of traffic would add unacceptably to prevailing congestion and danger on the main framework roads.”

In 2003, the Officer Report to the Executive on the Deposit Draft Surrey Structure Plan 2002 stated: “The findings thus far suggest that the transport impacts associated with the north west community [the Liddington Hall site] would be significant and difficult to resolve.” These previous rulings are vital and cannot be ignored.

I would ask that the Inspector reopen the enquiry and examine the effect of the new ONS figures have on the housing numbers.

I would suggest the new figures no longer support release of Greenbelt land and specifically that the Gosden Hill site should be taken out of the plan.

Insufficient housing sites have been provided in the Town Centre.

The transport plan do not even address the acknowledged existing deficiency and with Guildford being the most congested town in the country makes the plan unsound. Unless significant improves are made it will endanger the economic viability of the Borough.

I fully support the comments by the Guildford Residents Association and the Burpham Neighbourhood Forum.

Policy S2: Planning for the borough – our spatial development strategy

MM2 – OBJECTION S2-1

Both versions of NPPF require planning authorities to base their Local Plans on data that is relevant and up-to-date (see NPPF March 2012, paragraph 158, and NPPF July 2018, paragraph 31). Current Planning Practice Guidance also specifically identifies the ONS household projections – effectively as matter of definition – as being the most robust estimates of future household growth (see PPG paragraph 005, (Reference ID: 2a-005-20180913, 13/09/2018):

“Why are household projections used as the baseline for the standard method?

Using household projections as the baseline ensures that the process begins with a clear and transparent assessment of anticipated household growth for every area. The Office for National Statistics’ projections for numbers of households in each local authority are the most robust estimates of future household growth.

The household projections are trend-based, meaning that they provide the household levels and structures that would result if the assumptions based on previous demographic trends in the population and rates of household formation were to be realised in practice. They do not predict future growth.”

On 20/09/2018 ONS released their “2016-based household projections: detailed data for modelling and analytical purposes”. Therefore that data is the correct basis for Guildford’s Local Plan. The fact that the data only became available
shortly before the present public consultation is immaterial; the planned September release of the household data was discussed during the Local Plan Examination in Public (EIP) in June/July this year. Moreover, ONS’s updated population projections (which were released on 24/05/2018, and which were also discussed in detail during the EIP) showed a very marked reduction in the projected population levels, which should have alerted the Council to the inevitable similar change in the September household projections.

Over the period between the release of draft Submission Local Plan in December 2017 and the release of the present draft which includes the Main Modifications arising from the EIP, the nominal housing target in the Plan has increased by 174 dwellings from a total (over the entire 20-year plan period from 2015 to 2034 inclusive) of 12,426 (December 2017 Submission Plan) to 12,600 (September 2018 Main Modifications Plan). In comparison, the corresponding official projected household figures have decreased by 4,507 dwellings from a total 11,142 (used in the December 2017 draft Plan) to 6,635 (in the September 2018 draft Plan), as shown in the following table. This is a reduction of 40%.

<table>
<thead>
<tr>
<th>Year</th>
<th>2014-based (DCLG)</th>
<th>2016-based (ONS)</th>
<th>Change in Projected Guildford Households</th>
</tr>
</thead>
<tbody>
<tr>
<td>2014</td>
<td>56,055</td>
<td>54,988</td>

<td>67,197</td>
<td>61,623</td>
<td>-5,574</td>
</tr>
<tr>
<td>Growth</td>
<td>11,142</td>
<td>6,635</td>
<td>-4,507</td>
</tr>
</tbody>
</table>

In this situation (and irrespective of any subsequent adjustments for affordability, Woking’s unmet need, student accommodation, economic growth etc) it is clear that the housing requirement is based on an out-of-date household projection, is incorrect, and that the Plan is therefore unsound. Note that the extent of this error is I to more than two of the strategic sites, or 35.8% (4,507 / 12,600) of the housing requirement of the entire Plan.

**MM2 – OBJECTION S2-2**

In addition to the errors in the underlying household projections for Guildford identified in Objection S2-1, a similar situation applies to the Woking household projections, as presented below. The table shows that Woking’s household growth between 2015 and 2034 (inclusive) is now projected to be 2,959 households fewer than was originally projected (ie. a drop of 48%). The inclusion in Policy S2 of an annual housing increment of 42 dwellings per year between 2019 and 2034 to support part of Woking’s unmet need is therefore also flawed and unsound.

MM2 – OBJECTION S2-3

Given the very large discrepancies between the levels of housing proposed in the Plan and the ONS household data released on 20th September 2018, the Public Examination of the Plan by the Planning Inspector must be re-opened.

MM2 – OBJECTION S2-4

As a result of the changes to the housing figures identified in Objections S2-1 and S2-2 above, the equivalent of at least two strategic sites should be removed from the plan. In addition, Objection S3-2 to modification MM3 (below) demonstrates that over 60% of the housing proposed in the Plan would be destined to be built on land that is currently in the Green Belt. A major review of all Green Belt sites in the Plan should therefore be undertaken to align the planned level of housing delivery with the up-to-date household figures. In particular, the review should include (but not limited to):

- Site A25 (Gosden Hill Farm)
- Site A26 (Blackwell Farm)
- Site A26a (land for an access road to Blackwell Farm)
- Site A35 (former Wisley airfield)
- Site A43 (Garlicks Arch).

MM2 – OBJECTION S2-5

Following the Planning Inspector’s Examination of the Local Plan in June/July 2018, five new sites were included in the Plan, for the purpose of accelerating early delivery of housing. In the light of the recent changes to the household projections detailed in Objections S2-1 and S2-2 above, the new sites (listed below) should be removed from the Plan.

- Site A43: Land at Garlick’s Arch, Send Marsh (an additional 150 dwellings)
- Site A61: Land at Aaron’s Hill, Godalming (200 dwellings)
- Site A62: Land at Hornhatch Farm, adjoining New Road, Chilworth (80 dwellings)
- Site A63: Land west of Alderton’s Farm, Send Marsh Road, Send (120 dwellings)
- Site A64: Land between Glaziers Lane and Strawberry Farm, Flexford (105 dwellings)

Attached documents:

Comment: MM2 - LPMM18/5311  Respondent: Carol Herzig 9408833  Agent:

Re: Objection to MM2

I am writing to ask you to reconsider the fact that new figures have been produced by the Office for National Statistics which mean that the figures in MM2 for Guildford of 672 extra homes per year are no longer up to date, being over inflated and excessive. If the newly-produced figures of 360 extra homes per year were adopted, it would enable the planners to reconsider which sites should be used and remove a strategic Green Belt site from the plan. The Blackwell Farm site, which adjoins the Surrey Hills AONB could therefore be removed from the Plan, as the road infrastructure of the area will not support the additional homes planned. The development of the planned extra homes will lead to increased congestion of the A31/A3 junction area, an already overcrowded and frequently problematic junction. The considerations of aesthetic beauty, nature conservation and preservation of the Hogs Back skyline are also exceedingly important to the residents of Guildford, like myself.

These newly-published figures also make table S2b out of date and MM3 inadequate and in need of re-examination. The new lower figure of 360 homes would make it much more achievable for the Council to bring forward well-planned, sensitively designed housing in the town centre in a more considered, long-term way.
I ask you to urgently reconsider your use of the Blackwell Farm site in the MM2, in the light of this recent publication of the figures by the Office for National statistics.

I look forward to receiving your reply.

**Comment:** MM2 - LPMM18/4867  **Respondent:** Guildford Vision Group (John Rigg) 9531041  **Agent:**

**Submission Local Plan: Strategy and Sites - Main Modifications**

I write in response to the consultation on the Main Modifications to the Submission Local Plan: Strategy and Sites document on behalf of Guildford Vision Group (GVG).

As you are aware GVG has been an active participant throughout the regulation 18 and regulation 19 consultations. GVG also submitted a pre-hearing statement to the Planning Inspectorate in advance of the examination and subsequently participated in a number of the hearing sessions.

In summary GVG raised a number of critical issues during the regulation 18 and regulation 19 consultations, and also during the examination which can be summarised as follows:

- Not addressing the settlement hierarchy in formulating the plan and lack of a 'brownfield first' approach.
- Lack of proper town centre policies within the plan. Failure to meet the test of exceptional circumstances by the council in order to justify the release of green belt.
- Lack of development sites identified in Guildford Town Centre and wider urban area and in contrast to the sites identified in the 2017 Guildford Town Centre Regeneration Plan (plans attached at Appendix 4).
- Failure to address provision of infrastructure across the borough within the Local Plan, with only limited plans to address the poor infrastructure in the town centre.
- The suitability of the housing trajectory and the suitability of green belt sites to deliver housing.
- Lack of delivery of a wide variety of homes across the local plan area.
- Overprovision of retail space on the North Street site in relation to the established evidence base.
- Lack of policies for the town centre to address the broad spectrum of issues the town centre faces. Importantly there is no attempt to bring forward policies to promote masterplanning the town centre to provide a joined up approach to infrastructure, spatial strategy, resilience (Flood Prevention, Water and Sewerage, Power etc.).

The council has gone some way to addressing points raised by the Group. The changes as set out in the Main Modifications document do not go anywhere near far enough. On this basis, GVG is firmly of the opinion that the plan, in its current form (including the main modifications) remains unsound.

In the years leading up to the examination and throughout the hearing sessions, GVG sought to work proactively with the council to identify solutions concerning the town centre and wider urban area. As part of its involvement in the hearing sessions, GVG prepared a draft Statement of Common Ground which was submitted to the council in May 2017 (Appendix 5). Despite submitting this to the council, with a copy to the Inspector, no further response to this was received even though SOCGs have clearly been agreed with other parties involved in the process.

Since the hearing sessions, GVG has continued to meet as a group and most recently, on 16 October, held a public meeting, to receive an update on plan progress, particularly an update on Policy S3, in Guildford with around 150 residents attending. An exit poll at the meeting showed 94% were not confident about the outlook for Guildford and town planning, 89% supported more pedestrianisation, and 93% agreed that the council should address infrastructure issues in the town centre, including safeguarding a route for a new crossing of the railway & river if no other solution is available.
The meeting was streamed to the SurreyLive website where over 8500 ‘hits’ have been registered for the video of the event.

The Procedural Practice in the Examination of Local Plans issued by the Planning Inspectorate (June 2016 4th Edition v.1) deals specifically with ‘Post-Submission Changes Initiated by the LPA’ and specifically states at paragraph 5.22 that: The consultation on the proposed change may generate new representations. If so, in the interests of fairness, the Inspector will provide an opportunity to appear at the hearings to those who seek an amendment which follows directly from the LPA’s proposed post-submission change(s) to the plan.

GVG is firmly of the opinion that it is necessary to re-open the examinations in the interests of fairness so that further evidence can be heard from GVG and others (including The Guildford Society) on the inadequacies of the modifications proposed.

Turning to the main modifications as proposed by the council, GVG has split the response into the relevant sections and these will be taken in turn. GVG has not sought to comment on the modifications to the Housing or Protecting Policies within the plan. This is because there are more serious issues with the soundness of the plan, particularly around the town centre and the use of brownfield land.

**MM2 - Policy S2: Planning for the borough - our spatial development strategy**

The council has now selected a flat housing trajectory of 630 dwellings per annum over the plan period (2015-2034) following commentary from the inspector during examination. This trajectory is welcomed as it avoids the stepped Liverpool housing trajectory which was previously being promoted by the council and which the inspector had said would not be a sound approach. In order to deliver a flat housing trajectory it is also recognised that the council has had to make the difficult decision to allocate further additional sites in order to satisfy the requirements of early delivery. However, the flat trajectory still spreads the historic undersupply across the plan period (Liverpool method) which remains contrary to government advice and is likely to require further justification through additional hearing sessions on why the backlog cannot be met in the early plan period.

It is however notable that no town centre sites were considered as suitable candidates for early delivery of housing. Whilst the deliverability constraints of brownfield sites in urban areas is recognised by GVG, there are numerous examples of sites, such as surface car parks within the ownership of GBC, that could be made available for further early delivery. Several of these sites were fully identified by the council themselves in the 2017 Regeneration Strategy (Appendix 4). No evidence has been provided by the council that any consideration has been given towards any additional town centre sites above those previously identified by the council in the Local Plan.

The wording of part 2a) of policy S2 still refers to 41,000 sq m of comparison retail floorspace (gross) provision across the plan period. Our previous comments that were set out in our regulation 19 consultation response and pre-hearing submissions are still relevant in this regard. It is noted that the proposed 41,000 sq m of comparison retail floorspace proposed at North Street is only marginally reduced from the allocation in the May 2014 draft plan and is the same for the total borough-wide floorspace capacity for comparison shopping and food and beverage uses as set out at para 4.40 in the Retail and Town Centre Topic Paper up to 2030.

The rationale for including this quantum of retail floor space in a single location within Guildford at North Street remains unclear and is even less logical in light of recent trends in retail across the UK. The wording of policy 2a is also at odds with the wording of Policy A6: North Street where the wording of the allocation has been modified to say ‘approximately’ rather than ‘minimum’ and it is suggested that wording elsewhere in the plan which relates to retail space is reworded in a similar way, including a material reduction in quantum.

*Table S2b: Spatial Strategy: Distribution of Housing 2015 - 2034 (net number of homes)* shows that 10,592 homes are allocated across the GBC area, of which 2,306 (22%) are in the town centre and wider urban area, and only (863 - 8%) are in the town centre. This is analogous of the fact that the entire spatial strategy does not take a brownfield first approach as advocated by the council.

During the local plan hearing sessions, GVG submitted a document to the council which compared the site allocations in the town centre in the submission local plan to those identified within the GVG masterplan. No further consideration has
been given to how these sites could be incorporated into the spatial strategy or even be considered as candidates for early delivery to meet the significant backlog as identified.

Comment: MM2 - LPMM18/2433  Respondent: Anne Pascoe 9607905  Agent:

I am writing to object strongly to the excessive development planned for the Send/Ripley area and also the planned access to the A3. in West Clandon. This will cause undue problems to the A.247 which is already coping with excessive traffic, especially heavy goods vehicles. It is wrong to build on Green Belt land when there is plenty of brown field sites available which should be used first. The increased traffic caused by so many new houses will result in grid lock for the whole area. I implore you, DO NOT BUILD SO MANY HOUSES

Attached documents:

Comment: MM2 - LPMM18/5586  Respondent: F McHugh 10299041  Agent:

Ref: Guildford Borough Council’s Modified Local Plan consultation

Please note my comments set out below:

1. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.

2. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:
   1. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
   2. There is too much reliance on A3 improvements and these are beyond the council’s control
   3. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
   5. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

3. I would like the Inspector to RE-EXAMINE the Local Plan because:
   1. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
   3. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. The Clandon Society Objections and Concerns Which I Share

The A247
I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247.

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1 million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1 million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247
The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. **The Guildford Residents’ Association’s Objections and Concerns Which I Share**

   MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

   MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

   MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

   MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

   MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.
Comment: MM2 - LPMM18/3704  Respondent: Ian Wilkinson 10326081  Agent: 

I understand that a main modification may only be made if the plan as submitted is unsound. Realistically, modifications should only be required to make it sound.

MM2 Spatial development strategy and housing numbers
This is fundamental to the whole plan, and sufficiently important that I consider the housing requirements render the whole plan unsound.

The housing requirement should be calculated from the starting point of the latest, September 2018, ONS projections rather than the projections released earlier in 2018. These indicate a projected population increase of 301 dwellings per annum. Given the environmental constraints in this area, I consider that the OAN target should therefore, in our opinion, be set at a figure in the region of 301 dwellings per annum, ie the same as the ONS perception of need, and this totals 5728 over the plan period.

As set out in MM2:

Commitments (permissions/completions) total 3675  LAA sites not allocated total 620  
Windfall sites total 750  

This aggregates to a total of commitments, LAA sites and windfalls of 5045.

Assuming that the target is set at (say) 6000 (rounding up to the nearest thousand), I consider that the uplift of 955 can be met within the urban area on existing brownfield sites.

This reduces the case for Green Belt releases. No exceptional circumstances have been demonstrated to support release of any of the Green Belt (or indeed countryside) sites, especially since (per new policy S3) it is clear that the brownfield land within the urban area should be used as a matter of priority.

I cannot see that these numbers demonstrate any form of justification for the release of any new Green Belt or rural sites.

I note that the Inspector has sought the Council’s views on those ONS figures (ID/10), but given their significance ought to be asking the examination participants more generally for their views.

I also consider the retail requirements are unrealistically high, in particular for comparison shopping. More urban land is therefore available for housing development. The housing numbers proposed for the town centre of 863 are considerably below what the town centre is able to accommodate. By increasing pressure on the Green Belt the plan is unsound as not being consistent with national policy. The Town Centre housing figures should be increased to a minimum of 955 (assuming that the total target of 6000 is accepted) and policies put in place to manage that growth.

Comment: MM2 - LPMM18/3183  Respondent: Adrienne Lawrence 10337569  Agent: 

I have just returned from holiday so no time to create my own objection but I want it on record that I strenuously object to the plan.. my reasons outlined below
• MM2 The housing target is wrong. **Call for the hearing to be reopened so that the latest ONS figures and household projections can be taken into account**
• MM2 There should be no requirement for Guildford to take Woking’s unmet need particularly as this will require further green belt release.
• The council has not properly followed its spatial strategy which requires that development takes place first in the town centre, the urban area and brownfield before moving to land in the villages or greenbelt. The addition of another 500 houses in Send (which will be car dependent) has a severe impact on Portsmouth Road Ripley which has not been properly considered.

**Attached documents:**

---

**Comment:** MM2 - LPMM18/1560  **Respondent:** Ms Kate Lipmann 10408353  **Agent:**

I understand yet again the local community need to write to again OBJECT to the plans that have been put forward for the development of greenbelt land on the Wisley Airfield.

MM2

I believe the examination in public to be re-opened so that the latest Office of National Statistics can be used. There also should be no requirement for Guildford to take Woking’s unmet need particularly as this would require further greenbelt release! The council has not properly followed its spatial strategy which requires that development takes place first in the town centre, the urban area and brownfield before moving to land in the villages or greenbelt. The addition of another 500 houses in Send (which will be car dependent) has a severe impact on Portsmouth Road Ripley which has not been properly considered.

**Attached documents:**

---

**Comment:** MM2 - LPMM18/3502  **Respondent:** Rosslyn Reeves 10443169  **Agent:**

We have read that the Office of National Statistics has indicated that the number of houses Guildford Borough Council are proposing is flawed and an overestimate. Will this be taken into account. I would like to think that our Council (voted for by majority of residents) would be on their side, and not give in at the first fence to an uninformed Government Inspector.

How many objection letters do residents have to write to make Guildford Borough Council and the Inspectors understand the genuine concerns everyone has??

**Attached documents:**

---

**Comment:** MM2 - LPMM18/2940  **Respondent:** Sarah Wright 10543937  **Agent:**

I wish to make comment on Policy S2

At the Public Examination the figure for Guildford Borough housing need being used by the Inspector was 789 per year.
After this Barton Willmore, Consultancy, has found that the correct figure should be 431. Following on from this, September data from the Office for National Statistics, which carries out population forecasts, suggests that appropriate growth in Guildford Borough can be achieved with 460 houses a year.

It seems that the Local Plan is inaccurate.

**Conclusion:**

It appears that GBC are desperately and naively clutching at straws to find what they think are suitable sites to include in the Local Plan, instead of carefully identifying already suitable Brownfield sites. GBC need to realise how important the Green Belt is, and stop treating it as a free space to indiscriminately destroy for generations to come.

Please explain why thousands of previous objections are ‘not relevant’ this time round? How difficult can it be for GBC to listen to the people who know the area best - the residents? The whole process of this Local Plan has been a farce. I suggest GBC take note of local residents concerns and objections before the implications are borne out at the next council election.

I am not completely against development, but I oppose development without thought and consideration for the basics, and which will be detrimental for the area.

Dear Sir/Madam

Ref: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments:

A. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.

B. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:

   1. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
   2. There is too much reliance on A3 improvements and these are beyond the council’s control
   3. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
   4. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

C. I would like the Inspector to RE-EXAMINE the Local Plan because:

   1. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
   2. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:
D. The Clandon Society Objections and Concerns Which I Share

The A247

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247.

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

E. The Guildford Residents’ Association’s Objections and Concerns Which I Share

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.
It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

**Comment:** MM2 - LPMM18/5157  **Respondent:** G Rabin 10617601  **Agent:**

I wish to object on the following grounds.
I should like to call for the examination to be re-opened so that latest Office of National Statists can be used regarding household projections.

There is no need for Guildford to take Woking’s unmet need as this will require building on green belt.

The council needs to make development in the town centre first, the urban area and brownfield site before moving onto villages or green belt.

the addition of 500 houses in Send will impact severely on the Portsmouth Road which hasn’t been taken into consideration.

Comment: MM2 - LPMM18/2552  Respondent: Wiesia Taylor 10641953  Agent:
GBC Local Plan consultation

I am writing to comment on modifications made to three policies in the latest version of the Guildford Local Plan.

1. a) Modification MM2  Policy S2, Spatial Development Strategy:

Latest Government figures on population and housing projections show substantially lower growth that in previous figures, which are the ones used by GBC in basing its housing needs. I have seen some commentators argue the new projections are around 40% below those currently used in the local plan. Whichever is correct it is clear that the numbers in the Local Plan are much too high. They must be reduced substantially or else Guildford will end up with a plan that leads to excessive housing.

Perhaps GBC should re-open the examination to allow the correct numbers to be used? Alternatively GBC could simply propose numbers which are lower and more realistic in the current market context.

Also I would comment that the notion that Guildford borough needs to build more homes to compensate for under-shooting in Woking is plainly absurd. Where do they find these examiners?

I OBJECT to the housing numbers set out in Modification MM2 – a substantial reduction is needed.

[text of attachment are reproduced below]

MM2

The number of dwellings is far too high at 630. It should be less than 500. The assessment does not take into account the latest population demographics available this summer that indicate lower demand than first thought and planned for. Secondly there is no discussion anywhere that the so called deficit is correct and should therefore be added to the current assessments. No business planning is done on this basis. Business planning takes account of the current position and future projections it does not carry forward from the past its mistakes and add to them it presumes its existing assessments are later and more up to date. Therefore the 20% loading must be eliminated from the dwelling figures. The numbers of dwellings for the students is also based on the false premise that there is no available or potentially made available accommodation, and also that the students are a permanent population -they are not. Woking has not made available Green Belt land that it admits it has available nor is it properly up to dat with its assessments. Since Guildford has made green Belt land available and is in an area of outstanding natural beauty that Woking is not - it follows that until Woking has properly assessed itself Guildford should not take on any under provision of Woking as a permanent part of Guildford's plans until Woking has completed them. Finally the number of sutes for gypsies and travellers is far too high.

[Response has been redacted due to statements being considered contrary to the Council’s duty under the Equalities Act 2010 to eliminate discrimination, harassment, victimisation against persons with a protected characteristic; and to foster good relations between persons with a protected characteristic and persons who do not share it]

**Comment:** MM2 - LPMM18/1889  **Respondent:** Trudi Harris 10667073  **Agent:**

Ref: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments:

1. **I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.**

2. **I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:**
   1. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
   2. There is too much reliance on A3 improvements and these are beyond the council’s control
   3. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
   4. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

3. **I would like the Inspector to RE-EXAMINE the Local Plan because:**
   1. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
   2. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. **The Clandon Society Objections and Concerns Which I Share**

**The A247**

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.
The £1million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt
The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageble traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

Attached documents:

Comment: MM2 - LPMM18/1890  Respondent: Trudi Harris 10667073  Agent:

1. **The Guildford Residents’ Association’s Objections and Concerns Which I Share**

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the **housing supply** figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

   3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill  
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247  
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3  
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing  
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.  
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments  
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.  

Problems with the West Clandon section of the A247  

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:  

1. The junction with the current A3 south-bound slip road (modifications are underway)  
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph  
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.  
4. The sight lines for the exit of the Onslow Arms car park  
5. The narrowness of the road near Summers  
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement  
7. The sharp bend near Clandon Regis  
8. The narrowness of the road at the Bull’s Head  
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school  
10. The sharp bend with poor sight lines in either direction at the church  
11. No continuous footpath through the length of the village  
12. The speed of traffic  
13. The classification as an A-road without it having the capability of an A-road.  

Housing Number and the Green Belt  

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.  

The Council has long argued that much of the housing required must be built on such sites.  

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.  

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.
Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

In conclusion I would point out that the Inspector raised a considerable number of questions about the sustainability, viability and reasoning of Guildford Borough Council’s Local Plan and, despite modifications, these questions have not been addressed adequately in the modifications proposed by the Council in this consultation.

The Plan is unsound and should be re-examined.

**Comment:** MM2 - LPMM18/1176  **Respondent:** Margaret Bruton 10683457  **Agent:**

I would like to register my opposition to the latest modifications of the Guildford Local Plan which are relevant to Send

The Office of National Statistics’ prediction is that there is a decrease in the previously anticipated number of houses needed in Guildford and this has important consequences for the proposed developments in Send. The Local Plan modification will enable increase in housing in Send over and above those in the original Local Plan proposal. These new ONS figures make it unnecessary to plan in extra housing in Send.

I specifically object to development at the site at Alderton’s Farm (MM44). And is a valuable green area which is an important part of the rural character of the village of Send and housing here would destroy this important area. In addition houses on this site would lead to further congestion at busy times of day at either end of Send Marsh Rd (B368) where it either joins the Portsmouth Rd (B2215) or the already congested A247 at May’s Corner.

I further object to the modifications as I think they will cause a dangerous increase in traffic. Neither the Alderton’s Farm site (MM44) and Garlick’s Arch (MM41) have good public transport or cycle paths and the pavements along Send Marsh Rd are very narrow so there would be an inevitable increase in the number of car journey’s to and from these sites

Send school is on the A247 and there are already safety concerns about parking and children crossing the road so extra traffic would increase this danger

Furthermore these additional houses would put extra pressure on the already busy medical centre and the school which is a new build and is already full.

I also object to the allocation of industrial premises Burnt Common.

To exit this site it is necessary to go South along the Old London Rd (B2215) and the to turn right along a narrow strip then right again onto the north bound slip road of the A3. This is presently very dangerous as traffic leaving the A3 have very little time to see and slow down for lorries leaving the distribution centre and crossing on to the north bound A3 slip road. Extending the site would make this an even more dangerous hazard.

**Comment:** MM2 - LPMM18/5002  **Respondent:** Ben Gamble 10701537  **Agent:**

The Strategic Housing Market Assessment (SHMA) is of great concern. Why should the borough take the unmet need of Woking Borough Council (630 homes) – MM2 4.1.9aa. The recent publication of updated household projections by the Office for National Statistics showed significantly reduced figures. It could be calculated that the household
projections for Guildford would suggest a household growth (and hence a housing need) that is significantly lower than that suggested using the 2014 projections. The recalculation will also apply to Woking Borough Council and eliminate the need for GBC to take up any shortfall within Woking Borough. Considering GBC & Woking Borough Council updated predictions, GBC must recalculate the SHMA to reflect the lower projections.

**Housing Number and the Green Belt**

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. **The Guildford Residents’ Association’s Objections and Concerns Which I Share**

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

**Comment:** MM2 - LPMM18/1986  **Respondent:** Julian Spooner 10708577  **Agent:**

Please note my concerns…

* MM2 - current housing figures in the plan are grossly exaggerated and need revising; if Woking has a genuine housing need, surely it can only be met in Woking.

**Attached documents:**
POLICY S2

I object that the figure for Guildford Borough housing need used by the Inspector was 789 per annum. This has been discredited as shown to be a high over-estimate and therefore is an unreliable and irrelevant basis on which to plan housing for the area.

I object that GBC is using failing to acknowledge and amend their discredited figure of 789 per annum when Barton Willmore – a respected consultancy – has said that the correct figure should be 431[1].

I object that GBC is not considering relevant data when proposing housing need and this will impact on and encourage excessive development in Send and destroy our village and its character.

I object that GBC is proposing to amend its housing need by considering September data from the OFFICE FOR NATIONAL STATISTICS which suggests that appropriate growth for Guildford Borough can be achieved with 460 houses a year.

I object that GBC fails to take into account publicly available data which proposes a much lower number of housing need for our borough and village and - in opposition to the sustained and numerous objections from residents - instead proposes numbers and developments which would please only house builders and developers.

At the Public Examination the figure for Guildford Borough housing need being used by the Inspector was 789 per year. Since then a respected consultancy, Barton Willmore, has said that the correct figure should be 431. September data from the Office for National Statistics, which does population forecasts, suggests that appropriate growth in Guildford Borough can be achieved with 460 houses a year. Both these totals are hugely less than the total assumed by the Inspector. This could make a massive difference to developments in Send.

Attached documents:

Local Plan: Strategy and Sites - Main Modifications

I write this letter in the hope that it will actually be read and considered rather than simply counted and completely ignored like so many thousands of previously lodged objections. The purpose of a public consultation is to listen to the public and take their views into consideration. It is anti-democratic to just pay lip service to such an exercise – we deserve to be listened to.

POLICY S2

I object that the housing needs that the plan is based on are vastly overstated. The September data from the Office for National Statistics suggests that 460 houses a year is appropriate to meet the population growth for Guildford Borough. Respected consultancy, Barton Willmore, suggest that an even lower figure of 431 houses a year is enough. Yet the latest plan is based on an excessive figure of 789 houses a year. Where did this figure come from? Its detailed origins are shrouded in mystery.

Attached documents:
Comment: MM2 - LPMM18/989  Respondent: Stephen Niblett 10721537  Agent:

I would request that you supply details that show you are being fair to all village councils in the Guildford Borough in a form that shows existing number of houses in that area and the number of new applications (as a total number of houses) and express this as a percentage this would show that the GBC are being fair across the whole county or NOT as the case will show.

Also at the Public Examination the figure for Guildford Borough housing need being used by the Inspector was 789 per year.

Since then a respected consultancy, Barton Willmore, has said that the correct figure should be 431.

September data from the Office for National Statistics, which does population forecasts, suggests that appropriate growth in Guildford Borough can be achieved with 460 houses a year.

Both these totals are hugely less than the total assumed by the Inspector.

Perhaps someone at the Council would like to explain to me why we have such a massive difference to developments in Send.

I am referring to POLICY S2. so a reply would be appreciated

A very concerned resident

Attached documents:

Comment: MM2 - LPMM18/5809  Respondent: K. Croxford 10729185  Agent:

The Local Plan attempts to address the issue of transport, but is inaccurate in several places (eg ‘on most local roads in urban areas and in villages, there is at least one footway, usually two’)

Other than the main routes out of the village (which are already under pressure), most roads are in fact lanes, often with no footways at all (eg Polesden Lane, parts of Vicarage Lane & Potters Lane)

Many other routes are lanes which cannot accommodate free-moving two-way traffic (Newark Lane, Burnt Common Lane, Rose Lane, Send Hill, Woodhill, Potters Lane, Church Lane, Vicarage Lane)

The existing bends around Potters Lane / Send Hill are already treacherous, with several blind corners and narrow apertures – these need attention already, not more traffic volume!

Overall, any further developments will create significant traffic, pollution, delays and backlogs, putting more pressure on people using ‘back roads’ (ie lanes) and clogging up the villages

The modifications are simply too much for the villages of Send and Burnt common, that already suffer from increased traffic and congestion / pollution

Send has already taken on many developments (Skene Close, Vision Engineering, re-building Send school, Tannery Lane, Woodhill) as part of gentle but considered ‘in-filling’

ONS reports show that the actual levels of housing needs have been grossly over-estimated by the Council in its Local Plan. Send residents have repeatedly been voicing their concerns in previous feedback, but these have been largely ignored
It is not appropriate to try to ‘absorb’ unused housing capacity needs from Woking

Noise levels are already uncomfortable, and it has been reported that nitrogen dioxide levels are rising.

A loss of more countryside/Green Belt/nature/openness would exacerbate this

Abandoning the new A3 slip-road (policy A43a) would save a great deal of money which could be better spent on other services for existing residents, who already pay substantial levels of Council Tax (such measures could include traffic-calming, road repairs and noise reduction)

Local residents and Parish Councils feel they are now being ‘punished’ for simply voicing their concerns over the years – concerns which ONS and other boroughs seem to be taking heed of – except, it would seem, Guildford Borough Council

Comment: MM2 - LPMM18/6069  Respondent: Julia Osborn 10729537  Agent:

Way Ahead

I strongly reiterate the point I made at the Examination that at the very least a cap needs to be inserted on the overall amount of development in each village. Moreover, to ensure sustainable development in accordance with para 17 of the NPPF this should be a percentage that is proportionate to the size of the existing settlement.

Attached documents:

---

Comment: MM2 - LPMM18/1470  Respondent: Leslie Bowerman 10732193  Agent:

6) Objection re the over-all effect which the Modifications bring to other developments in Send.

What I have described as the ‘punitive’ Modifications above, combined with the figures already incorporated into the Plan (ie 40 houses and a travellers’ site on Send Hill, 60 houses at Clockbarn in Tannery Lane and the 25% increase in the Send Business Centre), plus the new Marina being constructed off Tannery Lane, does mean that such a heavy concentration of development in one village rather than with 40 villages, is way beyond reasonable and does appear to be designed to a) punish Send for making so many objections rather than taking the objections into account which is supposed to be what happens, or b) change Send beyond all recognition so that other villages do not have to be much altered. Either way this is wrong and a travesty of justice.

7) Further objections on the now highlighted fact that estimates in the Plan for future housing needs were incorrect.

I object to all the MMs and previous calculations where Guildford Borough housing needs were said to be 789 a year. The basis on which this figure was arrived at was never published and it has recently transpired that it was grossly exaggerated as was previously strongly suspected. A respected consultancy, Barton Willmore, has very recently said that the correct figure should be 431. September data from the Office for National Statistics, which does population forecasts, suggests that appropriate growth in Guildford Borough can be achieved with 460 houses a year. Both of these recent figures are greatly less than the total used by the Inspector. If these, apparently more reliable, figures are used it would make a huge difference to developments in Send. The bulk of the reduction should be applied to Send and its surrounding since that village was disproportionally penalised in the first place.

Attached documents:
Comment: MM2 - LPMM18/4724  Respondent: Debbie Leane 10742753  Agent:

I am writing regarding Guildford Borough Council’s latest modifications to the Local Plan. As a resident of Send village for many years, I strongly object to these modifications to our local area. It is very clear that once again Guildford Borough Council has failed to listen to its local residents and properly plan for an increase in the demand for more housing. It has once again disproportionally focussed the entire burden on our village.

I would also like to object again to the 40 houses and travellers site on Send Hill; the 60 houses at Clock barn in Tannery Lane and the 25% increase in size of the Send Business Centre. Added to the other housing sites and industrial sites all concentrating around one village how can any of this be deemed as a reasonable proposal.

Attached documents:

Comment: MM2 - LPMM18/3995  Respondent: John Herbert 10756033  Agent:

Dear Sir/Madam

Ref: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments:

A. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.

B. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:

   1. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
   2. There is too much reliance on A3 improvements and these are beyond the council’s control
   3. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
   4. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

C. I would like the Inspector to RE-EXAMINE the Local Plan because:

   1. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
   2. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

D. The Clandon Society Objections and Concerns Which I Share

The A247
I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247.

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247
The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

**Housing Number and the Green Belt**

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

**E. The Guildford Residents’ Association’s Objections and Concerns Which I Share**

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the **housing supply** figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.
As a long-time resident of Send, I object strongly to the Local Plan's threat to utterly over-develop our village and to negate its Green Belt protection. Adding 770 houses to a current village of 1700 houses is a massive over-development and cannot possibly be justified.

**POLICY S2**

The Office for National Statistics data from September suggests that appropriate growth in Guildford Borough can be achieved with 460 houses each year. This is a much lower figure than that in the Planning Inspector's Report and shows that throughout this whole process the housing need has been greatly exaggerated.

**1. NUMBER OF HOUSES (MM2)**

I object to the planned 12,600 new houses. The recent ONS household forecast has reduced by 6,635 (40%) since the previous forecast, and this needs to be reflected in the Plan. This reduction in households is roughly equivalent to two strategic sites plus all five of the new sites that were included after the Local Plan Examination in Public, and cannot be ignored. The Plan should be updated and resubmitted to the Planning Inspector. When the plan is updated due consideration should also be taken to the negative impact on housing needs in Guildford Borough caused by Brexit including a likely direct reduction in City of London employmen by some 100 000 and associated indirect job loses.

**Relating to all of the above proposals:** At the Public Examination the figure for Guildford Borough housing need being used by the Inspector was 789 per year. Since then a respected consultancy, Barton Willmore, has said that the correct figure should be 431. September data from the Office for National Statistics, which does population forecasts, suggests that appropriate growth in Guildford Borough can be achieved with 460 houses a year.
Having previously written to you about the original destructive plans drawn up to swamp Send under acres of concrete, desecrate the open green belt, overwhelm local roads, schools and medical facilities, it seems we must all object once again to the increased developments planned for this small village. There seems no point in quoting the MM reference numbers one by one as the entire plan to wipe out Send Village is completely and viciously aimed at creating as much mayhem in a relatively peaceful country village as it is possible to do.

Whilst everyone is aware of the need for affordable housing, building hundreds of homes under MM41 and MM44 in the area simply can't be coped with locally, and 14,800 square metres of industrial units/storage at Burnt Common MM42, is a crazy way to go about adding to the existing industrial units. There are much better ways of steadily introducing extra housing and industrial units into an area without causing a huge upheaval of clogged roads, infrastructure collapse, schools and medical units overcrowding - but this latest set of proposals seem to have totally ignored any idea of being sensible and working with the community to get the best possible options agreed. Send has just been the object of a complete planning overrule, by the look of the so-called plans, by sticking pins into a map on any piece of green land available.

When two schools merged in Send Village, the car parking was not even thought about, leaving hundreds of cars parked at angles all round the school entrance four times a day as parents jostle for somewhere to park their cars. One-car wide lanes are constantly seeing cars causing traffic jams, let alone the Medical Centre being used as a car park. Ripley School has been closed, so where does the planning committee think the increased number of children coming into the area are going to receive schooling? And how will the Medical Centre cope with thousands more patients? The answer is, of course, that it cannot be expected to. Planners just see the increase in revenue from building as much as possible on available land - Send has obviously come under the cosh simply because it is a small village surrounded by fields - the greed of Guildford Borough Council in putting forward these appalling plans is plain to see, despite the death of a small country village where people come to live for some peace and quiet in a rural atmosphere.

[Response has been redacted due to statements being considered contrary to the Council’s duty under the Equalities Act 2010 to eliminate discrimination, harassment, victimisation against persons with a protected characteristic; and to foster good relations between persons with a protected characteristic and persons who do not share it]. Guildford Borough Council seem not to care a jot that these devastating plans will totally ruin a small Surrey village not too far outside of the county town. It seems that Send must be the target of the planners who decide where buildings will go whether or not it destroys people's living. As part of Send is not on mains drainage, another health issue comes to the fore, possibly also overlooked.

Five houses are currently newly-built and for sale within half a mile of our home - logistics and travel in the lanes can be dealt with on smaller numbers. The Guildford Borough Council plans are appalling for Send, there is no way the village can survive if they go ahead. We object in the strongest terms to the desecration of Send Village, to every one of the MM articles aimed at wiping out Send Village, and sincerely hope that Guildford Borough Council realise that their plans to overrun this small village, where we have lived for 22 years, are totally and utterly unacceptable to the people who live in Send.

Comment: MM2 - LPMM18/5451  Respondent: Murray Dudgeon 10782689  Agent:  

Ref: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments:

1. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.

2. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:
2. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
3. There is too much reliance on A3 improvements and these are beyond the council’s control
4. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
5. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

1. **I would like the Inspector to RE-EXAMINE the Local Plan because:**
2. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
3. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. **The Clandon Society Objections and Concerns Which I Share**

**The A247**

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1 million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1 million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

**I believe that traffic will increase significantly because:**

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247.

6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3.

7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing.

8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.

9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments.

10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

**Problems with the West Clandon section of the A247**

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

**Housing Number and the Green Belt**

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.
Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. The Guildford Residents’ Association’s Objections and Concerns Which I Share

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

Attached documents:

Comment: MM2 - LPMM18/1781  Respondent: Neal Basson 10799169  Agent:

The current version of the Plan has increased the number of houses from 12,426 to 12,600.

On 20th September the Office of National Statistics (ONS) released new household growth projections for Guildford for the Plan period. The new figures reduced the projected growth in households from 11,142 (that applied to the previous version of the Plan) to 6,635; a reduction of 4,507 households (40.5% reduction). This change was no surprise; in May 2018 ONS had already released their population projections that clearly foreshadowed a substantial drop in the household projection.

Due to these very large discrepancies between the Plan and the up-to-date ONS household data, the Public Examination of the Plan by the Planning Inspector must be re-opened.

Comment: MM2 - LPMM18/5490  Respondent: Guildford Greenbelt Group (Susan Parker) 10799425  Agent:

Main modifications to Guildford Local Plan.

We understand that a main modification may only be made if the plan as submitted is unsound. Modifications should only be required to make it sound.

MM2 Spatial development strategy and housing numbers
This is fundamental to the whole plan, and sufficiently important that we consider the housing requirements render the whole plan unsound.

The housing requirement should be calculated from the starting point of the latest, September 2018, ONS projections rather than the projections released earlier in 2018. These indicate a projected population increase of 301 dwellings per annum. Given the environmental constraints in this area, we consider that the OAN target should therefore, in our opinion, be set at a figure in the region of 301 dwellings per annum, ie the same as the ONS perception of need, and this totals 5728 over the plan period.

As set out in MM2:
- Commitments (permissions/completions) total 3675
- LAA sites not allocated total 620
- Windfall sites total 750

This aggregates to a total of commitments, LAA sites and windfalls of 5045.

Assuming that the target is set at (say) 6000 (rounding up to the nearest thousand), we consider that the uplift of 955 can be met within the urban area on existing brownfield sites. Spacial distribution of proposed allocations to urban areas is already set at 863 for Guildford Town centre and 1443 for urban areas. Even this would seem to be theoretical oversupply, but it certainly makes it clear that there are no exceptional circumstances for release of Green Belt.

This reduces the case for Green Belt releases in the local plan even if a slightly higher number is adopted. No exceptional circumstances have been demonstrated to support release of any of the Green Belt (or indeed countryside) sites, especially since (per new policy S3) it is clear that the brownfield land within the urban area should be used as a matter of priority.

We cannot see that these numbers demonstrate any form of justification for the release of any new Green Belt or rural sites.

We note that the Inspector has sought the Council’s views on those ONS figures (ID/10), but given their significance ought to be asking the examination participants more generally for their views.

We also consider the retail requirements are unrealistically high, in particular for comparison shopping. More urban land is therefore available for housing development. The housing numbers proposed for the town centre of 863 are considerably below what the town centre is able to accommodate. By increasing pressure on the Green Belt the plan is unsound as not being consistent with national policy. The Town Centre housing figures should be increased to a minimum of 955 (assuming that the total target of 6000 is accepted) and policies put in place to manage that growth.

Attached documents:

Comment: MM2 - LPM18/5415  Respondent: Roger Harrison 10802177  Agent:

1. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.

1. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:
   2. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
   3. There is too much reliance on A3 improvements and these are beyond the council’s control
   4. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
   5. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.
1. **I would like the Inspector to RE-EXAMINE the Local Plan because:**
2. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
3. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

### The Clandon Society Objections and Concerns Which I Share

**The A247**

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

**I believe that traffic will increase significantly because:**

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing.

8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.

9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments.

10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

**Problems with the West Clandon section of the A247**

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

**Housing Number and the Green Belt**

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. **The Guildford Residents’ Association’s Objections and Concerns Which I Share**
MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

Attached documents:

Comment: MM2 - LPMM18/2463  Respondent: Lorraine Elliott 10803105  Agent:

I wish to object to the above on the following grounds:

• ONS data and therefore planning assumptions for housing has changed radically since the plan was first created. The plan now needs to be revised in line with the correct planning assumptions. Not to do this would be egregious and would easily be challenged. Make the plan on the best information available not the worst.

• Inclusion of Three Farms Meadows in plan. The SOS has made it perfectly clear that this is an unsuitable site for development. This is principally because it is in a totally unsustainable location with very poor transport links, and the adverse affect on the AONB, the local community, and all the other reasons that he gave in his judgment. So why is it still included? Please remove it and find somewhere more suitable to meet the local housing need. The fact that it has not already been removed is somewhat suspicious. Other sites have now been added so Three Farms Meadows can now be removed.

Attached documents:

Comment: MM2 - LPMM18/689  Respondent: Steve Green 10803361  Agent:

MM27, MM41, MM42 and MM48 Transport Strategy

• There has been no adequate assessment by GBC of the impact of this transport strategy on congestion, noise pollution and air pollution as thousands more cars head to Woking each day. There is the possibility of gridlock

Other developments

• The travellers’ site on Send Hill will exacerbate all the problems mentioned above and make the overall impact on Send significantly detrimental to all those living in this part of the world.
I would be most grateful if you could take into consideration all my views listed above. Many thanks.

**Attached documents:**

**Comment:** MM2 - LPMM18/3362  **Respondent:** Jean Bruton 10805793  **Agent:**

I maintain my objections to the Guildford Local Plan although I was not informed of this consultation. It seems likely therefore that many other objectors have not been informed of this consultation.

I agree with the representations made by the Wisley Action Group and believe the decisions regarding the unsuitability of this site for development and housing made by the Inspector and by the Secretary of State should be respected.

I support representations made by the Guildford Green Belt Group and by the Wisley Action Group.

MM2 the housing calculation is based on out of date figures.

Woking's unmet need is not Guildford's responsibility.

Guildford Borough Council should focus on development in the town centre, urban areas and brownfield land BEFORE development in villages and Green Belt.

**Attached documents:**

**Comment:** MM2 - LPMM18/550  **Respondent:** Bernard Corrigan 10805889  **Agent:**

MM2

I object to the doubling of space allotted to industry and storage. This is Green Belt land.

There is unused space at Slyfield industrial estate which can be utilised.

**Attached documents:**

**Comment:** MM2 - LPMM18/2593  **Respondent:** David Brandon 10808833  **Agent:**

I object to various parts of the Main Modifications of the local plan and have my objections placed on record.

MM2. The housing figures are no longer up-to-date. Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year is out of step with the latest ONS figures and the Government's standard method. 630 homes is based on inappropriate assumptions that inflate the figure. Further, it is inappropriate to expect Guildford to sacrifice important and valuable Green Belt land to provide homes for Woking when Guildford is more constrained.

**Attached documents:**
I would like you to note my following comments:

1. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.

1. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:
   2. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
   3. There is too much reliance on A3 improvements and these are beyond the council’s control
   4. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
   5. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

<td>I object to the revised local plan on the following grounds. It has increased from 400 to 550 homes an increase of 37% to be built in Send. The revised forecast for Guildford has been reduced by 45% by the office of National Statistics. I am also lead to believe the inspector visited Send at the end of August during a holiday period when the schools were on holiday as were many residents, therefore he did not witness the congestion on the roads that exist between the hours of to 9.30 am and 5 to 6.30 pm. It is imperative that a highways report and feasibility study is made and published before any further development is permitted. Send and Ripley are already at saturation point traffic wise. Another problem is the strain on existing schools and medical services which are at full capacity now.</td>

POLICY S2

BARTON WILLMORE CONSULTANTS have concluded that the correct housing number for Guildford Borough is in fact 431 - not 789 as proposed!

OTHER DEVELOPMENTS

OBJECTIONS: The total amount of development proposed is quite extraordinary and unreasonable and we cannot understand why Send and Send Marsh are being targeted in this way.

Attached documents:

Comment: MM2 - LPMM18/1186  Respondent: Marion Gooding 10820385  Agent:

Table S2b out of date and MM3 inadequate and in need of re-examination.

I would like to ask the Inspector to re-open the examination and amend the Local Plan to take account of the latest ONS housing figures.

As I understand it there has been a great deal of work carried out to look into the needs of housing in the future for Guildford. The recent passing of housing planning where the inspector said it was possible to build even more housing than previously submitted appears to be at odds with a report by the ONS that says entirely the opposite. It appears that the population growth previously expected upon which the housing needs were based was entirely incorrect. I therefore would request that the Blackwell Farm development is looked at again. It appears new figures show that only 360 homes a year are required rather than the 672 previously thought to be needed. This makes table S2b out of date and MM3 inadequate and in need of re-examination and means that the extensive loss of green belt land is unjustified.

As previously stated in my objection, I would like the Inspector to take another look at the Blackwell Farm site so that he can reconsider, with the aid of the new figures of 360, the loss of a greenbelt, the fact that congestion is already very bad at this particular part of Guildford and environmental concerns over pollution should mean that rather than develop this site, a greater and more importantly, a more useful area that could be considered is in the town centre where there are significant shortages of housing.

Attached documents:

Comment: MM2 - LPMM18/977  Respondent: Karen Dougherty 10822913  Agent:

Policy S2

At the Public Examination the figure for Guildford Borough housing need being used by the Inspector was 789 per year. Since then a respected consultancy, Barton Willmore, has said that the correct figure should be 431. September data from the Office for National Statistics, which does population forecasts, suggests that appropriate growth in Guildford Borough can be achieved with 460 houses a year. Both these totals are hugely less than the total assumed by the Inspector.

Attached documents:
Comment: MM2 - LPMM18/1879  Respondent: Geraldine Leiper 10829889  Agent: 

Dear Sirs,

I write to strongly object to the GBC new local plan.

The examination in public needs to be re-opened so the latest office of National Statistics can be used.

I wholly support the representation made by WAG.

How on earth do GBC think they can over rule the S.O.S who stated, quite clearly, that NO BUILDING would be allowed on 3 Farm Meadows.

Attached documents:

Comment: MM2 - LPMM18/878  Respondent: Mrs Julia Ellis 10834625  Agent: 

MM2 – the very recent data from the Office of National Statistics on projected household formation show significant change and provide a clear indication that the Guildford housing requirement should be lowered. I suggest that the Inspector must re-open the Examination of the Local Plan in public to examine this new data and take further advice from the experts.

MM2 – in view of the many critical comments about the required provision of new homes to meet Woking’s unmet need and since we in Guildford are experiencing exactly the same Green Belt constraints as Woking, it is argued that the figure of 42 new homes per year to meet Woking’s unmet need should be significantly reduced, and, if possible, eliminated completely. This view is reinforced by the further observation that Woking’s unmet need is itself likely/undoubtedly overstated following their latest ONS household formation data reduction.

Comment: MM2 - LPMM18/2694  Respondent: Jacky Fenton 10839009  Agent: 

Policy S2

At the Public Examination the figure for Guildford Borough housing need being used by the Inspector was 789 per year. Since then a consultancy, Barton Willmore, has said that the correct figure should be 431. September data from the Office for National Statistics, which does population forecasts, suggests that appropriate growth in Guildford Borough can be achieved with 460 houses a year.

I hope you take my objections into account when making your final decisions.

Attached documents:

Comment: MM2 - LPMM18/2284  Respondent: John Pyne 10840641  Agent: 

258 of 2575
POLICY S2

- I object to the way GBC uses the word 'need' in place of 'demand' when promoting house building requirements in this area.
- I object that the figure for Guildford Borough housing need used by the Inspector was 789 per annum. This has been discredited as shown to be a high over-estimate and therefore is an unreliable and irrelevant basis on which to plan housing for the area.
- I object that GBC is using failing to acknowledge and amend their discredited figure of 789 per annum when Barton Willmore - a respected consultancy - has said that the correct figure should be 431.
- I object that GBC is not considering relevant data when proposing housing need and this will impact on and encourage excessive development in Send and destroy our village and its character.
- I object that GBC fails to take into account publicly available data which proposes a much lower number of housing need for our borough and village and - in the face of sustained and numerous objections from residents - instead proposes numbers and developments which would only meet the needs of housebuilders and developers.

Attached documents:

---

Comment: MM2 - LPMM18/2571  Respondent: John Wright 10844929  Agent:  

I wish to make comment on Policy S2

At the Public Examination the figure for Guildford Borough housing need being used by the Inspector was 789 per year.

After this Barton Willmore, Consultancy, has found that the correct figure should be 431. Following on from this, September data from the Office for National Statistics, which carries out population forecasts, suggests that appropriate growth in Guildford Borough can be achieved with 460 houses a year.

It seems that the Local Plan is inaccurate.

Conclusion:

It appears that GBC are desperately and naively clutching at straws to find what they think are suitable sites to include in the Local Plan, instead of carefully identifying already suitable Brownfield sites. GBC need to realise how important the Green Belt is, and stop treating it as a free space to indiscriminately destroy for generations to come.

Please explain why thousands of previous objections are ‘not relevant’ this time round? How difficult can it be for GBC to listen to the people who know the area best - the residents? The whole process of this Local Plan has been a farce. I suggest GBC take note of local residents concerns and objections before the implications are borne out at the next council election.

I am not completely against development, but I oppose development without thought and consideration for the basics, and which will be detrimental for the area.

Comment: MM2 - LPMM18/3328  Respondent: Frank Drennan 10846625  Agent:  

POLICY S2

259 of 2575
I object that the figure for Guildford Borough housing need used by the Inspector was 789 per annum. This has been discredited as shown to be a high over-estimate and therefore is an unreliable and irrelevant basis on which to plan housing for the area.

I object that GBC is using failing to acknowledge and amend their discredited figure of 789 per annum when Barton Willmore – a respected consultancy – has said that the correct figure should be 4311.

I object that GBC is not considering relevant data when proposing housing need and this will impact on and encourage excessive development in Send and destroy our village and its character.

I object that GBC is proposing to amend its housing need by considering September data from the OFFICE FOR NATIONAL STATISTICS which suggests that appropriate growth for Guildford Borough can be achieved with 460 houses a year.

I object that GBC fails to take into account publicly available data which proposes a much lower number of housing need for our borough and village and - in opposition to the sustained and numerous objections from residents - instead proposes numbers and developments which would please only house builders and developers.

footnote:
1. At the Public Examination the figure for Guildford Borough housing need being used by the Inspector was 789 per year. Since then a respected consultancy, Barton Willmore, has said that the correct figure should be 431. September data from the Office for National Statistics, which does population forecasts, suggests that appropriate growth in Guildford Borough can be achieved with 460 houses a year. Both these totals are hugely less than the total assumed by the Inspector. This could make a massive difference to developments in Send.

Attached documents:

**Comment:** MM2 - LPMM18/4569  **Respondent:** Amanda McDougall 10850625  **Agent:**

The Local Plan is unsound because:

1. It lacks simple guidelines for mass and scale to protect Guildford from further inappropriate developments of an excessive height such as the Solum station development. It is unacceptable to allow such a lacuna in protection whilst awaiting adoption of a Development Management DPD in several years’ time.

3. The Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited.

4. Housing numbers should reflect the latest ONS figures and projections; these are lower than the previous figures which the Council is using.

Attached documents:

**Comment:** MM2 - LPMM18/1522  **Respondent:** Andrea Wright 10851425  **Agent:**

I wish to make the following comments and reservations about the local plan, especially in relation to MM2:
1) I am very disappointed that the Council has not fully exploited the opportunities within the town centre and other brownfield sites before turning its development thoughts to our precious green belt. Developers will always jump at the chance to develop green belt but the Council seem to believe that they cannot guide where development takes place and therefore has to offer Green belt when there are so many brown field sites in the area.

2) The new developments proposed on the green belt rely heavily on significant improvement being made to the A3. Whilst there has been talk for some time about the A3 being improved nothing has happened and the Council has no control over these improvements. It would seem particularly short sighted to offer prime green belt land for sale when the infrastructure is not there to support it.

3) New housing projections released from the ONS show a significant reduction in the proposed number of new homes required for the Guildford area. The enquiry should be re-opened as a matter of urgency so that these new targets and their impact on the plan can be reassessed. Guildford has also been forced to pick up extra housing from Woking whose council appears to have decided not to build on their green belt - their housing target has also been reduced. We run the risk of losing our precious green belt to provide housing above and beyond what is actually required. Once it is gone it is gone. The new numbers must be taken into account and the plan adjusted to reflect this. NO BUILDING ON GREEN BELT unless absolutely no other opportunities are available. The enquiry MUST be re-opened to assess the impact of these new and significantly lower figures.

4) Building on green belt should only be done in exceptional circumstances. I do not believe that the plan meets these exceptional circumstances and all effort should be targeted at ensuring these areas are protected, and brownfield sites used first.

Attached documents:

Comment: MM2 - LPMM18/4780  Respondent: S Freeland 10852065  Agent:

I object to the building of more houses in Send. I have lived in the village all my life and have seen it built up enough already. You cannot cross the main road now. With more traffic it will be impossible. Schools and medical facilities are over stressed now.

Taking all the lovely greenbelt.

Attached documents:

Comment: MM2 - LPMM18/5170  Respondent: J O'Byrne 10855265  Agent:

1) I think it is imperative to implement the plan ASAP to be able to have control over our borough’s planning applications. Any plan is better than none in that regard and I believe as much care as possible has been taken to outline what the relevant needs are and what can be done against the relevant constraints.

2) In terms of the main conurbations proposed - i.e. Gosden Hill Farm, Wisley Airfield and the site running up to the A31? - I think concentration on one site at a time would be sensible so that the relevant infrastructures i.e. schools, shops, doctors can be put in and a community formed. The proposed distribution of building numbers across all sites would not allow that and I would be concerned the numbers of affordable (I prefer low cost) accommodation can be provided.

3) Sites are identified for possible self-build projects but I think there should be a commitment within the plan to support community led housing and the development of community land trusts. I think this is especially pertinent for additions to village boundaries. This allows for community involvement and perhaps then less objections. There are many positive
examples of this approach in the country - see Cambridge. Your own land, development company, ability to raise funds and ability to coordinate efforts can ensure low cost housing into perpetuity.

4) I would want to see the council use the developments as a vehicle for local resources, businesses and people. This is an opportunity for employment / apprenticeships and stimulating the local economy. I would like to see this kind of approach embedded in the plan.

Attached documents:

Comment: MM2 - LPMM18/1856  Respondent: Dr William Kyte OBE 10857889  Agent:

This modification is unsound as it is based on out of date and unsound data.

The latest ONS population projections for Guildford and the new standard OAN methodology have not been used which render the underlying basis of the plan unsound and mean that the Examination in Public should be reopened.

A report by Neil McDonald shows that 360 homes/year would meet both the need and cater for economic growth.

Attached documents:

Comment: MM2 - LPMM18/1605  Respondent: Angela Otterson 10858977  Agent:

I am writing to object to: MM41,MM42,MM44,MM9, MM27.

POLICY S2.

At the public examination the figure for Guildford B.C. housing need used by the inspector was 789 per year. This figure was obtained by G.B.C Consultants and was greatly exaggerated by including Surrey University Student figures. These Consultants and GBC refused to disclose how this figure was calculated.

The figure now published by a highly respected consultancy Barton Wilmore has said the correct figure is 431 houses per year.

The data from the Office of National Statistics, doing population forecasts says the appropriate growth in GBC can be achieved by 460 houses per year.

This latest data makes a mockery of G.B.C consultants figures which have always been very suspect.

I trust the Inspector and GBC will now drastically reduce the housing need to reflect the true figures, and particularly in our already very congested village of Send.

Attached documents:

Comment: MM2 - LPMM18/1917  Respondent: Neil Langridge 10862977  Agent:
I believe the Local Plan examination should be re-opened because the housing figures are no longer up to date. The methodology is outdated, and new research from the Office of National Statistics significantly reduces housing requirement for Guildford. This makes the plan fundamentally flawed, and will cause unnecessary green belt loss as well as a focus on over development.

Attached documents:

**Comment**: MM2 - LPMM18/3645  **Respondent**: Edwina Fassom 10865537  **Agent**:

Ref: Guildford Borough Council's Modified Local Plan consultation I would like you to note my following comments:

A. I fully endorse the responses of The Clandon Society, the Guildford Residents' Association and the Guildford Vision Group and would like their responses to be registered as mine as well.

B. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:
   1. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited. 2. There is too much reliance on A3 improvements and these are beyond the council's control. 3. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit. 4. The grounds for Green Belt development are inadequate and do not fulfill the criteria for 'exceptional circumstances'.

C. I would like the Inspector to RE-EXAMINE the Local Plan because:
   1. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt. 2. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high.

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

D. The Clandon Society Objections and Concerns Which I Share The A247 I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road. The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247.

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years' time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem...
viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1 million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:
1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic
2. The development of 550 houses at Garlick's Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 1800 houses at Gosden Hill
4. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247.
5. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
6. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing.
7. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for redistribution of traffic - presumably as part of the policy of directing traffic around Guildford.
8. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3.
9. The pressure caused by this re-distribution is in addition to any increase caused by new developments.
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247 The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:
1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council's proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull's Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt
The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt. The Council has long argued that much of the housing required must be built on such sites.
This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.
The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites. Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

E. The Guildford Residents' Association's Objections and Concerns Which I Share
MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes
table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonal has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government's standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking's need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

Attached documents:

**Comment:** MM2 - LPMM18/3086  **Respondent:** Mike Pinder 10866881  **Agent:**

I’m a resident of East Horsley – my address is [Response has been redacted due to statement containing personal data which cannot be disclosed due to the provisions of the General Data Protection Regulation 2018/Data Protection Act 2018]

I would like to object to the proposed local plan

1. Number of Houses (MM2) - Last month the ONS released new household growth projections for Guildford for the plan period which significantly reduce the expected growth in the number of households from 11,142 to 6,635. This is such a massive decrease in the projected number of houses that I cannot see any situation in which it could be argued that the previous projections should continue to be used. I object to more houses than are needed being built in this area. I am particularly incredulous that, even though GBC and the Inspector, Jonathan Bore, were both aware of the likely significant reduction in population projections, (as projections were released in May 2018 showing this), they continued with the housing numbers in the local plan and instead of reducing it, the Inspector chose to increase the number of houses required to take on Woking’s unmet need.

2. Re-opening the public examination (MM2) – due to the massive differences between the plan and the latest ONS data, the only course of action can be to re-open the public examination by the Planning Inspector, to take these changes into account and significantly reduce the number of houses in the GBC local plan.

Attached documents:

**Comment:** MM2 - LPMM18/4127  **Respondent:** Kristine Good 10866945  **Agent:**

Send is facing a total transformation over the next few years. It will be the end of the village as we know it today – four new housing developments, two traveller sites, a huge industrial/warehouse complex, an enlarged business centre, building on perimeter fields, two new A3 slip roads and an incalculable increase in traffic congestion. Clearly this is too much development for one village.

Attached documents:
The recently revised ONS statistics show a huge over 40% reduction in housing need for Guildford Borough as well as a huge reduction for housing needs in Guildford's neighbouring boroughs. Therefore the figures for Guildford need to be reviewed.

These figures would mean that GBC should not have to pick up any of Woking's shortfall.

If Woking's shortfall is because they want to maintain their greenbelt, why should Guildford have to build on its greenbelt to meet Woking's need?

Attached documents:

---

Before I begin I have to question whether you should be looking for sites for new homes when you have one and its yet to be developed.

The Vision engineering site was agreed to have a new building on the basis the old one was removed and houses built on the site. There appears to be absolutely no progress on that and GBC should be held to account for not protecting the village and ensuring developments are held to their agreements. Why look to have sites for new houses when you have the site and allowed development based upon the building of houses and you font even pursue it,

As to my objections on the developments now raised:

My initial objection is to : MM41,MM42,MM44,MM9, MM27.

POLICY S2.

The housing number predictions have been shown to be incorrect so this is all starting from a incorrect basis. The latest data makes a mockery of G.B.C consultants figures.

At the public examination the figure for Guildford.B.C. housing need used by the inspector was 789 per year. This figure was obtained by G.B.C Consultants and was greatly exaggerated by including Surrey University Student figures. These Consultants and GBC refused to disclose how this figure was calculated.

The figure now published by a highly respected consultancy Barton Wilmore has said the correct figure is 431 houses per year.

The data from the Office of National Statistics, doing population forecasts says the appropriate growth in GBC can be achieved by 460 houses per year.

I trust the Inspector and GBC will now drastically reduce the housing need to reflect the true figures, and particularly in our already very congested village of Send.

Attached documents:

Comment: MM2 - LPMM18/2893  Respondent: Bruce D Edwards 10878881  Agent:

I offer below my comments on the set of main modifications to the amended GBC Local Plan:

1. NUMBER OF HOUSES (MM2)

The current version of the Plan has increased the number of houses from 12,426 to 12,600. However, the ONS recently released the projected household growth figures which shows a 40.5% reduction to 6635 households or 4,507 less. This equates to, for example, the dwellings proposed at Wisley airfield (site A35, MM40) of 2,000 and Gosden Hill Farm (site A25, MM35) of 1,800 plus a further 707 at any of the various other targeted sites.

Consequently the increase seems totally unwarranted.

2. RE-OPENING THE PUBLIC EXAMINATION (MM2)

Due to the very large differences between the Plan and the current ONS household data, the Public examination of the Plan by the Planning Inspector must be re-opened.

4. POLICY P2- GREEN BELT (MM2)

This Policy has been redrafted, but takes absolutely no account of the large reduction in projected households referred to in 1. above.

66% of the proposed housing is planned to be built on land that currently lies within the Green Belt.

Thus it is completely unwarranted to consider that the exceptional circumstances necessary to amend Green Belt boundaries or the very special circumstances to justify any development in the Green Belt exist; they do not.

Attached documents:

Comment: MM2 - LPMM18/4562  Respondent: Chris Cotton 10880705  Agent:

- It appears that the council is not conforming to its own development hierarchy under which all potential uses of brownfield sites should be explored.
- I understand that the housing numbers used in the plan are not based on the most recent data from the ONS. Although forecasts are always subject to error it is nonetheless crucial to use the most up to date figures available. If this means that public hearings must be restarted then so be it, it is far better than making plans based on outdated forecasts.
Firstly, may I say that I am confused as to why the public examination figure for Guildford Borough Housing need is fixed at 789 per year, when the correct figure should be 431 per year.

To be seen as a transparent and open council, supporting the residents of the Borough, it is necessary to use correct and substantiated facts.

Unfortunately, the council action over the housing needs and plans has only demonstrated a lack of consideration or honesty by council members, and will result in a lack of confidence by the public at large.

7000 people having already written to voice concerns about the proposed development, the council now proposes increasing the original development plans, yet will not allow any concerns about the original plan-only the additional plans. Could someone please explain how this is democratic or acceptable?

I am writing to support WAAG's representation and objections by their legal adviser Mr. Richard Harwood Q.C.

The housing targets are incorrect and there are no exceptional circumstances to justify in any way development within the Green Belt. Development should be concentrated and permitted on brownfield sites within urban boundaries.

Ref: Guildford Borough Council's Modified Local Plan consultation I would like you to note the following comments:

1. I fully endorse the responses of The Clandon Society, the Guildford Residents' Association and the Guildford Vision Group and would like their responses to be registered as mine as well.

1. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:
2. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited. 2. There is too much reliance on A3 improvements and these are beyond the council's control. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit. 4. The grounds for Green Belt development are inadequate and do not fulfil the criteria for 'exceptional circumstances'.

1. I would like the Inspector to RE-EXAMINE the Local Plan because:
2. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and
increased commercial development on the Green Belt. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high.

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. The Clandon Society Objections and Concerns Which I Share

The A247 I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road. The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247.

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years' time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic. The development of 550 houses at Garlick's Arch (an addition of 150) with the main entrance/exit on the A247.

3. The development of 120 houses (new site) at Alderton's Farm, Send Marsh.

4. The development of 1800 houses at Gosden Hill.

5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247. The conversion of the Burnt Common roundabout to an all-ways junction with the A3 7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing 8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford. 9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments. 10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.
Problems with the West Clandon section of the A247 The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway) 2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph 3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council's proposal to build a 1,000 place school on the site behind the station.

2. The sight lines for the exit of the Onslow Arms car park 5. The narrowness of the road near Summers 6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement 7. The sharp bend near Clandon Regis 8. The narrowness of the road at the Bull's Head 9. The Clandon Junior School and the, in places, narrow footpath for children walking to school 10. The sharp bend with poor sight lines in either direction at the church 11. No continuous footpath through the length of the village 12. The speed of traffic 13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt. The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites. Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. The Guildford Residents' Association's Objections and Concerns Which I Share

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government's standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking's need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

MM9 Green Belt Policy

MM27-MM41-MM42-MM48 Transport Strategy

Other Developments

I strongly object to the above planning proposals, especially now as the Office of National Statistics confirm that this is far more developments than what is required.

The existing infrastructure will not be able to support the above developments. The roads are already gridlocked, insufficient hospitals, schools, doctor surgeries, transport and the list of these items just keep on growing.

Perhaps it is now time to consider new towns in other parts of the UK as this area of the South East is already at breaking point.

Attached documents:

Comment: MM2 - LPMM18/1414  Respondent: Joe Gervasio 10906145  Agent: 

Regarding Policy S2, the Inspector at the Public Examination of the Local Plan used the figure for Guildford Borough housing need as 789 per year. A respected consultancy, Barton Willmore, has said that the correct figure should be 431. Even the Government’s Office for National Statistics, which does population forecasts, suggests in this September’s figures that appropriate growth in Guildford Borough can be achieved with 460 houses a year. Both these totals are considerably less than the total guessed-at by the Inspector. Therefore the housing need in Send should be reduced.

Overall, the increases in provision proposed in modifications MM41, MM42, MM48, on top of the already onerous proposed over-development in the area, further imbalances the delivery of housing in the borough to the North. I object in the strongest possible terms to the punishment this area is proposed to receive.

Attached documents:

Comment: MM2 - LPMM18/3623  Respondent: Heather Thompson 10910753  Agent:

I wish to take this opportunity to object to the following modifications to the local plan. The result of including these modifications would have a devastating effect on the lives of the people who live in the villages of Send, Ripley and Ockham. As a local resident, born and brought up in the area, I am aware that development is necessary if our children are to be able to stay in the area. Destroying village and community life, as would happen if all of these plans go ahead, is not the answer.

I object to MM2 as the housing target is wrong. As a result, I ask that the hearing be reopened so that the latest ONS figures and household projections can be taken into account. In addition, there should be no requirement for Guildford to take Woking’s unmet need, particularly as this will require further green belt release. The council has not properly followed its spatial strategy, which requires that development takes place first in the town centre, the urban area and brownfield before moving to land in the villages or greenbelt. The addition of another 500 houses in Send (which will be car dependent) has a severe impact on Portsmouth Road Ripley which has not been properly considered.

Attached documents:
Comment: MM2 - LPMM18/3657  Respondent: Heather Thompson 10910753  Agent:

I should like to raise my objections to the proposed development of a number of sites in the village of Send. As you can see from the above, I am a resident of Ripley, but the lane in which I live is on the borders of the two villages and any development in Send will have a profound impact me and my family. In addition to this, I was born in Send and, therefore, feel that I have the right to air my views in the hope that some sanity may prevail.

Attached documents:

Comment: MM2 - LPMM18/3675  Respondent: Heather Thompson 10910753  Agent:

Although we are now only able to comment on the main modifications of the plan, it should be noted that the 100 houses proposed for Send Hill and Clockbarn, along with the 25% increase in the Send Business Centre. If this is added to the points covered above, it is clear that the heavy concentration of housing and industrial sights in Send will bring an end to the village and the the life of its inhabitants. Why the concentration in Send when the load could be shared more equably and more fairly with all of the other villages in the borough.

I believe that the local council has a duty of care to the communities they serve. We hope that these members have the best interests of their residents at heart. If this is the case, the objections above cannot be ignored.

Attached documents:

Comment: MM2 - LPMM18/1615  Respondent: Ray Partridge 10911297  Agent:

Expert advice indicates that Guildford's new home need is 360 in order to support ambitious economic growth. This is much less than the figure of 672 being used to support the widespread allocation of Green Belt to housing. This figure of 672 needs re-examining. My comments are below on amendment -

MM2 - the base figure of 630 plus 42 for Woking is out of step with ONS figures and the Government's standard model. It is based on incorrect assumptions, particularly with regard to student houses and low economic participation. These inflate the figures.

MM2 - it is wrong to ask Guildford to sacrifice Green Belt to provide homes for Woking. In any event the Woking need is also less than stated and should be re-examined.

Attached documents:

Comment: MM2 - LPMM18/3299  Respondent: Peter P. Earle 10911617  Agent:

WISLEY AIRFIELD PLANNING - OBJECTION

I am writing to object to the current proposal by GBC re the use of Wisley Airfield for housing. The following points need to be considered:
GENERAL

- **MM2** The housing target is wrong. The hearing should be reopened so that the latest ONS figures and household projections can be taken into account.
- **MM2** There should be no requirement for Guildford to take Woking’s unmet housing need, particularly as this will require further green belt release.
  - The council has not properly followed its spatial strategy which requires that development takes place first in the town centre, the urban area and brownfield before moving to land in the villages or greenbelt.

The addition of another 500 houses in Send (which will be car dependent) would have a severe detrimental impact on Portsmouth Road in Ripley which has not been properly considered.

Attached documents:

---

**Comment:** MM2 - LPMM18/5040  **Respondent:** Jacqui Stanford 10913217  **Agent:**

I would like to support the GVG’s initiative and thereby declare the Local Plan as unsound because:

1. The council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
2. There is too much reliance on A3 improvements and they are beyond the council’s control
3. The town centre policy, S3, is thus inadequate and also does not address the infrastructure deficit
4. Housing numbers should reflect the latest ONS figures and projections. The public hearings should be re-opened on this subject to allow re-examination
5. The grounds for green belt development are inadequate because of 1 and 3 and do not represent ‘exceptional circumstances’

It needs to be reviewed and the suggestions made by GVG taken seriously. They have the best intentions and ideas for Guildford moving forward - please re think the Local Plan, listen to them and try to implement their ideas.

Attached documents:

---

**Comment:** MM2 - LPMM18/1701  **Respondent:** Stuart Ray 10915713  **Agent:**

My First objections are to: MM41, MM42, MM44, MM9, MM27. 

POLICY S2.

At the public examination the figure for Guildford.B.C. housing need used by the inspector was 789 per year. This figure was obtained by G.B.C Consultants and was greatly exaggerated by including Surrey University Student figures. These Consultants and GBC refused to disclose how this figure was calculated. (This is illegal by law you have to show how you have arrived at such figgers... ... To this end Police involvement may be necessary as fraud my have taken place.)
The figure now published by a highly respected consultancy Barton Wilmore has said the correct figure is 431 houses per year.

The data from the Office of National Statistics, doing population forecasts says the appropriate growth in GBC can be achieved by 460 houses per year.

This latest data makes a mockery of G.B.C consultants figures which have always been very suspicious.

My expectation is that the Inspector and GBC will now drastically reduce the housing need to reflect the true figures, and particularly in our already very congested village of Send.

Attached documents:

---

**Comment:** MM2 - LPMM18/5288  **Respondent:** Angus MacDonald 10918657  **Agent:**

I object - on the following grounds:

The council has not properly followed its spatial strategy which requires that development takes place first in the town centre, the urban area and brownfield before moving to land in the villages or greenbelt.

I have not been advised of the consultation

The examination in public should be reopened so that the latest Office of National Statistics can be used

I support the representation made by Wisley Airfield Action Group which was written with advice from Richard Harwood QC

Attached documents:

---

**Comment:** MM2 - LPMM18/578  **Respondent:** Sebastian Forbes 10920865  **Agent:**

1. d) Have you responded to the view of the Employment Land Needs Assessment (showing a reduction in demand)?

Attached documents:

---

**Comment:** MM2 - LPMM18/3595  **Respondent:** Arthur Thomas 10922017  **Agent:**

My objections are made in the knowledge of other development in Send eg 40 houses at Send Hill, 60 houses at Clockbarn and a 25% increase in Send Business Park for which we cannot now object to. It does appear to me that Send has been particularly burdened with over-development, more so than any other Village. The increase in people and traffic will give rise to congestion, pollution, inadequate schools and medical facilities, etc, and will be detriment to all who live here and for future generations.

Attached documents:
Representations on the main modifications published in September 2018

I begin by saying that I agree with everything written by Ockham Parish Council and Wisley Action Group. I also point out that I OBJECT to the modifications and my reasons are presented below.

I wish to point out that a general difficulty with the modifications is that no justification is put forward as to why the modification has to be made. A **main modification** may only be made if the **plan as submitted** is unsound and the modification is required to make it sound. It is not apparent why most of the modifications might be thought to be required to address a soundness failure, let alone to evaluate whether they are.

**MM2**

The housing requirement should be calculated from the starting point of the latest, September 2018, ONS projections rather than the projections released earlier in 2018. These reduce the net increase in households on those projections from 420 per annum to 325 per annum.

The housing requirement figures should therefore be adjusted downwards.

This reduces the case for Green Belt releases and there are not the exceptional circumstances which are necessary to support all of the sites. Fewer Green Belt sites ought therefore to be released, with the **unsustainable site of Former Wisley Airfield/Three Farm Meadows (FWA/TFM) the first to go**.

We note that the Inspector has sought the Council's views on those ONS figures (1D/10), but given their significance ought to be asking the examination participants more generally for their views.

**MM2 - 4.1.11**

The revised housing trajectory projects the first homes coming from FWA/TFM in **2022/23**. However, the M25 Junction 10 works are said to need to be completed before any units can be occupied at the site. Given the delays to the Junction 10 project, the trajectory is unrealistically optimistic. The start date for commencement of works on J10/M25 roundabout has been pushed back to begin **late 2021** with a **completion date to be confirmed**!

Site A35 FWA/TFM is highly unlikely to make any contribution to the five year supply.

**Attached documents:**

---

**Policy S2**

I am astonished to understand that at the Public Examination the figure for Guildford Borough housing need being used by the inspector was 789 per year. It has now emerged that the correct figure should be 431 per year. This needs re-examining.

**Attached documents:**

---

**Comment:** MM2 - LPMM18/5620  **Respondent:** Peter Clifford 10939841  **Agent:**

---
The current draft of the Local Plan is unsound because:

1. The revised Housing Need figures mean that much proposed greenbelt development is no longer justified and the exceptional circumstances that are required as grounds to allow greenbelt development do not exist.
2. The Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited.
3. There is no policy dealing with urban areas beyond the town centre such as St Catherine's where we live.
4. It is unacceptable that Guildford should consider having to accommodate housing which Woking claims not to be able to provide.

Attached documents:

Comment: MM2 - LPMM18/5801  
Respondent: Peter Clifford 10939841  
Agent: 

There is too much reliance on A3 improvements and they are beyond the Council's control.

Housing numbers should reflect the latest ONS figures and projections. The Public Hearings should be re-opened on this subject to allow re-examination.

Attached documents:

Comment: MM2 - LPMM18/5845  
Respondent: VJA and BJ Underhill and Burgess 10940417  
Agent: 

We should like the Inspector to re-open the examination and amend the Local Plan to take account of the latest ONS housing figures.

The figures in MM2 are no longer up to date and do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

Also there is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table S2b out of date and MM3 inadequate and in need of re-examination.

The proposal to build on Blackwell Farm will remove valuable agricultural land when the country is trying to be more self-sufficient with its food supplies. Also there will be a huge increase in traffic on the A31 Hog’s Back where vehicles are stationary in the rush hours. The effects of emissions from vehicles polluting the air can be seen in clouds rolling down the north side of the Hog’s Back which is frequently affected by fog in the winter months.

Any development on Blackwell Farm will result in the removal of woodland which offsets pollution.

There will be an unsustainable increase in vehicles for the proposed properties and extension of The Surrey Research Park. It should be borne in mind planning requires an allowance of two vehicles per household.

Attached documents:

Comment: MM2 - LPMM18/3598  
Respondent: Alison Humberstone 10952161  
Agent: 

277 of 2575
Before I begin I have to question whether you should be looking for sites for new homes when you have one in the middle of Send and its yet to be developed despite it being a requirement of the permission to build their new factory. GBC should be ensuring agreements are met before even considering suggesting we need to release more land for development.

The Vision engineering site new building was agreed on the basis the old one was removed and houses built on the site. There appears to be absolutely no progress on that and GBC should be held to account for not protecting the village and ensuring developments are held to their agreements. It’s in fact ended up as another small industrial site in the village. Why look to have sites for new houses when you have the site and allowed development based upon the building of houses and you don’t even pursue it? This infuriates me as you should be pursuing legal avenues with Vision to make them meet their agreements. How can GBC put forward requirements for more land when they don’t deal with the agreements they already have for new housing?

My initial objection is to: MM41, MM42, MM44, MM9, MM27.

POLICY S2.

The housing number predictions have been shown to be incorrect so this is all starting from a incorrect basis. The latest data makes a mockery of G.B.C consultants figures.

At the public examination the figure for Guildford B.C. housing need used by the inspector was 789 per year. This figure was obtained by G.B.C consultants and was greatly exaggerated by including Surrey University Student figures. These Consultants and GBC refused to disclose how this figure was calculated.

The figure now published by a highly respected consultancy Barton Wilmore has said the correct figure is 431 houses per year.

The data from the Office of National Statistics, doing population forecasts says the appropriate growth in GBC can be achieved by 460 houses per year.

I trust the Inspector and GBC will now drastically reduce the housing need to reflect the true figures, and particularly in our already very congested village of Send.

Attached documents:

Comment: MM2 - LPMM18/4481  Respondent: Charlotte Ladd 10953249  Agent:

Ref: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments:

1. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.

2. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:
   1. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
   2. There is too much reliance on A3 improvements and these are beyond the council’s control
   3. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
   4. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

3. I would like the Inspector to RE-EXAMINE the Local Plan because:
2. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt.

3. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high.

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. **The Clandon Society Objections and Concerns Which I Share**

**The A247**

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (e.g., through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247.

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1 million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1 million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

**I believe that traffic will increase significantly because:**

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic.
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247.
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh.
4. The development of 1800 houses at Gosden Hill.
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247.
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3.
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common.
avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing.

8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.

9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments.

10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. The Guildford Residents’ Association’s Objections and Concerns Which I Share

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.
MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

**Attached documents:**

---

**Comment:** MM2 - LPMM18/3798  **Respondent:** Anita Wilkinson 10954209  **Agent:**

In response to the local plan, I consider that important aspects of the Plan in its present state may be considered to be unsound and requiring of important revisions.

MM2: Please consider revising the target for new build in line with updated figures of housing requirement which, it may be argued, could be fulfilled by the re-use of brownfield sites and perhaps re-designation to residential use of former retail sites. Physical retail sites no longer reflect the pattern of consumer behaviour, those present of the high street are experiencing a downturn due to the unrelenting change in consumer purchasing behaviour. Reducing the projected figures (MM13) could free up town sites, this would help to minimise the impact of building on the green belt.

**Attached documents:**

---

**Comment:** MM2 - LPMM18/1251  **Respondent:** Pete Rollo 10954913  **Agent:**

In the light of the latest ONS housing figures I would urge you to reopen the examination and amend the Local Plan.

The figures in MM2 are no longer up to date as ONS housing figures have dropped considerably. They do not provide a sound basis for the Plan justify such extensive Green Belt loss.

There is a strong case for taking out a strategic site.

There is more scope for town centre provision.

This makes table S2b out of date and MM3 inadequate and in need of reexamination.

I urge you to take account of the current data.

**Attached documents:**
Regarding the modifications of GBC Local Plan, I would like to object very strongly to these modifications. Over the last few years I have repeatedly objected to the Local Plan in our area (in particular the inclusion of Three Farms Meadow as a strategic site) as being not suitable but, more importantly, not sustainable given the lack of a viable transport plan for such a large new town. Also the whole plan is based both on out of date ONS statistics, which justify a far higher target than is actually required, and a seemingly self imposed requirement to help fill Woking’s unmet needs (MM2).

Attached documents:

Ref: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments:

A. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.

B. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:
1. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
2. There is too much reliance on A3 improvements and these are beyond the council’s control
3. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
4. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

C. I would like the Inspector to RE-EXAMINE the Local Plan because:
1. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
2. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

D. The Clandon Society Objections and Concerns Which I Share

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road. The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247.

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1 million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.
I believe that in a few years' time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. Its already the intention to build a station next to the bridge.

The £1 million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly by because:
1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for the redistribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments.
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247
The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:
1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway.. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 places school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.
The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites. This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites. Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

E. The Guildford Residents’ Association’s Objections and Concerns Which I Share

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high and double the number of homes needed to support ambitious growth of the economy.

Attached documents:

Comment: MM2 - LPMM18/2582  Respondent: Inger & Ron Ward 10959265  Agent:

Dear Sir/Madam

Ref: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments:

1. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.

1. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:
2. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
3. There is too much reliance on A3 improvements and these are beyond the council’s control
4. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
5. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.
1. I would like the Inspector to RE-EXAMINE the Local Plan because:
2. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
3. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. The Clandon Society Objections and Concerns Which I Share

The A247

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247.

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1 million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1 million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing.

8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.

9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments.

10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. The Guildford Residents’ Association’s Objections and Concerns Which I Share
MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

Comment: MM2 - LPMM18/5655  Respondent: Jan Lofthouse 10959425  Agent:

OBJECTION TO MODIFICATIONS TO DRAFT LOCAL PLAN

I concur with the objections to this local plan modification made by Wisley Action Group and by Ockham Parish Council

I consider that there should be a new hearing – it must be re-opened as so much has changed

Housing numbers have changed

[text redacted: the text included a quote that was not wholly accurate]

The strategic sites should be modified

Please remove the Former Wisley Airfield, now Three Farm Meadows as a strategic site

As G B C is aware, this is simply not suitable as a major housing development and needs to be deleted as a strategic site

This planning application was indeed turned down by G B C over a year ago on 14 major planning grounds, so how could G B C keep it in the Local Plan as a strategic site?!
The Planning Inspector turned down the appeal by Wisley Property Investments Limited, so how can GBC still include this site in its Local Plan as a strategic site?!

No notice has been taken of important case law to include People v Wind

I concur with all Ockham Parish Council has objected to as well

Specifically please see below as follows

MM2 There should be no requirement for Guildford to take Woking’s unmet need particularly as this will require further green belt release.

The council has not properly followed its spatial strategy which requires that development takes place first in the town centre, the urban area and brownfield before moving to land in the villages or greenbelt. The addition of another 500 houses in Send (which will be car dependent) has a severe impact on Portsmouth Road Ripley which has not been properly considered.

4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247
The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. The Guildford Residents’ Association’s Objections and Concerns Which I Share

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.
The Local Plan is Unsound

I would suggest that the Local Plan is unsound because of the following and should be re-examined:

1. MM2. The latest ONS figures and projections make the proposed housing number invalid, as a result the public hearings should be reopened, and the figures re-evaluated. The same would go for Woking and result in a far lower figure., however there should no requirement for Guildford to take on the unmet numbers from Woking.

2. There are many brownfield Sites in the centre of Guildford that have not been considered or used efficiently. This has resulted in the proposed development of far too much green belt and should not be approved.

I am writing in with my comments on the recent amendments to the Draft Local Plan as I disagree with certain aspects of it.

MM2 Policy S2 Planning for the Borough – our spatial development strategy

The Office for National Statistics has produced new lower population and household figures for Guildford, so we don’t need to build as many houses as originally quoted in the plan. I therefore request that the Inspector re-open the examination and amend the Plan to take account of the new lower figures as the previous ones do not justify such extensive Green Belt loss.

Para 4.1.9ab Currently, there is only a sewer capacity for about 325 homes in Burpham. This is insufficient for the proposed housing number of 672 homes per annum in the Draft plan let alone the total over the plan period. Thames Water has advised that for the period 2020-2025 there isn’t any financial provision to update Guildford’s capacity. This renders the Local Plan unsound.

I comment below on the set of main modifications to the amended GBC Local Plan:

1. NUMBER OF HOUSES(MM2)

The current version of the Plan has increased the number of houses from 12,426 to 12,600. However, the ONS recently released the projected household growth figures which show a 40.5% reduction to 6,635 households or 4,507 less. This is
equivalent, for example, to the dwellings proposed at Wisley airfield (site A35, MM40) of 2,000 and Gosden Hill Farm (site A25, MM35) of 1,800 plus a further 707 dwellings at any of the various other targeted sites.

Consequently the increase seems unwarranted.

2. RE-OPENING THE PUBLIC EXAMINATION (MM2)

Due to the very large differences between the Plan and the current ONS household data, the Public examination of the Plan by the Planning Inspector must be re-opened.

4. POLICY P2 - GREEN BELT (MM2)

This policy has been redrafted but takes no account of the large reduction in projected households referred to in 1 above. 66% of the proposed housing is planned to be built on land that currently lies within the Green Belt.

Thus it is completely unwarranted to consider that the exceptional circumstances necessary to amend Green Belt boundaries or the very special circumstances to justify any development in the Green Belt exist; they obviously do not.

**Attached documents:**

**Comment: MM2 - LPMM18/3579  Respondent: Robin L. Smith 10972833  Agent:**

I strongly believe that GBC is dumping is housing policy in one area - an easy, lazy way of getting a "Tick in box" for having done their bit for housing policy. The continual increase in stakes gives me the impression of inserting a negotiating margin so that GBC can say "Look we have drooped 25% or our original proposals" but in reality there is still a huge chunk left.

I would comment more but I believe I have covered the essentials and added a few personal opinions.

**Attached documents:**

**Comment: MM2 - LPMM18/4120  Respondent: Richard Green 10986209  Agent:**

* I object on the grounds set out below.
* I would like to call for the examination in public to be reopened so that the latest Office of National Statistics can be used.
* As far as I’m aware I have not been advised of the consultation.
* I would also like to say that I support the representation made by WAG as advised by Richard Harwood QC

**GENERAL**

* MM2 The housing target is wrong.
* MM2 There should be no requirement for Guildford to take Woking’s unmet need particularly as this will require further green belt release.
* The council has not properly followed its spatial strategy which requires that development takes place first in the town centre, the urban area and brownfield before moving to land in the villages or greenbelt. The addition of another 500 houses in Send (which will be car dependent) has a severe impact on Portsmouth Road Ripley which has not been properly considered.
We support the representation made by Wisley Acton Group (WAG) which was written with advice from Richard Harwood QC. We also object to not having been advised of the consultation by your authorities and call for the examination in public to be reopened so that the latest Office of National Statistics can be used.

In general your proposals make a mockery of the concept of the Green Belt. The biased evidence by which you wish to bring this about calls into question the integrity of your Officers.

The plan does not adequately address the issue of plenty of land being available within Guildford town to build houses that are proposed to be built on greenbelt land. There is less need for retail in the town centre. Build houses there instead of miles out where people are dependent on cars.

I appreciate that it's MUCH easier for developers to build on greenbelt and their profits would be greatly reduced by looking at ways to make the town centre work. Has GBC established what 'land banks' the developers currently hold in the area?

The greenbelt is one of the reasons that make Guildford a nice place to live.

I object to an amended plan for which the housing target out of date and based on incorrect information. The lastest ONS statistics show a much reduced demand for housing and this needs to be reflected in the plan and on its own removes the requirement for Guildford to meet Woking’s housing shortfall.

The council has turned its own spatial strategy on its head and instead of concentrating on Brownfield sites in Guildford Town Centre where the big landowners like Network Rail, Legal and General and Guildford Corporation would be more than happy to realise the increase the value of that a change to residential use would bring. Building in the Green Belt and rural areas should be a last resort.
The addition of another 500 houses in Send (which will be car dependent) will have a severe impact on Portsmouth Road Ripley, and the A3 and there is no indication that this has been given proper consideration.

Comment: MM2 - LPMM18/3515  Respondent: Philip Erhardt 10992417   Agent:

We think your local plan is unsound and should be re-examined for the following reasons:

1. MM2. The latest ONS figures and projections make the proposed housing numbers invalid, and as a result the public hearings should be re-opened and re-evaluated.
2. The grounds for green belt development are inadequate and should be re-examined.

Attached documents:

Comment: MM2 - LPMM18/2443  Respondent: Peter Cormack 10995297   Agent:

Dear Sir/Madam

Ref: Guildford Borough Council’s Modified Local Plan consultation

Would you please register my following reservations and comments to Guildford Borough Council’s Modified Local Plan.

A. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.

B. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound and NOT FIT FOR PURPOSE because:

1. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
2. There is far too much reliance on A3 improvements which are totally outside of the council’s control.
3. The town centre policy, S3, is inadequate and does nothing to address the infrastructure deficit.
4. The grounds for Green Belt development are totally inadequate and do not fulfil Central Government’s criteria for ‘EXCEPTIONAL CIRCUMSTANCES’

I strongly request the Inspector to RE-EXAMINE the Local Plan because:

1. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
2. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:
1. The Clandon Society Objections and Concerns Which I Share

The A247

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send, which even now is totally inadequate to handle the current volume of traffic. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247.

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with any increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

Traffic is already stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches regularly having to mount the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I firmly believe that traffic will increase significantly because of:

1. The proposed development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic.
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247.
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh.
4. The development of 1800 houses at Gosden Hill.
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247.
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3.
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing.
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments.

10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

**Problems with the West Clandon section of the A247**

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is usually in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump in the railway bridge.

It was for these very strong reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site adjacent to and behind the station.

4. The sight lines for the exit of the Onslow Arms car park.
5. The extreme narrowness of the road near Summers.
6. Heavy lorries, buses and coaches are often unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head Public House.
9. The Clandon Junior School and the extremely narrow footpath for children walking to school, putting their lives in jeopardy.
10. The sharp bend with poor sight lines in either direction at St Peter and St Paul’s church.
11. No continuous or safe and wide footpath through the total length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

**Housing Number and the Green Belt**

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a total reconsideration of the policy of taking any sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

**E. The Guildford Residents' Association’s Objections and Concerns Which I Share**

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.
MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

Attached documents:

Comment: MM2 - LPMM18/1304  Respondent: Mr John Flatman 10997249  Agent:

I wish to OBJECT to the Local Plan, for the following reason:

Policy MM2: the housing requirement figure for Guildford Borough is now incorrect. The latest ONS projections (Sept 2018) indicate a requirement for 300, not 672, extra dwellings per annum. Moreover, the ONS indicate that nationally the largest part of the extra dwelling requirement is for homes for the elderly.

This places a priority on redevelopment of Guildford town centre, the opportunities for which have by no means been exhausted in the proposed plan. Development of greenfield areas, such as at Wisley, are totally unnecessary: the whole of the new dwelling projection can be met from town centre and in-filling in towns and villages.

Since the latest projections appeared after the end of the formal plan examination, the examination should be re-opened.

Attached documents:

Comment: MM2 - LPMM18/3586  Respondent: Greta Edwards 11001505  Agent:

I would like to object to the current Local Plan modifications - and the fact that I have NOT been advised of the consultation. An explanation would be appreciated.

In any event it is clear that the HOUSING TARGET is wrong. I call for a further examination in public so that the latest Office of National Statistics can be used instead of the now dated data being presented.

And why on earth should we absorb Woking's unmet need - particularly in view of the threat to our own Green Belt, despite government assurances to protect it?

Attached documents:

Comment: MM2 - LPMM18/3781  Respondent: Nick Thomas 11005473  Agent:
A few closing comments. I'm a resident of Send Hill. The building of forty houses and a travellers’ site here (document 003a, section 11.38) is even more disproportionate than what you're proposing for the village as a whole, reinforcing the impression that you are making no attempt to spread new development out across the Borough.

At another level, I am informed that a respected consultancy called Barton Willmore estimates the annual housing need for Guildford Borough at 431, not much over half the number being used by GBC (789). September data from the ONS suggests that a figure of 460 is accurate, very close to the Barton Willmore figure. In the light of these facts, please reconsider POLICY S2 and the implications for what is needed in Send.

It would be great to think that as a result of the time and thought residents put into these discussions, Guildford BC would make a genuine attempt to create a workable plan, but as above I'm afraid I have no expectation any more that our objections will result in anything of the kind. Nevertheless, I submit the above in the hope that the strength of feeling of Send residents will eventually make some impression on you and lead to a more moderate and sensible set of proposals.

Attached documents:

Comment: MM2 - LPMM18/3241  Respondent: James Culmer 11007393  Agent:

Ref: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments:

1. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.

2. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:
   1. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
   2. There is too much reliance on A3 improvements and these are beyond the council’s control
   3. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
   4. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

3. I would like the Inspector to RE-EXAMINE the Local Plan because:
   1. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
   2. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high. Guildford's future housing requirements are being inflated by the fact that the town is fairly modest in size but has a large university population.

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. The Clandon Society Objections and Concerns Which I Share

The A247

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road. As Chairman of Governors at Clandon C of E Primary School which is on the A247 I am particularly concerned about the traffic on this road. There have been 3 instances of vehicles running off the road into the school's flint wall whilst I have been a governor.
The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247. As a resident of East Clandon living on The Street between the Queen's Head pub and the church, this is of particular concern to me and my family. East Clandon is also plagued by the inexplicable decision a few years ago to place the village on the official Surrey Cycle Route. As if this is insufficient torture for our residents we are also on the route of the annual Prudential cycle ride at the end of July/early August.

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247
The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic.

Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon C of E Primary School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

**Housing Number and the Green Belt**

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. **The Guildford Residents’ Association’s Objections and Concerns Which I Share**

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the **housing supply** figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.
POLICY S2 The proposals as above when put together constitute an enormous increase in housing for a village such as Send. I understand however, that Barton Willmore has said the increase should be 431 which is a dramatically smaller number but which would still cause pressure on the present infrastructure.

Draft Guildford Local Plan/Examination in Public: Objections to Inspector's suggested Amendments

I am writing to object to the amendments suggested by the Inspector to the Draft Guildford Local Plan and to continue my objection to the inclusion in the Draft Plan of Site A35 - The Former Wisley Airfield/Three Farms Meadows.

General

1 Proposed Green Belt Release: Guildford Borough Council’s proposed housing provision appears to have reversed the Government’s Spatial Strategy which requires development to take place first in the town centre, then in the urban area, and then on brownfield land. Had Guildford properly applied this strategy, and had “housing need” been properly assessed and taken account of latest statistics, there would be no question of any proposed release of Green Belt land. The Draft Plan is therefore unsound and the Examination should therefore be reopened.

2 MM2: The current draft Plan and Examination were drafted/conducted prior to release by ONS of the latest Population and Household formation statistics. This means that the “housing need” figures on which the Draft Plan is based and was examined are inaccurate and out of date, making the Draft Plan unsound. In fact, since the Draft Plans’ conception, the derivation of the “housing need” figures has been flawed, producing unrealistic figures out of all proportion to neighbouring councils. The Examination should therefore be reopened.

3 MM2: There should be no requirement for Guildford to take/provide for any un-met housing need from any other borough (including but not limited to Woking). Moreover, the current Draft Plan and Examination were drafted and conducted prior to release by ONS of the latest Population and Household formation statistics, meaning that the “housing need” figures on which the Draft Plan is based and was examined are inaccurate and out of date, rendering the Draft Plan unsound. The Examination should therefore be reopened.

Wisley Airfield Planning - Objection

I am writing to object to the current proposal by GBC re the use of Wisley Airfield for housing. The following points need to be considered:
GENERAL

• **MM2** The housing target is wrong. The hearing should be reopened so that the latest ONS figures and household projections can be taken into account.

• **MM2** There should be no requirement for Guildford to take Woking’s unmet housing need, particularly as this will require further green belt release.

• The council has not properly followed its spatial strategy which requires that development takes place first in the town centre, the urban area and brownfield before moving to land in the villages or greenbelt.

The addition of another 500 houses in Send (which will be car dependent) would have a severe detrimental impact on Portsmouth Road in Ripley which has not been properly considered.

**Attached documents:**

---

**Comment:** MM2 - LPMM18/3369  **Respondent:** Geraldine Wright 11014369  **Agent:**

I write to request the examination in public of the GBC to enable the latest Office of National Statistics to be used. Up until now I was not aware of this consultation and I would like to support the representations made by WAG which I understand to have been written with advice from Richard Harwood QC. I would also query why I was not made aware of this consultation after I have commented previously on the Local Plan.

In essence I would like to object on the following basis

**GENERAL**

• The MM2 housing target is flawed. The hearing must be reopened so that the latest ONS figures and household projections can be taken into account

• **MM2** - There should be no requirement for Guildford to take Woking’s unmet need particularly as this will require further green belt release.

• The council has not properly followed its spatial strategy which requires that development takes place first in the town centre, the urban area and brownfield before moving to land in the villages or greenbelt. The addition of another 500 houses in Send (which will be car dependent) has a severe impact on Portsmouth Road Ripley which has not been properly considered.

**Attached documents:**

**Comment:** MM2 - LPMM18/4290  **Respondent:** Mr David Howells 11015745  **Agent:**

Local Plan: Consultation on Modifications

I refer to the proposed modifications to the Local Plan recently published by Guildford Borough Council and have the following concerns which I would ask the Council/Planning Inspector to address before taking the Plan further.

**Policy MM2**

The housing need is stated to be 630 dwellings per annum for Guildford with a further 42 per annum to take up the shortfall from the plans put in Woking Borough Council. My understanding is that the figure for Guildford exceeds the figures which would be derived from the latest data from the Office for National Statistics and the new Government
formula. In particular, it overstates the number of homes required for the student population and inflates the housing requirement by assuming a pessimistic rate of local economic engagement by residents.

Neil MacDonald, the expert advising Guildford Residents Association, has demonstrated that about 360 homes a year would support the economic growth rate proposed by the Inspector.

I am concerned that the Council, and/or the Inspector, use the most up to date data as the basis for the Local Plan and consider Neil MacDonald’s conclusions very carefully before finalising the plan. A lower housing need could lead to at least one of the Green Belt areas being preserved to improve the quality of life for of all those who live and/or work in Guildford.

It also seems perverse for Guildford to take up the slack in Woking’s Local Plan, when it results in Guildford sacrificing Green Belt land to housing development from out of area. I would also question whether Woking’s needs have been reassessed (as Guildford’s should be) to determine whether their housing needs are still as they were when their plan was submitted.

**Comment:** MM2 - LPMM18/4242  **Respondent:** Nik Proctor 11023969  **Agent:**

I object to an amended plan for which the housing target out of date and based on incorrect information. The latest ONS statistics show a much reduced demand for housing and this needs to be reflected in the plan and on its own removes the requirement for Guildford to meet Woking’s housing shortfall.

The council has turned its own spatial strategy on its head and instead of concentrating on Brownfield sites in Guildford Town Centre where the big landowners like Network Rail, Legal and General and Guildford Corporation would be more than happy to realise the increase the value of that a change to residential use would bring. Building in the Green Belt and rural areas should be a last resort.

The addition of another 500 houses in Send (which will be car dependent) will have a severe impact on Portsmouth Road Ripley, and the A3 and there is no indication that this has been given proper consideration.

**Comment:** MM2 - LPMM18/4848  **Respondent:** Sue Edwin 11024097  **Agent:**

Ref: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments:

1. **I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and request that their responses are registered as mine as well.**

1. **I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:**
2. Guildford Borough Council has not properly observed its hierarchy of development. There remain brownfield development opportunities, especially in the town centre, that have not been fully or properly exploited;
3. There is far too much reliance by the Council on purported A3 improvements which are beyond the council’s control and subject to modification and/or cancellation irrespective of the developments that may be undertaken based on such bare promises;
4. The town centre policy, S3, is inadequate and does not address the infrastructure deficit; and
5. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’ as required by the NPPF.

1. I request that the Inspector RE-EXAMINES the Local Plan because:
2. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt;
3. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number on which the Local Plan is predicated is excessive; and
4. Guildford Borough Council has failed adequately to notify or consult on its proposed changes, by comparison with the widely communicated consultation of the original version of the proposed Local Plan.

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. The Clandon Society Objections and Concerns Which I Share

The A247

The A247 is a minor A road that was so-classified many years ago before traffic loads, vehicle sizes and axle loads were anywhere near the specifications of the current day. As such, the current designation of the A247 is unsuitable to cope with the existing traffic requirements, let alone any increase as would be generated by the proposed developments according to the modified Local Plan. In short, the A247 IS NOT FIT FOR USE AS AN A ROAD AS IT STANDS, AND MOST CERTAINLY CANNOT WITHSTAND ANY SIGNIFICANT INCREASE IN TRAFFIC FLOWS.

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send, which is simply unsustainable. In the previous consultation, the Clandon Society, myself and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (e.g., through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247.

I welcome the recognition provided in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, recognition of the problem is merely wind if not coupled with well-considered and adequately funded provision for mitigating such problems. The suggested £1million of developer-funded mitigation measures for the A247 through West Clandon, which may or may not be enforceable, will not change the fact that the A247 through West Clandon does not have the capacity, nor physical characteristics, to deal with the increase in traffic that will be generated by the proposed developments.

The capacity of the existing road cannot realistically be increased because of existing physical constraints including the close proximity to the road of listed structures and other buildings and the limited width available.

The road is already too busy to cross on foot at times during the morning peak, creating problems in accessing the station. In a few years’ time, if the proposed developments proceed, the traffic will become nose-to-tail heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements, leading to near misses with pedestrians and frequent accidents with vehicles, as have been notified previously by the Clandon Society, the Parish Council and many residents.
What is needed is an alternative, modern A road classified route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could properly divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge and it is already the intention to build a station next to the bridge. This would seem to be a far preferable and achievable solution to the likely over-capacity of the A247.

The £1million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

**I believe that traffic will increase significantly because:**

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic;
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247;
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh;
4. The development of 1800 houses at Gosden Hill;
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247;
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3;
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing;
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford;
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments; and
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e., through West Clandon village) during the a.m. assessment period.

**Problems with the West Clandon section of the A247**

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway);
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still frequently in excess of 30mph;
3. The dangerous junction with the station roads and Oak Grange Road, where the exit sight lines to the North and/ or South are limited by the hump and parapet of the bridge over the railway and are the locations of frequent near misses such that it is only a matter of time before a serious accident occurs. The visibility of traffic emerging from the station roads and Oak Grange Road is also poor for traffic approaching the bridge from the North or South, respectively, because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station. In addition, particularly out of peak traffic periods, traffic speeds frequently far exceed the designated 30mph limit;
4. The sight lines for the exit of the Onslow Arms car park;
5. The narrowness of the road near Summers;
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement and/or causing near misses of even clashes of wing mirrors;
7. The sharp bend near Clandon Regis;
8. The narrowness of the road at the Bull’s Head;
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school;
10. The sharp bend with poor sight lines in either direction at the church;
11. No continuous footpath through the length of the village;
12. The frequently over-limit speed of traffic; and
13. The classification as an A-road without it having the capability of an A-road, rather a B-road at best.

**Housing Number and the Green Belt**

- The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.
- The Council has long argued that much of the housing required must be built on such sites.
- This argument is not supported either by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.
- The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.
- Coupled with modal shift, these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. **The Guildford Residents’ Association’s Objections and Concerns Which I Share**

MM2: The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2: There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2: Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2: It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2: Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

**Attached documents:**

**Comment:** MM2 - LPMM18/5009  **Respondent:** Victoria Rimmer 11026977  **Agent:**

MM2- housing figures need to be re adjusted as they are no longer up to date and do not provide a sound basis for the plan or justify green belt loss

....

MM2 would be out of date with new ONS figures which means that there is excessive emphasis on the need for housing, particularly student accommodation and this should be re adjusted.

....
MM2. It is inappropriate for Guildford to sacrifice green belt land to provide homes for Woking. Guildford is renowned for its rural beauty and much depends on the town retaining its characteristics. Excessive development would damage the aesthetic of the town.

Comment: MM2 - LPMM18/5020  Respondent: Victoria Rimmer 11026977  Agent:

As a resident I would like to comment on the inaccessibility and deep complexity of these plans. The changes to the plans make it almost impossible to follow, as do the links to other documentation. As this plan is going to affect all local residents it is beholden to the council to make it accessible and readable.

The video explaining town centre development is very thin on fact and does not explain how any of the proposed developments will occur or what impact they will have on the town.

Please take time to review and reconsider your options. Guildford needs sensitive and timely growth. The NPPF needs to be used to Guildford’s best advantage not its worst. Overdevelopment and inappropriate development will damage both residents and industry and ultimately we need to proceed with caution. People will only want to live here if it remains an attractive and accessible town with great amenities. The council needs to review housing numbers and development sites and be assured that their predictions for growth are accurate and not excessive.

Attached documents:

Comment: MM2 - LPMM18/2676  Respondent: John Lay 11029409  Agent:

I wish to strongly object to the proposed developments at Three Farms Meadows / Wisley Airfield for the following reasons.

GENERAL

• MM2 The housing target is wrong. Call for the hearing to be reopened so that the latest ONS figures and household projections can be taken into account
• MM2 There should be no requirement for Guildford to take Woking’s unmet need particularly as this will require further green belt release.
• The council has not properly followed its spatial strategy which requires that development takes place first in the town centre, the urban area and brownfield before moving to land in the villages or greenbelt. The addition of another 500 houses in Send (which will be car dependent) has a severe impact on Portsmouth Road Ripley which has not been properly considered.

Attached documents:

Comment: MM2 - LPMM18/1734  Respondent: Peter Bassett 11036545  Agent:

Sir/Madam
I confirm that I *OBJECT* seriatim to some of the proposed modifications to the Guildford Local Plan Strategy and Sites contained in the Schedule of Main Modifications.

*GENERAL*

MM2 - should be modified and the examination by the Inspector reopened in order to quantify the impact of the latest ONS figures and household projections. In addition, the requirement for Guildford to meet the unmet need generated in Woking Borough Council should be removed and the requirement for Green Belt site releases should be reduced, accordingly.

Attached documents:

Comment: MM2 - LPMM18/1687  
Respondent: Brian Slade 11036705  
Agent:

The Planning Inspector's Report on which these Modifications are based clearly demonstrates a lack of concern or perhaps contempt for the residents of Send who made many thousands of objections to the 2016 and 2017 Plans which have been totally ignored.

Even worse, in relation to POLICY 32, the Planning Inspector based his report on housing need in Guildford Borough as 789 houses per annum when the September data from the Government's Office for National Statistics stated that appropriate housing growth in Guildford Borough can be achieved with 460 houses per year and Barton Wilson a respected consultancy considers 431 houses as meeting the need.

Thus the Inspector's Report is fatally flawed in terms of housing needs by relying on inaccurate information with a close to 50% overstatement of housing needs in the Borough and should be discounted with a revised plan to meet much reduced housing needs produced asap. If not then there are significant grounds to draw this error to the attention of the Secretary of State to force a revised Plan.

GBC appears to have a pre-determined agenda to ruin the quality of life for the residents of Send and ignore the seriously increased pollution and traffic problems which these Modifications will cause - clearly totally uncaring for the health and safety of residents. It would appear that GBC is deliberately failing to take into account the inadequate infrastructure of the area and to put in place planning contraints as is required by Law. GBC has not even undertaken a formal traffic impact study relating to the proposed new A3 sliproads and the Guildford Plan on the A247 and surrounding road networks.

Re: Guildford Local Plan:Strategy & Sites-Main Modifications 2018-Sept 2018

I object to the following policies as amended by the main modifications of the above plan:-

MM2-Number of houses

I strongly object to this policy for the following reasons.

The housing target is wrong and therefore the Public examination hearing must be re-opened to take account of the up to date ONS figures and household
projections data. This is vital because the new figures published reduced the projected growth in households for Guildford by 40.5% which is significant. It represents a reduction of 4507 households required for the plan period 2015-2034. It equates to well over 2 large ‘strategic sites’ included in the current Plan.

Guildford Borough Council should have seen this change and should have reduced housing numbers because of the ONS population projections in May 2018. Instead it actually increased the number of houses in the current version of the Plan.

There should be no requirement for Guildford to take Woking’s unmet housing need especially as this would require further greenbelt release.

The council has not properly followed its spatial strategy which requires that development takes place first in the town centre, the urban area and brownfield before moving to land in the villages or greenbelt. The addition of another 500 houses in Send, (which will be car dependent) would have a severe impact on Portsmouth Road, Ripley which has not been properly considered.

2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247.
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh.
4. The development of 1800 houses at Gosden Hill.
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247.
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3.
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing.
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments.
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247
The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

**Housing Number and the Green Belt**

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. **The Guildford Residents’ Association’s Objections and Concerns Which I Share**

   MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

   MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

   MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

   MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

   MM2 Although extra sites are required because some might not come to fruition, the **housing supply** figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.
Agent:

I am very disappointed with the latest draft attempt of the Local Plan. It appears that yet again the concerns and reservations of local residents are being ignored, the tens of thousands of previous rejections to each draft local plan with minimal tweaks to prior versions to vainly attempt to justify the same unwanted developments over and over.

Guildford and its surrounding villages such as Ripley and Send are desirable places to live precisely because they are rural and not over developed.

While there is a need for development in the borough, it must not come at the price of destroying the character of the area.

The latest Local Plan would reduce the attractiveness of the area as a place to live and raise families - something the council is already trying to achieve by closing the local school in Ripley leaving local families struggling to find school places for their children - something that will hardly be helped by building another 700+ homes...

This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

**Problems with the West Clandon section of the A247**

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

**Housing Number and the Green Belt**

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

**E.. The Guildford Residents’ Association’s Objections and Concerns Which I Share**

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.
MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

Ref: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments:

1. **I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.**

2. **I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:**
   1. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
   2. There is too much reliance on A3 improvements and these are beyond the council’s control
   3. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
   4. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

3. **I would like the Inspector to RE-EXAMINE the Local Plan because:**
   1. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
   2. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. **The Clandon Society Objections and Concerns Which I Share**

The A247

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.
I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1 million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North-facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

**Housing Number and the Green Belt**

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. **The Guildford Residents’ Association’s Objections and Concerns Which I Share**

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the **housing supply** figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

I object to the identification of the HMA with the tri-borough area of Woking/Guildford/Waverley. This is not justified in terms of where residents live, work, shop, commute etc. The need to include Woking’s unmet housing need is therefore based on an incorrect premise.

It is untrue that the OAN has been based on the latest 2018-based population projections. To meet this reduced OAN, the balance of urban development should be shifted away from the retail sector towards building homes, in line with government policy, uplifting the Guildford Town Centre figure considerably.

GBC have claimed that the new ONS figures are inapplicable because the submitted local plan pre-dates the government’s new standard method for calculating housing need. The plan should be based on the best and latest evidence available and needs to adapt in line with the facts which ONS presented.

**Attached documents:**

**Comment:** MM2 - LPMM18/5890  **Respondent:** Patrick Oven 11048481  **Agent:**

My objections to the amendments to the Plan principally concern the amount and type of development proposed in the Send area, which appear to disproportionately target the village. I am also firmly of the view that the “need” for such development, both as regards housing and industrial use, has been grossly over-exaggerated by Guildford Borough Council (GBC), in a developer rather than need-led plan. The Plan is unsuitable for purpose, especially in the light of figures from the Office of National Statistics, (ONS), published as recently as 20th September 2018.

I understand that objections at this stage have to be confined to amendments to the Plan. I object specifically to the following, which I will list in order of the size of the proposed developments:

MM41, land at Garlicks Arch, between Ripley and Send Marsh, Policy A43;  
MM42, proposed increased industrial use at Burnt Common, London Road, Send, Policy A58;  
MM44, Alderton's Farm, Send Marsh Road, Policy A63;  
MM9, Green Belt considerations;  
MM27, MM41, MM42 and MM48, Transport Strategy in the Send, Ripley and Woking areas.

**Objectively assessed need for dwellings, (OAN).**

GBC utilised a firm of consultants, GL Hearne, to calculate the anticipated need over the period of the Local Plan. This was revised a number of times, eventually by the start of the Public inquiry into the Plan being assessed as 594 dwellings to be built per annum (DPA). Repeated attempts were made by responsible interested organisations, such as The Guildford Society, Guildford Residents, Association, Guildford Greenbelt Group, Save Send Action Group, Ockham Residents' Association, to be shown how this figure was arrived at. All bona fide groups with a need, not merely an interest, in seeing the logic used in reaching the figure arrived at so that they could if appropriate, challenge it. All were rebuffed. Confidentiality was cited, which seems an utterly bizarre explanation. Hence these bodies, as well as concerned individuals, had to make objections without even seeing the Council's argued case as regards assessed need. A highly unfortunate and undesirable position, inconsistent with the Council's oft-stated position of open local government. I am not aware whether any Freedom of Information request was made by any of these bodies or interested individuals, but if the Council was confident in its and G.L Hearne's methodology then I suspect it would have been only too willing to divulge this information. This smacked of wholly unnecessary secrecy at the time, and recent events have proved that suspicion to be well-founded.

At the Public Inquiry into the Plan in June/July 2018, the Inspector, Jonathan Bore, stated that he would use the most up-to-date figures to decide housing need, and that the proposed housing need figures were PROVISIONAL until the release
of updated Office of National Statistics figures. He did however add that it was unlikely that the OAN would be found to be less than 594 dwellings per annum. On the information available to him at that time, the Inspector assessed the need as 789 dwellings per annum over the lifetime of the Plan. The ONS figure released on 20th September hugely reduces this figure to 431 DPA needed. This confirms what the large number of objectors present at the Inquiry had been arguing - housing need had been greatly over-estimated in the Plan, which is thus now manifestly unfit for purpose and needs to be drastically revised. This was confirmed by the eminent consultants Barton Willmore in their "Intelligence", also dated 20th September:-

"Housing need will fall in the light of household projections."

Their commentary continued:-

"Governments' proposed standard method for assessing housing need in Local Authorities is predominantly informed by household projections produced by the Office for National Statistics".

The response by GBC, from Leader Councillor Spooner to this was [Response has been redacted due to statements being considered defamatory, derogatory, inflammatory or offensive in nature] he went on to say regarding the Government's new standard method in calculating housing need

"under the transitional provisions of the National Planning Policy Framework the new standard method does not apply to the examination of the Guildford Local Plan".

Essentially he is saying we do not have to apply the latest revised figure of housing need [Response has been redacted due to statements being considered defamatory, derogatory, inflammatory or offensive in nature]

Comment: MM2 - LPMM18/4192  Respondent: Belinda Nicoll 11049729  Agent:

Having previously objected to the Local Plan I would also like to record my further objection to the main modifications particularly those that adversely affect Send/ Ripley and the surrounding areas. What I find quite frankly astonishing, is the complete contempt and disregard shown towards the residents of Send and Ripley. The additional properties and the addition of an on/off ramp from the A3 at Burnt Common would have a such an adverse effect on the quality of life of existing residents that to completely ignore our views is quite frankly shocking and it will be us that will have to suffer the long-term adverse consequences for years to come.

It is quite frankly astonishing that between the Planning Inspector and Guildford Borough Council, you have both demonstrated a complete disregard for the views from the Send residents who have raised their concerns and have attempted to engage in the process then to be simply ignored is shocking.

How can it be satisfactory that any local authority could contemplate increasing the population of a village by 45% and think that will not have an adverse effect on the quality of life of the existing and new residents that will all have to share the services that were already stretched. Quite frankly the road infrastructure is strained and adding another 700+ homes and related traffic, will just grind the village to a halt, just imagine the level of carbon monoxide and sulphur dioxide the residents of Send will be subjected to.

Attached documents:

Comment: MM2 - LPMM18/4637  Respondent: Roger Bean 11051713  Agent:

Waste/recycling - Slyfield can not handle existing demand, council can not hit targets and fails repeatedly on borough recycling, fly tipping also on the increase. Another prime example as to the lack of vision and planning and cost cutting and the complete inability to manage the borough’s needs for effective waste management. This will only increase due to housing plans.

The village cannot cope with the huge number of proposed houses and industrial units, it will change and destroy the village environment, it is a village!

Ref: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments:
1. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.

1. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:
   2. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
   3. There is too much reliance on A3 improvements and these are beyond the council’s control
   4. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
   5. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

1. I would like the Inspector to RE-EXAMINE the Local Plan because:
   2. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
   3. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. The Clandon Society Objections and Concerns Which I Share

The A247

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1 million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1 million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:
1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic.
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247.
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh.
4. The development of 1800 houses at Gosden Hill.
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North-facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247.
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing.
7. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
8. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments.
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway).
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph.
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park.
5. The narrowness of the road near Summers.
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement.
7. The sharp bend near Clandon Regis.
8. The narrowness of the road at the Bull’s Head.
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school.
10. The sharp bend with poor sight lines in either direction at the church.
11. No continuous footpath through the length of the village.
12. The speed of traffic.
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.
The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. **The Guildford Residents’ Association’s Objections and Concerns Which I Share**

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

MM2 and S2 Planning for the Borough- our spatial development strategy.
• I understand a respected consultancy and the September data from the ONS, which does population forecasts, suggest that appropriate growth in Guildford Borough can be achieved at heavily reduced housing numbers which could mean much reduced requirement at Send. Will Guildford Borough revisit its figures?

Comment: MM2 - LPMM18/2559  
Respondent: Tony Millership 11076161  
Agent:

Please see below my comments on the amended GBC Local Plan

1. NUMBER OF HOUSES (MM2) 

• The current version of the Plan has increased the number of houses from 12,426 (in the previous version) to 12,600 (1.4% increase).

• On 20th September the Office of National Statistics (ONS) released new household growth projections for Guildford for the Plan period of 2015 to 2014 inclusive. The new figures reduced the projected growth in households from 11,142 (that applied to the previous version of the Plan) to 6,635; a reduction of 4,507 households (40.5% reduction).

This change was no surprise; in May 2018 ONS had already released their population projections that clearly foreshadowed a substantial drop in the household projection.

• A reduction of 4,507 dwellings equates to well over two “strategic sites” (ie. the largest sites). The currently planned capacities of the five largest sites are:

  − Wisley airfield (Site A35, MM40) 2,000
  − Gosden Hill Farm (Site A25, MM35) 1,800
  − Blackwell Farm (Site A26, MM36) 1,800
  − Slyfield Regeneration (Site A24) 1,500
  − Garlick’s Arch, Send Marsh (Site A43, MM41) 550 (including the 150 listed below)

  • At his examination of the previous version of the Local Plan in June/July this year, the Planning Inspector required the profile of house building to be biased towards the early part of the plan period in order to improve the affordability of housing in Guildford borough. In response the Council added a further five sites totalling 655 new dwellings:

  − Garlick’s Arch, Send Marsh (Site A43, MM41) 150
  − Aaron’s Hill, Godalming (Site A61, MM??) 200
  − Hornhatch Farm, Chilworth (Site A62, MM??) 80
  − Alderton’s Farm, Send Marsh (Site A63, MM??) 120
  − Strawberry Farm, Flexford (Site A64, MM??) 105

This increase in the planned number of houses was introduced at a time when a clear signal of the 40% drop in projected households was already apparent (ie. the ONS population projection of May 2018).

2. RE-OPENING THE PUBLIC EXAMINATION (MM2)
• There are very large discrepancies between the Plan and the up-to-date ONS household data.

• The Public Examination of the Plan by the Planning Inspector must be re-opened.

Attached documents:

Comment: MM2 - LPMM18/3567  Respondent: Sue Carmichael 11086529  Agent:

Regarding the consultation on the Main Modifications to the proposed Local Plan:

1. The examination in public should be reopened because of the major discrepancy between the Plan and the latest ONS projections of household numbers.

2. I support the representation made by Wisley Action Group regarding Site A35 as the requirement is not necessary given the revised ONS household projections.

Household projections

In September 2018 the Office of National Statistics (ONS) released new household growth projections for Guildford for the Plan period of 2015-34. The new figures reduced the projected growth in households by 40% - a reduction of 4,500 households. This reduction removes the need for at least two “strategic sites” (the five largest sites represent 7,650 dwellings including 2,000 at Wisley Airfield and 550 at Garlick’s Arch). Given these reduced household projections, Guildford should have no requirement to take Woking's unmet housing need (which virtually disappears under the new ONS projections); the is particularly important as it will require further release of green belt.

The latest ONS projections should be used the basis for the Local Plan otherwise it will be unsound

Other comments on the Plan

MM2: The addition of another 500 houses in Send (which will be heavily car dependent) will have a severe impact on access through Ripley which has not been properly considered.

Comment: MM2 - LPMM18/5851  Respondent: Miller Developments 11145825  Agent: Carter Jonas (Jamie Stanley)

GUILDFORD BOROUGH COUNCIL MAIN MODIFICATIONS CONSULTATION

HOOK FARM AND HUNTS FARM, FAIRLANDS, GUILDFORD

We write on behalf of our client, Miller Developments, in response to Guildford Borough Council’s (hereafter referred to as the ‘Council’) Schedule of Main Modifications to the Submission Local Plan. Miller Developments is responsible for the promotion of a residential development at Hook Farm and Hunts Farm, Fairlands (Land Availability Assessment Reference: 2072).

Miller Developments has engaged throughout the production of the Local Plan with representations duly made to each stage of consultation, including participation during the Examination in Public. In making representations, Miller Developments has highlighted aspects of unsoundness within the Local Plan.
Whilst the production of Main Modifications is supported in principle, we contend that fundamental flaws remain with the Local Plan as now drafted, unresolved by the matters proposed within the Main Modifications. Accordingly, we believe the Plan remains unsound on the basis the Council continues to:

- Fail to sufficiently plan to meet the full housing needs of the Borough in the early years of the Plan;
- Place an undue reliance on strategic housing allocations which are highly constrained and unlikely to deliver the number of houses required to meet the OAN in a timely fashion;
- Allocate sites which do not accord with the spatial strategy; and
- Fail to identify smaller housing allocations which are less constrained by uncertain infrastructure improvements which are capable of delivering housing within the first five years of the plan period.

In particular, the process undertaken in selecting further site allocations has not been evidence led.

The Council has retrospectively produced a Sustainability Appraisal Addendum (SAA) to justify pre-determined allocations, rather than allowing this work to inform the additional site selection process. The actual assessment work undertaken by the Council evidences that the sites bought forward as additional allocations are less sustainable than alternatives available. Finally, there has been no attempt by the Council to identify what ‘exceptional circumstances’ (2012 NPPF para 83, 2018 NPPF para 136) exist to justify alterations to Green Belt boundaries beyond the delivery of new housing. Each of these points is considered below.

1 Spatial Development Strategy – MM2

We support in principle the need for the Council to identify further housing sites to address housing delivery in the first five years of the Plan. Miller Developments has maintained throughout the Local Plan consultation process that the Council had not only failed to adequately plan for sufficient housing against the assessed needs of the HMA, but has also proposed an over-reliance on the delivery of the strategic sites; each of which is the subject of uncertain infrastructure provision.

Despite the steps taken within the Main Modifications to improve this situation, there are still worrying and unnecessary deficiencies within the Plan to meet the housing needs of local people. The question of whether the Liverpool or Sedgefield approach is adopted has a critical impact on housing land supply calculations. Planning practice guidance is clear that the Sedgefield approach should take precedence where possible. This is understandable as seeking to remedy any past undersupply within the first five years of the Plan is consistent with Central Government’s imperative of boosting significantly the supply of housing land, particularly in areas of chronic unaffordability.

Whilst it is appreciated that the use of an alternative method (e.g. the Liverpool Method utilised by the Council) is not prohibited, the emphasis of the guidance makes it clear that any deviation from the Sedgefield method should be the exception, with exceptional circumstances needed to justify such an approach. It is the assertion of Miller Developments that these exceptional circumstances do not exist; rather it is the result of a flawed spatial strategy and site selection process, which has resulted in the need to defer addressing housing need until later in the plan period.

In order for the Local Plan to be justified, the 2012 NPPF (paragraph 182) requires the plan to put forward “the most appropriate strategy, when consider against the reasonable alternatives, based on proportionate evidence”. Given the evidence of the availability and deliverability of sites in the early years of the plan period, the Council cannot uphold that enacting a strategy that fails to adequately address the acute affordability crisis in the Borough, whilst relying on uncertain, speculative highways solutions, is fully justified as the most appropriate strategy.

2 Additional Site Allocations – MM39, MM43, MM44, MM45

Putting aside the continued failure of the Council to identify sufficient sites for delivery within the early years of the Plan, the additional sites proposed within the Main Modifications fail to both accord with the current strategy, whilst representing less sustainable locations than alternative deliverable sites.

As an example, at Hook Farm and Hunts Farm has the potential to accommodate approximately 150 dwellings, care home, substantial green infrastructure, and additional parking and a new access to Worplesdon Primary School, alleviating existing congestion within Fairlands. This development is of a comparable size to those proposed within the
Main Modifications; however, represents greater community benefit within a more sustainable location close to the Guildford urban edge. The plans accompanying these representations demonstrate the ability of this development to provide an appropriately proportioned development alongside newly formed, defensible boundaries for the Green Belt.

For clarity, the additional sites favoured by the Council comprise:

- East of Glaziers Lane, Flexford (105 homes)
- Village extensions at:
  - Urban extension at Aarons Hill, Godalming (200 homes)
  - Hornhatch Farm, Chilworth (80 homes)
  - Alderton’s Farm, Send Marsh (120 homes)

The selection process undertaken by the Council for these additional sites is highly contentious and, based on the evidence available to them at the time of making this decision is not founded on the results of the assessment before them.

As is detailed within the Council’s response “Measures to boost housing delivery in the early years in the context of an OAN figure of 630dpa + contribution to the wider HMA”2, the decision to incorporate the above sites followed the Inspector’s note3 published on 22nd June and was made prior to the hearing session on 3rd July.

The SAAs supporting the Main Modifications has since been published retrospectively to justify these decisions rather than used to help inform their allocations as the most appropriate additional sites. It is this process that helps explain the failure of the Council to demonstrate these additional sites represent sustainable development.

This results lead assessment is evident in the manipulation of the site options at each spatial tier. In particular, Tier 8 of the September 2018 SAA covers Green Belt around Guildford or Godalming/Farncombe. This is a deviation from the earlier Sustainability Appraisals (SA), which informed the decision to allocate these sites, which defined Tier 8 sites as Green Belt around Guildford only. This change in approach coincided with the decision to include Aarons Hill, Godalming as an additional allocation. This site was previously assessed as a Tier 10 site.

However, the decision to include Tier 10 sites is not opposed by Miller Developments. In fact, we have emphasised the crucial role sites in these (Tier 10) villages can play in delivering much-needed homes within the early years of the plan period. Where the Council has erred is in the inconsistent and inaccurate approach to both site assessment and site selection.

Our Hearing Statement submitted to the Examination detailed flaws within the 2017 SA. This highlighted that the Council having prioritised three sites4 that had been assessed as ‘less sensitive’ Green Belt sites along with a further four ‘reasonable site options’5 that were within “higher sensitivity” Green Belt locations, deemed appropriate on the basis that these smaller sites that could be delivered in the first five years of the Plan. Three of these four sites now form the additional sites included at MM43-45 despite the Land Availability Assessment document concluding that they were contrary to the spatial strategy.

The SA uses only these as an example of Tier 10 sites capable of acting as a reasonable ‘variable’ from which to assess alternative strategies to the spatial strategy. This paints an inaccurate picture of how this alternative strategy could be implemented. In reality, there are other sites that are more sustainably located to the main urban centre of Guildford that can be provided in conjunction with, or as an alternative to the Council’s additional sites. The allocation of these sites would enable the Council to deliver a greater quantum of housing earlier in the Plan period. It is considered that the narrow assessment taken by the Council fails to give adequate consideration of these alternative options. These shortcomings highlight the failure of the Plan to be positively prepared or for the strategy to be truly justified.

In this context, land immediately to the south of Fairlands (comprising land at Hook Farm and Hunts Farm) has been completely overlooked as a reasonable alternative in the SA and the SAA despite it meeting the tests set out in the SA to a greater degree than any other of the Tier 10 sites.

footnotes
Land at Winds Ridge, ‘the Horsleys’, and land at Garlick’s Arch
5 Aldertons Farm, Land north east of Flexford, Land south of Halfway House, and Hornhatch Farm

The site lies immediately adjacent to the Fairlands settlement boundary, benefits from good road/public transport access to Guildford town centre and could be delivered in the first five years of the plan period. In addition, this proposal would alleviate a recognised local constraint by providing an alternative access and additional parking for Worplesdon Primary School. Furthermore, the Council’s Green Belt and Countryside Study Volume III states that Land Parcel H8 (incorporating land Hook Farm/Hunts Farm, which was identified as parcel H8C) provides opportunities to accommodate development without significantly compromising the purposes of the Green Belt. Parcel H8C was considered to be “surrounded by defensible boundaries” and achieved a higher sustainability rating (ranked 5th) when compared with the 41 Potential Development Areas surrounding villages.

The table included at Appendix 1 demonstrates how land south of Fairlands compared to the sites at Aldertons Farm, Flexford, and Hornhatch Farm, as well as alternative sites at Fairlands (H8A&B).

This contrast is reflected within the individual assessment of the sites in the 2017 SA. The table included at Appendix 2, noting that the three Fairlands sites were assessed as a whole and applying a quantitative scoring system to the traffic light assessment undertaken, demonstrates Fairlands as a more sustainable option than any of the sites being bought forward by the Council within these Main Modifications.

The September 2018 SAA recognises land at Hook Farm and Hunts Farm as less preferable to that to the west of Fairlands. This is totally at odds to the findings of the numerous assessments on sustainability undertaken by the Council and referenced above.

The rationale given for the site’s exclusion is its need for access to run across Common Land, with the legal process necessary to secure access giving rise to unforeseen delays to delivery. However, Surrey County Council (SCC) has agreed to the principle of securing an access across the common, subject to terms and pursuant to the development providing a community benefit solution in the form of an alternative access to Worplesdon Primary School. Such an alternative access is proposed as part of the development and has garnered the support from the school (see letter included at Appendix 3). Should the site benefit from an allocation with the inclusion of the primary school’s new access and parking, an expedited process can be undertaken in securing the necessary agreements to secure access over the Common Land. This is comparable to the Potential Development Areas at H8A&B, which are also reliant on access within Common Land but has not begun such negotiations with the County Council.

Paragraph 5.4.8 of the SAA excludes land west of Fairlands (though would equally apply to Hook Farm and Hunts) on the basis that a combination of one of the proposed Tier 8 sites alongside a development the size proposed for west of Fairlands (270 dwellings) would involve too great a reliance on the delivery of just two sites. The SAA goes on to immediately contradict itself by accepting that a reliance on two larger sites would equally apply to scenarios 1, 2 and 7, allowing these as potential strategies on the basis that these would align more closely to the spatial strategy. However, simply stating that the categorising of the Tier 8 sites as more closely in line to the spatial strategy than land at Fairlands is an inaccurate representation. Land at Hook Farm and Hunts Farm lies within 400m of Liddington Hall, was assessed as more sustainable within the 2017 SA, and provides the same accessibility options into major urban centres (in particular Guildford) as any of the Tier 8 sites.

The argument that an over-reliance on fewer sites increases risk also fails to paint a full picture. If fewer but larger sites are allocated, any delays to these sites would lead to a shortfall in delivery. However, equally the failure or delay in delivery of smaller sites would create a failure to meet the local housing need. What the SAA fails to recognise is the allocation of a greater number of sites increases the potential for individual sites to run into delivery problems. A greater number of sites results in the need for a greater number of planning applications, a reliance on a greater number of delivery agents and potentially a greater number of land deals, all of which increase the risk for delays to delivery within the early years of the Plan.
By contrast, Miller Developments represents a proven delivery partner, and controls the land at Hook Farm and Hunts Farm that is demonstrated as containing no absolute constraints to delivery, is in a highly sustainable location, and therefore can be delivered within the first five years of the Plan.

A further failure of the Council, which is reflected throughout its site selection process, is a failure to identify ‘exceptional circumstances’ to justify alterations to the Green Belt, as required by the NPPF (paragraph 83). The Plan makes one reference to exceptional circumstances6, stating that these exist in order to promote sustainable patterns of growth.

Miller Developments supports in principle the Council’s decision to make amendments to the Green Belt in order to accommodate sustainable development. In this regard, the tiered hierarchy within the SA prioritises the use of land outside of the Green Belt but recognises that in order to meet the housing and economic needs of the Borough, development within the Green Belt will be required. However, there has been a failure of the Council to seek opportunities for essential infrastructure that can be delivered in conjunction with sustainable housing development in order to form a more robust ‘exceptional circumstances’ case.

As demonstrated throughout our representations to the Plan, land at Hook Farm and Hunts Farm would deliver access to Worplesdon Primary School from the south, removing the majority of school traffic from the village; congestion within the village is a recognised and substantial local constraint. In this regard, SCC has confirmed (Appendix 4) that provision of a new access from the south is the only deliverable, comprehensive solution to the school traffic constraints in the village. Miller Developments has worked in conjunction with the school to design a new access and provide additional parking sufficient to alleviate existing congestion and future proof against expansion of the school in years to come.

This significant social benefit, combined with a housing development assessed by the Council as more sustainable than its competitors, represents considerably more robust ‘exceptional circumstances’ than is identified for other sites. Each of the additional proposed site allocations will provide solely a mix of housing tenures and site-specific mitigation necessary to make the proposed development acceptable in terms of its impact on the local environment.

5 Conclusions

Miller Developments supports the principle of Main Modifications being made to the Local Plan. However, there remain clear deficiencies which undermine its soundness. Though positive steps have been made, the Council has failed to address fundamental flaws in its ability to meet in full the objectively assessed needs of Borough in the early years of the Plan, and in particular the delivery of affordable housing.

The additional sites selected by the Council to address delivery within these early years would deliver scattered and unsustainable development that doesn’t accord with the Plan’s spatial strategy.

In fact, the Council’s strategy seeks to prioritise development which can best benefit from its most sustainable settlement, namely Guildford. With a need to allocate sites within the Green Belt around villages, it is logical that those villages that can best benefit from the services within Guildford (without reliance on the A3), should be prioritised. The allocations being promoted by the Council are not the best sites to meet this objective.

By contrast, the land at Hook Farm and Hunts Farm, based on the Council’s own assessments comprises the most sustainable location for development when compared to the sites proposed for allocation within the Main Modifications. Furthermore, as is recognised by SCC and Worplesdon Primary School, the site represents the only opportunity to provide a comprehensive access solution to the school, alleviating existing congestion within Fairlands and future proofing for further expansions. This provides a more robust ‘exceptional circumstances’ case than can be demonstrated by the proposed additional allocations within the Plan as drafted. Any need for a legal agreement to create access over Common Land has been confirmed by SCC as acceptable in principle, subject to terms and pursuant to the delivery of a solution to access to the primary school.

Accordingly, we respectfully request the Council to revisits its Main Modifications and look again at its own evidence in order to inform site allocations capable of being delivered in the first five years of the Plan.
We would be very grateful for confirmation that these representations have been received. We trust that the comments are helpful and clear, however if you require further clarity on any of the comments made please do not hesitate to contact us.

Attached documents: Miller Developments Rep_Redacted.pdf (7.2 MB)

Comment: MM2 - LPMM18/4934  Respondent: John Harrison 11157345  Agent:

MM2: The housing figures are now completely out of date following revisions by ONS. The GRA expert has demonstrated that about 360 homes per year would support the ambitious economic rate of growth proposed by the inspector. The 630 figure is based on inappropriate assumptions that inflate the numbers e.g. excessive student homes in the town and, low economic participation etc. Consequently proposals for development in the greenbelt need to be reconsidered. There is potential to remove at least one site. Any greenbelt development should be limited to those that will incorporate rail links.

MM2 and MM27 ID2 Not only does Guildford have exceptionally high levels of congestion, infrastructure more generally is close to capacity. This is particularly the case for electricity and there were a number of brief blackouts last winter; this is widely known amongst the major developers. Electricity supply does not even seem to come within the definition of infrastructure in ID2 which seems to be narrowly defined to that in respect of which contributions can be extracted from developers. The constraints are real and should be considered as a whole and the MM should be amended. Consequently it is particularly perverse for Guildford to provide homes for Woking when Guildford is more constrained and when the ONS revisions will also reduce significantly the amount of housing Woking requires. The whole issue needs to be examined again and accordingly the Inspector should reopen the enquiry.

Comment: MM2 - LPMM18/3843  Respondent: Andy Freebody 11160001  Agent:

Ref: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments:

1. I fully endorse the responses of The Clandon Society and the Guildford Residents’ Association and would like their responses to be registered as mine as well.

2. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:
   1. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
   2. There is too much reliance on A3 improvements and these are beyond the council’s control
   3. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
   4. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

3. I would like the Inspector to RE-EXAMINE the Local Plan because:
   1. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
3. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. **The Clandon Society Objections and Concerns Which I Share**

**The A247**

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247.

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

**I believe that traffic will increase significantly because:**

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic.
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247.
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh.
4. The development of 1800 houses at Gosden Hill.
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247.
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3.
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing.
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.

9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments.

10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. The Guildford Residents’ Association’s Objections and Concerns Which I Share

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.
MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

**Comment: MM2 - LPMM18/4294  Respondent: David Avery 11164225  Agent:**

I am writing to OBJECT to the local plan Main Modifications as outlined below and would strongly request that you LISTEN to those mostly effected and stop your crazy plan. We the residents of Send & Ripley et al repeatedly tell you to leave our villages alone but you never listen! Stop placing the councils financial kick-backs from developers above the wants and needs of local residents. You work for us and we pay your wages so, please LISTEN and ACT on what we ALL tell you, STOP!

Apparently this consultation only allows me to comment on the main modifications and so excludes the chance for me to object AGAIN to 40 houses and a travellers’ site on Send Hill, 60 houses at Clockbarn in Tannery Lane and a 25% increase in the size of the Send Business Centre despite the Wey Conservation area. Added to the other housing sites and industrial space such heavy concentration in one village, which could be more evenly shared with 40, is unreasonable. For the avoidance of doubt I still object again to these developments.

**Comment: MM2 - LPMM18/4655  Respondent: Bridge End Farm, Ockham (Julian and Nicola Harris) 11268769  Agent: CBRE Ltd (Phoebe Juggins)**

**Guildford Local Plan – Main Modifications Consultation**

Further to our engagement with and appearance at the Examination in Public in association with the Guildford Local Plan, on behalf of Land at Bridge End Farm (which is part of the wider site allocation for Former Wisley Airfield), we have taken this opportunity to provide representations with regard to the Main Modifications proposed to the Submission Local Plan.

CBRE acts for Julian Harris and Nicola King as Trustees of the J R Harris Discretionary Settlement, in respect of their landholdings ‘Land at Bridge End Farm’, which is included within the site allocation A35 Former Wisley Airfield.

CBRE is working on our clients’ behalf on the early stages of a planning application strategy including evidence base work and seasonal ecology surveys to ensure that a robust planning application can come forward on the site in due course.

Our response to the relevant proposed modifications is set out below.
We support the intention of the Local Plan to meet GBC’s objectively assessed housing needs and seek to adopt a plan which meets this requirement within the first five years of the plan period, in accordance with national planning policy.

We would seek to reiterate a point made at the Examination, that the site allocation at Former Wisley Airfield for 2,000 units, should be considered a minimum and that it is likely that the site will be able to offer a greater capacity than this, in accordance with the NPPF which seeks to make the most efficient use of land.

Comment: MM2 - LPMM18/3437  Respondent: Bewley Homes 11458241  Agent: Neame Sutton Limited (David Neame)

1.0 Instructions and Introduction

1.1 Neame Sutton Limited, Chartered Town Planners, is instructed by the Bewley Homes Plc (“Bewley Homes”) to prepare and submit representations in relation to the schedule of Main Modifications proposed by Guildford Borough Council (“the Council”) to the Guildford Borough Local Plan 2018 (“the Plan”).

1.2 This document covers the following matters:
- Section 2 Representations on the Main Modifications
- Section 3 Areas where further Modifications are required in order for the Plan to be found Sound

1.3 These Representations follow on from the Evidence presented by Bewley Homes in its Matters Statements and orally at the Examination, particularly in relation to the Matter 17 session dealing with the Ash and Tongham allocation (Policy A29).

1.4 For the avoidance of doubt Bewley Homes’ also supports in full the representations made by the Guildford Housing Forum, which it is a member.

1.5 The relevant Main Modification references are identified at the appropriate points within this document.

2.0 Representations on Main Modifications

(i) General Housing Requirement and Land Supply Matters

MM2 – Policy S2 – Spatial Strategy

MM46 – Appendix 0 Housing Trajectory

2.1 Bewley Homes is in full support of the representations submitted by the Guildford Housing Forum in relation to the housing requirement and general housing trajectory matters. It is clear that the Council has not gone far enough to address the problem of early years delivery in order to be able to maintain a robust 5-year housing land supply in the early stages of the Plan period.

2.2 It is clear from a review of the Sustainability Appraisal (“SA”) Addendum1 that the Council has in fact only pursued the approach it set out to the Inspector at the Examination hearing sessions in response to his note ID-006, namely to introduce a limited number of further Green Belt allocations.

2.3 The issue with the approach taken by the Council is that it has failed to properly consider all reasonable alternative options for boosting early years supply. Additionally the Council has not sought to adjust or update its housing delivery...
trajectory to take account of key changes in circumstance, particularly in relation to Wisley, which as the Forum identifies will result in delay to the delivery of housing completions on that site.

2.4 In Bewley Homes’ view the Council has overlooked two key sources of supply that could deliver easily within the early years of the Plan period:

2.4.1 Ash and Tongham Allocation – As presented in Bewley Homes’ Matters Statement and in oral evidence at the hearing session it is clear that the Ash and Tongham allocation area has potential to deliver between 130 – 300 additional dwellings in the first five years of the Plan period 2.

2.4.2 The Council has simply dismissed the concept of additional housing provision within the Ash and Tongham area without any sound reason for doing so. The Council’s suggestion that the market cannot absorb further housing in this area is simply unsupported by any evidence and does not amount to a reason to resist making best use of one of the most sustainable locations in the Borough and the only strategic allocation outside of the Green Belt.

2.4.3 Selective Releases Around Green Belt Villages – The approach the Council has taken is simply to add in a small number of locations that it had previously considered without properly considering all available options in a holistic manner. The consequence of this approach is that the Council has overlooked suitable and sustainable development opportunities around other Green Belt villages that would a) accord with the spatial strategy set out in the Plan b) avoid any impact with the A3 RIS and c) could deliver housing early in the Plan period.

2.4.4 Two such settlements are Horsley and Effingham. Both of these locations have capacity to accommodate further smaller scale residential development in a sustainable manner that would make a positive contribution to delivery in the early years of the Plan period.

2.4.5 PDL in the Green Belt – The Council has in fact reduced the capacity it envisages from this component of its supply. Whilst the reason for this is set out in the SA3 the Council has merely reacted to a change in circumstance for an individual site rather than undertaking a reassessment of the potential for delivery from this supply source as a whole. In Bewley Homes’ view there is greater potential from this source in suitable and sustainable locations that could again make a meaningful contribution to early years delivery. In particular an opportunity exists in Woodstreet Village4 that the Council has not properly explored. Although included in the PDL category the site in question has a greater capacity than the Council has allowed for in its supply.

2.5 As a consequence of the above points it is Bewley Homes’ view that the Council has not properly considered the Inspector’s interim findings that required a full review of all options to deal with early years delivery and ensure a robust housing delivery strategy. It is clear that there are options the Council has simply chosen to ignore and consequently opportunities have been missed that would make a valuable contribution to the early years supply.

Attached documents:

Comment: MM2 - LPMM18/6014  Respondent: Karen Lord 11550561  Agent:

I am finding the use of green belt for special circumstances in Send, in comparison to other areas out of balance. We are a village and would welcome this generation to maintain this. We feel our 7000+ objections to the earlier plan have been ignored and even more housing etc added

POLICY S2
At the public examination the figure for Guildford Borough Council, the housing need used by the inspector was 789 per year. It seems this and was exaggerated as it included Surrey University Student figures. can we see how these figures were calculated by the consultants and GBC.

Attached documents:
Response to GBC Local Plan Revisions

I wish to OBJECT to the local plan changes for the following reasons:

MM2

The housing target is wrong and additional research needs undertaking so the latest ONS figures and household projections can be taken into account. The figure appears to be nearer 300 than the 670 GBC state.

There should be no requirement for GBC to take WBC unmet need. GBC has not followed its own strategy that requires development of Brownfield urban sites before developing in villages or the Green Belt.

I have detailed where 500-500 residential units CAN BE BUILT ON URBAN BROWNFIELD SITES WITHIN GUILDFORD yet GBC chose not to discuss these proposals which would be for first time buyers and those on the housing list (via a not-for-profit vehicle).

Attached documents:

Local Plan: Consultation on Modifications

I refer to the proposed modifications to the Local Plan recently published by Guildford Borough Council and have the following concerns which I would ask the Council/Planning Inspector to address before taking the Plan further.

Policy MM2

The housing need is stated to be 630 dwellings per annum for Guildford with a further 42 per annum to take up the shortfall from the plans put in Woking Borough Council. My understanding is that the figure for Guildford exceeds the figures which would be derived from the latest data from the Office for National Statistics and the new Government formula. In particular, it overstates the number of homes required for the student population and inflates the housing requirement by assuming a pessimistic rate of local economic engagement by residents.

Neil MacDonald, the expert advising Guildford Residents Association, has demonstrated that about 360 homes a year would support the economic growth rate proposed by the Inspector.

I am concerned that the Council, and/or the Inspector, use the most up-to-date data as the basis for the Local Plan and consider Neil MacDonald’s conclusions very carefully before finalising the plan. A lower housing need could lead to at least one of the Green Belt areas being preserved to improve the quality of life for of all those who live and/or work in Guildford.

It also seems perverse for Guildford to take up the slack in Woking’s Local Plan, when it results in Guildford sacrificing Green Belt land to housing development from out of area. I would also question whether Woking’s needs have been re-assessed (as Guildford’s should be) to determine whether their housing needs are still as they were when their plan was submitted.

Attached documents:
Comment: MM2 - LPMM18/4032  Respondent: Dandara Ltd (John Richards) 12062017  Agent:

Introduction

These representations will comment solely on amendments made to the 2017 submission version Guildford Borough Local Plan: Strategy and Sites (SVLP) as 2018 Main Modifications (MMLP) following the examination hearing sessions.

Policy S2 – Spatial Development Strategy (MM2 Housing Target)

The SVLP contained a housing target of 12,426 dwellings over a 19 year Plan period (2015-34) equating to 654 dpa excluding any Duty to Cooperate figures. The MMLP reduces the housing target for Guildford Borough to 630 dpa. The overall housing target contained within the Plan does however undergo a marginal overall increase to 12,600 dwellings, when unmet housing need of 42 dpa originating from Woking Borough is taken into consideration.

The Guildford Borough OAN figure of 630 dpa arose following the conclusions of the Inspector regarding OAN within examination document ref. ID/6. We have the following comments regarding the inputs to this 630 dpa figure:

Demographic Starting Point – At the outset of the examination hearing sessions, the Council published a paper entitled ‘Implications of 2016-based SNPP for Guildford’ (ref. LPSS-004). This set out the differences in estimated household needs associated with the 2016-based SNPP compared within their 2014-based predecessor. The ‘West Surrey Strategic Housing Market Assessment Addendum Report’ (2017), which was based on the 2014 SNPP, informed the SVLP.

The 2016-based SNPP paper concluded in Table 5 that estimated housing need – being the ‘demographic starting point’ - in Guildford Borough associated with the 2014 set equated to 557 dpa which reduced significantly when compared with the 2016 set to 422 dpa (annual difference of 135 dpa). There is clearly a significant difference between the two sets of SNPP data across the 19 year Plan period equating to a reduction of 2,565 dwellings. The application of the 2016-based SNPP figure appeared to be indorsed by the Inspector in ref. ID/6 with para. 5 stating that “together, these point towards an OAN of 630 dpa. This represents a considerable uplift over the demographic starting point of 422 dpa”. The demographic starting point contained within the 2017 SHMA addendum was 552 dpa.

Whilst the ‘Implications of 2016-based SNPP for Guildford’ paper made some informed assumptions regarding the translation of the 2016-based SNPP into household growth and housing need, we note that following the publication of the 2016-based household projections, the Inspector has wrote to the Council to ask them to “comment on the latest version of the Household Projections and their implication for OAN” (ref. ID/10).

It is also important that the Inspector makes the Council aware that the ONS intends to publish an alternative version of the 2016-based household projections on 3rd December 2018. This is explained at the following link - https://www.ons.gov.uk/peoplepopulationandcommunity/populationandmigration/populationprojections/methodologies/methodologyusedtoproducehouseholdprojectionsforengland2016based#householdrepresentative-rates.

The ONS explain that on 2nd December 2018 they will publish a set of variant 2016-based household projections in which household formation rates for younger adults (those aged 25 to 44 years) are higher. The purpose of this variant would be to illustrate the uncertainty in the projections around the future household formation patterns of this age group. It is a response by the ONS to concerns raised regarding the revised methodological approach of establishing the 2016-based set which, unlike the 2014-based projections, which incorporated data from as far back as the 1971 census, are compiled with statistics that only go back to 2001. This change in methodology is particularly telling for Authorities such as Guildford who, due to ‘policy on’ constraints to development such as Green Belt, have seen housing delivery supressed, with annual housing completions over the decade 07/08 to 16/17 only exceeding 300 dpa on two occasions being 07/08 and 15/16 (2017 AMR, Table 1).

The 2016-based variant is a response by the ONS to justified concerns that the new methodology, by only going back to 2001, effectively ‘bakes in’ the adverse consequences to household formation, which is manifested in the age-group 25-44, of housing under-delivery during this period. The Inspector should therefore await the publication of the
2016-based variant and consider its implications for Guildford and whether a demographic starting point of 422 dpa is appropriate or robust. It is notable that the 'Implications of 2016-based SNPP for Guildford' paper suggests at table 2 that if an uplift is made to take account of higher household formation rates, the demographic starting point would increase from 422 to 475 (n.b. this adjustment considers only the 25-34 age bracket and it is reasonable to assume that if the ONS bracket of 25-44 is used instead, it would push the figure even closer to the original 2014-based demographic starting point of 552 dpa).

Dandara Ltd consider that given the low levels of housing delivery experienced in Guildford Borough over the past decade, averaging only 258 dpa, which is a result of ‘policy on’ constraints to growth, rather than lack of demand or developer appetite, the Inspector should give considerable weight to the ONS 2016-based household projection variant which is being published specifically for areas which will have experienced artificially suppressed household formation rates since 2001. Regardless of which iteration of the 2016-based projections the Council utilises, it is imperative that these are used to update the 2015 SHMA as a core evidence base document, applying a consistent methodological approach, rather than being considered in isolation.

Economic Uplift

Dandara Ltd supports the conclusion of the Inspector at para. 3 of ID/6 that “the SHMA Addendum growth assumption of 0.7% pa thus appears on the low side and I consider that a realistic and cautious approach would be to assume employment growth of 0.8% pa – lower than past trends and indeed lower than the highest of the economic forecasts, but higher than the blended average of the forecasts”. This uplift should be applied to the 2016-based household projection variant when published in December as part of a comprehensive update to the SHMA.

Student Numbers

Dandara Ltd supports the conclusion of the Inspector at para. 4 of ID/6 that “as regards student numbers, it is predicted that 23 dpa is required to compensate for added for predicted further incursion of students into the housing market”. Again, this uplift, alongside that to support economic growth, should be applied to the 2016-based household projection variant as part of a comprehensive update to the SHMA.

Market Signals

There was broad consensus during the examination hearing sessions that Guildford experiences one of the most challenging median workplace-based affordability ratios in the country. This is borne out both over the long-term, increasing from 4.83 in 1997 to 12.53 in 2017, and looking at relatively sharp increases over the shorter term, from 9.59 in 2012 to 12.53 in 2017. There is thus a demonstrable pattern of worsening affordability in Guildford over the long and short term.

The Council has recognised, within para. 29 of LPSS-010 that if one were to apply the standard methodology to the demographic starting point, then the 40% cap would automatically apply given that the overall uplift would be 53%. Whilst the Guildford Local Plan is not being examined under the auspices of the 2018 NPPF, it nevertheless provides an important steer regarding the direction of Government policy in applying a capped 40% adjustment to the demographic starting point where appropriate to address affordability.

The view of the Council however is that uplift applied to the demographic starting point to support economic growth subsumes an increase for market signals and effectively addresses both potential adjustments. The Inspector is aware of competing opinions on this matter put forward during the hearing sessions and we will not look to add to this debate other than to refer to updated Planning Practice Guidance on 'Housing Need Assessment’. This explains the practical application of the standard method which comprises establishing the demographic starting point and then applying an adjustment to take account of affordability that may be capped.

Affordability is therefore central to Government policy with the PPG explaining that “the affordability adjustment, at the level proposed, is applied in order to start to address the affordability of homes, and is intended to slow down the rate at which local affordability ratios are increasing” (para: 006, Ref. ID: 2a-006-20180913). This is not a new policy approach with the 2012 NPPF looking to boost housing delivery in para. 47 albeit the specific focus on readjusting affordability ratios provides more detail to the practical application.
What the PPG does tell us is that there will be occasions when a higher housing figure than the standard method needs to be considered (para: 010, ref ID: 2a-010-20180913). Note the use of the word ‘needs’ to be considered’ rather than ‘should be considered’. The PPG provides various examples which includes, “where growth strategies are in place, particularly where those growth strategies identify that additional housing above historic trends is needed to support growth”.

The Inspector will be aware from the hearing sessions of various reports which look at the level of housing growth needed to achieve a betterment in affordability ratios. Given the thrust of Government policy regarding improvements to affordability, and the specific application of median workplace-based affordability ratios under the standard method, it is imperative that the Inspector satisfies himself that if any adjustment to the demographic starting point to address affordability is subsumed within an adjustment made to support economic growth, that such an adjustment would have a positive impact on narrowing the existing chasm between house prices and earnings in Guildford.

The Inspector has suggested within ref. ID/6 that “the appropriate approach is to base adjustments on known factors and monitor market signals, and if affordability trends continue to worsen, take appropriate steps in the next plan review”. It is questionable whether this approach, which looks to avoid a worsening of affordability ratios rather than seeking to support a Plan which positively improves the differential, is in line with Government policy. At the very least, the Inspector should satisfy himself that if any adjustment to the demographic starting point is included in the Plan is accompanied by evidence that demonstrates that such a figure would at the very least ‘peg’ affordability ratios at 2017 levels. Such work has not been undertaken by the Council and indeed such evidence from participants suggests a target of between 800 dpa and in excess of 1,000 dpa would be required simply to avoid a worsening in affordability ratios (see REP-8944737-002 as an example).

The Inspector in ID/6 stated that “… the higher figures represented by these approaches [to improve affordability ratios] would result in an OAN a long way in excess of the reduced demographic starting point and they need to be treated with a degree of caution”. Whilst we agree with the sentiment, no evidence has been provided to demonstrate that an additional uplift to the demographic starting point to improve affordability would result in deliverability concerns. It is also notable that Option 8 of the SA assessed the sustainability implications of an OAN over 800 dpa and concluded it was deliverable without unacceptable harm resulting.

Affordable Housing

The SHMA addendum at para. 5.20 identifies 517 households per annum who require support in meeting their housing needs which, with 40% affordable housing delivery, would notionally require a housing target of 1,293 dpa to meet affordable housing need in full. This is a further indicator that a positive upward adjustment to the demographic starting point is required to positively address affordable housing need unless evidence can be provided that this cannot sustainably be achieved including market demand.

Policy S2 Spatial Development Strategy Conclusion (MM2 Housing Target)

These representations recommend that the Inspector considers the implications of the variant 2016- based household projections, due to be published by the ONS in December 2018, upon the housing target for Guildford Borough. These variants are directly relevant to Guildford, having been produced in response to justified criticism that the new methodology applied to the 2016-base projections, which go back to only the 2001 census, will have ‘built in’ periods where housing delivery has been suppressed, with knock-on implications to the ability of new households to form. It is considered that the variant 2016-based household projections should represent the demographic starting point for Guildford assuming they form part of a full SHMA update consistent with the methodology applied within the 2015 SHMA and latter addendum.

This demographic starting point should then apply an uplift to support economic growth and the student population recommended within the Inspector’s note ID/6. It is however considered fundamental, given the clear emphasis of Government policy to improve affordability having specific regard to affordability ratios, that if any uplift to improve chronic affordability within Guildford is subsumed within the economic uplift, that evidence is provided to demonstrate that over the Plan period, the 2017 median affordability ratio for the Borough will reduce or will at least be ‘pegged’ from 12.53. As it stands, the Inspector does not have evidence in front of him to satisfy himself that this is the case with much evidence to the contrary suggesting that the housing target established within Policy S2 of the MMLP would result in a
significant worsening in affordability ratios, even at inflated 2017 levels, with knock-on implications to household formation, homelessness and overcrowding.

Policy S2 – Spatial Development Strategy (MM2 Unmet Need)

Dandara Ltd supports the principle of the Local Plan including an allowance of 42 dpa to address unmet need arising from Woking Borough and as set out in the Inspector’s document ID/6.

Policy S2 – Spatial Development Strategy (MM2 Stepped Trajectory)

Dandara Ltd supports the deletion of the stepped trajectory formerly included within Policy S2. The rationale for the deletion of the stepped trajectory approach given by the Inspector at para. 14 of ID/6 is endorsed.

Para. 4.1.10 – Approach to Calculating Five Year Housing Land Supply (MM2)

Para. 4.1.10 of the MMLP explains that following the deletion of the stepped trajectory, the five year housing land supply will be aggregated across the Plan period, with an increase from 2019 to take into account unmet need arising from Woking Borough. Notwithstanding concerns regarding the overall housing target set out in Policy S2 which is the basis for calculating five year supply, this approach is supported. Dandara Ltd also supports the recognition within para. 4.1.9b that the application of a 20% buffer is appropriate given Guildford’s persistent record of under-delivery of housing.

Dandara Ltd fundamentally objects to the use of the ‘Liverpool’ methodology to address historic housing delivery shortfall and disagrees with the conclusion of the Inspector in para. 14 of document ref. ID/6 that “I am prepared to accept that the Liverpool methodology on its own is valid, given the scale of the strategic allocations and the infrastructure issues associated with them”. This conclusion is not in accordance with national policy as set out within PPG:

“The level of deficit or shortfall will need to be calculated from the base date of the adopted plan and should be added to the plan requirements for the next 5 year period (the Sedgefield approach). If a strategic policy-making authority wishes to deal with past under delivery over a longer period, then a case may be made as part of the plan-making and examination process rather than on a case by case basis on appeal.

Where strategic policy-making authorities are unable to address past shortfalls over a 5 year period due to their scale, they may need to reconsider their approach to bringing land forward and the assumptions which they make” (para: 044, ref ID: 3-044-20180913).

Whilst the PPG recognises that there is an opportunity associated with Plan making for Local Authorities to deal with past under-delivery through the ‘Liverpool’ approach, this must be considered in the context of an overriding preference for the use of the ‘Sedgefield’ approach unless this is not able to reinstate a five year supply due to the scale of the shortfall.

As we will go on to discuss, the MMLP has introduced five new housing allocations, three of which are located within ‘high sensitivity Green Belt’. This is considered to represent a significant shift in the Council’s policy to selecting housing sites which previously rejected all land located within high sensitivity Green Belt regardless of whether the site was identified as a potential development area (PDA) within the Green Belt and Countryside Study (GBCS).

These representations will go on to explain that the decision of the Council to allocate land for housing falling within high sensitivity Green Belt introduces the potential for a material number of small and medium scale sites, which were previously rejected for allocation solely for falling within high sensitivity Green Belt, to be considered for housing. To ensure that the site selection process is consistent and transparent, it is imperative that the Council revisit all sites previously rejected due to falling within high sensitivity Green Belt, especially if previously identified as PDAs.

Looking specifically at five year housing land supply, by accepting that high sensitivity Green Belt is no longer a finite constraint for land accommodating new housing, the Council must commit itself to reassessing all previously rejected high sensitivity Green Belt sites which would undoubtedly identify other sources of housing supply which could contribute to making-up past delivery shortfall within the first five years as per ‘Sedgefield’. This fundamental shift in approach to considering high sensitivity Green Belt parcels for development means that the Inspector cannot be satisfied.
that the Council is unable to accommodate past under-delivery within the first five years, especially given the provisions of the PPG which suggests very clearly that it is for an Authority to demonstrate that it is the scale of the under-delivery that prevents a five year supply being reinstated applying ‘Sedgefield’. The Council has fundamentally failed to demonstrate this.

Appendix 0 – Housing Trajectory (MM46)

Notwithstanding our concerns regarding the Policy S2 housing target, we have had regard to the housing trajectory set out within Appendix 0 of the MMLP in the context of the justification for applying the ‘Liverpool’ methodology to historic under-delivery and the availability of additional land previously excluded due to falling within high sensitivity Green Belt.

Over the first four pre-adoption years of the Plan period, a total of 1,264 dwellings were delivered (2015-19). This represents a shortfall of – 1,256 against the MMLP Policy S2 housing target of 630 dpa (630 x 4 = 2,520 – 1,264). Over the next five year period (2019-24) the trajectory shows the delivery of 4,974 new homes. The annual housing target from 2019 equates to 672 dpa giving a total target of 3,360 over the five year period which increases to 4,032 adding the 20% buffer (630 x 42 = 25,800 unmet need x 5 x 1.2).

If Guildford were to deliver their – 1,256 shortfall over the next five year period as required by PPG, they would need to deliver the following:

Baseline Target = 672 x 5 = 3,360;
Baseline plus Under-Delivery = 3,360 + 1,256 = 4,616 Baseline plus Under-Delivery plus 20% = 5,539.

The trajectory shows total supply over the period 2019-24 of 4,974 which is only - 565 dwellings short of reinstating a five year housing land supply applying ‘Sedgefield’. Given that the Council responded to the Inspector’s ID/6 note on OAN and five year supply on 27th June 2018, being only five days following the issuing of ID/6, setting out five additional sources of housing supply, three of which were on high sensitivity Green Belt, it is difficult to conclude that additional sources of supply could not be found. Put simply, if the Council identified 805 new homes in only five days, imagine what could be achieved if they undertook a proper, considered and consistent assessment of sites previously rejected due to falling within high sensitivity Green Belt.

The Inspector simply cannot be satisfied that the Council is unable to reinstate a five year housing land supply applying the Sedgefield methodology as required by PPG. This is for the following principal reasons:

• Applying the housing target within Policy S2, the shortfall is only -565 dwellings;
• In response to the Inspector’s note ID/6, the Council identified additional sites to accommodate a further 805 homes within five days of receipt;
• Three of these sites, delivering 385 new homes, are located on high sensitivity Green Belt which was previously considered a finite constraint and is thus a ‘game changer’ in respect of the Council identifying additional sources of housing land, especially those identified as PDAs within the GBCS;
• The Council has not sought to revisit their site selection process for land previously rejected due to falling within higher sensitivity Green Belt;
• We know for sites such as that being promoted by Dandara Ltd on land off Shere Road, West Horsley, which is medium scale and available within the next five years, that the only reason for rejection related to it falling within higher sensitivity Green Belt which is no longer a finite

The Inspector cannot therefore be satisfied that historic under-supply cannot be addressed within the first five years of the Plan period post adoption as required by PPG and should request, as a minimum, that the Council undertakes a review of all potential housing sites previously rejected solely due to falling within higher sensitivity Green Belt which is no longer treated as a finite constraint by the MMLP.

Main Modifications Local Plan Part 2: Sites (MM39, MM43, MM44, MM45)
Part 2 ‘Sites’ of the MMLP proposes to introduce five additional sources of housing supply alongside increasing capacity on two existing allocations. The purpose of these additional sources of housing supply is to allow the Council to reinstate a five year housing land supply on adoption of the Plan following the deletion at MMLP stage of the Policy S2 stepped trajectory as recommended by the Inspector – albeit applying the ‘Liverpool’ methodology. These representations specifically focus on the introduction of four additional Greenfield sites (n.b. Dandara Ltd’s omission site off Shere Road, West Horsley is included for comparison purposes).

</table>

There are three particularly important themes to draw from the above schedule:

**High Sensitivity Green Belt** - The SVLP proposed no sites for housing allocation that fell within ‘higher sensitivity’ Green Belt as identified within the GBCS. This approach was explained at para. 4.123 of the December 2017 ‘Housing Delivery’ Topic Paper, "as a starting position we have sought to protect land which has been assessed as high sensitivity Green Belt. We therefore consider it appropriate to exclude in the first instance any sites that fall within a red (high sensitivity) land parcel” (LPSS-SD-TP-004). The MMLP now proposes for allocation three sites which are located within ‘high sensitivity’ Green Belt, delivering a total of 385 homes;

**Potential Development Areas** – The GBCS identifies a series of ‘potential development areas’ (PDAs) which ‘... are identified on the basis that, should exceptional circumstances warrant amending the Green Belt boundary in order to accommodate growth that could not be suitably provided elsewhere, development here would not harm the main purposes
for allocation land at Aaron’s Hill, Godalming which was not identified as a PDA within the GBCS. This is despite the GBCS assessing the parcel within which the land sits, parcel F18 but then taking the informed decision, consistent with the methodological approach across the Borough’s Green Belt, not to identify a PDA;

**Sustainability** – An important component of the methodology underpinning the GBCS was to consider the sustainability credentials of PDAs alongside the contribution that the land made to Green Belt purposes. The final column in the table above reproduces the GBCS sustainability score for each PDA. The first score covers overall sustainability in respect of accessibility to shops, services and public transport modes with the second score covering sustainability in specific respect of access to recreational facilities. Generally, the higher the score the more sustainable the PDA.

It is helpful to revisit the original Land Availability Assessment (2016) which accompanied the SVLP as a core evidence base document. The reasons given by the Council for the exclusion of all sites, with the exception of Alderton’s Farm, Send which is located within ‘medium sensitivity’ Green Belt, is that the sites fell within ‘high sensitivity’ Green Belt parcels. This reason for rejection is consistent with the extract reproduced above from para. 4.123 of the December 2017 ‘Housing Delivery’ Topic Paper.

Plan. The site was identified in the Green Belt and Countryside Study but is located within high sensitivity Green Belt.

Likewise, it is helpful to revisit the PDA assessment for each site contained within the original GBCS which accompanied the SVLP with the exception of Aaron’s Hill, Godalming which was not identified as a PDA.

Whilst Dandara Ltd disagreed with the approach, the SVLP was at least consistent in not proposing for allocation any sites falling within ‘high sensitivity’ Green Belt parcels, regardless of whether they were originally identified as PDAs within the GBCS. The MMLP departs from this site selection process by allocating three sites for housing, delivering 385 homes, which fall within ‘high sensitivity’ Green Belt.

This approach is unsound, failing the ‘justified’ test, as it cannot be demonstrated that the additional housing sites introduced within the MMLP represent the most appropriate strategy, when considered against the reasonable alternatives. Taking Dandara Ltd’s omission site off Shere Road, West Horsley as an example, the selection of the
additional MMLP housing sites is considered unjustified and unevidenced having regard to the evidence base underpinning the SVLP.

Land off Shere Road, West Horsley, as set out within the LAA extract reproduced above, was only discounted for allocation due to falling within ‘high sensitivity’ Green Belt. The LAA assessment for the site was identical to the four Greenfield MMLP proposed housing sites. The Council has provided absolutely no justification to explain why they did not revisit all PDAs previously excluded due to falling within ‘high sensitivity’ Green Belt for consideration for allocation required to address housing trajectory concerns raised by the Inspector. Instead, within five days of receipt of the Inspector’s letter ID/6, the Council had proposed for allocation the MM additional Greenfield sites with no attempt to consider whether they represented the most appropriate PDAs for allocation having regard to the evidence base as a whole.

Taking sustainability as an example, the whole purpose of the GBCS including an objective assessment of the sustainability credentials accruing to each PDA was to allow the Council to take into consideration the overriding NPPF objective of promoting sustainable patterns of development associated with Green Belt release. However, as can be seen from the schedule above, land off Shere Road, West Horsley has a higher core sustainability score than both Alderton’s Farm and Glaziers Lane and outperforms all sites when considering access to recreational facilities. It is therefore an inherently sustainable site which out-performs at least two of the proposed MMLP allocations.

Fundamentally, if the Council is to make the decision to no longer treat land identified as ‘high sensitivity’ Green Belt as a finite constraint, they should reconsider for development all PDAs previously excluded from consideration due to falling within ‘high sensitivity’ Green Belt. Taking land off Shere Road, West Horsley as an example, a site which was only excluded from the Local Plan site selection process due to falling within ‘high sensitivity’ Green Belt, it is imperative that this land is reassessed on a level playing field, especially given the fact that the MMLP is proposing for allocation one site not even identified as a PDA within the GBCS (Aron’s Hill) and at least two that performed worse from a sustainability perspective (Alderton’s Farm and Glaziers Lane).

Conclusion

It is considered that the MMLP is required to identify additional sources of housing supply in order to reinstate a five year land supply applying the ‘Sedgefield’ methodology as required by PPG and taking into account upcoming ONS variant 2016-based household projections which are particularly applicable to Authorities such as Guildford where household formation has been suppressed since 2001 due to ‘policy on’ factors. In addition, the Inspector within ID/6 cannot be satisfied that the Policy S2 housing target is able to engender a meaningful improvement to affordability ratios, the betterment of which are a key Government objective enshrined within the standard method. There is at present no evidence in front of the Inspector that demonstrates that 630 dpa would act to reduce, or even ‘pin’, the unsustainable affordability ratio of 12.53 experienced across the Borough.

The Council has made an initially positive move from the SVLP by recognising that ‘high sensitivity’ Green Belt parcels do not represent a finite constraint to development where they contain PDAs identified within the GBCS. However, it is important that the Council recognises that there are a range of sites that were only excluded from the Local Plan site selection process due to falling within ‘high sensitivity’ Green Belt. It is imperative therefore that the Council revisits all PDAs previously ruled-out as ‘high sensitivity’ Green Belt in a transparent, consistent and open manner, especially where the comparison exercise undertaken above suggests that there are more sustainable PDAs available than those now included within the MMLP, taking into account the sustainability evidence included in the GBCS.

If the Council were able to identify four additional Greenfield sites within five days of receipt of ID/6, the Inspector must ask himself whether he can possibly be satisfied that the Council has undertaken a sound, robust assessment of omission sites in a consistent and transparent manner in order to meet full OAN, including meaningful improvements to affordability ratios, and to reinstate a five year housing land supply using the Sedgefield methodology as required by PPG. Dandara Ltd contend that the Council has failed to properly consider all omission sites previously excluded from consideration due to falling within ‘high sensitivity’ Green Belt and cannot demonstrate that those chosen represent the most appropriate strategy when compared against reasonable alternatives. By no longer considering ‘high sensitivity’ Green Belt as a finite constraint, the Council has made available a raft of PDAs which should all be reconsidered on an equitable basis to ensure that those allocations proposed within the MMMs are the most appropriate from a Green Belt purpose, sustainability, infrastructure and delivery perspective.
Comment: MM2 - LPMM18/3358  Respondent: Michael Forster 14177217  Agent:

The Local Plan is unsound because:

1. The council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
2. Housing numbers should reflect the latest ONS figures and projections. The public hearings should be re-opened on this subject to allow re-examination

Comment: MM2 - LPMM18/2474  Respondent: Ian Macpherson 14177313  Agent:

OBJECTION Amendment MM2

This is a reasoned objection by Ian Macpherson on the 2018 revisions to the 2017 draft Submission Local Plan.

My prime objection is over housing numbers [ your Paragraph MM2]. Guildford now proposes 650 [ or thereabouts] dwellings per year. I am told that expert calculations carried out on behalf of the GRA [Guildford Residents Associations]suggest an actual need of 360 homes per year. Consequently GRA , I am also told, is in process of challenging this amendment to the present draft.

Meanwhile the ONS has published its own estimates. The ONS figures of about 300 households a year [Household projections in England -2016 base]. are, given the guesswork in any forward estimating, much the same as GRA. Effectively ONS provides updated figures for the Government's Standard Method.

It is understood that the Government is in process of reconsidering the calculation of the Standard Method and will publish consultations 'after Christmas', which, even in draft, could provide a baseline.

Meanwhile, a substantial discrepancy

The National Policy position at the moment, as I understand it, is that Planning Authorities should hold to previous calculations where a draft Plan has been submitted.

However this is untenable in common sense [ and probably in law] where there is a discrepancy as large as seems to be the case here, and where the consequences involve removal of substantial and important areas of land from the Green Belt.

The exemplar of this is the proposal for Gosden Hill Farm. Gosden Hill is not 'rubbish' Green Belt - instead [NPPF 2018 para 170] it is central to a 'valued landscape' - that is, the view from the much travelled A3 across to the North Downs. There can be few landscapes of this kind that are viewed by more people. To alienate this does indeed require 'exceptional circumstances'.

Legally, Ministers and other Authorities are nowadays be obliged to show reasons, and this would be tricky given the doubts over the housing figures that provide the 'exceptional circumstances'. They are simply 'not sound' at the moment.
I suggest that the Council must, in the circumstances, ask the Inspector to re-convene the Examination into the Plan, so that this central matter can be thrashed out and agreed in public.

It would be sensible to re-convene after the Government has published at least a first draft of the revised methodology.

Comment: MM2 - LPMM18/4759  Respondent: Katherine Pyne 15057889  Agent:

POLICY S2

• I object to the way the GBC uses the word ‘need’ in place of demand when promoting house building requirements in this area.

• I object that the figure for Guildford Borough housing need used by the Inspector was 789 per annum. This has been discredited as shown to be a high over-estimate and therefore is an unreliable and irrelevant basis on which to plan housing for the area.

• I object that GBC is using failing to acknowledge and amend their discredited figure of 789 per annum when Barton Willmore – a respected consultancy – has said that the correct figure should be 431.

• I object that GBC is not considering relevant data when proposing housing need and this will impact on and encourage excessive development in Send and destroy our village and its character.

• I object that GBC is proposing to amend its housing need by considering September data from the OFFICE FOR NATIONAL STATISTICS which suggests that appropriate growth for Guildford Borough can be achieved with 460 houses a year.

• I object that GBC fails to take into account publicly available data which proposes a much lower number of housing need for our borough and village and - in the face of sustained and numerous objections from residents - instead proposes numbers and developments which would only meet the needs of housebuilders and developers.

I am writing to object to the proposed travellers site and 40 house on Send hill
Not to mention all the other prospered plan such as MM44 & MM41/MM9/MM42/MM48
This was once a peaceful and picturesque little village that has slowly been eroded and destroyed by greedy and thoughtless developers
I have lived in send for 20 years and it is sickening and sad to see it being over developed
So I strongly object to the plans to specified above

Comment: MM2 - LPMM18/1336  Respondent: Alison Turner 15098945  Agent:

It is proposed to put a gypsy camp in send hill, opposite winds ridge. The proposed land is Green Belt, it is also in a very pretty, quiet and [Response has been redacted due to statements being considered contrary to the Council’s duty under the Equalities Act 2010 to eliminate discrimination, harassment, victimisation against persons with a protected characteristic; and to foster good relations between persons with a protected characteristic and persons who do not share it]. This proposal is absurd:
1. Green Belt land
2. [Response has been redacted due to statements being considered contrary to the Council’s duty under the Equalities Act 2010 to eliminate discrimination, harassment, victimisation against persons with a protected characteristic; and to foster good relations between persons with a protected characteristic and persons who do not share it]
3. [Response has been redacted due to statements being considered contrary to the Council’s duty under the Equalities Act 2010 to eliminate discrimination, harassment, victimisation against persons with a protected characteristic; and to foster good relations between persons with a protected characteristic and persons who do not share it]
4. [Response has been redacted due to statements being considered contrary to the Council’s duty under the Equalities Act 2010 to eliminate discrimination, harassment, victimisation against persons with a protected characteristic; and to foster good relations between persons with a protected characteristic and persons who do not share it]
5. There will be an ever change of travellers coming and going, meaning noise and disturbance in Send Hill and Winds Ridge. The rolling change will mean [Response has been redacted due to statements being considered contrary to the Council’s duty under the Equalities Act 2010 to eliminate discrimination, harassment, victimisation against persons with a protected characteristic; and to foster good relations between persons with a protected characteristic and persons who do not share it]
6. Send Hill is set within the countryside and on a narrow country road with wildlife with the shrubbery and fields surrounding. The caravans coming and going will disturb the hedges and wildlife.
7. [Response has been redacted due to statements being considered contrary to the Council’s duty under the Equalities Act 2010 to eliminate discrimination, harassment, victimisation against persons with a protected characteristic; and to foster good relations between persons with a protected characteristic and persons who do not share it]

8. There is a large community of elderly residents in Send Hill and Winds Ridge, due to the predominance of bungalows in this area. The elderly feel safe and they walk the country lane to meet and talk with their neighbours. [Response has been redacted due to statements being considered contrary to the Council’s duty under the Equalities Act 2010 to eliminate discrimination, harassment, victimisation against persons with a protected characteristic; and to foster good relations between persons with a protected characteristic and persons who do not share it]

9. The intended land is full of wildlife, animals and hedgerow - the use of this land will bring a huge loss to wildlife.

10. Walkers enjoy the land and surrounding land, it is used by the whole community and will affect the quality of life of residents. [Response has been redacted due to statements being considered contrary to the Council’s duty under the Equalities Act 2010 to eliminate discrimination, harassment, victimisation against persons with a protected characteristic; and to foster good relations between persons with a protected characteristic and persons who do not share it]

**Comment:** MM2 - LPMM18/4228  **Respondent:** Michael Corlett 15196161  **Agent:**

I object to the revised local plan on the following grounds. It has increased from 400 to to 550 homes an increase of 37% to be built in Send . The revised forecast for Guildford has been reduced by 45% by the office of National Statistics. I am also lead to believe the inspector visited Send at the end of August during a holiday period when the schools were on holiday as were many residents, therefore he did not witness the congestion on the roads that exist between the hours of to 9.30 am and 5 to 6.30 pm. It is imperative that a highways report and feasibility study is made and published before any further development is permitted. Send and Ripley are already at saturation point traffic wise. Another problem is the strain on existing schools and medical services which are at full capacity now.

Attached documents:
Comment: MM2 - LPMM18/5777  Respondent: Mr Timothy Hewlett 15216129  Agent:

Making strategic sites exempt from design constraints (which would result in developments such as the monstrosity that was recently proposed on Three Farm Meadows) shows contempt for the Guildford Borough environment and should not be allowed under any circumstances.

The forecast for housing numbers in GBC is showing a decline in the numbers required by over 4,000 and this alone will negate any need to use Green Belt land to fulfil housing quotas.

Attached documents:

Comment: MM2 - LPMM18/3175  Respondent: Barnaby Lawrence 15232513  Agent:

I have returned this morning from a holiday, so will have no time to argue my own points.

I believe the local plan is flawed at many levels, infrastructure inadequate, housing need over inflated, wrong type of development (massive new towns as opposed to organic growth through local parish approval)

So I will be doing a cut and paste job so that at least you will get my objection in time to be counted

**DEADLINE Tuesday 23rd October – 12 NOON**

MM is main modification,

**Don’t forget to say object!**  — *italics designed to provide an explanation rather than to be used for comments*

**GENERAL**

- MM2 The housing target is wrong. *Call for the hearing to be reopened so that the latest ONS figures and household projections can be taken into account*
- MM2 There should be no requirement for Guildford to take Woking’s unmet need particularly as this will require further green belt release.
- The council has not properly followed its spatial strategy which requires that development takes place first in the town centre, the urban area and brownfield before moving to land in the villages or greenbelt. The addition of another 500 houses in Send (which will be car dependent) has a severe impact on Portsmouth Road Ripley which has not been properly considered.

Attached documents:

Comment: MM2 - LPMM18/1789  Respondent: Stephen John Tully 15238881  Agent:

Policy S2.

Data from office of National Statistics (September 2018) suggests Guildford Housing needs could be achieved with 460 homes per year not 789 as GBC is recommending. This revised number could/should be achieved by use of Brownfield sites.

### Comment: MM2 - LPMM18/5911  **Respondent:** Kath Frackiewicz 15257281  **Agent:**

**Guildford Borough Council (GBC) Proposed Local Plan - Comments On Proposed Modifications**

I wish to place on record that the comments relating to the previous versions of the Guildford Local Plan (Plan) made in my previous emails dated 17 July 2016 and 23 July 2017 continue to apply.

Regarding the proposed modification to the Plan I fully agree and endorse the comments and points of objection expressed in the two letters from East Horsley Parish Council dated 10 October 2018 dealing with (i) various comments on the proposed modification (ii) Policy A35 - Land at former Wisley Airfield, Ockham, and also those from Wisley Action Group.

Dealing with the modified plan I wish to make the following comments as in my opinion the Plan is unsound:

**Number of Houses (MM2):** The current version of the Plan should be based on the latest household growth projections from the Office of National Statistics, such projections now being some 50% lower than the current plan for some 12,500 houses. I continue to believe that the housing targets for Guildford Borough are excessive and over-stated particularly given the developing political situation including pending withdrawal from the EC.

...  

Finally I believe that the Plan is unsound as it does not consider the latest population statistics and trends, relies on utilising green belt land, does not fully utilise brown field development which would have the benefit of regenerating our ailing town centres and increasing the inflow of Council Tax revenue. I also consider that the many submissions and representations of East Horsley Parish Council together with other adjoining parish councils such as West Horsley, Ockham, etc. as well as the submissions and representations made by Wisley Action Group have not been properly considered and/or ignored.

As such I consider that the Plan must be amended to reflect the above and thereafter the Public Examination (MM2) of the Plan re-opened.

**Attached documents:**

### Comment: MM2 - LPMM18/1855  **Respondent:** Robert Peake 15264001  **Agent:**

1. **The Guildford Residents’ Association’s Objections and Concerns Which I Share**

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.
There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

**Attached documents:**

**Comment:** MM2 - LPMM18/1466  **Respondent:** Mrs Roshan Bailey 15264065  **Agent:**

The figures used for housing need are excessively high and should be reconsidered. Particular issues which make it necessary to reopen this aspect of the examination are double counting (eg of student needs), the recent ONS figures showing significantly lower population forecasts, and the inclusion of an allowance for Woking’s gap. Woking's figures are also higher than can be justified by ONS forecasts, and the requirement for neighbouring boroughs to sacrifice green belt land for Woking's shortfall is being challenged in the courts by Waverley BC.

**Attached documents:**

**Comment:** MM2 - LPMM18/6075  **Respondent:** Land Owner of Hornhatch Farm 15267521  **Agent:** MADDOX (Matt Hill)

I write on behalf of our client in relation to the ‘Guildford borough submission Local Plan: Strategy and sites main modifications consultation’, which opened on 11 September 2018. Our client is the landowner of ‘Land at Hornhatch Farm, Chilworth’.

We support the overall strategy of the Plan and support the Council’s efforts being undertaken to ensure an up-to-date Local Plan is in place. Our response is set out below:

**Spatial strategy and housing delivery**

Following comments made by the Inspector during the Local Plan Examination that the Council must find additional sites to assist with the early delivery of housing, our client welcomes the proposed spatial strategy and approach to housing delivery through the allocation of further sites to contribute to the delivery of housing within the first five years of the emerging Local Plan. Most notably, the subsequent inclusion of ‘Land at Hornhatch Farm, adjoining New Road, Chilworth’ as an additional site within the main modification draft of the Local Plan is clearly supported by our client.

**Attached documents:**
I do not accept that the housing demand figures used for this draft plan are correct.

The latest household figures from the Office for National Statistics show lower numbers of houses required.

I am also very concerned that the methodology used by GBC to assess housing need has not been made public and subject to scrutiny. This undermines public confidence in the process of creating a sustainable and durable Local Plan.

I also understand that some of the calculations on housing need in Guildford have been based on the Electoral Roll and registrations at NHS surgeries. In a town with a high turnover of students these figures will not reflect the actual long term need.

I am specifically concerned about the inclusion of Blackwell’s Farm and the impact on the AONB and Gosden Farm which will reduce the openness of the view from the Hogs Back.

In summary it should not be acceptable to permit building on Green Belt land using housing demand methodology which is not shared with the public and out of date.

---

Ripley Parish Council considers that it is entirely erroneous for GBC to increase the SHMA in our borough by the uptake of 20% of the unmet need for Woking Borough Council (630 homes) – MM2 4.1.9aa. The recent publication of updated household projections by the Office for National Statistics showed significantly reduced figures. It could be calculated that the household projections for Guildford would suggest a household growth (and hence a housing need) that is significantly lower than that suggested using the 2014 projections. The recalculations will also apply to Woking Borough Council and eliminate the need for GBC to take up any shortfall within Woking Borough. Considering GBC & Woking Borough Council updated predictions, GBC must recalculate the SHMA to reflect the lower projections. Ripley Parish Council is yet to receive a convincing argument as to why our borough is required to include shortfalls within another borough. It certainly brings into question why GBC is proposing to build on precious greenbelt land and surely does not meet the criteria of “exceptional circumstances”. In addition, Ripley Parish Council questions whether these figures are even accurate given the huge residential tower blocks that are under construction in central Woking. Instead, Woking Borough could actually take up some of Guildford’s potential unmet housing need and thereby assist in saving some of Guildford’s green belt areas.

---

The number of houses in the plan should be reduced, not increased, following the 40% reduction in the ONS household growth projections for Guildford.
Comment: MM2 - LPMM18/265  
**Respondent:** Gayle Leader 15328833  
**Agent:**

We strongly object to this proposed development as it is an inappropriate large expansion that will overload all the local facilities, schools, medical services, public transport, utilities and our already congested, poorly maintained roads.

In addition, since this plan was formulated figures recently released by the government indicate that the local population will not grow as previously thought. This plan needs a to be much reduced to be in line with the latest projected growth figures and to reduce strain on the above services.

**Attached documents:**

---

Comment: MM2 - LPMM18/2625  
**Respondent:** Mr John Kettle 15349761  
**Agent:**

I wish to object to the process of developing the Guilford Borough Council Local Plan:

No. of Houses(MM2)- The current version of the Plan is based on the need for 12,600 houses over the Plan period. However, the Office of National Statistics (ONS) had previously provided a figure of 11,142 which was used in a previous version of the Local Plan, and have now (20/9/2018) revised this figure to 6,635 houses. The plan is therefore totally unrealistic and as no legal basis for consideration.

**Attached documents:**

---

Comment: MM2 - LPMM18/4820  
**Respondent:** Neal Stone 15353633  
**Agent:**

I disagree with your proposals to inset several towns and villages from the Green Belt, making development that much easier in such places. I find it entirely unjustified and shocking - what kind of legacy does it set up for the next generations? Looking at other sites e.g. urban, brownfield and windfalls, green field development in the protected Green Belt is entirely unnecessary, especially since urban brownfield is given priority under the new S3 Policy. Furthermore I understand that the latest ONS figures show a much smaller housing requirement (which can be met by higher priority sites). No “exceptional circumstances”, as required by the NPPF, have been offered for any Green Belt development or for “insetting” most of the borough’s villages such as the Horsleys.

**Attached documents:**

---

Comment: MM2 - LPMM18/3685  
**Respondent:** John Burns 15359905  
**Agent:**

I object to the changes made after the last consultation for the new Local Plan:

MM2: The housing requirement figure used by the Local Authority is different from that given by the Office of National Statistics; ie 301 per year as opposed to 672 pa. The latter as used by the L.A. to derive overall housing numbers in the future therefore has a major skew which is incorrect and unnecessary; we regard this as very wrong of the Council to use what is most probably a grossly inaccurate figure for their overall assessment.

In addition we cannot see why Guildford Borough should sustain Woking Borough’s ‘unmet’ housing requirement; the same query obtains in regard to that figure – not given anywhere? – as the previous comment denotes.
Dear Sir/Madam

Ref: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments:

A. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.

B. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:
   1. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
   2. There is too much reliance on A3 improvements and these are beyond the council’s control
   3. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
   4. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

C. I would like the Inspector to RE-EXAMINE the Local Plan because:
   1. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
   2. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

D. The Clandon Society Objections and Concerns Which I Share

The A247

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads, (eg through East Clandon, which are totally inadequate for any increase in traffic, especially large vehicles) which will be used to avoid the inevitable traffic build ups on the A247

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.
I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

**I believe that traffic will increase significantly because:**

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

**Problems with the West Clandon section of the A247**

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

E. The Guildford Residents’ Association’s Objections and Concerns Which I Share

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

Comment: MM2 - LPMM18/5576  Respondent: Tim Poyntz 15381089  Agent:

Ref: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments:

1. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.
1. **I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:**

2. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited.

3. There is too much reliance on A3 improvements and these are beyond the council’s control.

4. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit.

5. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

1. **I would like the Inspector to RE-EXAMINE the Local Plan because:**

2. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt.

3. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high.

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. **The Clandon Society Objections and Concerns Which I Share**

**The A247**

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247.

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

**I believe that traffic will increase significantly because:**

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic.

3. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. The Clandon Society Objections and Concerns Which I Share

The A247

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247.

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

**Problems with the West Clandon section of the A247**

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

**Housing Number and the Green Belt**

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. **The Guildford Residents’ Association’s Objections and Concerns Which I Share**
MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

Objection to Main Modifications version of GBC Draft Local Plan 2018

Thousands of objections to the 2016 and 2017 Local Plans have been totally ignored during 3 previous consultations and at the recent Public Examination. The September 2018 data from the Government's Office for National Statistics suggests that the appropriate growth in Guildford Borough can be achieved with 460 houses per annum. This figure is supported by a respected consultancy, Barton Wilson, who consider 431 houses per annum would meet Guildford Borough's needs. Instead, the Inspector has used a Housing Need figure for Guildford of 789 houses p.a. Why?

Since the Inspector's Report relies on information with a significant overstatement of housing needs in the Borough it must be discounted and a revised plan to meet much reduced Housing Needs produced, which should include regeneration of the town centre and use of brownfield sites before allowing building on green belt. There are significant grounds to draw this error to the attention of the Secretary of State to force a revised Plan.

It would appear that GBC is failing to take into account the inadequate infrastructure of the Send and Ripley area for a disproportionately large industrial and residential development and consequently failing to put in place planning constraints, as is required by Law. GBC has not even undertaken a formal traffic impact study relating to the proposed new A3 slip roads and the Guildford Plan on the A247 and surrounding road networks.
Objections to the Guildford Borough Council Proposed Submission Local Plan (September 2018)

The Guildford Borough Submission Local Plan strategy and sites main modifications September 2018 Policies pdf says on page 18 under Spatial Vision "The plan provides for the delivery of at least 12426 additional homes by 2034".

This is the same as the total in the 2017 plan under point 1 of Policy S2.

This therefore shows NO increase in the total of additional homes from 2017 to 2018.

In the 2018 plan page 25 includes "During the plan period (2015-2034) provision has been made for at least 12600 new homes".

It would help if residents could rely on the plan being correct and consistent throughout.

Even at 12600 the increase from 2017 to 2018 is only 174 or 1.4% for the total borough.

In the 2018 plan Send has been hit with an extra 150 homes at Garlick's Arch A43 under MM41 and 120 homes by the addition of Alderton's Farm A63 under MM44, so a total increase of 270 which is more than the total increase for the borough.

It is totally wrong to focus so much extra on one small village which brings the total additional homes in Send to 770 which is an increase of over 45%. As well as being totally inappropriate to the scale of the locality it would have an adverse impact on the character of the countryside and the local enviroment; all of which is contrary to Green Belt limited infilling policy P2 under clause 4.3.26 on page 54.

It is totally inappropriate to hit Send with such a large increase when there is a net decrease (assuming the total of 12600 is correct) in the rest of the borough.

I therefore totally object to the very excessive focus on new developments in Send.

I also object to the plan as a whole because of the unjustified focus of planned new homes in the Send/Send Marsh/ Burntcommon/Ripley area and localities as 46% of the total for the borough is within 3 miles of Send Marsh.

This is totally unacceptable as it will overwhelm the local infrastructure for which no increase is planned, apart from several transport strategy projects which will end up making things worse by attracting far more traffic into this very busy area.

Comment: MM2 - LPMM18/2370  Respondent: David A Springings 15438049  Agent:

Ref: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments:
1. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.

1. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:
   2. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
   3. There is too much reliance on A3 improvements and these are beyond the council’s control
   4. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
   5. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

1. I would like the Inspector to RE-EXAMINE the Local Plan because:
   2. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
   3. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. The Clandon Society Objections and Concerns Which I Share

The A247

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:
1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic.
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247.
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh.
4. The development of 1800 houses at Gosden Hill.
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North-facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247.
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3.
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing.
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments.
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway).
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph.
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park.
5. The narrowness of the road near Summers.
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement.
7. The sharp bend near Clandon Regis.
8. The narrowness of the road at the Bull’s Head.
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school.
10. The sharp bend with poor sight lines in either direction at the church.
11. No continuous footpath through the length of the village.
12. The speed of traffic.
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.
The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. **The Guildford Residents’ Association’s Objections and Concerns Which I Share**

   **MM2** The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

   **MM2** There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

   **MM2** Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

   **MM2** It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

   **MM2** Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

**RE: GUILDFORD BOROUGH COUNCIL- LOCAL PLAN CONSULTATION.**

I write further to the publication of the revisions to the draft Local Plan. I object to the proposals for the following reasons:

**MM2.** I still consider that the Housing Target figure is wrong. The hearing on the Local Plan must be re-opened in order that the latest ONS figures and household projections can be taken into account.

**MM2.** Why should Guildford be required to take Woking's unmet need especially as by doing so further green belt land will be required?

**Attached documents:**

---

**Comment:** MM2 - LPMM18/1824  **Respondent:** Ian Symes 15457953  **Agent:**

Thank you for giving me the opportunity to contribute.

I am very concerned about two aspects.
Firstly the increased housing supply target and meeting Woking's unmet need. Both of these seem to be associated with the instructions of an unelected planning official. I am completely opposed to both increases.

This is supposed to be a democratic process and I have been giving GBC my responses for several years. We have never before been asked to comment on Woking's unmet need and to me this is an undemocratic tactic by an unelected planning official to get more building on the greenbelt in the borough. It should be opposed.

Secondly I would like to see Wisley removed from being inset and a development site selection. The recent appeal was dismissed and GBC were represented by a ‘silk’ in opposing the planning application. I would now like this backed up by removing Wisley from the Local Plan.

Thank you for a chance to comment.

**Agent:**

**Response to the Main Modifications to the Submission Local Plan (2017) Guildford Local Plan: Examination in Public (EIP)**

I have the following comments on the above consultation.

**MM2**  
I continue to have concerns about the OAN and these concerns are reinforced by the recent work conducted by Neil MacDonald from NMSS which I have studied. Based on the new information from ONS and NMSS, I suggest that the Examination of the Local Plan should be re-opened by the Inspector to allow the latest ONS and NMSS data to be examined and discussed.

I have also have concerns about the proposal to increase our housing requirement by 42 households per year to meet Woking’s unmet need. Guildford has exactly the same Green Belt constraints as Woking. In addition I understand that based on the recent ONS figures the Woking unmet need is now itself overstated and this is a further argument for Guildford to avoid further Green Belt erosion.

I urge the Inspector to review this element of the Local Plan and eliminate the unmet need figure of 42 new households per year completely.

Attached documents:

**Comment: MM2 - LPMM18/5771**  
**Respondent:** Donna Collinson 15460737  
**Agent:**

Guildford Borough Council is persisting in calling for a high housing figure.

The current figure in the Draft Plan, of 630+42 extra homes a year, is 75% higher than the number of homes needed to support ambitious economic growth and out of step with both the new ONS figures and the new Government formula. It is based on:

- adding extra homes for students even though they are already well catered for in the figures
- inflating the figures by being very pessimistic about how many and how much local people work, so lots of extra workers would have to be brought in.
We would be building two times more homes than the local population needs in the hope over-supply will drive down house prices.

GBC is saying it wants the extra homes to justify new infrastructure. This overlooks the fact developers only contribute to new infrastructure to the extent they make problems worse. Developers do not tackle the backlog of infrastructure investment or existing congestion. In any case, early development in our Plan currently offers little in the way of infrastructure.

To make matters worse, you are also suggesting we build an additional 42 homes a year in Guildford’s Green Belt to protect Woking’s Green Belt. This takes our proposed housing figure from 630 to 672. It seems perverse when Woking has ambitious growth plans and Guildford is more constrained. Its housing need figure has also reduced and has not been assessed at Examination.

Relating to MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely mixed use including residential and student residential town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained. Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

I strongly object to the latest Guildford local plan for Send, which if approved will destroy our village, quality of life and cause much stress to local residents.

Attached documents:

Comment: MM2 - LPMM18/1405  Respondent: Robert Drummond 15473761  Agent:

The latest statistics demonstrate that the target of well over 600 new homes needed in Guildford is seriously overstated and is well under 400. The congestion in Guildford (particularly the A3 and A31) is extreme. The geography and lack of suitable funds make it very unlikely that these problems will be resolved let alone after the Blackwell Farm area is developed. This possibility will also damage one of the most beautiful, historic and iconic areas of the Hogs Back which the council should preserve at all costs. The resulting need of less houses can easily be handled by better management of residences in the town. Look at Woking who are building considerable high rise buildings when they stand in contrast with the flat surrounding area. Guildford has hills all around so higher buildings would not be as aggressive if built
sensibly. There remain a number of unused town centre sites where planning could and should be given and they would be lower cost than the likely houses on Blackwell farm.

These new statistics should be a factor in the inspector re-opening the case for the extension of residential sites in particular the one at Blackwell Farm. Please include my view in your assessment of the local plan and any further review by the inspector.

Attached documents:

Comment: MM2 - LPMM18/5881  Respondent: Margaret Bennett 15478273  Agent:

As a resident of Guildford for the last 33 years, I am concerned about the latest Guildford Plan.

1. The housing numbers do not reflect the latest ONS figures and projections and will lead to inappropriate development in the green belt.

Attached documents:

Comment: MM2 - LPMM18/1557  Respondent: Jill Murphy 15502433  Agent:

My initial objection is to: MM41, MM42, MM44, MM9, MM27.

POLICY S2.

At the public examination the figure for Guildford B.C. housing need used by the inspector was 789 per year. This figure was obtained by G.B.C. Consultants and was greatly exaggerated by including Surrey University Student figures. These Consultants and GBC refused to disclose how this figure was calculated.

The figure now published by a highly respected consultancy Barton Wilmore has said the correct figure is 431 houses per year.

The data from the Office of National Statistics, doing population forecasts says the appropriate growth in GBC can be achieved by 460 houses per year.

This latest data makes a mockery of G.B.C consultants figures which have always been very suspect.

I trust the Inspector and GBC will now drastically reduce the housing need to reflect the true figures, and particularly in our already very congested village of Send.

Attached documents:

Comment: MM2 - LPMM18/3808  Respondent: Stan Long 15569281  Agent:

I am concerned to ensure that the corrected and lower figures for future housing demand are used as the basis for planned housing in Guildford.
Comment: MM2 - LPMM18/2703  Respondent: John Griffiths 15570113  Agent:

I request the Inspector re-opens the Blackwell Farm plan, re-examines and amends to take account of the new lower figures of Amendment MM2:-

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure e.g. excessive student homes intown, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

Attached documents:

Comment: MM2 - LPMM18/4451  Respondent: Hazel Thompson 15571745  Agent:

This consultation does not include the chance to comment/object to the 40 houses and travellers’ site on Send Hill, 60 houses at Clockbarn in Tannery Lane and the increase in size to the Send Business Centre despite the Wey Conservation area, these proposals are again devastating to the local roads in all of these areas, they are too narrow, often difficult to pass and have many blind spots, and the larger roads are already standing traffic during peak times, let alone at other times of the day, the small village cannot take any more development especially of the sizes proposed.

We do hope you consider our strong objections to all of the above, as not only us but our family and friends will be severely impacted. We are pensioners and are already finding the amount of traffic too much and has significantly risen in recent years, especially with commuters using our village as a cut throughs from the A3 and M25.

Attached documents:

Comment: MM2 - LPMM18/2488  Respondent: S Bennell 15571937  Agent:

Dear Sir/Madam

Ref: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments:
A. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.

B. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:

1. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
2. There is too much reliance on A3 improvements and these are beyond the council’s control
3. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
4. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

C. I would like the Inspector to RE-EXAMINE the Local Plan because:

1. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
2. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

D. The Clandon Society Objections and Concerns Which I Share

The A247

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247.

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1 million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic. There are already numerous dangerous instances of lorries and other large vehicles mounting the pavement in narrow spots where children and the elderly are walking.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1 million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.
I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic.
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247.
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh.
4. The development of 1800 houses at Gosden Hill.
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247.
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3.
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing.
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments.
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to safely carry the existing traffic never mind the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway).
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph.
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The poor visibility for traffic exiting the road near the station due to the hump of the railway bridge. Increased traffic will significantly heighten the risk of accidents during peak hours.
5. The sight lines for the exit of the Onslow Arms car park.
6. The narrowness of the road near Summers.
7. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement.
8. The sharp bend near Clandon Regis.
9. The narrowness of the road at the Bull’s Head.
10. The Clandon Junior School and the, in places, narrow footpath for children walking to school.
11. The sharp bend with poor sight lines in either direction at the church.
12. No continuous footpath through the length of the village.
13. The speed of traffic.
14. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.
The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

E. The Guildford Residents’ Association’s Objections and Concerns Which I Share

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

Comment: MM2 - LPMM18/5469  Respondent: Susan Palmer 15572641  Agent:

Ref: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments:

1. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.

2. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:
   1. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
   2. There is too much reliance on A3 improvements and these are beyond the council’s control
   3. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
   4. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

3. I would like the Inspector to RE-EXamine the Local Plan because:
2. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt

3. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. The Clandon Society Objections and Concerns Which I Share

The A247

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common,
avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing

8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.

9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments

10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

**Problems with the West Clandon section of the A247**

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

**Housing Number and the Green Belt**

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. **The Guildford Residents’ Association’s Objections and Concerns Which I Share**

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.
There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

**Comment:** MM2 - LPMM18/1898  **Respondent:** West Horsley Parish Council (Mrs Catherine Young) 15583841  
**Agent:**

I attended a meeting in West Horsley Village hall before the public hearings commenced in June this year. Paul Spooner, Leader of GBC, spoke about why there were plans to remove West Horsley from the Green Belt and blamed the Government for a substantial increase in housing that meant GBC had no choice but to look to the Green Belt. [text redacted: the text included a quote that was not wholly accurate]. It is outrageous that GBC made no attempt during the hearings to combat this number, and thus 42 extra houses per year have been added in for Woking. Does this mean that when it comes to voting for the Plan, Mr Spooner will vote no? I guess not, but then the rest of us will not be voting Conservative in the local elections next year.

There is no justification for the inflated housing numbers, especially when new lower numbers for housing need have been published by the ONS. The hearings should be re-opened and the GBC Executive need to take a closer look at their document!

The numbers of houses shown in all the charts in these policies do not represent protection of the Green Belt, and it seems to me that more should be done to look at availability within the Town Centre and on Brownfield sites.

I therefore object to the housing numbers proposed for West Horsley, and the insetting of the Village from the Green Belt as this is not justified and totally unnecessary. This is relevant to this policy as it is a reflection that the policy does not take into account accurate information.

**Comment:** MM2 - LPMM18/3728  **Respondent:** Oliver Hogben 15588033  
**Agent:**

At a public examination the figure cited for housing need in GBC was 789 per year. It has been demonstrated without argument that this figure was greatly exaggerated. It was obtained by G.B.C Consultants and included, inexplicably, Surrey University Student numbers. There has deliberately been no response by GBC as to how these inaccurate figures were obtained. In contrast, Barton Wilmore have offered a realistic figure of 431 houses. This is supported by the Office of National Statistics, citing that appropriate growth in GBC can be achieved by 460 houses per year. I ask for transparency from the the Inspector and GBC as to how their incongruous figure has been reached, against all other
intelligence, and trust that the result of this data will now result in the housing need proposed actually reflecting the true figures. It also needs to take in to account the huge congestion that already exists in Send, which GBC seem entirely unaware of despite repeated indications of this from numerous residents.

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. **The Clandon Society Objections and Concerns Which I Share**

The A247

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247
I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for

388 of 2575
traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.

4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. **The Guildford Residents’ Association’s Objections and Concerns Which I Share**

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

389 of 2575
I wish to take this opportunity to object to the following modifications to the local plan. The result of including these modifications would have a devastating effect on the lives of the people who live in the villages of Send, Ripley and Ockham. As a local resident, born and brought up in the area, I am aware that development is necessary if our children are to be able to stay in the area. Destroying village and community life, as would happen if all of these plans go ahead, is not the answer.

I object to MM2 as the housing target is wrong. As a result, I ask that the hearing be reopened so that the latest ONS figures and household projections can be taken into account. In addition, there should be no requirement for Guildford to take Woking’s unmet need, particularly as this will require further green belt release. The council has not properly followed its spatial strategy, which requires that development takes place first in the town centre, the urban area and brownfield before moving to land in the villages or greenbelt. The addition of another 500 houses in Send (which will be car dependent) has a severe impact on Portsmouth Road Ripley which has not been properly considered.

Although we are now only able to comment on the main modifications of the plan, it should be noted that the 100 houses proposed for Send Hill and Clockbarn, along with the 25% increase in the Send Business Centre. If this is added to the points covered above, it is clear that the heavy concentration of housing and industrial sights in Send will bring an end to the village and the the life of its inhabitants. Why the concentration in Send when the load could be shared more equably and more fairly with all of the other villages in the borough.

I believe that the local council has a duty of care to the communities they serve. We hope that these members have the best interests of their residents at heart. If this is the case, the objections above cannot be ignored.

Attached documents:

Comment: MM2 - LPMM18/3676  Respondent: John Thompson 15591585  Agent:

I should like to raise my objections to the proposed development of a number of sites in the village of Send. As you can see from the above, I am a resident of Ripley, but the lane in which I live is on the borders of the two villages and any development in Send will have a profound impact me and my family. In addition to this, I was born in Send and, therefore, feel that I have the right to air my views in the hope that some sanity may prevail.

Attached documents:

Comment: MM2 - LPMM18/87  Respondent: Mr Martin Billard 15601857  Agent:

I object to amendments in MM2

Table S2a shows a total of 15107 homes which is 2507 over target. By not having these extra homes there is enough reason to eat into greenbelt for so many developments.

There is no re- calculation for other sites now freed up for development when taking into account sites with no affordable housing or S106 on site between 5 and 10 which has been National Planning Policy since 2014 but ignored by GBC.

Attached documents:
I would like you to note my following comments as a resident of West Clandon for 14 years.

1. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine.

1. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:
   2. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
   3. There is too much reliance on A3 improvements and these are beyond the council’s control
   4. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
   5. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’. Just wishing

1. I would like the Inspector to RE-EXAMINE the Local Plan because:
   2. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
   3. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high.

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. The Clandon Society Objections and Concerns Which I Share

The A247

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (e.g. through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.
I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic.
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247.
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh.
4. The development of 1800 houses at Gosden Hill.
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247.
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3.
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing.
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments.
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway).
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph.
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park.
5. The narrowness of the road near Summers.
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement.
7. The sharp bend near Clandon Regis.
8. The narrowness of the road at the Bull’s Head.
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school.
10. The sharp bend with poor sight lines in either direction at the church.
11. No continuous footpath through the length of the village.
12. The speed of traffic.
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.
This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

**Guildford Borough Council Local Plan Strategy and Sites - Main Modifications 2018**

I wish to object to the Local Plan and its Modifications on the basis indicated below.

**MM2** The housing target set out in the Plan is simply wrong on the latest evidence. The public examination should be reopened so that the latest figures and household projections from the Office of National Statistics can be taken into account. These projections give new lower population and household figures, correcting the flaws which previously inflated Guildford's housing figures by overestimating how many students stay and have children after their course finishes.
I understand that Guildford Residents Association has been advised by a leading national expert, who has calculated that a more realistic figure for extra homes is 360 rather than the 672 currently proposed in the Local Plan. This suggests that the present proposed development in the Green Belt simply cannot be justified. This new lower figure would also make it more achievable to bring forward well-planned, sensitively-designed housing in the town centre in a faster timescale than presently proposed.

**MM2** There should be no requirement for Guildford to take Woking's "unmet need" particularly as this will require further green belt release. Presumably, this "unmet need" will also be based on projections now found to be inaccurate on the basis of the latest ONS figures.

The council has not properly followed its own spatial strategy, which requires that development takes place first in the town centre, the urban area and brownfield before moving to land in the villages or greenbelt. The addition of another 500 houses in Send (which will be car dependent) has a severe impact on Portsmouth Road, Ripley which has not been properly considered.

**Comment: MM2 - LPMM18/5259**  
**Respondent:** Simon Jefferies 15673185  
**Agent:**

I object to the modifications which propose development in the green belt.

I also object to the widening of inserting policy to include sites “which are considered to be in the village”. If this policy is adopted then the number of windfalls must be increased significantly I object to the use of statistics only “if they support the argument”. Specifically that the latest household formation statistics have not been taken into account.

I also consider that the traffic model is wildly inaccurate and therefore unreliable.

I note that advocate general Kolkutt’s clarification on European case law has also not been taken into account and this risks further expense for the council which has not taken the necessary action.

I support the representation written by Richard Harwood QC on behalf of the Wisley action group.

I call for the EIP to be reopened

**Respondent:** Susan Wade 15693185  
**Agent:**

I am writing you in relation to the Draft Local Plan for Guildford.

MM2 - Recently there has been a reduction in ONS Population Forecasts for Guildford. Since the Inspector’s Examination significantly revised population forecasts (downwards) for Guildford have been released from the ONS.

These figures mean that the total number of new homes required over the period of the Plan (2015-2034) should be considerably reduced. GRA expert Neil MacDonald has already demonstrated that 360 new homes per year would support the ambitious economic growth proposed by the Inspector. Therefore “exceptional circumstances” to allow the building of new homes in the Green Belt, are clearly not present. If this lower figure was accepted and more homes were built on brownfield sites, then the need to build on Green Belt land would be removed (Policy S2)
Also, it is I believe inappropriate for Guildford to sacrifice Green Belt area to provide homes for Woking when Guildford is more constrained

**Guildford Borough Council Submission Local Plan - Main Modifications Consultation**

Dear Sir/Madam,

These representations are submitted by Obsidian Land Promotions Guildford Limited (representor ID 17323713) in relation to Guildford Borough Council's emerging local plan Main Modifications Consultation.

Obsidian Land Promotions Guildford Limited (hereafter referred to as “Obsidian”) has a legal interest as the promoter of the site at Pond Farm, New Pond Road, Guildford including a small portion of land to the east of Furze Lane (hereafter referred to as “the Site”) (see site location plan at Appendix 1). The Site currently falls within the Green Belt and the Surrey Hills Area of Outstanding Natural Beauty (although, the Council has previously accepted that neither of these designations should prevent the site coming forward for redevelopment). It has capacity for c90 – 110 dwellings (including affordable housing). There are no obstacles to the delivery of the site and it can come forward at the beginning of the Plan period, thus making a significant contribution to the Council’s five year housing land supply (see technical documents submitted in support of previous representations). Representations have been made to all previous stages of the local plan process and Obsidian has repeatedly stated its objection to the emerging plan and its underpinning spatial strategy. Given that previous representations are on file and have been heard through the EiP, these will not be repeated. Rather, we wish to comment solely on the Main Modifications, to which we also strongly object.

In the Main Modifications to the emerging local plan, the site at Aaron's Hill, Godalming has been added to the plan as an allocation for residential development. This allocation forms an urban extension to Godalming comprising 200 new homes. The proposed allocation of this site for residential development is a direct response to the Inspector's comments regarding the need to allocate more sites that are available and deliverable within the first five years of the plan period. Whilst we support the Inspector's stance on this matter and the Council's willingness to address this, we object to the proposed allocation of the site at Aaron's Hill.

The proposed site allocation at Aaron's Hill extends an already sprawling settlement further into the countryside. The site itself is located some distance from the centre of Godalming and, as a consequence of the manner in which Godalming has grown, is effectively located within a small settlement between Godalming and Milford. Located at the top of a hill in open landscape, the site is visually prominent and lacks a clearly defensible boundary, presenting issues of future sprawl into open countryside far removed from the centre of the settlement. Additionally, Eashing Road to the west of the site is inherently rural in character. Development of the site will have a significant urbanising effect that will irreversibly change the character and rural setting to the north of Godalming.
As previously highlighted, Obsidian support the principle of amending the submitted local plan to introduce new sites that are deliverable within the first five years of the Plan period and are sustainable. The site at Pond Farm represents a more sustainable extension to an existing settlement than that at Aaron's Hill, whilst having a lesser visual and landscape impact and demonstrating a clearly defensible boundary. The site was a draft allocation in the emerging local plan (at Regulation 18 stage) which demonstrates the Council's agreement that the site is appropriate for development. Given the uplift in necessary housing supply and the need for sites in the early years of the plan, in addition to no technical justification regarding why the site should not be allocated for residential development, it is considered that the site at Pond Farm should be included as an allocation for residential development in the local plan. Inclusion of the site at Aaron's Hill in the local plan whilst the site at Pond Farm remains unallocated demonstrates the absence of a clear and coherent spatial strategy and is simply unjustified.

We trust our comments will be given full and proper consideration and we would be happy to discuss the site at Pond Farm in further detail should that be helpful.

Comment: MM2 - LPMM18/4663  Respondent: David Roberts 17164033  Agent:

**Guildford Local Plan: Strategy and Sites - Main Modifications 2018: consultation response**

**MM2**

I object to the identification of the HMA with the tri-borough area of Woking/Guildford/Waverley. This is arbitrary and has never been justified in real-world terms of where residents live, work, shop, commute and study. The need to include Woking’s unmet housing need is therefore based on a false premise enshrined in the SHMA.

It is factually untrue that the OAN has been based on “the latest 2018-based population projections,” September 2018 figures suggest 301 dpa, or just over 5,700 for the plan period. Taking account of the commitments, unallocated LAA sites and windfalls listed, green field development in the protected Green Belt is plainly unnecessary to meet the OAN, especially as new Policy S3 now requires urban brownfield be given priority. No “exceptional circumstances”, as required by the NPPF, have been advanced for any Green Belt development or for “insetting” most of the borough’s villages.

To meet this reduced OAN, the balance of urban development should be shifted radically away from the dying retail sector towards building homes, in line with government policy, uplifting the Guildford Town Centre figure considerably. Promoting the soft option of building in the Green Belt will only disincentivise developers from tackling the much-needed regeneration of central Guildford, directly conflicting with Policy S3.

GBC have claimed that the new ONS figures are inapplicable because the submitted local plan pre-dates the government’s new standard method for calculating housing need. This is splitting hairs. The “Objectively Assessed Need” should be what it says it is – objective. The plan should be based on the best and latest evidence available and needs to adapt in line with the facts.

---

Comment: MM2 - LPMM18/1039  Respondent: Ian William Groden 17206177  Agent:

**MM2 and S2 Planning for the Borough-our spatial development strategy**
• Does not the latest forecast by the Office of National Statistics, which slashes its forecast for population growth in the Borough by 40%, mean that the Borough’s housing needs are far below your proposed figures and should be reduced?
• Reportedly also a respected consultancy has given a similarly reduced figure.
• I also note the reported comment that Guildford Council housing needs, appropriately revised, could be met on existing brownfield sites within the town without touching the Green Belt. If this is true, will a reassessment be made to prove that all Green Belt developments cannot be met from existing brownfield sites?

Attached documents:

---

**Comment: MM2 - LPMM18/1430  Respondent: Bob McShee 17225281  Agent:**

I make the following comments:

1. The housing need figure should use the latest household formation rates and not the 2014 figure.
2. The Town Centre must be designated a strategic site or sites.

Attached documents:

---

**Comment: MM2 - LPMM18/3210  Respondent: David Thorp 17243873  Agent:**

The scale of the increase in housing included in the plan would have an important impact deleterious the Guildford Borough where there is a lack of infrastructure to cope with the existing population and plans to eat into the Green Belt are unnecessary. Where I live is accessed by narrow single track lanes which will have limited capacity to take further housing developments in the villages to the south of Guildford including Chilworth.

I ask that the housing target be reduced, for the reasons set out below. I am also concerned about the specific development proposed at Hornhatch Farm in Chilworth, just south of our area (MM43)

MM2 - policy S2. The examination should be re-opened because the housing figures should be revised in the light of the new ONS forecasts of population and households. The stated housing requirement is not a sound basis for the Local Plan or justification for such an extensive loss of Green Belt land

MM2 - there is a strong case for taking out a strategic site and more scope for better town centre provision. This makes table (S2), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 - independent expert, Neil MacDonald, has demonstrated that 360 homes per year would support the ambitious economic growth rate proposed by the Inspector. 630 homes a year is out of step with the new ONS figures and the Government's new standard methodology. 630 is based on inappropriate assumptions that inflate the figures due to excessive allowance for student homes and their low economic participation.

MM2 - it is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained. The number of houses needed in Woking has also been reduced and has also not been re-examined.

Attached documents:
RESPONSE TO MODIFIED GUILDFORD LOCAL PLAN

I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:

1. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
2. There is too much reliance on A3 improvements and these are beyond the council’s control
3. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
4. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

I would like the Inspector to RE-EXAMINE the Local Plan because:

1. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
2. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

The Clandon Society Objections and Concerns Which I Share

The A247

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1 million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1 million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.
I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

THIS ROAD SHOULD BE DE-CLASSIFIED TO THE B-ROAD WHICH IS ALL IT IS ADEQUATE ENOUGH TO BE. TRAFFIC FOR THE A3 FROM THE A25 SHOULD BE SENT THROUGH MERROW TO THE ROUNDABOUTS & DUAL CARRIAGeway ALREADY BUILT FOR THE PURPOSE YEARS AGO.

Attached documents:
Dear Sir/Madam

Ref: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments:

1. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.

1. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:
   2. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
   3. There is too much reliance on A3 improvements and these are beyond the council’s control
   4. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
   5. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

1. I would like the Inspector to RE-EXAMINE the Local Plan because:
   2. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
   3. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. The Clandon Society Objections and Concerns Which I Share

The A247

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.
The £1 million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic.
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247.
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh.
4. The development of 1800 houses at Gosden Hill.
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247.
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3.
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing.
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments.
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway).
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph.
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park.
5. The narrowness of the road near Summers.
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement.
7. The sharp bend near Clandon Regis.
8. The narrowness of the road at the Bull’s Head.
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school.
10. The sharp bend with poor sight lines in either direction at the church.
11. No continuous footpath through the length of the village.
12. The speed of traffic.
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt
The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. **The Guildford Residents’ Association’s Objections and Concerns Which I Share**

   MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

   MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

   MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

   MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

   MM2 Although extra sites are required because some might not come to fruition, the **housing supply** figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

   Attached documents:

   **Comment:** MM2 - LPMM18/1307 **Respondent:** Mrs Lynda Turner 17301473 **Agent:**

   The proposed increase in number of dwellings is far too high. The method used to calculate number of houses needed in the borough doesn’t take account of the need to preserve the designated green belt land and historic woodland which enhances air quality for the area. The housing increase has a disproportionate impact on Send, Send Marsh and Burnt Common particularly

   Attached documents:

   **Comment:** MM2 - LPMM18/1654 **Respondent:** Shirley Bowerman 17308417 **Agent:**

   Objection re the over-all effect which the Modifications bring to other developments in Send.
What I have described as the ‘punitive’ Modifications above, combined with the figures already incorporated into the Plan (ie 40 houses and a travellers’ site on Send Hill, 60 houses at Clockbarn in Tannery Lane and the 25% increase in the Send Business Centre), plus the new Marina being constructed off Tannery Lane, means that such a heavy concentration of development in one village rather than the other 40 villages, is way beyond reasonable and does appear to be designed to a) punish Send for making so many objections, rather than taking the objections into account which is supposed to be what happens, or b) change Send beyond all recognition so that other villages do not have to be much altered. Either way, this is wrong and a travesty of justice.

7) Further objections on the fact that estimates for future housing needs were incorrect.

I object to all the MMs and previous calculations where Guildford Borough housing needs were said to be 789 a year. The basis on which this figure was arrived at was never published and it has recently transpired that they were grossly exaggerated as was previously strongly suspected. A respected consultancy, Barton Willmore, has very recently said that the correct figure should be 431. September data from the Office for National Statistics, which does population forecasts, suggests that appropriate growth in Guildford Borough can be achieved with 460 houses a year. Both of these recent figures are very much less than the total used by the Inspector. If these, apparently more reliable, figures are used it would make a huge difference to developments in Send. The bulk of the reduction should be applied to Send since that village has disproportionally penalised.

Attached documents:

Comment: MM2 - LPMM18/5022  Respondent: Adrian Wise 17327329  Agent:

MM2 - the figures used to create Guildford’s OAN are wrong and out of date. Per the NPPF the most up to date figures must be used. In GBC’s case these figures have changed greatly, not moderately, because of the drop in immigration and the error in the previous households projection figures around university towns. The extent of these changes, I estimate well over a 30% reduction in housing need arises, makes the whole basis of the local plan housing target wrong. This can only be properly addressed by reopening the public enquiry.

... MM2 - there is no longer any need for Guildford to take any of Woking’s unmet need as Woking no longer has any such unmet need – there targets too when per the NPPF are assessed using the latest housing projections have fallen by a large amount.

... MM2 - the council’s declared spatial strategy is first to maximise development in the town centre, then the urban area, then brownfield sites, then land in the villages and finally Green Belt. This policy has not been followed, e.g. Town Centre development has been widely disregarded, so the plan can only be ‘found sound’ when the council can demonstrate that it has been followed. The inquiry should be reopened once the council has done this part of its planning correctly.

... MM2 – there has been no proper heed taken of the need for affordable housing and particularly social rented housing. Nearly all the housing need in Guildford is in fact for such dwellings whereas the plan is simply to build houses anywhere to meet the OAN. Inevitably many of these houses will be unnecessary large houses as they will be built in inappropriate places, remote Green Belt sites, for affordable and social rented homes. To build affordable houses in such places would render them unsustainable. The plan should be reopened once the council has done its duty and properly allocated sufficient appropriate sites for these purposes.

Attached documents:
### Policy S2

The Public Examination figure being used by Guildford Borough Council for housing need being used by the Inspectorate is 789 houses per year. There was a front page spread in the Surrey Advertiser two weeks ago about the new figures from the population forecasts from the Statistics Office states that Guildford can achieve its growth with 460 houses per year. There has also been a survey published by a prominent consultancy firm, Barton Willmore stating that the growth can be achieved with 431 houses per year.

This must be taken into consideration and the housing numbers lowered throughout the Borough, including Send.

### Attached documents:
5. As part of the July 2016 Regulation 19 Local Plan consultation, the Site was designated under Policy A34 as being suitable to accommodate approximately 100 homes. This allocation was subsequently removed from the July 2017 version of the Submission Local Plan, with the Site instead being designated a ‘Locally Significant Employment Site’ (“LSES”). CTI wrote to the Council on 16 May 2017, prior to the publication of the plan for consultation, and submitted formal representations in July 2017, questioning the soundness of this approach and recommended that the LSES designation be removed and the residential site allocation reinstated.

6. In his letter of 23 March 2018, the Inspector identified several issues that CTI consider relevant to the Council’s decision to designate the Site as a LSES instead of allocating it for housing. The relevant paragraphs from the Inspector’s letter have been highlighted below for ease of reference.

7. Paragraphs 1 and 2 of Inspector Bore’s letter outlined concerns in relation to the Council’s approach to calculating objectively assessed housing need in the borough and the meeting of otherwise unmet housing need for other boroughs (most particularly Woking Borough Council as highlighted in CTI’s representations) in the Housing Market Area (“HMA”). Paragraph 3 goes on to express significant concerns about:

3. “…the proposed stepped housing trajectory which indicates that the plan will deliver much lower numbers of homes in its early years than are actually needed. This appears to be an unacceptable aspect of the plan and the Council needs to consider the steps that should be taken to improve housing delivery in the earlier years of the plan”.

8. Paragraph 5 of Inspector Bore’s is particularly relevant to the Site and the Council’s intention to designate, what are outdated hard-to-let commercial premises, as this LSES could instead positively contribute towards the borough’s urgent need for housing.

5. “Guildford is a location with conflicting demand for limited space from different land uses, but it is demonstrably clear that the major need is for new housing, so it is not apparent why the plan seeks to protect all employment land, floorspace and hotels. Should the plan not be encouraging housing to replace outdated hard-to-let commercial premises in Guildford town centre, and should the land use balance in the Employment Core policy be revisited? This is a key strategic issue given (a) the amount of Green Belt land that is proposed to be released; (b) the potential that a higher OAN will be identified and (c) the need to cater for unmet housing need in the HMA. Please can the Council produce a paper setting out what steps should be taken and policy revisions made to accommodate a greater amount of the housing growth in the town centre and on other eligible brownfield land including suitable employment land and hotels” [our emphasis].

9. Inspector Bore provided comments at paragraphs 27 and 28 in relation to the approach followed by the Council as part of the employment policies contained in the Submission Local Plan.

1. “Policy E1(1) which concerns the provision of new employment floorspace is actually a different policy from E1(2) to (11) which relate more closely to Policy E3, Employment Protection. The Council should consider reordering this set of policies.

2. Policy E2(1): having established these locations as key office and R&D sites, it is not appropriate to differentiate sequentially between them. If a requirement for additional floorspace arose from an operator at a strategic employment site, it would not be appropriate to “direct” the requirement to Guildford Town Centre or a transport interchange. This is not an effective policy and this element should be deleted. In addition, E2(3) places an unacceptable impediment to the expansion of business and enterprise. The resistance to changes of use of employment floorspace is not adequately justified in the light of housing need (see Key Question XXX above)”.

10. Further to the formal representations described above, CTI wrote to the Council on 29 March 2018 to remind them of the opportunity to resolve the Inspector’s comments and concerns through use of the Site for housing.

11. The Council has claimed in its response to the Inspector’s Initial Questions (GBC-LPSS-001) to the examination that the plan adopts a “brownfield first” approach. The proposed modifications, however, instead opt to release several additional greenfield Green Belt sites for housing, plus an additional urban site in Guildford town centre.
12. Set out below are CTI’s comments regarding the soundness this approach when it is considered that there are reasonable alternatives available in the form of the Site.

C. MM2: MODIFICATIONS TO POLICY S2: PLANNING FOR THE BOROUGH – OUR SPATIAL DEVELOPMENT STRATEGY

13. CTI welcomes and supports the proposed modifications to Policy S2(1) to (3) to increase housing delivery in the Borough throughout the plan period so to account for the unmet housing need arising from Woking Borough Council. CTI also continues to support the release of Green Belt land for residential development considering the severe housing needs in Guildford Borough.

14. To accommodate the additional housing arising from Woking Borough Council’s unmet housing need the modifications to the Spatial Strategy contained in Table S2b propose the allocation of the following additional sites for residential or residential-led mixed use development, combined with adjustments to the housing trajectory to reflect the revised delivery rates other already allocated sites. CTI’s representations focus on the inclusion of the additional Green Belt sites (listed below) not otherwise included in the Submission Local Plan.

- Site A60: White Lion Walk, High Street, Guildford = 50 homes and retail floorspace
- Site A61: Land at Aaron’s Hill, Godalming = 200 homes
- Site A62: Land at Hornhatch Farm, adjoining New Road, Chilworth = 80 homes
- Site A63: Land west of Alderton’s Farm, Send Marsh Road, Send = 120 homes
- Site A64: Land between Glaziers Lane and Strawberry Farm, Flexford = 105 homes

15. Sites A61-A64 (inclusive) have been identified as coming forward in the first five years of the Council’s Housing Trajectory (Appendix 0 of the main modifications).

16. Whilst the inclusion of an additional urban based site (Site A60) is no objected to in principle, concern is raised regarding the inclusion of four additional greenfield sites that are in the Metropolitan Green Belt.

17. Sustainable development as defined by paragraph 7 of the NPPF (2012) requires consideration to be given to the economic, social and environmental dimensions of development. Paragraph 83 of the National Planning Policy Framework (NPPF) (2012) 1 confirms that Green Belt boundaries should only be altered in “exceptional circumstances”. The Calverton Judgment 2 provides the most recent and relevant definition of exceptional circumstances. Having undertaken an assessment of housing needs, the local planning authority should review Green Belt and seek to meet housing needs through an assessment and judgement of the following elements:

i) The acuteness/intensity of the OAN/Housing Need (matters of degree may be important);

ii) The inherent constraints on supply/availability of land prima facie suitable for sustainable development;

iii) The consequent difficulties in achieving sustainable development without impinging on the Green Belt;

iv) The nature and extent of the harm to the Green Belt (or those parts of it which would be lost if the boundaries were reviewed); and

v) The extent to which the consequent impacts on the purposes of the Green Belt may be ameliorated or reduced to the lowest reasonably practicable extent.

18. The Council’s selection of the four additional greenfield sites in the Green Belt is considered at odds with these principles.

19. The Site is ‘previously developed land’ (“PDL”) in the Green Belt and occupied by five buildings that range between two and three stories in height, plus associated hardstanding for access and car parking. The buildings on the Site already have an impact on the Green Belt’s openness. It has been demonstrated through CTI’s representations that redevelopment of the Site for residential purposes would not have a materially greater impact on the Green Belt than the existing. Combined with ecological enhancements secured through any redevelopment, there would be an opportunity to improve the environmental credentials of the Site, as referred to in paragraph 7 of the NPPF (2012), which should weigh positively.

in favour of allocating the Site for residential purposes.

20. In relation to the economic dimension of sustainable development, in replacing the existing office floorspace with residential development, it should be noted that most of the Site is available for redevelopment from 2019 by way of vacant possession, with the remainder available as a second phase by 2022. As explained in CTI’s representations to the Regulation 19 consultation, the existing office floorspace on the Site is of poor quality and structural integrity of the buildings means that there is a need of comprehensive redevelopment. Carrying out a standard office refurbishment would not be financially viable in this case given the inherent structural defects present in the existing building and poor rental returns for office buildings in this location. Furthermore, the Site’s location and poor access to public transport and major highway infrastructure make it unappealing to potential investors, meaning that a suitable refurbishment or redevelopment programme is unlikely to come forward. It is therefore likely that the existing office buildings will further deteriorate during the plan period and become increasingly unlettable.

21. As set out in paragraph 22 of the NPPF (2012), “planning policies should avoid the long-term protection of sites allocated for employment use where there is no reasonable prospect of a site being used for that purpose”. As the Inspector has rightly pointed out, preserving poor quality, unviable sites such as this for employment use, which would require comprehensive refurbishment and investment to bring to market, rather than taking the opportunity to deliver a more long-term sustainable solution such as additional housing, is misguided and fails to comply with the principles of sustainable development and core objectives of the NPPF.

footnotes 1 As the Submission Local Plan was submitted for examination in December 2017, the transitional arrangements set out in paragraph 214 of the revised NPPF (2018) confirms that the plan should be examined against the 2012 NPPF.

22. In terms of the social dimension, the opportunity to deliver additional homes is a positive feature of achieving sustainable development. As noted above, most of the Site would benefit from vacant possession in 2019 with the remainder by 2022. A phased residential scheme could therefore come forward as early as 2020/21, which will positively contribute to the first five years of the Council’s housing supply. Including the Site instead of the additional greenfield sites that are proposed through the main modifications would not therefore have a detrimental effect on the Submission Local Plan’s housing trajectory.

23. CTI consider that the Council has failed to properly weigh the dimensions of sustainable development in deciding to allocate additional greenfield land from the Green Belt for residential development when there are reasonable alternatives available that would have a lesser impact on the Green Belt’s openness and purposes as defined by paragraph 80 of the NPPF (2012).

24. Having regard to the tests of ‘soundness’ set out in paragraph 182 of the NPPF (2012), CTI consider that the proposed main modifications to the Submission Local Plan cannot be considered as being “positively prepared”, “justified”, “effective” or “consistent with national policy”. As a result, the Submission Local Plan remains unsound.

25. To remedy this, the Council should review its proposed allocations and include additional urban or previously developed employment sites in Green Belt or countryside locations (such as the Broadford Business Park) that are known as being poor quality or in locations that are not sequentially preferable for such development 3.

footnotes 3 See paragraph 4.9 of CTI representations to Regulation 19 consultation wherein it is noted that the Council recognised at paragraph 6.7 of the briefing note to Guildford Borough Council’s Borough, Employment and Infrastructure Advisory Board Committee, and repeated in the agenda papers for the Full Council meeting on 16 May 2017, that the Site is not sequentially preferable as a business location.

Comment: MM2 - LPMM18/5790  Respondent: Simon Runton 17381761  Agent:

I object to GBC’s amendments to the local plan.

I have only heard of this new call for responses late in the day and seem to have been missed off the list despite being informed of previous consultations.

Again, it seems there is a reluctance to include some basic evidence; particularly the latest figures from the Office of National Statistics regarding forecasts for housing need in the area. Please make allowances for this by reopening the process to the public to make sure vital and relevant evidence is included.

Attached documents:

Comment: MM2 - LPMM18/2735  Respondent: Brian Austin 17382305  Agent:

I have the following comments on the Main Modifications

MM2

the figures for the number of houses required, 12,600, are inconsistent with the latest figures from the Office for National Statistics for the projected growth in households in the Guildford area during the plan period of 6,635 A discrepancy of this size undermines the basis of the plan, The authoritative lower numbers would mean both many fewer houses and a much lower rate of construction. These lower figures also put in doubt the "exceptional circumstances" claimed to justify insetting of villages from the Green Belt and the removal of the strategic sites from the Green Belt.

The Public Examination of the Plan should be reopened to take into account these latest figures.

Attached documents:

Comment: MM2 - LPMM18/4146  Respondent: Jill Thomas 17408225  Agent:

My objections are made in the knowledge of other development in Send eg 40 houses at Send Hill, 60 houses at Clockbarn and a 25% increase in Send Business Park for which we cannot now object to. It does appear to me that Send has been particularly burdened with over-development, more so than any other Village. The increase in people and traffic will give rise to congestion, pollution, inadequate schools and medical facilities, etc, and will be detriment to all who live here and for future generations.

Attached documents:

Comment: MM2 - LPMM18/5273  Respondent: Colin Brewer 17408481  Agent:

I object - on the following grounds:

This is green belt land and the secretary of state has already rejected this.
The housing target is wrong.

I have not been advised of the consultation.

The examination in public should be reopened so that the latest Office of National Statistics can be used

I support the representation made by Wisley Airfield Action Group which was written with advice from Richard Harwood QC

Comment: MM2 - LPMM18/4399  Respondent: Sally Novell 17413025  Agent:

Ref: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments:

1. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.

1. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:
   2. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
   3. There is too much reliance on A3 improvements and these are beyond the council’s control
   4. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
   5. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

1. I would like the Inspector to RE-EXAMINE the Local Plan because:
   2. There have been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
   3. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. The Clandon Society Objections and Concerns Which I Share

The A247

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.
I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1 million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. The Guildford Residents’ Association’s Objections and Concerns Which I Share

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

Comment: MM2 - LPMM18/1460  Respondent: Claire Attard 17417633  Agent:  

With regard to the rest of the modifications there are several points which are not acceptable. In view of the latest ONS statistics, which were released a few weeks ago, the GBC has not taken these figures into account and therefore your
housing target is wrong, which means the plan is unsound. Also in MM2 - there should be no need for Guildford to take Woking’s unmet need, which would require further green belt release.

Attached documents:

**Comment:** MM2 - LPMM18/1760  **Respondent:** Gareth Porter 17423361  **Agent:**

I feel very strongly that the examination in public should be reopened so that latest info and statistics can be used.

I only heard about this via someone else. I have not had any formal notification. Not sure this is a true public consultation if people don’t get notified.

I fully support WAG and their representations

**Attached documents:**

**Comment:** MM2 - LPMM18/2536  **Respondent:** Simon Wright 17423681  **Agent:**

I wish to make comment on Policy S2

At the Public Examination the figure for Guildford Borough housing need being used by the Inspector was 789 per year.

After this Barton Willmore, Consultancy, has found that the correct figure should be 431. Following on from this, September data from the Office for National Statistics, which carries out population forecasts, suggests that appropriate growth in Guildford Borough can be achieved with 460 houses a year.

It seems that the Local Plan is inaccurate.

**Conclusion:**

It appears that GBC are desperately and naively clutching at straws to find what they think are suitable sites to include in the Local Plan, instead of carefully identifying already suitable Brownfield sites. GBC need to realise how important the Green Belt is, and stop treating it as a free space to indiscriminately destroy for generations to come.

Please explain why thousands of previous objections are ‘not relevant’ this time round? How difficult can it be for GBC to listen to the people who know the area best - the residents? The whole process of this Local Plan has been a farce. I suggest GBC take note of local residents concerns and objections before the implications are borne out at the next council election.

I am not completely against development, but I oppose development without thought and consideration for the basics, and which will be detrimental for the area.

**Attached documents:**

**Comment:** MM2 - LPMM18/1680  **Respondent:** Hugh Grear 17424065  **Agent:**
Please reopen the Local Plan so that the latest ONS statistics can be used.

Please note that I have not been advised about the Consultations (and don't try to hide behind GDPR)

I support the submissions from WAG

Once again GBC is trying to circumvent the decision of the Secretary of State and prefers big business to the will of the people.

**Comment:** MM2 - LPMM18/5219  **Respondent:** Katherine Ray 17424513  **Agent:**

I disagree with your proposals to inset several towns and villages from the Green Belt, making development that much easier in such places. I find it entirely unjustified and shocking - what kind of legacy does it set up for the next generations?

Looking at other sites e.g. urban, brownfield and windfalls, green field development in the protected Green Belt is entirely unnecessary, especially since urban brownfield is given priority under the new S3 Policy. Furthermore I understand that the latest ONS figures show a much smaller housing requirement (which can be met by higher priority sites). No “exceptional circumstances”, as required by the NPPF, have been offered for any Green Belt development or for “insetting” most of the borough’s villages such as the Horsleys.

**Comment:** MM2 - LPMM18/4504  **Respondent:** Aldertons Farm Residents Company Ltd (Paul Norman) 17427713  **Agent:**

MM2 – Policy S2: Spatial Development Strategy – it should not be necessary for GBC to contribute towards the housing allocation for Woking BC as they should address their own housing shortage without having to rely on neighbouring...
Boroughs to bail them out. It is understood that new wording in the NPPF document requires that Local Authorities should ‘share’ unmet housing needs ‘where it is practical to do so’ and also ‘consistent with sustainable development’. As the majority of the residential sites proposed in the GBC Draft Plan for the area, including Ripley, Burnt Common, Send Marsh and Send, are designated, and therefore protected, Green Belt sites, they are protected and are therefore not ‘practical’ or ‘sustainable development’ sites.

**Attached documents:**

**Comment: MM2 - LPMM18/2306**  **Respondent:** Jenny Wicks 17434817  **Agent:**

These are my comments on the proposed modifications to the Local Plan

MM2 (S2) The OAN appears to be significantly overstated in the light of the latest ONS household projections data. Working with an inflated OAN figure will mean unjustified sacrifice of previously protected Green Belt.

I object to the provision for Woking's unmet need. Woking have not carried out a thorough examination of their Green Belt sites to establish what capacity they have for meeting their own needs. In any case the revised ONS figures suggest their need has been overstated.

**Attached documents:**

**Comment: MM2 - LPMM18/2498**  **Respondent:** Philip and Maureen Blunden 17452673  **Agent:**

Dear Sir/Madam

Ref: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments:

A. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.

B. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:

1. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
2. There is too much reliance on A3 improvements and these are beyond the council’s control
3. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
4. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

C. I would like the Inspector to RE-EXAMINE the Local Plan because:

1. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
2. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high
In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

**D. The Clandon Society Objections and Concerns Which I Share**

**The A247**

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247.

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

**I believe that traffic will increase significantly because:**

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments.

10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

**Problems with the West Clandon section of the A247**

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

**Housing Number and the Green Belt**

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

**E. The Guildford Residents’ Association’s Objections and Concerns Which I Share**

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the
Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

REPRESENTATIONS TO GUILDFORD BOROUGH LOCAL PLAN - MAIN MODIFICATIONS

We are writing on behalf of our Client, Linden Homes, in respect of the main modifications into the Guildford Local Plan which are currently the subject of public consultation. Linden Homes are promoting land to the west of Westwood Lane at Flexford which could provide a sustainable and early contribution to housing delivery in Guildford Borough and deliver up to 350 dwellings.

The site has been continuously promoted through the Guildford Local Plan process with the site first being identified at the Issues and Options Stage of the Local Plan in 2013 and has been one of four sites assessed within the Local Plan evidence in terms of its suitability for delivering residential development at the village. Our Client has continuously challenged the conclusions of the Council’s evidence and site selection process and sought to demonstrate that of the sites promoted at Flexford, our Client’s is by far the most suitable of those available in light of the Council’s own evidence. This matter is of even greater importance now given GBC is considering allocating a site at Flexford through its main modifications which is not justified based on the evidence before the Examination which demonstrates the suitability, availability and deliverability of our Client’s sites within the early years of the plan period. A Vision Document has been prepared which demonstrates the opportunities for the site to the west of Green Lane at Flexford to deliver up to 350 dwellings. A copy of this Vision document is included at Appendix 1 of these representations.

The Inspector’s Note dated 22 June 2018 identified that regard should be had to an OAN of 630 dpa alongside consideration given to Woking’s unmet need. In addition, reference was made to the housing trajectory contained within the Submission Local Plan on account of the Inspector’s acknowledgement that ‘housing delivery in Guildford has been at a low level for a long time and the affordability ratio is very high and continues to worsen’. As such, the Inspector advises that ‘the Council should not adopt a stepped trajectory, but should identify additional sources of housing delivery in the early years of the Plan’.

In response to the comments made by the Inspector, the modifications commit to delivering a housing requirement of 630 dwellings per annum over the plan period alongside an additional 42 dwellings per annum to contribute towards Woking’s unmet need. This totals 672 dwellings per annum.

Our Client supports the Council’s commitment to increasing housing delivering in the early years of the plan period although we raise considerable doubt over how the Main Modifications seek to achieve this position.

As such, we have reviewed the relevant allocations which we do not consider that meet the tests of soundness under paragraph 182 of the Framework especially with regard to whether the main modifications proposed are justified and effective.

In summary, Linden Homes consider that the selection of a number of the additional allocations/sources of supply is flawed, do not represent sustainable development and will fail to address the shortfall in supply early in the Plan period.
In contrast, the site promoted by Linden Homes at Westwood Lane, Flexford is sustainable and deliverable. There are significant flaws arising from the Council’s assessment (or lack thereof) of the allocations which it now proposes in order to overcome the Inspector’s concerns.

Attached documents:

Comment: MM2 - LPMM18/6087  Respondent: Linden Homes South 17461921  Agent: Turley (Hannah Bowler)

Assessment of Reasonable Alternatives

It appears clear from the above that there is no commentary or justification as to how GBC has considered whether particular settlements are appropriate to accommodate additional development. This is particularly relevant given our Client’s site has been discounted through the SA (2018) when in fact it scores better than a number of the new allocations contained within the Main Modifications to the Local Plan. As a general point, the SA fails to consider the wider implications of the proposed allocations on the landscape and merely focusses on whether the site is within the AONB/AGLV. This is unjustified given one allocation is within the AGLV and another is adjacent to the AGLV and AONB which would have implications on the conclusions of the SA if it had robustly assessed the sites. We have enclosed a table below to demonstrate this position:

<table>
<thead>
<tr>
<th>Site GBC</th>
<th>Evidence base</th>
</tr>
</thead>
</table>
| Land at Aaron’s Hill, Godalming                    | SA - Amber - against railway station  
SA - Amber - against agricultural land                       
SA - Red - against Health Care Facilities, District/ Local Centre, Secondary School  
The site is within the AGLV.  
Green Belt - Red rate sensitivity - not a potential development site. The Green Belt Study identifies that the parcel has significant constraints. |
| Land at Hornhatch Farm, adjoining New Road, Chilworth| SA - Amber- against railway station  
SA- Red against District Centre/ Local Centre, Primary and Secondary School  
SA - Red against Agricultural Land- Best and Most Versatile  
The site is in close proximity to the AONB and AGLV although there is no criteria within the SA to consider this impact  
Green Belt - Red rated sensitivity. Identified as a potential development site within the Green Belt Study. |
| Land at Aldertons Farm, Send Marsh Centre,          | SA - Red - against District/ Local Primary and Secondary Schools  
SA - Red - against accessibility to train station  
Best and most versatile agricultural land  
Green Belt - Amber rated sensitivity - a potential development site |
No consideration given to cumulative impact of further development at Send/ Send Marsh as raised through the SA (2017)

Land east of Glazier Lane

SA - Green- against railway station
SA - Red - against District/ Local Centre,
Primary School and Health Care
Green Belt - Green Belt - Red rated sensitivity -
a potential development site. Identified as a potential development site within the Green Belt Study.

Land between Beech Land and Westwood Lane, Flexford (our Client’s site)

SA - Amber - against railway station
SA - Red - against District/ Local Centre,
Primary School and Health Care
SA - Amber - against agricultural land
Green Belt - Amber rated sensitivity - a potential development site. Identified as a potential development site within the Green Belt Study.

With regard to the above, it is clear that our Client’s site scores better than other proposed allocations within the Main Modifications. The above assessment is particularly relevant on account of the justification that GBC has provided within the SA (2018) for discounting our Client’s site as a proposed allocation through the main modifications. This is cited on Page 16 of the SA which states that ‘Land east of Glaziers Lane benefits from better proximity to the train station’. This appears to be the over-riding consideration for it being sequential preferable to our Client’s site. This position has no regard to other site specification considerations especially given Glaziers Lane is identified as red-rated Green Belt (therefore of greater significance to the Green Belt than our Client’s site).

When considering our Client’s site against the other sites considered (in our view GBC has failed to consider ‘all’ reasonable alternatives through the main modifications), there is limited or no justification/commentary as to why it was not included as a further allocation based on the Council’s own evidence. A high level review of the sites contained in the table above compared to our Client’s is set out below:

• Our Client’s site would not involve the loss of the best and most versatile agricultural land unlike allocations at Hornhatch Farm and Send Marsh
• Our Client’s site scores amber against Green Belt sensitivity and was identified as a potential development site unlike Aaron’s Hill
• Our Client’s site scores amber against Green Belt sensitivity and was identified as a potential development site unlike Hornhatch Farm and Glazier Lane which whilst identified as potential development site’s scored red against Green Belt sensitivity
• Our Client’s site is more accessible to a train station unlike the allocation at Send Marsh
• Our Client’s site is located within the same proximity to local facilities as the other allocations
• Our Client’s site is not constrained by being within or adjacent to the AGLV or AONB unlike the allocations at Aaron’s Hill and Hornhatch Farm
• Our Client’s site is not constrained in terms of early delivery by the requirement for significant highways works unlike Garlick’s Arch which will impact on its ability to increase housing output in the first five years of the plan period
• Our Client’s site would round off Flexford to the west and would not result in an out of character form of development unlike Glaziers Lane which result in the sprawl of Flexford north of the railway towards Normandy (identified within the Council’s evidence as two separate settlements)

In summary, the approach taken by GBC within its main modifications is unjustified and it is clear that the Council’s has not formed reasonable conclusions as to why our Client’s site was not proposed for allocation especially given its own
evidence identifies that it is significantly less constrained in terms of environmental and planning considerations than others which it has selected.

GBC should be considering ‘all’ reasonable alternatives as part of the SA process not limiting this to each settlement. The Council’s approach is wholly unjustified and has resulted in identifying sites that score strongly against the purposes of the Green Belt being identified for release, have poorer accessibility to train stations and will have a greater landscape impact (AONB/AGLV) than our Client’s site based on GBC’s own evidence base.

Sites at Flexford

The SA (2018) re-considers the Green Belt Potential Development Sites which related to four sites as shown in the image below.

We have the following comments for each parcel:

- Parcel A - incorporates part of our Client’s site as is discussed below
- Parcel B - would be a significant extension northwards of Flexford and breach the existing physical boundary of the train railway line and would be out-of-character to the existing linear development of Normandy. The SA acknowledges this position.
- Parcel C - would be a significant extension northwards of Flexford and breach the existing physical boundary of the train railway line and would be out-of-character to the existing linear development of Normandy
- Parcel D - the site is identified as a SNCI and it has been discounted by GBC.

However, the SA fails to explicitly explain as to why the other sites at Flexford (including our Client’s site) have not been considered further for allocation. Limited commentary is provided within Box 5.3 which explicitly states that our Client’s site was only discounted on account of distance to the train station. This is unjustified and GBC should be considering whether the site should be considered for allocation against ‘all reasonable’ alternatives as oppose to looking at each village in isolation.

In comparison to Glaziers Lane, our Client’s site scores an amber sensitivity to the Green Belt (in comparison to high sensitivity) and Volume III of the Green Belt Study acknowledges the presence of ‘defensible boundaries’, thus it being considered as a potential development site. In comparison to our Client’s site, Glazier’s Lane will result in the extension of Flexford northwards towards Normandy beyond the existing railway line which is considered to be a robust and defensible boundary. Whilst Glazier’s Farm is indeed slightly further from Wanborough Station than Glazier Lane, it is less environmentally constrained and is in fact closer to a station than other allocations proposed by GBC through its main modification allocations - thus this justification for the exclusion of the site is weak and unjustified.

A Vision Document has been prepared which demonstrates the opportunities for the site to deliver development that aligns with the character of Flexford and responds to the site opportunities/constraints which are discussed further below.

Attached documents:

Comment: MM2 - LPMM18/5072  Respondent: John Maycock 17462145  Agent:

Guildford Borough Council Local Plan Strategy and Sites - Main Modifications 2018

I wish to object to modifications to the Local Plan as indicated below.

**MM2** The housing target set out in the Plan is wrong on the latest evidence. The public examination should be reopened so that the latest figures and household projections from the Office of National Statistics can be taken into account. These projections give new lower population and household figures correcting the flaws that previously inflated Guildford’s housing figures by overestimating how many students stay and have children after their course finishes.
I understand that the Guildford Residents Association (GRA) has been advised by a leading national expert, who has calculated that a more realistic figure for extra homes is 360 rather than the 672 currently proposed in the Local Plan. This advice suggests that the present development proposed by The Local Plan in the Green Belt is simply unnecessary and cannot be justified. This new lower figure would also make it more achievable to bring forward well-planned, sensitively-designed housing in the town centre in a faster timescale than presently proposed.

**MM2** There should be no requirement for Guildford to take Woking's "unmet need", particularly as this will require further green belt release. Presumably, this "unmet need" will also be based on projections now found to be inaccurate on the basis of the latest ONS figures.

The council has not properly followed its own spatial strategy, which requires that development takes place first in the town centre, the urban area and brownfield before moving to land in the villages or greenbelt. The addition of another 500 houses in Send (which will be car dependent) has a severe impact on Portsmouth Road, Ripley which has not been properly considered.

**Comment:** MM2 - LPMM18/3986  **Respondent:** John Patterson 17464577  **Agent:**

To whom it may concern, I would like to make the following objections with regard to the the local plan given that the whole thing is based on inaccurate ONS data:

5.2-1 The household projection is using out of date information! The new household projections (Sept 2018) show a substantial drop in the number of households and thereby the plan is based upon fundamentally unsound data. The same issue applies to S2-2. Given this difference the public examination must be re-opened!

S2.4 – 4 Due to the changes in the household figures…the proposed strategic sites (2) specifically those on greenbelt must be removed.

S2.5 Also the 5 new sites included in the plan (for early delivery) should be removed.

**Comment:** MM2 - LPMM18/5974  **Respondent:** Guildford College Group (Guildford College Group) 17467233  **Agent:** Indigo Planning Limited (Aaron Peate)

**SUBMISSION LOCAL PLAN: STRATEGY AND SITES - MAIN MODIFICATIONS**

These representations have been prepared on behalf of Guildford College Group (GCG) who own Land at Liddington Hall Farm (LHF) in Guildford. They are submitted in response to Guildford Borough Council’s (GBC) consultation on its Submission Local Plan: Strategy and Sites - Main Modifications.

On behalf of GCG, we have promoted land at Liddington Hall as a potential residential site (together with the removal of the Merrist Wood Campus (MWC) from the Green Belt) since 2015 and submitted representations in July 2016 and again in July 2017. We also appeared at the Local Plan examination hearing sessions in June and July 2018.

We continue to be disappointed with the council’s lack of support for the GBG and the potential that both GBG sites have for residential and educational uses respectively. The council will be well aware of the financial predicament of the GBG
and the importance that the allocation of the LHF site would have for the long-term future of the College. We remain firmly of the view that the LHF site, in part or as a whole, can contribute a meaningful number of homes (up to 300) in years 1-5 of the Draft Local Plan, adding further flexibility into the supply and resilience to the emerging Plan. We also believe the site is a more sustainable and appropriate location for housing development than those additional sites proposed for allocation in the Main Modifications to the Plan.

In fact, we believe the proposed additional sites are illogical when read alongside the Sustainability Appraisal Addendum (2018) and that there has been no real desire to align with the spatial strategy as set out at Policy S2 of the draft Plan. We therefore believe that the Draft Plan as modified continues to be unsound.

These representations are focused on and limited to the following main modifications as set out in the latest consultation document.

- MM2: Policy S2: Planning for the borough - our spatial development strategy
- MM27: Policy ID2: Supporting the Department for Transport’s “Road Investment Strategy”;
- MM9: Policy P2: Green Belt
- MM39: A61 – Land at Aaron’s Hill, Godalming
- MM42: A62 - Land at Hornhatch Farm, adjoining New Road, Chilworth;
- MM43: A63 - Land west of Alderton’s Farm, Send Marsh Road, Send; and
- MM44: A64 - Land between Glaziers Lane and Strawberry Farm, Flexford.

**MM2: Policy S2**

The Borough’s spatial strategy is set out within Policy S2 Planning for the borough– our spatial development strategy and the supporting text. Paragraph 4.1.6 states that the Council will focus growth to the most sustainable locations, determined by a spatial hierarchy, which identifies a ‘brownfield first’ approach. Policy S2 sets out that growth will therefore be directed to:

- Guildford town centre;
- Urban areas;
- Inset villages; and
- Identified Green Belt villages.

This hierarchy reflects the most sustainable options for growth, in line with the NPPF and we support this approach.

However, paragraph 4.1.8 contends that these four preferred locations are unable to accommodate all the new development that is needed and that therefore additional development should then be directed to:

- Countryside beyond the Green Belt;
- Urban extensions to Guildford and Ash and Tongham;
- New settlement at the former Wisley airfield; and
- Development around villages (including some expansion).

Given that Guildford is the Borough’s most sustainable settlement, development should be directed towards urban extensions to Guildford (and Ash and Tongham) ahead of new settlements (ie Wisley airfield) and development around villages (ie Chilworth, Flexford and Send Marsh). The hierarchy at paragraph 4.1.6 encourages this and we again support this approach.

However, the robustness of the spatial strategy continues to be undermined by the Council’s over-riding priority to the protection of the Green Belt over the presumption in favour of sustainable development and the exceptions made to include some large strategic sites low down in the hierarchy based on the infrastructure they could provide.

The LHF site adjoins the Guildford urban area to the north west and therefore sits higher in the settlement hierarchy. The site is well-served by local bus routes with good cycling connections to the town centre. It is also within walking distance of the local facilities in Fairlands. The site is therefore in a sustainable location.
However, despite this, less sustainable sites such as those identified at Ash and Tongham and the new settlement at Wisley, which falls below Liddington Hall in the hierarchy, have been allocated instead. The impact of this approach is that growth will not be focused on the most sustainable locations in conflict with the aspirations of Policy S2.

This position is further exacerbated by the allocation of new sites at Flexford, Chilworth and Send Marsh as well as the increase in units at Garlick’s Arch, which form the Main Modifications to the Proposed Submission Plan and the primary subject of these representations.

We believe the Sustainability Appraisal Addendum (2018) that assesses and attempts to explain the council’s rationale for selecting these additional sites is inconsistent, at times non-sensical, and the council as a consequence have selected a package of sites that do not align best with the purported spatial strategy.

At Paragraphs 5.2.8 to 5.2.12 of the SA (2018), the council’s consultants AECOM set out the parameters for identifying potential additional sources of supply for housing. Firstly, that a sequential approach is followed, in other words that capacity at the most suitable sites higher up the hierarchy should be fully utilised before moving down the next tier in the hierarchy. There needs to be flexibility to deviate from this strict approach if constraints e.g. AONB, heritage; reliance on infrastructure; policy constraints e.g. Green Belt, or delivery indicate otherwise. Secondly that schemes shouldn’t be dependent on the A3 RIS schemes, and finally must be able to contribute meaningfully to the council’s five year supply position. The Inspector has concluded that this is the main purpose of identifying additional sites at this stage in the Plan’s formulation as this is a primary weakness that has been identified.

The SA (2018) goes on at 5.2.11 to say that in terms of robust delivery that the implications are that additional supply must be:

- delivered across a package of sites, as reliance on one site would create a risk that the five year supply might be lost, should that one site not deliver as anticipated;
- geographically spread, again to minimise the risk of unanticipated delays to delivery;
- at locations where delivery is not dependent on prior delivery of new or upgraded infrastructure, the timing of which is outside the Council’s control.

This approach is understood and generally accepted. What isn’t understood or accepted is then the SA’s but ultimately the council’s application of this approach.

Our first contention is the grouping of Green Belt around Guildford with Green Belt around Godalming/Farncombe. Guildford is by far the most sustainable location in the borough and indeed the wider Surrey area. At nearly 80,000 people, it is almost four times the size of Godalming, with the employment, educational, leisure, and retail opportunities to match. Godalming, at circa 17,000 population is not even the largest settlement in Waverley, only being defined as a ‘Community with Key Services’ within the Waverley. It is closer in size to Worplesdon (circa 8,500 population), a Green Belt village and next in the spatial strategy hierarchy than it is to Guildford. For this reason, we believe that Godalming/ Farncombe should be in a lower order tier (perhaps Tier 9), with all options to Urban Extensions to Guildford (Tier 8) exhausted before moving onto Godalming/Farncombe (Tier 8). At present, Land at Aaron’s Hill, Godalming is placed on a ‘even playing field’ in terms of sustainability to LHF and this is not correct.

We believe that given that Guildford is the Borough’s most sustainable settlement, comprising all levels of services, facilities, and employment needs, it is wholly logical that development should be prioritised towards sites with the best access to Guildford and its town centre. Urban extensions to Green Belt villages are in Tier 10, the bottom of the spatial hierarchy and the least preferable therefore should not be identified without exhausting earlier tiers. This continues not to be fully addressed, with the Main Modifications only going to exacerbate this misapplication of the spatial strategy.

A further contention is the assertion at paragraph 5.3.18 that it is not a desirable outcome to have a full allocation of LHF (and indeed Clandon Golf Club) delivering in the middle part of the Plan period. LHF could deliver 600 homes in total. The council now accept that LHF can deliver in the early part of the Plan period (300 homes can be delivered in the first five years and this has been accepted by the council in its examination of a 300-home part of the LHF in the SA (2018). The fact that the site could deliver beyond Year 5 should not preclude the site from further assessment, particular when
over 30% of the proposed site allocations are in the lowest two tiers of the spatial hierarchy e.g. Tier 9 ‘new settlements’ and Tier 10 ‘Development around Villages’. LHF would be in Tier 8. Whilst the exam question set by the Inspector is to allocate proposed additional sites that can deliver within Years 1-5, the fact that LHF, a site higher up the spatial strategy can also produce a spatial distribution more aligned to the proposed spatial strategy should be seen as a positive and not a negative that justifies only assesses part of LHF (300 homes) as a reasonable alternative housing option. The council’s approach appears more about retrofitting their proposed additional sites around their submission plan rather than objective assessing the merits of the promoted sites and a real desire to align these with their spatial strategy.

We also contest the ‘given’ scenario that an additional 150 homes could or indeed should be delivered at Send/Garlick’s Arch. Firstly, we question how capacity of the site could have increased by nearly 50% overall and by a further 12.5% in the first 5 years. We have seen no evidence to prove this despite the assertion in para 13 of the Examination Document GBC-LPSS-020. Indeed, provision of an additional 450 homes in five years in a village of circa 1,700 homes, represents a 30% increase. This is unlikely from a build-out perspective, due to the concerns expressed in the SA (2018) relates to saturation and indeed not desirable from sustainable growth point of view. The council confirm at 5.2.12 of the SA (2018) that it is not ideal concentrating housing at one location, to avoid geographical clusters of sites as it is proportionately more likely to saturate the local market. In fact, Box 5.2 of the SA (2018) states that no more than one site should be identified per village. The Green Belt village of Send has two sites, totalling 550 houses.

Furthermore, as set out in then paragraph above, provision of additional homes (100 in this case) in the middle part of the draft Plan was considered sufficient to warrant non-consideration of other housing options as reasonable alternatives. This should be particular true if it is in the lowest order spatial tier and when other higher tier options exist such as LHF.

The flawed conclusions are ultimately confirmed in the council’s overall selection of proposed additional housing sites at Paragraph 7.2.1 of the SA (2018) and MM2. The council’s preferred approach is Option 3, which involves Aaron’s Hill, Godalming (200 homes), Land at Alderton’s Farm, Send Marsh Road, Send Marsh (120 homes), Land east of Glaziers Lane, Flexford (105 homes) and Land at Hornhatch Farm, New Road, Chilworth (80 homes), leading to a total of 555 additional homes being delivered in the first five years of the plan. In addition, an additional 150 homes is supported at the Garlick’s Arch submission allocation (50 in the first five years) to ensure that best use is made of this site.

We will come on to the criticisms of the specific sites but this approach scored only 4th highest out of the assessed 7 scenarios. The scoring was not really even close with the council’s preferred approach scoring almost 20% worse than the top score. Every scenario that included the identification of ‘Development around Villages’ scored most poorly. The top three scoring approaches all included Urban Extensions to Guildford, with two or the top three including LHF. None of this is surprising given the spatial strategy proposed is to target development at the most sustainable locations, with these locations being the most sustainable out of the options assessed. The conclusions of the SA (2018) therefore only go to confirm that appropriateness of the council’s spatial strategy but that their application of it is flawed. The SA (2018) at paragraph 7.2.1 concludes that ‘the appraisal does not identify Option 3 as performing notably well in terms of any of the topic headings, but equally it is not identified as performing notably poorly in terms of any topic’. This is particularly damning.

We believe that LHF should form part of the preferred approach and should have been identified as an proposed additional housing site in MM2. As drafted, the proposed MM2 is not robust or effective and therefore the draft Local Plan is unsound.

**Attached documents:**

**Comment: MM2 - LPMM18/4892  Respondent: Morten Frisch 17472865  Agent:**

I object to the proposed amendments to the Guildford Borough Local Plan for the reasons stated below:

**1.NUMBER OF HOUSES (MM2)**
I object to the planned 12,600 new houses. The recent ONS household forecast has reduced by 6,635 (40%) since the previous forecast, and this needs to be reflected in the Plan. This reduction in households is roughly equivalent to two strategic sites plus all five of the new sites that were included after the Local Plan Examination in Public, and cannot be ignored. The Plan should be updated and resubmitted to the Planning Inspector.

Attached documents:

Comment: MM2 - LPMM18/2747  Respondent: Derek Gillmore 17490561  Agent:

I would like you to note my following comments as a resident of West Clandon for 14 years.

1. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine.

1. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:
   2. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
   3. There is too much reliance on A3 improvements and these are beyond the council’s control
   4. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
   5. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’. Just wishing

1. I would like the Inspector to RE-EXAMINE the Local Plan because:
   2. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
   3. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high.

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. The Clandon Society Objections and Concerns Which I Share

The A247

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (e.g. through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247.

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of
Congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1 million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

Attached documents:

Comment: MM2 - LPMM18/2748  Respondent: Derek Gillmore 17490561  Agent:

1. The Guildford Residents’ Association’s Objections and Concerns Which I Share

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

   2. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by that organisation in my full objection to the Modified Local Plan below:

1. The Clandon Society Objections and Concerns Which I Share

The A247

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.
I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic.
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247.
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh.
4. The development of 1800 houses at Gosden Hill.
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247.
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3.
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing.
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments.
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph.
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park.
5. The narrowness of the road near Summers.
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement.
7. The sharp bend near Clandon Regis.
8. The narrowness of the road at the Bull’s Head.
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school.
10. The sharp bend with poor sight lines in either direction at the church.
11. No continuous footpath through the length of the village.
12. The speed of traffic.
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.
This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

In conclusion I would point out that the Inspector raised a considerable number of questions about the sustainability, viability and reasoning of Guildford Borough Council’s Local Plan and, despite modifications, these questions have not been addressed adequately in the modifications proposed by the Council in this consultation.

The Plan is unsound and should be re-examined.

Comment: MM2 - LPMM18/3831  Respondent: Moira Maidment 17491425  Agent:

Please find my name here in support of the comments, suggestions and objections made to you in respect of your Local Plan for development, by the Residents of West Clandon where I live and own my property.

Just a reminder that you now have less than 24 hours to respond to Guildford Council's modified Local Plan which will result in massive building on Green Belt around West and East Clandon, including a major industrial estate, and the consequent impact on our villages with dangerous, unsustainably increased traffic.

THE DEADLINE IS NOON TOMORROW TUESDAY 23 OCTOBER.

A great deal of work has gone into researching and writing the response we have created for you to use - PLEASE USE IT and do not waste this opportunity to get the Plan pulled back in for re-examination.

As before we have made it as easy as possible for you by creating a full response (below our sign off in this email) - all you have to do is:

1. Copy and paste the text below our sign off into a new email
2. Add your name and address at the top of this text where shown and your name at the bottom (this is important as the Council will not count anonymous responses)
3. Send it to localplan@guildford.gov.uk with the words 'Response to Modified Guildford Local Plan' in the subject line

ALTERNATIVELY WE HAVE ATTACHED A WORD DOCUMENT WITH THE RESPONSE SO THAT YOU CAN ADD YOUR NAME AND ADDRESS AT THE TOP, AND NAME AT THE END, TO SEND AS AN ATTACHMENT IF PREFERRED.

BUT PLEASE, WHATEVER YOU DO, SEND A RESPONSE TO GUILDFORD COUNCIL NOW - the more that are sent the more likely we are to achieve a re-examination.

Thank you!

Protect Clandon - part of the Clandon Society, the Residents' Association for West and Ea

RESPONSE TO MODIFIED GUILDFORD LOCAL PLAN
Dear Sir/Madam

Ref: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments:

1. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.

1. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:
   2. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
   3. There is too much reliance on A3 improvements and these are beyond the council’s control
   4. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
   5. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

1. I would like the Inspector to RE-EXAMINE the Local Plan because:
   2. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
   3. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. The Clandon Society Objections and Concerns Which I Share

The A247

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.
The £1 million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic.
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247.
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh.
4. The development of 1800 houses at Gosden Hill.
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247.
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3.
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing.
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments.
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway).
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph.
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The exit sight lines for the exit of the Onslow Arms car park.
5. The narrowness of the road near Summers.
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement.
7. The sharp bend near Clandon Regis.
8. The narrowness of the road at the Bull’s Head.
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school.
10. The sharp bend with poor sight lines in either direction at the church.
11. No continuous footpath through the length of the village.
12. The speed of traffic.
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt
The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. **The Guildford Residents’ Association’s Objections and Concerns Which I Share**

   MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

   MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

   MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

   MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

   MM2 Although extra sites are required because some might not come to fruition, the **housing supply** figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

Comment: MM2 - LPMM18/2794  Respondent: B Lockie 17604577  Agent:

- There seems to be no sound reason why Guildford should be taking up the shortfall for Woking Borough Council’s ‘unmet housing need’, especially as Woking wants to protect it’s Green Belt land and so is not proposing to build on its Green Belt but Guildford is proposing to do this and do it on a large scale, with an increase because of taking up Woking’s ‘unmet housing need’.
- The very recently released Office for National Statistics (ONS)figures show that Guildford does not need so many new houses (a fall of 40-45% from its previous figures). Neighbouring councils also show a reduction in need of approximately 36% for Woking and 27% for Waverley. These figures need to be accurately reflected in the proposed GBC local plan as the figures previously proposed are unsound.
- The Government said that councils could not build on Green Belt land unless there were exceptional circumstance: there are no exceptional circumstances for GBC to propose building on Green Belt land, especially as brown field sites are available. Greenfield sites rely on cars, brown field sites largely negate the need for cars.

Comment: MM2 - LPMM18/5550  Respondent: Talullah Scotland 17633313  Agent:

I have not been advised of this consultation (despite being advised previously by email) and only heard of it by my neighbours. Why have you stopped informing me?

I fully support the representation made by Wisley Action Group and their legal team. In particular, their observations that:

- MM2 The housing target is wrong.
• MM2 There should be no requirement for Guildford to take Woking’s unmet need particularly as this will require further green belt release.

• The council has not properly followed its spatial strategy which requires that development takes place first in the town centre, the urban area and brownfield before moving to land in the villages or greenbelt. The addition of another 500 houses in Send (which will be car dependent) has a severe impact on Portsmouth Road Ripley which has not been properly considered.

Attached documents:

Comment: MM2 - LPMM18/2406  Respondent: Gladman Developments Ltd (Richard Agnew) 17752321  Agent: 

MM2: Policy S2: Planning for the borough - our spatial development strategy

It remains Gladman’s position that the Council should be following the Sedgefield approach for calculating a rolling five-year housing land supply rather than the Liverpool approach. The significant backlog that has accrued since the start of the plan period should be dealt with within the first five years of the plan. We recognise that this backlog is significant however there is a clear need for these homes now and not later in the plan period.

Comment: MM2 - LPMM18/6039  Respondent: Thakeham Homes (Sir or Madam) 17976417  Agent: RPS Planning & Development (Mr Cameron Austin-Fell BA)

Guildford Local Plan: Consultation of Main Modifications

These representations have been made by RPS on behalf of Thakeham Homes, who have land interests to the west of Fairlands.

RPS has been involved in the Examination sessions for the Local Plan, where substantive concerns were raised surrounding the soundness of the Council’s strategy for new growth and the ability of the Council to deliver the necessary housing within the Plan period. RPS does not consider that the Council’s proposed Main Modifications (MMs) address these concerns, and the Council will not be able to maintain a deliverable supply of housing land post adoption of the plan.

RPS remain of the view that the MMs are not appropriate, or justified, and further work is necessary to ensure that these concerns can be addressed. In addition, RPS has identified further discrepancies in the Council’s Sustainability Appraisal, which has reoccurredly failed to address Thakeham’s land interests to the west of Fairlands as a reasonable alternative site. As such, the findings of the Sustainability Appraisal do not legitimise the Council’s findings and further work is necessary in order to ensure that the most appropriate sites are brought forward as part of the Plan.

Sustainability Appraisal

In support of the MMs, the Council has prepared a Sustainability Appraisal Addendum [GBC-LPSS-028a], dated September 2018. This document sets out the Council’s selection of reasonable alternative sites and provides justification for the Council’s preferred approach. As part of this approach, the Sustainability Appraisal Addendum (SA Addendum) presents seven options for additional housing scenarios, summarised in Appendix 1. None of these options include the potential for land west of Fairlands, as a legitimate reasonable alternative site. RPS considers that this approach is unjustified.
Upon request from the Council, Thakeham Homes provided an updated masterplan for land west of Fairlands, which demonstrated how a smaller site could come forward, consistent with the need for more non-strategic sites [INS ID/6]. A plan was provided to the Council (Appendix 1), which presents a Phase 1 scheme for 270 dwellings, which would also include a community hub and SANG provision. This plan was available to the Council when considering the site for the purposes of the SA process.

The justifications in the SA for discounting the sites are provided within paragraph 5.4.8 of the SA, which surprisingly identifies that Land to the west of Fairlands could ‘deliver in full within the first five years of the plan’ and ‘does not stand out as subject to constraint’. The SA however rules out the site as a reasonable alternative on the following grounds set out within paragraph 5.4.8:

‘Firstly, there is a need to consider the reasonableness of scenarios involving land to the west of Fairlands. The site does not stand out as subject to constraint, and Fairlands appears no less suited to growth than other settlements; however, a concern is with the size of the allocation. The resulting scenario would involve additional supply via just two sites, and hence could be associated with a degree of delivery risk. Whilst scenarios 1, 2 and 7 would equally involve reliance on just two large sites, they are preferable as they align closer with the spatial strategy.’

The logic presented here in the SA is flawed and contradictory, particularly given the Council’s decision to include 200 homes at Aaron’s Hill, Farncombe in the plan although delivery of this site, as demonstrated above is uncertain. Given that Garlick’s Arch (see comments on MM41) does not deliver the Inspectors requirement for early delivery, the site at the west of Fairlands has the potential to be delivered alongside 2 or 3 of the tier 10 sites and therefore ruling the site on its restriction to be delivered only with 1 other site is unfounded. The SA should clearly not have discounted Land to the West of Fairlands on the basis of size. The SA does also indicate that this could be reduced further (paragraph 5.4.6), yet no justifications have been given as to why this has not been considered as an option.

Indeed, the SA also recognises that Land West of Fairlands would present the most sequentially preferable site in Fairlands (Box 52 refers), and can come forward in a way which presents strong defensible boundaries.

An earlier version of this SA Report Addendum (namely the draft version submitted to members in August 2018) included an analysis including an appendix dedicated to ‘Supplementary information on site options’. (Appendix 1). The decision was subsequently taken however to delete that appendix referenced on site options (footnote 11, p10) as ‘the information presented was simply a repeat of the information presented in Appendix IV of the SA Report Update and, on reflection, was deemed unnecessary and with the potential to cause confusion.’ It is unclear why the decision was taken to remove this table, however turning to it, it appears that some consideration has been given to Land West of Fairlands. For the benefit of the Examination, this has been enclosed as Appendix 2 of these representations, to ensure transparency in the process.

If the table in Appendix 1 had not been omitted however it would have demonstrated that several of the chosen sites were in unsustainable or less sustainable locations than the site at Fairlands represented herein. All of the chosen sites are outside of a 2km walking distance from the facilities of a district or local centre, all besides Aaron Hill are further than 2km walking distance from a primary school and all are more than 1km walking distance from a health centre (more than 2km for Aaron’s Hill and Glazier’s Lane). RPS advises that the findings of this SA Appendix are taken into account when considering the options for reasonable alternative sites.

The site at Fairlands however lies within 0.2 miles/0.3km (4 minutes walk of Fairlands Practice/Rowlands Pharmacy, 0.3 miles/0.5km (6 minutes walk) of Worplesdon Primary School, and 0.3 miles/0.5km (6 minutes walk) of Fairlands Local centre including 2 convenience stores, hair and beauty and other retail establishments. Furthermore the site lies within 3 miles/4.8km of Guildford town centre, easily accessible within 20 minutes by a regular bus service and also within 9 minutes via a single A road (A323). The site is not reliant on the uncertain delivery of improvements to the A3 and the site will furthermore reduce the traffic within Guildford town centre through a new park and ride scheme. The site will also provide a SANG in excess of its own requirement. Although the omitted analysis made an assessment based on both the Fairlands sites, the draft SA found that these presented more favourable scores than the preferred options. The scores for Land to the West of Fairlands may have even scored more preferably if assessed on its own merits. The site is therefore not just more sustainable than the Council’s chosen options but it will also enhance the district centre’s and district’s ecological, transport and air quality sustainability.
The Council have however chosen sites subject to additional delivery constraints, further from Guildford and other local services, and reliant on improvements to the A3, of which delivery is uncertain (Policy ID2). Aaron’s hill is in close proximity to Godalming but as suggested within the SA Godalming is ‘on a significantly smaller scale compared to Guildford Town Centre.’ (p59) Also this approach does not ‘maintain Guildford borough and Guildford Town’s economic role’ or enhance the district’s local economy.

Fairlands however lies less than a mile from the edge of Guildford and acts as a suburb to the town. Development here will provide improved access to the town centre via a new park and ride and increase the population utilising the town centre economy, facilitating its growth in accordance with the retail, employment and spatial strategies of the plan. This demonstrates that the Council have unjustifiably chosen unsustainable and undeliverable sites and omitted the evidence base behind this. The Council’s reasoning for omitting the site is therefore contradictory and justified on delivery grounds where they have previously said there were no concerns. This would determine that the SA is not soundly based and has been unobjectively skewed towards the Council’s preferred options from the outset.

The advice provided regarding the sustainability appraisal of the emerging Huntingdonshire Local has been a consideration of these representations which recognise that a SA is a planning judgement of the Local Authority. The Council are however required to consider all ‘reasonable alternatives.’ Paragraph 40 of the Hickinbottom case (R (RLT Built Environment Ltd) v Cornwall Council (2016) EWHC 2817)) set out the key principles as to what is required for something to be a reasonable alternative. This determines that ‘an option which will, or sensibly may, achieve the objectives is a reasonable alternative.’ Whether this is achieved is a matter of evaluative judgement on behalf of the authority and if the authority rationally determines that a particular option will not meet the objectives, that option is not a reasonable alternative.’

The Council’s reasoning evidence for the site however only demonstrates that the site does meet the objectives consideration as a reasonable alternative and on this basis, it is perverse that the site has been excluded from assessment. This, alongside the Council’s decision to omit supportive information, suggests that the report presents some uncomfortable truths, and has been unobjectively prepared.

In summary the Council’s judgement to discount this site from assessment is not appropriate or justified and has omitted a clear reasonable alternative site from the selection of further sites. RPS, considers that this is not a good practice, and consequently will prevent delivery of the Borough’s immediate housing need due to the inclusion of undeliverable sites early in the plan period. Omission sites should therefore be considered outside of the SA on their merits, considering their sustainability, benefits, deliverability and their ability to contribute development early in the plan period. RPS would recommend that the SA is revised, to take a fair and transparent view of Land to the West of Fairlands as a reasonable alternative in light of existing options to consider whether the Council are planning for the right strategy, or simply retrofitting based on initial decisions made.

Led by Thakeham Homes, RPS considers that Land to the West of Fairlands represents a sustainable option for growth that can see delivery in the next five years, consistent with the Inspector’s Note ID6. The Council has proposed to meet this through a number of new sites, which RPS provide comment on below.

---

**Comment: MM2 - LPMM18/3004**  **Respondent: David Wilson 18641057**  **Agent:**

I am writing to **OBJECT** to a number of the modifications and matters relating to the modifications to the Local Plan.

1. Number of Houses – MM2- **OBJECT**
2. In the current version of the Plan the number of houses has increased from the previous version. This is despite that fact that the 20th September 2018 ONS household growth projections for Guildford have reduced. In fact, the ONS number of projected growth in households over the relevant plan period has now reduced from 11,142 (old version of Plan) to 6,635 …….. a reduction of 4,507.
3. The household growth figures are therefore materially wrong.
4. Because of these huge discrepancies between the assumed housing growth in both the old and new versions of the Plan, and the correct ONS figures, the Public Examination of the Plan by the Planning Inspector should be reopened (MM2).

Attached documents:

Comment: MM2 - LPMM18/3008  Respondent: David Wilson 18641057  Agent:

5. Methodology of Plan and Modifications- OBJECT

a. The Plan and its modifications have not properly observed the correct hierarchy of development, and in particular, Brownfield opportunities in the town centre have not been made sufficient use of. (Policy S3, MM3)

Attached documents:

Comment: MM2 - LPMM18/5950  Respondent: Waverley Borough Council (Gayle Wootton) 19607073  Agent:

Guildford Local Plan: Main Modifications Consultation

I am writing on behalf of Waverley Borough Council in response to the proposed Main Modifications to the Guildford Local Plan: Strategy and Sites.

The Council’s comments are set out below:

Policy S2 – MM2

The Council’s comments relate to the issue of unmet housing need from Woking. During the Examination Hearings the Inspector issued his note ID/6, which included a section on unmet housing need. In that section the Inspector stated that Guildford should be seeking to accommodate a meaningful amount of around 25%, which he calculated as 787 dwellings. The Inspector noted that in Waverley, which was being asked to pick up 50% of the unmet need, the allowance was being spread over the whole Plan period. He said that if the same approach was taken in Guildford, this would amount to 41 dwellings per annum (dpa).

It is noted that in the proposed modifications, an allowance has been included for 42 dpa as a contribution towards the Woking unmet need. However, this is only applied to the period from 2019, rather than from the start of the Plan period (2015). As a result, the contribution only amounts to 615 dwellings, rather than the 787 identified in the Inspector’s note. The contribution towards the unmet need is, therefore, around 20% not the 25% identified by the Inspector.

The Council appreciates that the Inspector will have given this matter careful consideration. However, in the modifications that Guildford Borough Council is consulting on, there does not appear to be a justification as to why the contribution towards the Woking unmet need does not apply from the start of the Plan period. This was the approach taken with the Waverley modifications. If there is a justification for not including this within the period 2015 to 2019, then it is still possible for Guildford to contribute towards meeting 25% of the unmet need, by increasing the contribution for the period 2019 to 3034 from 41 to 53 dpa, which would ensure delivery of the 787 identified by the Inspector in his note. From the information available there appears to be no reason why this increase in the contribution to Woking’s unmet needs cannot be accommodated, given that the Plan anticipates a total supply of 15,107 against a proposed target of 12,600.
Dear Sir,

I strongly object to the Main Modifications.

I support the representation made by the Wisley Action Group which was written with advice from Richard Harwood QC.

1. The housing projections in MM2 are overstated. Half the 'requirement' is for students who will leave at the end of their course. The latest ONS figures recognise this. The Hearing should be re-opened to take account of the latest figures. This should eliminate the requirement for Guildford to take Woking's unmet need and the release of Green Belt for this purpose.

OBJECTIONS set out in five parts:

1. Policy S2 – Spatial Strategy
2. Cross-reference to SHMA Reports
3. Deliverability & the NPPF
4. Mods Sites A63 & A64
5. Substitution Site Advocated – Land at Ripley

(1) Policy S2 – Spatial Strategy
We consider that the OAN of 671 dwellings per annum does not fully reflect the housing need of the Borough, and the stepped trajectory is unsatisfactory. The Inspector’s note on this subject raised concerns, as follows:

“It would negate the purpose of the 20% buffer (which the Council accept), frustrate attempts to address key factors affecting worsening affordability, and would be contrary to Government policy which is seeking to boost the supply of housing.”

Extending that point, the Inspector’s note on OAN sets out that in not adopting a stepped trajectory, GBC should identify additional sources of housing delivery in the early years of the Plan and should aim for a flat trajectory and not rely on completion of the A3 Road Improvement Strategy, which is not due until at least 2027.

Our overall conclusion is that additional housing sites are vital and necessary to increase delivery rates early in the Plan period (see Section 3). Clearly, the Modifications are responsive, but they are insufficiently attuned to realistic delivery rates especially in relation to Wisley Airfield. Moreover, there is the update in OAN, via the population projections and economic growth conclusions to consider, as set out in Section (2), below.

But before coming to that, we also feel that there is a philosophical deficit in the Plan’s dependence on small sites (below 30 units) and (very often) displacement of commercial uses; many of which perform valid functions for community/societal needs. Instead, there should be greater emphasis on sites of between 100-250 units – allowing for new open space
to be created; for affordable and mixed housing; and for cohesive layouts/development patterns to be achieved. These functional attributes are much more difficult to realise through small/piecemeal site development.

(2) Cross-reference to the two key SHMA Reports
We refer to the May 2014 Draft Guildford SHMA Report and the December 2014 Surrey SHMA in respect of Guildford Borough. The later report updates the 2012 Sub-National population projections as the starting point for considering housing need.

The December Report acknowledges that accurately projecting household formation rates is difficult, but the adopted model shows a need for 549 homes per year. However, alongside that is the result of the Guildford Employment Needs Assessment, prepared by URS: this reveals higher than expected growth in jobs.

As a result, the December Report indicates that housing provision may need to be adjusted upwards from the “demographic-led” figure. That leads to a need for 712 homes per year to support the projected economic growth within the Borough.

Overall, the December Draft SHMA Report concludes by identifying a need for between 620 – 816 homes per annum in Guildford Borough. The full OAN is described as 816 homes per annum. As that figure is based on the latest population projections, predicted economic growth and G.L. Hearn’s stats on student growth Persimmon Homes consider that the Local Plan should be based on 816 dpa; and that further housing sites will be necessary. We urge that the site at Ripley, set out in Section 5, below be considered.

(3) Deliverability and the NPPF
Persimmon Homes’ direct experience, as a national developer, is that very large sites, with major infrastructure requirements, are simply not delivering the quantum of units required within initially anticipated timescales.

For its part, Guildford Borough is placing over reliance on a number of exceptionally large sites - such as the Former Wisley Airfield (2,000 homes) and the Slyfield Regeneration Project (1,500 homes) both of which require major infrastructure. And, therefore, cannot be relied upon to deliver housing in the first five years of the Local Plan. We are concerned that the draft local plan is overly dependent on these exceptionally large sites to deliver the Borough’s housing strategy.

Whilst we have no objection to the principle of large scale sites, there has to be recognition of the significant amount of lead-in time to begin construction of major development - where programmes frequently suffer long term delays and delivery rates can initially be slower than anticipated.

The latest guidance in the NPPF is seeking to ensure housing sites are deliverable and the Inspector in the recent Woolpit (Mid Sussex District) decision (PINS Ref: 3194926) states;

“The up-dated PPG on Housing and economic land availability assessment sets out guidance on what constitutes ‘deliverable sites’ and covers the evidence that a site with outline permission is expected to have in support of its inclusion in the supply. The PPG places great weight on the adequacy and sufficiency of consultation with those responsible for delivering dwellings. It is noteworthy that in this case, the Council has failed to adequately demonstrate it has done so. An assessment of the Council’s AMR against the updated PPG reveals that the AMR falls substantially short of producing that evidence that a LPA is expected to produce”.

As a result of this decision, the Council should provide clear evidence that all sites granted outline permission can start to deliver housing within 5 years, otherwise the Council’s five year land supply can be called into question.

As noted earlier, where major infrastructure is required the delivery will be delayed early in the plan period or the rate will be significantly slower than anticipated. Put simply, Guildford Borough do not want to look back in five years asking why their housing target is unmet? And this is likely to be with case with the infrastructure, land issues, and build complexities of the major allocated sites. Based on Persimmon Homes’ current experience, this is inevitable. Moreover, the draft Letwin analysis makes it clear that a range of sites need to come forward (both large and small sites). Paragraph 21 of this report states: ‘this cannot be a question of either / or. We will continue to need more new housing both on smaller sites and on large sites’. This is now reflected in the NPPF which states there should be a sufficient mix of sites (para 67) acknowledging the important contribution of small and medium sites for early delivery (para 68).
Consequently, the (Plan’s) over-reliance on a number of major allocations is contrary to that advice. Additional housing allocations should be made on smaller sites of up to 250 units ensuring a steady supply of land for housing in the first five years (where the need is very great), and throughout the plan period. The current contingent is not enough, especially with the over reliance on a number of large sites and against the context of a growing affordability issue in the Borough.

Since the publication of the White paper, ‘Fixing Our Broken Housing Market’ central Government has been adamant that both national and local housing production has been far below that needed. This is both as measured demographically and as measured through market signals – largely in terms of affordability ratio’s. The political, social and planning importance of increasing housing output from the very low levels currently being achieved has permeated every facet of advice issued by DCLG and Ministerial speeches.

NPPF (March 2012) highlights the need to boost significantly the supply of housing whilst the NPPF (July 2018) strengthens further the importance which Central Government attaches to increasing housing production since it was one of the primary reasons for reviewing the document with Paragraph 59 of the NPPF stating:

“to support the Government’s objective of significantly boosting the supply of homes, it is important that a sufficient amount and variety of land can come forward where it is needed, that the needs of groups with specific housing requirements are addressed and that land with permission is developed without unnecessary delay”.

(4) Modifications Sites A63 and A64 - Objection
Respectively, land West of Alderton’s Farm, Send (120 dwellings) and land at Flexford (105 dwellings).

... The Alderton’s Farm’s allocation ignores the (settlement) impact of the 550 dwellings, etc development (already planned), and close by at Garlick’s Arch. This allocation has increased from 400 dwellings to 550 units: in short, the village will be overwhelmed if it is now to take a further 120 dwellings at Alderton’s Farm.

... The Mods site at Flexford is remote and has little by way of social infrastructure; its only merit is the local rail station. The position is clearly seen when one considers the distance between the “development site” and its nearest local facilities:

- 1km to the nearest primary school
- 1km to the nearest health facility
- 1km to the nearest “A” category road
- 1km to the nearest public open space
- 0.75km to the nearest village hall.

Instead we urge that land controlled by Persimmon Homes Thames Valley at Georgelands/ Devonia Farm, on the west flank of Ripley be considered before these sites as much needed housing can be delivered within five years if the site were to carry an allocation for housing. The site details are as follows.

(5) Details of the Proposed Substitution Site/ or Candidate for additional housing land release

This site has no impact on the gap between Ripley and Send Marsh, for the reason that the Grove Heath Neighbourhood stands mid-way between the two settlements. This is illustrated in the plan below, which also shows the close distance of the “substitution site” (marked “A”) to the village centre.

- The site is outside the Ripley Conservation Area.
- It is within walking distance of the Village Centre – see the plan below
- The site is only 3 minutes walk to the local Primary School.
- It is practically adjacent to the local Health Centre.
- Direct access to a Category “A” road is achievable.

Overall, this block of land amounts to 25.97 acres, of which 12.66 acres would be developed for housing: a yield of approximately 200 dwellings, 40% of which would be affordable units.
The preliminary layout on page 8, below, shows Public Open Space on the south flank of the site, and also along the west boundary: that means that the development area has a settled appearance and strong green boundaries, with little discernible profile from the Portsmouth Road. These public open spaces / green corridors/ and SANG elements amount to 11 acres.

The site is under the control of Persimmon Homes, a major housebuilder with a track record of building out consented schemes as soon as practicable. Commencement and development completion is possible within the next 3 years.

The location is shown below, followed by a red-lined plan, and then a preliminary layout to show the development configuration and open space elements.

**Comment: MM2 - LPMM18/13**  **Respondent:** Mr James Masterman 20392641  **Agent:**

MM2 - 12600 new homes represents an increase of 30% in housing stock and population. Local roads into and out of Guildford are already chronically congested from all directions. The A3 through Guildford is a dangerous, noisy, polluting local, regional and national embarrassment. A 30% increase in homes and population with only minor tinkering with infrastructure is NOT A VIALBLE PLAN. It is rather a shot in the dark, with the gun held to the heads of local Guildford residents. The modelling details and assumptions have never been explained or properly justified to local residents associations, despite multiple representations throughout this planning process. But nothing seems to shift you guys - keep going then, but on your heads and consciences, be it. And be brave enough to put your names to this "plan".

**Comment: MM2 - LPMM18/153**  **Respondent:** Mr James Masterman 20392641  **Agent:**

The ONS has reduced its population growth figures by 40%, meaning 4662 new households in the Guilford Borough, by 2034, rather than 7717 previously predicted. This new housing need can now be meet from the utilisation of brownfield sites alone, and should clearly preferentially be done so. In turn this will preserve the greenbelt, negating the need to build on sites such as Gosden Hill. The Guildford plan must be changed to reflect these new population growth figures.

Comment: MM2 - LPMM18/456  Respondent: Chris Blow 20605953  Agent:

MM2 – the very recent data from the Office of National Statistics on projected household formation show significant change and provide a clear indication that the Guildford housing requirement should be lowered. I suggest that the Inspector must re-open the Examination of the Local Plan in public to examine this new data and take further advice from the experts.

MM2 – in view of the many critical comments about the required provision of new homes to meet Woking’s unmet need and since Guildford are experiencing exactly the same Green Belt constraints as Woking, it is argued that the figure of 42 new homes per year to meet Woking’s unmet need should be significantly reduced, and, if possible, eliminated completely. This view is reinforced by the further observation that Woking’s unmet need is itself likely/undoubtedly overstated following their latest ONS household formation data reduction.

Attached documents:

Comment: MM2 - LPMM18/466  Respondent: Mr R C Mackay 20607201  Agent:

Our response to the proposals is that we submitted our response in the original plan Guildford, Merrow, Burpham, Send, Ripley, West Clandon, West Horsley, Wisley Airfield. There is no infrastructure to support any of these proposed developments on Green Belt Land. There is no justification for taking land out of the Green Belt in order that it can be built on when there are many brown field sites that can be used. We do not have the time to go through page after page of these proposed alterations to the plan.
The traffic through all of these areas is already more than can be coped with and we have not seen any proposals that would prevent this being an overflow from London. Which is exactly what the developers at Wisley told us when we went to view their first proposal for development. The people in the villages have a right to quality of life, free from pollution and noise generated by traffic.

The National Statistics Office have clearly stated that you have over estimated the housing requirement for this area and they do not expect it to change. They have slashed their forecasts for population growth in the borough by 40%. September 20th 2018, that the figure would be 4,662. This means the housing requirements could be met on existing brownfield sites within the town.

There is no reason that is acceptable that Guildford and the surrounding villages should meet Wokings unmet housing needs when Woking has ignored their residents needs.

We therefore hope that without spending a great deal of tax payers money this housing assessment will be reviewed and that priority will be given to the quality of life for residents and wildlife conservation.

**Comment:** MM2 - LPMM18/855  **Respondent:** Berkeley Homes Ltd (Olivia Forsyth) 20644961  **Agent:**

**Representations to Guildford Borough Council's Proposed Modifications to the Local Plan (2018)**

These representations are submitted by Berkeley Homes (Southern) Ltd.

Berkeley Homes has been working closely with the Howard of Effingham School in Effingham to develop an effective and modern school and much needed housing within the Effingham area.

These plans were initially proposed for development in the Draft Local Plan (2014), which formed the basis of a planning application for the provision of a replacement school and 295 enabling residential dwellings. The scheme was refused planning by Guildford Borough Council and later granted planning permission in March 2018 by the Secretary of State following an appeal by Berkeley Homes.

Following the grant of planning permission, it is considered that the current allocation of land within Effingham would result in a Local Plan that is out of date prior to it even being adopted and as such, the following sites should be allocated for the development they have planning permission for:

- Existing Howard of Effingham School - allocated for up to 100 dwellings
- Browns Field - allocated for 37 dwellings
- Lodge Farm - allocated for approximately 160 dwellings and a secondary school.

This approach is supported by the NPPF which states at paragraph 67 that "planning policies should identify a sufficient supply and mix of sites, taking into account their availability, suitability and likely economic viability. Planning policies should identify a supply of:

a) Specific, deliverable sites for years one to five of the plan period; and

b) Specific, deliverable or broad locations for growth, for years 6-10 and where possible, for years 11-15 of the plan".

Appendix 0 identifies the Howard of Effingham development providing 265 dwellings in years 2019/20 to 2024/252 which clearly demonstrates that the Council are relying heavily on the delivery of the scheme for their housing supply and it is accepted that the sites are deliverable within the specified timescales.
Despite the grant of planning permission however, a comprehensive review of the Green Belt in Effingham should be undertaken. The resultant northern boundary of the residential development site is not considered to be a defensible Green Belt boundary. The land between the consented residential development and Thornet Wood to the north should be removed from the Green Belt and be allocated for residential development, for approximately 100 dwellings, which would include a significant provision of affordable housing.

Comment: MM2 - LPMM18/856  Respondent: Berkeley Homes Ltd (Olivia Forsyth) 20644961  Agent:

Policy S2: Borough Wide Strategy

Policy S2 sets out the Council's strategy for planning and positively meets its Objectively Assessed Needs (OAN) which are required by the NPPF (paragraphs 14 and 17). This policy particularly focuses on the Borough-Wide housing target.

In relation to this target, we would note the following:

• The proposed plan pushes back the plan period again from 2011-2031 to 2015-2034. Given the under delivery of housing since 2011, the current approach means Guildford is very likely to see fewer homes delivered by 2034 than is required and there is no strategy identified to meet the backlog of the years no longer included within the Plan period.
• The phasing of development "backloads" the housing target. The overall housing target is equivalent to 663 dwellings per year but the Council is not planning to deliver that many homes in any year until 2020/21, with that provision largely from sites already with planning permission. Additional sites should be identified and allocated for immediate delivery in 2019/20-2020/21 to address the immediate need and under delivery between 2011 and 2018.
• There appears to be a lack of flexibility within the allocations. If any one of the larger sites fails to deliver, Guildford will not be meeting their housing requirement.

Attached documents:

Comment: MM2 - LPMM18/979  Respondent: Carmen Niblett 20658817  Agent:

Policy S" - Barton Willmore, from a respective consultancy, has advised that the correct figure should be 431. September data from the Office for National Statistics, which does population forecasts, suggests that appropriate growth in Guildford Borough can be achieved with 460 houses a year. Both these totals are greatly lower than the total assumed by the Inspector. This could make a massive difference to developments in Send.

Please explain how with this application, it will not constitute over development by joining Ripley and Send villages.

Comment: MM2 - LPMM18/1151  Respondent: Jennie Moss 20667169  Agent:

RE: MM41 Land at Garlicks Arch, Send Marsh, Policy A43 - INCREASE OF 37%
MM42 Land at Burnt Common, London Road, Send, Policy A58

MM44 Land at Alderton's Farm, Send Marsh Road, Policy A63

MM9 Green Belt Policy

MM27 MM41 MM42 and MM48 Transport Strategy

I am a resident at Send Road and prior to that lived in [Response has been redacted due to statement containing personal data which cannot be disclosed due to the provisions of the General Data Protection Regulation 2018/Data Protection Act 2018]. I have two children who attended [Response has been redacted due to statement containing personal data which cannot be disclosed due to the provisions of the General Data Protection Regulation 2018/Data Protection Act 2018] which has now closed, one child moved to [Response has been redacted due to statement containing personal data which cannot be disclosed due to the provisions of the General Data Protection Regulation 2018/Data Protection Act 2018] which I believe it to be a full capacity following the closure of [Response has been redacted due to statement containing personal data which cannot be disclosed due to the provisions of the General Data Protection Regulation 2018/Data Protection Act 2018], my other child is now at [Response has been redacted due to statement containing personal data which cannot be disclosed due to the provisions of the General Data Protection Regulation 2018/Data Protection Act 2018] (no school transport available and if she would like to get to school on time no public transport available, let alone travelling over an hour to get to school if she were to take public transport - not acceptable!). You are given 6 choices for secondary schools and we didn't receive any of the 6 choices, but after two appeals and a lot of waiting we were offered [Response has been redacted due to statement containing personal data which cannot be disclosed due to the provisions of the General Data Protection Regulation 2018/Data Protection Act 2018] but logistically I have to take her and collect her. The reason behind this is because all schools are over subscribed and areas are over populated. HENCE MY REASON THAT I HAVE TO OBJECT WITH MORE HOUSES BEING BUILT.

The journey to school currently takes 30 minutes, Send to [Response has been redacted due to statement containing personal data which cannot be disclosed due to the provisions of the General Data Protection Regulation 2018/Data Protection Act 2018] is a 10 minute journey without traffic! Again more houses leads to more transport on the roads, WE ARE OVER CONGESTED WITH TRANSPORT NOW, SO AGAIN ANOTHER VALID REASON NOT TO BUILD MORE HOUSES.

Send is a village and IF all the above proposed is carried out Send will not be a village anymore. I think all the facilities ie: medical, schools are at breaking point now adding more will lead to disaster.

Attached documents:

Comment: MM2 - LPMM18/1217  Respondent: Jim Allen 20674913  Agent:
Note 1: These observations are made on the understanding that the 2018 NPPF is the defining document in making these modifications.

Note 2: Claiming infrastructure requirements for individual sites are not the concern of Local Plan Soundness, is unethical and morally unsustainable. If the plan fails to include the correctly assessed physical ability for the local infrastructure to cope with additional housing, it must surely be considered practically and politically unsound as it is detrimental to those already in the community as well as those arriving into the new housing locations. As required by the relevant sections of the 2018 NPPF.

Note 3: The release of the New Housing figures; which you mused at the end of 3rd day end of 3rd session “ Housing requirement for the plan period September and midyear middle of June will be taken into account of any meaningful change in the situation”. This release subsequently has occurred on 20th September and displayed around a 40% decrease range.

The housing number modifications, when compared with the main modifications, which correctly imply no strategic housing (actually no housing) can sustainably or realistically be brought forward in the first five years, due to severe foul water infrastructure constraints. See below.

This need for the five year land supply has theoretically added some additional 672 houses per year for 5 years to the previous number of 12,768; thus the council is now providing between 15,000 and 16,126 ‘plots’; the majority on Green Belt sites, when a number of approximately 6,832 or averaging 402 per annum would suffice local need plus affordability needs. The claimed ‘exceptional circumstances’ need to release three strategic sites in the Green Belt has ceased to exist, both in numerical plot terms and in location of strategically placed sites. A decision has to be made which one or more sites will be removed from the Local Plan. Below is the table covering predicted Growth from the ONS for both pre and post EiP. Constantly changing the formulae means no one will ever agree. My calculation is based on simply statements of fact and ONS figures. It is based on the start year of 2018 for simplicity and these figures are already set in the stone of the past decrees, so all I had to do was discover the decrease of Household formations as predicted. Apply this decrease to the previously declared numbers supplied by you as the inspector and GBC via a declaration by the Councillor for infrastructure Matt Furness. The resultant figure is an annual build out rate of 402 PA or a total of 6,832 for the period up until 2034 meaning an over capacity into the Green Belt of 4,592 housing Plots – thus now, no justification or sound argument exists to move the Green Belt line for Gosden Hill with its traffic blocking two right turns to exit North, and the removal of the ill-fated Slyfield regeneration project, thus allowing TW to finance refurbishment of the treatment works without re-location, to provide for Blackwell Farm and the other minor sites.

Justification for removal of Policy A25: Gosden Hill is outlined below.
Page 1: Response to Policy S1;

1. Policy Para (3)(a)

1.1. I support this phrasing as it gives greater clarity to the weight to be accorded to the NPPF in decision making.

2. Reasoned Justification Para 4.1.4

2.1. I agree this change as it gives additional protection to sites and assets with a specific designation.

Page 2: Response to Policy S2;

3. Policy Para’s (1) to (3)

3.1. I am concerned that these figures still do not represent a reasonable calculation of housing need; noting that the reason Woking cannot meet their needs is their refusal to release Green Belt. It is therefore inequitable to expect Guildford to release further Green Belt land having released so much for its own requirements. We look forward to you revisiting these figures released on 20th September technical data is released as you stated during the EiP.

Page 3: Reasoned Justification Para 4.1.9a to 4.1.10.

The Statement fails to take note of the requirement ‘where it is practical to do so’ - it is not practical to do so without moving into Green Belt to build houses and the Minister has specifically stated housing is not an exceptional circumstance. Woking Borough ‘stealing’ Green Belt from Guildford to protect Woking Green Belt is inequitable and counterproductive as it provides no incentive for any borough to meet its own needs.
Clearly the objective via the NPPF Policy/statutory requirement of the Local Plan is ‘to meet the objectively assessed needs’ making no mention of having to ‘exceed’ those needs or by how much, many commentators are indicating that the Local Plan over supplies by something in excess of 4,000 housing plots for the plan period. Thus the Local Plan far exceeds its legal or policy remit with this over supply and therefore must be seen as unsound as it is using exceptional circumstances to move Green Belt boundaries to insecure soft boundary locations from the current solid boundaries set in the 1940’s. Clearly there is no exceptional need when individual sites are taken into consideration, at least two strategic sites could be removed from the Plan and still meet the policy requirement of objectively assessed need.

Para 137 (c) of the new NPPF states that a statement of Common Ground is required as part of the justification for Green Belt release. No such statement of Common Ground has been drawn up between the two boroughs. Therefore allocating housing from Woking is currently incompatible with the wording of the 2018 NPPF. Further there is no provision for the inspector at EiP to force agreement or set a random number. This should be considered in its entirety, or not at all, as part of the examination of this Local Plan. I raise this issue because we note with interest that the Main Modifications make specific reference to the new requirements of the 2018 NPPF.
In 2015, Thames Water declared an available sewer capacity for 4,000 new homes across the borough. This table S2a reveals that the BNF's estimate of 2,000 homes with permissions or completed since 2015 (please see our hearing statement) was an underestimation. As 3,675 homes have been approved or completed since 2015, this is some 1,225 ‘plots per year’ far in excess of the deemed requirement of 672. In fact it is almost double that requirement. Meaning the ongoing OAN Pa has already been over supplied by 1,659 Plots. Thus the figure over 15 years should already be an OAN of 561 pa not 672. Proving the plan OAN is now numerically unsound. In respect of the sewer capacity, just 325 homes remain, which equates to less than half a year’s sewer capacity for the proposed 672 homes per year. This is clearly well short of the infrastructure requirement for five year land supply, let alone the total volume of new homes proposed over the plan period.

The demonstration provided by many, concerning infrastructure short fall has been proven by the inspectors comments that sites cannot come forward prior to provision of this infrastructure and has led to a seriously misguided and unsound approach to ‘capacity’. The Council, Environment Agency and Thames water have or plan to ‘adjust the theoretical formulae’ to improve the foul water capacity (discharge rates into the local river). Notably “without changing the physical capacity of the input system” this approach is totally unethical and practically unworkable. Thus failing to meet the needs of section 74 of the NPPF as no site within Guildford is deliverable due to lack of foul water infrastructure provision by the Water Undertaker. The Water Undertaker has made no budget provision in the borough to update and modernise the currently overloaded system, thus making the plan unsound in respect of future planning for Infrastructure; Waste water. [As the Water Undertaker is a PLC there is legal questions as the ethical approach to the LPA providing public finance for a PLC – who are already being paid to provide that very service - under legal obligations as defined within the relevant Water Industries Act.] “If the private sector is unwilling to lend or invest in a venture perceived by to be unviable or unsound should not the public sector get the message and keep away?” [Alec Samuels Barrister former leader of Southampton City Council]

Noting the discharge capacity referred to and allocated by the DoE is not the same as the physical pipe capacity to the treatment works or the Treatment works incoming capacity to handle additional ‘permitted’ discharge into the local river. The 4,000 home capacity listed above being pipe and treatment works capacity identified in 2015 by Thames Water PLC.

Thus the Local Plan in practical terms is unsound as no proposal in this Plan provides for such rapid upgrade to the water infrastructure. We note that Thames Water on the 3rd September released its business plan for the 2020 - 2025 period which did not include financial provision, in fact specifically excluded financing, for any new capacity pertaining to Guildford. While Martin Grant was informed in 1980’s that Pipes through Burpham were running at 4 Dry weather flow when the then design capacity should be 6 DWF. This referred to a 3km length of Main sewer.

Since my submission to the EiP. Information in respect of foul water further problems have been reported.

- Ockham – Constant raw sewage in road to Wisley and ‘tankering out’ due to lack of capacity at Wisley
- West Horsley - sewer collapse road, closed for multiple months,
- Burpham - blocked for 33 days TW had not lifted a main sewer line, manhole for 40 plus years
- AA roundabout – Collapse of main sewer
- Dapdunne Wharf – Blocked sewer
- Fairlands adjacent common Blocked

The Sewer system of Guildford is estimated to have been install in the 1890’s and little has been done in respect of pipe work since. It is running pipe work which is well over design capacity and the introduction of even the 5,800 homes onto the system will simple overload it. Any attempt to impose housing numbers without a consolidated program of Sewer pipe replacement throughout the Borough – for which Thames Water has no budget for – makes the plan unsound.

Further information can be found at the following link https://www.getsurrey.co.uk/news/surreynews/guildford-council-bear-full-cost-15122956

Please also note, in practical terms the enlargement of pipe sizes for additional capacity takes three years and increase of treatment capacity takes five to ten years. Thus the Local Plan cannot be considered sound, as the water infrastructure simply cannot be upgraded within the five year land supply requirement window.
Page 5: Para 4.1.9ac Table S2b Sources of Supply

We welcome the reduction in the housing figure on Gosden Hill. However this in isolation does not in itself give reassurance that a defendable Green Belt boundary can be achieved. It is unclear whether the site allocation boundary will be amended to reflect the housing reduction on this site. Considering the reduced Housing number detailed below – this site could easily be removed without detriment to the Objectively assessed housing need in Guildford.

Page 6: Para 4.1.10

We support the spread of 'alleged demand' for housing over the life of the Plan (The Liverpool Method) as this will give Woking additional time to reappraise their true ability to absorb their own objectively assessed needs. We note that Woking have not expressed any concern about their sewer capacities. Exceptional circumstances exist in respect of water infrastructure in Guildford Borough, but similar circumstances do not exist within Woking.

Further to the HMSO release on housing need figures September 20th 2018 – the number is now down to approximately 402 from 672 per annum, yet now with the 5 year supply included, over 3,000 additional houses have been added to the allocation topping 15,000 all bar 50 in the Green Belt. In reality over 40% of the Green Belt allocation could be removed, which equates to at least one of the strategic sites: A25: Gosden Hill is the site which requires most ‘off site’ infrastructure work to make it sound, deliverable, sustainable and viable – noting if a road tunnel is accepted as necessary under Guildford, this site should be protected in any respect. Currently there is a gross over supplying of the housing need.

Further, this Plan makes no mention of the fact that the water treatment across the borough is lacking in capacity. We remain concerned that the Plan pays little regard to infrastructure provision and its timely delivery by other agencies Surrey, Highways England, Thames Water, National Grid (both Gas and Electric).

Page 7: Monitoring Indicators.

These plots identified as 'traveller plots' make no mention of these travellers 'departing' to allow others to travel and depart. It is implied that these pitches are for permanent occupants, thus the problem of traveller incursions elsewhere will remain unmitigated. The policy should include 'time limited plots’, to ensure that there is a regular turnover of occupants to make pitches available to other travellers. We are concerned that the indicator seeks to make provision for groups of ‘unknown planning status’. This is an extremely wide definition which would be open to abuse and should be removed.

Comment: MM2 - LPMM18/1337  Respondent: Mrs Janet Ashton 20689281  Agent:

Most up to date housing need figures suggest these to be grossly exaggerated. Also, if Woking borough has a genuine housing need which is unmet, surely it can only be met in Woking itself.

Attached documents:

Comment: MM2 - LPMM18/1930  Respondent: Mrs Janet Ashton 20689281  Agent:

Dear Sir,

Re: Guildford’s Modified Local Plan - MM2, Policy S2, Spatial Development Strategy.
The latest figures from the Office of National Statistics suggest that current housing numbers in the plan are grossly exaggerated and no longer form a sound basis on which to make decisions. It has been demonstrated that building 360 homes a year would support the ambitious economic growth proposed and figures accommodating student graduates are currently inflated and inaccurately calculated.

As a result, the loss of Green Belt space is not justified and sites currently proposed for development in the Green Belt could be removed.

As for the unmet housing need of Woking, it would seem if it were a genuine need, it could only possibly be met in Woking itself. If additional housing were built elsewhere the need for housing in Woking would still exist. Please re-open the examination.

Yours Faithfully,
Janet Ashton

Comment: MM2 - LPMM18/1370  Respondent: Mrs Alison Warne 20689665  Agent:

If Woking's needs are unmet, it is up to them to find the required additional housing. It is unfair to expect Guildford to absorb the shortfall. Is this because Guildford house prices are higher than Woking, so developers will make more profit from building in Guildford?

Comment: MM2 - LPMM18/1403  Respondent: Mr Michael Voisin 20689889  Agent:

On behalf of the 251 residents of Godalming and Eashing listed in the attached document, collectively using the name Godalming Community, we are setting out our response to the consultations on the Main Modifications to the Guildford Local Plan. This mainly relates to MM2 and MM39.

I also attach the Representation by Way of Objection (RBWO) and Second Representation by Way of Objection (SRBWO), in each case submitted to Waverley Borough Council mentioned in the main attachment.

- Second Representation by Way of Objection - Final Published.pdf (14.1 MB)
- Final Letter of Objection 31.8.18 with appendix.pdf (5.3 MB)
It is with huge disappointment to me that it is necessary to respond to the Modified Local Plan. Having been awarded the Guildford Design award last year and met a number of key people in the council and Planning department I would have anticipated a more positive development of the Local Plan. Sadly this is not the case, and to me personally this somewhat devalues the merit of the awards.

It also seems you have largely failed to engage, collaborate and take account the highly constructive and valuable work undertaken by the Guildford Vision Group (GVG) and the Guildford Society.

My comments fall into two categories firstly in respect of the Local Plan in general, and secondly but no less importantly about specific details of the Main Modifications of the Plan

The Local Plan is unsound because:

1. The council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
2. There is too much reliance on A3 improvements and they are beyond the council’s control
3. The town centre policy, S3, is thus inadequate and also does not address the infrastructure deficit
4. Housing numbers should reflect the latest ONS figures and projections. The public hearings should be re-opened on this subject to allow re-examination
5. The grounds for green belt development are inadequate because of 1 and 3 and do not represent ‘exceptional circumstances’

I would like to OBJECT strongly to the following amendments:-
MM2 The suggestion that Guildford takes Woking ‘s unmet housing needs when we have difficulty in meeting our own needs.

I OBJECT strongly to the proposal to build another 500 houses in Send with the increase in numbers of cars which such a density of housing would cause.

Attached documents:

**Comment: MM2 - LPMM18/1437  Respondent: Tony Mason 20690817  Agent:**

I object to the scale of new housing planned for Ripley and Send.

This will forever change the nature of our villages and increase road traffic.

Town centres and brownfield sites should always be used first - not green belt sites.

Policy S2

The housing needs figures have been grossly exaggerated and this is surely fuelled by the profits that building the houses would generate.

At the Public Examination the figure for Guildford Borough housing need being used by the Inspector was 789 per year. Since then a respected consultancy, Barton Willmore, has said that the correct figure should be 431. September data from the Office for National Statistics suggests that appropriate growth in Guildford Borough can be achieved with 460 houses a year. Both these totals are hugely less than the total assumed by the Inspector. This could make a massive difference to the proposed developments in Send.

I call for the examination in public to be reopened so that the latest Office of National Statistics can be used.

I support the representation made by WAG which was written with advice from Richard Harwood QC

Attached documents:

**Comment: MM2 - LPMM18/1445  Respondent: Anthony Teal 20690913  Agent:**

I understand the Office for National Statistics (ONS) has published the latest household projections for local authorities which uses more recent data and a different methodology than its predecessors. The revised figures suggesting the borough’s housing need is far below the proposed housing target in the local plan. The expert employed by Guildford Residents’ Association Neil Mac Donald has shown that around 360 homes per annum would be sufficient to support the economic growth rate proposed by the Inspector and even GL Hearn’s values would reduce from 629 to 480 homes a year. As the figures in MM2 are no longer up to date and cannot provide a sound basis for the Plan, I would request that the Examination be re-opened to allow a meaningful and informed debate on this vital issue. Any sensible reduction can only benefit local amenities, roads and the overburdened infrastructure in Guildford and its local environs. It would also prevent the overzealous loss of the Green Belt, which needs to be preserved for the benefit of the whole community.

I would also wish to fully support the submissions put forward by the Burpham Community Association and the Burpham Neighbourhood Forum.

Attached documents:
Introduction

These representations to the Guildford Borough Local Plan Main Modifications (“the Main Modifications”) are submitted on behalf of CEG, the Earl of Onslow and the Trustees of the Clandon Estate. They supplement the examination Statement submitted in May 2018 and respond specifically to the Main Modifications produced by Guildford Borough Council (“the Council”) in the light of the Inspector’s conclusion that the Council must allocate additional sustainable housing sites to deliver homes in the first five years of the Local Plan (following adoption).

These representations are also submitted further to the submission made to the Council on 31st July 2018 (Appendix 1) relevant to the suitability and deliverability of a scheme for 300 homes on the site we refer to as Land adjacent to Merrow Park and Ride but which is referred to as ‘Clandon Golf’ in the Council’s Sustainability Appraisal Addendum 2018 (for ease of reference we refer to the site as ‘Clandon Golf’ for the purposes of these representations). The information submitted to the Council in July, at the Council’s request, included:

i. a basic capacity plan which demonstrates, in accordance with the Council’s assumptions, that the area of land in question could, at an average density of approximately 29 dpa, deliver 300 homes utilising defensible boundaries formed by existing belts of vegetation which create eastern and southern boundaries (which could be strengthened further if required);

ii. a ‘Transport and Highways Feasibility Note’ produced by Systra confirming that 300 homes could be delivered without any reliance on improvements to the A3; and

iii. a ‘Deliverability Statement’ that confirms that this site, which is in single ownership, benefits from an existing vehicular access and already has a developer and technical team on board, could deliver 300 homes by 2023/24 i.e. in the first 5 years of the Local Plan post-adoption.

Our objection to the Main Modifications, in summary, is that the suite of additional housing allocations proposed by the Council to increase housing delivery in the early years of the Local Plan is neither sustainable nor made in accordance with the Council’s own spatial hierarchy. Indeed, the Sustainability Appraisal Addendum 2018 (“the SA Addendum”) confirms that in addition to being a sequentially preferable site on the Council’s own terms (the Clandon Golf site is a Tier 8 option whereas the selected sites are, or should be, in the lowest and least sustainable category -Tier 10), the development options that include development at the Clandon Golf site score materially higher than the options that do not.

Having regard to the Council’s own evidence base and spatial strategy, the intention to allocate a suite of sites that excludes the Clandon Golf site is unjustified and, therefore, unsound. For the reasons explained in detail in these representations, the Council must re-consider its proposed housing allocations and, in accordance with the SA Addendum, allocate one of the three most sustainable development options – all options that include the Clandon Golf site.

MM2 (paragraph 4.1.9a)

Paragraph 4.1.9a as proposed to be amended states that ‘Guildford’s objectively assessed housing need has been based on a consideration of the latest 2018-based population projections.’

This is not correct.

The population projections that the Local Plan is now based upon are those published on 24th May 2018 but they are in fact 2016-based. The relevant statistical bulletin from the ONS is titled ‘Subnational population projections for England: 2016-based.’

Change Required
Amend paragraph 4.1.9a to identify that Guildford’s objectively assessed need for housing has been based on consideration of:

“...the ‘Subnational population projections for England: 2016-based.’”

**MM2 (Table S2b)**

**Introduction**

Table S2b sets out the spatial strategy distribution as amended following the proposed allocation of additional sites to deliver housing in the earlier years of the LP period (MM39, MM41, MM43, MM44 and MM45).

However, the revised table highlights the unsustainability of the Council’s proposed new allocations which exacerbate the extent of development proposed in the least sustainable locations within the Borough. This unsustainable distribution is unnecessary, unjustified and unsound given that the Council’s own evidence base identifies that there are more sustainable, deliverable, and sequentially preferable sites available such as that at Clandon Golf.

The representations to Table S2b focus on the spatial implications of the Council’s approach, its unsustainability and its lack of consistency with the Council’s own spatial hierarchy / approach – all of which make this modification unsound.

**Unsustainable Housing Distribution**

Table S2b confirms that 3,350 homes are proposed to be allocated as ‘Urban extensions to Guildford’. This equates to 31% of the total number being allocated (10,592 homes). This focus (as a minimum) on urban extensions to Guildford is wholly appropriate given that it is the county town of Surrey and, by some distance, the most sustainable location for development in the Borough (and indeed the sub-region). Urban extensions to Guildford are identified as Tier 8 in the Council’s Sustainability Appraisal Report Update 2017.

With the allocation of the additional sites as proposed by the Council in the Main Modifications, the level of housing now proposed in Tier 9 and 10 locations as identified in the Sustainability Appraisal Report Update July 2017 i.e. the least sustainable locations in the Borough, has now increased to 3,450 homes. This equates to 32% of the proposed number of housing allocations in the Borough.

Accordingly, it can be seen that there are now more homes proposed in the least sustainable locations in the Borough as are proposed at the sequentially preferable (based on the Council’s own evidence base / spatial hierarchy) and significantly more sustainable location as urban extensions to Guildford.

As set out in further detail later in our representations, this approach is unjustified, unnecessary and unsound given that there are acknowledged reasonable alternatives as urban extensions at Guildford (such as Clandon Golf) which the Council’s own evidence base confirms are deliverable, sustainable and sequentially preferable to those sites now proposed to be allocated.

**Sustainability Appraisal Addendum September 2018**

To inform the Council’s Main Modifications it instructed AECOM to produce an addendum to the original Sustainability Appraisal. As set out in paragraph 1.2.2 of that document, the aim is to:

‘...present information on the proposed modifications, and alternatives, with a view to informing the current consultation and subsequent plan finalisation.’

From a housing perspective the SA Addendum confirms that its purpose is to:

“...identify packages of sites to deliver 550 homes in the first five years of the plan period”.

In so doing it acknowledges that:

“First and foremost the strategy reflects an understanding that there is a hierarchy of places / potential growth locations within the Borough, and that a sequential approach to allocating development sites must be followed. In other words, capacity should be fully utilised at the most suitable sites (e.g. town centre sites), before moving down to the next tier in
the hierarchy, and so on until a residual amount of growth is left to be delivered at sites in the bottom tier, namely village Green Belt sites, which tend to be less suitable for development.” (emphasis added)

In terms of providing for the additional housing required in the early years of the Local Plan (post-adoption), Table 6.1 of the SA Addendum confirms that it has identified seven potential housing package options for assessment. They are each a combination of various site options, and each option scenario would deliver between 550 and 650 homes in total.

Ultimately the Council’s chosen option, in terms of the package of new sites to be allocated, is Option 3 as identified in the SA Addendum – “Aaron’s Hill and small sites”. For clarity, the additional sites to be allocated are as follows:

- Land at Hornhatch Farm, Chilworth (MM43) – 80 homes
- Land at Aaron’s Hill, Godalming (MM39) – 200 homes
- Land east of Glaziers Lane, Flexford (MM45) – 105 homes
- Land at Alderton’s Farm, Send (MM44) – 120 homes

Whilst not a new site, the Council also proposes to increase the residential component of the existing allocation at Garlick’s Arch, Send Marsh.

In terms of the outcome of this SA Addendum, it states overtly at paragraph 7.2.1 that:

“*The appraisal does not identify Option 3 as performing notably well in terms of any of the topic headings, but equally it is not identified as performing notably poorly in terms of any topic. It performs jointly least well in terms of two topic headings - ‘land’ and ‘brownfield’, but no major concerns are highlighted.*” (emphasis added)

Indeed, this can be seen with reference to Table 6.1 of the SA Addendum which confirms that the Council’s selected option (Option 3) does not score as the best option against any of the identified topics.

In stark contrast to this, it can be noted from Table 6.1 of the SA Addendum that options that include the Clandon Golf site (Options 1, 4 and 7) score much better than the selected option. This is not particularly surprising given its highly sustainable location as an urban extension to Guildford.

More specifically with regard to the Clandon Golf site, the following can be noted in terms of the conclusions reached in the SA Addendum (as set out in the assessment tables on pages 57 to 73 of that document):

i. **Biodiversity** – Table 6.1 confirms that Option 4, which includes the Clandon Golf site, scores best against this topic assessment area. Options 1 and 7, which also include Clandon Golf, are ranked 2nd. With specific regard to the Clandon Golf site, the SA Addendum notes that:

- “The outcome is that Clandon Golf does stand-out as the least constrained of the larger site options.”
- “In conclusion, Option 4 (Clandon Golf + Small sites) performs best, including on the basis that it would lead to least concerns in respect of the SPA’.

ii. **Climate change** – Options 1 and 2 are ranked joint first (Option 1 includes Clandon Golf) against this topic assessment area. Dispersal of development amongst smaller villages is not supported. With specific regard to the Clandon Golf site, the SA Addendum notes that:

‘...is approximately 3km from Guildford town centre, but Merrow Local Centre is approximately 1 km away. The site is adjacent to the Merrow Park & Ride from where there are frequent bus services into Guildford town centre as well as advisory cycle lanes along the majority of Epsom Road between the town centre and the Park and Ride site, with opportunities for improvement.’

iii. **Communities** - Option 1 including Clandon Golf scores best against this topic assessment area. There is no specific commentary associated with the Clandon Golf site.

iv. **Economy** – all options score equally against this topic assessment area with a conclusion that it ‘...is not possible to differentiate between the alternatives.’

v. **Employment** - all options score equally against this topic assessment area with a conclusion that ‘...the alternatives are judged to perform broadly on a par under this heading’.
vi. **Flooding** - all options score equally against this topic assessment area with a conclusion that “...it is not clear that any of the sites give rise to significant flood risk concerns”.

vii. **Health** - all options score equally against this topic assessment area with a conclusion that “...it is not possible to differentiate the alternatives”.

viii. **Historic Environment** - Option 7 (which includes Clandon Golf) is ranked first against this topic assessment area. With specific regard to the Clandon Golf site, the SA Addendum notes that whilst it is adjacent to Clandon Park (a Registered Park and Garden):
   • “...the potential for significant impacts is seemingly low given the intervening A25 dual carriageway and mature screening vegetation”.
   • Whilst there are a cluster of listed buildings 350m to the west of the site “...direct impacts are not thought likely”.

ix. **Housing** - Option 6 scores best against this topic assessment area. Options 3 and 7 (Option 7 includes Clandon Golf) are ranked second. The reason for this is identified as being that Option 6 would result “...in a good geographical spread of sites.”

We do not accept or understand the rationale for scoring Option 6 best in this regard, as the Council’s spatial strategy is not one of geographic dispersal but instead adopts a tiered, sequential approach which seeks to focus development in the most sustainable locations before moving to locations that are less sustainable. Accordingly, we do not accept that the scoring of the options against this topic is robust or consistent with the Council’s own spatial strategy.

x. **Land** - Option 7 (which includes Clandon Golf) scores best against this topic assessment area.

With specific regard to the Clandon Golf site, the SA Addendum notes that it is Grade 3b agricultural land (the lowest of all of the identified sites) but that unlike those other sites, Clandon Golf is (as its name would suggest): “…a golf course rather than land used for agricultural purposes.”

xi. **Landscape** - Option 2 scores best against this topic assessment area. Options 1, 3, 5, 6 and 7 (Clandon is part of Options 1 and 7) are ranked second. With specific regard to the Clandon Golf site, the SA Addendum notes that whilst the site, on the Council’s evidence, is red-rated

Green Belt and in the AGLV (like the site at Aarons Hill which is a proposed allocation i.e. this is demonstrably not a show-stopper), the Landscape Character Assessment:

“...does not reference this golf course as a particular asset within the Merrow and Clandon Wooded Chalk Downs character area”.

xii. **Poverty** – all Options are scored equally against this assessment topic and the SA Addendum notes that “...there is no potential to differentiate the alternatives”.

xiii. **Brownfield land** - Options 4, 5, and 6 are equally ranked 1st against this topic assessment area (Option 4 includes Clandon Golf). There is no specific commentary with regard to the Clandon Golf site (or the majority of the other sites).

xiv. **Rural Economy** – all Options are scored equally against this assessment topic, with the SA Addendum concluding that “...it is not possible to differentiate the alternative with any certainty”.

xv. **Safer Communities** – all Options are scored equally in this regard, with the SA Addendum noting that “...it is not possible to draw conclusions in relation to safety / security.”

xvi. **Transport** – Options 1, 2 and 7 are ranked joint 1st against this topic assessment area (Clandon Golf is part of Options 1 and 7). With specific regard to the Clandon Golf site, the SA Addendum notes that:

“Vehicle trips to/from Clandon Golf to/from the south...will pass through part of the Guildford section of the A3 which is due to be improved by the RISI Road Period 2 scheme. Those travelling to/from the north towards London and the M25 motorway will not generally be expected to use this section of the A3.”

xvii. **Water** – all Options are scored equally against this assessment topic, with the SA Addendum concluding that “...there is no potential to differentiate the alternatives.”
It is evident from the SA Addendum that the Clandon Golf site, and the development options that include it, generally score the best of those assessed. Indeed it can be seen from the SA Addendum summary conclusions (Table 6.1) that Options 1, 4 and 7 (that all include the Clandon Golf site) are ranked first against 7 of the identified 17 topic areas (see highlighted table at Appendix 1). The Council’s selected option (Option 3) is not ranked first against any of the identified topic areas.

Whilst we accept that an SA process is not simply about adding up the results, it is evident that the options that score the best, when looked at in the round i.e. with the greatest number of / most significant positives, and the least number of / least significant negatives, are Options 1, 2 and 7. This is demonstrated visually on the bar chart at Appendix 2 where Options 1, 2 and 7 are the options with the most blue and orange colours (1st and 2nd rankings) and the fewest grey and yellow colours (3rd and 4th rankings).

In our view it is clear from the SA Addendum that of these Option 1 scores the best – “Clandon Golf and Aarons Hill”. This option has the greatest number of 1st rankings, the majority are 2nd rankings, it has very few 3rd rankings and no 4th rankings. The fact that Option 1 performs so well is not surprising, as the two sites included within it are those located in the most sustainable locations of those assessed as identified by the Council’s own spatial approach / hierarchy.

Against this evidential background, it is demonstrably unjustified and unsound for the Council to propose to proceed with an option which, as a matter of fact, allocates housing in the least sustainable locations in the Borough, and an option which identifies a suite of sites which score very poorly in the SA process.

The Council’s Justification for Option 3

As identified above, it is demonstrably the case that the SA Addendum does not support the selection of the Council’s chosen option (Option 3). Instead it very clearly supports an option that includes Clandon Golf (Options 1, 4 and 7). It is additionally the case that the Clandon Golf site, as a Tier 8 site identified in the SA Repot Update 2017, is sequentially preferable to Aarons Hill and the smaller sites at the Green Belt villages (all Tier 10 and, therefore, the least sustainable locations in the Borough).

However, it is fair to note that the SA Addendum records (paragraph 5.2.9) that in some instances there can be a need to pass over allocating a site in one tier of the hierarchy in favour of allocating a more suitable site in a lower tier. Specifically, it records that relevant factors that could lead to such ‘leap-frogging’ include:

i. timescales for delivery;
ii. constraints (AONB, SPA, heritage etc…)
iii. reliance upon, or ability to facilitate provision of, essential infrastructure; and
iv. policy constraint e.g. Green Belt sensitivity.

For the reasons expanded upon below, it is evident that none of these provide reasons not to allocate the Clandon Golf site.

Timescales for Delivery

As shown at Appendix 3, we provided the Council with information in July 2018 relating to the potential for housing delivery at the Clandon Golf site. As a site in single ownership, with a developer and technical team already in place and with a vehicular access already constructed, development can progress quickly. Our submission demonstrates how the site could realistically deliver 300 homes by 2023/24. This delivery timetable is not disputed by the Council.

It is evident, therefore, that timescales for delivery provide no reason to ‘leap frog’ the sequentially preferable site at Clandon Golf in favour of less sustainable sites.

Environmental Constraints

The SA Addendum is clear that the Clandon Golf site is not constrained by the AONB, nor is it adversely affected by matters such as impact on the SPA (indeed it scores best of all the sites in this regard), flooding, heritage or biodiversity.
Accordingly it is evident that environmental constraints provide no reason to ‘leap frog’ the sequentially preferable site at Clandon Golf in favour of less sustainable sites.

**Infrastructure**

As set out in our submission to the Council (Appendix 3), 300 homes at the Clandon Golf site can be delivered without any reliance on improvements to the A3. Furthermore, given the limited scale of development being proposed on the various sites, none are providing any wider infrastructure.

Accordingly it is evident that infrastructure matters provide no reason to ‘leap frog’ the sequentially preferable site at Clandon Golf in favour of less sustainable sites.

**Summary**

There is no evidential basis to support the Council’s selection of Option 3 as the most appropriate strategy for the delivery of additional homes in the early years of the Plan (post-adoption).

As set out above, the SA Addendum clearly supports the allocation of Options 1, 2 or 7. The Clandon Golf site falls within Options 1 and 7. As set out previously, options including Clandon Golf demonstrably score the best based on the Council’s own evidence. In addition Clandon Golf, as an extension to Guildford, is sequentially preferable to all of the alternatives based on the Councils own spatial hierarchy / approach.

Very unusually from our experience the SA Addendum, in outlining the reasons for selecting the preferred option (Option 3), distances itself totally from the decision ultimately made by the Council stating at paragraph 7.2.1 that: “The following text was provided by the Council”

This is unsurprising as the conclusions of the SA Addendum fundamentally do not support the Council’s decision to take forward Option 3.

The SA process is there to inform decision-making, to ensure the delivery of sustainable development. It is also, importantly, there to provide clarity to third parties as to how decisions have been reached, and it is the fundamental evidence base document to demonstrate that a proposal is the most appropriate strategy i.e. justified and, therefore, sound.

In this instance the SA Addendum simply does not support the decision made by the Council in proposing to take forward Option 3.

In explaining why the Council is taking forward an option that is not supported by its own SA process, the Council states simply (SA Addendum paragraph 7.2.1) that it considers that the option it has chosen has ‘...strong delivery certainty’. However, as set out previously, neither the SA Addendum nor the Council itself in any other document suggests that an alternative option, which includes Clandon Golf, would provide any less delivery certainty. Indeed, to suggest so would be perverse given that it is a site in single ownership, with a developer and technical team on board, with a vehicular access already constructed and in a location where there is clear and strong market demand.

Against this background, the Council’s Main Modifications, which take forward the suite of additional housing sites in Option 3, are not consistent with its own evidence base or spatial hierarchy / approach, and are demonstrably unjustified and, therefore, unsound.

**Re-categorisation of the Aaron’s Hill Site**

In the SA Report Update 2017 that accompanied the submission draft Local Plan, the site at Aarons Hill is identified as falling within Tier 10 (Green Belt around villages) – the least sustainable locations in the Borough.

It is referred to as ‘Site H’ and described at paragraph 6.6.16 of that document.

In the SA Addendum 2018 (Table 5.1) the Council has re-categorised the Aarons Hill site, identifying it within Tier 8 i.e. the same category as urban extensions to Guildford. The only justification for this change is set out at footnote 15 of the SA Addendum where the Council identifies that Godalming, whilst falling within Waverley Borough, is considerably larger than any of the Green Belt villages within Tier 10. This is potentially a case for the Aarons Hill site being
considered to be more sustainable than the other Tier 10 sites, but not for suggesting that it is equivalent in sustainability terms as urban extensions to Guildford.

The implications of this amendment are significant. Following the Council’s identified sequential approach / hierarchy, development opportunities in Tier 8 should generally be developed before opportunities in Tiers 9 or 10, as they are inherently more sustainable.

The categorisation of Aarons Hill (as an urban extension to Godalming) as comparable in sustainability / sequential terms to the Clandon Golf site (as an urban extension to Guildford) is wholly unjustified.

As identified in the Waverley Local Plan Part 1, Godalming has a population of approximately 22,000 (at 2011). It records that the size and range of services in Godalming are less than Farnham and that it is significantly influenced by Guildford, which is approximately 10km (6 miles) away via good road and rail links.

By contrast, Guildford is the county town of Surrey. The Guildford Local Plan notes that Guildford town had a population of 137,000 in 2011 i.e. it is 6 times larger than Godalming. The Guildford Local Plan also recognises that it is home to two universities, a world leading research institute, a number of UK and European business headquarters and a world class research park. The borough also has a vibrant retail economy of subregional importance.

There is no reasonable or logical basis on which it can be asserted that an urban extension to Godalming is as sustainable as an urban extension to Guildford.

By identifying the Aarons Hill site as being within Tier 8 i.e. the same as Clandon Golf the Council is unfairly and unreasonably favouring the Aarons Hill site in what should be a fair and transparent SA process. As a consequence, the Council’s revised approach is unjustified and therefore unsound, resulting in an unnecessary and unsustainable distribution of development.

**Changes Required**

For the reasons set out in detail above, the revised spatial strategy established by MM2 (and specifically the allocation of the sites identified in MM39, 43, 44 and 45) is unjustified and unsound.

The Council must re-visit the strategy to allocate additional sites to deliver in the first five years of the Local Plan (post-adoption) and base its decisions on clear evidence (most notably the SA Addendum) and its own spatial hierarchy / approach. This will result, on the Council’s own evidence, in the identification of a different development option (and therefore a different suite of sites) to those now proposed. It will also, most importantly, result in a more sustainable distribution of development (on the Council’s own terms).

**Clandon Golf Course**

**Deliverability Statement**

1.0 **Introduction**

1.1 This short note supplements submissions made on behalf of CEG, the Earl of Onslow and the Trustees of the Onslow Estate to the Local Plan examination, where hearing sessions took place in June / July. Following these sessions the Inspector and Council agreed that the Council needed to make Main Modifications to the Plan that would, inter alia,
allocate additional sites to deliver housing in the first 5 years of the Plan following adoption i.e. in the period 2019/20 to 2023/24.

1.2 Specifically, this note is provided to assist the Council in its consideration of the potential of the north western part of the Golf Course (referred to as ‘the Site’ for the purposes of this note), located adjacent to the existing Merrow Park and Ride and capable of accommodating approximately 300 homes, to deliver housing in the period to 2024.

2.0 Availability

2.1 The Site is in the single ownership of the Earl of Onslow / the Trustees of the Clandon Estate and is available for development.

2.2 The landowner has already engaged a developer (CEG) to bring land in this highly sustainable location forward for development. CEG has an excellent track record in delivering high quality residential developments on sustainably located greenfield sites at historic towns. By way of example these have recently included:

i. Stamford, Lincolnshire – 400 homes

ii. Chichester, West Sussex – 500 homes

iii. Thame, Oxfordshire – 400 homes

2.3 CEG has already appointed a full technical team who commenced work at the beginning of 2018.

3.0 Delivery

3.1 The development being considered (approximately 300 homes) is of a scale whereby it is realistic to assume that there would be two housebuilding outlets on site.

3.2 Against this background we summarise below a delivery timetable:

Q4 2018 - Adoption of the Local Plan
Q2 2019 - Submission of outline planning application
Q1 2020 – Outline planning permission granted
Q1 2020 – Submission of reserved matters
Q3 2020 – Approval of reserved matters
Q4 2020 - Discharge pre-commencement conditions
Q2 2021 - Start on site
2021/22 – 60 homes
2022/23 – 120 homes
2023/24 – 120 homes

Total Housing Delivery by 2023/24 – 300 homes

3.3 It can be noted that this is a similar (albeit more conservative) timetable to that put forward by the Council for the similarly sized site at Garlicks Arch promoted by a developer similar to CEG (see Appendix 4: Housing trajectory of the Council’s Topic Paper: Housing Delivery December 2017).

3.4 Of fundamental importance, the location of the Site and the scale of development proposed is such that the delivery of this housing is not reliant on the delivery of improvements to the A3.

3.5 As concluded in the attached technical note produced by Systra: “The number of trips associated with the sit, both onto the A3 and through its’ junctions is within normal expected daily variations in traffic flows on the route…….Delivery of the site would be feasible early in the Plan period as the site will not be reliant on the delivery of any of the A3 improvement schemes.”

4.0 Suitability / Sustainability
4.1 Whilst not the primary purpose of this note the Council will be aware, having regard to its own evidence, that the Site is a suitable location for housing. Most notably, for ease of reference:

i. the Site it is situated immediately adjacent to the Guildford urban area, the principal settlement in the Borough;

ii. extensions to Guildford are identified in the Sustainability Appraisal 2017 as ‘Tier 8’ in the Council’s sequential approach to development. Development of the Site, applying this sequential approach, is therefore preferable to any new settlement options or development of any Green Belt site options around villages;

iii. unlike most other unallocated sites which were clearly rejected as options by the Sustainability Appraisal 2017, the SA 2017 identifies the Site as a location where the allocation of development should be considered (SA 2017 page 30);

iv. uniquely, the Site is located immediately adjacent to the existing Merrow Park and Ride, providing access to existing bus services to Guildford town centre which run every 15-20 minutes and take just 12-15 minutes;

v. the Site would complement and complete the Council’s proposed Sustainable Movement Corridor through Guildford (Figure 10.1 of the SA 2017), requiring only a simple southwards extension from the allocation at Gosden Hill that could terminate at the Merrow Park and Ride;

vi. the Site relates well to the existing Guildford urban edge and is located within easy walking and cycling distance of a range of existing education, leisure, retail, employment and community facilities;

vii. the Site is located in close proximity to the proposed new rail station at Guildford East (Merrow), delivery of which is due to commence in 2024;

viii. the Site already benefits from planning permission (01/P/01627) for the construction of (an as yet unbuilt) clubhouse and health centre of 14,500 sqft

i.e. there is already precedent for built development on the Site;

ix. appropriate SANG provision could be made; and

x. the Site is not countryside, with the land already significantly re-modelled / engineered and used as a golf course.

1. EXECUTIVE SUMMARY

1.1.1 This Transport & Highways Feasibility Note demonstrates that impact on the A3 of a potential 300 residential units located at the land adjacent to Merrow Park and Ride would be immaterial. The number of trips associated with the site; both onto the A3 and through its’ junctions, is within normal expected daily variations in traffic flows on the route, with a maximum of 58 additional vehicles anticipated (in the PM Peak hour). Delivery of the site would be feasible early in the Plan period as the site will not be reliant on the delivery of any of the A3 Improvement Scheme.

1.1.2 A large proportion of trips are expected to travel into Guildford Town Centre, and with the site located so close to the east of the town, there are ample opportunities to facilitate sustainable travel to and from the site, building upon the existing network which includes high quality walking and cycling links as well as an established Park & Ride providing regular direct and frequent services.

1.1.3 There are no transport reasons why the site should not be developed, at a reasonable timescale given the negligible impact on the A3 and the existing walking, cycling and public transport links which can be utilised to provide a sustainable development.

2. INTRODUCTION

2.1.1 This Transport & Highways Feasibility Note has been prepared by SYSTRA Limited on behalf of CEG, the Earl of Onslow and the Trustees of the Onslow Estate to demonstrate that development of approximately 300 residential dwellings could be successfully accommodated in transport terms on the part of the Clandon Golf Course site adjacent to Merrow Park and Ride, Guildford.
2.1.2 In particular this document demonstrates that the number of trips generated by a development of 300 residential units in this particular location would not have a material, let alone ‘severe’, impact on the existing operation of the A3, and therefore that the site could be delivered early in the Local Plan period without reliance on any forthcoming A3 Improvement Schemes.

2.1.3 The Note calculates the trips associated with a potential 300 dwelling development and calculates the number of vehicle trips that could be expected to use the A3.

Trip Generation

2.2.1 The potential vehicle trips generated by the site are provided in Table 1. The trip rates have been taken from the ‘Study of Performance of A3 Trunk Road Interchanges in Guildford Urban Area to 2024 Under Development Scenarios (April 2018)’ document; referred to hereafter as the ‘A3 Study of Performance’ which was prepared by Mott MacDonald and commissioned by Guildford Borough Council (GBC).

2.2.2 The highest recorded trip rates within the A3 Study of Performance; ‘Neighbourhood Centre, Mixed Private/affordable housing’ (Table 11: vehicle Trip Rates) have been used at this stage to provide a robust assessment of the potential impacts on the A3.

2.3 Trip Distribution

2.3.1 Analysis of Census 2011 Journey to Work (JTW) data for the ‘Guildford 011’ MSOA has been undertaken, with the percentage distribution also compared to the A3 Study of Performance to ensure a consistent approach. The use of JTW figures are useful as this represents one of the main trip purposes during the AM and PM peak periods. A summary of the distribution of traffic is demonstrated in Appendix A with distribution diagrams contained in Appendix B.

2.3.2 The data indicates that the vast majority of JTW trips (92.9%) would travel west from the site, with 7.1% turning east. A summary of the key destinations and resultant trip generation is demonstrated in Table 2.
2.3.3 The data shows that 21.4% of trips would continue into Guildford Town Centre, with 7.5% travelling south along the A281 towards the south of Guildford (including Godalming, Dunsfold, Alford Crossways and Shalford). 4.6% of traffic would travel west along the A31 Farnham Road towards destinations including Farnborough, Aldershot and Farnham, and 10.2% of traffic would travel north across the A3 towards north Guildford, including to the Slyfield Industrial Estate, Jacobs Well and Woking.

2.3.4 Based on the above, as an estimate just 36.4% of total JTW trips would enter the A3 (29.5% travelling northbound towards the M25 and London and 6.9% travelling southbound towards the south coast). A further 16.5% of traffic would cross the A3, which would be distributed between the six key junctions around Guildford and would be dispersed in terms of traffic impact at key individual junctions.

2.3.3 The data shows that 21.4% of trips would continue into Guildford Town Centre, with 7.5% travelling south along the A281 towards the south of Guildford (including Godalming, Dunsfold, Alford Crossways and Shalford). 4.6% of traffic would travel west along the A31 Farnham Road towards destinations including Farnborough, Aldershot and Farnham, and 10.2% of traffic would travel north across the A3 towards north Guildford, including to the Slyfield Industrial Estate, Jacobs Well and Woking.

2.3.4 Based on the above, as an estimate just 36.4% of total JTW trips would enter the A3 (29.5% travelling northbound towards the M25 and London and 6.9% travelling southbound towards the south coast). A further 16.5% of traffic would cross the A3, which would be distributed between the six key junctions around Guildford and would be dispersed in terms of traffic impact at key individual junctions.

### Traffic Impact on A3

2.4.1 Of the total trips in the AM Peak period, applying the percentages in the Table above, just 39 vehicles would be expected to travel to/from the north on the A3, with 10 vehicles expected to travel to/from the south. Of the southbound trips, 7 would exit at The Chase junction towards the Surrey Research Park & Hospital and would therefore exit the A3 within two junctions. In the PM Peak period, a total of 47 vehicles would be expected to travel to/from the north on the A3, with 11 vehicles travelling to/from the south. Of the Transport & Highways Feasibility Note (300 Units) Land Adjacent to Merrow Park and Ride southbound trips, 7 would exit at The Chase junction towards the Surrey Research Park & Hospital.

2.4.2 Appendix C provides an extract from the Highways England (HE) daily traffic report on the A3 at Guildford (link between A3100 and A320) for the month of March 2018. From this, a neutral week has been analysed over a 7-day period (Monday 12th March 2018 to Sunday 18th March 2018) to establish an average hourly flow on this link. 6,491 two-way vehicles in the AM Peak period and 6,631 two-way vehicles in the PM Peak period are shown, with 72,346 two-
way movements across a 12-hour day. This count provides a useful guide as to the level of peak hour flows on the A3; although it is accepted that there will be some variation in traffic flows on the A3 between different junctions.

2.4.3 Table 3 provides a summary of the base traffic movements on the A3 and the percentage impact of potential Clandon related development traffic on this link.

| Table 3: Summary of Highways England Data and Percentage Impact of Potential Development |
|------------------------------------------|------------------|------------------|
|                                        | AM Peak period (0600-0900) | PM Peak period (1700-1800) |
| Highways England A3 at Guildford Traffic Count | 6,491 | 6,631 |
| Trip Generation (300 Dwellings) onto A3 | 39 | 47 |
| Total Flow with Development Traffic | 6,530 | 6,678 |
| Percentage Impact | 0.0% | 0.7% |

2.4.4 With a percentage impact of just 0.6% in the AM Peak period and 0.7% in the PM Peak period, Table 3 demonstrates that the addition of development traffic onto the A3 is clearly marginal, and can be considered well-within the daily variation in traffic flows that would be expected for a trunk road of this nature.

2.5 Traffic Impact on A3 Guildford Junctions

2.5.1 The development will not have a material impact on the A3 as noted above. The junctions leading onto the A3 include the A247 junction, the Clay Lane Junction, the Stoke Junction, the Dennis Junction, the A31 Farnham Road Junction and the Hospital and Cathedral Junction.

2.5.2 Of the traffic which is expected to enter/exit the site, a total of 22 vehicles in the AM Peak period and 25 vehicles in the PM Peak period are anticipated to travel over the A3 to the aforementioned destinations to the north and west of Guildford. Whilst using the A3 junctions, these movements will not be required to enter or exit the A3 directly.

2.5.3 The distribution of traffic means that the 22-25 vehicles will be distributed between the six aforementioned major junctions along this route, and therefore the impact at each junction will be immaterial (for example a maximum of 16 additional movements over an hour at the Clay Lane Junction).

2.5.4 Based on the trip generation and distribution patterns the impact of development traffic at each of the junctions along this route is anticipated to be marginal, and well within the normal, expected daily variation of traffic flows.

Summary

2.5.5 It is reported that the A3 currently experiences high volumes of traffic and periods of congestion at a number of junctions along the Guildford corridor. With such a small volume of traffic calculated to be travelling on or across the A3 from a 300 dwelling development on land adjacent to Merrow Park and Ride it is evident that the effect of development traffic from this site would not have a material impact on the existing operation of the A3, nor any of the junctions accessing onto it. Therefore, this development would be in a valuable position to be delivered in the early stages of the Local Plan, in advance of any planned A3 improvements and would not be dependent on wider their delivery.

2.6 Wider Traffic Impact

2.6.1 Of the development traffic, 21.4% is anticipated to travel into Guildford Town Centre, with an additional 7.5% travelling through the centre to access the A281 to the south. The total of 28.9% of traffic equates to 39 vehicles in the AM Peak period and 46 vehicles in the PM Peak period.

2.6.2 A total of less than one additional vehicle a minute in the AM and PM Peak periods demonstrates again that the development impact on Guildford Town Centre would be marginal, and within expected daily variations in traffic flows.
2.6.3 It is extremely important to take into account this development’s location in respect of sustainable access for all modes of travel. Located to the east of the town centre and the existing residential area (just 4km from the heart of Guildford) any vehicles travelling into/ out of Guildford would not need to travel on, or via the junctions of the A3 and would therefore not have an impact on the A3, or any of the junctions along its route. Further evidence that the delivery of the site is not dependent on any A3 planned Improvement Schemes.

2.6.4 The location of the site immediately to the east of the existing settlement of Guildford also provides an alternative to the A3 for northbound traffic, should the A3 Improvement Schemes cause temporary congestion along this route. The alternative is the A25/ A246 route on which the site is located, which allows direct access to London and the M25, through East Horsley, Effingham, Great Bookham, Fetcham and Leatherhead.

2.7 Sustainability

2.7.1 The site is located approximately 4km to the east of Guildford Town Centre, and 1km to the east of Merrow Local Centre. The site’s location means that travel by sustainable modes is a realistic alternative to the private car. The proximity to Guildford means that travel to/ from the town centre can be undertaken by a variety of modes; all of which are direct, safe and well established and do not require crossing the A3 (or any other major roads).

2.7.2 Being on the A25 and located immediately adjacent to the established Merrow Park & Ride, the site is already well connected by way of existing bus links. Buses from Merrow Park & Ride run every 15-20 minutes between 07:30 and 19:20, and travel directly into the centre of Guildford taking just 12-15 minutes. Buses are also available to Clandon Station, taking just three minutes, with ample walking & cycling opportunities also available. A summary of the local walking, cycling and public transport opportunities is demonstrated in Figure 1.

2.7.3 There are significant and comprehensive opportunities to encourage walking and cycling into the town centre, as well as to Merrow’s local centre without significant investment in the existing road network to accommodate such facilities. This aligns with the focus of the Guildford Town and Approaches Movement Study (March 2015), which strategy includes:
• Comprehensive network of walking and cycling routes including improved routes to the rail station;
• Pedestrian facilities, improved crossings, shared surfaces;
• Cycle parking and bike sharing/ cycle hire schemes;
• Park and Ride facilities.
2.7.4 The site is suitably sustainable to encourage walking, cycling and public transport travel without reliance on the private car; particularly for journeys into Guildford Town Centre and local facilities.

Attached documents: Main Modifications Reps Combined Redacted.pdf (6.1 MB)

Comment: MM2 - LPMM18/1495  Respondent: Mrs Lesley Tregaskes 20692737  Agent:

Dear Sirs
I OBJECT to Guildford Planning Policy as it refers to Site A35 and I support the representation made by WAG.

Firstly, why, after a public enquiry and the Secretary of State’s robust refusal of planning permission, has GBC chosen to keep this site within the local plan? Specifically in reaching the decision to refuse planning permission, both the Inspector and the Secretary of State gave considerable weight to harm to the Green Belt, damage to heritage assets, the severe impact on the strategic road network and permanent harm to view from the Surrey Hills AONB. That refusal was published on 13th June 2018 and yet shortly thereafter the Local Plan was submitted including a development of essentially the same scale on essentially the same area, despite official household projections on which the Local Plan was based being reduced by 40%.

I would point out that the addition of land to the south of the appeal site does not mitigate the density issue as much of that new land is constrained by the VOR which prevents construction within a certain radius. That land abuts the Ockham Conservation area and increases the visibility of the site to/from the Surrey Hills AONB.

The Examiner’s decision on Site Policy A35 was made within a few minutes after the closing of the public hearing and he could not possibly have had the time to properly consider and assess all of the arguments presented during that day. This appears to be a clear case of pre-determination.

In the light of all the above, I wish to call for the examination in public to be re-opened so that the inter alia the latest Office of National Statistics can be used.

Attached documents:

Comment: MM2 - LPMM18/1499  Respondent: Mrs Lesley Tregaskes 20692737  Agent:

I OBJECT to the GBC Local Plan on the following grounds.

MM2 The housing target is wrong in that on 20th September the Office of National Statistics released new household growth projections for Guildford reducing the figure by 40.5%, following their population projections released in May which clearly foreshadowed a substantial drop in the household projection. There should also be no requirement for Guildford to take Woking’s unmet housing need. As there are very large discrepancies between the Plan and the up to date Office of National Statistics household data the Public Examination of the Plan by the Planning Inspector must be reopened.

Attached documents:
My objections are to: MM9, MM27, MM41, MM42, MM44 and MM48

At the public examination, the figure for GBC housing needs used by the inspector was 789 per year; a figure obtained by G.B.C Consultants which was inflated by including students from the University of Surrey. The Consultants and GBC have refused to disclose how this figure was calculated so one can only guess at the accuracy of it.

However, subsequent and more accurate figures published by consultancy Barton Wilmore, said the correct figure is 431 houses per year with data from the Office of National Statistics (a very reputable body), doing population forecasts saying the appropriate growth in GBC can be achieved by 460 houses per year; supporting the figures published by Barton Wilmore.

This latest data makes a mockery of G.B.C consultant’s figures which have always been very suspect, especially given their reluctance to disclose their calculations.

Therefore, given the data from both the Office of National Statistics and Barton Wilmore; I hope that Guildford Borough Council and the Inspector will now significantly reduce the housing needs to reflect the true figures, especially given the fact that Send already is congested and functioning with an "at capacity" infrastructure.

Attached documents:

---

I would like to make a comment on the Guildford Local Plan that is currently being considered. Because the Office of National Statics has reappraised various figures since this plan was submitted to the Planning Inspector it may well be that too many houses have been put into the plan. I consider that the whole plan should be reappraised with a view to substantially reducing the number of houses needed. This may well save some of the Green Belt that was being sacrificed for housing. In the interests of the environment we need as much green space and trees etc.

Guildford Borough Council has indicated that a large estate maybe build on land at Slyfield Green. Was the number of houses planned for this site included in the Guildford Plan? If not then there is even more reason/excuse to protect even more Green Belt. Was the housing planned on the Railway Station site included in the original figure. If not we need even less housing taking this into account. These all good reasons for looking at the plan again. Maybe any final decision should be left until after Brexit has been settled because we shall have more idea what the future population forecasts will be. Immigration has an impact on any calculations for future housing. Currently about 300,000 people net are coming into the country annually and this may drop substantial. after Brexit, again making a need for less housing. We need to do all that we can to keep housing figures down in the interests of preserving the Green Belt and Surrey countryside.

If this is done then I believe that it should be made transparent as to how any new calculations are carried out so that the public are fully aware of the basis that any housing need figure is arrived at. We were kept in the dark when the current plan was being put together.

Please add this comment to any others that you have

Attached documents:
With respect to proposed activity on the Wisley airfield in Ockham. I have been advised previously of the consultation but seem to no longer be receiving emails. I have been alerted of further developments by a friend. Can you please still keep me briefed. I am concerned to hear of further developments being considered, can the examination in public be reopened so the latest office of National statistics can be used

I support the representations made by WAG with advice from Richard Harwood QC.

Comment: MM2 - LPMM18/5931  Respondent: Dirk Mercer 20699553  Agent:

Re: Guildford Local Plan:Strategy & Sites-Main Modifications 2018-Sept 2018

I object to the following policies as amended by the main modifications of the above plan:-

MM2-Number of houses

I strongly object to this policy for the following reasons.

The method of counting the requirement and the assumptions used to come up with the final figures is wrong and therefore the policy is flawed. As a result, the Public examination hearing must be re-opened to take account of the up to date ONS figures and household projections data. This is vital because the new ONS figures as recently published, reduced the projected growth in households for Guildford by 40.5%. This is extremely important and significant. It represents a reduction of 4507 households required for the plan period 2015-2034 and represents well over the 2 large ‘strategic sites’ included in the current Plan.

Guildford Borough Council should have seen this change and should have reduced housing numbers because of the ONS population projections in May 2018. Puzzlingly, it actually increased the number of houses in the current version of the Plan.

In addition I am equally astonished and appalled by the proposal that the voters and tax-payers of Guildford, should be forced to take Woking’s unmet housing need, especially as this would require further greenbelt release. Indeed, if we follow this logic to it’s ultimate conclusion, this could make the voters of Guildford take any other other council’s unmet housing need, from anywhere in the country. This is clearly unacceptable and wrong!

GBC has not properly followed its own spatial strategy which requires that development takes place first in the town centre, the urban area and brownfield, before moving on to land in the villages or Green Belt. The addition of another 500 houses in Send,( which will be car dependent ) would have a severe impact on Portsmouth Road, Ripley which has not been properly considered.

Comment: MM2 - LPMM18/1676  Respondent: Malcolm & Marcia Sorrell 20700097  Agent:

Comments on local plan.

The Local Plan is unsound because:
Housing numbers should reflect the latest ONS population projections. There are technical reasons why these may still be an over estimate of future population estimates - simply, based on assumed fertility rates of younger age groups as they age, however, being a university time it is unlikely a significant proportion of the younger age group will remain locally.

Guildford must have an effective Local Plan. Development rules must ensure quality of development across the town centre to prevent piecemeal development.

Attached documents:

**Comment:** MM2 - LPMM18/1712  **Respondent:** Stephen Rossides 20700577  **Agent:**

On behalf of my family, I wish to make the following comments on the Draft Guildford Local Plan:

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

Attached documents:

**Comment:** MM2 - LPMM18/2476  **Respondent:** Stephen and Audrey Hofmeyr 20700705  **Agent:**

MM2 - policy S2

The scale of the increase in housing included in the plan would have an important impact deleterious on our town, in general, and our local Tyting area, in particular, which is accessed by two narrow single tracked lanes. Increased traffic will be difficult to handle without loss of existing character.

We ask that the housing target be reduced, for the reasons set out below.

The examination should be re-opened because the housing figures should be revised in the light of the new ONS forecasts of population and households. The stated housing requirement is not a sound basis for the Local Plan or justification for such an extensive loss of Green Belt land.

We are therefore concerned about the specific development proposed at Hornhatch Farm in Chilworth, just south of where we live and accessed from Guildford by the narrow country lanes. (MM43). There is a strong case for taking out this strategic site and more scope for better town centre provision. This makes table (S2), which identifies types of site to be developed, out of date and in need of re-examination.
Independent expert, Neil MacDonald, has demonstrated that 360 homes per year would support the ambitious economic growth rate proposed by the Inspector. 630 homes a year is out of step with the new ONS figures and the Government's new standard methodology. 630 is based on inappropriate assumptions that inflate the figures due to excessive allowance for student homes and their low economic participation.

Further, it is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained. The number of houses needed in Woking has also been reduced and has also not been re-examined.

**MM43 - Hornhatch Farm, Chilworth**

As set out in MM2 above the much lower projection of housing needs removes the necessity to bite into the Green Belt and the development of this site.

In conclusion, our local residents’ association, the Tyting Society, will be putting in a separate response. We support that response.

**Attached documents:**

**Comment:** MM2 - LPMM18/1736  **Respondent:** Karen and Marcus Browne 20700929  **Agent:**

We wish to make the following points/objections to the Current Local Plan, because the current draft is unsound.

The revised Housing Need figures mean that much proposed greenbelt development is no longer justified, and the “exceptional circumstances” that are required as grounds to allow greenbelt development do not exist.

The Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited.

Proper planning of the town centre would help to promote more relevant sensitive development. The hastily added section is based on pre-Internet retail models and numbers.

There is no policy dealing with urban areas beyond the town centre such as the one where we live.

There are few concrete proposals for reducing congestion. Where there are any, these are outside Guildford’s control, like widening the A3, and therefore there is nothing really to prevent the major greenbelt development taking place irrespective of the congestion.

Specifically:

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

Attached documents:

Comment: MM2 - LPMM18/1761  Respondent: Hazel Jarvis 20701217  Agent:

The ONS has published revised forecasts of population and households for Local Authorities over the past few months. These show a significantly different position in Guildford in 2034 compared to the 2016 forecasts. Analysis carried out by Neil McDonald on behalf of Guildford Residents Associations demonstrates the need for new housing is substantially lower than the target of 630 dwellings per annum included in the Plan.

We therefore ask that the Inspector reopen the hearing to examine this fundamental issue in the light of the new evidence because of its huge significance for the Plan.
Comment: MM2 - LPMM18/1762  Respondent: Fiona Clayton 20701249  Agent:

I am concerned about the validity of the Guildford Local Plan and feel that many parts are deeply worrying and indeed not fit for purpose

Of deepest concern...

Why is the council looking to develop the green belt when the brownfield sites of Guildford centre have not been fully explored or considered?

The council’s plan totally relies on the redevelopment of the A3 which is outside of the council’s control and is certainly not ‘a given’.

What would happen if the proposed development is abandoned by government?

As a result the town centre policy S3 is completely inadequate.

Housing numbers should reflect the latest ONS figures. They do not.

The grounds for green belt development stated DO NOT represent ‘EXCEPTIONAL CIRCUMSTANCES’

Right now we have once in a lifetime chance to get this right and develop a town centre fit for purpose in the 21st century.

With a bit of clear thinking and forward planning the council can get this right.

Harness the good will and exceptional professional talents of people who love this town and create a modern functioning town with a vibrant fully functioning centre.

---

**Comment: MM2 - LPMM18/1806  Respondent: Lynne Sherwood 20701761  Agent:**

Please can you see the comments below which cover my concerns on the Main Modifications to the GBC Local Plan:

1) MM2 – the very recent data from the Office of National Statistics on projected household formation show significant change and provide a clear indication that the Guildford housing requirement should be lowered. I suggest that the Inspector must re-open the Examination of the Local Plan in public to examine this new data and take further advice from the experts.

2) MM2 – in view of the many critical comments about the required provision of new homes to meet Woking’s unmet need and since we in Guildford are experiencing exactly the same Green Belt constraints as Woking, it is argued that the figure of 42 new homes per year to meet Woking’s unmet need should be significantly reduced, and, if possible, eliminated completely. This view is reinforced by the further observation that Woking’s unmet need is itself likely/undoubtedly overstated following their latest ONS household formation data reduction.

Attached documents:

---

**Comment: MM2 - LPMM18/6005  Respondent: Mrs Jennifer Grove 20704385  Agent:**

The council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited. We should not be allowing Green Belt development when there is other land to be built on. It should only be used as a last resort, but ideally never.

... 

Housing numbers should reflect the latest ONS figures and projections. There should be a proper re-examination. The recent publication of new figures alters things enormously. Why do we have to take up Woking’s deficit? Why do we have these thousands of houses being built if there is no projected need?
The grounds for green belt development are inadequate. They do not represent ‘exceptional circumstances’ as brownfield sites have not been fully explored and used.

Attached documents:

Comment: MM2 - LPMM18/1906  Respondent: Mr Peter A Hackman 20704961  Agent:

I have the following points to make concerning the Local Plan

(1) MM2
In my opinion, that as the housing figures are out of date, the Examination should be re-opened. They provide an unsound basis for the plan and do not justify the loss of so much Green Belt

(2) MM2
Why should Guildford sacrifice Green Belt to provide homes for Woking when Guildford is so geographically constrained?

(3) MM2
There is a strong argument for removing a strategic site and greater scope for town centre provision. Table S2b is out of date and needs to be re-examined

(4) MM2
Neil MacDonald has shown that approximately 360 homes per annum would support the ambitious rate of growth proposed by the inspector. Inappropriate assumptions have been made to arrive at the inflated figure of 630 homes.

Attached documents:

Comment: MM2 - LPMM18/1989  Respondent: Mr Alistair Smith 20705793  Agent:

The plan although promulgating a policy of Brownfield first in practice supports building on the Greenbelt with little use of Brownfield sites. The council appears from various documents e.g 2017 Town Centre Regeneration Strategy, to have identified many Brownfield sites in the town centre and elsewhere but for reason that are unclear have not included these in the plan. The result seems to be the use of Greenbelt land when it is not really required.

Note I am not suggesting that Greenbelt land is sacrosanct, but its use needs to be properly planned. For example developing Gosden Farm looks an effective development as it can be planned with good transport infrastructure and as a urban extension of Guildford can be linked into the wider facilities within the town

Attached documents:

Comment: MM2 - LPMM18/3754  Respondent: C D Kimpton 20706241  Agent:
We understand that a main modification may only be made if the plan as submitted is unsound. Modifications should only be required to make it sound.

**MM2 Spatial development strategy and housing numbers**

The housing requirement should be calculated from the starting point of the latest, September 2018, ONS Projections, rather than the projections released earlier in 2018. These indicate a projected population increase of 301 dwellings per annum. This reduces the case for Green Belt releases. No exceptional circumstances have been demonstrated to support release of any of the Green Belt (or indeed countryside) sites, especially since (per new policy S3) it is clear that the brownfield land within the urban area should be used as a matter of priority.

We cannot see that these numbers demonstrate any form of justification for the release of any new Green Belt or rural sites.

**Attached documents:**

---

**Comment: MM2 - LPMM18/2086  Respondent: Mr ANDREW STRAWSON 20708033  Agent:**

MM2. The inspector has stated that the most current Office of National Statistics (ONS) data must be taken into account in the review of the Guildford local plan. ONS has published two reports since the Local plan review – both materially indicating lower household formation estimates than previously used. The most recent ONS publication (20/09/18), covering 2016-based household projections for the next 10 years (2018–2028), shows significant reductions versus the earlier data used during examination (23%). These trends are not unique to Guildford and are a general pattern across many regions, including for example Woking, although Guildford is at the higher end of the spectrum of reductions.

This is in addition to earlier announce revisions to the ONS data, which had already had high impact on the housing need figure included in the local plan. Analysis by both GL Hearn and Neil McDonald (NM) had already agreed a reduced OAN base at around 400 houses per annum. Whilst differences in assessed uplift had resulted in a final OANs of 629 versus 460, this difference was driven entirely by differences in assumptions and judgements extended over the 15 to 20 year plan period. The latest ONS data reinforces the real concern that GBC and GL Hearn are materially overstating OAN against the most recently published objective data from ONS. Based on latest ONS published data, NM has revised the unadjusted 2016 household projections to 325 (versus the 420 prior baseline), which is fully justified at a detailed level. The very high difference between this baseline objectively assessed need and the previously proposed and as yet unchanged OAN from GBC must be justified in some way. If GBC cannot agree a revised OAN figure with the Inspector, reflecting similar reductions based on the latest ONS data points, a further round of focused public examination on the continuing objectivity of the OAN is required.

**Attached documents:**

---

**Comment: MM2 - LPMM18/2087  Respondent: Mr ANDREW STRAWSON 20708033  Agent:**

MM2. Student uplift of 29 in the OAN continues to be overstated. The latest data from ONS shows a reduction household formation for this age group, not an increase. Student need is already more than fully covered in the unadjusted figures. Indeed, there is more properly an argument for a reduction rather than an increase in OAN, for student numbers, based on the most recent ONS data for this age group. This uplift must be removed.

Re: Response from Godalming Town Council to Guildford Borough Council's Consultation on the Guildford Local Plan: Strategy and Sites - Main Modifications

Godalming Town Council makes the following observations (in bold) regarding the Guildford Local Plan: Strategy and Sites - Main Modifications:

**MM2 - Policy S2: Planning for the borough - our spatial development strategy**

As stated in 4.1.9aa Woking Borough Council has yet to review its current Local Plan and as the latest population and household projections indicate that the level of Woking's unmet need is lower than that assessed in the West Surrey SHMA (2015).

**Guildford Borough Council should remove the requirement for A61 Aaron’s Hill - Urban Extension to Godalming from Policy S2: Planning for the borough - our spatial development strategy.**

Attached documents:

---

POLICY S2

- I object to the way GBC uses the word 'need' in place of 'demand' when promoting house building requirements in this area.
- I object that the figure for Guildford Borough housing need used by the Inspector was 789 per annum. This has been discredited as shown to be a high over-estimate and therefore is an unreliable and irrelevant basis on which to plan housing for the area.
- I object that GBC is using failing to acknowledge and amend their discredited figure of 789 per annum when Barton Willmore - a respected consultancy - has said that the correct figure should be 431.
- I object that GBC is not considering relevant data when proposing housing need and this will impact on and encourage excessive development in Send and destroy our village and its character.
- I object that GBC fails to take into account publicly available data which proposes a much lower number of housing need for our borough and village and - in the face of sustained and numerous objections from residents - instead proposes numbers and developments which would only meet the needs of housebuilders and developers.

Dear GBC,

I have strong concerns regarding the local plan. Please note the following in considering the need for appropriate action to be taken.

The Local Plan is unsound because:
1. The council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited. These could both reduce pressure on the green belt development and improve the areas of the town centre that are a poor relation to the High Street and potentially likely to undergo further deterioration without focused effort.

2. There is too much reliance on A3 improvements and they are beyond the council’s control. This create a plan that could fail and be blamed on others. Let's get a plan where we have a strong level of control from the Council.

3. The town centre policy, S3, is thus inadequate and also does not address the infrastructure deficit.

4. Housing numbers should reflect the latest ONS figures and projections. The public hearings should be re-opened on this subject to allow re-examination.

5. The grounds for green belt development are inadequate because of 1 and 3 and do not represent ‘exceptional circumstances’. Furthermore, building outside of the town centre is likely to increase the traffic and pollution problems faced by Guildford.

The last 15 years have been a huge missed opportunity for Guildford town centre. In 15 years from now we could have an fantastic town centre (not just a great High Street), but the danger is that the current local plan fails to focus on driving the opportunity.

We have an opportunity to create great places and also make changes to drive significant modal shift (which won't happen on it's own, nor with the current difficulties with getting into town - just try cycling in the town centre or around the gyratory and you will realise why we don't see many cyclists in a town that is so close to areas that are amongst the most popular in the UK for leisure cycling.

My fear is that without a sound plan for the town centre we will be in a worse position than now and have failed to grasp the opportunity of creating a fantastic area before the bricks and mortar retail bubble pops. Please don't let this happen - take the right action now.

Attached documents:

Comment: MM2 - LPMM18/2518  Respondent: Kelly Bradley 20754593  Agent:

Dear Sir/Madam

Ref: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments:

A. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.

B. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:

1. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
2. There is too much reliance on A3 improvements and these are beyond the council’s control
3. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
4. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

C. I would like the Inspector to RE-EXAMINE the Local Plan because:
1. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt.

2. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high.

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

D. The Clandon Society Objections and Concerns Which I Share

The A247

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (e.g. through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247.

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1 million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1 million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

**I believe that traffic will increase significantly because:**

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic.
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247.
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh.
4. The development of 1800 houses at Gosden Hill.
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247.
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3.
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common,
avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing

8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.

9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments

10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

E. The Guildford Residents’ Association’s Objections and Concerns Which I Share

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.
MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

Comment: MM2 - LPMM18/2572  Respondent: Barry Sterndale-Bennett 20754945  Agent:

Dear Sir/Madam

Ref: Guildford Borough Council’s Modified Local Plan consultation

As a local resident in West Clandon I would like you to note my following comments:

1. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.B. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:1. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited. There is too much reliance on A3 improvements and these are beyond the council’s control. 3. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit. 4. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’. C. I would like the Inspector to RE-EXAMINE the Local Plan because:1. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt. 2. New figures and projections for housing numbers have
been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high. In case Guildford Borough Council is not prepared to accept my request in Section A above, I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

2. The Clandon Society Objections and Concerns Which I Share

The A247

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road. The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build-ups on the A247. I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1 million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents. What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge. The £1 million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh. The development of 1800 houses at Gosden Hill. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247. The conversion of the Burnt Common roundabout to an all-ways junction with the A37. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford. 9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247
The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are: 1. The junction with the current A3 south-bound slip road (modifications are underway) 2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph 3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station. 4. The sight lines for the exit of the Onslow Arms car park 5. The narrowness of the road near Summers 6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement 7. The sharp bend near Clandon Regis 8. The narrowness of the road at the Bull’s Head 9. The Clandon Junior School and the, in places, narrow footpath for children walking to school 10. The sharp bend with poor sight lines in either direction at the church 11. No continuous footpath through the length of the village 12. The speed of traffic 13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt. The Council has long argued that much of the housing required must be built on such sites. This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker. The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites. Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. The Guildford Residents’ Association’s Objections and Concerns Which I Share

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss. MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination. MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation. MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined. MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

Comment: MM2 - LPMM18/2608  Respondent: Kris Nasta 20762433  Agent:

Proposed Amendments to Guildford Borough Local Plan

General Objections

I object to the Council unilaterally removing the Wisley Airfield Site from the Green Belt. They have no mandate from the people of Guildford and Surrey to do this.

It appears that the only reason for this this dubious manoeuvre is to undermine the Secretary of State for the Environment’s decision that the Wisley Airfield development “would represent inappropriate development in the Green
"Belt, and should not be approved except in very special circumstances" and to try to get around the fact that the provision of housing is not an “exceptional circumstance.”

It is also illogical that GBC should take this action given that they unanimously supported the refusal of the original application, and because the conservative members stated in their election manifesto that they would not build on green belt land.

I also object to the Council’s failure to communicate adequately with residents about the current amendments to the Local Plan under the guise of compliance with GPDR. All the 32,000 or so persons who responded to the plan in 2016 should have been given the opportunity respond this time and not to have done so is a clear and unilateral disenfranchisement.

**Specific Objections**

**Amendment MM2**

I object to an amended plan for which the housing target out of date and based on incorrect information. The latest ONS statistics show a much reduced demand for housing and this needs to be reflected in the plan and on its own removes the requirement for Guildford to meet Woking’s housing shortfall.

The council has turned its own spatial strategy on its head and instead of concentrating on Brownfield sites in Guildford Town Centre where the big landowners like Network Rail, Legal and General and Guildford Corporation would be more than happy to realise the increase the value of that a change to residential use would bring. Building in the Green Belt and rural areas should be a last resort.

The addition of another 500 houses in Send (which will be car dependent) will have a severe impact on Portsmouth Road Ripley, and the A3 and there is no indication that this has been given proper consideration.

**Attached documents:**

**Comment: MM2 - LPMM18/2638  Respondent: Rebecca Green 20762817  Agent:**

**MM27, MM41, MM42 and MM48 Transport Strategy**

- There has been no adequate assessment by GBC of the impact of this transport strategy on congestion, noise pollution and air pollution as thousands more cars head to Woking each day. There is the possibility of gridlock.

**Other developments**

- The travellers’ site on Send Hill will exacerbate all the problems mentioned above and make the overall impact on Send significantly detrimental to all those living in this part of the world.

**Attached documents:**

**Comment: MM2 - LPMM18/2695  Respondent: Linda Crawford 20767969  Agent:**

Please can you tell me when the population and household figures produced by the Office for National Statistics state that we actually only need 360 extra homes per year, and not nearly 672 as previously stated, are they still going to remove villages from the Green Belt? Does this mean that developers would be given a free reign to build, build, build? There are NO exceptional circumstances for insetting, as brownfield sites should always be used for development first.
My initial objection is to: MM41, MM42, MM44, MM9, MM27. POLICY S2.

At the public examination the figure for Guildford B.C. housing need used by the inspector was 789 per year. This figure was obtained by G.B.C Consultants and was greatly exaggerated by including Surrey University Student figures. These Consultants and GBC refused to disclose how this figure was calculated.

The figure now published by a highly respected consultancy Barton Wilmore has said the correct figure is 431 houses per year.

The data from the Office of National Statistics, doing population forecasts says the appropriate growth in GBC can be achieved by 460 houses per year.

This latest data makes a mockery of G.B.C consultants figures which have always been very suspect.

I trust the Inspector and GBC will now drastically reduce the housing need to reflect the true figures, and particularly in our already very congested village of Send.

**MM27, MM41, MM42, and MM48 Transport Strategy.**

Why have the effect of thousands more cars in an already heavily congested area not been taken into account?

The increased traffic for Send from Burnt Common Garlicks Arch, Aldertons, Clockbarn in addition to Gosden Hill and Wisley Ockham is not in any meaningful fashion addressed by the Road changes of the A3 and Clandon Slip Roads. They seem both the developers and GBC to offer narrative and not action.

This massive increase in traffic of all sorts heading to and from Woking along Send Barns Road and Send Road will cause horrendous noise, air pollution delays and gridlock.

**MM41 Land at Garlicks Arch, Send Marsh, Policy A43.**

I object to the increase from 400 to 550 houses of which 450 are to be built in the first 5 years. This is an increase of 37% in the number of houses to be built.

Despite the promises by the developers and GBC the ancient woodland after hundreds of years of peace will be ruined once the fuss has died down and nobody is checking. This over development will effectively join Ripley to Send, and spoil the wisdom of our Green Belt Planners of many years ago.

Up to a thousand cars and between 1600 to 1700 extra people will block the surrounding roads and overwhelm the already full to capacity schools and health facilities, sewage, water etc.

Why have over 7000 objections to the earlier plan been ignored and more houses etc added?

**MM42. Land at Burnt Common, London road Send Policy A58.**

As the Employment Lands Needs Assessment showed a reduction in demand for Industrial Land why has again Send been picked on again to have the largest industrial allocation in any village in the Borough, is it politics?
This is a further increase of 25% making it a huge increase in Send, bigger than any other village.

There is no need for new industrial sites when Slyfield is has unused capacity. There are NO SPECIAL CIRCUMSTANCES so it contradicts MM9.

There is no need to put Industrial premises in our precious GREEN BELT. This plan has since being deleted from 2014 plans, has been increased twice from 7000 to a MINIMUM of 14800 sq m.

MM44 Land at Aldertons Farm, Send Road, Policy A63.

New site for 120 homes which was deleted because of objections and not reinserted until the public examination in JULY. With Garlicks Arch 550, Clockbarn 60, Winds Ridge 40, that means 770 houses to the 1700 currently in Send AN INCREASE OF 45%

How are our roads, sewage, water, healthcare, schools etc going to allow us to live normal lives in this polluted gridlocked stressful environment. Again this is GREEN BELT and with NO special circumstances and contradicts policy MM9.

**MM9 GREEN BELT POLICY.**

How can you say the modifications claim to protect our precious GREEN BELT except in very special circumstances? GBC make an exception for LIMITED INFILLING OUTSIDE THE IDENTIFIED SETTLEMENT BOUNDARIES WHERE IT CAN BE DEMONSTRATED THAT THE SITE SHOULD BE CONSIDERED TO BE WITHIN THE VILLAGE.

This is a catch all statement which is completely subjective causing complete uncertainty and completely negates GREEN BELT PROTECTION. Virtually any land on the then ever increasing edges of the village can be picked off by developers and is open season for speculators at the expense of villagers.

I wish the above objections to be considered and this huge imposition of housing and commercial development to be largely abandoned.

**Attached documents:**

**Attached documents:**
**Comment: MM2 - LPMM18/2731  Respondent: Mrs Yvonne E Murray 20768705  Agent:**

The current draft of the Local Plan is unsound because:

1. The revised Housing Need figures mean that much proposed greenbelt development is no longer justified, and the “exceptional circumstances” that are required as grounds to allow greenbelt development do not exist.

**Attached documents:**

**Comment: MM2 - LPMM18/2734  Respondent: Mrs Yvonne E Murray 20768705  Agent:**

4. There is no policy dealing with urban areas beyond the town centre such as the one where we live.
5. There are few concrete proposals for reducing congestion. Where there are any, these are outside Guildford's control, like widening the A3, and therefore there is nothing really to prevent the major greenbelt development taking place irrespective of the congestion.

**Attached documents:**

**Comment: MM2 - LPMM18/2828  Respondent: Rebecca AJ Gillmore 20769505  Agent:**

Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments as a resident of West Clandon for 14 years.

1. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine.
2. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
3. There is too much reliance on A3 improvements and these are beyond the council’s control
4. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
5. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’. Just wishing

1. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:
2. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
3. There is too much reliance on A3 improvements and these are beyond the council’s control
4. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
5. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’. Just wishing

I would like the Inspector to RE-EXAMINE the Local Plan because:

1. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
2. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high.

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. The Clandon Society Objections and Concerns Which I Share

The A247
I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (e.g. through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247.

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1 million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years' time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1 million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic.
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247.
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh.
4. The development of 1800 houses at Gosden Hill.
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247.
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3.
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go south of Guildford to use the A247 - potentially an easier route than any existing.
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments.
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247
The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

**Housing Number and the Green Belt**

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. **The Guildford Residents’ Association’s Objections and Concerns Which I Share**

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.
I would like you to note my following comments as a resident of West Clandon for 14 years.

1. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine.

1. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:
2. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
3. There is too much reliance on A3 improvements and these are beyond the council’s control
4. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
5. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’. Just wishing

1. I would like the Inspector to RE-EXAMINE the Local Plan because:
2. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
3. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high.

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. The Clandon Society Objections and Concerns Which I Share

The A247

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (e.g. through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247.

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.
What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

**Housing Number and the Green Belt**

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. **The Guildford Residents’ Association’s Objections and Concerns Which I Share**

   MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

   MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

   MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

   MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

   MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

**Comment: MM2 - LPMM18/3026  Respondent: Michael and Marina Dominicus 20774337  Agent:**

The current draft of the Local Plan is unsound because:-

1. The revised Housing Need figures mean that much proposed greenbelt development is no longer justified, and the “exceptional circumstances” that are required as grounds to allow greenbelt development do not exist.
2. The Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited.
3. Proper planning of the town centre would help to promote more relevant sensitive development. The hastily added section is based on pre-Internet retail models and numbers.
4. There is no policy dealing with urban areas beyond the town centre such as the one where we live.
5. There are few concrete proposals for reducing congestion. Where there are any, these are outside Guildford's control, like widening the A3, and therefore there is nothing really to prevent the major greenbelt development taking place irrespective of the congestion.

Attached documents:

**Comment: MM2 - LPMM18/3040  Respondent: Peter Drew 20774497  Agent:**

- Housing numbers must reflect the latest ONS data and projections. The public hearings on housing should be re-opened and the subject re-examined in the light of the most up-to-date data.
- As the above points demonstrate, the grounds set out in the plan for green belt development are inadequate and certainly do not represent 'exceptional circumstances'.
After 30 years, I still feel privileged to be able to live in Guildford. It is an exceptional town, set in beautiful countryside. We have the opportunity of addressing today's problems of transport, housing, infrastructure et al in a coordinated, consistent and elegant manner and thus enhance the experience of living in Guildford for future generations of townspeople and businesses. In order for this to happen, the Local Plan must be revisited.

Submission Local Plan, Strategy and Sites in Guildford Borough

Main Modifications

MM2 4.1.9.ac

Urban extension to Godalming, 200 homes at Aarons Hill

Although we live in Waverley Borough, our home is only 500 yards from the above field, and we wish to comment on the proposal to allocate this site for housing.

Masterplan

A masterplan is required by Inspector Bore setting out how a high quality development can be achieved both in conjunction with and without development of the Waverley site before the Guildford land can be allocated to housing as a strategic housing site. No such plan has been published and in our view it is essential that this should be achieved before the proposal is progressed. There would need to be much negotiation between the Boroughs before an integrated proposal which is viable could be achieved.

Sustainability

The development is not sustainable. The infrastructure is totally inadequate for such a large number of dwellings on the combined sites. Aarons Hill is not well connected to Godalming town centre. Car access will be required and the road network would need major road widening and alteration to accommodate the huge increase in traffic, which would change the character of this historic country town and beautiful area.

Overall, for the above reasons, we object strongly to the Modification in respect of the Guildford Aarons Hill site.

Thank you for considering our representations.

| Comment: MM2 - LPMM18/3117 | Respondent: John Shorto 20775713 | Agent: |

In particular the Local Plan is unsound because:

The council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited.
Housing numbers should reflect the latest ONS figures and projections. The public hearings should be re-opened on this subject to allow re-examination.

**Attached documents:**

---

**Comment:** MM2 - LPMM18/3253  **Respondent:** J Font Friede 20778817  **Agent:**

Dear Inspector, please re-open the examination and amend the Plan to take account of the new lower figures.

GRA’s adviser, a leading national expert, has shown Guildford can achieve ambitious economic growth with an extra 360 homes a year. This is still a big number, recognising we need homes, but is much more realistic than the 672 extra homes a year currently proposed in the Draft Plan which would lead to excessive loss of countryside, congestion and town cramming.

The new figure of 360 homes means development in the Green Belt on the scale proposed in the Plan can no longer be justified. The new lower figure would also make it more achievable to bring forward well-planned, sensitively-designed housing in the town centre in a timely way.

**Comment:** MM2 - LPMM18/3268  **Respondent:** Paul and Patricia Hubbard 20787361  **Agent:**

Please see below our objections to some of the main modifications in GBC Local Plan consultation which we like to note and record.

MM2 The housing target is wrong. We call for the hearing to be reopened so that the latest ONS figures and household projections can be taken into account

MM2 There should be no requirement for Guildford to take Woking’s unmet need particularly as this will require further green belt release.

The council has not properly followed its spatial strategy which requires that development takes place first in the town centre, the urban area and brownfield before moving to land in the villages or greenbelt. The addition of another 500 houses in Send (which will be car dependent) has a severe impact on Portsmouth Road Ripley which has not been properly considered.

**Attached documents:**

---

**Comment:** MM2 - LPMM18/3365  **Respondent:** Stephen Marriott 20789409  **Agent:**

I would like to add my voice to those who think the local plan is unsatisfactory (unsound). The Local Plan is unsound because:
1. The council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited. Since I moved to Guildford in 1999 there has been no movement on developing either the area behind North Street or the large site between the Portsmouth Road and St Nick’s church.

4. Housing numbers should reflect the latest ONS figures and projections. The public hearings should be re-opened on this subject to allow re-examination.

Attached documents:

Comment: MM2 - LPMM18/3409  Respondent: Brian & Helene Pavey 20789921  Agent:

Other Developments: We object to proposal of a travelers Site in Send Hill we have experienced the total lack of social community demonstrated when they illegally took over our village green. We object to 60 houses being built in Tannery Lane and putting the Wey Conservation area under threat by increasing the size of the Send Business Centre. Added to other proposals for our village it is too much for one little area these proposals should be shared evenly within the borough.

Attached documents:

Comment: MM2 - LPMM18/3410  Respondent: Sheena Preston 20790049  Agent:

I am writing to ask that you re-consider the Gosden Hill site as part of the Local Plan for the following reasons:

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

Attached documents:

Comment: MM2 - LPMM18/3447  Respondent: John Dixey 20790945  Agent:

Specific Objections
Amendment MM2

I object to an amended plan for which the housing target out of date and based on incorrect information. The latest ONS statistics show a much reduced demand for housing and this needs to be reflected in the plan and on its own removes the requirement for Guildford to meet Woking’s housing shortfall.

The council has turned its own spatial strategy on its head and instead of concentrating on Brownfield sites in Guildford Town Centre where the big landowners like Network Rail, Legal and General and Guildford Corporation would be more than happy to realise the increase the value of that a change to residential use would bring. Building in the Green Belt and rural areas should be a last resort.

The addition of another 500 houses in Send (which will be car dependent) will have a severe impact on Portsmouth Road Ripley, and the A3 and there is no indication that this has been given proper consideration.

Comment: MM2 - LPMM18/3462  Respondent: Emma Shaw 20791073  Agent:

Re: Comment on amendments to GBC Local Plan

In the light of the new, much lower housing and population ONS figures, I request that the Inspector re-opens the examination of the local plan, with particular attention to housing need/supply projections, and the new updated calculations provided by Neil MacDonald.

In relation to amendment:

• MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify the proposed extensive Green Belt loss.
• MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision, replacing unnecessary 40% retail expansion, with residential housing provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.
• MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year does not reflect the new ONS figures and the Government’s standard method. 630 is based on incorrect assumptions resulting in an inflated figure.
• MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained and Woking’s need figure has also reduced and has not been examined.

Attached documents:

Comment: MM2 - LPMM18/3483  Respondent: Gavin Teague 20791265  Agent:

With reference to your letter dated 7th September 2018, I write to record my objections as follows:

MM2: The objectively assessed housing need is materially wrong. The Plan takes no account of the drastic reduction in new household formations forecast by the ONS last month, and is thus fundamentally unsound.
Regarding the consultation on the Main Modifications to the proposed new Local Plan:

1. I believe the examination in public should be reopened because of the huge discrepancy between the Plan and the latest ONS projections of household numbers.
2. I support the representation made by Wisley Action Group regarding Site A35 as the requirement is not necessary given the revised ONS projections of household numbers.

Household numbers

The current version of the Plan requires 12,600 houses. In September 2018 the Office of National Statistics (ONS) released new household growth projections for Guildford for the Plan period of 2015-34. The new figures reduced the projected growth in households by 40% - from 11,142 (previous plan) to 6,635, a reduction of 4,507 households. A reduction of 4,500 dwellings removes the need for at least two “strategic sites” (where the five largest sites represent 7,650 dwellings including 2,000 at Wisley Airfield and 550 at Garlick’s Arch).

Given these reduced household projections, Guildford should have no requirement to take Woking’s unmet housing need (which virtually disappears under the new ONS projections); the is particularly important as it will require further release of green belt.

The latest ONS projections should be used the basis for the Local Plan otherwise it will be unsound.

Other comments on the Plan

MM2: The addition of another 500 houses in Send (which will be heavily car dependent) will have a severe impact on the Portsmouth Road, Ripley which has not been properly considered.

I am concerned that the revised local plan is still substantially flawed and I request that the examination of it be re-opened principally because:

1. the housing figures are no longer up to date; they do not provide a sound basis for the Plan and they do not justify such extensive Green Belt loss. There is a strong case for taking out a strategic site.
2. it is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained. Woking is proposing Green Belt development, plus Woking’s need figure has also reduced.
I would like you to note my following comments:

1. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.

1. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:
   2. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
   3. There is too much reliance on A3 improvements and these are beyond the council’s control
   4. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
   5. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

1. I would like the Inspector to RE-EXAMINE the Local Plan because:
   2. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
   3. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. The Clandon Society Objections and Concerns Which I Share

The A247

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.
The £1 million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt
The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. **The Guildford Residents’ Association’s Objections and Concerns Which I Share**

   MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

   MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

   MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

   MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

   MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

   **Attached documents:**

   **Comment:** MM2 - LPMM18/3632  **Respondent:** Richard and Nicola Slynn 20794657  **Agent:**

   The current draft of the Local Plan is unsound because:-

   1. The revised Housing Need figures mean that much proposed greenbelt development is no longer justified, and the “exceptional circumstances” that are required as grounds to allow greenbelt development do not exist.

   2. The Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited.

   MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

   MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

   MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the

Comment: MM2 - LPMM18/3698  Respondent: Colin Cross 20795169  Agent:

4. Housing Numbers in relation to SHMA and the latest ONS projections need now to be totally revised and the LP must be suspended to allow for new figures to be drafted and the revised numbers to be included. This will result in a much more realistic housing need picture.

Attached documents:

Comment: MM2 - LPMM18/3740  Respondent: Anthony Thompson 20796225  Agent:

My comments on the main modifications are as follows

MM2 I object. The housing numbers need to be updated to take account of the latest ONS projections for population increase. Using these numbers the number of dwellings required over the Plan period would be about 6,000. Having regard to existing commitments, permissions, windfall sites etc. it is clear that the requirement can be accommodated on brownfield sites within the town without significantly encroaching on greenbelt. The development of brownfield sites within the urban area would not only save countryside from irrevocable destruction but reduce the transport problem which is exacerbated by developing housing outside the town requiring commuting to jobs and shopping in the town

Attached documents:

Comment: MM2 - LPMM18/3855  Respondent: Sue Algeo 20797473  Agent:

Ref: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments:

1. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.
2. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:

I would like to respond to the Local Plan. I have attended in the past year the two Guildford Vision Group meetings and as a resident of the Tyting Society am in receipt of information from them as part of the Guildford Residents Association.

There is a lot to cover but in essence my concerns are as follows;

MM2 - Housing is needed but why invade Green Belt. I don't believe the Plan has considered Brownfield sites, it is also apparent that the figures from the ONS have been revised which show that the 630 homes required in the area is overinflated and that 360 homes is the realistic figure, this confirmed by independent expert Neil MacDonald.

Comment: MM2 - LPMM18/3886  Respondent: Matthew Stork 20797825  Agent:

It appears that MM2 is out of date and the Examination should be reopened as the housing figures are no longer up to date and do not justify such extensive redevelopment. This has been supported by expert input from Neil MacDonald, who has demonstrated that 360 homes per annum would support the growth target. It may be that there are inappropriate assumptions built into the proposed number of 630 with student housing being included.

Comment: MM2 - LPMM18/3899  Respondent: John Everritt 20797921  Agent:

Please revisit the above as there is quite clearly a lesser number of houses required You will also need to review the traffic and other social needs to ensure villages such as West Clandon are not swamped in any new road schemes

Comment: MM2 - LPMM18/3912  Respondent: Gai Palmer 20797985  Agent:

Ref: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments:

1. **I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.**

2. **I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:**
   1. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
   2. There is too much reliance on A3 improvements and these are beyond the council’s control
   3. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
   4. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.
1. I would like the Inspector to RE-EXAMINE the Local Plan because:

2. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt

3. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. **The Clandon Society Objections and Concerns Which I Share**

**The A247**

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247.

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

**I believe that traffic will increase significantly because:**

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic

2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247

3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh

4. The development of 1800 houses at Gosden Hill

5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247

6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing.

8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.

9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments.

10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. The Guildford Residents’ Association’s Objections and Concerns Which I Share
MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

   3. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. The Clandon Society Objections and Concerns Which I Share

The A247

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of
a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years' time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for
traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.

4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. **The Guildford Residents’ Association’s Objections and Concerns Which I Share**

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the **housing supply** figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

**Attached documents:**
To whom it may concern, I would like to make the following objections with regard to the the local plan given that the whole thing is based on inaccurate ONS data:

5.2-1 The household projection is using out of date information! The new household projections (Sept 2018) show a substantial drop in the number of households and therefor the plan is based upon fundamentally unsound data. The same issue applies to S2-2. Given this difference the public examination must be re-opened!

S2.4 – 4 Due to the changes in the household figures…the proposed strategic sites (2) specifically those on greenbelt must be removed.

S2.5 Also the 5 new sites included in the plan (for early delivery) should be removed.

Attached documents:

Comment: MM2 - LPMM18/4027  Respondent: Mr Anthony Allen 20804897  Agent:

Regarding the modifications of GBC Local Plan, I would like to object wholeheartedly to these modifications. Over the last few years I have repeatedly objected to the Local Plan in our area. Time and time again I have listed my objections and am horrified that you have added to the land south of the appeal site, which will completely overlook our house and land and completely ruin our historic hamlet, turning it into a large town of ridiculous proportions. Also, a lot of this land is constrained by the VOR (air traffic control beacon) which prevents any construction within a certain radius.

Attached documents:

Comment: MM2 - LPMM18/4029  Respondent: Mr Anthony Allen 20804897  Agent:

With regard to the rest of the modifications there are several points which are not acceptable. In view of the latest ONS statistics, which were released a few weeks ago, the GBC has not taken these figures into account and therefore your housing target is wrong, which means the plan is unsound. Also in MM2 - there should be no need for Guildford to take Woking’s unmet need, which would require further green belt release.

Finally, I note that Strategic sites are to be exempt from design constraints! This will result in inappropriate developments such as that proposed on Three Farm Meadows. There is also no evidence that recent case law, such as “People over Wind” has been taken into account.

For all the above reasons I am calling for the hearing to be reopened, specifically so that the latest Office of National Statistics can be used. I would also like to advise that I support the representation made by WAG (Wisley Action Group), which was written with advice from Richard Harwood QC.

Attached documents:

Comment: MM2 - LPMM18/4033  Respondent: TSG Consulting (Mr Mark Watson) 20805057  Agent:
I wish to object to the main modifications proposed for the Local Plan. I also wish to point out that I have not been advised of the consultation on this matter (despite being advised previously by email). In providing my reasons, I support the representation made by WAG, written with advice from Richard Harwood QC

My reasons are as follows:

GENERAL

- MM2 The housing target is wrong. I call for the examination in public to be reopened so that the latest ONS figures and household projections can be taken into account.
- MM2 There should be no requirement for Guildford to take Woking’s unmet need particularly as this will require further green belt release.
- The council has not properly followed its spatial strategy which requires that development takes place first in the town centre, the urban area and brownfield before moving to land in the villages or greenbelt. The addition of another 500 houses in Send (which will be car dependent) has a severe impact on Portsmouth Road, Ripley, which has not been properly considered.

Attached documents:

Comment: MM2 - LPMM18/4148  Respondent: Nicolas and Judith Ware 20808161  Agent:

Dear Sir/Madam,

The Local Plan makes depressing reading for existing Send and Burnt Common residents and largely ignores many thousands of previous objections.

Whilst Ripley seems to have been protected from large scale development (but considered for limited ‘in-filling’), Send and Burnt Common seem to have been targeted for an unacceptable scale of development.

We have lived at this address adjacent to Burnt Common roundabout for 32 years, and even now, the level of traffic noise and exhaust gas pollution is becoming unbearable. In particular, anything that creates more heavy goods lorry traffic at this point would be a disaster for this house and all of those in the vicinity. Traffic leaving Burnt Common roundabout in the direction of Clandon Road and Portsmouth Road is at full capacity daily during peak times.

Comment: MM2 - LPMM18/4156  Respondent: Nicolas and Judith Ware 20808161  Agent:

In summary, the modifications are simply too much for the village of Send and Burnt common, both of which already suffer from greatly increased traffic and congestion/pollution

- Send has already taken on many developments (Skene Close, Vision Engineering, re-building Send school, Tannery Lane, Woodhill) as part of gentle but considered ‘in-filling’

- ONS reports show that the actual levels of housing needs have been grossly over-estimated by the Council in its Local Plan

- Send residents have repeatedly been voicing their concerns in previous feedback, but these have been largely ignored
- It is not appropriate to try to ‘absorb’ unused housing capacity needs from Woking

- Noise levels are already an uncomfortable health hazard, and it has been reported that **nitrogen dioxide levels are rising, currently at a level of 5 out of a legal limit of 6 (ref: BBC Science website)**. A loss of more countryside/Green Belt would exacerbate this.

- Abandoning the new A3 slip-road (policy A43a) would save money which could be better spent on other services for existing residents, who pay high levels of Council Tax

(such measures should include traffic-calming, road repairs and noise reduction)

Many residents feel they are now being ‘punished’ for simply voicing their concerns over the years

The Wisley airfield site could perhaps be re-considered for some light industrial development, if demand can be proven, given its closer proximity to the M25/A3, Jct 10.

It is also better suited to having an appropriate traveller pitch allocation (instead of Winds Rush A44 – practically opposite the cemetery!!) as part of a mixed development.

**Comment: MM2 - LPMM18/4239  Respondent: Sally Sparham 20816769   Agent:**

The number of houses proposed does not appear to reflect the latest ONS figures and projections. The use of Green Belt sites should be reconsidered in view of the town centre brownfield sites and the housing numbers.

**Attached documents:**

---

**Comment: MM2 - LPMM18/4255  Respondent: Save Hog's Back Campaign (Tom Stevens) 20817537   Agent:**

We object to the inclusion of site allocations A26 and A26a forming part of the modified local plan and we believe that these site allocations for development should be removed from the local plan and the land should remain as green belt. These objections have been set out at length in previous consultation responses and at the examination in June.

We object to the following specific modifications:

**MM2** – The Examination should be re-opened because the housing figures used to prepare Guildford’s local plan are out of date and are significantly different to latest ONS figures. The housing figures used by GBC therefore do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

The housing supply figure in table (S2a) is too high. This figure is double the number of homes needed to support what would already be ambitious growth targets for the economy. Consequently, there is a strong case for taking out one or more of the strategic sites. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

**Attached documents:**
Comment: MM2 - LPMM18/4312  Respondent: Annmarie Shenton 20819521  Agent: 

Ref: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments:

1. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.

2. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:
   2.1. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
   2.2. There is too much reliance on A3 improvements and these are beyond the council’s control
   2.3. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
   2.4. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

3. I would like the Inspector to RE-EXAMINE the Local Plan because:
   3.1. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
   3.2. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. The Clandon Society Objections and Concerns Which I Share

The A247

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.
The £1 million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumambly as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt
The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. The Guildford Residents’ Association’s Objections and Concerns Which I Share

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

Observations on the Soundness of the Local Plan for the development of Guildford.

Dear Sirs,

There are a number of areas where the Local Plan for Guildford would seem to have deficiencies, which need to be given further consideration. These include:-

1. The council does not seem to have taken into account the use of a considerable number of brownfield sites, particularly in the town centre, which should have been considered for development.

2. Because of this, there is an over reliance on the use of green belt sites for development – the easy answer.

3. Housing number targets would appear to be set too high, in view of the latest projections and ONS figures. This should be subject to further scrutiny.
Comment: MM2 - LPMM18/4325  Respondent: Mrs P.M McIntosh 20819649  Agent:

I write to object to the local plan as I feel it is unfit for use.

1) In the 21st. century we should be putting many more abodes in the town centre to ensure that we are developing our town and ensuring that it is sustainable. I am saddened that this hasn't happened in the plan.

2) I am also concerned by the allocation of greenbelt land for housing which will increase traffic around Guildford while losing precious greenbelt land.

Attached documents:

Comment: MM2 - LPMM18/4327  Respondent: Angela Gill 20819713  Agent:

I am writing to object to the Inspector’s suggested amendments to the above draft Plan and to continue my objection to the inclusion in the draft Plan of Site A35 - The Former Wisley Airfield/Three Farms Meadows.

I object to the following:

General:

1 Proposed Green Belt release: The draft Plan is unsound. Guildford Borough Council’s proposed housing provision appears to have reversed the Government’s Spatial Strategy which requires development to take place first in the town centre, then in the urban area, and then on brownfield land. Had Guildford properly applied this strategy, and had “housing need” been properly assessed and taken account of latest statistics, there would be no question of any proposed release of Green Belt land. The draft Plan is unsound and the Examination should be reopened.

2 MM2: The current draft Plan and Examination were drafted/conducted prior to release by ONS of the latest Population and Household formation statistics, meaning that the “housing need” figures on which the draft Plan is based and was examined are inaccurate and out of date, rendering the draft Plan unsound. The Examination should be reopened.

3 MM2: There should be no requirement for Guildford to take/provide for any unmet housing need from any other borough (including but not limited to Woking). Moreover, the current draft Plan and Examination were drafted/conducted prior to release by ONS of the latest Population and Household formation statistics, meaning that the “housing need” figures on which the draft Plan is based and was examined are inaccurate and out of date, rendering the draft Plan unsound. The Examination should be reopened.

Comment: MM2 - LPMM18/4493  Respondent: Amanda Baines 20822369  Agent:
Having attended a meeting hosted by the Guildford Vision Group on the subject of the Local Plan (and as a long standing resident of Guildford) I feel I must comment on the worrying proposals which fails to address the challenges that that confront the town centre in the 21st century.

Despite the Allies and Morrison Local Plan costing vast sums, there is no sign of Guildford Borough Council presenting a transparent, democratic and responsible plan for the sustainable future of Guildford town centre. There continues to be an ad hoc and disconnected approach to granting permissions piecemeal with little awareness of the congestion, pollution and unpleasantness that increasingly beleaguer the town centre.

Once away from the High Street, there is urban decay. Retail outlets are imploding globally so creating more retail square footage which will remain empty is a massive waste. The figures in the current plan must be corrected to reflect this trend.

Proposals focus on car dependent greenfield sites surrounding Guildford. GBC and Highways England have not done nearly enough work on the infrastructure that is needed to support the proposed 6,000 homes. Guildford is at full capacity with vehicles now. As we are seeing at the moment, just one lane out of action in the town centre gyratory system causes total gridlock.

There are currently in excess of 300 flats on the market in Guildford with thousands more proposed. The Local Plan does nothing to address the desperate need of 2 and 3 bedroomed family homes with a garden and outside communal areas such as on the Olympic Park site. In addition, based on the latest figures, the stated numbers of dwellings required are incorrect and should be adjusted immediately.

Developing brownfield sites should be a priority before releasing any greenfield areas for development. It is a mystery as to why GBC is conducting this approach. Sadly, there does not seem to be much proper scrutiny to proposals by Councillors who have realistic and informed local knowledge of the town centre.

Guildford is an historic market town and with the correct approach could become a sustainable, economically viable and really lovely place to live and work in. The current plan fails on almost every level. All interested parties should be held accountable for the impact of their proposals on Guildford and its residents. If these prove unsound then viable alternatives must be considered as matter of urgency.

Attached documents:

**Comment:** MM2 - LPMM18/4535  **Respondent:** Gary Pask 20824737  **Agent:**

I object to the recent modifications made to the GBC Local Plan. The general grounds upon which I object are:

MM2 – the ONS figures and household projections have not been considered. The hearing needs to be reopened.

MM2 – on what basis is there a requirement for Guildford to meet Woking’s unmet housing need? This will inevitably require a further and unacceptable release of green belt land. The addition of a further 500 houses in Send which does not have adequate public transport, will have a severe impact on Portsmouth Road in Ripley. This does not appear to have been considered.

RE: Guildford Borough Council Local Plan Main Modifications Consultation

I write in response to the consultation on main modifications to the Local Plan for Guildford Borough Council ("GBC").

The representations included in this letter can be summarised as follows:

• Commentary on the proposed Main Modifications.
• The Site, local context and site history.
• The change in spatial context.
• The Site's ability to deliver much needed housing early on in the Plan period.

The following additional information has been submitted in support of these representations and can be found in the attached appendices:

• Appendix 1 - Vision Document.
• Appendix 2 - Site Layout.

MAIN MODIFICATIONS

The proposed main modifications show the proposed rewording of Policy S2 1.1 (Planning for the borough - Our Spatial Development Strategy). GBC have removed the stepped housing trajectory and replaced it with a flat trajectory, in line with the Inspector's advice at the conclusion of the initial round of hearings. This puts GBC's annualised housing requirement at 630 dwellings.

1.2 Paragraph 4.1.10 of the main modifications text reads as follows:

National policy states that where possible the deficit accrued since the start of the plan period should be met within the first five years. Given the step change in housing requirement compared to past delivery rates which have been constrained by Green Belt policy; the accrued backlog at the date of adoption is significant. Whilst the plan includes numerous smaller sites capable of being delivered early in the plan period, there are a number of strategic sites that have longer lead in times. For these reasons, the backlog will be met over the plan period, using the Liverpool approach to calculating a rolling five year housing land supply rather than the Sedgefield approach. For the purposes of calculating the five year land supply, the housing requirement from 2015 to 2018 is 630 dwellings per annum, and from 2019 to 2034 it is 672 dwellings per annum, which includes an allowance of 42 dwellings per annum to contribute towards meeting unmet needs from Woking Borough.

1.3 GBC has decided to stick with a Liverpool approach to ensuring a five year housing land supply to spread the historic undersupply of housing across the plan period, rather than the Sedgefield approach preferred by the Inspector which would provide for the undersupply in the early plan period.

1.4 The Council's justification for maintaining a Liverpool approach is that there are a significant number of strategic sites which have been allocated housing which will come forward later on in the plan period due to the need to provide greater levels of infrastructure before housing can be built. This justification is weak due to the fact that one logical way to ensure that housing shortfall is met within the first five years is to increase the number of smaller sites which have the ability to deliver housing at an earlier stage in the plan period.

1.5 This approach does not seek to promote positive plan making and does not address the acute affordability issue within the borough.

1.6 In selecting sites the council must have regard to the settlement hierarchy. Send is within tier 4 of this hierarchy, the second highest after the town centre (tier 1) and the wider urban area (tier 2).

1.7 In his initial response to the council, set out within document ID7 the inspector asked the council the following questions:

• In selecting sites, did the Council pass too quickly down the settlement hierarchy? Did it move the goalposts to avoid conclusions it didn’t want and get to the outcome it wanted?
• Should there be much more attention to Tiers 1 and 2 of the hierarchy? Should the Council have demonstrated that they had explored a range of mechanisms to deliver urban sites before they could demonstrate exceptional circumstances to remove land from the Green Belt?

• How could a major Tier 9 site be put forward when there are clear opportunities for development further up the settlement hierarchy?

1.8 It is therefore considered that whilst attention should be provided to tier 1 and tier 2 (in order to demonstrate exceptional circumstances) the council must revisit sites in tiers higher in the settlement hierarchy before considering those much lower down.

1.9 The Inspector also focused on the Villages within the questions set out within ID7 and stated:

• Is the proportion of homes allocated to villages too small? Should the Council consider development adjacent to villages as the best way of boosting the delivery of homes within the first 5 years from adoption? Should villages close to Guildford be given favourable consideration?

1.10 Send is one such Village and it is considered that development adjacent to the village 1.10 is the best way of boosting the delivery of homes in the early years as set out by the inspector.

• In giving villages a lower position in the hierarchy, has the plan failed to recognise that some are sustainable and have a range of transport facilities and local shops?

1.11 Send Village has a range of shops and facilities which are all within walking distance of this site as set out in the accompanying document.

1.12 The amendments to Policy ID2 (Supporting the Department for Transport's "Road Investment Strategy") indicate the increased potential for the Local Plan to require an early review. The proposed modification to this policy includes the following justification:

*The evidence at the time of the Examination of the Local Plan was that, without the implementation of the A3 Guildford scheme, the cumulative impacts of the quantum and distribution of development in the Local Plan could be considered to become severe during the second half of the plan period. Nevertheless, the evidence also indicates that individually, site allocations may be able to be occupied in whole or substantial part without creating a severe impact on the Strategic Road Network as there are potential alternative transport measures that may reduce or limit the impact of additional traffic on the A3. A review will determine whether the proposed transport measures or additional transport measures can mitigate the cumulative impacts of development traffic on the A3 either during the period that the A3 Guildford scheme is delayed, in response to a reduction in its scope or in the event of its cancellation. If a review determines that transport measures are not able to mitigate a severe impact on the A3 then a review of the Local Plan is likely to be required.*

1.13 It is unclear to what extent the proportion of GBC's housing requirement is reliant on the improvements to the A3. This is a major risk in adopting the plan in its current form. Should the improvements not come forward, this would mean a significant change to the spatial strategy of GBC. If the Inspector were to be minded to allow a Local Plan review mechanism on this basis, this would cause further underdelivery and supply of housing which would only exacerbate the already critical affordability issue within the borough.

1.14 Reviewing a Local Plan in order to seek alternative sites to meet supply would still require GBC to go through stringent consultation and examination requirements. This would increase delays to housing delivery and create a situation where sites which are able to come forward within the next five years, are significantly delayed.

**TANNERY LANE**

**THE SITE**

The Site is located to the north east of the village of Send, to the south of 1.15 the River Wey. Extending to approximately 2.9 ha of agricultural land, the site is bounded to the south by the redundant buildings of the former Clockbarn Nurseries. This Site has been allocated in the emerging Local Plan for 60 units under policy A42. To the north,
the Site is bounded by the marina and a field with the River Wey beyond and to the west by existing residential
development along Wharf Lane.

Figure 1: Site Location

1.16 The Site currently lies in the Green Belt and abuts the settlement boundary of Send. The Corridor of the River Wey,
the River Wey Navigation Conservation Area and a Site of Nature Conservation Interest lie to the north of the site, but
not adjacent to it. An extract from the Local Plan proposals map is included below (figure 2).
LOCAL AREA

The Site is well connected to the strategic road network, with the A247 (Send 1.17 Road) linking with the A3 at nearby Burnt Common and Ripley. The Site is also well served by local facilities, with a range of shops, services and schools within walking distance of the Site.

1.18 The village of Send is ranked as the fifth most sustainable settlement within Appendix V: GBC Settlement Hierarchy Assessment Schedule of the Green Belt and Countryside Study (2013). The parcel of land which the Site falls within (B16-C) is ranked as the eighteenth most sustainable potential development area out of a possible 41 sites.

1.19 This clearly demonstrates that the Site offers a sustainable and logical location for residential development.

SITE HISTORY

1.20 This Site forms part of a wider development area which was promoted throughout the Local Plan period (figure 3).
1.21 The wider site was originally submitted to GBC for consideration for residential development in February 2013 as part of the Green Belt and Countryside Study. This study looked at the potential for a major expansion of Send and concluded that this area of land would be suitable for such a development. The impact of the development on the openness of the Green Belt was considered to be limited due to the enclosure provided by tree-belts and hedgerows. It was also recognised that there was the opportunity for a waterfront development to provide leisure and employment uses.

1.22 The wider site was also reviewed in the June 2014 SHLAA and was given an allocation in the Regulation 18 Local Plan Strategy and Sites (2014) for either housing (C3) and a public village car park or housing (C3), public village car park and marina (sui generis) (Allocation Number 75). The wider site was seen as an opportunity for mixed used development in a sustainable location.

1.23 At Regulation 19 consultation stage (2016), Clockbarn Nursery was allocated under A42 for 45 units. This was increased to 60 units in 2017 as a result of this consultation. However, the remainder of the wider site was discounted on the basis of harm caused to the Green Belt. The Sustainability Appraisal (2016) cited the exclusion of the Site as a result of its grading as a 'red-rated' Green Belt site and proximity to the River Wet Navigation Conservation Area.

1.24 As part of the Main Modifications, GBC released an update to their Sustainability 1.24 Appraisal (September 2018) which set out to justify the re-allocation of Land east of Aldertons Farm, Send Marsh (Allocation number A63). Alongside the assessment of this allocation were assessments of an additional three potential development sites which are as follows:

• Land North of Tannery Lane (100 homes);
• Land South of Tannery Lane (50 homes);
• Land at Polesdon Lane and Send Marsh Road (120 homes).
1.25 Of the four sites assessed, this Site was seen to be the least desirable due to its proximity to the River Way Navigation Conservation Area, according to the Sustainability Appraisal (Addendum, September 2018).

1.26 Within the 2016 version of the Sustainability Appraisal, the justification for the 1.26 removal of the Site from an allocation in the Regulation 18 version of the plan is set out. Here, GBC reason that it should be excluded due to it being a 'red-rated' Green Belt site.

1.27 GBC's Green Belt Review (Green Belt and Countryside Study, 2013) only considered large parcels of land and did not assess smaller parcels of land against the Green Belt purposes. In the case of this Site, which fell into the wider parcel of B16, was considered to have a high sensitivity in relation to the Green Belt, meeting three of the four assessed purposes (Purpose 1, 3 and 4).

1.28 This larger parcel of land was considered in relation to four of the five purposes of the Green Belt, as set out within paragraph 80 of the 2012 NPPF. A summary table of GBC's assessment is shown in figure x below.
1.29 In the initial response to the council during the hearing sessions (ID7) the inspector set out the following comments in relation to the Green Belt and Countryside Study:

- Was the GBCS approach too coarse-grained in looking at the whole parcel in relation to the Green Belt and paying insufficient attention to the contribution that individual sites made? Should the potential for mitigation have been investigated before ruling sites out?

1.30 The intention behind purpose one of the Green Belt is to prevent the urban sprawl of the settlement to which it surrounds. In this case, GBC lies within the Green Belt surrounding London. Additionally, Guildford is considered to be a 'large built-up area'. Therefore the Green Belt serves to restrict the urban sprawl of London and Guildford, rather than smaller settlements within the borough.

1.31 Within its Green Belt methodology, GBC have considered that the villages of Send, Send Marsh and Ripley as large built-up areas. This is not consistent with the underlying principle of this purpose of the Green Belt. None of these three settlements can be classed as large built-up areas and thus this parcel of land does not meet the first purpose of the Green Belt.

1.32 The second purpose relates the maintaining the Green Belt in order to prevent the merging of neighbouring towns. GBC have assessed this parcel of land in relation to the merging of Send, Send Marsh and Ripley. None of these three settlements are classed as towns in the settlement hierarchy and therefore it should be considered that parcel B16 does not meet this purpose of the Green Belt.

1.33 If this purpose were to be considered within the context of the merging of Guildford and Old Woking, it is argued that the presence of the River Wey Navigation acts as a natural barrier between Send and Old Woking. The land to the north of the River Wey Navigation is protected as a Site of Nature Conservation Importance, it part of the flood plain and is owned by the National Trust. This means that it is highly unlikely that development would come forward which would result in the coalescence of Old Woking and Send.

1.34 B16 was assessed to not result in encroachment into the countryside, largely due to the presence of the River Wey Navigation which runs along the northern boundary of the parcel.

1.35 Purpose four is underpinned by the intention to protect historic towns such as York or Bath, not the inclusion of conservation areas or small historic settlements as part of the Green Belt review methodology. Listed buildings and conservation areas are site constraints which should be taken into account after the Green Belt Assessment, not as a part of it. It is therefore considered that this purpose cannot be applied to this parcel of land.
1.36 Additionally there has been no revisiting of the Green Belt purposes in relation to the sub-area of B16-C which this Site falls into. It has not been considered that different sub-parcels within B16 will contribute differently to the purposes of the Green Belt.

1.37 The Green Belt and Countryside Study (2013) provided a generic assessment but there is a lack of clear justification further on in the Local Plan process which details how this specific parcel contributes to the purposes of the Green Belt. The study stated that:

\textit{B16-C is surrounded by defensible boundaries including tree-cover following the River Wey Navigation to the north, substantial hedgerows near a farm complex and Tannery Lane to the east, and hedgerows bordering a horticultural nursery and residential gardens to the south of the PDA.}

1.38 If the parcel B16-C were to be assessed again as in figure 5, it is believed that it would not fully meet any of the four assessed Green Belt purposes. As a result, it is recommended that the site be released from the Green Belt and allocated for development.

1.39 It is important to note that there has been a distinct change in the spatial context of the Site. Within the Regulation 18 consultation documents, the wider allocated site was considered to be suitable for C3 housing, a village car park and a marina or; C3 housing and a village car park.

1.40 At present, a marina has been built on the north-eastern section of the wider site adjacent to the expanded Send Business Centre with a car park and a number of buildings located directly to the south. Clockbarn Nursery along the southern border has been allocated within the Local Plan for 60 units. Existing residential development on Wharf Lane runs along the western boundary of the Site.

1.41 This means that the Site is now surrounded by development (or proposed development) on three sides, with the River Wey acting as a natural barrier to the north. As a result, it is considered that this Site could gain planning permission through limited infilling under Green Belt policy. However, it is believed that the best and most efficient use of this land would be through a release from the Green Belt and an allocation for residential development.

**OPPORTUNITIES**

1.42 The Site presents multiple opportunities for sustainable development above and beyond its sustainable location.

1.43 The proposed scheme for the Site offers the provision of 66no. C3 dwellings with a policy compliant level of affordable housing ranging from 2 to 4 bed units. Alongside this, there is the potential for the provision of a 60no. bed care home (C2), meaning a total of 122 dwellings/bed spaces.

1.44 The care home would provide a public access communal area in the form of a coffee shop and would allow access to the marina. This would create an integrated development which would provide homes a wide range of needs.

1.45 A significant advantage in allocating this Site is the ability for a greater number of units to be delivered at a quicker rate. A site this size requires a lower level of infrastructure to be put in place before units can begin to be built and houses can be completed. This is in line with the Inspector's advice for GBC to seek development opportunities that have the ability to deliver much needed housing early on in the Local Plan period.

1.46 It is envisaged that upon the assumption that the Local Plan is adopted in March 2019, a planning application could be submitted in the summer of 2019 with planning permission granted in early 2020. Work would be able to begin on site in the summer of 2020 with completions in 2021. This clearly demonstrates the early deliverability of the scheme.

1.47 Apart from the Green Belt, the Site does not have any specific constraints which would prevent development coming forward or reduce the capacity of the site. The Site is located within Flood Zone 1 and would not result in the loss of agricultural land. There are no heritage concerns at the Site. The River Wey Navigation Conservation Area is not located adjacent to the Site and would not be impacted by development at this location.

**CONCLUSION**
The Procedural Practice in the Examination of Local Plans issued by the Planning Inspectorate (June 2016 4th Edition v.1) deals specifically with 'Post-Submission Changes Initiated by the LPA' and specifically states at paragraph 5.22 that:

"The consultation on the proposed change may generate new representations. If so, in the interests of fairness, the Inspector will provide an opportunity to appear at the hearings to those who seek an amendment which follows directly from the LPA’s proposed post-submission change(s) to the plan."

We are firmly of the opinion that it is necessary to re-open the examinations in the interests of fairness so that further evidence can be heard from landholders and others on the modifications proposed. The site is suitable, available, achievable, developable and deliverable.

I trust that the comments made in these representations will be taken into account in the further modifications to the emerging Local Plan.

see attached for appendix

Comment: MM2 - LPMM18/4824  Respondent: Nina Mileksic 20832321  Agent:

Please see my comments on proposed Main Modifications 2 and 39 (Aarons Hill land) which also form the basis for my objection to allocating Aarons Hill land for house building under the local Guildford plan.

**Transport and Traffic**

Sustainability assessment states there is good bus service which is incorrect. The bus service is currently once an hour, with residents reporting the buses frequently get stuck in traffic and often missing out the entire Aarons Hill area as the drivers attempt to cut delays to their schedules.

There is only one access road to the estate (Eashing lane) which is narrow, with steep hill from A3100 junction up to Aarons Hill. Pavements are narrow and unsuitable for elderly, prams or people with mobility constraints, and in places the pavements are a death trap, especially in winter. No traffic calming measures or speed limit enforcement means drivers often speed along the entire stretch of Eashing lane, making it unsafe for pedestrians and cyclists alike.

This would be the only access for emergency vehicles for an estate of well over 1500 people (including Waverley side of the development and existing Aarons Hill estate), which is inadequate. Pairing this up with frequent traffic jams and the narrowness of Eashing lane from A3 to A3100, there is a serious risk that emergency vehicles would not be able to access the new development in a timely manner.

Eashing lane is a narrow country lane, for most of it without any pavements for safe pedestrian use and it is unsafe for cyclists due to sharp corners and excessive speed of many drivers. In most places it is too narrow for a car and a lorry to meet – there have been instances of the road being blocked by a lorry that got stuck for over 20 minutes and needed help of residents to manoeuvre out of Lower Eashing.

**Ecology**

The Waverley side of the field was surveyed by an ecologists as part of the existing planning application for 262 dwellings. Even though the ecology reports significantly downplayed the impact of the development on the environment, it became very clear that the site holds an astounding levels of biodiversity. Some of the protected species identified are listed below:
7 species of bats, one of which is Barbastelle bat, Habitats Directive Annex II protected species and classified as Vulnerable to Extinction. This is an important find and if there is a maternity colony on site, this site could be a good candidate for a Special Area of Conservation. Further investigation is needed to establish the size of Barbastelle population and how they use the site. They can cover wide areas and it would be key to understand if they are present on the Guildford side as well.

There is also potential for Hazel Dormouse to be present and Natural England requested more information to be obtained on this matter.

In addition, the following protected birds were identified to be using the site:

**Birds:**

- **RSPB red listed** due to rapid population decline (as a result of loss of habitat/food sources):
  - Skylark (*Alauda Arvensis*)
  - House Sparrow (*Passer Domesticus*) – also Defra Red listed
  - Starling (*Sturnus Vulgaris*) – also Defra red listed
  - Song Thrush (*Turdus philomelos*)

- **RSPB amber** listed due to population decline (as a result of loss of habitat/food sources):
  - Swift (*Apus apus*)
  - Dunnock (*Prunella modularis*)
  - Kestrel (*Falco tinnunculus*)

As the ecology reports were of inadequate quality and were downplaying the impact on the environment, it is highly likely that significant omissions of other protected species occurred.

An independent ecology survey of the entire site would be necessary to establish the level of biodiversity overall and the impact of any development on the protected bats, birds and any Hazel Dormice.

Even without an additional survey it is clear this site contains a significant level of biodiversity which - according to the NPPF - should be protected for future generations.

**Climate change**

Recent scientific evidence has shown that climate change can adversely impact two important factors in food production and distribution: weather related events can cause significant disruption to transport infrastructure, and it can reduce crop yields on a global scale, which in turn can cause stress to agriculture industry, in turn causing food insecurity in certain regions and disrupt the food supply chain. On the national/local level, that means that over-reliance on food imports can cause significant concern in terms of food supply. As the instances of severe weather events are likely to occur more frequently, it is important to consider these factors (food production and distribution) in local planning terms.

In the light of the emerging climate risks it would be unwise to continue to build on fertile farmland – the proposed Aarons Hill site is in its entirety a fertile field growing a wide variety of crops.

**Housing Projections**

The latest ONS statistics (published September 2018) and population growth projections based on 2016 data showed significant decline in population growth. This was before the effect of Brexit referendum on immigration showed in the data. The immigration after Brexit referendum has fallen significantly.
According to ONS, the two main factors contributing to population growth are immigration and longevity (birth rates keep declining). As immigration has significantly fallen since June 2016, and life expectancy is stagnating (according to ONS data 2015-2017), the next data set for 2018 is likely to show even more significant decline in population growth.

This puts the current planned housing numbers for Guildford in a very different context, and needs serious consideration.

In addition, the type of housing required in order to address the affordable housing need is housing available to core workers (care, education and services – e.g. hospitality) at about 50-60% market rate. Private housing and so called “affordable” housing at 80% market value is not accessible to the vast majority of core workers who are on lower than average salaries (average Surrey salary is around £30 000 pa, which is too low to afford even 25% of shared ownership scheme flat or 80% of the market rent).

As it stands, private housing (even when classified as 'affordable' according to the legal definition) will not be accessible to the majority of local population, even further exacerbating the housing affordability problem.

**Deliverability of the Plan in years 1 – 5**

The Aarons Hill site would require significant enabling works (water supply, sewage, electricity, gas) as it has never been built on before. It is not clear whether delivering 200 homes on the Guildford side of Aarons Hill site within first 5 years of the plan is deliverable. By comparison, the Waverley Land Availability Assessment plans to deliver only 25 homes (out of 262) in the first 5 years of their plan.

**Communities and economic impact**

The development could result in adverse economic and social impact on the local community. The new neighbourhood will bring a significant increase in population of Godalming and the brunt will be carried by Godalming town. It is not clear what employment opportunities are there to cater for this population (see comments on retail industry below).

Increase in elderly population also means new development will have to cater for their specific needs - there is need for accessible and reliable public transport and cater for mobility and health issues, with easy access to GP surgeries and hospital care (there are no nearby GP surgeries or other amenities on site, and GP surgeries in and around Godalming are oversubscribed as it is).

Considering the site is on top of a hill, with only one narrow access road which is frequently congested, and no amenities or doctor surgeries nearby, the site does not cater for elderly or disabled residents even with infrastructure improvements. Emergency vehicle access can also be frequently compromised, especially in winter.

In addition, the elderly need special care services to be available - for which care service providers need staff. There is not enough housing available to core workers such as care workers and nurses as they are priced out of the area. As such - and in absence of key workers housing at 50-60% of market value - the Plan is potentially discriminating against vulnerable population (elderly, disabled) and against core workers on lower incomes.

Significant proportion of businesses in Godalming and surrounding areas are rural businesses (see Waverley BC Economic strategy) which may be adversely impacted by increased road congestion and urbanisation of the area. A significant appeal of the area is its ‘rural character’ and that feature is frequently used for marketing – that would be completely lost with continued urbanisation and is likely to have negative consequences for the local economy.

One important trend to note is that retail industry is in significant decline, with over 39000 retail jobs lost or at risk in 2018 alone (http://www.retailresearch.org/2018yearofcrisis.php). This means that the local economy cannot put reliance on retail but needs to find other opportunities to advance the local economy. With significant shift to online purchasing and home delivery, this would also put additional strain on the roads.
The Sustainability analysis does not address these emerging trends, putting the Local Plan at risk of being undeliverable or having detrimental economic consequences for the local area.

The Sustainability assessment also does not take into consideration emerging trends and economic risks and disruption arising from transition to low carbon economy, which has the potential to significantly disrupt the economy at all levels in the next 10-15 years - this period falls well within the period of the Local Plan.

As such, the Community and Economic Sustainability analysis is inadequate to account for emerging economic and social risks of the future.

For all the above reasons, the Main Modifications 2 and 39 relating to Aarons Hill land (Godalming) should be rejected.

**Comment:** MM2 - LPMM18/4921  **Respondent:** Nicholas Brown 20834593  **Agent:**

I really don’t understand why it is necessary to comment again on these sites.

GBC do not appear to be following a democratic process. There have been over 7000 objections from Send and Ripley which is a very loud and clear message to say GBC have got it wrong. Now we are effectively gagged and can only comment on modifications to proposals which appear to be presented as a ‘done deal’.

I do not feel both my own and those of the many residents I know who all share the same feeling are being listened to and each time a plan is presented it is modified to an even more concentrated plan.

- We in Send have expressed our views over the years but clearly no attention is paid to them as evidenced by the fact that despite everything that has been said even more houses are proposed to be built in Send than before.

The opening paragraph to the local plan states

“Our Proposed Submission Local Plan balances the needs of residents, businesses and visitors with protecting the borough’s most important countryside, landscapes and heritage. It addresses housing, employment, retail and leisure requirements, supported by suitable infrastructure including education, healthcare and transport. The new Local Plan will be in place until 2034.”

Furthermore there are signs at various points proclaiming

“The Surrey Hills an area of Outstanding Natural Beauty.”

I am very disappointed with the way the Guildford Plan has been presented. The complete lack of listening to resident’s views, common sense and awareness of the local amenities cannot be understood by anyone and cannot support the proposed plans which GBC seem intent on creating and effectively merging the two villages. Availability of schooling, medical provision and the existing roads between Woking and the main access to the A3 and the M25 already struggle to cope with current numbers and existing staff provision for the facilities already in existence! A national shortage of GPS, Nurses and teachers along with the actual structure building to facilitate medical and schooling requirements will be unable to cope with these proposed plans for potentially several thousand extra residents, children and their cars concentrated in this area.
If 7000 objections does not get the message across then I fail to see what GBC need to get the message that they have these proposals completely wrong.

Attached documents:

**Comment:** MM2 - LPMM18/4922  **Respondent:** Monique Harrison 20834945  **Agent:**

**MM2** The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination. It is now possible to limit greenbelt development to the locations where there will be rail links.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined,

Attached documents:

---

**Comment:** MM2 - LPMM18/4945  **Respondent:** C Davies 20835105  **Agent:**

I am writing to register objections to the latest consultation on the Local plan, despite not being advised about the consultation even though I have previously commented.

It appears to me that there are NO exceptional circumstances for removing the villages from the Green Belt due to the latest figures produced by the ONS. GBC have not stated what the Special Circumstances are for the Insetting of the local villages.

**MM2** As a result the new ONS figures the public examination should be re-opened to take these into account together with the household projections. The new figure indicates that only 360 extra homes per year are needed NOT the 630 proposed, not including the extra houses from Woking. This figure could be covered with Town Centre development and the use of Brownfield sites with no need to touch the Green Belt. This is detailed in the spatial strategy which requires that development should be in the town centre first and the Brownfield before moving out to land in the Green Belt and Villages.

The addition of 500 houses in Send would have a huge impact on traffic and cause huge congestion in the surrounding areas and the effect of this proposed development has not been considered.

There should no requirement to take the unmet housing need from Woking.

Attached documents:
1.0 Instructions and Introduction

1.1 Neame Sutton Limited, Chartered Town Planners, is instructed by the Guildford Housing Forum (“the Forum”) to prepare and submit representations in relation to the schedule of Main Modifications proposed by Guildford Borough Council (“the Council”) to the Guildford Borough Local Plan 2018 (“the Plan”).

1.2 These representations have been prepared with input from RPS in respect of the 2016 based Household Projections and should also be read in conjunction with the Evidence presented on behalf of the Forum in the Matters statements and oral submissions made at the Examination.

1.3 This document covers the following matters:

• Section 2 Representations on the Main Modifications
• Section 3 Representations on the 2016 based Household Projections
• Section 4 Areas where further Modifications are required in order for the Plan to be found Sound

1.4 As with the Evidence submitted in the Matters Statements and oral submissions made at the Examination individual Forum Members will be submitting their own separate representations dealing with strategy-specific or site-specific issues.

1.5 The relevant Main Modification references are identified at the appropriate points within this document.

2.0 Representations on Main Modifications

2.1 This section of the representations sets out the Forum’s views on the various Main Modifications proposed by the Council to the Plan.

(i) Housing Requirement including Unmet Need

MM2 – Policy S2:

2.2 The proposed change to the minimum housing requirement in the Plan to bring this into line with the interim recommendations of the Inspector is supported by the Forum. The figure of 630 dpa as a minimum housing requirement is reflective of the recommendation made by the Inspector.

2.3 The Inspector also recommended that Guildford should take 25% of the total unmet need arising from Woking over the Plan period. The Council has equated this to be an additional 42 dpa. The Inspector’s note ID-006 calculated a total housing requirement of 671 dpa (630 dpa + 41 dpa), but the Forum understands from Officers that the Council has now agreed a figure of 672 dpa with the Inspector. The remainder of these representations therefore work on the basis of the Council’s figure of 672 dpa.

2.4 In the Forum’s view the additional 42 dpa should be provided for over the whole of the Plan period and from the start of that period. By contrast the Council is seeking only to introduce the unmet need component from 01 April 2019 i.e. the first monitoring year after the Plan is to be adopted. This cannot be right for the following reasons:

2.4.1 Reason 1 – The unmet need arising from Woking already existed at the start of the Plan period. The need does not simply vanish as a result of the Council only choosing to apply an allowance from 01 April 2019;

2.4.2 Reason 2 – At the Examination hearing session dealing with this issue the Forum accepted (albeit informally) that the unmet need allowance could legitimately commence from 01 April 2019 but only in the event that the need arising in the first 4 years of the Plan period was then accounted for in the remaining 15 years of the Plan period. This approach has not been applied by the
Council in its Main Modifications. Consequently there is an element of unmet need arising from Woking that will never be provided for;

2.4.3 **Reason 3** – In terms of consistency of approach across the HMA the unmet need should be planned for from the start of the Plan period. This approach was applied in Waverley and indeed the representatives from Waverley Borough Council made this point at the relevant Examination hearing session; and,

2.4.4 **Reason 4** – By Guildford taking 25% of Woking’s unmet need and Waverley taking 50% this leaves a balance of 25% that is not being planned for across the HMA. This places even greater emphasis on the 25% in Guildford being properly provided for and not discounted further, which is the practical effect of the approach the Council is now taking.

2.5 In the Forum’s view the housing requirement should be 672 dpa taking account of the factors that were clearly set out by the Inspector at the ‘wash up’ session immediately before the close of the Examination hearing sessions and identified in ID-005 and ID-006 and the position the Council has subsequently agreed with the Inspector.

2.6 This figure should be applied on a uniform basis from the start of the Plan period.

2.7 If the view was taken by the Inspector that the unmet need component should only commence from the first monitoring year after the adoption of the Local Plan i.e. from 01 April 2019 then the resultant annualised figure should reflect the fact that the unmet need arises from the start of the Plan period and not from 01 April 2019.

2.8 This is particularly important bearing in mind the fact that a) the housing requirement is expressed as a minimum and b) not all of the unmet need arising from Woking will in fact be met within the HMA. Given that this is directly at odds with Government policy that requires the housing need for the HMA to be met in full, it is vitally important that the housing requirement figure (inclusive of the unmet need component) is not watered down.

(ii) Housing Trajectory

**MM2 – Policy S2:**

**MM39, 41, 43, 44, 45 – Additional Allocations:**

**MM46 – New Housing Trajectory:**

2.9 One of the key interim findings from the Examination hearing sessions was the fact that the Council’s housing delivery strategy and in turn the Housing Trajectory (now set out at Appendix 0 of the Plan) was flawed and that further delivery is urgently required in the early years of the Plan period.

2.10 The Inspector consequently directed the Council to address its short term supply problem to ensure the housing delivery strategy and in turn the housing trajectory would represent a robust position for the Plan going forward in terms of 5-year housing land supply.

2.11 In the Forum’s view the Main Modifications advanced by the Council do not address the short term delivery issue at all.

2.12 The allocations now proposed all comprise greenfield Green Belt releases that are entirely dependent on the adoption of the Plan before they can proceed. The Council has not explored any of the other early delivery options put forward by the Forum and other parties at the Examination to address the early delivery issue.

2.13 Equally the Council has not addressed through further evidence (beyond the limited rebuttal provided verbally at the Examination hearing sessions) how the deficiencies in the housing trajectory that were identified by the Forum and others have been addressed. In short the Council has simply ignored this matter and retains the majority of its delivery trajectory for each supply source without any modification.

2.14 The only notable exceptions to this are the changes to the following supply sources:
2.14.1 **Villages in the Green Belt**

This component of supply has actually reduced by 20 dwellings from 272 down to 252. The reduction worsens the supply position when compared with that presented at the Examination hearing sessions and upon which the Inspector identified an early delivery problem.

footnote: 1 When compared with the Trajectory presented in GBC-LPSS-020

**2.14.2 PDL in the Green Belt**

- The same applies with this component of supply, which has reduced by 150 dwellings from 345 down to 195. Again this worsens the position presented to the Inspector thereby increasing the gap between early delivery and requirement.

2.15 With regard to Wisley the Forum’s position on the delivery trajectory set out by the Council in GBC-LPSS-020 needs to be updated. Whilst the Forum did not take issue with the delivery trajectory for this site in its evidence presented in the Matters Statements and orally at the hearing sessions, the Forum position was predicated on the Appeal being allowed and planning permission being granted by the Secretary of State. This did not happen.

2.16 On this basis the Forum position on the delivery trajectory for Wisley is updated as set out below to take account of the fact that the lead in to first completions must now be delayed by at least 2 years. The 2 year period is necessary to allow for the progression of a new outline planning application followed by first phase reserved matters before proceeding into the discharge of conditions and initial infrastructure and site set up. This timetable is in line with the empirical evidence contained in the Lichfields study – Start to Finish:

<table>
<thead>
<tr>
<th></th>
<th>2024/25</th>
<th>2025/26</th>
<th>2026/27</th>
<th>2027/28</th>
<th>2028/29</th>
<th>2029/30</th>
<th>2030/31</th>
<th>2031/32</th>
<th>2032/33</th>
<th>2033/34</th>
<th>Total</th>
</tr>
</thead>
<tbody>
<tr>
<td>Total</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>1400</td>
</tr>
</tbody>
</table>

2.17 The affect of the approach taken by the Council now, even if the Council’s figures are accepted in their entirety, is that the housing trajectory will ‘bump along the bottom’ in 5-year supply terms only exceeding 6 years supply in 2026.

2.18 In the Forum’s view a more realistic position is conveyed in the Forum trajectory attached at Appendix 1. This demonstrates that even with the addition of the sites proposed by the Council in the Main Modifications the Trajectory still fails to maintain a 5-year supply. In fact a further 557 dwellings are required at the start of the Plan period for the Council to break even and achieve a 5-year supply. This applies even if a step is included in the trajectory for the initial 4 year period 2015 – 2019.

2.19 Without further allocations beyond those already proposed by the Council the Plan will fail early in the Plan period.

footnote: 2 When compared with the Trajectory presented in GBC-LPSS-020
3 See Forum Matters 4 and 5 Statements
4 NLP – Start to Finish: How Quickly do Large-Scale Housing Sites Deliver? – November 2016

(iii) 5-Year Housing Land Supply

(By reference to new Framework Deliverability test)

2.20 As demonstrated by the Forum trajectory it is clear that the Council will be unable to demonstrate a 5-year supply at any point during the Plan period. This cannot be considered to comprise a sound Plan. Further allocations are therefore necessary to address the situation and ensure a robust Plan going forward that can maintain a rolling 5-year supply of deliverable housing sites in accordance with the requirements of the Framework 2012.

2.21 Even if the Council’s position on its delivery sources is to be taken at face value it is important to have regard to the new deliverability test set out in Annex 2 of the Framework 2018.Whilst the new deliverability test is not directly applicable to the consideration of the housing trajectory in the context of this Examination, given that the Plan is to be
considered in the context of the Framework 2012, the Council’s ability to demonstrate a 5-year supply moving forward will be tested against the new deliverability test.

2.22 That being the case it is important to determine whether the Council’s supply sources are capable of meeting the new deliverability test. This is particularly important for those sites that are proposed to be allocated and also those sites that are subject of outline consents. The Council should therefore satisfy itself and the Inspector that it can provide clear evidence of deliverability in order to ensure the new test can be met during the early years of the Plan period.

(iv) Adequacy of Evidence Base and SA Update

2.23 The Council has produced a SA Update and HRA Addendum, which together comprise the only updates to the evidence base underpinning the Main Modifications.

2.24 The SA Update explains the objective is to identify a further 550 dwellings5 to address the shortfall in the early years delivery within the Plan. The document then goes on to consider alternatives before concluding on a chosen option. The Forum is concerned that the SA Update only appears to test the approach set out in GBC-LPSS-020 i.e. the document is a retrofit appraisal of a note prepared in haste by the Council during the course of the Examination hearing sessions. It does not therefore properly consider all reasonable alternatives and cannot as a consequence be considered to comprise a robust evidence base to underpin the chosen approach.

footnote 5 Paragraph 4.1.4 of the SA Addendum – September 2018 – GBC-LPSS-028a

2.25 Equally the HRA Addendum is focussed on the same limited parameters.

2.26 Beyond the above two documents what is perhaps of greater concern is the fact the Council has not sought to update any of the other key evidence base documents, namely:

- Green Belt and Countryside Study
- Strategic Flood Risk Assessment
- Infrastructure Delivery Plan
- Transport Strategy

2.27 Without updates to the above key components of the evidence base the Council cannot possibly state that the housing delivery option chosen represents the most appropriate and sustainable option. In turn the Inspector will not have sufficient evidence to be able to determine whether the additional allocations comprise a sound strategy. This is particularly the case given that all of the new allocations (with the exception of the Garlick’s Arch site in Send) comprise new Green Belt releases that have not been considered and tested through the Green Belt and Countryside Study.

3.0 Representations on 2016 based Household Projections

3.1 The Inspector’s note ID-10 invited the Council to consider the 2016 based household projections and the implications on the OAN.

3.2 On behalf of the Forum RPS has also considered the 2016 based household projections and the implications on the OAN, which are set out in the note attached at Appendix 2.

3.3 In summary the RPS note concludes that The 2016 SNHP raised a number of uncertainties which are clearly not appropriate for plan making and should not be aligned with the standard method. It is also based on short-term growth trends and not compatible with the Government’s ambitious target of delivering 300,000 homes per year. As such, greater weight should be given to the modelled sensitivity analysis based on the 2014 SNHP figure of 671 dpa identified in the Note (ID-006).

3.4 As set out in Section 2 above these representations have been based on a figure of 672 dpa, which the Forum understands has been agreed between the Council and the Inspector as part of the preparation of the Main Modifications.

4.0 Areas Where Further Modifications Are Required

4.1 In order for the Plan to be found Sound the Forum considers the following further modifications are required:
1. The Council should allocate at least a further 557 dwellings on sites that can deliver early in the Plan period in order to ensure a robust housing delivery trajectory; and,

2. The evidence base should be properly updated to support the proposed additional allocations and provide the Inspector with the evidence required to be able to determine the soundness of the Plan as modified.

4.2 The Council should also satisfy itself and the Inspector that the sources of supply identified in the housing delivery strategy are capable of meeting the new deliverability test set out in Annex 2 of the Framework 2018 to ensure that future assessments of housing supply are robust, particularly in the early years of the Plan period.

4.3 In the context of the 2016 based household projections and for the purposes of the Plan the housing requirement figure of 672 dpa should remain.

Attached documents: Guildford Housing Forum Rep_Redacted.pdf (983 KB)

Comment: MM2 - LPMM18/5015  Respondent: P T & D M Kelly 20836929  Agent:

Response to the modified local plan

The Local Plan is unsound for the following reasons:

1. Policy S2. Guildford Borough Council have placed considerable reliance on improvements to the A3 to enable their allocation of development. Such reliance is beyond the council’s control.

2. Policy S2. The recent ONS report regarding the housing requirement throughout the country should lead to the plan reflecting the latest projections. The public hearing should be re-opened to allow re-examination.

3. Policy S2. Surrey University continues to build accommodation beyond the extent of the campus. All future development should take place within its boundaries.

4. Policy S2. The grounds for green belt development are inadequate as the plan fails both to fully exploit the Town Centre brownfield opportunities and the infrastructure deficit.

Attached documents:

Comment: MM2 - LPMM18/5121  Respondent: Richard Smith 20841889  Agent:

MM2

• I object that to the proposal that Send should have to meet the unmet need arising from Woking Borough Council in addition to what had already been proposed. This additional requirement could and should be absorbed by the increased use of brown field sites within Guildford itself.

Attached documents:

Comment: MM2 - LPMM18/5133  Respondent: Hazel Balti 20842017  Agent:
1. Housing numbers should reflect the latest ONS figures and projections. The public hearings should be re-opened on this subject to allow re-examination

2. The grounds for green belt development are inadequate because of 1 and 3 and do not represent ‘exceptional circumstances’

**Attached documents:**

**Comment:** MM2 - LPMM18/5137  **Respondent:** Ann Smith 20842305  **Agent:**

- I object that Send has to take on more new housing from Woking Borough.
- I object to the proposal of a travellers site on Dend Hill, 60 houses at Clockbarn in Tannery Lane and a 25% increase in the size of Dend Business Centre despite the Wey Conservation area.
- I object to the unreasonable increased level of proposed housing and industrial sites in such a high concentration in one village which will undoubtedly make the area gridlocked with traffic and will forever change the rural nature of Send and Ripely.

**Attached documents:**

**Comment:** MM2 - LPMM18/5176  **Respondent:** Christopher and Alison Taylor 20843265  **Agent:**

I would like to express my strong objection to the inclusion in MM2 of the plan for the 2000 houses at Wisley Airfield.

I am surprised that the council continues to include this project in their plans.

It would be reasonable for some development on the airfield; two or three hundred homes would be sensible.

The 2000 home development is likely to cause immense congestion on the roads, at the station, in the medical centre and local shops, at the schools etc. It seems to have been ill-conceived. The persistence of the council in including this project, is worrying, and arouses suspicion of lack of consideration at best or greed at worst.

I would like to request that the council reconsider this part of the plan, and massively reduce the size of the Wisley project.

Additionally, I would request that the council ensure that the projected numbers that they use in their plan are the most recent and correct forecasts of the Office for National Statistics.

**Attached documents:**

**Comment:** MM2 - LPMM18/5215  **Respondent:** Diana Elliott 20843393  **Agent:**

I would like to object to the following modifications to the local plan.

MM2, the figures in MM2 are no longer up to date, and do not provide a sound basis for the plan, or justify such extensive loss of Green Belt.
Comment: MM2 - LPMM18/5225  Respondent: Paige Allen 20843489   Agent:

I would like to object again to the GBC local plan and request the examination in public is reopened. This is only fair and correct so that the office of national statistics can be used.

the WAG representation with advise from Richard harwood QC states the numerous reasons why this plan is not sustainable which I agree with.

I don't believe I was made aware of the consultation which I expected was a requirement that is was informed.

I await confirmation of your receipt to this objection

Ref: Guildford Borough Council’s Modified Local Plan consultation

I would like you to note my following comments:

1. I fully endorse the responses of The Clandon Society, the Guildford Residents’ Association and the Guildford Vision Group and would like their responses to be registered as mine as well.

2. I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:
   2. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
   3. There is too much reliance on A3 improvements and these are beyond the council’s control
   4. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
   5. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

3. I would like the Inspector to RE-EXAMINE the Local Plan because:
   2. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
   3. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. The Clandon Society Objections and Concerns Which I Share

The A247
I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247.

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1m of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1m funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic.
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247.
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh.
4. The development of 1800 houses at Gosden Hill.
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247.
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3.
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing.
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments.
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247
The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

**Housing Number and the Green Belt**

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. **The Guildford Residents’ Association’s Objections and Concerns Which I Share**

   MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

   MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

   MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

   MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

   MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.
Please reconsider the local GRA adviser’s recommendation for 360 new homes for Guildford rather than 672 homes new homes a year as proposed by your Draft Plan.

Guildford can ill afford more loss of country side and surely rush hour traffic congestion has reached its limit!!

I expressed my concerns back in July 2017 as a concerned parent of a West Horsley resident.

Having looked at the current proposals I have to strongly disagree with your proposals to inset several towns and villages from the Green Belt thus making development that much easier in those locations.

What a legacy for our grandchildren if this unwarranted proposal is adopted!!

   2. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high
In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

1. The Clandon Society Objections and Concerns Which I Share

The A247

I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247.

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1 million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1 million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments.

10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

 Problems with the West Clandon section of the A247

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

Housing Number and the Green Belt

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. The Guildford Residents’ Association’s Objections and Concerns Which I Share

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the
Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

Comment: MM2 - LPMM18/5434  Respondent: Peter Slade 20848609  Agent:

In my view the Local Plan is deficient for the following reasons:

1. Opportunities for brownfield development, especially in the town centre, have not been fully explored
2. Housing numbers should reflect the latest ONS figures and projections. The public hearings should be re-opened on this subject to allow re-examination
3. The grounds for green belt development are inadequate. They do not represent ‘exceptional circumstances’

Attached documents:

Comment: MM2 - LPMM18/5519  Respondent: Hazel McGee 20850017  Agent:

I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:

1. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
2. There is too much reliance on A3 improvements and these are beyond the council’s control
3. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
4. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

I would like the Inspector to RE-EXAMINE the Local Plan because:

1. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
2. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

The Clandon Society Objections and Concerns Which I Share

The A247
I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

I believe that traffic will increase significantly because:

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247
The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

THIS ROAD SHOULD BE DE-CLASSIFIED TO THE B-ROAD WHICH IS ALL IT IS ADEQUATE ENOUGH TO BE. TRAFFIC FOR THE A3 FROM THE A25 SHOULD BE SENT THROUGH MERROW TO THE ROUNDABOUTS & DUAL CARRIAGeway ALREADY BUILT FOR THE PURPOSE YEARS AGO.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247.

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1 million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1 million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

**I believe that traffic will increase significantly because:**

1. The development of an industrial estate at Burnt Common. At greater than 1.4 ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic.
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments.

10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

**Problems with the West Clandon section of the A247**

The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

**Housing Number and the Green Belt**

The recent release of information from the ONS must cause a recalculation of the housing requirement. In turn, this requires a reconsideration of the policy of taking sites out of the Green Belt.

The Council has long argued that much of the housing required must be built on such sites.

This argument is not supported by the NPPF or ministerial statements and if the housing number is decreased the argument becomes even weaker.

The attendees at the AGM of the Association heard a very cogent case presented by the Guildford Vision Group for much more of the required development to occur in the town on brownfield sites.

Coupled with modal shift these proposals offer the prospect of more manageable traffic levels, improved prospects for the town centre and reduced pressure on the Green Belt.

1. **The Guildford Residents’ Association’s Objections and Concerns Which I Share**

   MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

   MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

   MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the
Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure eg excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

MM2 Although extra sites are required because some might not come to fruition, the housing supply figure in table (S2a) is far too high at double the number of homes needed to support ambitious growth of the economy.

Comment: MM2 - LPMM18/5593  Respondent: Jeremy Stephens 20850561  Agent:

After attending the recent meeting by the Guildford Vision Group regarding the Local Plan, I would like to add my response to it's findings.

I agree that the local plan is unsound for the reasons they outlined.

Namely:

1. The council has not properly exploited brownfield sites especially in the town centre.
2. Housing numbers should reflect latest projected requirements. New public meetings should be reopened to examine this.
3. The grounds for green belt development are wrong because 1 to 3 above do not represent "exceptional circumstances".

Attached documents:

Comment: MM2 - LPMM18/5623  Respondent: Joan Clifford 20850753  Agent:

The current draft of the Local Plan is unsound because:

1. The revised Housing Need figures mean that much proposed greenbelt development is no longer justified and the exceptional circumstances that are required as grounds to allow greenbelt development do not exist.
2. The Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited.
3. There is no policy dealing with urban areas beyond the town centre such as St Catherine's where we live.
4. It is unacceptable that Guildford should consider having to accommodate housing which Woking claims not to be able to provide.

Comment: MM2 - LPMM18/5763  Respondent: Boyer Planning (Mr Mike Newton) 20853697   Agent:

1. INTRODUCTION

1.1 This representation has been prepared on behalf of Trenfold Property Limited and Countryside Properties (UK) Limited (Countryside) in response to the proposed Main Modifications to the ‘Guildford Borough Submission Local Plan. Countryside is a residential developer and holds an option on the Polesden Lane and Send Marsh Road site and is able to deliver residential development at the site early on in the plan period.

1.2 We consider the status of the site and the way in which it has been considered as a potential additional housing allocation to address the Borough’s increased housing requirement, raises clear concerns about the soundness of the Main Modifications.

1.3 Land at Polesden Lane and Send Marsh Road is approximately 2.6ha in size and currently comprises scrub grassland together with spoil and hardstanding associated with the previous uses of the site. It is therefore Previously Developed Land (PDL).

1.4 The site is enclosed on three sides by existing residential development. The site is broadly level and featureless with no significant vegetation within the site. The site benefits from vehicular access from Danesfield suitable to serve the proposed development.

1.5 Further details of the site have been submitted as part of our representations on the Regulation 19 Plan and in our statement for the examination in public.

2. RESPONSE TO MAJOR MODIFICATIONS

MM2 – Policy S2

2.1 In relation to the housing requirement we note and support the increase to 12,600 homes at 672 dwellings p.a. and its inclusion in the Policy. However, we are concerned that the part of this requirement that is a contribution to Woking’s unmet need is subject to review and that the basis for that review is not justified or effective.

2.2 The Policy states “This contribution will be reviewed subsequent to Woking Borough Council reviewing their Local Plan in light of an updated objectively assessed housing need and any comprehensive Green Belt and other related studies.” However, it should made clear that this review must be conducted formally in the context of the review of the Guildford Plan and that the Council cannot reduce the housing requirement without going through the formal statutory process.

2.3 There is at present imprecision in the wording of the policy in relation to this question of review in terms of how the review will be triggered, the timing and process involved. Once the Plan is adopted the Council must remain committed
to the housing requirement and it must be a basis for long term strategic planning in accordance with the requirements of the Plan led system. The current wording of the review provision is not effective because of its lack of clarity and precision and should be modified to address this.

2.4 In relation to the proposed housing supply, the modifications to the policy are not sound as they are not in accordance with Government policy, not justified nor effective.

Consistency with National Policy

2.5 Our principal concern that goes to the soundness of the proposed Main Modifications, concerns the question of whether they are consistent with national policy in giving due regard to the effective use of Previously Developed Land (PDL).

2.6 Annex 1 of the NPPF 2018 “Implementation” states at paragraph 214 that “the policies in the previous Framework will apply for the purpose of examining plans, where those plans are submitted on or before 24 January 2019”. It is therefore clear that the previous framework (NPPF 2012) applies to the examination of the Guildford Local Plan and the consideration of these Main Modifications.

2.7 One of the core Planning Principles in the NPPF 2012 (paragraph 17) is to: Encourage the effective use of land by reusing land that has been previously developed (brownfield land), provided that it is not of high environmental value

2.8 This principle is reflected in Policy S2 of the Plan. In introducing the policy, paragraph 4.1.6 states:

“Development will be directed to the most sustainable locations, making the best use of previously developed land (including in the Green Belt if appropriate)”.

2.9 It should be noted that the new NPPF 2018 is very strong in its emphasis on the use of PDL to meet development needs. It states in paragraph 117:

“strategic policies should……..make as much use as possible of previously developed or brownfield land”

2.10 Paragraph 138 of the NPPF 2018 states that where it is necessary to release Green Belt:
“plans should give first consideration to land which has been previously developed and /or is well served by public transport”

2.11 Although the plan is not required to comply with the NPPF 2018, the principle of encouraging the reuse of land that has been previously developed is clearly established by the NPPF 2012 and the Plan itself. This is simply given additional emphasis in the current NPPF and should therefore be taken into account unless there are clear reasons not to do so.

2.12 The Main Modifications have not given due regard to the principle of effective use of PDL established in the NPPF 2012. Nor do the modifications and the site selection process that provides the basis for them, follow the Plan’s principle of making best use of PDL.

2.13 An SA Addendum prepared by AECOM (August 2018) was central to the process of selecting the additional sites needed to address the housing requirement established through the EIP process.

2.14 The SA Addendum establishes the principle that the Modifications should follow the Plan’s spatial strategy. It states: “……there is a hierarchy of places /potential growth locations within the Borough, and that a sequential approach to allocating development sites must be followed. In other words, capacity should be fully utilised at the most suitable sites (e.g. town centre sites), before moving down to the next tier in the hierarchy, and so on until a residual amount of growth is left to be delivered at sites in the bottom tier, namely village Green Belt sites, which tend to be less suitable for development. (para 5.2.9)

2.15 It is acknowledged by the SA in paragraph 5.2.9 that site suitability and constraints are a consideration in applying this hierarchy and therefore a degree of flexibility is required in allocating sites according to the sequential priority.
2.16 The SA then reviews the housing potential at each level of the spatial hierarchy of which there are 10 tiers. The hierarchy and the conclusions reached by the SA (after analysis) about potential for additional housing at each level, are summarised below:

Tier 1 - Guildford town centre the SA Addendum concludes “nil additional housing within Guildford Town Centre should be taken as a ‘given’”

Tier 2 - Wider Guildford urban area Again the SA Addendum concludes (on the basis of its analysis), that “nil additional housing should be taken as a given”

2.17 The same conclusion of “nil additional housing” is then reached for Tier 3: Ash and Tongham urban area, Tier 4: Built up areas of villages, Tier 5: Village gap sites, Tier 6 Brownfield in the Green Belt”, Tier 7: Countryside beyond the Green Belt and Tier 9: New settlement.

2.18 The identification of potential additional housing sites is therefore confined to Tier 8: Green Belt around Guildford or Godalming / Farncombe and Tier 10: Green Belt around Villages. The SA goes on to identify and assess all possible additional sites falling within these tiers and constructs scenarios based on different combinations of sites and capacity between these two tiers.

Housing potential of Tier 6

2.19 Our concern is that the SA Addendum gives very limited and unsound consideration of the potential falling within Tier 6: Brownfield in the Green Belt, in relation to the established Government priority to favour PDL.

2.20 The SA Addendum notes that the supply provided by Tier 6, at 195 homes, is lower than that included within the submission Plan due to the removal of Send Prison in the LAA Addendum 2018 (which originally provided 150 homes) as the site is no longer available for development. The housing potential in Tier 6 is therefore diminished rather than increased through the Main Modifications process.

2.21 The Plan currently focuses on major PDL sites in the Green Belt rather than smaller PDL areas that relate well to the built up area of villages, where their PDL status should reinforce other site attributes and strengthen the case for allocation.

2.22 We consider that our clients’ site “Land at Polesden Lane and Send Marsh Road” must be considered within Tier 6 but it is only considered by the SA Addendum within the Tier 10 assessment. This is not consistent with the Government Policy principle of making effective use of PDL.

2.23 Where Land at Polesden Lane and Send Marsh Road is considered as part of the analysis of Tier 10 sites, it is acknowledged that “it comprises an element of PDL” and that “the Council gives weight to the PDL element of land at Polesden Lane and Send Marsh Road”. Given this assessment, it must be considered within Tier 6.

2.24 The PDL status of this site is established by a report sent to the Council in February 2016. This provided significant evidence to support the case for the site being Previously Developed Land. Essentially, the site has been occupied by permanent non-agricultural structures for much of the Twentieth Century. The remains of these structures are still visible on site and the findings of the Geo-Technical assessment lends further support to the existence of foundations on the site.

2.25 If the Polesden Lane and Send Marsh Road site is considered in the Tier 6 analysis it significantly changes the construction of the additional housing scenarios on which the selection of sites in the Main Modifications is based (as presented in Table 5.1 of the SA Addendum).

2.26 In the SA Addendum, the Land at Polesden Lane and Send Marsh Road is one of seven sites that, in different combinations, make up additional housing scenarios or options (Options 1 to 7). If the Polesden Lane site is re-assigned to Tier 6 as it must be, this will significantly alter the scenarios and the basis for judgement between them based on sequential priority and Government Policy (given that the scenarios currently only include sites from tiers 8 and 10).

2.27 This necessary change in the construction of the scenarios leads to the conclusion that the logical and correct choice is for land at Polesden Lane and Send Marsh Road to be allocated as a proposed Main Modification.
2.28 It is therefore our clear conclusion that the reallocation of our client’s site to Tier 6 would result in its allocation for development. That conclusion is strongly supported by the current assessment of the site within the Tier 10 analysis in the SA Addendum.

2.29 The analysis of the Tier 10 sites in the SA addendum (in Section 5.4) narrows down the choice initially to 6 sites. Three of these sites are in Send Marsh including our client’s site at Polesden Lane and Send Marsh Road. In examining these three sites, the SA Addendum states at paragraph 5.4.10: “The differences in suitability between these sites are quite marginal, but on balance the Council considers Land South of Tannery Lane, Send to be sequentially least preferable. The Council gives weight to the PDL element of Land at Polesden Lane and Send Marsh Road, and the ‘amber Green Belt’ status of Alderton’s Farm (also its ‘not-too-big-not-too small’ size, and the fact that it has been a focus of appraisal and consultation twice)”

2.30 The additional housing scenarios set out in Table 5.1 then include 4 sites within Tier 10 including the Polesden Lane site. Given the marginal differences between the sites, it is clear that the application of sequential priority to the Polesden Lane site as a Tier 6 rather than Tier 10 site would be key to both the construction of the scenarios in Table 5.1 and the choice made between them.

2.31 The SA addendum concludes in paragraph 7.2.1: “The Council’s preferred option is Option 3, which involves Aaron’s Hill, Godalming (200 homes), Land at Alderton’s Farm, Send Marsh Road, Send Marsh (120 homes), Land east of Glaziers Lane, Flexford (105 homes) and Land at Hornhatch Farm, New Road, Chilworth (80 homes), leading to a total of 555 additional homes being delivered in the first five years of the plan.

2.32 The SA addendum then notes: “The appraisal does not identify Option 3 as performing notably well in terms of any of the topic headings, but equally it is not identified as performing notably poorly in terms of any topic. It performs jointly least well in terms of two topic headings - ‘land’ and ‘brownfield’, but no major concerns are highlighted.”

2.33 The fact that Option 3, which does not include the land at Polesden Lane and Send Marsh Road, performs least well in terms of the “brownfield” measure is also significant in relation to the above analysis. The conclusions regarding Alderton’s Farm (quoted in para 2.28 above from the SA Addendum), specifically the reference made to its “not-too-big-not-too small” size, and the fact that it has been a focus of appraisal and consultation twice, are not a clear basis for choosing between the identified scenarios and the selection of sites, in comparison with the attribute of PDL status.

2.34 It is therefore clear that Modification MM2 (Policy S2) is not consistent with national policy in relation to reuse of PDL. It is also not justified or effective in dealing with the PDL issue as it does not give PDL in the Green Belt the necessary sequential priority that is required by the Plan’s objectives and its site selection methodology.

Other Considerations

2.35 It should be noted that the need to identify the Polesden Lane and Send Marsh Road site within Tier 6 “Brownfield in the Green Belt” within the SA Addendum and therefore within the Modified Policy S4 (and specifically table S2b in the Policy) is supported by a wide range of other relevant site selection considerations. These considerations all underpin the case for this site to be given sequential priority due to its PDL status.

Safeguarded Land

2.36 The 2014 version of the Plan identified my clients’ land at Polesden Lane and Send Marsh Road as “safeguarded land” in Policy 9 “Villages and Major Previously Developed Sites” and on the proposals map inset for Send Marsh.

2.37 It was clearly important, in identifying safeguarded land, to ensure that these sites were acceptable in principle for development, even if only to be brought forward via a Plan review. Even if the Plan no longer includes safeguarded land as such, the sites previously safeguarded are worthy of re-consideration to provide the additional small deliverable sites now required.

Green Belt Review
2.38 We are concerned that the land at Polesden Lane and Send Marsh Road has been incorrectly judged to be high sensitivity Green Belt land in the Council’s Green Belt and Countryside Study. We see no basis for that conclusion and draw attention to our comparative Green Belt Assessment of the site dated March 2016 that was submitted with our statement for the Examination in Public as an appendix.

2.39 Our Green Belt assessment is important not merely because it draws different conclusions about my client’s site but because it does so on the basis of additional points of assessment and, in particular, a relative assessment of sites in the area based on their degree of contribution to each Green Belt purpose. These facets are absent from the GBCS and we request that our Green Belt assessment be considered within the selection process for the required additional sites.

2.40 Our Green Belt assessment provides a relative assessment of the contribution of sites in the Send, Send Marsh and Ripley areas and there is a sound basis to its conclusion that the Polesden Lane / Send Marsh site makes the least contribution to meeting Green Belt purposes.

Landscape Containment

2.41 All of the above considerations are reinforced by the landscape assessment of the site. Most importantly, the site is adjacent to the village settlement boundary to the north, east and south and is therefore largely within the existing village envelope. The smaller part of the northern boundary, and the western boundary, adjoin fields but these boundaries comprise of strong and mature landscaping.

2.42 Overall, the site is bordered by established housing and defensible boundaries. It therefore has an enclosed character that is visually contained and separate from the wider countryside beyond. This reinforces the sequential priority that should apply to the site based on its PDL status.

A3 Road Improvement Scheme

2.43 The dependence of major strategic sites upon the A3 RIS was a key consideration at the recent EIP hearings.

2.44 Clearly, it is important that the additional sites to be identified to increase supply in the early years of the Plan do not increase dependency on the A3 RIS and the associated uncertainty about housing delivery and, ideally, such sites should have the capability to improve the position.

2.45 The allocation of land at Polesden Lane and Send Marsh Road would not be dependent upon the A3 RIS. Further, the site’s proximity to Woking station (with its high frequency train services) is a key factor in travel choices and in considering how the high impact of growth in Guildford Borough on the A3 may be avoided. This proximity to Woking is also a factor in considering sites that are best placed to meet Woking’s unmet housing need within the HMA.

Proposed Change to Main Modification MM2

2.46 In order to address this issue and ensure the Main Modifications are sound, Table S2b in the Modified Policy S2 should be revised to include an additional 50 dwellings (from the Polesden Lane and Send Marsh Road site) in the category “Previously Developed Land in Green Belt”, so increasing the figure within this category from 195 dwellings to 245 dwellings.

2.47 Whether there is a consequential reduction in the category “Development around Villages” which currently proposes 1,250 dwellings, is a matter for the Council to determine but we consider that this figure and the identified supply that is the basis for it, could be retained as currently proposed. This is because the 50 additional dwellings in the “Previously Developed Land in Green Belt”, category, that we propose, would simply strengthen the flexibility and deliverability of the Plan’s housing supply rather than suggest oversupply of housing or any need to reduce the current identified supply in the Main Modifications.

2.48 A further modification should then be made to include the Polesden Lane and Send Marsh site in the tabulation of allocations (to be added to the site allocations A1 to A64 currently defined in this section of the Plan (see our representation on Main Modifications MM32 to MM 45 below that relate to the site summary table).

MM32 –M45 Site Allocations Summary Table
2.49 For the reasons set out in detail in our representation above on MM2 we consider that the site at Polesden Lane and Send Marsh Road, Send Marsh should be included in the modifications to the site allocations summary table, to ensure the Plan is sound in terms of consistency with national policy and meets the “effective” and “justified” tests set out in the NPPF.

Additional Modification Policy to Allocate and define policy requirements in relation to the site at Polesden Lane and Send Marsh Road

2.50 For the reasons set out in detail in our representation above on MM2 we consider that the site at Polesden Lane and Send Marsh Road, Send Marsh should be specified as an allocation under a specific additional policy introduced as a Main Modification to the Plan.

Comment: MM2 - LPMM18/5783  Respondent: Ptarmigan Land 20855201  Agent: Iceni Projects Ltd (Stuart Mills)

1 INTRODUCTION

1.1 On behalf of our client, Ptarmigan Land, we set out below our comments on Guildford Borough Council’s proposed Main Modifications to the draft Local Plan, as set out in the documents published for consultation in September 2018. These comments build upon the representations we have made to date and the matters discussed at the Examination Hearing Sessions.

1.2 As stated previously, we broadly support the draft Local Plan and in particular we strongly support the intention to allocate the land at Garlick’s Arch (at Policy A43) for residential development.

1.3 We broadly welcome the amendments now proposed by the Council to address those matters discussed at the Hearing Sessions, and provide our comments below on the soundness of the specific amendments which relate to the matters we have previously raised. In particular, this response deals with the proposed Main Modifications relating to Policies S2, H2, D1 and A43.

2 COMMENTS ON PROPOSED MAIN MODIFICATIONS

MM2 – Policy S2

2.1 We welcome the identification of a housing requirement of at least 630 dwellings per annum over the plan period, as proposed by MM2, which reflects the discussion at the Hearing Sessions and seeks to meet the identified housing need for Guildford Borough. In our view, it is necessary to deliver at least 630 dwellings per annum in order to address the various pressures on the housing market that are resulting in significant affordability issues, including employment growth and increasing student numbers. As such, we support the 630 dwelling per annum figure now identified in the policy, which will ensure that the Plan is positively prepared, in accordance with the requirements of paragraph 182 of the 2012 National Planning Policy Framework (NPPF).

2.2 We also strongly support the inclusion of an allowance of an additional 42 dwellings per annum following adoption of the Plan to accommodate a portion of unmet housing need arising from Woking Borough. Evidence provided by Woking Borough Council at the Examination demonstrates that there will continue to be an element of unmet need that will have to be accommodated within the remainder of the housing market area in order to avoid the significant socio-economic consequences of failing to meet identified needs in full. The 42 dwellings per annum added to the 630 dpa will thus also ensure that the Plan is positively prepared, in terms of seeking to meet both Guildford’s identified needs and unmet needs from neighbouring areas.
2.3 Furthermore, we support the associated increase in the overall number of dwellings being planned for within the Local Plan (identified within Table S2a) which will ensure that the identified housing requirement of 12,600 dwellings can be met over the plan period.

2.4 We note that MM2 also proposes to delete the phased requirement set out in the previous draft of the Plan, and instead identifies an annualised requirement of 630 dpa for each year of the Plan (plus an additional 42 dpa following adoption). We consider this to be a more appropriate approach, as it will ensure that the Borough’s housing needs are met in the early years of the plan period, taking a positive approach to significantly boosting the supply of housing as required by paragraph 47 of the NPPF. Consequently we consider that this proposed modification will address the issues we previously raised, and result in a sound policy that will be positively prepared and consistent with national policy.

Comment: MM2 - LPMM18/5799  Respondent: Taylor Wimpey UK 20855297  Agent: Woolf Bond Planning (Graham Ritchie)

Guildford Borough Proposed Submission Local Plan: Strategy and Sites– Main Modifications (September 2018)

Representations Submitted on Behalf of Taylor Wimpey UK Ltd

Introduction

We refer to the above consultation paper and write on behalf of our client’s, Taylor Wimpey UK Ltd., setting out a number of comments upon the policies and proposals contained in the Main Modifications to the Proposed Submission Local Plan.

As the Council is aware, our client has a controlling interest in the majority of the land between Normandy and Flexford which site was initially proposed as an allocation under proposed Policy A46 in the June 2016 version of the Proposed Submission Local Plan, but was subsequently removed by the Council.

As set out in our Statements for the Examination Hearing Sessions, we continue to object to this decision and consider that the site should be re-allocated and included in as an additional or alternate allocation in a further round of Modifications. Such an amendment would assist in addressing the fundamental soundness concerns to the Main Modifications as set out in our representations below.

Whilst we acknowledge that the Proposed Submission Local Plan: Strategy and Sites for Guildford Borough is being examined under the 2012 version of the NPPF (since it was submitted before the 24th January 2019 date referred to in paragraph 214 of the July 2018 edition), the latest version is nevertheless relevant, particularly with respect of any assessment of the maintenance of a rolling five year supply of housing land.

This is because, pursuant to paragraph 212 of the revised NPPF, the policies in the revised NPPF “are material considerations which should be taken into account in dealing with application from the day of its publication.”

Paragraph 73 of the revised NPPF details how local authorities “should identify and update annually a supply of specific deliverable sites sufficient to provide a minimum of five years’ worth of housing against their local requirement set out in adopted strategic policies, or against their local housing need where the strategic policies are more than five years old. The supply of specific deliverable sites should in addition include a buffer (moved from later in the plan period).”

The glossary of the revised NPPF refines the definition of a deliverable site to read as follows:

‘To be considered deliverable, sites for housing should be available now, offer a suitable location for development now, and be achievable with a realistic prospect that housing will be delivered on the site within five years. Sites
that are not major development, and sites with detailed planning permission, should be considered deliverable until permission expires, unless there is clear evidence that homes will not be delivered within five years (e.g. they are no longer viable, there is no longer a demand for the type of units or sites have long term phasing plans). Sites with outline planning permission, permission in principle, allocated in the development plan or identified on a brownfield register should only be considered deliverable where there is clear evidence that housing completions will begin on site within five years.

(Our emphasis)

The Inspector’s note (ID/6) issued on 22nd June 2018 (although pre-dating the revised NPPF) in paragraph 14 highlights concerns that “there are important issues regarding the timing of housing delivery” which the Inspector amplified upon in paragraph 15 to state “in the circumstances the Council should not adopt a stepped trajectory, but should identify additional sources of housing delivery in the early years of the Plan”.

Although the Inspector highlights his concerns over housing delivery, these were not within the context of the refined definition of such sites in the revised NPPF. These representation to the Modifications therefore acknowledge the refined definition of a deliverable site as it would be illogical for the examination of the Local Plan to use the guidance in the earlier NPPF when any determination of a planning application would need to take account of the revised version.

The need to provide clear evidence that housing completions will begin on site within five years therefore has informed these representation to the Proposed Main Modifications.

Our representations to the Main Modifications consequently relate to the following policies:

- Policy S2 (Borough Wide Strategy) (MM2)
- Policy A25 (Gosden Hill) (MM35)
- Policy A26 (Blackwell Farm) (MM36)
- Policy A26a (land for access road between A31 Farnham Road and Blackwell Farm, Hogs Back, Guildford) (MM37)
- Policy A35 (Wisley Airfield) (MM40)
- Policy A43 (Land at Garlick’s Arch) (MM41 & MM43)
- Policy A46 (Normandy and Flexford)
- Policy A61 (Land at Aaron’s Hill, Godalming) (MM39)
- Policy A62 (land at Hornhatch Farm, adjoining New Road, Chilworth) (MM43)
- Policy A63 (land west of Alderton’s Farm, Send Marsh Road, Send) (MM44)
- Policy A64 (land between Glaziers Lane and Strawberry Farm, Flexford) (MM45)

Our original representations were accompanied by the following plans and particulars which are equally relevant to the representations on behalf of Taylor Wimpey to the Proposed Main Modifications:

- Illustrative Masterplan No. CSA/2516/110/D (CSA Environmental)
- Illustrative Masterplan No. CSA/2516/110/F (CSA Environmental)
- Wyke SANG Location Plan
- Concept Masterplan – Great Westwood No. CSA/2516/120A (CSA Environmental)
- Concept Masterplan – Wanborough Station No. CSA/2516/121B (CSA Environmental)
- Concept Masterplan – Combined No. CSA/2516/122B (CSA Environmental)
- Green Belt Review of Alternative Sites in Guildford Borough (CSA Environmental)

We also continue to rely upon our submissions to the Hearing Sessions.

The National Planning Policy Framework (NPPF) (2012) and the Tests of Soundness

The 2012 version of the NPPF sets out the principal components to be included in local plans. Paragraph 182 requires that in order to be “sound” a DPD should be positively prepared, justified, effective and consistent with national policy.
In order to be justified the DPD must be founded upon a robust and credible evidence base and represent the most appropriate strategy when considered against the reasonable alternatives.

Effective means the document must be deliverable, flexible and be able to be monitored.

The positive preparation test also requires plans to objectively assess development and infrastructure requirements from neighbouring authorities.

As explained above, whilst the Local Plan is not being examined with respect of the revised NPPF (2018), the guidance on whether a site is deliverable is nevertheless relevant.

For the reasons set out below there are a number of shortcomings with the plan, as currently proposed to be Modified, that result in the need for further amendments. These amendments relate to the need to increase the level of number of deliverable housing sites (therefore by addressing a key concern identified by the Inspector together with acknowledging the refined definition of a deliverable site in the revised NPPF. Taking account these concerns, we also do not consider that the Main Modifications have effectively considered relevant reasonable alternatives to the strategy as currently proposed.

To address these concerns, additional allocations are required in the Plan which are accompanied with the necessary clear evidence of their deliverability within five years thereby resolving the Inspector’s identified shortfall.

Our client’s land at Normandy/Flexford continues to be available, suitable and deliverable to meet important housing needs in the immediate period of the Local Plan, thereby reflecting the refined definition of a deliverable site in the revised NPPF. We remain committed to further engagement with the Council to explore the option of a deliverable allocation on this site, such that it can be incorporated into the final version of the Local Plan.

**POLICY S2: Borough Wide Strategy (MM2)**

**Overall Housing Requirement**

Through the Proposed Main Modifications, the Council states that “provision has been made for at least 12,600 new homes” in the revised policy S2. However, table S2a only indicates a supply of 15,107 dwellings, which is consistent with the content of the additional appendix 0 proposed in the Plan. Consequently, insufficient land has therefore been identified to reflect the commitment in the policy. As detailed elsewhere, notwithstanding the under provision of housing against requirement in policy S2, insufficient deliverable land (reflecting the refined definition of such sites in the revised NPPF) has been included within the Plan. Therefore, to both achieve the Plan requirement in Modified Policy S2 together with maintaining a robust five year supply of housing land, sites for around 1,500 additional dwellings should be allocated.

As explained in the original representations to the Draft Submission Plan alongside these on the Proposed Main Modifications, the land controlled by Taylor Wimpey between Flexford and Normandy should be included as an additional allocation.

Taking account of the failure to provide sufficient sources of supply to address the Plan’s housing requirement for 12,600 dwellings, it is not considered that Modified Policy S2 is not justified upon appropriate evidence and is not effective or consistent with national policy by failing to meet the Borough’s overall market and affordable housing needs.

**Five Year Housing Land Supply**

Before commenting specifically upon the Council’s proposed housing delivery arising from the Main Modifications, we note there is a need for the plan to demonstrate a fiveyear housing land supply on the date of adoption. Any failure to secure this comprises an issue of soundness in respect of compliance with paragraph 47 of the 2012 version of the NPPF and the objective of significantly boosting the supply of housing land and the requirement to demonstrate a five year supply.

The importance of demonstrating a 5 year housing land supply upon adoption, in order to achieve a sound plan, was noted by an EiP Inspector in examining the Canterbury District Local Plan:
The Framework indicates that relevant policies for the supply of housing should not be considered up-to-date if the local planning authority cannot demonstrate a 5-year supply of deliverable sites. As such, I consider that the Plan would be ineffective and not accord with national policy. It would therefore be unsound unless this can be remedied.

As noted previously, although the Plan is being examined within the context of the 2012 edition of the NPPF, it is illogical to discount the guidance on the 2018 version, when this is relevant to the determination of planning applications (pursuant to paragraph 212). Therefore, it is essential to review the Council’s assessment of the deliverability of the various sites have regard to the refined definition of such sites in the revised NPPF.

Appendix 0 of the Modified Plan (page 71 of the Main Modifications) details the expected housing trajectory. The projections within this table can then inform the assessment of a five year supply at 1st April 2019 (potentially around the adoption date for the Plan, subject to further consideration by the Inspector).

The following represents the assessment of five year supply at 1st April 2019, following the Liverpool method of addressing the shortfall over the plan period.

Appendix 0 provides a trajectory for the various sources of supply which indicates that between April 2019 and March 2024, 4,974 dwellings are expected to be delivered (518 + 905 + 1,063 + 1,271 + 1,217). This therefore equates to a 5.48 years supply (4,974 / 907) or a surplus of 439 dwellings (4,974 – (907 x 5)).

However, this trajectory assumes delivery of sites from 2020/21 from sites upon which development is only permissible once they have been removed from the Green Belt. Taking account of the refined definition of a deliverable site in the revised NPPF, it is not considered that relevant clear evidence has been supplied to demonstrate that these can be completed to provide the scale of completions envisaged i.e. at Aaron’s Hill, Godalming.

If delivery of the sites currently in the Green Belt is delayed until 2020/21, 260 units will be removed from the 5 year supply. Furthermore, the surplus will be reduced if delivery envisaged from the Gosden Hill and Blackwell Farm sites in Guildford (policies A25 and A26) does not reflect expectations, particularly having regard to the scale of infrastructure improvements required and the need to limit impacts upon the A3 until wider enhancements are delivered, as detailed in our original representations and discussed at the examination hearings.
With these delays, the surplus in supply within five years at April 2019 will be eliminated resulting in a plan which is unsound for the purposes of both the 2012 and 2018 NPPFs.

As detailed in our original representations, part of the necessary solution is to identify sites that can provide material boosts to the overall deliverable supply within the immediate five year period, thereby reflecting the refined definition of such sites in the revised NPPF. Presently the plan is overly reliant upon sites that have significant lag times associated with them. Our client’s proposal (see representations below) would enable two or more sales outlets to be established at the Normandy/Flexford (Policy A46) site with completions at approximately 60+dpa per outlet.

If one were to apply a base date of say 2019 (from anticipated adoption of the Plan), a minimum of 200+ dwellings could be delivered at the Normandy/Flexford site within the 5 year period to 2024. Such deliverability is achievable in part due to the site’s greenfield nature and the fact that it is controlled by an established national housebuilder.

**Comment:** MM2 - LPMM18/5810  **Respondent:** Bloor Homes 20855809  **Agent:** Turley (Clara Millar)

**1. Introduction**

1.1 These representations have been prepared by Turley on behalf of Bloor Homes Southern in respect of their comments to the proposed Main Modifications to Guildford Borough Council’s Local Plan.

1.2 Our client has important land interests in the Local Plan area, in particular the northern most parcels of Gosden Hill Farm, as well as Nutbourne Farm which lies to the east.

1.3 Gosden Hill Farm is allocated under Policy A25 for c. 1,800 homes, employment, retail and a school. A Site Location Plan is provided at Appendix One. This response focuses on issues which particularly affect the land controlled by our client.

1.4 Each of our responses relates to a particular modification and this report is structured accordingly.

**2. Response to Main Modifications**

**Main Modification 2**

2.1 This main modification relates to Policy S2: Planning for the Borough – Our Spatial Development Strategy. We strongly support the fact that the Council has increased its housing provision in order to meet the Council’s full OAN, as well as a proportion of Woking’s unmet need.

2.2 We consider that this is a positive change and secures closer compliance with National Policy. However, in order to ensure the Council delivers this housing requirement within the plan period, it will be necessary to allow for more flexibility in the Council’s strategy; in other words, we do not consider that the current allocations are sufficient and question the deliverability of some of these sites within the plan period.

2.3 We, therefore, consider that more sites, or extensions to existing proposed allocation sites, should be sought within the sequentially preferable locations – as set out in the Council’s spatial strategy. Our client’s site represents such site: adjoining the Gosden Hill Farm allocation in the Guildford area, this site could deliver additional housing and infrastructure opportunities to meet the increased housing needs.

**Attached documents:**
Comment: MM2 - LPMM18/5830  Respondent: Anthony Jacques 20856577  Agent:

- Housing numbers should reflect the latest ONS figures and projections. The public hearings should be re-opened on this subject to allow re-examination.

- The grounds for green belt development are inadequate because of 1 and 3 and do not represent 'exceptional circumstances'

Attached documents:

Comment: MM2 - LPMM18/5903  Respondent: Claire Stone 20857697  Agent:

I disagree with your proposals to inset several towns and villages from the Green Belt, making development that much easier. I find it entirely unjustified and shocking - what kind of legacy does it set up for the next generations? Looking at other sites e.g. urban, brownfield and windfalls, green field development in the protected Green Belt is entirely unnecessary, especially since urban brownfield is given priority under the new S3 Policy. The latest ONS figures show a much smaller housing requirement (which can be met by higher priority sites). No "exceptional circumstances", as required by the NPPF, have been offered for any Green Belt development or for “insetting” most of the borough’s villages such as the Horsleys.

Comment: MM2 - LPMM18/5925  Respondent: Sustainable Land Products Ltd 20858657  Agent: Mr Roger Daniels

1. INTRODUCTION

1.1 Sustainable Land Products Ltd (SLP) has an interest at Tangley Place Farm, Worplesdon and has promoted the site throughout the local plan process as a suitable location for residential development.

1.2 Following the inspector’s comments on the hearing sessions, the Council were required to make several amendments to the plan which were then to be consulted upon. This consultation period has now begun and is scheduled to run from 11th September 2018 to 23rd October 2018.

1.3 These representations set out the particularly pertinent changes to the plan and provides some commentary on them.

2. POLICY CONTEXT AND BACKGROUND

2.1 The Guildford Local Plan was submitted to the Planning Inspectorate in December 2017. The examination hearings took place between June and July 2018, following which the inspector provided their conclusions to the Council.

2.2 The inspector’s conclusions on the plan confirmed that the stepped approach to housing delivery was inappropriate, raised concerns over the deliverability of housing within the early years of the plan and recommended that additional sources of housing delivery be identified to address this.

2.3 SLP welcomed this finding, having expressed the same reservations over the Council’s strategy to deliver its housing requirement and maintain a healthy supply of housing in the early years of the plan in their representations to the Regulation 19 plan.
2.4 In response, the Council has proposed a number of changes, including the allocation of four new green belt sites at settlements outside of Guildford. SLP will provide their comments on these allocations in the following chapter.

2.5 This was in addition to several modifications to the plan that were required to make the plan sound. This included, but was not exclusive to, the following key measures:
• accommodating 20 per cent of Woking's unmet need (MM2);
• reducing the Gosden Hill Farm allocation by 200 to 1,800 homes (MM35);
• increasing Burnt Common industrial floor space to 14,800 square metres to meet employment land needs (MM42); and
• a new policy (S3) to deliver regeneration in Guildford town centre (MM3).

2.6 In respect of the first bullet point specifically, SLP welcomes this measure, having expressed concerns in respect of the approach to unmet need set out in the submission plan. All other modifications to the plan are not relevant to our client’s interests and, therefore, we do not wish to make any further comments.

3. COMMENTS ON THE KEY MAIN MODIFICATIONS
3.1 To be clear, the specific modifications that SLP feels should be commented on relate to the new green belt sites that have been allocated to help address the shortfall in the early years of the plan. These allocations are contained within policies A61, A62, A63 and A64 and are set out below:
• **Policy A61**: Land at Aaron's Hill, Godalming (200 dwellings);
• **Policy A62**: Land at Hornhatch Farm, adjoining New Road, Chilworth (80 dwellings);
• **Policy A63**: Land west of Alderton’s Farm, Send Marsh Road, Send (120 dwellings);
• **Policy A64**: Land between Glaziers Lane and Strawberry Farm, Flexford (105 dwellings).

3.2 The Council have also identified an already existing site (Land at Garlick’s Farm) as being able to deliver an additional 150 dwellings over the plan period. This is, presumably, the result of the removal of employment space that was originally going to be delivered alongside 400 dwellings. SLP have no comments to make on this modification.

3.3 As can be seen, the Council has sought to address the shortfall in the early years of the plan by allocating additional sites at several locations across the district. Aside from the site at White Lion Walk, High Street, Guildford (Policy A60), all of the identified sites are within the Green Belt.

3.4 Combined, the identified sites have the potential to deliver around 700 additional dwellings over the plan period.

3.5 SLP has the following concerns with the approach of the Council. These are:
• The lack of contingency sites identified alongside the additional allocations; and
• The appropriateness of the locations chosen in sustainability and green belt terms.

**Insufficient contingency in the event of a housing delivery shortfall**

3.6 In previous representations, SLP has highlighted the disparity between past completions within the Borough and the annual housing requirement identified in the local plan. Since the examination, the latter figure has been further increased due to the need to take on some of Woking’s unmet need.

3.7 There is clearly a challenge to raise housing completions to the level required by the local plan. The reliance on large strategic and brownfield sites within Guildford mean that there are significant question marks around the deliverability of these sites due to the need to provide infrastructure for the former (e.g. the A3 RIS) and potential viability issues with the latter.

3.8 Whilst we note the incorporation of a 20% buffer within the proposed housing target, SLP are concerned that the constraints within a significant proportion of the District i.e. Green Belt mean that any shortfall in delivery could not be easily met through speculative applications to boost housing supply.

3.9 Indeed, this has likely been one of principal reasons as to why there is such a disparity between the Council’s net completions over the past 10-12 years and their local plan target.

3.10 **Paragraph 11** of the NPPF requires plans to positively seek opportunities to meet the development needs of their area and be sufficiently flexible to adapt to rapid change. The Council clearly feel that the allocation of the above sites to
be sufficient to address this shortfall; however, SLP does not feel that simply allocating more sites provides this flexibility, especially given that there will be no realistic scope to address any future housing shortfall until the Local Plan review stage due to the Green Belt constraints discussed above.

3.11 Whilst SLP is confident that the Council would seek to address any shortfall at the Local Plan review stage, the effect will have been to delay the delivery of housing that could potentially have come forward in the shorter term. This would be contrary to the NPPF’s goal to significantly boost the supply of housing (paragraph 59).

3.12 SLP, therefore, feels that it would be prudent for the Council to consider the inclusion of a set of ‘reserve’ sites that could come forward in circumstances where the ‘presumption’ was engaged (i.e. a deficient housing land supply position or poor performance against the Housing Delivery Test).

3.13 On the issues of Housing Land Supply, the adoption of the plan will not rectify the Council’s position overnight. The revised NPPF makes it explicitly clear as to what can and cannot be included as part of a Five-Year Housing Land Supply assessment. This definition is provided below:

“To be considered deliverable, sites for housing should be available now, offer a suitable location for development now, and be achievable with a realistic prospect that housing will be delivered on the site within five years. Sites that are not major development, and sites with detailed planning permission, should be considered deliverable until permission expires, unless there is clear evidence that homes will not be delivered within five years (e.g. they are no longer viable, there is no longer a demand for the type of units or sites have long term phasing plans). Sites with outline planning permission, permission in principle, allocated in the development plan or identified on a brownfield register should only be considered deliverable where there is clear evidence that housing completions will begin on site within five years.”

3.14 Unless the Council is able to provide compelling evidence that the identified sites are deliverable in the short term, it is highly debatable that they would be able to deliver any sites in the early part of the plan period. This would also mean that progress towards addressing the existing shortfall would not be met until the middle part of the plan period which is precisely what the Council are trying to avoid with these allocations.

3.15 In short, any shortfall in housing delivery over the plan period (including the early years) could not be addressed through speculative applications in sustainable locations as these are affected by Green Belt constraints. Therefore, the Council should look to allocate reserve sites (inevitably located in the Green Belt) for development that could come forward in the event of such a shortfall being identified.

3.16 Whilst land at Tangleys Place Farm was previously promoted alongside the land allocated as land north of Keens Lane (Policy A22), it would not be reliant on the delivery of the latter in order to come forward for development and certainly could assist in meeting a shortfall, should one arise. Thus, were the Council minded to produce a list of ‘reserve sites’, we would strongly encourage them to include Tangleys Place Farm on such a list.

Are the proposed locations the most appropriate?

3.17 SLP questions whether the locations chosen by the Council are the most appropriate in both sustainability and green belt terms.

Sustainability

3.18 The Council has included sites at Godalming, Chilworth, Send and Flexford. Godalming aside, Chilworth, Send and Flexford have limited access to facilities and services and would likely require residents to travel into Guildford or other nearby villages to meet their day-to-day needs.

3.19 This is not to say that the sites chosen are inherently unsustainable; however, given that these sites are identified as ‘tier 10’ settlements in the Council’s Sustainability Appraisal, the sequential approach would dictate that sites within the Green Belt around Guildford (‘tier 9’) should have been considered in the first instance.

3.20 Large urban extensions are planned for Guildford (Blackwell Farm and Gosden Farm) as well as an allocation of 150 dwellings at Keens Lane (adjacent to Tangleys Place Farm). However, only the latter (alongside some of the brownfield sites identified in the plan) would be expected to deliver any housing in the early plan period.
3.21 Guildford, being the most sustainable location for development (as reflected in the settlement hierarchy) also has the ability to deliver homes swiftly, particularly on non-infrastructure heavy, greenfield sites (such as Tangley Place Farm).

3.22 Indeed, demand at the locations identified by the Council is likely to be weaker than it would be within Guildford given access to services, facilities and employment opportunities that are absent from the surrounding villages. The sustainability credentials of a site generally correlate positively with its market desirability and, therefore, its potential for delivery. If the ambition is to identify sites that could be delivered early in the plan period, then a review of sites within the Green Belt around Guildford should have been the first port of call.

Green Belt

3.23 Furthermore, it is questionable whether the proposed locations are the most appropriate in Green Belt terms. Indeed, the sustainability appraisal conveniently summarises the four identified sites (paragraph 6.6.16). This extract is included at figure 1.

[see attachment for image included here]

3.24 The SA echoes the findings of the Green Belt and Countryside Study which confirms that all but one (Aldertons Farm, Send Marsh Road, Send) are RED rated in terms of their Green Belt sensitivity. In short, they are proposing allocations on highly sensitive Green Belt sites that are no more sustainable than other available and deliverable sites.

3.25 Whilst Tangley Place Farm also falls within an area identified as being highly sensitive in Green Belt terms (parcel J4), this is the result of the site being assessed as part of a wider ‘cell’. Indeed, it is possible for areas within identified parcels to be of limited sensitivity when compared with others. We contend that this is the case for parcel J4.

1 This assessment considered the performance of each ‘cell’ against the five purposes as set out within the NPPF 2012. These did not change following the publication of NPPF 2018. It was assumed that all sites met the fifth aim (assisting in urban regeneration) and so the assessment only assessed performance against the other four purposes.

3.26 SLP has consistently argued that Green Belt boundaries should be reviewed around the north-western edge of Guildford more generally to accommodate a mix of housing and open space uses (including SANG) and reflect physical features that are readily recognisable and likely to be permanent. It is these physical features which should have dictated the land parcels identified for the purposes of the Green Belt review, rather than arbitrary areas based on field boundaries.

3.27 The Land at Tangley Place Farm benefits from such physical/defensible features which limit its sensitivity in Green Belt terms. These features constitute:
• an existing watercourse which bisects this parcel and would form a strong boundary along its western edge);
• important ecological designations and buffer zones affect the site within its northern half and this would ensure a robust northern boundary could established; and
• existing road infrastructure to the east and south which would secure these boundaries.

3.28 The concept document previously submitted with representations also shows how the delivery of development within the southern areas of the site (i.e. those most closely related to the built-up area of Guildford) the site can still contribute to the five key purposes of the Green Belt whilst accommodating some additional development. The site would also be able to deliver SANG as part of any scheme which has the potential to bring wider ecological benefits by relieving pressure on the Thames Basin Heath SPA.

3.29 The sustainability benefits of the location would make it a much preferable site to those sites that have been identified which are also rated as being highly sensitive in Green Belt terms.

Summary

3.30 Given that the ambition is to deliver homes in the early period of the plan, SLP objects to the Council’s decision to allocate sites that are inherently less sustainable and on highly sensitive Green Belt land when other viable options with better prospects of delivery exist (e.g. Tangley Place Farm).
Conclusion
3.31 SLP does not believe that the Council’s approach to simply identifying more sites provides sufficient flexibility to help deliver the required dwellings in the early years of the plan period. This is because the Green Belt constraints that affect almost all land within the borough mean that opportunities to address the shortfall through speculative applications are severely limited. SLP therefore objects fundamentally to the simplistic approach taken by the Council.

3.32 In order to improve this flexibility, SLP feels that the Council should incorporate a set of reserve sites, alongside those that have been identified that could come forward in the event of a shortfall in housing supply.

3.33 SLP also objects to the sites that have been identified by the Council which are less sustainable and, with the exception of Aldertons Farm, at least as (if not more) sensitive in Green Belt terms than other viable alternatives (e.g. Tangley Place Farm).

3.34 The Council has missed an opportunity to review the Green Belt boundary in a sustainable location along the north-western edge of Guildford to accommodate a mix of housing and open space uses (including SANG) that could alleviate pressures on the Thames Basin Heath SPA and deliver housing during the early years of the plan period.

4. LOCAL PLAN REVIEW

4.1 Paragraph 33 of the NPPF 2018 sets out the requirement for Councils to undertake local plan reviews within five years of their adoption. This has the purpose of updating policies where changing local circumstances indicates a need to do so. This includes a specific reference to strategic housing policies which will require updating if local housing need has changed, or is expected to change, significantly.

4.2 The implications of the revisions to the standard method for Guildford’s housing need are not yet clear, although this would be applied as part of any Local Plan review.

4.3 The Council’s housing completions data are also a cause for concern given that they have been significantly below the required housing need of the plan. Furthermore, the Council’s reliance on large strategic sites to deliver much of its housing toward the middle/later stages of the plan means that there is the potential for a shortfall should there be any significant delays to one or more of these sites.

4.4 The progress of these sites and the Council’s performance against the Housing Delivery Test should be monitored closely to inform the Local Plan review. Should it be revealed that the Council is performing poorly against these and other various measures (Housing Land Supply, delivery trajectories at the key strategic sites etc.) then there will be a strong case for the allocation of further sites given that the Green Belt constraints within the Borough would essentially negate the ability for speculative development to take place in order to address any shortfall.

4.5 Land at Tangley Place Farm would be ideal for an allocation as part of such a plan review given that it would be deliverable, sustainable and allow for the creation of a long-term, robust, defensible Green Belt boundary.

5. CONCLUSION

5.1 SLP generally welcomes the findings of the inspector following the examination hearings and acknowledges some of the positive steps made by the Council in response to his concerns. However, SLP objects to the lack of flexibility within the plan moving forward in the event that a housing shortfall is identified (a scenario which is not unlikely given the disparity between completions figures and the proposed annual housing target).

5.2 Whilst the allocation of additional sites is welcomed, the choice of these sites does not appear to be particularly logical given that more sustainable and less sensitive Green Belt sites are available and, therefore, more likely to be deliverable. Land at Tangley Place Farm is one such location.

5.3 Furthermore, the Green Belt constraints placed on land within the Borough means that there is no scope to address any identified shortfall in scenarios where the ‘presumption in favour of sustainable development’ would apply (e.g. deficient housing land supply position or poor performance against the housing delivery test).

5.4 SLP would, therefore, wish to see the incorporation of a ‘reserve site’ list to provide additional flexibility to the plan. This will ensure that sites can come forward to maintain a healthy supply of homes throughout the plan period should...
delivery on other allocated sites be slow or fail to come forward at all. Again, land at Tangleys Place Farm could fulfil such a role.

5.5 Alternatively, it will be imperative for the Council to be positive at the Local Plan review stage for example, should circumstances dictate a requirement for a higher housing target and/or in the case of under delivery over the early period of the plan. In looking to address these potential issues, the Council will need to identify additional allocations, ideally alongside reserve sites, in order to ensure that housing can come forward consistently throughout the remainder of the plan period.

Comment: MM2 - LPMM18/5958  Respondent: Steven Grove 20859009  Agent:

Yesterday evening I attended a meeting regarding the Guildford Borough Local Plan.

I am very concerned about a number of matters in the proposed Plan which I feel must be addressed, as the Plan as submitted to the Inspector is, I believe, unsound.

It is apparent that the Guildford Council have not explored in depth the availability of brownfield sites both within the town centre and elsewhere in the Borough that would allow a considerable reduction of housing and related developments within the Green Belt, thereby reducing the Green Belt grab.

Attached documents:

Comment: MM2 - LPMM18/5949  Respondent: John Lobley 20859041  Agent:

I note that in the Revised Local Plan (“RLP”) that there has been a small reduction in the proposed number of houses to be built on the green belt sites, although in the main the sites themselves continue to be earmarked for development at a level which is totally unsustainable for the existing community. I attended a presentation at Tongham and asked numerous questions to the Council staff (Mr Spooner was not present) and was not given any satisfactory responses. There was no presentation at Sutherland Park and this omission is remarkable considering the impact of the Gosden Hill Farm (“GHF”) on the residents of Burpham, of which I am one. As such a resident I know first-hand the impact of an additional 5,000 vehicles (from 2,000 new houses) on the already clogged-up narrow roads, in particular Clay Lane which under an additional threat from the Slyfield Regeneration Plan. It is clear that the Council is adopting a plan of “housing first, infrastructure second” as there is no clear plan to ease the traffic other than token gestures such as a new station and park-and-ride (which nobody uses anyway).

I ask that the greenfield sites be removed from the plan, not out of NIMBYism but out of a genuine and deep-seated concern over the effect on the existing community.

Furthermore, I find it extraordinary that you have not had the courtesy to give me any reply to my previous comments and assume you are ignoring them.

Comment: MM2 - LPMM18/6002  Respondent: Guildford Borough Council Executive (Cllr Paul Spooner)
20863233  Agent:

Representation to Guildford Local Plan Main Modifications

I am writing this letter in conjunction with the Executive at Guildford Borough Council, and with their full support, as Leader of the Council and Lead Member responsible for the Guildford Local Plan.

The Executive wish to adopt a realistic and achievable Local Plan at the earliest opportunity. It has been a long journey, which has been difficult and divisive for some of our community however a new Local Plan is long overdue. Nonetheless, given the current context in relation to the revised OAN, we will not be recommending adoption of the new plan with proposed main modifications. Many difficult decisions have already been taken and we strongly believe that the scale of growth in the local plan as submitted was a bold attempt to fully meet OAN, and our local needs as a community, in very challenging circumstances.

For the Guildford Local Plan to be adopted by this Council it has to achieve an appropriate balance between meeting the needs of the borough in terms of housing, employment and retail in a sustainable way whilst protecting the character of the borough. We are pleased that the plan as originally submitted by ourselves, after much public consultation, has been found fundamentally sound at the end of the Local Plan hearing sessions.

However, the Guildford Borough Council Executive have serious concerns in relation to the inclusion of the additional, highly sensitive Green Belt sites and the resulting rate of housing delivery over the first five years of the plan that is necessary to achieve a robust rolling five year land supply. It is widely recognised within Government that as a Local Planning Authority we currently have no means of forcing developers to build at the rates presented during the public hearing sessions.

We therefore welcome the updated household projections, which demonstrate that our OAN is reduced from that assessed during the hearing sessions. Lowering the housing requirement in the plan would enable us to meet our housing needs in the early years without a phased approach. It would also ensure that the adopted plan is robust and deliverable, and will not be rendered out of date soon after adoption should delivery not meet the significant rates required by the plan with main modifications. We require a sustainable plan that achieves good design and delivers sufficient housing, employment, retail and most importantly new infrastructure to be built out for the benefit of the existing community as well as new members of the community. Whilst Guildford Borough Council intends to deliver a significant level of supporting infrastructure ourselves, we require a Local Plan that sets out the requirements for developers and our partners in order to deliver this sustainable growth.

We therefore ask you to consider and act on the following:

1. We ask that you review and amend the plan in light of the new household formation figures by amending the housing requirement to reflect the latest evidence.
2. The Executive have never accepted that there is a real ‘unmet need’ in Woking as a comprehensive borough wide Green Belt and Countryside study has not been undertaken by Woking BC. Furthermore, following the approval by Woking BC of their Core Strategy Review at their Full Council on 18 October, there is now confirmation by Woking BC that there is no unmet need arising from Woking. We therefore ask that all additional numbers applied to the Guildford Local Plan to meet this perceived need be removed from the plan to enable the Executive to recommend adoption.
3. As a result of the reduced OAN and bearing in mind that we have no realistic means of forcing early delivery on allocated sites, we ask that you remove all new green belt sites proposed during the hearing sessions as these are no longer necessary to meeting housing need in the early years. Instead, we ask that you accept the sites and rates of delivery proposed by the Council in the Submission Local Plan to ensure that the plan continues to be sound after it is adopted.

Whilst we require a new Local Plan as soon as possible, we accept that given the latest 2016-based household projections published very recently by ONS and the significant impact upon Guildford’s OAN, there may be a requirement for a further delay and the possibility of another hearing, and we accept that position. We also accept that there is a genuine housing crisis in our Borough and a serious deficit in Infrastructure.
It is important for all who live in, work in or travel through Guildford’s borough that a sound, sustainable and fair Local Plan is adopted.

Comment: MM2 - LPMM18/6006  
Respondent: Barratt Developments Plc (Giuseppe Zanre) 20863329  
Agent:  

1. **Executive Summary**

1.1. Barratt David Wilson – Southern Counties (hereafter “BDW”) has prepared this Representation to the consultation on the Main Modifications of the Draft Local Plan for Guildford Borough Council (GBC).

1.2. Following examination of the Draft Local Plan in July 2018, a need was identified to allocate one or more additional sites, sufficient to provide for c.550 homes within the first five years following plan Adoption, in order for the plan to be found ‘sound’ by the Planning Inspector. This consultation response has been prepared upon review of the Main Modifications which the Council is proposing to submit to the Planning Inspectorate for re-examination.

1.3. GBC are currently committed to a delivery timescale that will see their Plan Adopted in **late March 2019**. The original National Planning Policy Framework (NPPF) came into force in March 2012. On 24 July 2018 the NPPF Revision was published. From the date of publication of the NPPF Revision there is a transitional period of 6 months which applies, enabling those Local Planning Authorities (LPAs) who have progressed their Plan to continue through the examination process under the 2012 NPPF. This timeframe expires on the 24th January 2019.

1.4. The Inspector’s guidance note ID6 recognised a need to identify packages of sites to deliver c.550 homes in the first five years of the plan period. The GBC’s reappraisal process identified the most appropriate candidates for realistically increasing the supply of homes in the early years of the plan. Five sites were identified by GBC equating to an increase of 655 homes, with it being estimated that at least 555 homes would be delivered within the first five years following Adoption of the plan.
1.5. One of these five reappraised Sites is ‘Land West of Alderton’s Farm, Send Marsh’ (Site 29/Policy A63). The allocation would be for c.120 homes and would represent a sustainable development that will have a limited visual impact on the Green Belt, and its location, and will ensure the continued health and sustainability of Send Marsh as a settlement.

1.6. BDW has a legal interest in the site and are supporting GBC in its proposal to include ‘Land West of Alderton’s Farm, Send Marsh’ (Site 29/Policy A63) as a site allocation in the Local Plan. BDW confirm that there are no fundamental issues, and it is entirely realistic that the housing could be provided on this site within 18 months, and completed within the first five years of the plan period.

1.7. GBC have assessed the Site, weighted the impact on the ‘amber Green Belt’ status, considered benefits from the provision of a 14.3ha SANG (Suitable Alternative Natural Greenspace), and revisited the previous appraisals and consultations completed in 2016 and 2017. All of the analysis has led to the conclusion that the Site should be included, and this stance is wholly Supported by this Representation.

1.8. In addition to the background evidence compiled by GBC, BDW has undertaken its own assessments of the site to confirm that there are no issues that cannot be overcome or that would impede implementation of the development. In addition to the background evidence compiled by GBC, BDW has undertaken its own assessments of the site to confirm that there are no issues that cannot be overcome or that would impede implementation of the development. These include a Transport Assessment (2013), Archaeology and Heritage Assessment (2014), Ecological Report (2014) and Landscape Visual Appraisal (2014)

1.9. Following the implementation of the Modifications, the draft Local Plan will be consistent with National Planning Policy. The Site upon which this Representation is based has been assessed appropriately, and the inclusion of land to the west of Alderton’s Farm (Site 29) for the development of housing is Supported in the proposed Policy A63. This Allocation is given credence by the evidence base prepared by GBC and added to through this representation. This Representation Supports the Allocation of land to the west of Alderton’s Farm, Send Marsh for c.120 new homes, as it is a positive step that will help meet the need for housing across the Borough and will help to deliver a sustainable level of growth to Send Marsh.

2. The Purpose of the Representations

2.1. These Representations support the proposed Allocated Site (Policy A63) within the Main Modifications of the Emerging Local Plan, at Land to the West of Alderton’s Farm, Send Marsh Road, herein referred to as “the Site”.

2.2. The representations confirm that the Site is deliverable and that BDW have a legal interest in the Site. Subject to the Allocation and planning permission being granted, BDW intend on implementing the development as soon as possible, with all homes delivered in the first five years of the plan period.

2.3. Paragraph 182 of the NPPF (2012) sets out the four tests to ensuring a sound Plan:
   a) Positively prepared – the plan should be prepared based on a strategy which seeks to meet objectively assessed development and infrastructure requirements, including unmet requirements from neighbouring authorities where it is reasonable to do so and consistent with achieving sustainable development;
   b) Justified – the plan should be the most appropriate strategy, when considered against the reasonable alternatives, based on proportionate evidence;
   c) Effective – the plan should be deliverable over its period and based on effective joint working on cross-boundary strategic priorities; and
   d) Consistent with national policy – the plan should enable the delivery of sustainable development in accordance with the policies in this Framework”

2.4. These Representations Support the evidence base upon which some of the emerging Policies have been based, in order to ensure that the above tests of soundness are met.

3. The Site

3.1. The Site is split into two key components, the residential parcel of land which comprises an area of some 6.35ha and the SANG parcel to the west of the site which comprises an area of some 14.3ha.
3.2. The Site is located within the administrative boundary of Guildford Borough Council (GBC). The Site is currently adjacent to the defined settlement boundary of Send Marsh, and designated as land within the Green Belt.

3.3. It is classified as falling within Flood Zone 1, with a very low risk of flooding from rivers, and also located in an area of very low risk from surface water flooding.

3.4. The settlement of Send Marsh contains a small number of listed buildings, although does not contain a Conservation Area. The Site is located in close proximity to the listed farm building at Alderton’s Farm.

3.5. The proposed residential element of the Site comprises two fields which are demarcated by boundary fencing or mature planting and hedgerows. The Site is adjacent to the existing settlement boundary of Send Marsh eastern and southern boundaries, and is shown in its wider context below:

[see attachment for photograph]

**Figure 1: Site Plan**

3.6. The topography of the Site is that of a broadly flat area with the SANG element of the Site, at some 14.3ha, of a similar topography. In terms of a Site specific location within Send Marsh, the Site is bordered to the north by Send Marsh Road, to the east by residential development off Green Drive, to the south by Boughton Hall Avenue, and beyond the proposed SANG to the west by Send Barns Lane.

3.7. It is within easy access of the local road network serving the area, being approximately 750m away from the A247 to the west which is a further 1 mile north of the A3 trunk road, and is located such that there is easy access to nearby villages and towns, such as Guildford (6km to the southwest), Woking (4km to the north) and Send (1km to the west).

3.8. The Site is categorised as Rural Character Area E2 (Wooded Rolling Claylands) and any opportunities to preserve and enhance this character area will be explored through the formulation of a Planning Application. The ‘Indicative Layout’ shows ample promotion of local green linkages along with the aforementioned provision of the Suitable Alternative Natural Greenspace (SANG).

3.9. The Site is also located in close proximity to existing public transport, with a bus stop approximately 200m away to the west at Alderton Farm and 150m to the west at Send Marsh Green. These bus stops offer regular bus services to Guildford, Woking, Clandon, Merrow and Burpham. Whilst there is no train line or train service available from Send Marsh, the nearest stations are located in Worplesdon and Woking, approximately 4.5km and 4.1km from the Site respectively. From here, train services to London Waterloo, Basingstoke and Portsmouth Harbour with London-bound services operating approximately every 10 minutes during peak time.

3.10. Within Guildford Borough, Send Marsh is identified in the Settlement Hierarchy (2014) as a ‘Large Village, alongside Pirbright, Shalford, Chilworth, Eppingham, Ripley, Fairlands, Wood Street, West Horsley, Peaslake and Send itself. Send Marsh’s designation is cited as being due to the population and close proximity to the services in Send.

### 4. Proposal

4.1. The proposed development of the Site for a residential-led scheme will be designed appropriately to take account of existing site features and environmental constraints Initial master planning includes the provision of a large SANG to the west of the residential parcel. Open space and play areas will also be incorporated in the residential parcel of the Site. The development on the Site will be influenced by its surroundings and the following key considerations:

- Sensitive clear boundaries separating the Site from the wider surrounding area;
- Planting and retention of mature boundaries as far as possible to screen from adjacent residential area;
- Inclusion of a 14ha SANG to be linked to the existing PROW network to the north, south and west
- Creation of open space and a nature walk/amenity area within the site; and
- Appropriate densities to respond to the northern and western extents of the Site.

4.2. The design of the proposed development will be informed by Landscape, Highways, Heritage and Ecological specialists. This will allow the proposal to respond effectively to the Site’s constraints. A number of preliminary reports
and assessments have already been undertaken in informing the indicative
masterplan at Appendix 1.

4.3. The promotion document, illustrating indicative proposals for the site is provided at Appendix 1, demonstrating that
the developable area on site can accommodate 120 dwellings as set out in the proposed Policy A63. Many of the reports
were produced in 2014 to inform the Indicative Masterplan, all technical reports will be refreshed and updated at the
relevant time prior to the submission of a Planning Application.

4.4. BDW is proposing the following to be provided on the site:

• Provision of c. 120 dwellings; and
• Provision of 14ha SANG with sensitive landscaping features and connections to existing PROW network

5. National Planning Policy Position

5.1. This section sets out the Planning Policy context for the Site, given that the overarching National Planning Policy
Framework has been revised during the formulation of the Emerging Plan.

National Planning Policy Framework

5.2. The original National Planning Policy Framework (NPPF) came into force in March 2012. On 24 July 2018 the
NPPF Revision was published. The NPPF Revision is a material planning consideration in the Plan making and decision-
taking processes.

5.3. From the date of publication of the NPPF Revision (24 July 2018) there is a transitional period of 6 months which
applies, enabling those Local Planning Authorities (LPAs) who have progressed their Plan to continue through the
examination process under the 2012 NPPF. This timeframe expires on the 24th January 2019. Beyond this time, the NPPF Revision will apply.

5.4. GBC is currently committed to a delivery timescale that saw their Plan submitted to the Secretary of State on 13
December 2017, prior the 24 January 2019 deadline. As ‘Main Modifications’ form part of the examination process, the
2012 NPPF Policies and housing targets that were in place through the formulation of the Plan and during the Examination Hearings will apply, and will be considered in this representation.

BDW is confident in their ability to contribution to the Council’s expectations regarding fiveyear housing delivery, in line
with these National Policies.

6. Housing Needs and Provision

6.1. GBC’s publication of the Main Modifications to the Emerging Local Plan identifies:

• A housing need of 12,600 over the course of the Plan period of 2013-2021 (672 per annum post-2019 taking into
account an allowance of 42 dwellings per annum toward meeting unmet need from Woking Borough);
• The preferred approach is to provide housing within urban areas, areas around villages, extensions to Guildford
and in new settlements or on sites already identified or allocated;
• The land supply identified includes 3,675 commitments and approximately 9,972 site allocations already
accommodated for since the start of the plan period; and
• The Local Plan sets out an allocation of 620 dwellings on sites identified in the LAA, and anticipates a windfall
allowance of 750 dwellings over the remaining plan period.

6.2. In determining additional allocations, GBC ruled out sites which were anticipated to be delivered within years 6-10
of the plan period, and this included ruling out two additional urban extensions of Guildford for this reason.

6.3. GBC considered the spatial option most likely to boost early delivery was through greater provision in and around
inset villages due to their smaller scale, lower infrastructure dependency and dispersed nature.

6.4. Following the Local Plan examination, GBC considers that a boost to early delivery would be most realistically
achieved through the allocation of additional village extension sites. This balance of Green Belt harm and exceptional
circumstances for removal additional sites from the Green Belt was considered in light of the Inspector’s views in relation
to objectively assessed need and early delivery. Alderton’s Farm at Send Marsh was selected as one of the three sites best suited to increase early delivery.

**Affordable Housing**

6.5. The National housing crisis has characterised the housing market for many decades and is steadily heightening; the crisis is now compounded by a lack of affordability. The Office of National Statistics (ONS) has shown that the mean affordability ratio, based on median house price to median income, is 11.6; that is to say median house prices are 11.6 times median income.

6.6. There has not been a specific local housing need assessment conducted on Send Marsh. However, it can be seen in Table 3.1 of the Sustainability Assessment of the Guildford Local Plan (Sept 2018 Addendum) that “there is a deficit in affordable housing supply and the current completion rate is below the annual level required to address the deficit”.

6.7. The proposal on Land West of Alderton’s Farm will deliver Affordable Housing at a level of 40% of the development, in accordance with the Emerging Local Plan policies. This will be delivered in accordance with the definition of affordable housing as provided in the glossary to the NPPF and to reflect local need. Evidently, in an area where there is a clear shortage of affordable homes, this proposal will make a valuable

**Conclusion**

6.8. GBC needs to ensure that a suitable range of sites, of varying sizes and scales, are allocated in the Emerging Plan to ensure the early delivery of a sufficient number of new homes to address the under delivery against the 5 year requirements. GBC needs to ensure that the Plan is flexible and able to meet the demands on it both in terms of providing for need but also delivering at a sufficient rate.

6.9. Send Marsh has been identified as a large village settlement in the settlement hierarchy (below Guildford and Ash urban areas and East Horsley rural centre), and represents one of the most sustainable locations for development in the Borough.

6.10. Land to the West of Alderton’s Farm has been identified, assessed, and found to be one of the preferred sites to deliver sustainable development to the settlement of Send Marsh by the Council. The inclusion of land to the west of Alderton’s Farm will enable BDW to deliver a Site in the Borough that would on a local scale provide a suitable and sustainable level of development, with a policy-compliant provision of Affordable Housing and a 14ha SANG that will not only mitigate the impacts of the development itself but provide capacity for c.400 homes within a 4km catchment area.

6.11. The Site forms part of the Council preferred option (3) as outlined in the SA of the Guildford Local Plan (Sept 2018) which involves one larger urban extension (Aaron’s Hill, Godalming) alongside a package of smaller extensions with strong delivery certainty. The option reflects the Inspector’s recommendations to ‘align the spatial strategy of the Borough whilst recognising the need to apply flexibility in response to competing objectives’. Option 3 avoids performing notably poorly in any of the topic headings outlined in the SA and there is a confidence that the sites not only represent sustainable development but, on balance, provide sufficient opportunities to avoid or mitigate against any identified level of significant and demonstrable harm and much needed contribution to meeting identified housing needs within the first 5 years of the Plan period.

**Attached documents:** [Barratt Developments Rep Redacted.pdf](Barratt%20Developments%20Rep%20Redacted.pdf) (7.2 MB)

**Comment:** MM2 - LPMM18/6045  **Respondent:** Michael R Bennett 20865729  **Agent:**

- The revised Housing Need figures mean that much proposed greenbelt development is no longer justified, and the “exceptional circumstances” that are required as grounds to allow greenbelt development do not exist.
The Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited.

MM2 The Examination should be re-opened because the housing figures are no longer up to date, do not provide a sound basis for the Plan or justify such extensive Green Belt loss.

MM2 There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table (S2b), which identifies types of site to be developed, out of date and in need of re-examination.

MM2 Expert Neil MacDonald has demonstrated that about 360 homes a year would support the ambitious economic growth rate proposed by the inspector. 630 homes a year would be out of step with the new ONS figures and the Government’s standard method. 630 is based on inappropriate assumptions that inflate the figure e.g excessive student homes in town, low economic participation.

MM2 It is inappropriate to expect Guildford to sacrifice Green Belt to provide homes for Woking when Guildford is more constrained, Woking is proposing Green Belt development, plus Woking’s need figure has also reduced and has not been examined.

Attached documents:

Comment: MM2 - LPMM18/6046  Respondent: SGN (Konstantinos Gallios) 20866497  Agent: 

Thank you for your email asking for comments on the Guildford Local Plan. SGN is preparing for the next Price Control Period (RIIO-GD2), due to commence 2021, and welcomes all input from Local Authorities that provides intelligence on proposed development within their respective areas. This information will assist us in identifying potential growth and associated reinforcement requirements.

SGN has carried out a high level assessment of the impact of developments contained within the Local Plan, Housing Land Audit and Employment Land Supply documents and can comment as follows:

NETWORK OVERVIEW

SGN’s network within Guildford District Council, areas is energized by the South Local Transmission System (LTS) with and supported by the integrated IPMP system. Transmission Regulator Stations (TRS) are located across the center of the region, reducing pressure to the High Pressure (HP) Intermediate (IP) and Medium (MP) pressure systems. In some instances pressure is reduced from IP to MP by means of District Pressure Governors (DPG). In turn, the IP/MP systems are further broken down to Low Pressure (LP) systems directly supplying the majority of existing domestic customers.

STRATEGIC DEVELOPMENT AREAS

Through the assessment of the impact of developments there are no areas of significant concern - which result in the requirement of network reinforcement. There is no new reinforcement required from the latest local plan or sites which may have significant impact, compared to the potential existing ones. SGN’s infrastructure will not be severely affected from the additional developments described on the latest local plan.

Below is a short synopsis of the networks supplying these areas where reinforcement will may be required in the medium and long term.

For are the district area, reinforcement of the IP/MP Grid will be required, if gas is to play a major role in meeting the energy requirements of any potential developments identified in the local plans. If said developments are phased as set out in the various LDPs, then the reinforcements will be necessary in ensuring that security of supply is maintained. It is...
of paramount importance to stress that the timelines and capacities that are quoted in the various LDP documents are not concrete and are, therefore, subject to change such as the reinforcements accompanying them.

**STATUTORY OBLIGATIONS**

Where required, SGN will look to manage the provision of any off site infrastructure improvements, in line with the overall development growth and/or timescales provided. The full extent of these works will be dependent on the nature and location of the requested load(s), potentially requiring LP reinforcement in addition to that required for IPMP networks, and will only become clear once a developer’s request has been received. Reinforcement solutions are likely to involve the provision of a new pipeline in parallel to SGN’s existing mains system, but may also include the installation of above ground apparatus involving land purchase.

As this is a high level assessment and response, the information provided is indicative only and should be used as a guide to assist you on your assessment. While information obtained through consolation and/or engagement on Local Development Plans is important to our analysis, it only acts to identify potential development areas. Our principle statutory obligations relevant to the department of our gas network arise from the Gas Act 1986 (as amended), an extract of which is given below:-

*Section 9 (1) and (2) which provides that:*

9. *General powers and duties*

   (1) It shall be the duty of a gas transporter as respects each authorised area of his:-

   (a) to develop and maintain an efficient and economical pipe-line system for the conveyance of gas; and

   (b) subject to paragraph (a) above, to comply, so far as it is economical to do so, with any reasonable request for him -

   (i.) to connect to that system, and convey gas by means of that system to, any premises; or

   (ii.) to connect to that system a pipe-line system operated by an authorised transporter.

   (1A) It shall also be the duty of a gas transporter to facilitate competition in the supply of gas.

   (2) It shall also be the duty of a gas transporter to avoid any undue preference or undue discrimination -

   (a) in the connection of premises or a pipe-line system operated by an authorised transporter to any pipe-line system operated by him; and in the terms of which he undertakes the conveyance of gas by means of such a system.

SGN would not, therefore, develop firm extension or reinforcement proposals until we are in receipt of confirmed developer requests.

As SGN is the owner and operator of significant gas infrastructure within the Guildford area and due to license holder obligations;

- Should alterations to existing assets be required to allow development to proceed, such alterations will require to be funded by a developer.
- Should major alterations or diversions to such infrastructure be required to allow development to proceed, this could have a significant time constraint on development and, as such, any diversion requirements should be established early in the detailed planning process.

SGN would therefore request that, where the Council are in discussions with developers via the Local Plan, early notification requirements are highlighted.

Additionally, SGN are aware of the advances being made in renewable technologies, especially those related to the production of biomethane. Should any developer be proposing to include such technology within their development, then we would highlight the benefits of locating these facilities near existing gas infrastructure. Again, where the Council are
in discussions with developers via the Local Plan, we would hope that these early notifications requirements are highlighted.

Please let me know if the above information is sufficient for your requirements at present.

**Comment:** MM2 - LPMM18/6060  **Respondent:** Jasper Collinson Warr 20866977  **Agent:**

The council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited

Housing numbers should reflect the latest much lower ONS figures and projections. The public hearings should be re-opened on this subject to allow re-examination

The grounds for green belt development are inadequate because of 1 and 3 and do not represent ‘exceptional circumstances’

**Special reference to MM2**

I most respectfully request that for these reasons you will see fit to reopen the examination of the Guildford Local Plan as indeed other local plans have been when found unsound based on outdated information.

Comment: MM2 - LPMM18/6092  Respondent: Neal Fox 20867873  Agent:

I therefore demand that the examination of the Local Plan be re-opened so that current factual evidence can be considered to include ONS figures and that a revised retail demand forecast for Guildford Town Centre be commissioned, if not already available.

[Response has been redacted due to statements being considered defamatory, derogatory, inflammatory or offensive in nature]

Attached documents:
Safeguard Coaches has engaged with the Draft Local Plan process from the outset, principally arguing for a better Town Centre where sustainable transport, especially bus travel, is promoted and for additional infrastructure to enable traffic congestion to be reduced and a more vibrant and pedestrian-friendly Town Centre created.

While we acknowledge that efforts are being made in these regards, including occasional discussions with bus operators, we believe that the new Policy S3 (Delivery of development and regeneration within Guildford Town Centre), which has been added to the Draft Local Plan at HM Inspector’s request, is not adequate or detailed enough given the vital importance of the Town Centre and its centrality to movement around the Town and its environs.

We fear that, if considered sound as currently written, the Draft Local Plan will fail to achieve the best possible outcome for Guildford and particularly its Town Centre. We have a huge opportunity to plan the Town Centre in a coordinated way with sustainable transport modes at its heart, address the present infrastructure deficit, provide for a larger town in the future and create a place that we and our children can be proud of.

We urge that far more consideration be given to the planning of the Town Centre and that a far more robust and detailed plan be enshrined in the Local Plan.

As we believe that significantly more work is required on all these aspects we consider the Plan to be UNSOUND at the present time and urge HM Inspector to work with the Council and its stakeholders to address the weaknesses of the Plan for the benefit of Guildford.

Attached documents:

---

The town centre policy should include an allocation for an all direction bus interchange. Ensuring the centre is designed around sustainable transport is essential. The geography of Guildford, as a constricted, congested gap town with a steeply sloping high street, means that is does not lend itself to a ring round and peripheral bus stop approach. A central bus interchange from which you can travel in any direction is essential. It is a major failing of the plan that no site is identified. With changing demand for retail floorspace, the reasons for loss of the existing bus station site cannot be sustained in the absence of an alternative bus proposal.

New town centre development should avoid adverse impact on surrounding residential areas.

There should be a policy (S4) for the urban areas beyond the town centre to prevent inappropriate garden grabbing and to encourage a joined-up approach to site assembly in carefully selected residential areas where redevelopment linked to enhancement might be appropriate. At the outset GRA advocated targeted site assembly and redevelopment linked to enhancement in a few locations, such as parts of Park Barn, and this option was not pursued because so much Green Belt
was identified. Without a policy to promote this approach there is a concern no action will be taken either in this plan period or in readiness for the next plan period.

**Comment:** MM3 - LPMM18/5006  **Respondent:** Holy Trinity Amenity Group (Robert Bromham) 8559297  **Agent:**

**POLICY S3.** Modification MM3.

The addition of a policy to cover the Town Centre is welcome, but it needs to be more concise and positive. It can repeat guidance provided elsewhere but should not present them as quotes, but as clear independent policies of the Borough Plan. If necessary, they should be adapted to fit current circumstances. Detailed comments:

1. **(1) Reword as** “Developments will not be allowed that would compromise desired or planned developments on adjacent sites”.

2. **(2) Reword as** “Residential development must be considered as a priority for all sites and should be part of any major development”.

3. **(3) Reword as** “Schemes must demonstrate that they have made effective use of the site”. While high density developments are anticipated the need for sites to include some open space must also be emphasised. Add: “Guidance on housing density will be given in a revised Residential Design Guide; densities higher than the norm for the area will be allowed in the area up to 300m from the designated centre boundary.” (The present 800m from the centre is too high).

4. **(5)** Add, as (e), new developments will “have regard to The Town Centre Conservation Area Appraisal”.

6(b). We presume this refers to open space. We do not understand “well enclosed”. Reword as “Defined public and private open space”.

Paras 4.18 and 4.19 quote the Corporate Plan and The Town Centre Regeneration Strategy. We do not think these should be quoted under the “Reasoned Justification” for the S3 Policy. They should stand as independent parts of the S3 Policy. In this context we have the following comments:

4.1.18 (a). Reword “Facilitating major new residential and mixed-use developments the centre, including in North Street”.

4.1.18 (b). Some parts of the Regeneration Strategy need to be set out as enforceable polices.

4.1.18 (c) Delete “surfaces”. This should not be singled out. There are many improvements needed to the public realm, see comments on 4.1.25 below.

4.1.19. (c). reword “and overall feel” as “and character as an historic market town”.

4.1.19 (h) reword to clarify as “Improve walking links from the town centre to the train station”.

4.1.19 (i) reword as “Conserve and enhance the river Wey and the riverside, including the towpath, as a key historic feature of the town. Develop it as a green wildlife corridor through the Borough, and respect it as a continuous Conservation Area. It must not be compromised by intrusion of new building too close to the river or overshadowing by too high buildings”.

4.1.20. **This might be read as an excuse for lack of action. Suggest reword as** “Close collaboration will be obtained with other bodies who have some control of the area” and include this in policy.
4.1.25. The public realm. This also should be part of the S3 policy, and should include general improvements to pedestrian facilities such as proper pedestrianisation of the existing town centre, ceasing use of the High Street as a car park for half the day, 20mph limits on roads in and around the town centre, pedestrian priority crossings, pavement widening, reinstatement of pavement curbing, policing of vehicle intrusion onto pavements (particularly in the evening), prohibition of A-boards. It should also include tree planting and seating.

Attached documents:

Comment: MM3 - LPMM18/3138  Respondent: The Guildford Society (Julian Lyon) 8561377  Agent:

Main Modification 3 – Policy S3 (Guildford Town Centre)

The Inspector invited the Guildford Vision Group and The Guildford Society to comment on and submit our response to the draft Policy S3 issued swiftly during the Examination in Public.

We came to the conclusion, in submitting our proposed solution (https://www.guildford.gov.uk/newlocalplan/CHttpHandler.ashx?id=28097&p=0), that this needed to have two distinct parts: S3 – The Town Centre; and S4 – The rest of the Guildford Urban Area.

Guildford Borough Council chose to ignore that suggestion and we have not had the opportunity to explain our approach to the Inspector. Policy S3, a crucial plank in the Local Plan’s Spatial Strategy, has also not been examined in public.

CONCLUSION

We request that the Inspector provides the scope to examine both this policy (or these policies), and the hierarchical principles behind it/them, by reopening the Examination in Public. The NPPF differentiates and distinguishes between town centres and urban areas in terms of densities, and so it is important to treat them separately. In S3 there is now a policy for the town centre. The second most important part of the borough hierarchically is the Guildford Urban Area, where approximately 45% of the population of the Borough lives. It cannot be appropriate to have no specific policies for bringing forward development, even if in due course, in this important area.

NOTE

It is our settled and firm view that one of the principal reasons this area has not been planned, has few site-specific policies, and has contributed a negligible number of sites and homes, is the very poor quality of the Settlement Profiles Report for Guildford Urban Area including the Town Centre (reproduced at APPENDIX 3 – Settlement Profiles Report for ease of reference). This has needed to be dealt with since the initial consultation on the Local Plan, as consistently requested by the Society.

The second part of the Local Plan (the Development Management Local Plan) has not yet been made available, even in draft, and will not be adopted before 2020 at the earliest.

Policy S3 does not incorporate the Guildford Urban Area as a whole. The policy environment throughout the Local Plan provides little protection against garden-grabbing, backhand development, but equally fails to promote and direct development towards areas of greatest need and relative deprivation.

The failure to introduce a policy for the wider Guildford Urban Area will mean that the plan acknowledges the prospect (and propensity) of development and its character in the Town Centre (Policy S3) and in the Green Belt and Countryside (Policy P2 and Site-specific policies), but fails to provide for positive planning in the remainder of the Guildford Urban Area (our proposal for a Policy S4).
As a Group focussing on Guildford’s Transport issues for the last 16 years, the Society’s Transport Group is disappointed that the Council has failed to accept the unique opportunity offered by the Inspector to stiffen up elements contained in their Transport Strategy to create a more positive framework.

Over the years, many studies have been carried out in attempts to alleviate the mainly peak time congestion occurring around the gyratory, each one failing, principally due to the bottleneck caused by the Bridge Street/Farnham Road Bridge intersection. No serious investment has been made, and little change has taken place, except for the closing of two pedestrian underpasses below major routes which have increased the degree of potential conflict between road and pedestrian traffic. Some improved traffic signal controls are promised, and some improved cycle routes contemplated but “Key facts about the Borough” admits that the network of cycle routes is “fragmented and disjointed”.

While the Council fails to be proactive in the planning of all types of movement in the Town Centre, by essentially delegating such matters to the whims of developers, it is likely that the current situation might, at best, become no worse, but certainly no major improvement would be likely. In fact, elements of the Transport Strategy accept that matters will worsen before they improve.

We believe this to be a recipe for Guildford’s stagnation, and a major obstacle to development which is largely within the Council’s control.

To state, in Policy S3, that the Council will “play a key coordinating role” in the development of the Town Centre with a policy, inter alia, to “realise the Council’s ‘drive to, not through’ concept to reduce the impact of traffic in the Town Centre” and to “give priority to pedestrians and cyclists over motor vehicles” is simply not enough. If they plan to delegate transport issues to be funded by developers (as is set out in – or missing from – the Infrastructure Delivery Schedule), the Council must have at least an outline plan for implementation.

The only feature of its Transport Strategy with any impact on the Town Centre is the Sustainable Movement Corridor. While an excellent concept in theory, it could not, in practice, function if overlaid on an unchanged Town Centre traffic structure. It is worth noting that the original proposal by ARUP included a new east-west crossing of both the river and railway, whereas the current proposal simply enlarges an existing pedestrian bridge over the railway to create a low-capacity single lane crossing for buses.

In September Dr. Steve Melia of the University of the West of England, made a presentation to the Borough Overview and Scrutiny Committee. In it he postulated that increasing urban density tended to reduce the amount of traffic in the area but this needed to be in conjunction with diverting major flows of traffic away from it. He quoted the particular example of Taunton where his colleagues would be studying the changes in traffic behaviour as a result of a diversion being planned there to restrict the flow of traffic through the centre of the town. See diagrams below – current (left); and proposed (right):

In our view, this is exactly what Guildford should be planning to do, and to be seeking the necessary funding.

The key feature which the Council has failed to grasp is the need to conceive some means of diverting this current “through” traffic, which it recognises “afflicts the urban area during peak hours” (see 2. Key facts about the Borough) away from the Town Centre, notably from Bridge Street and Onslow Street.
The Society is a supporter and advocate of the Guildford Vision Group Plan, where a new crossing could, with one stroke:

- Free up road space for the Sustainable Movement Corridor to function effectively along Bridge Street, Onslow Street and the southern end of Walnut Tree Close.
- Reduce the number of delaying junctions inherent in the current gyratory system, with two river crossings in close proximity and only one rail crossing at Farnham Road.
- Improve the pedestrian route between the Railway Station and the Town Centre and reducing the potential conflict between pedestrians and vehicles.
- Improve permeability in the area generally for both pedestrians and cyclists, including pedestrianisation.
- Reduce public transport delays allowing buses to keep close to timetables.
- Reduce the pollution in Bridge Street and Onslow Street caused by heavy traffic.
- Divert HGVs which currently benefit from using the bus lane in Onslow Street.
- Provide ready access to the riverside for all.

All of these are aspirations included in the Society’s Transport Strategy.

In terms of the Evidence Base, we understand that Origin and Destination data now exists for a wider area outside the gyratory which should establish the current pattern followed by through traffic so that a suitable diversionary route can now be identified. It is most likely that this would call for a new east-west crossing, a version of which was first conceived by this Group in 2009.

The Borough is a major landowner in the Town Centre, with only a few others. We believe that elements of the Local Plan need to be amended to include the intention of the Borough to Masterplan areas of the Town Centre so that any necessary land can be reserved for transport improvements. This could be by identifying strategic sites or at least by encouraging essential land assembly.

The Society is concerned that Policy S3, as drafted, contains plenty of wording that will be difficult to translate into the planning assessment of submitted proposals. For example:

Paragraph (1)
In the absence of an over-arching Master Plan and/or specifically designated development areas, how can we encourage development proposals to seek opportunities to take account of the development potential of adjacent sites, when the Plan contains no specific proposals for what those development sites might need to take into account?

Paragraph (2)
We acknowledge the difficulty of having Policy S3 as an enabler for development which was not identified in any detail in the formation stages of the Local Plan. We do, however, have a qualitative as well as a quantitative concern about the phrase “…will be expected to meet identified housing need.” There should be a clearer policy to make the satisfaction of the Borough’s housing need hierarchically (or sequentially) better in the town centre than outside the urban areas. There should also be some indication of the types of housing that should be accommodated in the town centre.

Paragraph (3)
This policy makes the Society nervous because an unqualified phrase such as “schemes must demonstrate that they have made the most efficient use of land” may simply promote over-development and fail to deliver the place shaping the town centre really needs, or interfere with views, etc.

Paragraph (4)
This seems to us to be a hollow threat of the Council’s use of Compulsory Purchase powers. Without allocating a Master Plan or Regeneration area/site within the Plan, the necessary circumstances for CPO will rarely if ever exist.

The first paragraph (4.1.18) of the section ‘Reasoned Justification’ seems out of place in a plan from 2015 to 2034.

We recognise the statement of aspirations, but past performance does little to suggest that deeds follow words. We find it difficult to reconcile 4.1.19c and 4.1.19d with the Council’s approval of the nine-storey Guildford Plaza scheme, which
certainly paid no respect to townscape at ground and roof level, and with the Planning Inspector granting consent to the Guildford Wall that is Solum at Guildford Station.

We would propose some fundamental rewriting of these two paragraphs to achieve what they seem to set out do:

SUGGESTED WORDING

4.1.18 Through the Town Centre Regeneration Strategy we have identified the need to regenerate and improve Guildford town centre, with a key intent to embrace high quality place-making. We have allocated the Town Centre Regeneration Strategy Area for development in accordance with an area-wide Master Plan to be brought forward within the first two years after adoption of the Local Plan. Key projects to support this and the delivery of the Local Plan include:

(a) Facilitating the delivery of a major new mixed development in North Street
(b) Tackling the town centre’s traffic and transport infrastructure
(c) Implementing the Council’s ‘Drive to, not Through’ concept
(d) Increasing visitors’ dwell time to contribute to the town’s vitality, including its leisure and evening economy
(e) Improving the public realm in key town centre areas
(f) Updating Conservation Area and Character Area Assessments
(g) Urgently bringing forward a Roofscapes, Heights and Views Supplementary Planning Document

4.1.19 This policy and the Town Centre Regeneration Strategy will help deliver the following objectives:

(a) enhance the vibrancy of Guildford Town Centre
(b) create and foster high quality design
(c) protect the town’s heritage and overall feel
(d) respect existing townscape at both the street and roof level
(e) create an enhanced and more positive public realm
(f) reduce the concrete environment atmosphere
(g) reduce the impact of traffic in the town centre, complementing future environmental improvements
(h) link the Town Centre to the train station
(i) open up the River Wey and improve connections to the river
(j) assist in meeting Guildford’s housing need
(k) ensure schemes are sustainable and do not block future development potential
(l) promote and create an investment friendly environment

Policy E7 looks somewhat odd after the removal of paragraphs into this Policy S3, but paragraph 4.4.71 could also usefully come across into S3. S3 and E7 should also cross-refer for the sake of completeness.

Attached documents:
4.1.12 Guildford town centre has a unique setting and historic character and is the largest retail, service, administrative and commercial centre in the county of Surrey (measured by floorspace and number of units). With good transport accessibility by rail and road, it is one of the key town centres in the South East outside of London.

<th>Local Plan</th>
<th>GSoe Proposed Wording</th>
</tr>
</thead>
<tbody>
<tr>
<td>The NPPF states that policies should recognise that residential development often plays an important role in ensuring the vitality of centres and therefore should encourage residential development on appropriate sites. The Council is committed to ensuring that the policies and allocations within the Local Plan, including those within the Guildford Town Centre, are deliverable and its objectives are realised over the plan period. Furthermore, the Council remains committed to supporting any further opportunities for future development and regeneration within the town centre that reinforces its important role and function. The Guildford Town Centre is intended to function as the key focus for a more intense vibrant mix of uses including residential, office, retail, leisure, tourism, entertainment, and arts and cultural facilities.</td>
<td></td>
</tr>
</tbody>
</table>

4.1.13 The town centre is centred on two linear features, the River Wey, and the High Street that rises up the valley side from Town Bridge. Related to this, the centre has striking topography, with attractive views to the surrounding countryside south and east of the town centre. It is renowned for its picturesque historic High Street and lanes off it, known as ‘gates’ which link the High Street, the Castle and the other key shopping street, North Street. The setting and the historic street pattern in the central area of the town centre are a vital part of its special character as is the range and concentration of heritage assets.

<table>
<thead>
<tr>

<tbody>
<tr>
<td>… with attractive views to and from the surrounding countryside west, south and east of the town centre. ADD at the end of the paragraph: “The quality of the town centre deteriorates rapidly towards the north-west, and there are opportunities to regenerate the urban fabric, and to enhance and improve the riverside and shopping areas through greater pedestrianisation and public spaces.”</td>
<td></td>
</tr>
</tbody>
</table>

4.1.14 The Council is facilitating the delivery of development through a range of proactive measures. These include:

<table>
<thead>
<tr>
<th>Local Plan</th>
<th>GSoe Proposed Wording</th>
</tr>
</thead>
<tbody>
<tr>
<td>Amend the third bullet: Advancing and collaborating on key regeneration opportunities in the area allocated for Town Centre Regeneration (A??), forming part of the Guildford Town</td>
<td></td>
</tr>
</tbody>
</table>

597 of 2575
- Driving and unlocking key development projects that form a basis for the delivery of the Local Plan (such as at North Street, A6; Guildford Park Road and Bright Hill car parks, A11 and A12);
- Playing a lead role, working with other delivery partners, in infrastructure interventions that realise growth and regeneration opportunities;
- Advancing and collaborating on key regeneration opportunities as part of the Guildford Town Centre Regeneration Strategy, which include leveraging its own landholdings as part of efforts to promote mixed use and higher density development supporting the vitality and vibrancy of the town centre.

4.1.16 In undertaking and further to these actions, the Council will explore the use of a range of mechanisms at its disposal to support regeneration and the accelerated development of housing and mixed-use schemes. These include using, where appropriate, compulsory purchase powers, granting permission in principle, assisting in land assembly and playing a coordinating role with its development partners around development opportunities.

NOTE: if the plan does not allocate the Regeneration Area AND if there is no specific reference to the sites in the Local Plan, it will be challenging to use some of these mechanisms.

</thead>
<tbody>
<tr>
<td>land assembly and playing a coordinating role with its development partners around development opportunities.</td>
<td></td>
</tr>
</tbody>
</table>

4.1.17 The borough’s town centre will form the key focus for these measures to support and accelerate growth in this sustainable location and maximise the use of previously developed land. This will occur with careful attention to the Local Plan’s design policies, Development Management policies, the provisions of any possible future Area Action Plan, as well as relevant SPDs including guidance on strategic views into and out of the town centre which will help to guide the appropriate location, form, scale and massing of development.

Cllr Spooner adds: "There are great opportunities, as well as challenges, in making our dynamic and attractive town a great place to live, work and visit. There will be consultation opportunities during the next stages of this important work to regenerate Guildford and we'll let people know how they can get involved."

Published on Thursday 16 August.

(6) Schemes must demonstrate high quality urban design and contribute wherever possible to achieving:

| a) mixed use developments with active ground floor uses; |
| b) defined public and private spaces which are well-enclosed; |
| c) an attractive and safe public realm; |

Again, we need the Master Plan for the regeneration area to make sure that this is holistic and cohesive urban planning.

We also need to open out spaces along the river which can only be done – thinking about Policy P4 – by reference to the Environment Agency over a large area.

**Local Plan**

| d) legible routes that are easy to understand and to move through, and give priority to pedestrians and cyclists over motor vehicles; |
| e) improved access and views to the River Wey. |

planned holistically and making smart use of lower levels for water attenuation in times of floods, but active pedestrian-level street frontages.

We also need schemes to make provision for the infrastructure and facilities that will be needed for so many urban homes, including healthcare facilities, education establishments and cultural centres.

**OMITTED FROM THE POLICY**

(7) Transport Infrastructure – the Council will identify ways of displacing traffic from the town centre and its gyratory, both by modal shift and by new, modified and/or replacement infrastructure, designed to reduce accidents and pollution, to encourage non-car-based transportation, and to design public and personal transport to interlink where possible to encourage people out of their cars into different forms of transport.

(8) Town Centre development should avoid adverse impact on surrounding residential areas.

4.1.19 This policy and the Town Centre Regeneration Strategy will help deliver the following objectives:

(a) enhance the vibrancy of Guildford Town Centre
(b) create and foster high quality design
(c) protect the town’s heritage and overall feel
(d) respect existing townscape at both the street and roof level
(e) create an enhanced and more positive public realm
(f) reduce the concrete environment atmosphere
(g) realise the Council’s ‘drive to, not through’ concept to reduce the impact of traffic in the town centre, complementing future environmental improvements
(h) link the Town Centre to the train station

Local Plan

(i) open up the River Wey and improve connections to the river
(j) assist in meeting Guildford’s housing demand
(k) ensure schemes are sustainable and do not lock future development potential
(l) promote and create an investment friendly environment

GSoC Comment

aspiration to provide footpaths and cycle ways on both banks of the river
(j) assist in meeting Guildford’s housing need
(k) ensure schemes are sustainable and do not block future development potential
(l) promote and create an investment friendly environment [although we are not clear how this operates in practice]

4.1.20 Whilst the Council will play a key coordinating role aimed at achieving delivery of development and regeneration, working with partners such as Surrey County Council, Network Rail and the National Trust, the private sector is central to this process. It is important that schemes that seek planning permission are conceived and

This needs an adopted town centre master plan to achieve, failing which, we get more piecemeal developments that disrespect the urban grain, townscape and surrounding sites.
designed in a manner that considers regeneration opportunities beyond the boundaries of the site. Collaboration between adjacent and surrounding property owners in the Guildford town centre, including efforts that seek to maximise regeneration opportunities through mutually supportive design elements, uses and access arrangements are supported.

<table>
<thead>
<tr>
<th>Local Plan</th>
<th>GSoc Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>4.1.21 The delivery of housing in the town centre adds to its vitality and vibrancy. The Council regards the town centre as critical in terms of meeting needs for main town centre uses. This includes high trip generating uses such as offices and retail, where there are opportunities to encourage linked trips and maximise the use of public transport networks. However, the town centre also represents the most sustainable location for new higher density housing. Whilst the Local Plan provides for sufficient sites to meet housing needs over the plan period, as part of regeneration efforts, more housing is likely to come forward over the plan period. It is important that this occurs in a manner that makes the most of its central location and is thus developed at a density that maximises its sustainability benefits whilst responding to heritage, design and flooding considerations. Consideration should also be given to the potential to minimise the provision of car parking where this can help optimise the density of development.</td>
<td></td>
</tr>
<tr>
<td>This needs an adopted town centre master plan to achieve.</td>
<td></td>
</tr>
</tbody>
</table>

| 4.1.22 The Council will support mixed use development, which can retain or re-provide retail, leisure and employment uses/floorspace in the town centre, in line with national and Local Plan policies. This will help ensure the efficient use of land and presents an opportunity to enhance the vitality of the town centre and increase delivery of homes in sustainable locations. |
| There needs to be some regard to the interchangeability of uses. For example, purpose-built student dwellings do not readily convert into self-contained apartments unless this potential change is recognised at the design stage. |

| 4.1.23 Enhancing the vitality and vibrancy of the town centre cannot occur solely though more intense uses, nor greater numbers of residents. A quality public realm needs to support day-to-day activities, peoples’ well-being, safety and sense of place and forms the basis for the area’s attractiveness to residents, workers and visitors. |
|------------|--------------|
4.1.24 The public realm includes publicly-owned streets, squares, pathways, parks, publicly accessible open spaces, right of ways, and any public or private building and facilities that are accessible by all. Whilst parts of the town centre reflect high quality public environments, there are areas where this could be improved. This is often in areas that represent opportunities for regeneration and intensification of development.

4.1.25 The enhancement of the public realm and its amenity value will ensure the town centre becomes an even more attractive place to live, work and visit and will be a key component of the area’s regeneration. This could occur through a range of interventions such as improving surfacing of public space, providing more generous pedestrian environments, landscaping, street furniture, lighting and public art. The Council will seek contributions toward the improvement of the public realm from developments, where appropriate. The Council will also continue working with Surrey County Council to implement measures that deliver public realm enhancements.

It is worthy of note that the Council’s references in 4.1.19(g) to “realis(ing) the Council’s ‘drive to, not through’ concept to reduce the impact of traffic in the town centre, complementing future environmental improvements”, whilst good in principle, does rather ignore the significant volume of traffic that does still travel through the town centre (due to being gap town with no scope for a ring road). It is important to ensure that this through traffic does not impact other routes around the town (e.g., the propensity for traffic to rat-run through Compton to the south west).

The entire transport policy in the Local Plan, the 2015 Town Centre Master Plan and the 2017 Guildford Town Centre Regeneration Strategy has no real substance to it, is based on old data (2011 Sky High Survey) and needs much more rigour.
