There needs to be amendment and update to the Infrastructure Delivery Schedule to take into account the works required to specify, design and commission major works to improve the traffic and transport infrastructure in the Town Centre.

Omission 2 – Guildford Urban Area

The second hierarchically sustainable tier of development, as set out in the Sustainability Appraisal, is the Guildford Urban Area (described in rather general and unhelpful terms in the Settlement Profiles Report – see Appendix 3).

The Guildford Urban Area comprises approximately half of the Borough’s population, and contains settlements (villages that have, over many years, become suburbs) with differing characteristics, local services, levels of relative deprivation, and, consequently, needs.

The policies in the GSDLP do not provide any positive planning for growth, nor any protection against small or large-scale garden grabbing. This means that, for about half of the population, the GSDLP is at best largely irrelevant and at worst somewhat negative.

NOTE

Considering soundness involves examining the Plan to determine whether it is:

(a) positively prepared – based on a strategy which seeks to meet objectively assessed development and infrastructure requirements;
(b) justified – the most appropriate strategy when considered against the reasonable alternatives, based on proportionate evidence;

(c) effective – deliverable over its period and based on effective joint working;

(d) consistent with national policy – able to achieve sustainable development in accordance with the Framework’s policies

Of the tests of soundness set out in the Inspector’s note ID/2 Rev 2, the GSDLP fails in almost every category in the Guildford Urban Area:

The GSDLP, by its silence on relevant matters, is not positively prepared as it deals with the Guildford Urban Area – the second tier for identifying development, in which few sites have been identified, and where areas of relative deprivation have been largely ignored.

Leaving the Guildford Urban Area alone for the most part for the entirety of the Local Plan Period cannot be justified when the relative deprivation of areas (mostly coinciding with low development density at around 15 Dwellings per Hectare) has not begun to be tackled in the GSDLP.

The GSDLP is ineffective for the Guildford Urban Area

The failure to identify sites where regeneration is most needed has led to the Council looking to meet OAN in the Green Belt. This is not consistent with national policy and is counter to the Sustainability Appraisal hierarchy of sustainable locations for development, making the GSDLP unlawful as it stands.

It is disappointing that, during the time taken in preparation of the Local Plan, the Council did not identify areas where substantial regeneration could take place to help meet housing need and to deliver solutions to relative deprivation. We recognise that, in common with the Town Centre, it is not possible to specify numbers of homes that could be delivered with enough certainty to change the allocations in the Plan, and to reduce the need to remove land from the Green Belt.

In common with the Town Centre, the Plan must lay the groundwork for regeneration in the life of this Plan or at least ready for implementation early in the next plan period.

REQUEST TO REVISIT THIS TOPIC

As a result of the general failure to plan the Guildford Urban Area, we request that the Inspector reopens the Examination in public to address this topic.

I wish to submit representations in relation to main modification MM3.

I regard these modifications as still leaving the Local Plan unsound in that:

1. The Council has not properly adhered to the obligation to give priority of consideration to development on brownfield sites - particularly in the Town Centre.
2. The Modifications rely heavily on A3 planned improvements, but these are within the powers of Highways England, not GBC.

3. Town Centre policy S3 remains inadequate and does not address the infrastructure deficit.

4. The housing numbers on which housing development is based does not reflect the latest ONS figures and projections.

For the above reasons I submit that the public hearings should be re-opened to allow re-examination of these issues.

Attached documents:

Comment: MM3 - LPMM18/3207  Respondent: Tyting Society (David Thorp) 8565601  Agent:

MM3 - policy S3. Guildford Borough Council must deliver real and co-ordinated results. The Guildford town centre must be designated a strategic site or sites.

MM3 - policy S3. Guildford Borough Council should adopt the Guildford Vision Group proposals, including a new crossing or equivalent effective alternative so as to deliver a safer pedestrianised town centre with transport resilience and opened riverside.

Attached documents:

Comment: MM3 - LPMM18/5696  Respondent: David Calow 8567105  Agent:

2. The internet is rapidly changing shopping and delivery processes but the plan seems to assume the pre-internet world will just go on as before.

3. It seems there is no policy on building height for the town centre.

Attached documents:

Comment: MM3 - LPMM18/5347  Respondent: Miss Edwina Attwood 8568193  Agent:

MM3 In (5) new town centre development should avoid adverse impact on surrounding residential areas.

MM3 There should be a policy (S4) on the urban areas beyond the town centre to prevent inappropriate garden grabbing and to encourage a joined-up approach to site assembly in carefully selected residential areas where redevelopment linked to enhancement might be appropriate.

1. The Guildford Vision Group’s Objections and Concerns Which I Share

MM3 – POLICY S3. Guildford Borough Council must deliver real and coordinated results. The Town Centre must be designated a strategic site or sites

MM3 – POLICY S3. Guildford must have an effective local plan. Development rules must ensure quality of development across the Town Centre
MM3 – POLICY S3. Guildford Borough Council should adopt Guildford Vision Group’s proposals, including the new crossing or equivalent effective alternative, to deliver a safer, pedestrianised town centre with transport resilience and opened riverside.

**Comment:** MM3 - LPMM18/1933  **Respondent:** Mrs Fiona Curtis 8570273  **Agent:** Mrs Fiona Curtis

MM3 New Policy S3 - Delivery of development and regeneration with Guildford Town Centre

This policy is welcomed and must be implemented and not open to interpretation that permits this to be secondary to Greenbelt development as this would make a mockery of the NPPF.

It should be possible to build well-designed properties in the town, that meet much of the housing target, within the desired time frame without adverse impact on existing properties.

**Attached documents:**

---

**Comment:** MM3 - LPMM18/4527  **Respondent:** Gillian Cameron 8571585  **Agent:**

MM3 Policy S3 of the Local Plan should:

The Town Centre must be a designated strategic site.

It must be Masterplanned (as opposed to site by site development permitted) and quality of development assured.

It must deliver transport resilience by providing another road across the river and railway lines. Also ensure adequate water, power, and sewerage.

It must open up and protect the river corridor

**Attached documents:**

---

**Comment:** MM3 - LPMM18/5848  **Respondent:** Mr Gordon Farquharson 8571617  **Agent:**

MM3 – I note that Policy S3 has been introduced at a late stage but it is neither a plan nor a strategy. I take the view that Policy S3 should be converted into a Master Plan to be incorporated into the Local Plan and that in addition it should include an element of housing development. The following are vital aspects of a proper masterplan amongst other items:

- I note that there is no reference to the importance of buses nor bus connections

in the reasoned justification in 4.1.19. It is our view that there should be.
• I suggest that emphasis should be put on the possibility of underground car parking.
• There should be proposals for EV charging.
• There should be a review of the impact of ON-LINE shopping to the high street.
• Clear strategy for business rates.

Attached documents:

Comment: MM3 - LPMM18/3069  Respondent: Gordon Bridger 8571809  Agent:

The town centre proposals are so fundamental to this and indeed any plan that making them a subsequent development defies basic planning procedure. A plan needs to start with an analysis of resources available and from this devise appropriate policies. This inadequate planning sequence has serious consequences as set out below.

To produce a plan which scarcely considers the area where most of the retail is based, is the source of most employment and produces most of the wealth of the Borough, where most people work, contains a very high proportion of its population, and the cause of most of its development problems, is a serious flaw.

This serious planning flaw, which the Inspector has rightly drawn attention to, has meant that the Plan does not consider the huge potential for some 3,500 houses on this brown field site claimed by the GVG. The GBC Plan proposes only around 380 houses and a vast, but unspecified increase in retail development. Why was this claim not investigated? If correct it means a massive misallocation of housing to the Greenbelt. Challengers to housing plans on the Greenbelt would demand to know why these figures were not in the Plan? Failure to take these proposals into account is a serious omission and will undermine the Plan. There would be a perfectly good case for a Judicial Enquiry which would surely indicate the Plan was flawed if these figures are not included, or at least challenged in the Plan.

This plan appears to still be heavily reliant on a massive retail development, maybe no longer the 41,000 sm proposed, but it is not clear how much is now planned – but with only some 380 housing a large increase seems to be expected. This needs to be made clear. Since the retail market has imploded, due to structural changes it is difficult to see any justification for an increase in retail. This substantiates the GVG proposal for a substantially higher housing figure. Once again failure to take this into account is another reason why many planning applications on Greenbelt sites are certain to fail – they are not “essential” with so much retail allocated. This space allocated should have been stated and justified. The retail forecast have been based on a report by Carter Jonas which used data years out of date, was national data not relevant to Guildford, and most important ignored the priority need for housing. The current new Tunsgate shops, not fully rented are a testament to the inadequate retail forecasts.

The need for height of buildings restrictions in the Plan are woefully absent. The Inspector will surely realise when studying the Solum decision, and subsequent applications, for high rise buildings, that these out of scale and character and will ruin Guildford’s historic town centre and add to “the appalling surroundings” which the Inspector correctly identified. There should be a clear height restriction for the town centre which should not exceed 5 storeys.

Attached documents:

Comment: MM3 - LPMM18/1190  Respondent: Burpham Neighbourhood Forum (Jim Allen) 8581505  Agent:

Policy S3; Delivery of development and regeneration within Guildford Town Centre.

We support the general thrust of this policy as it supports a ‘Town Centre first’ approach but are surprised that only 50 additional homes could be found (White Lion Walk) as this fails to meet the Inspector’s requirement to make greater use of the town centre for residential use. The
further incursions into the Green Belt elsewhere in the Plan are even less justified when viewed in the context of not maximising residential potential in the urban area, particularly in light of the new ONS data.

Uncertainty in the retail industry continues and we maintain that the Guildford urban area, in particular the North Street Development site, should be revisited to increase the ratio of homes to retail and entertainment. In that regard this policy is too vague to be effective.

4.1.19 Town centre regeneration

This Plan makes no infrastructure provision for bypassing the town centre. As Guildford is a gap town subsection (g) is not viable or sustainable as people need to cross through, not simply stop on the outskirts. Given the lack of major external roads infrastructure in the plan to deal with this issue we recommend the deletion of subsection (g).

4.1.21 Town centre regeneration

We welcome the acknowledgement of the fact that provision of housing in the town centre is critical. The following statement should be removed as unrealistic:- ‘Consideration should also be given to the potential to minimise the provision of car parking where this can help optimise the density of development’.

Monitoring Indicators

The Council has failed to find sites to provide a substantive number of new homes within the town centre. Such an exercise is now more pressing given the question mark over the release of Green Belt land following the publication of the latest ONS data. It is not acceptable that there is no specific numeric target for homes in this location, since much of the concern at EiP related to lack of ambition regarding housing provision in the town centre.

Attached documents:

Comment: MM3 - LPMM18/5943  Respondent: Jennie Kyte 8585601  Agent:

MM3 (Policy S3)  Place shaping and character and design of new development

(5) b  The words ‘at both ground and roof level’ should be added, eg.

‘the historic environment, street pattern and topography at both ground and roof level.”

(5) c  The words ‘including the AONB’ should be added, eg.

‘ important views (including the AONB) into and out of the town centre from the surrounding landscape”.

(6) e  The words ‘and from’ should be added, eg.

‘improved access and views to and from the River Wey’

4.4.18 (c): Improving the public realm, including surfaces, in key town centre areas

The words ‘where appropriate’ should be added, eg.

‘Improving the public realm, including surfaces, where appropriate, in key town centre areas.’
Surfaces of heritage streets and alleyways with setts, pavements and sloping topography in key town centre areas should be protected. Their surfaces are in keeping with the High St and should be retained and upkept.

4.1.25 2\textsuperscript{nd} sentence: Add the words ‘where appropriate’ after the words ‘…… such as improving surfacing of public space ……’.

(Comment as above)

2\textsuperscript{nd} sentence: Add the words at the end of the sentence: ‘in areas which need enhancing’.

(Public art should be positioned carefully so as not to litter or overload streets and landscapes which are already beautiful. It should only be used in areas which need enhancing)

2\textsuperscript{nd} sentence: Add the word ‘planting trees’ after the word ‘landscaping’.

(Trees greatly enhance towns, particularly large trees when planted in places where they do not obstruct views)

1. 2\textsuperscript{nd} sentence as follows:

“This could occur through a range of interventions such as improving, \textit{where appropriate}, surfacing of public space, providing more generous pedestrian environments, landscaping, \textit{planting trees}, street furniture, lighting, and public art in areas \textit{which need enhancing}.”

4.1.19 This policy and the Town Centre Regeneration Strategy will help deliver the following objectives

There is no mention of a bus station/exchange with buses radiating out in all directions (important in a gap town). A bus station/exchange is essential for sustainable transport. This should part of the Town Centre Regeneration Strategy.

• The River Wey and its riverside should be a green wildlife corridor through the Borough. Its natural character and setting must not be harmed through over development close to the river, ugly or non-descript buildings or unnatural hard surfaces.

4.2.24/25 The town centre needs a Master Plan. However, any Master Plan needs to protect rather than destroy Guildford’s heritage. Its heritage has diminished over the years and in particular all remaining buildings in the High St need to be retained as well as the Town Bridge.

Any Master Plan should resist expanding concrete alongside the river.

Attached documents:
Comment: MM3 - LPMM18/5088  
Respondent: Elizabeth Critchfield 8586785  
Agent: MM3

- Any new town centre development should not cause any adverse impact on surrounding residential areas. Burpham has already been blighted by unsympathetic development and I would urge that consideration be given to a policy aimed at preventing inappropriate garden grabbing.

Attached documents:

Comment: MM3 - LPMM18/3227  
Respondent: Michael Bruton 8591169

1. S3 The town centre policy does not address issues related to the infrastructure deficit.

Attached documents:

Comment: MM3 - LPMM18/5734  
Respondent: Sarah Belton 8598561  
Agent:

MM3 wording includes the ‘efficient use of land’. Again, without clear definition of what this means, one could assume that this means more tower blocks like those being approved and built in Woking Town Centre. Vertical building is efficient, but history has shown that tower blocks have plenty of problems, both socially and physically.

Attached documents:

Comment: MM3 - LPMM18/2870  
Respondent: Richard Sinker 8599137  
Agent:

My wife and I have been resident in Guildford since 1996 and have had connections with the town since the mid 1970s. I therefore value the opportunity to make some observations on the Main Modifications and in particular to section MM3, the town centre, its development and regeneration.

Policy S3. I have read the new proposed version closely.

My overriding comment is that there is an expectation of a cohesive plan for the town centre to emerge but that this will, in large measure, be dependent on the private sector for which I read “developers.” I believe that no coherent plan can be realised from a situation in which private sector developers will produce a planning application for one or more buildings which are to include spatial/public realm proposals for adjoining parts of the town centre. How can a coherent overall town centre plan evolve when there are a number of uncoordinated peripheral plans being proposed by several developers? I sincerely believe, with respect, that such expectation is naive and unlikely to succeed.

My second main observation is that there are several requirements, for example as noted in paragraph 4.1.19, that are expected to be integrated into a successful overall plan that by definition will be growing piecemeal on the back of individual planning applications. How does the council propose to “play a key coordinating role aimed at achieving
delivery of development and generation..” with several partners as noted in paragraph 4.1.20? Surely there has to be a well thought out overall plan established and agreed before the approval of individual planning applications.

In this context I have not been able to understand the apparent reluctance of GBC to adopt and support the concept of masterplanning which precisely fills the role of defining and agreeing an overall plan before committing to major investments. I was most impressed by the initial Guildford Town Centre masterplanning proposals made by Allies and Morrison at the behest of Guildford Vision Group. Their work clearly demonstrated the great value of thinking through a complex set of factors and constraints over an extended period of time to arrive at a coherent and cohesive long term plan. With the further masterplanning work done, I am convinced that the latest proposal made by Guildford Vision Group should be formally adopted as an agreed plan. Perhaps I should add that my comments here are based on my own industrial experience gained over many years.

Persisting with stated major areas of floor space for retail in the town centre is perverse given the by now well known major inroads of online buying and the recent extensive failures of retail companies.

Attached documents:

Comment: MM3 - LPMM18/1324  Respondent: Mr Richard D Jarvis 8599201  Agent:

The addition of this policy is very welcome.

There should be a map of the town centre showing the sites included in the plan (Policies A1, A2, A3, A5, A6, A7, A8, A9, A10, A11, A12, and A60 ), so that it is clear how these relate to one another. The area affected, designated as the town centre, requires a Master Plan, for the same reason that the strategic sites are being required to be planned. The Town Centre Regeneration Strategy is not a sufficient basis for this Plan.

4.1.21 is supported. It should be linked to a higher target for housing in the town centre.

4.1.24 Second sentence, please change ’could’ to ’should’.

Attached documents:

Comment: MM3 - LPMM18/3508  Respondent: Development Planning Consultants (Richard Cooke) 8599937  Agent:

1.0 Preamble.

S.C. Properties is a property company specialising for the most part in housing. We are active in the Guildford and Godalming area and in the last 10 years have been responsible for the development of over 150 housing units in the Guildford market area. We are currently building in the Town Centre and have recently been given the Civic Trust award for the best new housing scheme in Waverley.

Our Managing Director is also the senior partner in the planning consultancy Development Planning Consultants.

We are ‘planners who develop’.

Our fellow Directors and partners have over 40 years experience of all aspects of the speculative and social housing markets.
The reason for this preamble is to establish our credentials as a firm involved in local area development for over 20 years, with a strong town planning emphasis.

2.0 Our involvement.

We currently own land at Tangley Place Farm (TPF), ‘Land to the north of Keens Lane’ which has been considered and then dismissed as a site for further allocation.

3.0 Background to the Plan

Following the examination into the Local Plan, the Inspector considered that provision should be made for a further 550 houses capable of delivery in the first five years of the Plan.

Whilst the main modifications (MM’s) have been inserted into the Plan, these representations follow the Sustainability Appraisal Report ‘Addendum’ of September 2018, which considers the new allocations under the ‘additional housing scenarios’.

3.1 Basic principles of the Plan.

The Inspector raised no objection to the broad spatial strategy proposed in the Plan. The strategy proposed a hierarchy of settlements ranging from Tier 1 (Guildford town centre) to Tier 10 (Green Belt villages).

The proposed MM’s suggest that this methodology should continue to be adopted by the plan makers, subject to being “flexible” to take account of timescale delivery issues, constraints, infrastructure and GB sensitivity.

Additionally, the Council must keep a 5 year supply of land, with supply not being subject to overreliance on one site, and not reliant on infrastructure outside the LA control.

Having established these parameters the MM’s rapidly proceed to allocate most of the new land coming forward to sites within Tier 10, the lowest Tier in the hierarchy.

4.0 Objections.

4.1 Tier 1 sites.

The SA considers no further housing sites will come forward in the initial 5-year period. Whilst it is appreciated that this was discussed at the Inquiry, I find it incomprehensible that there will be no further housing (outside that already identified in the Plan) coming forward within Guildford.

Land will come forward on old industrial/commercial premises in the Town Centre especially in the station area and along Walnut Tree Close. Whilst we understand the Council would prefer this area to remain commercial, the existence of PD rights to convert business space and the approval for various redevelopment schemes has already rendered this land as likely to go for residential and student development.

Additionally much of the development within town centres is by its nature small scale. Only when taken together do the numbers start to have an effect.

Whilst I understand that the delivery of these sites may be a matter of conjecture, a policy positively affirming the residential nature of the wider town centre would encourage the redevelopment of land for housing.
Our company is currently building within 200 yards of Guildford castle and our prior marketing suggests that there is a considerable demand for housing close to the town facilities.

Our assessment is that at least 150 units would come forward within the next 5 years, with policy encouragement from the Council.

4.2. Tiers 2 to 6.

The Council consider that no further units will come from these sources; we have no evidence to contradict that view.

7.0 Summary

Tier 1: Guildford Town Centre.

More encouragement for redevelopment and reuse of industrial, commercial and retail space.

Allocate further 150 dwellings.

Tier 8: Guildford and Godalming Urban areas.

Tangley Place Farm: 80 dwellings

Aarons Hill: 200 dwellings

Tier 10: Green Belt villages

Smaller sites only. 50-70 max on small sites.

see attachment for appendix

Attached documents: Richard Cooke Rep.pdf (894 KB)

Comment: MM3 - LPMM18/2945  Respondent: Roger Newland 8600929  Agent:

For the attention of the Head of Planning Policy at Guildford Borough Council,

Further to my previous comments below I would wish to add my further objection in the strongest possible terms to the proposed amendments to the plan particularly as it relates to Send, Ripley and Ockham.

Firstly I would ask that the Council reconsidered its whole strategy re the use of the green belt and better utilise the centre of Guildford where the Councils failed policies re the North Street sites and have created a large waste land with a feeling of dereliction which would be ideal for a dense housing led redevelopment scheme rather than retail, which is struggling nationally.

There remains no special circumstances to take large swaths of land along the A3 for development which is contrary to planning policy to safeguard the Green Belt. Guildford's infrastructure particularly the road network is already at breaking point and cannot absorb further developments.

Attached documents:
Downsedge Residents Association: Response to Guildford Borough Council - Local Plan changes, 2018

Background

Downsedge Residents Association was formed over 10 years ago to represent the views of Guildford residents in the area in the east of Guildford, bounded by the Epsom Road, Warren Road, St Omer and Tangier Road, including Gateways and Broadwater Rise, as well as The Ridgeway. Little Warren Close and Downside Road joined the Association more recently.

The area covered by our Association forms part of the easterly urban fringe of Guildford. We currently have around 80 household members, are members of GRA (the Guildford Residents Association) and support their responses to the changes being proposed to the current Local Plan.

The current Local Plan is unsound

We do not believe that the Local Plan as it currently stands, forms a “sound Local Plan”, for the following reasons:

• Lack of an Adequate Town-Centre Masterplan
  The Local Plan lacks a properly thought out Town Centre Masterplan. (MM3– Policy S3). If there was one, then this would have identified more Brownfield sites for town centre housing, thus reducing the need for Green Belt development;

Attached documents:

My response to your latest local plan consultation request is as follows:

Considering the huge amount of time and energy that has gone into the preparation of the current draft local plan, it is with regret that I nonetheless consider the result to remain inadequate to its purpose and therefore unsound.

The plan should be a reflection of an underlying strategy that credibly leads to a better borough for all in future. This is transparently not the case. Indeed any overall co-ordinated strategic vision for the borough is difficult to discern and may be absent altogether.

In particular, the lack of a co-ordinated, strategic approach to the town centre leads to the prospect of significant deterioration of traffic, accessibility and amenity and therefore a serious threat to the town’s commercial vitality in the longer term. Relatedly, the plan is exposed to even greater infrastructure shortfalls if A3 improvements are not forthcoming, and the plan offers no mitigating ‘plan B’ for such a contingency. At the same time, a huge opportunity is being missed to capitalise on current and anticipated brownfield sites within the town, many already within the councils remit, which could be used to significantly reduce pressure on greenbelt land for housing. Taking these aspects into account, the town centre policy, S3, is wholly inadequate.

Attached documents:

MM3 (in 5): There should be a policy in place to prevent inappropriate garden-grabbing in the residential suburbs around the town centre.

Attached documents:

Comment: MM3 - LPMM18/2670  Respondent: CPRE Surrey Branch & Guildford District (Tim Harrold) 8607169  Agent:

S3
The Town Centre policy is inadequate and does not address the infrastructure deficit. There is too much reliance on A3 improvements

Attached documents:

Comment: MM3 - LPMM18/5992  Respondent: Guildford Borough Council (Tony Rooth) 8607585  Agent:

There is a serious question, potentially fundamental flaw in the submission Local Plan between the assessment of retail/office allocation especially in the town centre and the resulting demand for housing on the Green Belt.

In short, the town centre will not support the amount of planned retail in particular in the light of the continuing and increasing challenges presented by internet shopping.

The realistic situation is that shops in our town centre are closing because of various factors including business rates and rents. This can be seen from the number of empty premises especially on the Upper High Street, North Street and in the new Tungate Quarter. Many chains are not occupying or closing shops either because they do not have the continuing need for premises, are in financial difficulties (eg House of Fraser) or have gone into administration (eg Maplins).

This fundamental change in spatial allocation to the retail sector means that there is more land and potential for housing and other development in the town centre. A knock on effect would be to increase the potential for further housing on brownfield sites and hence reduce the pressure for housing in the Green Belt especially in the light of the potential reduction in housing need following the revised ONS figures.

Therefore, I think the council needs to carefully assess both the retail and office needs in our town centre and the potential additional space available for additional housing development there subject to suitable scale, height, design and views across our town centre landscape. The borough needs more affordable, social and public sector housing for the likes of nurses, police and other much needed public services.

Attached documents:

Comment: MM3 - LPMM18/5439  Respondent: Julian Cranwell 8640353  Agent:

MM3
Policy S3 needs to be stronger all round. Most of the borough’s population live, and want to live, in the Guildford urban area. Urban regeneration, not car-dependent Green Belt housing, should therefore be the centrepiece of the plan. This would be more consistent with national policy and GBC’s own spacial strategy.

The current wording evades several major issues and is too open to loose interpretation in years to come. It needs -

- explicitly to prioritise residential over retail (see above).
- to make plain that the town’s character, including “important views”, can only be protected with a presumption that height will be limited (depending on exact location) to about 4-6 storeys.
- to make more explicit the link between giving “priority for pedestrians and cyclists over motor vehicles” and more realistic, higher housing densities that incentivise walking and cycling, rather than low-rise, suburban-type homes in the town centre with gardens and garages. All this is do-able without compromising character, as London has shown.
- needs to highlight the important role town-centre development can have in kick-starting and front-loading the whole plan, boosting housing numbers in the early years as government policy requires, leveraging GBC’s comparative advantage (relative to greenfield development) as an urban landlord.

Attached documents:

Comment: MM3 - LPMM18/3764  Respondent: Victoria Sinnett 8667713  Agent: MM3 In (5) new town centre development should avoid adverse impact on surrounding residential areas.

MM3 There should be a policy (S4) on the urban areas beyond the town centre to prevent inappropriate garden grabbing and to encourage a joined-up approach to site assembly in carefully selected residential areas where redevelopment linked to enhancement might be appropriate.

1. The Guildford Vision Group’s Objections and Concerns Which I Share

MM3 – POLICY S3. Guildford Borough Council must deliver real and coordinated results. The Town Centre must be designated a strategic site or sites

MM3 – POLICY S3. Guildford must have an effective local plan. Development rules must ensure quality of development across the Town Centre

MM3 – POLICY S3. Guildford Borough Council should adopt Guildford Vision Group’s proposals, including the new crossing or equivalent effective alternative, to deliver a safer, pedestrianised town centre with transport resilience and opened riverside

Attached documents:

Comment: MM3 - LPMM18/1483  Respondent: John and Susan Burge 8686913  Agent: MM3 – POLICY S3 on the Town Centre (MM3)

The town centre of Guildford to the north of North Street continues to be an eyesore. This should be made available immediately for new housing. I OBJECT to the continued prevarication about the development of this site.

Attached documents:
Comment: MM3 - LPMM18/1352  Respondent: Sir Michael Aaronson 8687041  Agent:

I WELCOME this new Policy S3, which pays long overdue attention to the importance of Guildford Town Centre in meeting the housing needs of the Borough. I note the statement in “Reasoned Justification 4.1.21” that "The delivery of housing in the town centre adds to its vitality and vibrancy...the town centre also represents the most sustainable location for new higher density housing. Whilst the Local Plan provides for sufficient sites to meet housing needs over the plan period, as part of regeneration efforts, more housing is likely to come forward over the plan period. [My emphasis.]

Given this acknowledgement, it is disappointing that GBC has not set itself more ambitious targets for housing development in the Town Centre, but has instead fallen back on taking more land out of the Green Belt. Under the section "Monitoring Indicators" there is an indicator "The number of new homes completed each year in the town centre", but the "Target" is "N/A"! That doesn't sound like a very serious target, and I would request that one be included in the final version of the Local Plan.

Attached documents:

Comment: MM3 - LPMM18/4771  Respondent: Rosmarie Roberts-Kunz 8711841  Agent:

Policy S3 needs to be strengthened. Most local people want to live in the Guildford urban area. Urban regeneration, not car-dependent Green Belt housing estates, should be the plan’s flagship policy. This would be more consistent with national policy and GBC’s spacial strategy.

The current wording evades several major issues and is too open to loose interpretation in years to come. It needs explicitly to prioritise residential over retail (see above). It needs to make plain that the town’s character, including “important views”, can only be protected with a presumption that height will be limited (depending on exact location) to about 4-6 storeys. It needs to make more explicit the link between giving “priority for pedestrians and cyclists over motor vehicles” and more realistic, higher housing densities that incentivise walking and cycling, rather than low-rise, suburban-type homes in the town centre with gardens and garages. All this is do-able without compromising character, as London has shown. It also needs to highlight the important role town-centre development can have in kick-starting and front-loading the whole plan, boosting housing numbers in the early years as government policy requires, leveraging GBC’s comparative advantage (relative to greenfield development) as an urban landlord.

Comment: MM3 - LPMM18/5337  Respondent: Helen Jefferies 8717921  Agent:

MM3

Object

5c/5d What are the historic vies that need protecting? Is there a list or will this just provide room for further argument between stakeholders?
6d What is a legible route?

4.1.2.1 Reference to minimisation of car parking should include a limit on “on street” parking as “consideration should also be given” is both ineffectual and unenforceable.
4.1.24 Rights of way rather than right of ways

Attached documents:

Comment: MM3 - LPMM18/3784  Respondent: Ian Slater 8731649  Agent:

MM3 In (5) new town centre development should avoid adverse impact on surrounding residential areas.

MM3 There should be a policy (S4) on the urban areas beyond the town centre to prevent inappropriate garden grabbing and to encourage a joined-up approach to site assembly in carefully selected residential areas where redevelopment linked to enhancement might be appropriate.

1. The Guildford Vision Group’s Objections and Concerns Which I Share

MM3 – POLICY S3.Guildford Borough Council must deliver real and coordinated results. The Town Centre must be designated a strategic site or sites

MM3 – POLICY S3. Guildford must have an effective local plan. Development rules must ensure quality of development across the Town Centre

MM3 – POLICY S3. Guildford Borough Council should adopt Guildford Vision Group’s proposals, including the new crossing or equivalent effective alternative, to deliver a safer, pedestrianised town centre with transport resilience and opened riverside

Attached documents:

Comment: MM3 - LPMM18/3194  Respondent: Simon Marshall 8732353  Agent:

S3. The town centre policy is inadequate and does not address the infra structure deficit nor the structural changes currently being witnessed across the country in terms of the use of town centres.

Attached documents:

Comment: MM3 - LPMM18/3212  Respondent: Sally Erhardt 8796481  Agent:

The Local Plan is Unsound

I would suggest that the Local Plan is unsound because of the following, and should be re-examined:

1 MM2. The latest ONS figures and projections make the proposed housing number invalid, as a result the public hearings should be reopened, and the figures re-evaluated. The same would go for Woking and result in a far lower figure, however there should no requirement for Guildford to take on the unmet numbers from Woking.

2 There are many brownfield Sites in the centre of Guildford that have not been considered or used efficiently. This has resulted in the proposed development of far too much green belt and should not be approved.

3 The exceptional circumstances to develop the green belt do not add up and should be re-examined.

4 There are no guarantees regarding the improvements to the A3 which is critical to the developments.

Problems with the Main Modified Plan
1. MM3 – POLICY S3. Guildford Borough Council must deliver real and coordinated results. The Town Centre must be designated a strategic site or sites
2. MM3 – POLICY S3. Guildford must have an effective local plan. Development rules must ensure quality of development across the Town Centre
3. MM3 – POLICY S3. Guildford Borough Council should adopt Guildford Vision Group’s proposals, including the new crossing or equivalent effective alternative, to deliver a safer, pedestrianised town centre with transport resilience and opened riverside

ii) There is a strong case for taking out a strategic site and more scope for timely town centre provision. This makes table S2b out of date and MM3 inadequate and in need of re-examination.

Attached documents:

Comment: MM3 - LPMM18/2957  Respondent: Rob Sewell 8849313  Agent:

I also think that the focus in respect of the town centre should be to ensure that current retail units aren’t too high. The High St works so well because of its lower rise character. Things like House of Fraser really look quite ugly from North St. Encouraging any further high rise development would be bad. Retail is changing, and the successful retail areas are increasingly focussed on mixed use; creating an experience rather than just a bunch of shops. This should be a focus for the plan.

Attached documents:

Comment: MM3 - LPMM18/4258  Respondent: Anthony Umney 8851777  Agent:

MM3 – Policy S3

• There needs to be strategic designated sites in the Town Centre in order to achieve a coherent and coordinated development.
• Development rules need to be established to ensure quality of developments in the Town Centre and to regulate the height of developments to a maximum of seven storeys.
• GBC should consider adopting the Guildford Vision Group’s proposals including the new crossing or equivalent effective alternative to deliver a safer pedestrianised town centre with transport resilience and opened riverside.

Attached documents:

Comment: MM3 - LPMM18/3818  Respondent: John F. Wood 8852289  Agent:

S3: The policy for the town centre is totally inadequate and does not address the infrastructure deficit.

MM3 In (5) new town centre development should avoid adverse impact on surrounding residential areas.

MM3 There should be a policy (S4) on the urban areas beyond the town centre to prevent inappropriate garden grabbing and to encourage a joined-up approach to site assembly in carefully selected residential areas where redevelopment linked to enhancement might be appropriate.
Comment: MM3 - LPMM18/2039  Respondent: John Coleman 8855649  Agent:

1. The Guildford Vision Group’s Objections and Concerns Which I Share

MM3 – POLICY S3. Guildford Borough Council must deliver real and coordinated results. The Town Centre must be designated a strategic site or sites.

MM3 – POLICY S3. Guildford must have an effective local plan. Development rules must ensure the quality of development across the Town Centre.

MM3 – POLICY S3. Guildford Borough Council should adopt Guildford Vision Group’s proposals, including the new crossing or equivalent effective alternative, to deliver a safer, pedestrianised town centre with transport resilience and opened riverside.

Comment: MM3 - LPMM18/5462  Respondent: Ramsey Nagaty 8858113  Agent:

3. The Council should prioritise early regeneration of the town centre. The Inspector rightly identified much of the Town Centre as not worthy of protection and ripe for development. The change in retail habits further allows town centre land to be used for Housing and regeneration. The Guildford Vision Group have stated that the Town Centre could enable 2500-3000 houses which would save a further Greenbelt (so called) Strategic Site on the Greenbelt being developed.

3. The town centre policy, S3, is thus inadequate and also does not address the infrastructure deficit.

Comment: MM3 - LPMM18/4880  Respondent: Deborah Wardrop Griffiths 8858369  Agent:

Policy 3 MM3

I would urge Guildford Borough Council to adopt the Guildford Vision Group proposals, we deserve a cohesive, sensible plan to enhance our historic town. We need better pedestrianisation, solutions to our dire traffic problems, quality, attractive developments especially near the riverside, all provided by the Vision Group’s Plan. What we do not need is piecemeal developments that deliver none of these.

Comment: MM3 - LPMM18/5875  Respondent: Clare Bevan 8859553  Agent:
1. On line shopping means less space should be allocated to retail and those sites in town could be allocated to sustainable housing

Attached documents:

Comment: MM3 - LPMM18/3824  Respondent: David Smith 8862145  Agent:

The central area of the town should be used for housing and the reduction of traffic, for a solution to the problems caused by through traffic, and for provision of housing land along the river corridor (as proposed in the Allies and Morrison Masterplan – approved by GBC). The Plan should undertake to invest in infrastructure for housing, pedestrian movement. The dependence on Retail is excessive and irrelevant in the internet age. Why has the Masterplan by A&M been shelved?

Attached documents:

Comment: MM3 - LPMM18/2369  Respondent: Angus McIntosh 8865377  Agent:

Local Plan Consultation submission by 23rd October 2018

It is clear the Planning Inspector needs to re-open this plan; the plan needs to be re-examined. It should not progress with a few amendments but needs for more verifiable evidence; at present it is unsound which might lead to a Judicial Review.

Here are a few examples why it should be re-considered:

There is a "sustainable corridor" going from no-where to no-where. It does not seem to link into the current road, footpath, cycle track infrastructure and there is a clear path showing how this much happen, including how it links westwards with the SOLUM rail station project, and eastwards into Guildford town centre.

At the Planning Inquiry, Jonathan Bloor, the Inspector, clearly asked GBC to prepare a Town Centre Plan (which was not produced at the inquiry). The few pages of words submitted are NOT A PLAN. There is no empirical evidence, nor clear view, as to how these words related to a verifiable plan.

Policy 3 should have been re-written, but it is not clear that this has been done, nor it reflects actual meetings held with the likes of GRA, GGG, G.Soc., GVG and others to reflect their views, as clearly requested by the Inspector. Were there any, and where is the Agenda and Minutes from each meeting? There may have been brief short meeting, but there is no evidence any of the ideas have been used from these very knowledgeable and highly qualified organisations.

There is no evidence that there are clear plans to identify additional site for residential development, in the centre of Guildford. If GBC can identify sites on the Green Belt for development (many without adequate transport & other infrastructure) it should ALSO identify sites in the centre of Guildford

Even currently, and if there are more residents in the central area (and even more living within the hinterland of Guildford, their main town centre), the infrastructure needs totally overhauling, and up-grading. There is almost no clear evidence: -

- there are improved flooding prevention plans,
- there will be a substantial reduction in the air pollution (one of the worst towns in Surrey),
- there are no clear improvements for pedestrian movement in the existing town centre,

- there are no proposals to reduce road accidents (one of the worst towns in Surrey),

- there is no evidence that GBC intend to reduce the traffic congestion (THE worst town in the UK). The 40 year old gyratory system is notoriously congested and highly dangerous for cyclists.

- Where extra schools, doctors surgeries and other facilities will be located.

This letter is written in a private capacity as a local resident since 1986

Comment: MM3 - LPMM18/3104  Respondent: Carol Wilson 8896161  Agent:

NEW POLICY S3 ON THE TOWN CENTRE (MM3)(S3)
• The hierarchy of development has not been used, particularly in the town centre. There is ample brownfield there and this would be better used for 3,000 dwellings than for retail. The Internet has changed shopping habits and reduced some of the need for retail shops, so we have enough retail space yet not enough housing.

• The town centre is universally acknowledged (including by the Council) to be the largest and most sustainable location in the borough, then please get on and use it, instead of greenbelt land. Pollution, traffic jams and car use would be less if houses were in the centre instead of car only Greenfield sites.

• A town centre policy is necessary, but the current draft falls well short of the requirement.

• There is too much reliance on A3 changes and these are not under the control of the GBC and infrastructure is inadequate.

Attached documents:

4. the draft local plan’s emphasis on retail provision is, I believe, out of date in that current trends suggest a continuing increase in online shopping, witness the current concerns, generally, for the UK’s decline in high street shopping. The current allocation proposed for retail should be reviewed and any savings should, if feasible, be allocated to housing, thus providing an element of relief to pressures to utilise the Green Belt.

MM3 Policy S3 Delivery of development and regeneration within Guildford Town Centre

We support the “Town Centre first” approach but are concerned that only the White Lion Walk site, providing 50 homes, could be found. This hardly accords with the Inspector’s requirement to make greater use of the town centre for residential use. How can the Green Belt incursions be justified if the residential potential in the urban area is not realised?

The retail industry still faces an uncertain future and we feel that consideration should be given to increase the ratio of homes to retail and entertainment.

(5) New town centre development should avoid adverse impact on surrounding residential areas. We consider there should be a policy (S4) on the urban areas beyond the town centre to prevent inappropriate garden grabbing.

Reasoned Justification

Para 4.1.19 Subsection (g) refers to a “drive to, not through” concept. This takes no cognisance of the fact that Guildford is a gap town and the phrase should therefore be deleted, as there is no indication in the plan of external roads infrastructure to cope with this issue.

There is no reference to the importance of bus connections, or to the possibility of underground car parks; we feel this should be included.

2. NEW POLICY S3 ON THE TOWN CENTRE (MM3)

The new Town Centre Policy does not include details of what is planned for the town, whereabouts it is planned, or when it is proposed that it should happen. At the Examination in Public the Council stated that the need to demonstrate a 5-year housing supply had led them to allocate rapidly developable sites that were at the least sustainable, and were at the bottom of the hierarchy. The Town Centre Policy should be revised to take advantage of the sustainable opportunities in the town centre, and to reduce the development of sites in the Green Belt. I strongly object to any building on the Green Belt when there are alternatives.

**Comment: MM3 - LPMM18/1507  Respondent: Sue Reeve 8928961  Agent:**

1. **NEW POLICY S3 ON THE TOWN CENTRE (MM3)**

The version of the Local Plan being consulted on includes a new policy on the town centre (Policy S3). I make the following comments and objections

- The town centre is universally acknowledged (including by the Council) to be the largest and most sustainable location in the Borough, but as currently drafted Policy S3 is wordy, general and imprecise, and fails to specify concrete in terms of what is planned for the town, whereabouts it is planned, or when it is proposed that it should happen.

- A town centre policy is necessary, but the current draft falls well short of the requirement.

- At the Examination in Public in June 2018, the planning inspector stated that the town centre plans lacked a policy and strongly indicated that there should be significantly more housing provided in the town centre (agreed...
to be the most sustainable location of all) and questioned the amount of retail over-provision outlined in the previous Local Plan, given the reducing trends of town centre retail needs. None of this has been addressed in any concrete way.

**Given the lack of solid policy on town centre redevelopment which should include a much higher number of households, the policy must be revised and the Public Examination of the Plan by the Planning Inspector must be re-opened.**

**Comment:** MM3 - LPMM18/3173  **Respondent:** Jenny Austin 8946113  **Agent:**

2 The town centre policy is inadequate, therefore, and does not deal properly with the infrastructure deficit.

   **Attached documents:**

---

**Comment:** MM3 - LPMM18/2413  **Respondent:** Joan Wrenn 8946497  **Agent:**

MM3 policy S3. Guildford Borough Council must deliver real and coordinated results. The town centre must be designated a strategic site, or sites.

MM3 policy S3. Guildford must have an effective local plan. Relevant rules must ensure quality of development across the town centre. Rules should be quantitative where possible and not nearly bland urgings of high-quality development as at present which are meaningless.

MM3 policy S3. At morning and evening peak times Guildford is one of the most congested towns in the UK and Europe. Much greater priority should be given to improving and creating safe and attractive pedestrian and cycle routes.
Proper consideration should be given to Guildford Vision Group’s proposal for an additional river crossing to relieve congestion on the one-way system.

MM3 There should be a policy (S4) on the urban areas beyond the town centre to prevent inappropriate garden grabbing and to encourage a joined-up approach to site assembly in carefully selected residential areas where redevelopment linked to enhancement might be appropriate.

MM3 In (5) new town centre development should avoid adverse impact on surrounding residential areas.

The current draft of the Local Plan is unsound because:–

1. The revised Housing Need figures mean that much proposed greenbelt development is no longer justified, and the “exceptional circumstances” that are required as grounds to allow greenbelt development do not exist.
2. The Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited.
3. Proper planning of the town centre would help to promote more relevant sensitive development. The hastily added section is based on pre-Internet retail models and numbers.
4. There is no policy dealing with urban areas beyond the town centre such as the one where we live.
5. There are few concrete proposals for reducing congestion. Where there are any, these are outside Guildford’s control, like widening the A3, and therefore there is nothing really to prevent the major greenbelt development taking place irrespective of the congestion.

Comment: MM3 - LPMM18/2069  Respondent: Tim J. Harrold 8971233  Agent:

S3

The Town Centre policy is inadequate and does not address the infrastructure deficit. There is too much reliance on A3 improvements at Guildford which are beyond the Council’s control and have no fixed timescale.

Attached documents:

Comment: MM3 - LPMM18/5730  Respondent: Andrew herzig 8990721  Agent:
These newly-published figures also make table S2b out of date and MM3 inadequate and in need of re-examination. The new lower figure of 360 homes would make it much more achievable for the Council to plan the regeneration of the Town Centre, in a more considered, timely, long-term way.

**Attached documents:**

**Comment:** MM3 - LPMM18/4692  **Respondent:** Shelagh Yeomans 8993121  **Agent:**

MM3 - policy S3. Guildford Borough Council must deliver real and co-ordinated results. The Guildford town centre must be designated a strategic site or sites.

MM3 - policy S3. Guildford Borough Council should adopt the Guildford Vision Group proposals, including a new crossing or equivalent effective alternative so as to deliver a safer pedestrianised town centre with transport resilience and opened riverside.

**Attached documents:**

**Comment:** MM3 - LPMM18/4723  **Respondent:** Fiona Yeomans 8996481  **Agent:**

- **Proposed radical changes to traffic through the one way system.** The plan to restrict severely the one way system permanently, including limiting Bridge Street to all but buses and taxis, is “potty” to quote one observer. It WILL NOT WORK !! People do need to drive THROUGH Guildford not just TO Guildford. How will those of us who live on the west side of the River Wey get our shopping home? (Answer is probably to shop in Godalming instead). How do we get to the GP surgery (on the east side). What about the elderly and very young who can’t walk or cycle? Yes of course improvements need to be made. Until the A3 problems are sorted the town centre will always be vulnerable to periodic gridlock as traffic diverts away from the A3.

**Attached documents:**

**Comment:** MM3 - LPMM18/1177  **Respondent:** Mr David Ogilvie 9231713  **Agent:**

(1) This policy is wishful thinking developers will want to make money. The plan should include sufficient masterplanning, regarding land use, building height, density and plot ratio to render this paragraph unnecessary.

(2) To require all major developments to include housing is not good planning. e.g. office and housing does not mix well.

(3) This policy will encourage over development and the omission of good landscaping and open space.

(6) f) add good landscape design.

4.1.18(b) This strategy does nothing to improve pedestrianisation all the way to the station or to reduce traffic congestion, noise, danger and pollution on the gyratory.

**Attached documents:**
4.1.21 the Local Plan does not do sufficient to address brownfield first as required by the NPPF. It does not give guidance regarding building densities, building heights, plot size, plot cover landscape requirements or parking requirements. Parking provision should relate to use, access to public transport and not be a means of encouraging dense development.

For the reasons above I consider the town centre proposals unsound and the Local Plan hearing should therefore be reopened.

I have previously submitted a plan to GBC that will solve most of these problems as far back as 2012 and more recently.

Attached documents:

Comment: MM3 - LPMM18/4360  Respondent: Patricia Wood 9237953  Agent:

S3: The proposed policy for the town centre is completely inadequate and does not address the infrastructure deficit.

It is essential that the public examination is reopened, so that the latest information from the Office of National Statistics can be applied.

I completely support the representation made by WAG, which was written with advice from Richard Harwood QC.

Attached documents:

Comment: MM3 - LPMM18/5205  Respondent: G4 residents association (Sir or Madam) 9238593  Agent:

MM3
Policy S3.
4.1.19 (g)

Recent roadworks have highlighted the problems for those who live in the town centre and do need to drive through as opposed to those visiting who we would encourage to drive to not through. We must not forget local traffic needs and the impact on family and business when a simple journey is hampered. Improvements to bus services with smaller local buses might be one answer. Of course all this may change with autonomous cars but the shorter term problem needs to be addressed if we are to have a successful town centre community.

4.1.21 an increase in car club provision would help

4.1.22 provision of small flexible units for mixed light industrial/design/small business would benefit residents in the town who currently have to work at home or drive out of town to work spaces.

Attached documents:

Comment: MM3 - LPMM18/5180  Respondent: David Reeve 9335041  Agent:
Policy S3: Delivery of Development and Regeneration within Guildford Town Centre

**MM3 – OBJECTION S3-1**

This Policy attempts to fill an uncomfortable gap that existed in previous drafts of the Local Plan, and is therefore welcome on that basis.

However, it consists almost entirely of aspirational wording without specifying anything concrete in terms of what is planned for the town, whereabouts it is planned, or when it is proposed that it should happen. For example, the Policy applies to the “town centre” but makes no reference to any map that defines the geographical extent of the Policy. As such it signally fails to contain the minimum necessary tangible information that is required in order for it to be considered as a credible Policy in a Local Plan. It also fails to meet the requirements of NPPF (March 2012) paragraph 154 that “Only policies that provide a clear indication of how a decision maker should react to a development proposal should be included in the plan.” As such, the Plan is unsound.

**MM3 – OBJECTION S3-2**

As part of the “Reasoned Justification”, paragraph 4.1.21 states that “Whilst the Local Plan provides for sufficient sites to meet housing needs over the plan period, as part of regeneration efforts, more housing is likely to come forward over the plan period.” Table S2b of the Plan is reproduced below with an extra column identifying sites that are currently in the Green Belt. The table shows that 66% of the planned housing in the Local Plan (excluding existing permissions & completions, windfalls and rural exception housing) is destined to be built on land that is currently in the Green Belt. If there is confidence that additional housing proposals will come forward during the plan period, then the exceptional circumstances necessary to amend Green Belt boundaries or the very special circumstances necessary to justify any development in the Green Belt do not exist (let alone the situation prevailing in this Plan, where a clear majority of the development is proposed on land that is currently in the Green Belt).

</table>

*This total excludes trend based housing supply (Windfall and rural exception) as well as completions and permissions, whether allocated or not.

Moreover, during the EIP the Council categorically stated that an absence of suitable sites being available in the early part of the plan period had led to a Plan in which much of the early development would be located on sites at the bottom of the hierarchy, and in the most unsustainable locations. Under such circumstances, how can a very substantial “take” of Green Belt be justified when the Local Plan glibly talks about additional housing coming forward in town centre – which is the most sustainable are in the entire borough?

The Plan is unsound.

**Attached documents:**

**Comment:** MM3 - LPMM18/4868  **Respondent:** Guildford Vision Group (John Rigg) 9531041  **Agent:**
MM3 - Policy S3: Delivery of development and regeneration within Guildford Town Centre

The inclusion of policy S3 in response to the inspector's request at the hearing sessions is noted by GVG but does not achieve the objectives or aspirations of the Group and, more importantly, the residents of Guildford. And this is after previous plans failed to address issues or generate action through positive planning. The council consistently abrogates its responsibilities to masterplan the town centre to address local issues, even though it is the major land owner and the relevant authority, and could play a formative role in creating a vibrant Guildford.

In general terms there is a need for basic masterplanning. There is even a distinct lack of any map or plan which indicates which area policy S3 applies to. This should be included. It is vital that policy S3 is applied to a wider area than just the area designated as Guildford Town Centre on the proposals map, and it should apply to the wider hinterland around the town centre where the more significant issues of urban decay exist, as highlighted by the Inspector during the hearing sessions. The GVG masterplan considers the much wider area around Woodbridge Meadows and Walnut Tree Close and this area should also fall under the remit of policy S3. Alternatively, the council should consider the inclusion of a policy S4 to cover the wider Guildford Urban Area as agreed within the joint GVG and Guildford Society submission made during the Planning Examination.

Paragraph 4.1.17 of the introductory text to policy S3 sets out how the delivery of aspirations of policy S3 will be delivered, including the future Area Action Plan (AAP). It remains abundantly clear to GVG that there is no obligation on the council to begin the AAP at any time in the future. This could be delayed indefinitely, as with the 2006 Town Centre Area Action Plan, whilst the town centre continues to fall into decline, including the supporting infrastructure. In order for the plan to be sound in terms of effectiveness it is crucial that there is a clear obligation on the council to begin the AAP immediately upon adoption of any plan, conditional upon other issues of soundness being resolved.

In document ID7 (Points raised during the Spatial Strategy session for response by the Council) the inspector raised a number of key points to the council in relation to the town centre as follows:

- For exceptional circumstances to exist to release land from the Green Belt, shouldn’t it be clearly demonstrated that all opportunities for development in the town centre have been exhausted?
- Isn’t the residential capacity of the town centre much higher than the Council states? How is it that the GBCS looked at potential residential development sites but such an approach does not appear to have been done for the town centre?
- Does the plan rely too much on additional retail in the town centre, limiting the opportunity to provide many more homes where both young and old people want to live? Isn’t the North Street redevelopment site within the Council’s gift to deliver homes early in the plan period?
- Should the plan pay more attention to improving the environment in the town centre?
- Should the spatial strategy pay greater attention to deprived parts of the urban areas?
- Shouldn’t the Council be emphasising the need for the University to intensify the use of its sites before new Green Belt land is taken? Areas of surface car parking could be developed.

It is considered that the council has simply not addressed the rest of the questions and GVG shares the concern of the inspector in this regard. Whilst the intention of policy S3 may be to address the town centre it does not address the connection with the fundamental questions, particularly around Exceptional Circumstances, which are considered to be a matter of soundness.

Paragraph 4.1.20 of the Reasoned Justification accompanying Policy S3 sets out that the Council will play a key co-ordinating aimed at achieving regeneration. It is disappointing to see that the council sees itself as only playing a co-ordinating role in the regeneration of the town centre and fails to recognise the unique role that the council can play as an owner of substantial land holdings across the town centre, and as the planning authority with the appropriate powers. An example of how councils can play a key role as land holder as well as facilitator of development is the Slough Urban Renewal initiative undertaken by Slough Borough Council.

Paragraph 4.1.20 goes on to set out the partners that the council will be working with to deliver policy S3 which include Surrey County Council, Network Rail, National Trust and the Private Sector. None of these parties will initiate and take forward solutions beyond their ownership. GBC, or a third party instructed by GBC, needs to take on this role.
It is notable that nowhere does the council's thinking include resident groups such as GVG, The Guildford Society, Guildford Bike User Group, Holy Trinity Amenity Group, or Guildford Residents Association. Nor does it include any obligation of the council to be the facilitator or to work with the residents of the borough. These are matters which are fundamental to the success of policy S3. Historically the council has a history of consulting residents but not engaging to develop plans acceptable to residents.

Appendix 1 - Policy S3: Delivery of development and regeneration within Guildford Town Centre

<table>
<thead>
<tr>
<th>Introduction</th>
<th>GVG Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>4.1.12 Guildford town centre has a unique setting and historic character and is the largest retail, service, administrative and commercial centre in the county of Surrey (measured by floorspace and number of units). With good transport accessibility by rail and road, it is one of the key town centres in the South East outside of London.</td>
<td>Accepted</td>
</tr>
<tr>
<td>4.1.13 The town centre is centred on two linear features, the River Wey, and the High Street that rises up the valley side from Town Bridge. Related to this, the centre has striking topography, with attractive views to the surrounding countryside south and east of the town centre. It is renowned for its picturesque historic High Street and lanes off it, known as ‘gates’ which link the High Street, the Castle and the other key shopping street, North Street. The setting and the historic street pattern in the central area of the town centre are a vital part of its special character as is the range and concentration of heritage assets.</td>
<td>The Town Centre has large areas of deterioration and obvious opportunities for a town centre plan with an integrated approach to the serious issues identified in the plan at examination.</td>
</tr>
<tr>
<td>4.1.14 The NPPF states that policies should recognise that residential development often plays an important role in ensuring the vitality of centres and therefore should encourage residential development on appropriate sites. The Council is committed to ensuring that the policies and allocations within the Local Plan, including those within the Guildford Town Centre, are deliverable and its objectives are realised over the plan period. Furthermore, the Council remains committed to supporting any further opportunities for future development and regeneration within the town centre that reinforces its important</td>
<td>The council need to accept responsibility for masterplanning the town centre and assist developers in others to deliver the plan.</td>
</tr>
<tr>
<td></td>
<td>The council as the principal landowner in the Town Centre has a KEY role in regenerating the town centre – it is not just support</td>
</tr>
</tbody>
</table>
role and function. The Guildford Town Centre is intended to function as the key focus for a more intense vibrant mix of uses including residential, office, retail, leisure, tourism, entertainment, and arts and cultural facilities.

4.1.15 The Council is facilitating the delivery of development through a range of proactive measures. These include:

Ø Driving and unlocking key development projects that form a basis for the delivery of the Local Plan (such as at North Street, A6; Guildford Park Road and Bright Hill car parks, A11 and A12);

Ø Playing a lead role, working with other delivery partners, in infrastructure interventions that realise growth and regeneration opportunities;

Ø Advancing and collaborating on key regeneration opportunities as part of the Guildford Town Centre Regeneration Strategy, which include leveraging its own landholdings as part of efforts to promote mixed use and higher density development supporting the vitality and vibrancy of the town centre.

4.1.16 In undertaking and further to these actions, the Council will explore the use of a range of mechanisms at its disposal to support regeneration and the accelerated development of housing and mixed-use schemes. These include using, where appropriate, compulsory purchase powers, granting permission in principle, assisting in land assembly and playing a coordinating role with its development partners around development opportunities.

4.1.17 The borough’s town centre will form the key focus for these measures to support and accelerate growth in this sustainable location and maximise the use of previously developed land. This will occur with careful attention to the Local Plan’s design policies, Development Management policies, the provisions of any possible future Area Action Plan, as well as relevant SPDs including guidance on strategic views into and out of the town centre which will help to guide the appropriate location, form, scale and massing of development.
well as relevant SPDs including guidance on strategic views into and out of the town centre which will help to guide the appropriate location, form, scale and massing of development.

<table>
<thead>
<tr>
<th>POLICY S3: Delivery of development and regeneration within Guildford Town Centre</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Coordination of development in the Town Centre</td>
<td>There can be no co-ordination without masterplanning to secure the broad range of plan objectives including addressing flooding, power, water and movement corridors.</td>
</tr>
</tbody>
</table>

(1) Development proposals will be encouraged to seek opportunities to enable the future development potential of adjacent sites and not undermine their development potential.

More efficient use of land and the acceleration of housing delivery

(2) Major applications will be expected to deliver a mix of uses and include residential development. Residential development in mixed use schemes will be expected to meet identified housing need. There must be a spatial strategy for the town centre – not all buildings are mixed use. In particular location of commercial activity and housing needs to be identified to optimise transport and create mixed use neighbourhoods.

(3) Schemes must demonstrate that they have made the most efficient use of land both in terms of the quantum of development and the mix of uses. Again there needs to be a Masterplan of allocation as development will occur over a 10plus year timescale

(4) In seeking to achieve more efficient use of land and/or accelerated housing delivery and/or regeneration, the Council will where appropriate utilise mechanisms such as its compulsory purchase powers. Besides using CPO powers, where appropriate GBC will lead or promote development initiatives to deliver an adopted masterplan. The council may also need to consider alternative management structures to deliver the

Place shaping and character and design of new development

Town Centre e.g. Development Corporations
New development will have regard to:

a) the provisions of Policy D1;
b) the historic environment, street pattern and topography;
c) important views into and out of the town centre from the surrounding landscape;
d) views within the town centre of important historic buildings and local landmarks.

See notes on D1 Below. The Town Centre in totality should be considered a Strategic Site and thus subject to a proper Masterplan process as proposed in Policy D1 --- ‘regard to’ what does this mean in practice

Schemes must demonstrate high quality urban design and contribute wherever possible to achieving:

a) mixed use developments with active ground floor uses;
b) defined public and private spaces which are well-enclosed;
c) an attractive and safe public realm;
d) legible routes that are easy to understand and to move through, and give priority to pedestrians and cyclists over motor vehicles;
e) improved access and views to the River Wey

This requires an adopted masterplan addressing environment, amenity, power, water, transport, and spatial strategy

Why enclosed surely we need open out spaces along the river etc.

ADD new point f) Schemes must make provision for Infrastructure facilities e.g. Health Care Facilities, Education Establishments and Cultural Facilities.

Upgrade Town Centre Infrastructure

Needs a policy related to Policy ID1

Due to the identified infrastructure deficit and record congestion a radical solution is required to sustain the town centre.

This is the second most important issue critical to enabling Homes and Commercial sites to be developed.

The GVG crossing is but one option (currently the only one) and Motion

Consultants Ltd Report - Guildford Gyroratory, Highways Matters for Guildford Vision Group shows increased resilience and environmental improvements as well as health and safety wins with the crossing and is attached.

Reasoned justification
4.1.18 Our Corporate Plan (2018-2023) identifies regenerating and improving Guildford town centre and other urban areas as one of three strategic priorities supporting its “Place Making” theme. Key projects to support this and the delivery of the Local Plan include:

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>(a)</td>
<td>Facilitating the delivery of a major new mixed use development in North Street</td>
</tr>
<tr>
<td>(b)</td>
<td>Implementing the vision of the Town Centre Regeneration Strategy</td>
</tr>
<tr>
<td>(c)</td>
<td>Improving the public realm, including surfaces, in key town centre areas</td>
</tr>
</tbody>
</table>

**Note on a)**
North Street is to be masterplanned, surely this should be extended to the whole town centre.

**Note on b)**
This strategy has no designs, plans, proposals on infrastructure, civic or amenity space or housing identified. It is inadequate to deliver what is required.

4.1.19 This policy and the Town Centre Regeneration Strategy will help deliver the following objectives:

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>(a)</td>
<td>enhance the vibrancy of Guildford Town Centre</td>
</tr>
<tr>
<td>(b)</td>
<td>create and foster high quality design</td>
</tr>
<tr>
<td>(c)</td>
<td>protect the town’s heritage and overall feel</td>
</tr>
<tr>
<td>(d)</td>
<td>respect existing townscape at both the street and roof level</td>
</tr>
<tr>
<td>(e)</td>
<td>create an enhanced and more positive public realm</td>
</tr>
<tr>
<td>(f)</td>
<td>reduce the concrete environment atmosphere</td>
</tr>
<tr>
<td>(g)</td>
<td>realise the Council’s ‘drive to, not through’ concept to reduce the impact of traffic in the town centre, complementing future environmental improvements</td>
</tr>
<tr>
<td>(h)</td>
<td>link the Town Centre to the train station</td>
</tr>
<tr>
<td>(i)</td>
<td>open up the River Wey and improve connections to the river</td>
</tr>
</tbody>
</table>

**General point** this policy needs to be cross-referenced to actual substantive statements/policies on Mass Scale and Sightlines for the town centre.

**Note on c)**
How do you do this with Bedford Wharf and Portsmouth Road Car Parks and the Area around the courts which are awaiting regeneration?

**Note on d)**
How is this to be done pending a proper policy?

**Note on g)**
Good in principle but how is the council proposing to manage this with THROUGH traffic in Guildford still being a significant volume – doesn’t this impact other routes around the town e.g. rat running through Compton.

The whole transport policy in the Plan and in 2014 Town Centre Master Plan and Guildford Town Centre Regeneration Strategy 2017 is just words with no substantive proposals.

**Note on h)**
<table>
<thead>
<tr>
<th>4.1.20 Whilst the Council will play a key coordinating role aimed at achieving delivery of development and regeneration, working with partners such as Surrey County Council, Network Rail and the National Trust, the private sector is central to this process. It is important that schemes that seek planning permission are conceived and designed in a manner that considers regeneration opportunities beyond the boundaries of the site. Collaboration</th>
</tr>
</thead>
<tbody>
<tr>
<td>In the natural absence of pressure to regenerate from the private sector (most of the land is council owned) the Council must take a leading role in putting in place a professional masterplan. Partners such as SCC, Network Rail and the National Trust will only work on their own sites. National Trust is unlikely to be considered as a partner in any regeneration and will only be an important statutory consultee. The council appear to be seeking to pass the obligations to deliver masterplan objectives without having a masterplan.</td>
</tr>
<tr>
<td>4.1.21 The delivery of housing in the town centre adds to its vitality and vibrancy. The Council regards the town centre as critical in terms of meeting needs for main town centre uses. This includes high trip generating uses such as offices and retail, where there are opportunities to encourage linked trips and maximise the use of public transport networks. However, the town centre also represents the most sustainable location for new higher density housing. Whilst the Local Plan</td>
</tr>
<tr>
<td>Where are substantive policies to achieve this? Agreed, and if followed up with energy could save unnecessary use of the Green Belt. Needs a masterplan of Infrastructure and Facility improvement to achieve this? It is important that all these elements are delivered through a co-ordinated masterplan led by the council</td>
</tr>
<tr>
<td>Not clear how this is to be achieved Note on i) This should be far stronger with the presumption for a Wey pedestrian cycle corridor on both banks i.e. new developments should leave 20 ft margin from river etc. Note on k) The council need to accept responsibility for professionally masterplanning the town centre and assist developers in others to deliver the plan. Note on l) What does this mean in practice does there need to be a spatial strategy that e.g. puts offices on or near transport hubs etc. ADD a new para m) promote and create a resident friendly environment.</td>
</tr>
</tbody>
</table>
provides for sufficient sites to meet housing needs over the plan period, as part of regeneration efforts, more housing is likely to come forward over the plan period.

It is important that this occurs in a manner that makes the most of its central location and is thus developed at a density that maximises its sustainability benefits whilst responding to heritage, design and flooding considerations.

Consideration should also be given to the potential to minimise the provision of car parking where this can help optimise the density of development.

4.1.22 The Council will support mixed use development, which can retain or re-provide retail, leisure and employment uses/floorspace in the town centre, in line with national and Local Plan policies. This will help ensure the efficient use of land and presents an opportunity to enhance the vitality of the town centre and increase delivery of homes in sustainable locations.

The policy should highlight the need for buildings to be designed with flexibility of use in mind e.g. Student Dwellings don’t convert easily into Owner occupied Flats – unless this is recognised in the design from day one.

4.1.23 Enhancing the vitality and vibrancy of the town centre cannot occur solely through more intense uses, nor greater numbers of residents.

The council need to accept responsibility for masterplanning the town centre and assist others to deliver the plan.

A quality public realm needs to support day-to-day activities, peoples’ well-being, safety and sense of place and forms the basis for the area’s attractiveness to residents, workers and visitors.

These will all need to be created within the new areas of regeneration. It is key role for the council to ensure all developers take this policy seriously.

4.1.24 The public realm includes publicly-owned streets, squares, pathways, parks, publicly accessible open spaces, right of ways, and any public or private building and facilities that are accessible by all. Whilst parts of the town centre reflect high quality public environments, there are areas where this could be improved. This is often in areas

The first intervention must be a masterplan to set the framework with adequate community involvement.

4.1.25 The enhancement of the public realm and its amenity value will ensure the town centre becomes an even more attractive place to live, work and visit and will be a key component of the area’s regeneration. This could occur through a range of interventions such as improving surfacing of public space, providing more generous pedestrian environments, landscaping, street furniture, lighting and public art. The Council will seek contributions toward the improvement of the public realm from developments, where appropriate. The Council will also continue working with Surrey County Council to implement measures that deliver public realm enhancements.
### Missing Policy?

*What about Public Social Infrastructure Health, Entertainment, Education and Leisure facilities?*

### Key Evidence

The Guildford Town Centre Regeneration Strategy (Guildford Borough Council, 2017)

And also 2014 Town Centre Master Plan – which in itself is a rewrite/update on the Allies and Morrison proposals? Both have not been adopted by GBC.

### Monitoring Indicators

The number of new homes completed each year in the town centre

Surely there should be indicators related to increase in Accidents, Pollution, Pedestrianised Space, Bike Lanes Provided, Traffic Congestion etc.

As a resident of Guildford for more than 30 years, I wish to record my views on the Schedule of Main Modifications of the Local Plan for Guildford:

1 MM3 - POLICY S3

It is important that Guildford Borough Council achieve coordinated results. The heart of Guildford, the Town Centre must be designated as a strategic site, to include not only the High Street and North Street, but those narrower but potentially attractive neighbouring streets and buildings, which in many cases have been hitherto neglected. The success of the recent work in Tuns gate should be an inspirational example to our planners.
2 MM3 - POLICY S3

Guildford must have an effective local plan which will be clearly stated, and operative, before any other future development prevents the fulfilment of creative and workable projects. The eventual entity should be of a consistently high standard, to make our town attractive to people who wish to live, work, visit, study, and participate in the life of this historic but progressive town.

3 MM3 - POLICY S3

The Guildford Borough Council should adopt the proposals of Guildford Vision Group including the new crossing or equivalent, to deliver a safer, pedestrianised town centre with transport resilience and access to attractive riverside, to include an attractive environment where people of all ages can spend their leisure time.

Comment: MM3 - LPMM18/5003  Respondent: Ben Gamble 10701537  Agent:

The Plan does not reflect the evolution that is occurring in the retail sector, with the growth of online and the shrinking of the high street (MM3). The is no need for an additional 40,000 SQM of retail space. There is already ample retail
accommodation in in Guildford town centre, with units being available to rent/buy. No doubt with the regular news of retailers and “casual dining” operators struggling further space will come available. It would be far better to have a smaller vibrant town centre than one filled with vacant shop units. It would make more sense to include provision of more residential units within the central area of Guildford that offer excellent employment opportunities and sustainable transportation.

2. NEW POLICY S3 ON THE TOWN CENTRE (MM3)

The new Town Centre Policy does not include details of what is planned for the town, whereabouts it is planned, or when it is proposed that it should happen. At the Examination in Public the Council stated that the need to demonstrate a 5-year housing supply had led them to allocate rapidly developable sites that were at the least sustainable, and were at the bottom of the hierarchy. The Town Centre Policy should be revised to take advantage of the sustainable opportunities in the town centre, and to reduce the development of sites in the Green Belt.

Attached documents:

Comment: MM3 - LPMM18/5452  Respondent: Murray Dudgeon 10782689  Agent:

Comment: MM3 - LPMM18/5491  Respondent: Guildford Greenbelt Group (Susan Parker) 10799425  Agent:

MM3 New Policy S3 - Delivery of development and regeneration with Guildford Town Centre

We welcome this new policy. There are few changes to the Local Plan that we regard positively, but this change is one that we have been requesting for at least 5 years, since the original Issues and Options consultation. We need more concentration of development in the urban area; more efficient use of land; and emphasis on brownfield and urban development as a priority. Having introduced this policy, it is lamentable that the new proposed additional developments are all on green fields, within the Green Belt, and do not implement this policy. What is the point of a policy if it is just theoretical?

Given the falling trends in relation to retail, we consider that the best way of regenerating the urban area within Guildford, especially some of the semi-derelict areas around North Street, is to build high quality residential areas. This is considered deliverable within the early part of the plan period since so many of the areas are within the LAA control.

Attached documents:

Comment: MM3 - LPMM18/5419  Respondent: Roger Harrison 10802177  Agent:

MM3 In (5) new town centre development should avoid adverse impact on surrounding residential areas.

MM3 There should be a policy (S4) on the urban areas beyond the town centre to prevent inappropriate garden grabbing and to encourage a joined-up approach to site assembly in carefully selected residential areas where redevelopment linked to enhancement might be appropriate.

MM3 – POLICY S3. Guildford must have an effective local plan. Development rules must ensure quality of development across the Town Centre.

MM3 – POLICY S3. Guildford Borough Council should adopt Guildford Vision Group’s proposals, including the new crossing or equivalent effective alternative, to deliver a safer, pedestrianised town centre with transport resilience and opened riverside.

1. **The Guildford Vision Group’s Objections and Concerns Which I Share**

MM3 – POLICY S3. Guildford Borough Council must deliver real and coordinated results. The Town Centre must be designated a strategic site or sites.
MM3 – POLICY S3. Guildford must have an effective local plan. Development rules must ensure quality of development across the Town Centre.

MM3 – POLICY S3. Guildford Borough Council should adopt Guildford Vision Group’s proposals, including the new crossing or equivalent effective alternative, to deliver a safer, pedestrianised town centre with transport resilience and opened riverside.

MM3 – POLICY S3. Guildford Borough Council should adopt Guildford Vision Group’s proposals, including the new crossing or equivalent effective alternative, to deliver a safer, pedestrianised town centre with transport resilience and opened riverside.

**Attached documents:**

**Comment:** MM3 - LPMM18/1187  **Respondent:** Marion Gooding 10820385  **Agent:**
Table S2b out of date and MM3 inadequate and in need of re-examination.

I would like to ask the Inspector to re-open the examination and amend the Local Plan to take account of the latest ONS housing figures.

As I understand it there has been a great deal of work carried out to look into the needs of housing in the future for Guildford. The recent passing of housing planning where the inspector said it was possible to build even more housing than previously submitted appears to be at odds with a report by the ONS that says entirely the opposite. It appears that the population growth previously expected upon which the housing needs were based was entirely incorrect. I therefore would request that the Blackwell Farm development is looked at again. It appears new figures show that only 360 homes a year are required rather than the 672 previously thought to be needed. This makes table S2b out of date and MM3 inadequate and in need of re-examination and means that the extensive loss of green belt land is unjustified.

As previously stated in my objection, I would like the Inspector to take another look at the Blackwell Farm site so that he can reconsider, with the aid of the new figures of 360, the loss of a greenbelt, the fact that congestion is already very bad at this particular part of Guildford and environmental concerns over pollution should mean that rather than develop this site, a greater and more importantly, a more useful area that could be considered is in the town centre where there are significant shortages of housing.

Attached documents:

Comment: MM3 - LPMM18/4570  Respondent: Amanda McDougall 10850625  Agent:

2. The town centre policy does not address the infrastructure deficit, in particular the traffic congestion.

Attached documents:

Comment: MM3 - LPMM18/5171  Respondent: J O'Byrne 10855265  Agent:

5) Changes to retail impact on town centre plans and I understand the need for refreshing approaches. Look to encourage local business and cooperatives to keep money within the town. It would be great to be able to compel land owners to proceed with developments in the town e.g the land at the bottom of the Portsmouth Road opposite The Mount which has just been growing budleahs for years and the empty properties in the triangle between Leapale Road and Woodbridge Road.

6) Anything that can be done to resolve traffic problems is to be welcomed! I like the ideas of the Guildford Vision Group for changing the roads in the town.

Attached documents:

Comment: MM3 - LPMM18/5177  Respondent: Annabel Agace 10859361  Agent:

I recently attended a talk by the GVG about the Plan. I was impressed at the quality and diligence of their efforts to assist the Council in creating a truly ‘local plan’. I fear that the Council are not particularly interesting in listing to and leaning from those who live in the local plan area.
I am aware of the revisions that the Council has made in light of your comments. I have long believed that there is a need for a more comprehensive masterplan for the town centre. I do not believe that the hastily penned S3 goes far enough - the area is covers is too small and does not address the very real infrastructure issues our town is facing.

There is also too much future housing development on green belt sites when brownfield opportunities exist.

The public hearings should be re-opened on these subjects to allow re-examination.

Attached documents:

---

Comment: MM3 - LPMM18/3646  Respondent: Edwina Fassom 10865537  Agent:

MM3 In (5) new town centre development should avoid adverse impact on surrounding residential areas.

MM3 There should be a policy (S4) on the urban areas beyond the town centre to prevent inappropriate garden grabbing and to encourage a joined-up approach to site assembly in carefully selected residential areas where redevelopment linked to enhancement might be appropriate

F. The Guildford Vision Group's Objections and Concerns Which I Share

MM3 - POLICY S3.Guildford Borough Council must deliver real and coordinated results. The Town Centre must be designated a strategic site or sites

MM3 - POLICY S3. Guildford must have an effective local plan. Development rules must ensure quality of development across the Town Centre

MM3 - POLICY S3. Guildford Borough Council should adopt Guildford Vision Group's proposals, including the new crossing or equivalent effective alternative, to deliver a safer, pedestrianised town centre with transport resilience and opened riverside

Attached documents:

---

Comment: MM3 - LPMM18/5920  Respondent: Margaret Pearce 10874273  Agent:

MM3 there is too much allocation in the town centre. All recent evidence shows that on-line shopping and business taxes are having a serious effect on shopping in the town’s centres. The many empty shops on our town centre would indicate this.

MM3 Policy S3 Delivery of development and regeneration within Guildford Town Centre

I feel the “Town Centre first” approach on the plan should be more prominent and more houses built within the Town. With the reduction in retail outlet requirements, there must be capacity for more houses in the town centre especially with the amount of re-development going on. How can the Green Belt incursions be justified if the residential potential in the urban area is not realised?

Transport strategy and other infrastructure.

The Sustainable Movement Corridor won’t work. The A3100 London Road through Burpham is not wide enough to have additional bus and cycle lanes. This road is already too congested since Aldi was built, any additional traffic on top of that will create gridlock in Burpham on even more occasions.

Local bus services have already been cut because of traffic congestion on Burpham’s roads so the suggestion of new bus services on even more congested roads doesn’t make sense.

The volume of traffic means we are now having an issue with pollution and making the roads a very dangerous place for pedestrians and cyclists. There are a lot of children who walk and cycle to school in Burpham. I don’t feel we should make their journey any more dangerous.

Please could these issues be properly addressed.

**Comment: MM3 - LPMM18/4304  Respondent: Steve Lawson 11047713  Agent:**

MM3 Policy S3 needs to be improved and more thought out. Most of the borough’s population live in the Guildford urban area. Urban regeneration should be a focus of the plan. This would be consistent with national policy. The current wording is too lose and open to interpretation and ambiguity.

It needs -

- to make plain that the town’s character, can only be protected with a height limitation to about 4 storeys.
- to make more explicit the link between giving priority for pedestrians and cyclists over motor vehicles and more realistic, higher housing densities that incentivise walking and cycling, rather than low-rise, suburban-type homes in the town centre with gardens and garages. This is achievable.
- to prioritise residential over retail.

**Attached documents:**

**Comment: MM3 - LPMM18/2969  Respondent: Claire Owen 11053825  Agent:**

MM3 In (5) new town centre development should avoid adverse **impact on surrounding residential** areas.

MM3 There should be a policy (S4) on the urban areas beyond the town centre to prevent inappropriate garden **grabbing** and to encourage a joined-up approach to site assembly in carefully selected residential areas where redevelopment linked to enhancement might be appropriate.

1. **The Guildford Vision Group’s Objections and Concerns Which I Share**

MM3 – POLICY S3. Guildford Borough Council must deliver real and coordinated results. The Town Centre must be designated a strategic site or sites.

MM3 – POLICY S3. Guildford must have an effective local plan. Development rules must ensure quality of development across the Town Centre.
MM3 – POLICY S3. Guildford Borough Council should adopt Guildford Vision Group’s proposals, including the new crossing or equivalent effective alternative, to deliver a safer, pedestrianised town centre with transport resilience and opened riverside

Attached documents:

**Comment: MM3 - LPMM18/2560**  **Respondent:** Tony Millership 11076161  **Agent:**

3. NEW POLICY S3 ON THE TOWN CENTRE (MM3)

- The version of the Local Plan being consulted on now finally (after a process that has now taken more than five years) includes a new policy on the town centre (Policy S3).

- The town centre is universally acknowledged (including by the Council) to be the largest and most sustainable location in the borough, but as currently drafted Policy S3 is wordy, general and imprecise, and fails to specify concrete in terms of what is planned for the town, whereabouts it is planned, or when it is proposed that it should happen.

- A town centre policy is necessary, but the current draft falls well short of the requirement.

Attached documents:

**Comment: MM3 - LPMM18/4937**  **Respondent:** John Harrison 11157345  **Agent:**

MM3: S3. The biggest issue within Guildford is peaktime congestion. This doubles fuel consumption and therefore doubles the amount of carbon being produced. Accordingly, there is disproportionate benefit in reducing the amount of traffic, say to that typical during school holidays. There is no clear proposal to reduce the current level of congestion, policies seem to be limited to new development. What does”drive to, not through” mean in the context of a gap town? How will priority to pedestrians and cyclists over motor vehicles be given: A man on point duty or a form of road pricing/congestion charging, or attempts at persuading schools to educate children as to the benefits of walking? There should be clear targets and mechanisms identified in the plan aimed at improving the current position. The council was recently addressed by Dr Steve Melia, a traffic expert, who stated that to be effective it would be necessary to use a stick as well as a carrot. This presents problems for elected councillors. The purpose of a plan such as this is to hold their feet to the fire and ensure difficult issues are addressed and dealt with, particularly those which extend over several election cycles. Bland statements of desire are meaningless, have proved ineffective in previous plans, and would prove ineffective in this one if allowed to persist. The council acknowledges the problem but refuses to grasp the nettle. Much greater priority should be given to creating safe and attractive pedestrian and cycle routes. Some pedestrian routes, e.g. Porridge Pot Ally and the bridges over the river near the Yvonne Arnold theatre could be extended to cycle use. Mill Lane could be open to cyclists in both directions whilst remaining one way only for cars. The plan is unsound environmentally and **I call upon the inspector to reopen the examination in order to improve it.**

MM3: S3 (1) is inadequate and should say, for instance, development proposals will be rejected as premature if the Council believes a more satisfactory solution would result if the applicant property were combined with (specified) others. I find the current wording clumsy and ambiguous.

MM3 S3 (3) is ambiguous and unworkable. What is the most efficient use of land? Does it mean of the applicant site in isolation or does it contemplate site assembly? Does it imply, for example, a requirement for basement car parking rather than surface parking? To what constraints is it subject e.g. height and the impact on views, overlooking and of the street scene? Does it involve a financial test? Is it subject to a viability appraisal? This would add a huge layer of cost and
delay. The draft is ambiguous because not enough time has been spent in considering it. For reasons such as this the plan is unsound.

MM3 this hastily added Town centre section fails to cover the wider urban area for which a new "policy S4" is needed. I moved to Guildford because it is one of few towns where family housing with gardens is available within walking distance of a main line Rail link to London. Areas such as Guildown where I live and Pewley have this valuable and sought-after characteristic which should be conserved. Generally therefore development in your back garden should be resisted even though it might provide an attractive pension. I would suggest there should be a presumption against such development unless there is independent highway access to both existing and proposed new dwellings. In the garden behind me a new house has just been completed 20 years after application was first submitted. The access is poor and it depends for light and air on overlooking my property. There were boundary disputes with two adjoining owners and most recently they cut down trees on my property whilst they have not completed any boundary treatment of their own notwithstanding the 2 meter fence clearly shown on the approved plans and it is unlikely that the enforcement team pursue it. Garden grabbing is very rarely acceptable development and can be disproportionately disruptive. A considered policy would prevent decades of attrition and successive appeals. This omission really needs dealing with since it's a major issue in Guildford.

MM3 An “S4” policy could and should also incorporate strategic site designation for a number of locations mentioned above such as Walnut Tree Close and Bedford Road which could then be masterplanned. These are needed now. You should familiarise yourself with the rural section of the Mount where the rear gardens of large houses fronting Upper Guildown road, which have a frontage to the Mount, are being developed on an ad hoc basis into six bedroom detached houses. Each plot is around an acre and so this is very inefficient use of land within walking distance of the town centre. Although widely resisted there is some logic in development here (I have no personal financial interest in this). At one point in the saga, individual houses were refused for under development and the response application was a block of flats of 40 units to the hectare which was refused on appeal. Optimum development would be somewhere in between and would involve combining plots rather than sticking to the historic garden boundaries. Another example of a lack of proper planning producing a poor outcome but where there would still be time to change and most certainly learn from the principle.

MM3: And finally an “S4 policy” could be designed to deal with all the complex issues which exist in an established urban area, but which is not a town centre where the dominant land uses are commercial. Whilst there could be some commonality between S3 and S4, having a separate S4 and clearly thinking through the issues would be hugely beneficial. Without this I fear there will be decades of anachronisms resulting in adverse development decisions.

Attached documents:
Does not address the infrastructure deficit.

Attached documents:

Comment: MM3 - LPMM18/3361  Respondent: Michael Forster 14177217  Agent:

The town centre policy, S3, is thus inadequate and also does not address the infrastructure deficit

Attached documents:

Comment: MM3 - LPMM18/4395  Respondent: Brian Scammell 14180449  Agent:

Guildford Borough Council's modifications still leave the Local Plan unsound because:

1. GBC has not properly observed its hierarchy of development. Opportunities for brownfield development, especially in the town centre, have not been fully exploited
2. The town centre policy, S3, is therefore inadequate and does not address the infrastructure deficit.

Attached documents:

Comment: MM3 - LPMM18/5204  Respondent: R Hazelwood 14187809  Agent:

I thank the GVG group for the spur for these comments (in the nick of time?). I support their enthusiasm but feel their imagination has run away with them. I have looked at the plans and would like to make my suggestions based on discussions with GBUG and others

I think the GVG ideas are far too expensive and unlikely to be funded. I heartily support the work of GBUG.

Guildford is currently being throttled by town centre traffic and whilst

A3 development may help to the north, traffic from the south will continue to need better access if the town is not to be crippled by its poor infrastructure.

Congestion is centred on the Bridge St area, and Onslow St needs to be cleared, separated from walkers and cyclists. If coordinated with an improved Friary site this can use the existing footbridge over Onslow St and subway under Millbrook. It is crazy (or at least completely unfeasible in current financial climates) to demolish the modern Friary roadbridge, which if fully used could carry 6 lanes. Few walk across it now and an extra river footbridge by the subway would not be expensive.

A high level network of paths across the valley would help link in the train and bus services. The towpath already helps provide this separation.

The effort should then be to improve the flow to each end of this, the main river bridge.
There are four key roads, the A31 and A322 from the north and the A281 and A3100 to the south. There will need to be light controlled access to the bridge but as far as possible no other delays to motor traffic.

This will help give access to the centre from all directions, and reduce pollution from the jams

**Comment:** MM3 - LPMM18/5778  **Respondent:** Mr Timothy Hewlett 15216129  **Agent:**

The reasoning behind the level of planned new retail space in Guildford town centre is flawed. The need for retail space is in steep decline across the whole of the United Kingdom and Guildford is no exception. This should be reconsidered and more space given over to residential occupancy which in turn would negate the need to use valuable Green Belt Land and would bring new life into the Guildford town centre.

**Attached documents:**

**Comment:** MM3 - LPMM18/3180  **Respondent:** Barnaby Lawrence 15232513  **Agent:**

S3 The town centre policy is inadequate and does not address the infrastructure deficit.

**Attached documents:**

---

**Comment:** MM3 - LPMM18/1857  **Respondent:** Robert Peake 15264001  **Agent:**

MM3 In (5) new town centre development should avoid adverse impact on surrounding residential areas.

MM3 There should be a policy (S4) on the urban areas beyond the town centre to prevent inappropriate garden grabbing and to encourage a joined-up approach to site assembly in carefully selected residential areas where redevelopment linked to enhancement might be appropriate.
1. The Guildford Vision Group’s Objections and Concerns Which I Share

MM3 – POLICY S3. Guildford Borough Council must deliver real and coordinated results. The Town Centre must be designated a strategic site or sites.

MM3 – POLICY S3. Guildford must have an effective local plan. Development rules must ensure quality of development across the Town Centre.

MM3 – POLICY S3. Guildford Borough Council should adopt Guildford Vision Group’s proposals, including the new crossing or equivalent effective alternative, to deliver a safer, pedestrianised town centre with transport resilience and opened riverside.

3. Town Centre

Ripley Parish Council considers that this Plan is significantly over weighted with regard to the additional retail allocation in Guildford Town Centre (MM3). It seems entirely specious that Guildford should “buck the trend” nationally, insofar as the retail sector is struggling to sustain profitability in the high street situation, against online retail. We note that the much lauded Tunsgate development has been less than successful with a substantial volume of units still empty. In addition, there are a large number of vacant units in the Upper High Street and North Street. A number of High Street retailers are openly struggling to survive (House of Fraser being one and John Lewis reporting substantial decreases in profit). Extra numbers of retail units are unlikely to be required in the North Street redevelopment zone. It would clearly make more sense to include provision of more residential units (primarily one- and twobedroom flats in higher rise buildings) within the central area of Guildford that offer excellent employment opportunities and sustainable transportation. An additional 40,000 sqm of retail space would seem a move out of step with current retail reality.

Policy S3 should be strengthened to focus on the prioritising the Guildford urban area inspiring urban regeneration over building on our precious Green Belt.
MM3 In (5) new town centre development should avoid adverse **impact on surrounding residential** areas.

MM3 There should be a policy (S4) on the urban areas beyond the town centre to **prevent inappropriate garden grabbing** and to encourage a joined-up approach to site assembly in carefully selected residential areas where redevelopment linked to enhancement might be appropriate.

Comment: MM3 - LPMM18/5690  Respondent: Susan Wade 15693185  Agent:

In addition, the lack of an Adequate Town-Centre Masterplan (MM3 – Policy S3) means that there would have been identified more Brownfield sites for town centre housing, thus reducing the need for excessive Green Belt development.

Attached documents:

Comment: MM3 - LPMM18/4665  Respondent: David Roberts 17164033  Agent: MM3

Policy S3 needs to be stronger all round. Most of the borough’s population live, and want to live, in the Guildford urban area. Urban regeneration, not car-dependent Green Belt housing, should therefore be the centrepiece of the plan. This would be more consistent with national policy and GBC’s own spacial strategy.

The current wording evades several major issues and is too open to loose interpretation in years to come. It needs -

- explicitly to prioritise residential over retail (see above).
- to make plain that the town’s character, including “important views”, can only be protected with a presumption that height will be limited (depending on exact location) to about 4-6 storeys.
- to make more explicit the link between giving “priority for pedestrians and cyclists over motor vehicles” and more realistic, higher housing densities that incentivise walking and cycling, rather than low-rise, suburban-type homes in the town centre with gardens and garages. All this is do-able without compromising character, as London has shown.
- needs to highlight the important role town-centre development can have in kick-starting and front-loading the whole plan, boosting housing numbers in the early years as government policy requires, leveraging GBC’s comparative advantage (relative to greenfield development) as an urban landlord.

| 2. Town Centre new policy S3 - MM3- **OBJECT**  
a. The town centre policy is woolly, unsound and inappropriate. When you take account of the current well-established trend for retail selling space to be replaced by internet sales, far more house building should take place in the town centre, and far less retail development. Indeed, there should be a plan for making use of future reductions in retail space in the town centre, and using these for housing. This would have the add on benefit of reducing journey times and pollution for people working in the city centre. | | |

| **Page 9: Policy S3; Delivery of development and regeneration within Guildford Town Centre.**  
I support the general thrust of this policy as it supports a ‘Town Centre first’ approach but am surprised that only 50 additional homes could be found (White Lion Walk) as this fails to meet you’re requirement to make greater use of the town centre for residential use. The further incursions into the Green Belt elsewhere in the Plan are even less justified when viewed in the context of not maximising residential potential in the urban area. | | |
Uncertainty in the retail industry continues and I maintain that the Guildford town centre area, in particular the North Street Development site, be revisited to increase the ratio of homes to retail and entertainment. In that regard this policy is too vague to be effective.

Page 10: 4.1.19 Town centre regeneration

This Plan makes no infrastructure provision for bypassing the town centre, particularly as Guildford is a gap town. (g) is not viable or sustainable as people need to cross through, not simply stop, on the outskirts. Given the lack major external roads infrastructure in the Plan to deal with this issue I believe the deletion of point (g) should occur

Page 10: 4.1.21 Town centre regeneration

Considering the destruction of Guildford’s Green Belt for unneeded housing plots, while contrary to the NPPF which makes no provision for such a policy I believe there should be a policy which specifically states “A site is consider to remain under the umbrella of the Green Belt definition until that particular sit has been developed and should remain within the Green Belt, should it be found at the next Plan revision, that there is over supply of housing land. Thus providing provision within this, to remove strategic Green Belt sites from the Plan if town centre sites produce sufficient houses. E.g. if 500 sites are found in the town centre or on other sites, then 500 should be removed from the Green Belt allocation as exceptional circumstances cease to exist for changing the Green Belt line at that location. While this proposal is slightly outside the current ‘National Policy document’ there are now exceptional circumstances to ensure housing numbers when reduced reflect the communities wishes and the community is not left with the unnecessary loss of Green Belt and Countryside.

Page 11: Monitoring Indicators

Only 50 homes allocate has been as a result of your comment ‘to find housing in the town centre.’...... This is not acceptable; there should be a target as much of the concern at examination related to lack of ambition regarding housing provision in the town centre.

Attached documents:

Comment: MM3 - LPMM18/1338  Respondent: Mrs Janet Ashton 20689281  Agent:

Please include the well researched and considered plan of Guildford Vision Group for the town centre.

Attached documents:

Comment: MM3 - LPMM18/1416  Respondent: Derek Carley 20690369  Agent:

In respect specifically of the Main Modifications MM3 I would note

1. MM3 - POLICY S3: GBC must deliver real and coordinated results. The Town Centre must be designated a strategic site or sites
2. MM3 - POLICY S3: Guildford must have an effective local Plan. Development Rules must ensure quality of development across the town centre. Without such there is little point in continuing with the Guildford Design Awards which sets a bench mark for excellence in Design in the Built environment!!
3. MM3 – POLICY S3: GBC should adopt GVG proposals, including the new crossing or equivalent effective alternative to deliver a safer, pedestrianised town centre with transport resilience and opened riverside.
Comment: MM3 - LPMM18/3074  Respondent: Jo Owens 20690625  Agent:

I strongly believe that the two traffic bridges crossing the river are very dangerous. The walking route from the station to the Friary is narrow and always busy with pedestrians. And the traffic speeds past them leaving a safety space of only inches. This surely has to be addressed urgently as it’s only a matter of time before there will be a serious accident. Also – with all of the pollutants that the pedestrians are inhaling, it makes it a very dangerous walk indeed.

I support GVG’s suggested plan of building a new bridge and separating the traffic from the pedestrians.

Attached documents:

Comment: MM3 - LPMM18/1501  Respondent: Mrs Lesley Tregaskes 20692737  Agent:

New Policy S3 on the town centre (MM3) The Town Centre policy is imprecise and fails to specify what is planned for the town. Yet, as the Council itself acknowledges, the town centre is the largest and most sustainable location in the borough.

Attached documents:

Comment: MM3 - LPMM18/5933  Respondent: Dirk Mercer 20699553  Agent:

MM3-(S3) Town centre Policy

The town centre policy is inadequate. It fails to specify what is planned for the town, is far too general and imprecise and does not address the infrastructure deficit.

The policy falls well short of a commitment to planning for houses for residents, which could accommodate more people and produce more in social housing. If inadequate housing as allocated for people in the centre, Guildford will become a wasteland of fast-food shops and tacky chains of cheap clothing and tat.

1. The Guildford Vision Group’s Objections and Concerns Which I Share

MM3 – POLICY S3. Guildford Borough Council must deliver real and coordinated results. The Town Centre must be designated a strategic site or sites MM3 – POLICY S3. Guildford must have an effective local plan. Development rules must ensure quality of development across the Town Centre MM3 – POLICY S3. Guildford Borough Council should adopt Guildford Vision Group’s proposals, including the new crossing or equivalent effective alternative, to deliver a safer, pedestrianised town centre with transport resilience and opened riverside

The town centre policy, S3, is inadequate and also does not address the infrastructure deficit

The town centre policy, S3, is a load of words which cover over the complete inadequacy of recent Councils to do anything to rectify the traffic congestion, enhance the river, sort out the bus station and the whole North Street development, etc. Bearing in mind that talks were taking place in the late 1990s about all this, what hope do we have that anything beneficial is going to come from all these words. The town centre needs a major restructuring basically and should be considered as an entity upon which local people can make their contributions. Piecemeal development will not achieve anything. Things have got so bad that there does need to be a proper town centre plan.

Policy S3 is welcomed but it could be so much more. S3 is obviously closely linked with other policies which may change to support S3. S3 needs major changes to include:

Requirement to create a Strategic Plan for the whole town centre, can't the Town Centre be designated a strategic site?
Add in policies to support proper infrastructure investment in the town centre to mitigate flood issues and most importantly revise traffic flows to improve resilience and remove the traffic corridor between the Wey and High Street.

Add or link to policies to preserve the town in particular Mass and Scale Guidelines to avoid planning disasters such as the Solum development at the station.

Add policies that create a proper spatial strategy for the town, e.g. High quality Offices at the Station are easily accessible and may be a better option that flats. (Guildford should avoid just being a dormitory town for London), revise North Street to limit Retail -- with House of Fraser and Debenhams both challenged at present Guildford may have a over provision of retail space. A true spatial strategy would also allow proactive planning in the town - if the Debenhams site became vacant it is a opportunity to maybe ensure the vibrancy of the High St/North Street retail environment and repurpose a site by the river.

**Attached documents:**

**Comment: MM3 - LPMM18/2089  Respondent: Mr ANDREW STRAWSON 20708033  Agent:**

MM3 – Policy S3. The Inspector raised concerns in the Public Examination over the lack of comprehensive planning for Guildford Town Centre. Whilst some progress has been made, this still represents an early stage of a work in progress. There needs to be a much tighter framework for further development and more ambitious targeting by GBC to ensure that the needs and the opportunities that exist in the centre of town are actually realised. Otherwise there is a very real and transparent risk that these opportunities will simply lie dormant and fail to progress. It is proposed that:

1. The Town Centre is designated a strategic site
2. A comprehensive Town Centre Master plan is developed
   • GBC should develop its own Town Centre plan for increased brown field development, greater residential volume and options where people wish to live, improved traffic management in the centre of town, enhanced pedestrianised spaces and better riverside usage - either by making use of and adopting the Guildford Vision Group proposals and ideas, or by forming equivalent alternatives.

**Attached documents:**

**Comment: MM3 - LPMM18/5831  Respondent: Dr Richard Bowles 20708353  Agent:**

The town centre policy, S3, is thus inadequate and also does not address the infrastructure deficit

**MM3 -PolicyS3 Guildford Borough Council must deliver real and co-ordinated results. The Town Centre must be dedicated a strategic site or sites.**

**MM3 - Policy S3. Guildford must have an effective local plan. Development rules must ensure quality of development sites across the town centre.**

**MM3 -Policy S3. Guildford Borough Council should adopt Guildford Group's proposals, including the new crossing or equivalent effective alternative, to deliver a safer, pedestrianised town centre with transport resilience and opened riverside.**

**MM3 -Policy D1. Guildford Borough Council as a major landowner in the centre, must accept the same obligations as imposed on the other strategic site owners by the council as planning authority.**
Comment: MM3 - LPMM18/2519  Respondent: Kelly Bradley 20754593  Agent:  

MM3 In (5) new town centre development should avoid adverse impact on surrounding residential areas.

MM3 There should be a policy (S4) on the urban areas beyond the town centre to prevent inappropriate garden grabbing and to encourage a joined-up approach to site assembly in carefully selected residential areas where redevelopment linked to enhancement might be appropriate.

**Attached documents:**

**Comment:** MM3 - LPMM18/3039  **Respondent:** Peter Drew 20774497  **Agent:**

Thank you for the opportunity to respond to the consultation. It is with regret that, after so much work, I find it necessary to declare the plan unsound for the following reasons:

- It is clear that the brownfield opportunities, especially in the town centre, have not been, by any measure, fully exploited. The council has thus not properly observed its hierarchy of development.
- It is also clear that a significant part of the plan is dependent on A3 improvements which are beyond the council's control and thus represent a high risk element within the plan.
- As a result the town centre policy is inadequate. In addition, it does not address the infrastructure deficit.

**Attached documents:**

**Comment:** MM3 - LPMM18/3115  **Respondent:** John Shorto 20775713  **Agent:**

I submit the following points for inclusion in the current consultation.

The current Guildford Borough Council has failed to plan the future of Guildford town as an integral place for the young and old to live in closer harmony.

In particular I have the following four points to make about the Main Modifications (eg MM3) are:

1. MM3 – POLICY S3. Guildford Borough Council must deliver real and coordinated results. The Town Centre must be designated a strategic site or sites
2. MM3 – POLICY S3. Guildford must have an effective local plan. Development rules must ensure quality of development across the Town Centre
3. MM3 – POLICY S3. Guildford Borough Council should adopt Guildford Vision Group’s proposals, including the new crossing or equivalent effective alternative, to deliver a safer, pedestrianised town centre with transport resilience and opened riverside

The town centre policy, S3, is thus inadequate and also does not address the infrastructure deficit.

**Attached documents:**

**Comment:** MM3 - LPMM18/3273  **Respondent:** Paul and Patricia Hubbard 20787361  **Agent:**

S3 The town centre policy is inadequate and does not address the infrastructure deficit.

**Attached documents:**
3. The town centre policy, S3, is thus inadequate and also does not address the infrastructure deficit. The only “improvement” I have seen in infrastructure has been to fill in the underpass at the bottom of the High Street and create some bus lanes, both of which have made the traffic worse. It would be better to improve cross town buses making the terminuses the park and ride stops and replace the bus station with normal bus stops for the cross town routes. Better bus routes might result in a small reduction in traffic, but otherwise it would be better for the local plan to plan for what people actually want rather than plan for you think they should need.

Amendment MM3

Policy S3

I object to the fact that the town centre policy is inadequate and does not address the infrastructure deficit.

Attached documents:

Comment: MM3 - LPMM18/3463  Respondent: Emma Shaw 20791073  Agent:

- MM3 There should be a policy (S4) on the urban areas beyond the town centre to prevent inappropriate garden grabbing and to encourage a joined-up approach to site assembly in carefully selected residential areas where redevelopment linked to enhancement might be appropriate.

Attached documents:

Comment: MM3 - LPMM18/3525  Respondent: Mark O Mathews 20793153  Agent:

I am sure that you will be familiar with the article published in this week’s addition (Fri.19th Oct 2018) of the Surrey Advertiser on page 4 under the title of ‘Flawed’ Local Plan ‘needs to be reopened’.

I am pleased that I was able to attend the public meeting put on by the Guildford Vision Group on Tuesday October 16th. I was amazed to discover that despite the large number of surveys and reports that have been carried out by the council at great expense over the years, the council has clearly failed to come up with and integrated an overall plan to make use of all the power and influence that it has over large sectors of the town to use all the brown field sites within this beautiful town to enhance the environment, improve housing, organise the flow of traffic, make it more pedestrian friendly, provide more affordable housing and protect the green belt.

Being very concerned and aware of the issues that are a concern of local residents, with the help and cooperation of very knowledgeable and well informed experts, the vision group has come up with a provisional plan that is obviously very
much more suitable than the local plan produced by the council, which I suspect has been influenced behind the scenes by selfish commercial interest. I have copied in below some of the key modifications that Guildford Vision group has produced in response to the modified local plan.

1. MM3 – POLICY S3. Guildford Borough Council must deliver real and coordinated results. The Town Centre must be designated a strategic site or sites
2. MM3 – POLICY S3. Guildford must have an effective local plan. Development rules must ensure quality of development across the Town Centre
3. MM3 – POLICY S3. Guildford Borough Council should adopt Guildford Vision Group’s proposals, including the new crossing or equivalent effective alternative, to deliver a safer, pedestrianised town centre with transport resilience and opened riverside

Attached documents:

Comment: MM3 - LPMM18/3545  Respondent: John Wood 20793889  Agent:

1. MM3 policy S3. At morning and evening peak times Guildford is one of the most congested towns in the UK and Europe. Much greater priority should be given to improving and creating safe and attractive pedestrian and cycle routes. Proper consideration should be given to Guildford Vision Group’s proposal for an additional river crossing to relieve congestion on the one-way gyratory system. The hurriedly put together plan for the Town Centre is flawed in so many ways. Guildford Vision Group’s startlingly simple plan regenerates the town centre; provides thousands of homes in the Town Centre; solves the excruciatingly bad gyratory traffic problem and creates very pleasant pedestrian walkways not only in the High St and North Street but also alongside the river. Their plan is designed to solve the traffic and other problems in Guildford for the next 50 – 100 years. The Councillors appear to be only interested in short-termism, which coincides with local elections. This is not good enough for a beautiful town like Guildford, ruined by the awful gyratory road system. GBC appear to have no credible ideas how to solve the problem.

Attached documents:

Comment: MM3 - LPMM18/3604  Respondent: Sharon Cork 20794337  Agent:

MM3 In (5) new town centre development should avoid adverse impact on surrounding residential areas.

MM3 There should be a policy (S4) on the urban areas beyond the town centre to prevent inappropriate garden grabbing and to encourage a joined-up approach to site assembly in carefully selected residential areas where redevelopment linked to enhancement might be appropriate.

1. The Guildford Vision Group’s Objections and Concerns Which I Share

MM3 – POLICY S3. Guildford Borough Council must deliver real and coordinated results. The Town Centre must be designated a strategic site or sites

MM3 – POLICY S3. Guildford must have an effective local plan. Development rules must ensure quality of development across the Town Centre

MM3 – POLICY S3. Guildford Borough Council should adopt Guildford Vision Group’s proposals, including the new crossing or equivalent effective alternative, to deliver a safer, pedestrianised town centre with transport resilience and opened riverside
1. Proper planning of the town centre would help to promote more relevant sensitive development. The hastily added section is based on pre-Internet retail models and numbers.

2. There is no policy dealing with urban areas beyond the town centre such as the one where we live.

Comment: MM3 - LPMM18/3635  Respondent: Richard and Nicola Slynn 20794657  Agent:

MM3 policy S3. Guildford Borough Council must deliver real and coordinated results. The town centre must be designated a strategic site, or sites.

MM3 policy S3. Guildford must have an effective local plan. Relevant rules must ensure quality of development across the town centre. Rules should be quantitative where possible and not nearly bland urgings of high-quality development as at present which are meaningless.

MM3 policy S3. At morning and evening peak times Guildford is one of the most congested towns in the UK and Europe. Much greater priority should be given to improving and creating safe and attractive pedestrian and cycle routes. Proper consideration should be given to Guildford Vision Group’s proposal for an additional river crossing to relieve congestion on the one-way system.

MM3 There should be a policy (S4) on the urban areas beyond the town centre to prevent inappropriate garden grabbing and to encourage a joined-up approach to site assembly in carefully selected residential areas where redevelopment linked to enhancement might be appropriate.

MM3 In (5) new town centre development should avoid adverse impact on surrounding residential areas.

Policy 3 should have been re-written, but it is not clear this has been done, nor it reflects actual meetings held with the likes of GRA, GGG, G.Soc., GVG and others to reflect their views, as clearly requested by the Inspector – particularly now the expected housing numbers have changed.

There is no evidence that there are clear plans to identify additional site for residential development, in the centre of Guildford. If GBC can identify sites on the Green Belt for development (many without adequate transport & other infrastructure) it should ALSO identify sites in the centre of Guildford

Even currently, and if there are more residents in the central area (and even more living within the hinterland of Guildford, their main town centre), the infrastructure needs totally overhauling, and up-grading. There is almost no clear evidence :-
there are improved flooding prevention plans,

there will be a substantial reduction in the air pollution (one of the worst towns in Surrey),

there are no clear improvements for pedestrian movement in the existing town centre,

there are no proposals to reduce road accidents (one of the worst towns in Surrey),

there is no evidence that GBC intend to reduce the traffic congestion (THE worst town in the UK). The 40 year old gyratory system is notoriously congested and highly dangerous for cyclist.

Where are extra schools, doctors surgeries and other facilities will be located.

This is written in a private capacity as a local resident since 1986

Attached documents:

Comment: MM3 - LPMM18/3697  Respondent: Colin Cross 20795169   Agent:

3. S3 Policies for the town centre are wholly inadequate and do little to address the basic infrastructure deficit in the Plan.

Attached documents:

Comment: MM3 - LPMM18/3741  Respondent: Anthony Thompson 20796225   Agent:

MM3 I object The regeneration of the urban area should be achieved by developing housing in the town rather than retail for which demand is reducing not increasing

Attached documents:

Comment: MM3 - LPMM18/3856  Respondent: Sue Algeo 20797473   Agent:

MM3 In (5) new town centre development should avoid adverse impact on surrounding residential areas.

MM3 There should be a policy (S4) on the urban areas beyond the town centre to prevent inappropriate garden grabbing and to encourage a joined-up approach to site assembly in carefully selected residential areas where redevelopment linked to enhancement might be appropriate.

1. The Guildford Vision Group’s Objections and Concerns Which I Share

MM3 – POLICY S3.Guildford Borough Council must deliver real and coordinated results. The Town Centre must be designated a strategic site or sites
MM3 – POLICY S3. Guildford must have an effective local plan. Development rules must ensure quality of development across the Town Centre.

MM3 – POLICY S3. Guildford Borough Council should adopt Guildford Vision Group’s proposals, including the new crossing or equivalent effective alternative, to deliver a safer, pedestrianised town centre with transport resilience and opened riverside.

Attached documents:

Comment: MM3 - LPMM18/3874  Respondent: Clare Price 20797537  Agent:

MM3 Policy S3 - The current congestion and traffic around guildford is appalling. I now ask my daughters to walk to the bottom of the high street when picking them up from the station, as getting in and out of the station is chaotic and unsafe, with taxis and waiting cars with engines running all trying to exit promptly and 'fight' their way out onto Walnut Tree Close. Walking across Bridge Street is dangerous, with very narrow pavements. Clearly new road/pedestrian routes need to be adopted, and I support the Guildford Vision Groups proposal to deliver a safer, pedestrianised town centre with transport resilience and opened riverside.

MM3 Policy S3 - Guildford Borough Council must deliver real and coordinated results and the Town Centre must be designated a strategic site/s. Guildford has some wonderful heritage in a beautiful location, with historic high street and some attractive buildings, but much of North Street, the Friary, the bus station, which is shameful is to my mind a 'disgrace' to the town. There has been no change for 30 or more years, aside from the Friary. The Debenhams building is a 'blight' to the town full of franchise shops instore.

Attached documents:

Comment: MM3 - LPMM18/3878  Respondent: John Price 20797569  Agent:

MM3 S3.1 although the new plan finally includes a policy on the town centre it is too vague, rambling with no details of what is exactly proposed! This is unacceptable and looks like a last minute job!
**Comment:** MM3 - LPMM18/4038  **Respondent:** TSG Consulting (Mr Mark Watson) 20805057  **Agent:**

- S3 The town centre policy is inadequate and does not address the infrastructure deficit.

**Comment:** MM3 - LPMM18/4085  **Respondent:** Gay Umney 20806273  **Agent:**

**General overall comment:**

It seems to me to be futile discussing the future of the town centre without first sorting out the traffic problems. If we don’t address the chronic traffic jams and queues in and around the town, nobody will be prepared to come to Guildford to take the spaces in all the new proposed developments.

**Detail Comments:**

MM3 – Policy S3

- There need to be strategic designated sites in the Town Centre in order to achieve a coherent and coordinated development.
- It is important that rules are established to ensure the quality of developments in the Town Centre and to regulate the height of these developments.
- GBC should consider adopting the Guildford Vision Group’s proposals including the new crossing or equivalent effective alternative to deliver a safer pedestrianised town centre with transport resilience and opened riverside.

**Comment:** MM3 - LPMM18/4238  **Respondent:** Sally Sparham 20816769  **Agent:**

S3 It appears that the the Brownfield sites in the town centre are not being considered earlier enough in the planning process. Surely these should be fully utilised before the green belt sites are involved. There seems little effort to improve the infrastructure in the town centre – the traffic flow and pollution levels are appalling. The improvements on the A3 may not be enough to sort out Guildford’s problems and the GBC has no control over the timing for these.

**Comment:** MM3 - LPMM18/4267  **Respondent:** Paulina Shearing 20817985  **Agent:**

Issue 2b

As a separate, but related objection, I consider the town centre should be defined as a Strategic Site. It is to the serious detriment of Guildford that at present the development on sites within the town centre are considered in an ad hoc manner. I am particularly concerned that the Plan includes no proposals to improve the appallingly bad conditions for
pedestrians as they walk between Guildford Main Line Station (8 million passengers a year) and the town centre. The conflict between pedestrians and vehicles a the crossing of Onslow Street is serious both in terms of pedestrian safety and the dangers fro pollution. There needs to be a requirement in the Local Plan for a Masterplan to be prepared for the town centre in order to frame and direct the overall development of the town centre and to address major issues relating to pedestrian movement.

Attached documents:

Attached documents:

Comment: MM3 - LPMM18/4837  Respondent: Ian Rees 20832993  Agent:

My interest in Guildford is that I was at school in Guildford, grew up in Cranleigh and several times a week I commute through the town, changing trains from the Waterloo line to the Reading line and back. My parents live in Cranleigh and my sister and her family live in Haslemere.

My interests coincide with those of the Guildford Vision Group ie:

1. MM3 – POLICY S3. Guildford Borough Council must deliver real and coordinated results. The Town Centre must be designated a strategic site or sites.

I would add that the damage to the riverside goes back a long way. Photographs in Dapdune Wharf show how the urban riverside was enclosed and privatised during the 19th century. The destruction of classic surrey buildings in Friary Street and construction of ‘The Friary’ shopping centre were disastrous for the character of this part of the town. The decline of retail presents the opportunity to demolish Friary and recover the character of this part of town by reconstruction of historic buildings (from drawings and photographs etc), mindful that the river should become a public space as it last was probably at the end of the 18th century. Alongside this investment in the character of the town any development should be mixed and mindful of the digital knowledge industries that are driving innovation. The university should be encouraged to bring campus buildings into the centre of Guildford and you should resist soulless ‘student housing company’ style blocks. There is much scope for an innovation district by the river as discussed by Brookings (https://www.brookings.edu/innovation-districts/)

2. MM3 – POLICY S3. Guildford must have an effective local plan. Development rules must ensure quality of development across the Town Centre. I would urge you to consider tunnels as a solution to traffic that is passing ‘through’ Guildford, removing artificial barriers to pedestrians without creating a pedestrianised no go zone for local car traffic. Consider ‘the big dig’ in Boston. Many cities around the world have accomplished this.
3. MM3 – POLICY S3. Guildford Borough Council should adopt Guildford Vision Group’s proposals, including
the new crossing or equivalent effective alternative, to deliver a safer, pedestrianised town centre with transport
resilience and opened riverside.

Attached documents:

Comment: MM3 - LPMM18/4923  Respondent: Monique Harrison 20834945  Agent:

MM3 policy S3. Guildford Borough Council must deliver real and coordinated results. The town centre must be
designated a strategic site, or sites so that they can be properly masterplanned.

MM3 policy S3. Guildford must have an effective local plan. Relevant rules must ensure quality of development across
the town centre. Bland urgings of high-quality development as at present are meaningless. It is not necessary to be
proscriptive but so much modern development is mediocre clearer guidelines are required

MM3 policy S3. At morning and evening peak times Guildford is one of the most congested towns in the UK and
Europe. Much greater priority should be given to improving and creating safe and attractive pedestrian and cycle routes.
This might include wider pavements, dedicated cycle lanes, lower speed limits but above all reducing single occupancy
commuting and ferrying children to school. It is perfectly possible for the council to come up with proposals to address
these matters which should be in this plan .Proper consideration should be given to Guildford Vision Group’s proposal
for an additional river crossing to relieve congestion on the one-way system.

MM3 There should be a policy (S4) for the urban areas beyond the town centre to prevent inappropriate garden grabbing
and to encourage a joined-up approach to site assembly in carefully selected residential areas where redevelopment linked
to enhancement might be appropriate. Garden grabbing developments are very disruptive. Consents are generally
contested and the often long-running uncertainty very unsettling. The construction is particularly intrusive and the
ultimate development is generally substandard. There should be a presumption against this other than in exceptional
circumstances such as where the additional house cant be self-contained with its own highway access.

MM3 In (5) new town centre development should avoid adverse impact on surrounding residential areas.

Attached documents:

Comment: MM3 - LPMM18/4949  Respondent: C Davies 20835105  Agent:

S3
The town centre policy is inadequate and does not address the infrastructure deficit

Attached documents:

Comment: MM3 - LPMM18/5016  Respondent: P T & D M Kelly 20836929  Agent:

1. Policy S3. Guildford Borough Council are expected to deliver coordinated results. This requires an effective
local plan which includes a Town Centre Masterplan. The Town Centre must be designated a strategic site or
sites. In addition development rules are required to ensure quality of development across the Town Centre.
2. Policy S3. The Council should adopt Guildford Vision Group’s proposals, including the new crossing or equivalent alternative, to deliver a safer, pedestrianised town centre with transport resilience and opened riverside. The current plan is inadequate and does not address the infrastructure deficit.

3. Policy S3. The Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the Town Centre have not been fully exploited.

Attached documents:

Comment: MM3 - LPMM18/5023  Respondent: Mr Chris Britton 20839361  Agent:

As someone who lived in Guildford for almost 30 years, ran a business in the town, and still have my social life, church and shopping centred in Guildford, I have taken an interest in the new Local Plan and am very concerned at its current state, and believe the Main Modifications put forward do not make the Plan sound. This particularly applies to MM3 and MM23. My main concerns are;

- The Spatial Strategy does not grasp the opportunity to maximise the use of brownfield land in the town centre, which ends up resulting in unacceptable and unsustainable allocation of greenfield sites on the margins.

- The lack of a proper vision (masterplan) for the town centre means the whole Plan is back-to-front; if there was a proper masterplan in place for the central areas, and the associated infrastructure investment, then subsequent allocation of sites for housing and mixed use can be put in the right places, minimising sacrifice of greenfield development

- Quality of the urban environment. I agree with the Inspector that, with the exception of the High Street, central Guildford is a disgrace - abandoned derelict sites, eye sore car parks, roads and footways in appalling condition, inconsistent use of lighting, street furniture and signs etc. which are of mixed quality and lack a cohesion in design. This should be corrected in a proper town centre design and masterplan policies.

- Transport; everyone knows that road traffic is the bane of the lives of residents, visitors, businesses alike, and no 'tinkering at the edges' or provision of more buses and one or two disjointed cycle lanes will solve the problem. Neither is relying on delivery by Highways England of some (yet to be agreed) improvements in the A3 a viable way out. The 'Solum' development of the station site is a travesty and misses the ideal opportunity to use that space creatively for improving the lot of rail travellers, and creating better connectivity between West and East sides of the town. The Borough Council should be brave and bold and go for radical transport solutions.

Attached documents:

Comment: MM3 - LPMM18/5131  Respondent: Hazel Balti 20842017  Agent:

I support GRA & GVG findings that the Local Plan is unsound because:

1. The council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited

2. The town centre policy, S3, is thus inadequate and also does not address the infrastructure deficit

Attached documents:
2. There is consequently a strong case for taking out a strategic site, and more scope for timely town centre development. This makes table S2b out of date, and MM3 inadequate and in need of re-examination.

Attended documents:

Comment: MM3 - LPMM18/5235  Respondent: Sam McWilliams 20843617  Agent:

MM3 In (5) new town centre development should avoid adverse impact on surrounding residential areas.

3. The town centre policy is inadequate and fails to address infrastructure deficit.

Comment: MM3 - LPMM18/5596  Respondent: Jeremy Stephens 20850561  Agent:

3. Proper planning of the town centre would help to promote more relevant, sensitive development. The hastily-added section is based on pre-internet retail models and numbers.

Comment: MM3 - LPMM18/5625  Respondent: Joan Clifford 20850753  Agent:
3. Proper planning of the town centre would help to promote more relevant, sensitive development. The hastily-added section is based on pre-internet retail models and numbers.

There need to be height restrictions on any building including the Wey corridor as well as the town centre (Portsmouth Road, North Street etc).

I have lived in Guildford for nearly 40 years, and have been involved in a variety of resident's associations and other interest bodies concerned with the town's development for much of that time. Over the last six years or so, I have followed carefully the work done by GRA, GVG, and (when it was in existence during Stephen Mansbridge's tenure), I attended the meetings of the Residents Association Liaison Group (RALG).

I am not a NIMBY, and I recognise the need for a pragmatic and negotiated approach to development between all parties. I support the Wisley development, and hope that this will be resubmitted in due course. That area should count as brownfield not greenfield. I am not totally against the Blackwell Farm development but I consider it needs extensive thinning out and modification.

The plan as currently envisaged though is unsound in many ways - let me give some detail:

- Brownfield opportunities, especially in the town centre have not been fully exploited.
- The town centre policy, S3, is thus inadequate and does not address the infrastructure deficit.

Policy S3 should be strengthened to focus on the prioritising the Guildford urban area inspiring urban regeneration over building on our precious Green Belt.

Attached documents:
There is no coherent development plan for the Town Centre especially with regard to infrastructure to reduce or alleviate traffic flows through the centre of Guildford, which already can be grid-locked at peak times.

Attached documents:

Comment: MM3 - LPMM18/6047  Respondent: Michael R Bennett 20865729  Agent:  

- Proper planning of the town centre would help to promote more relevant sensitive development. The hastily added section is based on pre-Internet retail models and numbers.  
- There is no policy dealing with urban areas beyond the town centre such as the one where we live.

MM3 policy S3. Guildford Borough Council must deliver real and coordinated results. The town centre must be designated a strategic site, or sites.

MM3 policy S3. Guildford must have an effective local plan. Relevant rules must ensure quality of development across the town centre. Rules should be quantitative where possible and not nearly bland urgings of high-quality development as at present which are meaningless.

MM3 policy S3. At morning and evening peak times Guildford is one of the most congested towns in the UK and Europe. Much greater priority should be given to improving and creating safe and attractive pedestrian and cycle routes. Proper consideration should be given to Guildford Vision Group’s proposal for an additional river crossing to relieve congestion on the one-way system.

MM3 There should be a policy (S4) on the urban areas beyond the town centre to prevent inappropriate garden grabbing and to encourage a joined-up approach to site assembly in carefully selected residential areas where redevelopment linked to enhancement might be appropriate.

MM3 In (5) new town centre development should avoid adverse impact on surrounding residential areas.  

- There are few concrete proposals for reducing congestion. Where there are any, these are outside Guildford's control, like widening the A3, and therefore there is nothing really to prevent the major greenbelt development taking place irrespective of the congestion.

Policy H1(3) stipulated requirements for accessible homes on housing sites. It is not considered that sufficient sound justification has been provided to support policy requirements for 10% Building Regulations M4(2) category 2 standard ‘accessible and adaptable’ and 5% of new homes meeting Building Regulations M4(3)(b) category 3 wheelchair user accessible dwellings standard.

Whilst as stated previously, we support the provision of policies to ensure housing size, type and tenure of homes required for different groups in the community are provided, Planning Practice Guidance is clear that evidence is required to demonstrate need and viability prior to implementing these standards.

The 2017 SHMA provides some justification regarding the need for accessible homes and indicates a projected increase in the number of people with long-term health problems or disability, whilst also indicating a requirement for 8% of the housing need to cater for specialist housing for older persons, such as sheltered extra care housing.

Our position therefore remains the same, and whilst we generally support the delivery of residential units to meet the needs of the ageing population and those with health needs, there has been little justification within the Local Plan evidence base to support the proposed total level of 15% of new homes as indicated in policy H1.

In addition, whilst a need has been identified within the Borough, particularly for the needs of older people, there is little justification as to whether all sites would be suitable for this need depending on size, location and need within a particular area. For village sites such as Land west of West Horsley, 15% provision for accessible and adaptable dwellings may not be justified by need within the area.

Policy H1(9) continues to stipulate requirements for self-build and custom homes on housing sites. The policy requirement of 5% on development sites of over 100 homes or more to be made available for sale as self-build and custom housing building has not been justified. As discussed above in regard to accessible units, need for self-build and custom homes needs to be justified within the council’s evidence base to ensure a sound basis for any policy.

Site allocation A38 also includes a requirement for ‘some self-build and custom house building plots’. As above, this requirement needs to be justified in the council’s evidence base. In our view, these policy requirements for a proportion of self-build and custom housing plots on all sites is not a feasible approach.

We trust that these representations will be useful and clear, and we would be grateful of confirmation of receipt. In the meantime, please do not hesitate to contact me if you have any queries or require any further information.

Attached documents:

Comment: MM5 - LPMM18/5849  Respondent: Mr Gordon Farquharson 8571617  Agent:

MM5 – I note that at 4.2.23 it is stated there is no evidence for a need for a (travellers) transit site within our borough. This is at total variance with the advice published by Commissioner David Munro on the 19th June 2018 where he stated that the use of Transit Sites had been useful in other areas but there are none in Surrey. He states that they should be introduced following a number of recent unauthorised encampments. A number of these have been in Guildford. Since travellers from time to time make a nuisance of themselves in Merrow by occupying our Park and Ride facility causing significant inconvenience to our residents, and expense to GBC, I take the view that there is a need for a transit site in or near to our borough to avoid travellers parking illegally.

Attached documents:

Comment: MM5 - LPMM18/1325  Respondent: Mr Richard D Jarvis 8599201  Agent:

Re para 4.2.23, xperience of the effect of visiting Travellers provides sufficient grounds for inclusion of one or more transit pitches. Better to face this now, rather than 'keep under review'.

Attached documents:

Comment: MM5 - LPMM18/2403  Respondent: Shalford Parish Council (Nuala Livesey) 8627201  Agent:

MM5 POLICY H1 PARA (4.2.23) Provision of transit site for Gypsies and Travellers

The draft Plan submitted to the Inspectorate stated that the TTA (2017) had ‘found no evidence of need for a transit site within our borough’. The proposed amendment adds the following statement:
The Council will keep this position under review and should the need for a transit site arise, will work with neighbouring authorities to address this.

SPC welcomes this as a step in the right direction, but in the light of events during summer 2018 urges GBC to delete the whole text and substitute a new statement which recognises the need for such sites and commits the Council to working with other authorities to provide several transit sites in the SCC area as a matter of urgency.

Comment: MM5 - LPMM18/1308  Respondent: Mrs Lynda Turner 17301473  Agent:

[Response has been redacted due to statements being considered contrary to the Council’s duty under the Equalities Act 2010 to eliminate discrimination, harassment, victimisation against persons with a protected characteristic; and to foster good relations between persons with a protected characteristic and persons who do not share it]. Not a sensible siting near the proposed housing areas.

Attached documents:

Comment: MM5 - LPMM18/5872  Respondent: Thakeham Homes (Sarah Sutcliffe) 17345441  Agent:

Policy H1: Homes for all (Main Modifications 4 & 5)

In addition to the above, MMs proposed in respect of Policy H1: Homes for All, do not address previous concerns raised through representations regarding the soundness of the policy stipulations in respect of self-build and custom homes.

Policy H1(3) stipulated requirements for accessible homes on housing sites. It is not considered that sufficient sound justification has been provided to support policy requirements for 10% Building Regulations M4(2) category 2 standard ‘accessible and adaptable’ and 5% of new homes meeting Building Regulations M4(3)(b) category 3 wheelchair user accessible dwellings standard.

Whilst as stated previously, we support the provision of policies to ensure housing size, type and tenure of homes required for different groups in the community are provided, Planning Practice Guidance is clear that evidence is required to demonstrate need and viability prior to implementing these standards.

The 2017 SHMA provides some justification regarding the need for accessible homes and indicates a projected increase in the number of people with long-term health problems or disability, whilst also indicating a requirement for 8% of the housing need to cater for specialist housing for older persons, such as sheltered extra care housing.

Our position therefore remains the same, and whilst we generally support the delivery of residential units to meet the needs of the ageing population and those with health needs, there has been little justification within the Local Plan evidence base to support the proposed total level of 15% of new homes as indicated in policy H1.

In addition, whilst a need has been identified within the Borough, particularly for the needs of older people, there is little justification as to whether all sites would be suitable for this need depending on size, location and need within a particular area. For village sites such as Land west of West Horsley, 15% provision for accessible and adaptable dwellings may not be justified by need within the area.

Policy H1(9) continues to stipulate requirements for self-build and custom homes on housing sites. The policy requirement of 5% on development sites of over 100 homes or more to be made available for sale as self-build and custom housing building has not been justified. As discussed above in regard to accessible units, need for self-build and custom homes needs to be justified within the council’s evidence base to ensure a sound basis for any policy.
Site allocation A38 also includes a requirement for ‘some self-build and custom house building plots’. As above, this requirement needs to be justified in the council’s evidence base. In our view, these policy requirements for a proportion of self-build and custom housing plots on all sites is not a feasible approach.

We trust that these representations will be useful and clear, and we would be grateful of confirmation of receipt. In the meantime, please do not hesitate to contact me if you have any queries or require any further information.

Main Modification: MM6  Number of representations: 21

Comment: MM6 - LPMM18/3142  Respondent: The Guildford Society (Julian Lyon) 8561377  Agent:

Main Modification 6 – Policy H2 (Affordable Homes)

The Society broadly accepts the amendments to this policy but has some reservations.

Paragraph (4a) is not quite right, nor is it complete enough. We would prefer this to read: “If developers, acting objectively and reasonably, satisfactorily demonstrate that the provision of the amount of affordable housing required by this policy would not be economically viable, such demonstration to be available for scrutiny by the Council and the public, the Council will consider the following to assist with delivering a proposed development:

• varying the tenure mix of the affordable housing (for example, more intermediate housing and less rented housing), size and/or type of homes to be provided; and/or
• reducing the overall number of affordable homes; or

(c) at the Council's sole discretion, accepting a contribution to the provision of affordable housing elsewhere in the Borough;

all subject to the proviso that there will be clawback provisions whereby the developers provide additional contributions or make additional provision of affordable homes if the development returns exceed those in the viability assessment.”

Paragraph 4.2.38 seems to be adequate, although the Council may wish to make some adjustments to accommodate our comments on Policy H2 itself.

Monitoring Indicators

The number of new-build affordable home approved needs to have reference to the changes made to the threshold of ten homes for affordable housing obligations to apply. This should perhaps limit the indicator to schemes of more than ten homes.

Attached documents:

Comment: MM6 - LPMM18/1191  Respondent: Burpham Neighbourhood Forum (Jim Allen) 8581505  Agent:

Policy H2; Affordable Homes

(2) We support the uplifting of the threshold from 5 to 10 as this allows more flexibility for affordable units on site.

(4) This is a positive move forward but steps must be put in place to ensure that legal boundaries are included to provide the legal tools for planning enforcement and legal officers to ensure no deviation from the legal agreement.

Attached documents:

Comment: MM6 - LPMM18/5735  Respondent: Sarah Belton 8598561  Agent:
MM6 refers to ‘affordable homes’ and again we need a clear definition of what this means. Reasonably it should mean quality homes from one to three bedrooms, with consideration for innovation in design to be energy efficient and space saving without compromising amenity and appearance. Cost savings should come from reduced profit not quality, and affordability must be in perpetuity to prevent future profiteering. It is about time government at all levels stopped profiteering from the property market, in favour of promoting business that produces sustainable, quality jobs and products.

Attached documents:

Comment: MM6 - LPMM18/1326  Respondent: Mr Richard D Jarvis 8599201  Agent:

Re 4(a) - surely the test is 'financially' viable rather than 'economically'. Economic can imply the inclusion of non-financial measures, which developers are unlikely to allow for.

Attached documents:

Comment: MM6 - LPMM18/5339  Respondent: Helen Jefferies 8717921  Agent:

MM6

2a /2b Why should the urban area be treated differently from the rural areas? The threshold should be 5 throughout the borough.

3 Again refers to a document which should subsequently be updated.

MM6

4.2.42 Poor drafting 0.5 affordable homes round up and 0.4 affordable home round down – what happens between 0.4 and 0.5 or is that a subjective discussion between officers and developers at the time?

MM7

4.2.49 [Response has been redacted due to statements being considered contrary to the Council’s duty under the Equalities Act 2010 to eliminate discrimination, harassment, victimisation against persons with a protected characteristic; and to foster good relations between persons with a protected characteristic and persons who do not share it] Local needs defining to avoid argument later.

Affordable to local people properties should be built before rather than after other more expensive dwellings. Truly suited to first time or down sizers.

**Attached documents:**

---

**Comment:** MM6 - LPMM18/5181  
**Respondent:** David Reeve 9335041  
**Agent:**

**Policy H2: Affordable Homes**

**MM6 – OBJECTION H2-1**

Paragraph 2a of the Policy states: “In Designated Rural Areas, the threshold where we will seek an affordable housing contribution of at least 40% of the homes on these sites will be on sites providing more than 5 dwellings. For developments of between 6 and 10 dwellings inclusive (gross), or where dwellings have a combined gross internal floorspace of more than 1,000 square metres, a financial contribution in lieu of on-site provision of affordable housing will be sought which is of broadly equivalent value relative to on-site provision.” The notion that developers can “buy out” of an obligation that would otherwise provide affordable homes is unacceptable.

**MM6 – COMMENT H2-2**

Paragraph 4.2.42 of the reasoned justification leaves the position undefined for fractional homes in the range between 0.4 and 0.5. The text should be amended to state “we will therefore round up any part requirement of an affordable housing dwelling in line with common convention at 0.5 of a home, and down at 0.499 or less.”

**Attached documents:**
Comment: MM6 - LPMM18/4566  Respondent: Chris Cotton 10880705  Agent:

- Section MM6, paragraph 4a now states that "the Council will consider the following ..." whereas the previous wording was "the Council may consider the following ...". This significantly weakens the Council's position when trying to ensure that developers provide the required amount of affordable housing. This should be changed back to "may".

Attached documents:

Comment: MM6 - LPMM18/913  Respondent: Esther and Adrian Parry 10933473  Agent:

MM6, 4a: Relates to developers claiming they can't provide the required amount of affordable housing because it would not be economically viable used to state 'may consider the following to assist with delivering a scheme' and now says 'will'. We feel strongly that it should revert back to the original wording "may" as this enables the Council to achieve more affordable housing. Developers are already pushing these boundaries without making it even easier for them. There is no need to change this wording.

Attached documents:

Comment: MM6 - LPMM18/1087  Respondent: Michael Dawson 10986241  Agent:

We wish to make the following comments on the main modifications identified in bold below:

**MM6 Affordable Homes 4a:** Relates to developers claiming they can't provide the required amount of affordable housing because it would not be economically viable. The previous wording stated 'may consider the following to assist with delivering a scheme' and now says 'will' rather than 'may'. We feel strongly that it should revert back to the original wording "may" as this will enable the Council to achieve more affordable housing and not enable developers to find excuses not to make such provision. Developers are already pushing these boundaries without making it even easier for them. There is no need to change this wording.

Attached documents:

Comment: MM6 - LPMM18/5096  Respondent: R & R Connor 17359489  Agent:

MM6, 4a:

Relates to developers claiming they can’t provide the required amount of affordable housing because it would not be economically viable, USED to state:

‘MAY consider the following to assist with delivering a scheme...’

Now it says ‘WILL’
We feel strongly that it should revert back to the original word of ‘MAY’, as this enables GBC to achieve the required and vital amount of affordable housing.

Developers are already producing the minimal or none of this category and always looking for loopholes. Changing this word would make another one.

**Attached documents:**

**Comment:** MM6 - LPMM18/2407  **Respondent:** Gladman Developments Ltd (Richard Agnew) 17752321  **Agent:**

**MM6: Policy H2: Affordable homes**

Gladman are concerned that the policy is still seeking for ‘at least’ 40% of homes as affordable. The NPPF establishes in paragraph 17 and 154 the importance of the local plan setting out unambiguous policies that support predictable and efficient decision making. It is therefore essential that affordable housing requirements are set out as maximums not minimums as this provides the clearest indication as to how a decision maker should react with regard to this policy. It also ensures that applicants are confident that they will not be asked for a higher level of affordable housing requirement by the Council.

When considering this policy, it is also important to recognise that it will be implemented on the basis of paragraph 57 of the revised NPPF. This states that where an application complies with the development plan then it should be assumed to be viable. No further assessment of viability is required, and no additional provision of affordable housing should be sought by the Council. To provide the necessary clarity on this the Council should set out its requirement as 40% to ensure certainty for applicants as well as deliver consistent decision making in future that is compliant with the revised NPPF.

**Comment:** MM6 - LPMM18/857  **Respondent:** Berkeley Homes Ltd (Olivia Forsyth) 20644961  **Agent:**

**Policy H2: Affordable Homes**

Policy H2 indicates the Council's proposed policy in relation to providing more Affordable homes. Berkeley Homes welcomes the additional of section 4a within the Policy wording.

**Attached documents:**

**Comment:** MM6 - LPMM18/1089  **Respondent:** Olive Edwards 20663873  **Agent:**

We wish to make the following comments on the main modifications identified in bold below:

**MM6 Affordable Homes 4a:** Relates to developers claiming they can't provide the required amount of affordable housing because it would not be economically viable. The previous wording stated 'may consider the following to assist with delivering a scheme' and now says 'will' rather than 'may'. We feel strongly that it should revert back to the original wording "may" as this will enable the Council to achieve more affordable housing and not enable developers to find
developers are already pushing these boundaries without making it even easier for them. There is no need to change this wording.

Attached documents:

Comment: MM6 - LPMM18/1220  Respondent: Jim Allen 20674913  Agent:

Page 13: Policy H2; Affordable Homes

(2) I support the uplifting of the threshold to 10, this allows more flexibility for affordable units on site.

(4) This is a positive move forward but steps must be put in place to ensure that strong legal boundaries are included to provide the legal tools to planning enforcement to ensure no deviation.

Attached documents:

Comment: MM6 - LPMM18/3419  Respondent: West Horsley Parish Council 20790113  Agent: Colin Smith

MM6 - Affordable Homes

2.16 Recommendations;
   i. Retain the modification to ensure the thresholds comply with those in paragraph 63 of the NPPF;
   ii. Retain the modification to (4) in order to trigger the provision of off site affordable housing;
   iii. Retain the modification to paragraph 4.2.38 to make it clear that viability arguments will be an exception;
   iv. The modification to paragraph 4.2.42 is supported.

Comments

2.17 The modifications to the policy are generally supported as they bring the policy in to line with Government policy thresholds and provide a trigger to ensure that offsite affordable housing is delivered alongside market housing.

2.18 Whilst it is understood that developers are able to present viability arguments to justify reduced affordable housing provision, the clarification in paragraph 4.2.38 is welcomed to make it clear that this would be an exception.

Attached documents:

Comment: MM6 - LPMM18/5784  Respondent: Ptarmigan Land 20855201  Agent: Iceni Projects Ltd (Stuart Mills)

MM6 – Policy H2

2.5 We welcome the proposed inclusion of part (4a) within Policy H2, as set out within MM6. This modification addresses our previous comments that the supporting text indicating that the 40% affordable requirement will be subject to viability considerations should be included within the policy text. We consider that this now appropriately reflects the
guidance at paragraph 173 of the NPPF that it is important to consider viability to enable a development to be deliverable. We thus consider that with this modification the policy will be effective and consistent with national policy.

Attached documents:

**Main Modification 6**

2.4 Main modification 6 relates to Policy H2: affordable homes. We welcome the additional flexibility which has been integrated into the policy in relation to affordable housing provision:

*“if developers satisfactorily demonstrate that providing the amount of affordable housing required by this policy would not be economically viable, the Council will consider the following to assist with delivering a scheme:*

*a) varying the tenure mix of the affordable housing (for example, more intermediate housing and less rented housing, size and/or type of homes to be provide: and/or*

*b) reducing the overall number of affordable homes”.*

2.5 We consider this added flexibility allows for site specific circumstances whereby proposals may have been rendered unviable by the level of affordable housing sought. This modification will, therefore, be instrumental in enabling housing delivery.

**Page 15: Policy H3; Rural Exception Homes**

The wording leaves Green Belt open to 'technical deviation from intent by travellers. It also introduces market housing in rural exception sites for the first time.

We note this amendment is in reference to the new revised NPPF of July 2018 therefore the whole plan must comply with the new Policy document. Thus the requirement of a currently missing statement of common ground taking housing numbers from Woking is significant in making the Plan unsound.

**MM7 - Rural exception homes**

**2.19 Recommendations:**

i. Remove the wording that provides for sites for gypsies and travellers that do not meet the definition in the Planning Policy for Traveller Sites;

ii. Retain the inclusion of a requirement to ensure that only the minimum number of market homes should be provided, subject to a viability assessment;

iii. Remove the wording in paragraph 4.2.49 that provides for sites for gypsies and travellers that do not meet the definition in the Planning Policy for Traveller Sites;

**Comments**

2.20 The modifications to the above policy are supported to the extent that they allow for greater clarity around who can benefit from rural exception sites and how developers might be encouraged to provide these sites with the inclusion of
limited market housing. However, the provision of rural exception sites for those falling outside the definition of gypsies and travellers should be resisted in order to avoid unnecessary and inappropriate developments.

**Comment:** MM7 - LPMM18/3742  **Respondent:** Anthony Thompson 20796225  **Agent:**

MM7 I object Rural exception housing should be affordable housing to meet local needs. Allowing developers to build market housing on those sites will open them to the argument that the affordable housing is uneconomic and they end up as large dwellings that are not meeting the intended purpose.

**Comment:** MM8 - LPMM18/4134  **Respondent:** Kristine Good 10866945  **Agent:**

MM27 MM41 MM42 and MM48 Transport Strategy

The traffic implications for Send of Garlick’s Arch, Burnt Common, Clockbarn and Alderton’s added to nearby Gosden Hill and Wisley/Ockham are not adequately addressed by the A3 changes and the Clandon slip roads. GBC offer no proper assessment of the aggregate traffic impact on Send Barns Lane and Send Road as thousands more cars head to Woking every day, causing increased noise, nitrogen dioxide pollution, delays and gridlock, as already stated in previous points. This area is unable to support increased residential traffic and is unsuitable for heavy commercial traffic.

In conclusion, development of this scale in this rural village will be detrimental to the character of this living space, and impact hugely on residents, there is **insufficient consideration of the enormous size of development being placed in one small area of the constituency**, as opposed to spacing out development, which would ease traffic overloading, decrease the escalating problem of pollution, share the increased strain on services; education, health.

I urge the planners to take these objections in to consideration and listen to the observations regarding these plans from the people who live and work in these areas and see each day how the infrastructure is completely inappropriate to support such huge development in squeezed into one small area of the borough.

**Attached documents:**

**Comment:** MM8 - LPMM18/3072  **Respondent:** Nigel Freebody 15590849  **Agent:**

I object to the number of showpeople plots currently in the revised Local Plan. The proposed allocation is disproportionate to the number of possible new homes within the Ripley, Send and Clandon area as compared with other local development plans, such as the Wisley aerodrome site. There is no justification for such inclusion within the Green Belt area and sacrifice of Green Belt land for this purpose seems nothing less than cavalier.

MM9

In Green Belt, proposed limited infilling outside identified settlement boundaries should not be allowed, would harm openness and become a loophole.

Attached documents:

Comment: MM9 - LPMM18/5008  Respondent: Holy Trinity Amenity Group (Robert Bromham) 8559297  Agent:

Delete the added sentence “Very special circumstances will not exist unless the potential harm to the Green Belt by reason of inappropriateness, and any other harm, is clearly outweighed by other considerations.” This does not clarify the previous sentence “Inappropriate development will not be permitted unless very special circumstances can be demonstrated” and could create added confusion.

Attached documents:

Comment: MM9 - LPMM18/2990  Respondent: Chris Brown 8561057  Agent:

MM9 Green Belt Policy

This can hardly claim to be a policy when the above developments all impinge on the existing Green Belt which GBC seem prepared to sacrifice. Following GBC’s logic, all greenbelt land can be sacrificed and therefore is able to be built on. This breaches all GBC’s own policies and government directives.

Attached documents:

Comment: MM9 - LPMM18/3145  Respondent: The Guildford Society (Julian Lyon) 8561377  Agent:

Main Modification 9 – Policy P2 (Green Belt)

We do not agree the specific wording of the last sentence of paragraph (1) of the policy itself. We would prefer this either to be deleted or for it to be less ambiguous. Something along the lines of: “Very special circumstances will not exist where the potential harm to the Green Belt, its openness and its permanence, is not substantially outweighed by other material considerations and where the development could not reasonably be accommodated on non-Green-Belt land.”
The amendments at Paragraphs (2)(a) and (2)(b) are generally acceptable to the Society.

At 2(c) the limited infilling must not be done in such a way as to extend villages through a loophole.

Paragraph (3a) is vague and contains a double negative and should be reworded to: “Certain other forms of development (description or test required) are also not considered to be inappropriate in the Green Belt provided they preserve its openness and do not conflict with the purposes of the Green Belt as listed in the NPPF.

The deletions of paragraphs 4.3.21 and 4.2.23 are generally acceptable to the Society.

The additional text at Paragraph 4.3.25 is inconclusive and vague and, because it is basically an incomplete list, it neither protects nor explains anything.

**Monitoring Indicators**

The target should, realistically, be zero as there is a general default against development in the Green Belt.

**Generally**

The Council has not satisfactorily applied its own settlement hierarchy (as demonstrated in the Sustainability Appraisal), and this sets a poor example and a very low threshold for a Very Special Circumstances test by comparison.

Due to the updated housing numbers, we do not believe the case has been made appropriately or conclusively for releasing land from the Green Belt. Consequently, **we consider the Plan is unsound.**

**Attached documents:**

---

**Comment:** MM9 - LPMM18/6026 **Respondent:** C Sheard 8562561 **Agent:**

**MM9 Policy P2 Green Belt**

I welcome the statement that “The Metropolitan Green Belt, as designated on the Policies Map, against inappropriate development in accordance with the NPPF. Inappropriate development will not be permitted unless very special circumstances can be demonstrated. “ I would point out however that the revised ONS housing figures issued in September 2018, would allow Guildford Borough Council to avoid building on the Metropolitan Green Belt entirely!

**Attached documents:**

---

**Comment:** MM9 - LPMM18/5350 **Respondent:** Miss Edwina Attwood 8568193 **Agent:**

MM9 In Green Belt, proposed limited **infilling outside identified settlement** boundaries should not be allowed as it will harm openness and become a loophole for inappropriate development.

**Attached documents:**

---

**Comment:** MM9 - LPMM18/1936 **Respondent:** Mrs Fiona Curtis 8570273 **Agent:** Mrs Fiona Curtis
MM9

In Green Belt, proposed limited infilling outside identified settlement boundaries should not be allowed, would harm openness and become a loophole.

Current NPPF guidelines to protect special landscapes/ features/ biodiversity/ wildlife are being circumnavigated to enable development and this is not in the spirit of the National Policy. If it is in line with the policy then the wording of the national policy should be changed so that the public can see that this government is not protecting these vital areas.

MM9

Policy P2 modifications

The revised NPPF places greater emphasis on maintaining, conserving and enhancing biodiversity:

"Stronger protection for the environment"

The new framework has also been updated to provide further protection for biodiversity; ensuring wildlife thrives at the same time as addressing the need for new homes.

Changes to the framework see the planning system align more closely with Defra’s 25 Year Environment Plan, which aims to leave the environment in a better state for future generations.”

The current draft Local Plan will have the opposite effect – destroying wildlife and reducing biodiversity by removal of habitats and corridors.

I object to the policy of insetting villages. There are no exceptional circumstances for doing so. I support the views put forward by East Horsley Parish Council with regard to insetting. Insetting will lead to loss of wildlife corridors and result in smaller gardens most of which will be overmanaged in a way that deters wildlife and reduces biodiversity. It will be a very significant reduction in the quality of life for residents – altering the character of the villages entirely.

I object to the identification of the proposed settlement areas within the Green Belt.
Policy P2 is amended but continues to focus infilling on newly defined settlement areas, within the Green Belt, extending existing village boundaries. In my opinion there is no legal requirement to identify such areas and doing so amounts to pre-determination of planning applications against the intentions of the NPPF. Prescribing these village extensions restricts the right of residents to raise valid planning objections. The wording in Policy P2 should be amended to remove the identification of such areas – and they should be removed from the maps in Appendix H.

I have particular concerns regarding the area known as Horsleys - East Horsley (south) in the maps included in Appendix H. I have lived within the proposed area for 25 years and throughout that time I have acted to “maintain, conserve and enhance” its biodiversity. I manage my plot (garden and attached field) effectively as a private nature reserve. I am not alone in the area in taking a deep interest in, and appreciation of, the wildlife that we share our chosen places with.

“Horsleys – East Horsley (south)” is a choice made by Guildford Borough Council based on a desk-top exercise that ignores various aspects such as biodiversity, landscape, local character and sustainability. Any new housing in this proposed area will generate more short car journeys to the village due to the barriers to walking, and once in a car there is no incentive to switch to the poor local bus service for journeys to destinations such as Guildford town centre. I object to its inclusion in the plan.

I stressed the biodiversity and landscape aspects of the proposal in my examination statement.

Although I have commented on this previously it seems that I need to underline certain aspects of the biodiversity of the proposed settlement area by providing more detail (some of which was included in the East Horsley Neighbourhood Plan evidence).

My garden is home to an isolated colony of the **Small Blue butterfly**.

The Small Blue used to occur at The Sheepleas (an SSSI to the west of the proposed settlement area which includes Surrey’s Coronation Meadow) but died out there due to habitat change.

Efforts to link up the remaining colonies of the Small Blue are being made by the Surrey Small Blue Stepping Stones Project which involves considerable time and work carried out by volunteers. Guildford Borough Council is threatening the future of a colony, currently in my ownership, by signalling to developers that it is suitable for infilling.

My plot also includes a small colony of the **Chalkhill Blue butterfly**.

35 species of butterfly have been recorded in my plot - a high proportion of which are completing every stage of their life cycle on site. This is a high number by any standards for a small site. Butterfly Conservation lists 41 species for Surrey. 12 of the 15 rarer Surrey species have been recorded in my plot.

Nine species of orchid have been recorded in my plot and this includes an exceptional density of **Greater Butterfly Orchid** (Platanthera chlorantha) - probably one of the best remaining sites in Surrey. At least one additional orchid species (a very rare species in Surrey) is also present within the proposed settlement area. They are dependent on the special soils found in this area – and occur along with many other characteristic chalk grassland plants including the uncommon **Knapweed Broomrape** (Orobanche elatior).

Most people find that butterflies and meadows enhance their lives, and feeling of wellbeing, and there are many other aspects to biodiversity.

Among the invertebrates that occur in my plot and are of particular importance due to their scarcity are:

**Microdon devius**

A very rare hoverfly, dependent on anthills, which is now hard to find at The Sheepleas SSSI - one of the few known Surrey sites historically. It occurs in significant numbers in my plot and this year it was particularly numerous. According to information on the website of the Hoverfly Recording Scheme (the notes from "Falk (1991)") **STATUS** Very local and declining with about a dozen known post 1960 sites, mainly from Wealdon, Hampshire, the North Downs and the Chilterns with one (possibly two) sites in North Wales (Merionethshire). It was also recorded from Middle Harling Fen, Norfolk in 1988."
I have visited a number of other likely historic sites on the North Downs in an attempt to find this species - but without success so far.

The presence of this rare species in large numbers in my plot enables me to make a contribution to knowledge of its phenology that would be difficult to obtain elsewhere.

**Callicera aurata**

A scarce hoverfly associated with old trees. Found on at least three occasions in my field (there has been a fourth likely sighting). Likely to be breeding in the older trees of Chalk Lane. The most recent confirmed sighting was on 15\textsuperscript{th} September 2018.

**Andrena hattorfiana**

A rare, and easily recognised, large mining bee. The "Bees of Surrey" (Surrey Wildlife Trust - 2008) listed six known historic sites for this species in the County. It has been present in my field since at least 2003 (and probably earlier) and occurs here in large numbers. It is a Field Scabious specialist. I found it in Wellington Meadow (also within the proposed settlement area) in 2009 and it has been seen there every year since. A small area of Field Scabious has developed at The Sheepleas recently and hattorfiana occurred there for the first time this year (the only records of its occurrence at The Sheepleas are my own, this year, as far as I am aware). Whether there is sufficient suitable habitat to maintain a small population at The Sheepleas remains to be seen. It seems likely that having colonised my field at some point in the past it was able to colonise Wellington Meadow a few years after favourable management was undertaken by East Horsley Parish Council. If it has also succeeded in colonising a small corner of The Sheepleas, nearby, this demonstrates the contribution that large wildlife gardens (and sympathetic Parish Councils) can make to Surrey's biodiversity.

**Osmia bicolor**

A snail-shell nesting bee that is abundant in my garden and field. The North Downs is its main habitat in the UK. Its appearance is extraordinary when flying around carrying sections of dried grass stem to add to its "nest" for protection.

**Pammene trauniana**

I submitted photographs of "micro" moths found in my plot to a survey, the results of which were published in "The Smaller Moths of Surrey" (Surrey Wildlife Trust - 2012). One of the photographs turned out to be of this rare UK resident species. It was confirmed by an expert at the London Natural History Museum and was the only Surrey record obtained in the survey. My understanding is that it had not been found in Surrey for over 100 years. It was photographed on my garden hedge.

**Nemophora metallicia**

Another micro moth (a Field Scabious specialist) that has been present in my field, often in very good numbers, since at least 1995. It has also colonised Wellington Meadow (included in the proposed settlement area) but there are still no records from The Sheepleas as far as I am aware.

**Nemophora cupriacella**

This attractive micro moth (also known to utilise Field Scabious and very rare in Surrey) was found in my field for the first time this year. It was on its foodplant. It remains to be seen whether it has colonised.

**Commophila aeneana**

An uncommon and attractive micro moth. Finding this in my field led me to the micro moth survey for identification. I find it nearly every year here and have also seen one in Wellington Meadow.

**Atypus affinis**

The purseweb spider - seen here on two occasions.
Myrmarachne formicaria

An unusual spider that resembles a rather colourful ant. Seen here on a number of occasions.

Glow Worm (Lampyris noctiluca)

It is still possible to find these in the area although they are much reduced from the numbers seen here at the end of the last century (in my experience).

My garden also has a thriving colony of Viviparous Lizards (Zootoca vivipara) while Slow Worms are plentiful in the area.

Another resident has told me that the Hazel Dormouse has been seen in two gardens suggesting that the tree-lined banks of the lane act as a north-south corridor for this species. This seems likely given the proximity of known colonies. Infilling will lead to further destruction of the banks and loss of trees in order to create access points. This will break up the corridor for Dormice.

Many other aspects of chalk grassland wildlife are present (too much to list here).

The area also functions well as an east-west corridor for wildlife on the dip slope of the Downs. Infilling destroys wildlife corridors while the Government has indicated that it wants to maintain them.

My plot is an example of a "biodiversity opportunity area" (in the real sense – though not in the somewhat limited planning definition) in which the opportunity has been realised through 25 years of sound management (Wellington Meadow is another example). The same opportunity applies to the gardens and fields across this proposed settlement area that the Council is going out of its way to invite developers to infill. I am by no means the only wildlife gardener in Chalk Lane. It seems that the current Council is not genuinely concerned about biodiversity or landscape. By defining this settlement area the Council is actively discouraging wildlife gardening and wildlife-friendly land management. The Council is putting wildlife corridors at risk in an area where it could yield significant gains in biodiversity.

Perhaps the planning team were not aware of the implications of their decision - which is in direct contradiction to their own policy on biodiversity. I have pointed out the other aspects that make Chalk Lane unsuitable for infill development.

Please take this opportunity to remove the proposed settlement area from the maps.

Please also remove the other proposed settlement area extensions within the Green Belt and amend the wording in policy 4.3.25 so that no areas are pre-determined in this way. There can be no justification for circumventing the intentions of the NPPF in this manner.

Attached documents:

Comment: MM9 - LPMM18/5699  Respondent: Douglas French 8574369  Agent:

MAIN MODIFICATIONS MM9 GREEN BELT

I strongly object to the Council's determination to ride roughshod over the Green Belt adopting an approach which contravenes Case Law, the revised NPPF and the stated policy of HM Government. Guildford Council needs to appreciate that the law and Government policy applies to it in the same way as it does to everybody else. Without repeating all the case law here “exceptional circumstances” and “special circumstances” have been amply defined in court decisions. Guildford Council continues to show no signs of being aware of that, of, if aware, ready to comply.
**MM9 GREEN BELT INSETTING OF VILLAGES**

I object to Guildford Council making an exception to Green Belt policy allowing “limited infilling outside the identified settlement boundaries where it can be shown that a site should be considered to be within the village”. Considered by whom and on what criteria? This introduces a subjective test and considerable uncertainty. If Guildford Council wanted to try to negate Green Belt protection this effectively does it. It means that any land on the edge of a village like Send could be picked off for development, an open invitation to developers and speculators at the expense of residents.

This approach by Guildford Council is seriously anti-democratic and shows a complete betrayal of the trust conferred on them at the last ballot box.

Attached documents:

---

**Comment:** MM9 - LPMM18/3507  **Respondent:** Ian Reeves 8575649  **Agent:**

This leads me on to (MM9) Green Belt Policy. Although these latest modifications to the Local Plan claim to protect the Green Belt except in very special circumstances GBC make an exception for limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be 'within the village'. This introduces a subjective test, considerable uncertainty and effectively negates Green Belt protection. Any land on the edge of our village could be picked off for development, an open invitation to developers and speculators at the expense of residents. All sites in the proposed housing increases in Send Marsh are on Green Belt land.

Attached documents:

**Comment:** MM9 - LPMM18/6071  **Respondent:** D & M Planning Limited (Jesse Chapman) 8581153  **Agent:**

Green Belt Map

As can be seen within the attached letter dated July 2017; the site was subject to Amendments 1 – 8 (Normandy and Flexford).

Map MM 42 relating to the latest draft version of the Local Plan, attached as Appendix 2, highlights the location of Halsey Cottage and shows the proposed settlement boundary realignment.

To reiterate, our client objects to the inclusion of his residential garden curtilage land to be located within open Green Belt and outside of the settlement boundary.

Within our previous submission, it was outlined that the land further west of the garden of Halsey Cottage is already designated as Metropolitan Green Belt and, as such, does not need to be made more robust and defensible as it is already afforded all of the statutory protection that comes with it being Green Belt land.

Since our previous submission, the National Planning Policy Framework (NPPF) has been updated.

Our previous submission referred to paragraph 85 of the 2012 NPPF, which has been superseded by paragraph 139 of the 2018 version and which says:

*When defining Green Belt boundaries, plans should:*
a) ensure consistency with the development plan’s strategy for meeting identified requirements for sustainable development;
b) not include land which it is unnecessary to keep permanently open;
c) where necessary, identify areas of safeguarded land between the urban area and the Green Belt, in order to meet longer-term development needs stretching well beyond the plan period;
d) make clear that the safeguarded land is not allocated for development at the present time. Planning permission for the permanent development of safeguarded land should only be granted following an update to a plan which proposes the development;
e) be able to demonstrate that Green Belt boundaries will not need to be altered at the end of the plan period; and f) define boundaries clearly, using physical features that are readily recognisable and likely to be permanent.

Each of the above points are discussed below:

a) The site has the potential to accommodate additional, albeit a modest degree of, development, to help the Council achieve its housing numbers.

In order to do this, the settlement boundary would not need to be moved from its current location, but merely taken out of the Green Belt, the same as the rest of the village.

b) The land in question is lawful residential curtilage land (see photographs attached as Appendix 3), with open Green Belt land beyond and which is defined by a strong boundary treatment. As such, it is not necessary to keep this land permanently open.

Further to the above, there is no requirement to safeguard this residential garden land from the open, agricultural fields beyond.

The residential garden curtilage in question is not significant in size and thus, cannot be viewed as a location where ‘large’ amounts of development could come forward.

c & d) The site is not ‘safeguarded’ land, but it could come forward as a potential ‘windfall’ site.

Indeed, as well as sites being allocated for new housing within the Normandy / Flexford area, policy P2 of the draft Local Plan highlights Normandy as location where new development could be acceptable.

To include my client’s residential garden land within the Green Belt, outside of the settlement boundary, would prejudice any opportunity to do this.

e) If sites, such as the residential garden curtilage of Halsey Cottage, are taken outside of the settlement and placed within open Green Belt, and thus prejudicing their ability to accommodate new development, there is every possibility come the end of the plan period these sites will be taken back out of the Green Belt in any event.

f) The Council’s line of segregation of my client’s residential garden curtilage is arbitrary.

As can be seen from the photographs attached as Appendix 3, there are no physical or otherwise discerning features which could possibly demark land that would be within or outside of the settlement area / open Green Belt.

It is noteworthy that the rear garden curtilage of Halsey Cottage has been within the settlement boundary since at least 2003 (when the current Local Plan was adopted) and has always been used as residential garden curtilage since my client first purchased the property in August 2012 from the vendor who themselves purchased the property in 1994.

The garden was actually created in 1934 from the plot to the northern boundary. The remaining land was utilised to build the houses that are there today.

Inter alia, paragraph 140 of the NPPF says:

If it is necessary to restrict development in a village primarily because of the important contribution which the open character of the village makes to the openness of the Green Belt, the village should be included in the Green Belt.
Clearly the Council does not consider that Normandy does make an important contribution to the openness of the Green Belt otherwise it would not seek to remove it from the Green Belt.

Therefore, it is not understood what contribution to the openness of the Green Belt the section of residential garden of Halsey Cottage makes and why the Council has not sought to keep it within the settlement boundary. There are other rear gardens belonging to other properties within Glaziers Lane with similar attributes to Halsey Cottage’s and, therefore, it seems somewhat perverse that no other rear garden has been omitted from the settlement boundary.

As such, it is contended that Guildford’s approach in segregating my client’s residential garden curtilage is contrary to the planning policy advice set out within the NPPF.

However, if it is the approach of the Council to seek to protect the Grade II Listed Building by virtue of placing the curtilage land within open Green Belt outside of the settlement boundary (at this point it is worth mentioning that a portion of the garden curtilage land of No. 38, to the south-east, is part of the historic curtilage of Halsey Cottage, (bought in around 1978)), paragraph 140 of the NPPF also says:

If, however, the character of the village needs to be protected for other reasons, other means should be used, such as conservation area or normal development management policies, and the village should be excluded from the Green Belt.

If this is the case, this is not only contrary to paragraph 140 of the NPPF, but also highlights a lack of confidence and robustness within the Council’s conservation, heritage and development management policies. Furthermore, I can find no justification, or indeed any reason, within any of the Council’s documents setting out why the garden curtilage of Halsey Cottage has been taken out of the settlement boundary of Normandy and placed within the open Green Belt.

The NPPF 2018 is very clear in setting out that there should be a presumption in favour of sustainable development and, at paragraphs 14 and 15, says:

At the heart of the National Planning Policy Framework is a presumption in favour of sustainable development, which should be seen as a golden thread running through both plan-making and decision-taking

Paragraph 14

Policies in Local Plans should follow the approach of the presumption in favour of sustainable development so that it is clear that development which is sustainable can be approved without delay. All plans should be based upon and reflect the presumption in favour of sustainable development, with clear policies that will guide how the presumption should be applied locally.

Paragraph 15

The NPPF is, therefore, quite plain in that land that can accommodate sustainable development should not be prevented from coming forward when available, as is the case here.

To reiterate, it is therefore considered that by removing the garden curtilage land from the settlement boundary and including it within open Green Belt land is contrary to the NPPF as:

a) The residential garden curtilage makes not greater contribution to the openness of the Green Belt than other gardens within Glaziers Lane and which have remained within the settlement boundary of Normandy.

b) The whole of the land is lawful residential curtilage. It has no physical or other defining features which gives it the character or appearance of being anything other than residential curtilage. As such, the garden curtilage land should not be segregated.

c) Because of the site’s sustainable location, it is entirely possible that if the garden curtilage is placed within open Green Belt land, the boundary may be moved again for the ‘next’ Local Plan period.
d) Taking the land outside of the settlement boundary will provide no greater benefit to the openness of the Green Belt as it will remain as lawful residential curtilage.

e) If the Council is seeking to place the garden within open Green Belt to protect the setting of the Listed Building, this is contrary to the planning policy guidance of the NPPF and highlights inadequacies within the Council’s development management, conservation and heritage protection policies.

f) Removing the site from the settlement boundary and placing it within open Green Belt is contrary to the aim of enabling sustainable development sites in coming forward.

I look forward in receiving acknowledgement of these latest representations and being kept abreast of the progress of the Local Plan.

Comment: MM9 - LPMM18/1193  Respondent: Burpham Neighbourhood Forum (Jim Allen) 8581505  Agent:

Policy P2; Green Belt

(2) The wording should be amended to state ‘in accordance with the latest NPPF’.

Green Belt Limited Infilling

This wording should be deleted as it contradicts the purpose of insetting i.e. it allows for development within the Green Belt outside either the original village boundary or the new inset village boundary, raising a serious question mark over the planning value of any village boundary line. This statement opens up the whole of the Green Belt around a village, as ‘infill’ is not specifically defined within the NPPF and thus has an ‘open’ definition.

The village boundaries should be comprehensively thought through so as to make this wording redundant. This wording is a hangover from when the villages were washed over by Green Belt in the previous Local Plan. As the villages are no longer washed over, the wording should be removed.

**Attached documents:**
GBC make an exception for LIMITED INFILLING OUTSIDE THE IDENTIFIED SETTLEMENT BOUNDARIES WHERE IT CAN BE DEMONSTRATED THAT THE SITE SHOULD BE CONSIDERED TO BE WITHIN THE VILLAGE.

This is a catch all statement which is completely subjective causing complete uncertainty and completely negates GREEN BELT PROTECTION.

Virtually any land on the then ever increasing edges of the village can be picked off by developers and is open season for speculators at the expense of villagers.

I wish the above objections to be considered and this huge imposition of housing and commercial development to be largely abandoned as Send Village is at present at bursting point.

Comment: MM9 - LPMM18/5051  Respondent: Surrey Wildlife Trust (Mike Waite) 8591041  Agent: 

Policy P2: Green Belt.

Paragraph 4.3.17. *The Surrey Wildlife Trust believes that the land removed from the Green Belt at the Former Wisley Airfield should be precisely limited by the areal extent of the previously developed footprint of the former airfield.

Attached documents:

Comment: MM9 - LPMM18/3223  Respondent: Michael Bruton 8591169  Agent: 

1. MM9 – infilling around the villages will weaken the protection of the countryside

Attached documents:

Comment: MM9 - LPMM18/2340  Respondent: Jane Whatley 8595905  Agent: 

These objections are for the attention of the Planning Inspector in charge of the Local Planning Consultation, Guildford Borough Council.

I objected with many others to the size of the previous plans and it is extremely galling that thousands of objections no longer count and you have made adjustments that are proposing even bigger developments than those previously suggested.

Objections to Modification MM9 and MM44

I object in the strongest possible way to the plans of the Council to build in the Green Belt on any site, even when (subjectively) it is determined as being on 'within the confines' of a village. Who determines this?
It is a precedent that is extremely dangerous for everyone who loves the land we live in. This specially protected land is meant to give a better quality of life to those who live in the city. The protection of Green Belt land should be seen as sacrosanct and to build on this when there are no special circumstances removes the rights of our descendants.

The Land at Alderton's Farm is one which together with other planned developments for the area is likely to increase traffic and pollution with no real advantages for the village, only the profit of the developers. Roads in this area are narrow and twisting and the introduction of several hundred cars is not going to make life pleasant for those living nearby. It also raises the possibility of unsuitable, narrow roads without footpaths being used as cut-throughs to avoid the congestion that is likely to occur at the Send crossroads and in Ripley.

**Comment:** MM9 - LPMM18/3925  **Respondent:** Allen Fencing (Mr Paul Cope) 8598433  **Agent:**

**MM9 – Green Belt**

None of the proposed sites seem to carry any tangible ‘special circumstances’ to warrant insetting from the Green Belt

The concern of many villagers is that – once a little development is permitted – it can establish a basic footprint for greater density of development in future

Attached documents:

**Comment:** MM9 - LPMM18/5736  **Respondent:** Sarah Belton 8598561  **Agent:**

**MM7** any reference to use of greenbelt land for development without there being an exceptional reason for doing so, and specific local consultation in each case, must not be permitted as it contravenes the law and intent of the creation of the greenbelt in the first place.

Attached documents:

**Comment:** MM9 - LPMM18/5737  **Respondent:** Sarah Belton 8598561  **Agent:**

**MM9** refers to the provisions of the NPPF regarding the greenbelt, but it is clear that protection in the NPPF for the greenbelt is weak and ineffectual, and not in line with the intent with which it was created and originally protected in law.

**MM9** refers to infilling in villages. It is hard to argue against sensible infilling, but the wording is loose enough that interpretation of boundaries or limited infilling will be open to abuse. Also, it is essential that wording includes the provision of infrastructure (drainage, water supply, roads, etc.) to provide for such infill, and the impact that this will also have on the village and greenbelt land in the vicinity. Infrastructure is overlooked time and again in the plan. **MM26** does address the issue of infrastructure, but the requirement for developments to include infrastructure provision should be enshrined in planning law. It is good that the idea of a levy on the development (and hence the residents) has been removed, as it is the developer who should pay for this, not unsuspecting residents, after the fact.

Attached documents:
4.4. Tier 8.

This is the Green Belt land around Guildford and Godalming.

In our view, there are some fundamental inconsistencies in the sites proposed that render the Plan unsound.

The SA considers a number of sites within this category and in our view a reappraisal of the reasoning behind these recommended sites is necessary.

Attached documents:

**Comment: MM9 - LPMM18/2950  Respondent: Roger Newland 8600929  Agent:**

**MM9 Green Belt policy.**

This policy is vague and open to abuse by both developers and the Council. The Council has reviewed all boundaries and proposes insetting villages to remove their Green Belt status which I have opposed. In the case of Send Parish made up of three settlements Send, Send Marsh and Burnt Common there are potentially many areas that could be disputed. Preferably this policy should be removed but any event there should not be any subjective element left to interpretation.

This is the third or fourth time we have been asked to comment on GBC's efforts to put a local plan together and it appears that the Council is following Government dictate rather than the comments of so many residents. I still hope that common sense will prevail and that the housing figures will be reduced and that the Boroughs Green Belt is saved from the politically growth policy that will be detrimental to our borough we know and love.

Attached documents:

**Comment: MM9 - LPMM18/2141  Respondent: Susan Greenman 8606081  Agent:**

**MM9 - Green Belt Policy**

The modifications to the Local Plan claim to protect the Green Belt. Far from it! Guildford Borough Council claim they make exceptions for "limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village". This is open to interpretation at will by the Council leaving Residents at the mercy of developers.

FORMAL RESPONSE TO THE MAIN MODIFICATIONS CONSULTATION

Worplesdon Parish Council wishes to comment on the main modifications as follows:

Policy P2 – Green Belt

OBJECT: Worplesdon Parish Council objects in the strongest possible terms to the proposed infilling outside the settlement boundary in the following villages:

1. Jacobs Well
2. Fairlands
3. Wood Street Village; and
4. Worplesdon

Attached documents:

Comment: MM9 - LPMM18/4640  Respondent: Worplesdon Parish Council (Gaynor White) 8627393  Agent:

Comment: MM9 - LPMM18/5441  Respondent: Julian Cranwell 8640353  Agent:

MM9

Development in the Green Belt should be restricted in accordance with the NPPF, full stop. Instead, this policy appears to be to seek out and broaden loopholes in Green Belt protections beyond the exceptional circumstances permitted in the NPPF.

With its tortured and ambiguous wording, MM9 adds dangerous layers of challengeable interpretation to national policy that only confuse what is and is not permitted.

The repeated phrases under MM9 (1), for example, appear to go round in circles and are impossible to follow. Under “limited infilling” (2)c(i)-(iii) subjectivity reigns. It could be made a little clearer by deleting “should be considered to be” by “is” in each case. Many villages are highly diffuse or leggy in shape, so any room for confusion about what is “within the village” needs to be restricted.

MM9’s biggest defect, however, is the absence of any positive defence of the Green Belt, despite this covering 81% of the borough’s area. The plan is widely seen by residents as declaring war on the countryside by “insetting” most of the borough’s villages, extending settlement boundaries, removing SNCI protections and prioritising greenfield housing estates over urban regeneration. As currently worded, MM9 risks upsetting the difficult balance between protection and development set out in national policy. Insetting and settlement boundary extension on this major scale is unnecessary and amounts to a general pre-determination in favour of future planning applications. MM9 should not pre-judge these and the relevant maps at Appendix H should be removed.
I wish to object to the Local Plan both in general and specifically to Main Modifications MM9, MM7, MM41, MM42 and MM44.

My general objection is that the proposed modifications to the Local Plan are unjustified. Has anyone considered what the limit is on continued development? At what stage will we be full up? That is: 'When does the built environment take precedence over the remaining green belt'.

When will the road infrastructure no longer be sufficient to serve all those living in the Guildford area? Traffic densities coupled with infrastructure maintenance costs overwhelm the tax payer. It is now a lottery to plan getting around without encountering heavy traffic and delays. On roads that are a poor state of repair.

Get that balance right first before attempting mass developments that are destroying apparently protected green space

**MM9**

Full of loopholes in so far as everything is protected except for very special circumstances. Who decides what special circumstances? Residents’ views are ignored. It appears that the needs of speculators and developers take precedence over the views of residents.

The Green belt was developed and designated to protect the public from over development. Already the most densely populated country in Europe; it is time to say ‘no more’.

**Comment:** MM9 - LPMM18/3765  **Respondent:** Victoria Sinnett 8667713  **Agent:**

MM9 In Green Belt, proposed limited **infilling outside identified settlement** boundaries should not be allowed as it will harm openness and become a loophole for inappropriate development.

**Comment:** MM9 - LPMM18/3276  **Respondent:** Valerie Thompson 8671969  **Agent:**

2. You have never given any rational explanation for doing this and have failed to offer any reasoned "SPECIAL CIRCUMSTANCES" to remove any areas from the Greenbelt. I object to Greenbelt removal

**Comment:** MM9 - LPMM18/1058  **Respondent:** Allan Howlett 8656417  **Agent:**

Guildford Local Plan Public Examination

**Attached documents:**
Comment: MM9 - LPMM18/6107  Respondent: Mr Kes Heffer 8672993  Agent:

- MM9. I object to removal of rural villages from the Green Belt and the consequent infilling in and around those villages. The 5 purposes of the Green Belt as identified in the NPPF paragraph 80 are:
  1. to check the unrestricted sprawl of large built-up areas;
  2. to prevent neighbouring towns merging into one another;
  3. to assist in safeguarding the countryside from encroachment;
  4. to preserve the setting and special character of historic towns; and
  5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

The development of strategic sites proposed within the Green Belt (A35, Three Farm Meadows in particular) is contrary to purposes 1, 3, 5 and, probably in the future, 2.

- Taking into account all the mistakes in housing targets and flawed logic it is clear that the exceptional circumstances necessary to amend Green Belt boundaries or the very special circumstances necessary to justify any development in the Green Belt do not exist (let alone the situation prevailing in this Plan, where a clear majority of the development is proposed on land that is currently in the Green Belt).

- On April 13th the Court of Justice of the European Union published its ruling in the Case C323/17 with regards to the Habitats Directive. This ruling has major implications for developments where a Habitats Regulations Assessment may be required. In order to comply with this ruling and avoid legal challenge the Guildford Local Plan needs to ensure that the HRA process will be followed in all developments to be compliant with this judgement.

3. Policy P2 Green Belt (MM9)

I strongly OBJECT to the proposal to remove from Green Belt protection several villages in the borough.

Attached documents:

Comment: MM9 - LPMM18/1353  Respondent: Sir Michael Aaronson 8687041  Agent:

The welcome commitment in Policy P2 to continue to protect the Metropolitan Green Belt sits ill alongside the fact that almost all of the additional uptake of housing in the first five years of the Local Plan called for by the Inspector is to be met under the Main Modifications by additional building on the Green Belt. This casts into doubt the sincerity of the intention behind the Policy. This doubt is reinforced by the statements in new para 2 c, under "Limited infilling". Para 2 c ii contains the statement "Limited infilling may also be appropriate outside the inset settlement boundaries, as designated on the Policies Map, of the following villages where it can be demonstrated that the site should be considered to be within..."
the village." These villages include Flexford and Normandy. I OBJECT strongly to this provision; either a settlement boundary means something or it does not. I am not reassured by the new statement in "Reasoned Justification 4.3.25" to the effect that: "There are a number of considerations to take account of when assessing whether a site is located within the village. This includes factors such as the pattern of development, and the proposed development’s relationship to the built up area of the village and the surrounding countryside." This reads too much like a loophole that will be exploited by unscrupulous developers and which will lead to the gradual erosion of the open spaces between distinct settlements - in this case between Flexford and Normandy.

Attached documents:

Comment: MM9 - LPMM18/1999  Respondent: N J Axten 8703585  Agent:

1. (MM9) Policy P2 : Green Belt. Guildford Borough Council has failed to adequately address the option for brownfield development within the town before proposing Green Belt development, including the prioritisation of residential property over commercial and retail development. 'Exceptional Circumstances' have not been met for Green Belt development.

The current Local Plan has not been fully thought through and its content is based upon flawed information. It should not be allowed to proceed.

Attached documents:

Comment: MM9 - LPMM18/4773  Respondent: Rosmarie Roberts-Kunz 8711841  Agent:

MM9

Development in the Green Belt should be restricted in accordance with the NPPF. Instead, this policy appears to be to seek out and widen loopholes in Green Belt protections beyond the "exceptional circumstances" set out in the NPPF.

The wording of MM9 is muddled, adding to the risk of challengeable interpretations of national policy about what development should be allowed.

MM9 (1), for instance, is impossible to follow. Under “limited infilling”, (2)c(i)-(iii) I suggest deleting “should be considered to be” by “is” in each case. Many villages are diffuse or irregularly shaped, so any scope for confusion about what is “within the village” needs to be restricted.

Most seriously, MM9 omits any support for the Green Belt, even though the latter covers 81% of the borough. By “insetting” most of the borough’s villages, extending settlement boundaries, removing SNCI protections and prioritising greenfield housing estates over urban regeneration the plan is widely criticised as an attack on the countryside. MM9 fails to strike the same balance between protection and development as the NPPF. Along with the maps at Appendix H it appears to be pre-determined in favour of future development and should be cut from the plan.

Comment: MM9 - LPMM18/5340  Respondent: Helen Jefferies 8717921  Agent:
MM9

3c(i) Object to limited infilling outside the identified settlement boundaries.

(ii) Object to limited infilling inside the inset settlement boundaries

(iii) object to limited infilling “considered to be” within the village.

4.3.25 Object – see response to 3c above

Attached documents:

Comment: MM9 - LPMM18/4400  Respondent: Michael Derrick 8724993  Agent:

Objections to MM9 Green Belt Policy

The proposals ‘modifications’ clearly do not protect the Green Belt. I object to the proposed number of residential dwellings and industrial sites. This does not surely qualify as ‘limited infilling outside of settlement boundaries’. This is open to misinterpretation and is clearly being taken advantage by developers at the expense of those of us who live in Send.

Attached documents:

Comment: MM9 - LPMM18/1106  Respondent: Lisa Wright 8729313  Agent:

I object to further Green Belt sites being allocated in the Local Plan. There is far too much land in the town centre that is being wasted and should be regenerated to provide homes for our youngsters.

Attached documents:

Comment: MM9 - LPMM18/3785  Respondent: Ian Slater 8731649  Agent:

MM9 In Green Belt, proposed limited infilling outside identified settlement boundaries should not be allowed as it will harm openness and become a loophole for inappropriate development.

Attached documents:

Comment: MM9 - LPMM18/285  Respondent: John Freeland 8732321  Agent:

I should like to raise the following objections to the Local Plan: Strategy & Sites - Main Modifications:-
**MM9 - Green Belt Policy**

- Green Belt should be protected from development except in very special circumstances and none of the proposed developments can genuinely claim this exception.
- GBC Planning has capitulated under pressure from avaricious landowners and developers with a calculating statement to allow, “Limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village.” I suggest that an additional 770 dwellings, about 155 acres, can hardly be considered “limited infilling”.
- This gives GBC Planning the go ahead to allow developers carte blanche throughout the Borough and, as well as being grossly excessive, is a very dangerous precedent.

As a result of the info we have received re the amended local plan, I OBJECT strongly to the following:

MM9 I OBJECT to the infilling in and around local villages which destroys the countryside and life of villagers in a loss of walking and cycling and further erosion of green belt.

MAIN MODIFICATIONS MM9 GREEN BELT

I strongly object to the Council’s determination to ride roughshod over the Green Belt adopting an approach which contravenes Case Law, the revised NPPF and the stated policy of HM Government. Guildford Council needs to appreciate that the law and Government policy applies to it in the same way as it does to everybody else. Without repeating all the case law here “exceptional circumstances” and “special circumstances” have been amply defined in court decisions. Guildford Council continues to show no signs of being aware of that, of if aware, ready to comply.

MM9 GREEN BELT INSETTING OF VILLAGES

I object to Guildford Council making an exception to Green Belt policy allowing “limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village”. Considered by whom and on what criteria? This introduces a subjective test and considerable uncertainty. It means that any land on the edge of a village like Send could be picked off for development, an open invitation to developers and speculators at the expense of residents. This approach by Guildford Council is seriously anti-democratic and shows a complete betrayal of the trust conferred on them at the last ballot box.

MM9 Green Belt Policy

Although the “modifications” claim to protect the Green Belt except in very special circumstances GBC make an exception for “limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village.” This introduces a subjective test, considerable uncertainty and effectively negates Green Belt protection. Any land on the edge of our village could be picked off for development, an open invitation to developers and speculators at the expense of residents.
MM9 The infilling of villages will result in the weakening of the protection of the countryside. The insetting of villages like East and West Horsley has opened up large areas of these larger villages for housing development 40% of which will be affordable. East Horsley shows the lowest demand for affordable housing in the whole borough. Yet GBC are under the impression that all the affordable housing built will remain affordable in perpetuity under planning constraints. As both East and West Horsley and not protected under the legislation protecting rural areas from the rights to acquire, to buy or enfranchise. This will not be the case and affordable homes built will be open to the market.

Comment: MM9 - LPMM18/1366  Respondent: Mr Paul Tubman 8794529  Agent:

There is insufficient definition given regarding 'Limited infilling' in Policy paras (1) to (4) as to 'where it can be demonstrated that the site should be considered to be within the village.' As currently written this is a very subjective definition and is open to interpretation. What are the minimum rules / standards that need to be satisfied before such a 'Limited infilling' could be considered?

Paragraph 4.3.25 suggests that 'There are a number of considerations to take account of when assessing whether a site is located within the village' and states that these include factors such as 'pattern of development, and the proposed development's relationship to the built up area of the village and the surrounding countryside.' What other factors are there? This is not clear, and leads on to the very subjective nature of this policy.

How can 'inappropriate development' be demonstrated versus the vague definitions given regarding what may be appropriate in terms of limited infilling? Is limited infilling regarded as 'very special circumstances', thereby making the development 'appropriate'?

Comment: MM9 - LPMM18/394  Respondent: Mrs Diana Delahoy 8794657  Agent:

How can 'inappropriate development' be demonstrated versus the vague definitions given regarding what may be appropriate in terms of limited infilling? Is limited infilling regarded as 'very special circumstances', thereby making the development 'appropriate'?
MM9 4 c) ii Limited Infilling at Flexford. Facilities such as GP surgery and roads are not coping with current population. It will be far worse if the population is increased by maybe about 400 people in new homes. Currently 3 week wait for a GP appointment. Currently Hogs Back is stationary every morning due to traffic volume (on travel reports every week day). The area cannot cope with more people or vehicles.

2. **Policy P2, Green Belt: Modification MM9**

Policy P2 is still proposing the insetting of East Horsley from the Green Belt, despite all of the evidence presented during the examination to show that the justification put forward by GBC for this insetting is flawed. As set out in the submission of East Horsley parish council, the Pegasus Green Belt & Countryside Study contains many errors in the analysis presented to justify the insetting of East Horsley. This should have lead GBC to remove this policy from the Local Plan. I am mystified as to why GBC retains this policy within the plan.

*Accordingly, I OBJECT to the insetting of East Horsley as proposed in Policy P2.*

| Comment: MM9 - LPMM18/5210 | Respondent: Celia Howard 8817121 | Agent: |
I write to object to the local plan for Send.

I feel for all the sites in this area no consideration appears to have been given to the congestion on local roads, school places, parking and the medical centre where it's difficult to get an appointment and this is now (looking further afield) the parking and appointments at the Royal Surrey are also hard to come by.

I think the council should think carefully before wiping out the green belt and turning another Surrey village into suburbia.

A corridor from Guildford to Woking.

We need to keep the small pockets of countryside for the wildlife and our health benefits instead of increasing the pollution in the village.

**Comment: MM9 - LPMM18/1899  Respondent: Mr Stephen Stuart-Matthews 8824833  Agent:**

MM9

Limited infilling clause 3a). I object to this change of wording as it will gradually remove protection against limited infilling in the green belt outside the settlement areas. The phrase "should be considered to be within the village" instead of "is as a matter of fact within the village" will lead to gradual growth of the village at the boundaries to the settlement area. As the housing density near the settlement area boundary gradually increases the relationship of infill developments just outside the settlement area with the village will grow ever stronger. The new wording under 4.3.25 will allow and even encourage infill developments to occur near to settlement areas as they "should be considered" to be within the village, when previously they were not "as a matter of fact".

For example the southern end of Chalk Lane or Green Dene are attractive wooded areas in the Green Belt bordering on the Surrey Hills. These areas are just outside the settlement area for East Horsley. Under the new proposals such areas would become vulnerable to infilling as the density along these roads gradually increased with infill. This would negate the Green Belt protection currently preserving these wooded areas and the overall effect would over time be to the detriment of the Green Belt and indeed to the Surrey Hills. This change undermines the purpose of the Green Belt legislation and will cause harm to the Green Belt and will lead to increased housing density right up to the borders of the Surrey Hills, an area of outstanding natural beauty.

1. Policy P2: Green Belt – **MM9**  I write to **OBJECT** to the proposed modification to this policy.

I believe that the proposed modification would allow development outside of the long discussed, and objected to, proposed inset settlement boundaries “where it can be demonstrated that the site should be considered to be within the village”. I would have thought after all the years of consultation etc that the inset village settlements were now fully
‘considered’ and that any further subsequent encroachment into the Green Belt by expanding the proposed inset village settlements would, and should, be resisted completely.

Comment: MM9 - LPMM18/4972  Respondent:  Lynn Yeo 8839521  Agent:

I object to MM41,MM42,MM44,MM9, MM27, POLICY S2.

At the public examination, the figure for Guildford Borough housing need used by the inspector was 789 per year. This figure was obtained by Guildford Borough Council (GBC) Consultants and was greatly exaggerated by including Surrey University Student figures. These Consultants and GBC refused to disclose how this figure was calculated. The figure now published by a highly respected consultancy Barton Wilmore has said the correct figure is 431 houses per year. In addition, using data from the Office of National Statistics population forecasts, suggests that the appropriate growth in GBC can be achieved by 460 houses per year.

This latest data makes a mockery of GBC consultants figures which have always been very suspect. I believe the number of houses per year to be unreasonably high, and that the actual figure should be revised downwards for more responsible and reasonable levels of development.

Attached documents:

Comment: MM9 - LPMM18/4983  Respondent:  Lynn Yeo 8839521  Agent:

MM9 Green Belt Policy

I disagree with the claim that the modifications will protect our precious Green Belt except in very special circumstances. GBC make an exception for limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village. This is a catch all statement which is completely subjective causing complete uncertainty and completely negates Green belt protection. Virtually any land on the then ever increasing edges of the village can be picked off by developers and is open season for speculators at the expense of villagers.

In conclusion, I wish the above objections to be considered and this huge imposition of housing and commercial development on my beloved village of Send to be abandoned. The proposed developments are to the extreme detriment of existing and future residents, our local environment, and are very undemocratic and unfair. This consultation only allows comment on main modifications and so excludes the chance to object again to 40 houses and a travellers’ site on Send Hill, 60 houses at Clockbarn Nursery on Tannery Lane and a 25% increase in size of the Send Business Centre despite its proximity to the Wey Conservation area. Added to all the other housing sites and industrial space being proposed for
Send, it represents a very heavy concentration of development in one small village, which should be more evenly shared with the approximately 40 other villages in Guildford Borough.

**Attached documents:**

**Comment: MM9 - LPMM18/5172   Respondent: David Burnett 8839553   Agent:**

I am writing to make comment on the latest round of the Draft Local Plan for Guildford Borough in particular MM9 Green Belt policy.

I OBJECT to the modification "limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village."

This demonstration of whether a site is within a village or not is quite subjective - no criteria is being supplied.

Thank you for considering my point.

**Attached documents:**

**Comment: MM9 - LPMM18/3064   Respondent: Sam Pinder 8850977   Agent:**

1. Policy P2: Green Belt (MM9) – Although this policy has been changed significantly, this section has not factored in the massive reduction in the number of projected houses from the latest data released by the ONS. More than half of the plan’s housing is due to be built on land that is currently in the Green Belt – this is now no longer necessary due to the reduction in housing number requirements. There can be no justification to build such a large number of houses on the Gren Belt and choosing to ignore the new housing figures, with the
consequence that land that is currently in the Green Belt will be built on and therefore lost for future generations, is frankly, criminal.

I would like the Local Plan public examination to be re-opened so that the new ONS housing data can be factored into the housing calculations so that only the houses that are required are built and no Green Belt land is built on unnecessarily.

We are losing our wildlife at an extraordinary rate, lots of birds species and hedgehogs are down by 80% in the last 20 years.

Green belt land is disproportionately targeted overall in the current plan especially as it relates to the Inspector’s proposed modifications in the Send area. (MM9 Green belt policy.)

Green belt land is there as a buffer between Send and the surrounding villages, Woking and Guildford, and it is not reasonable for Send village to have grown to one and a half times in size. We do not have the infrastructure, and local schools such as Ripley First School and St Bedes have been closed down, and Send First School is already over subscribed.

**Attached documents:**

---

**Comment:** MM9 - LPMM18/1443  **Respondent:** Mr & Mrs Michael and Jill Simmonds 8861697  **Agent:**

I write to object to the Guildford Borough Council local plan and ask that the hearing be reopened on account of the following reasons.

MM9. Further thought should be given to preserving the countryside with inappropriate infilling.

Furthermore not enough thought has been given to the demands of VOR. The addition of extra land does not help the density of building at

MM9. More thought should be given to preserving the countryside and consideration for Wild Life. As a general comment there is too much development scheduled for this part of Surrey and for the above reasons I ask that the hearing should be reopened.

**Attached documents:**

**Comment:** MM9 - LPMM18/5988  **Respondent:** David Williams 8865665  **Agent:**

**MM9 Green Belt Policy**

As I explained in my previous objection the proposed insetting areas will facilitate development applications for up to 1000 more houses in Send. This would more than double the latest revised plan.

The road and sewage infrastructure in the village and especially along the A247 from Send Road where I live to Old Woking are totally inadequate to take the proposed scale of additional developments.

**Conclusions**

Local infrastructure and especially transport are barely meeting existing demands. The new Local Plan with its new insetting proposals, and the increased housing and industrial site targets, appear likely to encourage far more new housing developments far in excess of local infrastructure capacity.

GBC used to have a courageous reputation for maintaining realistic development strictly within clearly defined planning guidelines, against the predatory ambitions of many developers. In the last 5-10 years it has become difficult to maintain confidence in the Council’s planning and planning control roles.

---
These most recent changes to the Local Plan suggest that political considerations and interests locally and at Government level are overriding all sensible planning considerations for the future of Send. I would like to be proved wrong.

The modification is a weakening of the protection of the countryside, changing the site being ‘as a matter of fact within the village’ to ‘should be considered to be’. The new text has a prospective element to it – how the village ought in the future to be perceived rather than how it presently is.

In the context of a very diffused settlement such as Ockham, it is difficult to identify what is within the village at present, let alone what should be considered to be. The proposed modification would bring an uncertain, but potentially large, area into possible ‘infill’ development.

The Sustainability Appraisal Report Addendum asserts that there is ‘a considerable re-write of the policy; however, this is presentational, i.e. there is no change in policy approach’ (para 9.11.3). Firstly, there is a change in the policy and either way the current text is not unsound. A presentational re-write cannot be addressing a failure of a plan to be sound.

3. **POLICY P2: GREEN BELT (MM9)**

Given the greatly reduced housing projections from ONS, and the fact that 66% of the Plan’s proposed housing is planned to be built on land that currently lies within the Green Belt, then by definition the exceptional circumstances necessary to amend Green Belt boundaries or the very special circumstances necessary to justify any development in the Green Belt do not exist. I strongly object to development in Green Belt under these circumstances.

**Attached documents:**

**Comment:** MM9 - LPMM18/4161  **Respondent:** Lynda Newland 8913985  **Agent:**

MM9 Green Belt Policy

Although the “modification” claim to protect the Green Belt except in very special circumstances, GBC make an exception for “limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village”. This introduces a subjective test, considerable uncertainty and effectively negates Green Belt protection. Any land on the edge of our village could be picked off for development, an open invitation to developers and speculators at the expense of residents.
3. POLICY P2: GREEN BELT (MM9)

Given the greatly reduced housing projections from ONS, and the fact that 66% of the Plan’s proposed housing is planned to be built on land that currently lies within the Green Belt, then by definition the exceptional circumstances necessary to amend Green Belt boundaries or the very special circumstances necessary to justify any development in the Green Belt do not exist. I strongly object to development in Green Belt under these circumstances.

MM9: infilling in and around villages will result in further weakening of protection of the countryside.

MM9 In Green Belt, proposed limited infilling outside identified settlement boundaries should not be allowed as it will harm openness and become a loophole for inappropriate development.

MM9 In Green Belt, proposed limited infilling outside identified settlement boundaries should not be allowed as it will harm openness and become a loophole for inappropriate development.
The modification is a weakening of the protection of the countryside, changing the site being ‘as a matter of fact within the village’ to ‘should be considered to be’. The new text has a prospective element to it – how the village ought in the future to be perceived rather than how it presently is.

In the context of a very diffused settlement such as Ockham, it is difficult to identify what is within the village at present, let alone what should be considered to be. The proposed modification would bring an uncertain, but potentially large, area into possible ‘infill’ development.

The Sustainability Appraisal Report Addendum asserts that there is ‘a considerable re-write of the policy; however, this is presentational, i.e. there is no change in policy approach’ (para 9.11.3). Firstly, there is a change in the policy and either way the current text is not unsound. A presentational re-write cannot be addressing a failure of a plan to be sound.

The Sustainability Appraisal Report Addendum asserts that there is ‘a considerable re-write of the policy; however, this is presentational, i.e. there is no change in policy approach’ (para 9.11.3). Firstly, there is a change in the policy and either way the current text is not unsound. A presentational re-write cannot be addressing a failure of a plan to be sound.

In Green Belt, proposed limited infilling outside identified settlement boundaries should not be allowed as it will harm openness and become a loophole for inappropriate development.

This can hardly claim to be a policy when the above developments all impinge on the existing Green Belt which GBC seem prepared to sacrifice. Following GBC’s logic, all greenbelt land can be sacrificed and therefore is able to be built on. This breaches all GBC’s own policies and government directives.
I object to GBC narrow-mindedness on its land use policies (see MM2 above) and unnecessarily removing large, unsustainable, sites from the Greenbelt.

Whilst Guildford are contributing to Woking's unmet housing need, Woking have a policy of not building in Greenbelt. Guildford should protect their Greenbelt instead of providing housing for a borough who will not use their Greenbelt, this is illogical.

The new housing numbers and a review of sustainable sites should not require 5,400± homes in the Greenbelt.

The village of Ockham comprises a necklace of 8 scattered hamlets. I object to a policy which proposes 'infilling' unless clearly stated infilling must be within those hamlet boundaries.

</tr>
<tr>
<td>This Policy has been almost completely redrafted, but takes no account of the large reduction in projected households (see above). 66% of the Plan's proposed housing is planned to be built on land that currently lies within the Green Belt. Yet, given the reduced housing projections from ONS, and the apparent likelihood of additional housing during the period of the Plan, the exceptional circumstances necessary to amend Green Belt boundaries or the very special circumstances necessary to justify any development in the Green Belt do not exist, especially when 66% of the development is proposed on land that is currently in the Green Belt. Also given the huge reduction in housing requirement as a result of the most recent ONS figures, there should be no need at all to inset villages within the Borough. They should all remain part of the Green Belt.</td>

<tr>
<td>East Horsley Parish Council (&quot;EHPC&quot;) has reviewed the modifications proposed by Guildford borough council (&quot;GBC&quot;) to the Submission Local Plan following its examination and submits this letter as part of the current consultation process.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Our comments are focused on the modifications proposed by GBC following the examination of the plan. In this letter we look to address the following three policies:

- Policy P2 Green Belt – insetting of villages
- Policy P2 Green Belt – limited infilling
- Policy D1 Place shaping
- We shall also be submitting further consultation comments on Site Policy A35, the former Wisley airfield, which will be addressed in a separate letter.

**POLICY P2 Green Belt - insetting**

Proposed Modification MM9 makes a series of changes to Policy P2 Green Belt. Of particular concern to EHPC is that, following the local plan examination, Policy P2 has still not been revised in respect to the proposed insetting of villages. Specifically, East Horsley is still proposed for insetting.

**Local Plan examination**

Along with many other villages EHPC submitted a detailed Statement to the local plan examiner, Mr Bore, arguing that the proposed insetting of East Horsley was unsound. In our Statement, shown for convenience as Appendix 1 to this letter, we identified a series of errors in the analysis of Pegasus Planning Group in their Green Belt & Countryside Study, the main document used by GBC to justify village insetting. At the public hearing on this topic, held on 26th June 2018, EHPC’s representative summarised these errors for the benefit of the examiner, as did other representatives of villages across the borough. A copy of this hearing address is given as Appendix 2 to this letter.

The evidence against the Pegasus analysis is considerable, as the examiner openly acknowledged at the hearing. However, in his summing-up on 5th July 2018, the examiner announced that he had found the Green Belt proposals relating to insetting to be basically sound and that no modifications would be recommended in this regard.

**Flaws in the local plan process**

EHPC believes a number of flaws can be identified in the local plan process in respect of Policy P2, as follows:

a) It is remarkable that the examiner is not recommending any changes whatsoever to the list of villages proposed for insetting. Given all the deficiencies identified in the justification evidence during the examination, the absence of any one village being proposed for removal implies either that the examination process was no more than a token exercise, having no substantive validity, or that the benchmark level used by this examiner for assessing the soundness of this policy was set so high as to be effectively worthless;

b) In view of the substantial evidence presented to the examiner on the deficiencies of the Pegasus Green Belt & Countryside Study, it is also unclear why GBC still persist in using this study to justify the insetting of villages, including East Horsley. Even though the examiner failed to act upon the evidence provided to him, this does not excuse GBC from their basic professional duty to act on the correct information and to take appropriate action;

c) As detailed in Appendix 1, throughout all of the local plan consultations, EHPC have raised concerns about the proposed insetting of East Horsley, yet on no occasion have GBC attempted to engage in “meaningful engagement and collaboration” with EHPC, contrary to NPPF paragraph 155 on Plan Making;

d) At the hearing on this topic on 5th July 2018, the examiner suggested that the Horsleys parish councils should meet with GBC and review deficiencies in the insetting justification provided within the Green Belt & Countryside Study. However, when efforts were made to arrange such a meeting, it was refused by GBC on the grounds of being unnecessary – thus providing yet another example of GBC’s lack of engagement during the local plan process.

Based upon the evidence we have presented, EHPC believes the proposed insetting of East Horsley from the Green Belt is unsound and should be removed from the list of proposed inset villages.

**2. POLICY P2 Green Belt – limited infilling**

Proposed Modification MM9 makes a number of changes to Policy P2 in respect of ‘Limited Infilling’, with additional changes made in the supporting Reasoned Justification.
These changes considerably expand the text addressing ‘Limited Infilling’ in the Green Belt and in particular seek to define the situations where it may be appropriate and where it may not be. This policy area is thoroughly addressed in the NPPF (paragraph 145) and clarified by planning case law in recent years. EHPC does not believe that any further clarification is either necessary or beneficial in this complex area where judgements may be required on the nature of settlement boundaries that are not easily defined within a local plan policy.

If GBC wishes to offer greater clarification on Limited Infilling then we believe this would be more appropriately done within the development management guidance document on Green Belt development which GBC has promised to issue in the near future.

EHPC believes the re-drafted Limited Infilling policy is unnecessarily detailed and should be deleted, allowing this topic to be clarified through development management guidance.

MM9 In Green Belt, proposed limited infilling outside identified settlement boundaries should not be allowed as it will harm openness and become a loophole for inappropriate development.

**Attached documents:**
1. Green belt development will undoubtedly be required, but this should be concentrated in as few locations as are consistent with improved infrastructure. In particular it must be sufficiently sized & provide a full range of housing/care facilities to form effective & viable local centres which provide for eg schooling, local shops & community services, including medical provision.
The modification is a weakening of the protection of the countryside, changing the site being ‘as a matter of fact within the village’ to ‘should be considered to be’. The new text has a prospective element to it – how the village ought in the future to be perceived rather than how it presently is.

In the context of a very diffused settlement such as Ockham, it is difficult to identify what is within the village at present, let alone what should be considered to be. The proposed modification would bring an uncertain, but potentially large, area into possible ‘infill’ development.

The Sustainability Appraisal Report Addendum asserts that there is ‘a considerable re-write of the policy; however, this is presentational, i.e. there is no change in policy approach’ (para 9.11.3). Firstly there is a change in the policy and either way the current text is not unsound. A presentational re-write cannot be addressing a failure of a plan to be sound.

MM9

+Infilling in and around villages will result in the weakening of protection of the countryside

Attached documents:

Comment: MM9 - LPMM18/4611  Respondent: Victoria Sandu 9042049  Agent:

I am writing in response to the public consultation on the revised Guildford Local Plan: Strategy and Sites which started on 11th September 2018.

Change MM9

- What are the minimum rules / standards that need to be satisfied before the 'Limited infilling' mentioned in Policy paras (1) to (4) could be considered? It is stated that this is 'where it can be demonstrated that the site should be considered to be within the village' however this is a very subjective definition and is open to interpretation.

- Paragraph 4.3.25 suggests 'There are a number of considerations to take account of when assessing whether a site is located within the village'. Only 2 such factors are stated as being 'pattern of development, and the proposed development's relationship to the built up area of the village and the surrounding countryside.' What other factors are there? This is not clear, and this a very subjective policy.

- It is particularly unclear as to how an 'inappropriate development' may be demonstrated against the vague definitions given regarding what may be appropriate in terms of limited infilling? Is limited infilling seen as 'very special circumstances', thereby making the development 'appropriate'?

**Comment:** MM9 - LPMM18/1122  **Respondent:** Alison Drennan 10717985  **Agent:**

**MM9 GREEN BELT POLICY**

- I object to the GBC claim that that they are protecting the Green Belt as this is highly subjective and exposing any land on the edge of our village for excessive and over-development.
- I object as the approach proposed will create significant opportunities for interested parties to undermine and erode the protections enshrined in the green belt designation and will certainly lead to the continued expansion of the settlement boundaries.
- I object to the wording of policy paragraph (1) as it is devoid of meaning. The paragraph states that “Inappropriate development will not be permitted unless very special circumstances can be demonstrated”. Are we to understand that inappropriate development will be permitted in special circumstances? The paragraph goes on to state that “Very special circumstances will not exist unless the potential harm to the Green Belt by reason of inappropriateness, and any other harm, is clearly outweighed by other considerations”. This is clearly nonsense masquerading as reason and provides no objective criteria for its application.

**Comment:** MM9 - LPMM18/5066  **Respondent:** Stewart Fenton 10719297  **Agent:**

MM9 Green Belt Policy
I object to the major permanent and irreversible damage to the Green Belt. It is our generation’s responsibility to protect the Green Belt for future generations. Green Belt may only be built on if exceptional circumstances have been established and there are none to support this. The policy claims to protect the Green Belt, but in truth it only protects areas of the Green Belt that it chooses to, making exceptions to “limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village.” This statement is too vague to afford any real protection. It is also ignoring the fact that most villages are part of the Green Belt. By taking these villages out of Green Belt protection they will become vulnerable to unlimited applications from speculative developers, ultimately resulting in a negative impact to the character of the rural villages of Guildford Borough.

Attached documents:

Comment: MM9 - LPMM18/719  Respondent: Linda Holland 10719553  Agent:

MM9 I object as this will allow any land on the edge of our villages to be picked off for development, an open invitation to developers and speculators at the expense of residents.

<td>Regarding policy MM9, I object most strongly to any attack on the Green Belt. The supposed pressure on land only shows how necessary Green Belt land is if we are not to live in one huge urban sprawl as bigger towns such as Guildford and Woking stretch out. The extent to which we need extra housing is itself open to question, particularly in a post-Brexit world. I am also sure that more can be done to free up housing stock in other ways. Speeding up the process of probate for example would free up many properties left empty for months. Allowing change of use of former retail properties, enabling them to be used for living accommodation would also have an impact. Tearing up Green Belt land is simply wrong and disguising this by adopting such policies as allowing limited infilling at the edges of settlements is dinginguous and will allow for ever increasing raids on the Green Belt.</td>

**MM9 – Green Belt**

None of the proposed sites seem to carry any tangible ‘special circumstances’ to warrant insetting from the Green Belt. The proposed ‘new Woodham town’ was heavily criticised, and recent planning documents suggest the site will be safe-guarded from development.

(The main reasons are to prevent urban sprawl and an encroachment into the countryside, a loss of open space, and limited scope to mitigate traffic)

For the same reasons, the modifications proposed for Send should be similarly dismissed.

Therefore I OBJECT to the re-drawing of the GREEN BELT boundaries in the above proposals, and believe other boroughs have set a precedent in this regard.

**MM9 – Green Belt**

None of the proposed sites seem to carry any tangible ‘special circumstances’ to warrant insetting from the Green Belt.

The concern of many villagers is that – once a little development is permitted – it can establish a basic footprint for greater density of development in future.

Woking Borough Council has acted to preserve its open spaces and concentrate development in the town centre.

For example, the proposed ‘new Woodham town’ was heavily criticised, and recent planning documents suggest the site will be safe-guarded from development.

(The main reasons are to prevent urban sprawl and an encroachment into the countryside, a loss of open space, and limited scope to mitigate traffic)

For the same reasons, the modifications proposed for Send should be similarly dismissed.

**MM9/ MM7**

I also am further concerned that further additional sites outside the settlement boundary and within the Green Belt could be approved leading to further overdevelopment and pressures on the infrastructure.
MM9 (policy P2 Green Belt) c ii, states “limited infilling maybe appropriate outside the inset settlement boundary.. If it can be demonstrated the site should be considered within the village”.

Attached documents:

Comment: MM9 - LPMM18/6068  Respondent: Julia Osborn 10729537  Agent:

MM9/ MM7

I also am further concerned that further additional sites outside the settlement boundary and within the Green Belt could be approved leading to further overdevelopment and pressures on the infrastructure.

In the past month alone, I am aware that two further sites in Send are being marketed by developers and a potential rural exception site looks to be under consideration.

Attached documents:

Comment: MM9 - LPMM18/4008  Respondent: F. Newton 10729985  Agent:

I object to MM9
Any residential and commercial development proposals within the Green Belt should as a matter of policy and public interest not be approved.

Attached documents:

Comment: MM9 - LPMM18/4217  Respondent: Joan Bagnall 10731361  Agent:

MM9 Green Belt Policy

GBC's plan does not provide the "special circumstances" to claim that an exception for "limited infilling" in the Green Belt to be permitted within the village.

I hope that GBC will reconsider its current proposals

Attached documents:

Comment: MM9 - LPMM18/1458  Respondent: Leslie Bowerman 10732193  Agent:

I live at Send Marsh in one of the most beautiful and delightful heritage spots in Surrey, albeit that access is already much hindered by traffic on the nearby Portsmouth Road and the A3 at one end of the hamlet and by the A247 through the village of Send at the other end. I am appalled by the total and contemptuous dismissal of the thousands of local
objections to the previous plan and the literally punitive proposed increase in development of this area. I regret to say that it smacks more of the abuse of power by over-mighty autocratic rulers seen recently elsewhere in the world than of responsible local democracy in action in rural Surrey.

Specifically, I object as follows:

1) **MM9 Green Belt Policy.**

As everybody knows, the Green Belt is not supposed to be built on except in exceptional circumstances and no exceptional circumstances have been suggested here. Therefore this proposal appears to be illegal. The same would seem to apply to the device of removing areas from Green Belt protection and then proposing development.

**Attached documents:**

---

**Comment:** MM9 - LPMM18/1084  **Respondent:** Ruth Hunter 10733409  **Agent:**

**OBJECT to MM41 and MM42 and MM9 and MM27 and MM48**

I strongly object to main modifications to above policies.

The increase in the amount of new houses (MM41) is preposterous. It is too much for the village and will create insurmountable problems in destroying natural habitats, Flora and fauna; the traffic congestion will block roads and access for residents and emergency services; there will be flooding and the infrastructure and facilities of Ripley and Send stretched to breaking point. This is an irresponsible plan which should not go ahead.

Re MM42, there is no need for so much industrial warehousing when Slyfield is not running at capacity. It is too much for our villages and goes against everything in MM9.

The proposed changes to A3 at Burnt Common has not been properly assessed and will cause chaos on our roads and risk safety of many resident children and vulnerable elderly.

Please re think these modifications and stop this unnecessary development.

**Attached documents:**

---

**Comment:** MM9 - LPMM18/4734  **Respondent:** Debbie Leane 10742753  **Agent:**

**MM9 Green Belt Policy**

These current modifications have claimed to protect our Green Belt except in special circumstances: ‘limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village’. This is incredibly subjective and refutes Green Belt protection. This implies an open invitation to developers and speculators to build on the land on the edges of our village. This will have massive implications for our residents.

**Attached documents:**
I wish to object to the current incarnation of the Guildford Local plan as it affects the village of Send and its surrounding green belt land. I wish to have noted in the strongest terms my disquiet at the process by which this plan has evolved. In particular, the manner in which previous strong and valid objections from the local people have been ignored to the extent that housing figures which had previously been objected to by large numbers of local residents have been substantially increased. My specific objections are to the following amendments to the plan.

MM9 Green Belt Policy – the proposal to allow “limited infilling outside the identified settlement area” sets up a dangerously vague principle subject to different interpretation and could be used to ‘infill’ to a large extent the green belt which currently protects Send village and separates it from neighbouring settlements and indeed from Guildford itself.

Attached documents:

MM9 – Green Belt Policy

Modifications claim to protect the Green belt except in very exceptional circumstances. This is highly subjective, introduces uncertainty and potentially negates Green Belt protection.

Attached documents:

MM9 In Green Belt, proposed limited infilling outside identified settlement boundaries should not be allowed as it will harm openness and become a loophole for inappropriate development.

Attached documents:

The modifications to protect green belt and phrase hsbe can make an exception effectively negates the green belt policy.

Attached documents:

3.POLICY P2: GREEN BELT (MM9)
Given the greatly reduced housing projections from ONS, and the fact that 66% of the Plan’s proposed housing is planned to be built on land that currently lies within the Green Belt, then by definition the exceptional circumstances necessary to amend Green Belt boundaries or the very special circumstances necessary to justify any development in the Green Belt do not exist. I strongly object to development in Green Belt under these circumstances.

Attached documents:

**Comment: MM9 - LPMM18/781  Respondent: Kate Cheyne 10774881  Agent:**

**MM9 Green Belt Policy**

Although the “modifications” claim to protect the Green Belt except in very special circumstances GBC make an exception for “limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village.” This introduces a subjective test, considerable uncertainty and effectively negates Green Belt protection. Any land on the edge of our village could be picked off for development, an open invitation to developers and speculators at the expense of residents.

Attached documents:

**Comment: MM9 - LPMM18/4841  Respondent: Wendy Lodge 10775137  Agent:**

I object to MM9.

There is already clear guidance on development within Green Belt land. It appears that GBC intends to use its own subjective method to allow unnecessary and damaging development within or adjoining existing village boundaries.

Attached documents:

**Comment: MM9 - LPMM18/307  Respondent: Prue Robinson 10776033  Agent:**

**MM9 Green Belt**

*I object most strongly to the 'modifications' made to the Green Belt*

These are my reasons:

Although the 'modifications' claim to protect the Green Belt except in very special circumstances, GBC make an exception for 'limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village.'

This introduces a subjective test, considerable uncertainty and effectively negates Green Belt protection. Any land on the edge of our village could be picked off for development, an open invitation to developers and speculators at the expense of residents.

| **MM9 Limited infilling impact on Ockham**  
The modification is a weakening of the protection of the countryside, changing the site being ‘as a matter of fact within the village’ to ‘should be considered to be’. | | |
In the context of a very diffused settlement such as Ockham, it is difficult to identify what is within the village at present, let alone what should be considered to be. The proposed modification would bring an uncertain, but potentially large, area into possible ‘infill’

**MM9 Green Belt policy**

Despite the apparent policy that the Green Belt will be protected, we consider that this is not being implemented in practice. Given that the modifications include substantial additional settlements in GB, SNCl removal, that all the key sites have been found sound, that insetting is being permitted (which will remove wildlife corridors as large gardens are developed) it seems that the Local Plan sees our wildlife and biodiversity as an obstacle to be swept aside. This is not in either the spirit or the letter of the rules as proposed by the NPPF.

**Attached documents:**

Comment: MM9 - LPMM18/1156  Respondent: F.A. Howell 10839393  Agent: 

Re: MM41 - Land at Garlicks Arch, Send Marsh, Policy A43  
MM42 - Land at Burnt Common, London Road, Send, Policy A58  
MM44 - Land at Alderton's Farm, Send Marsh Road - Policy A63  
MM9 - Green Belt Policy  
MM27, MM41, MM42 and MM48 - Traffic

There are unimaginable difficulties with your proposed plan for Send and Send Marsh. There is not enough infrastructure to house the proposed amount (for example)

- of cars (and the extra pollution that they will bring)
- a lot more people needing healthcare
- schooling
- our small country lanes
- and we are DEFINITELY NOT AN INDUSTRIAL AREA, why not enlarge Slyfield, which has empty space readily available?
- plan to route the A3 traffic towards Woking through Burpham.

The proposed 750 houses will more than likely mean 1500 more cars on our narrow roads. We can't move freely now when there are roadworks or an accident or breakdown, let alone move with all this extra traffic.

Try coming around to this are at 'rush' hour or when there has been an accident - it's a nightmare.
NO, NO, NO TO YOUR PLAN

Attached documents:

Comment: MM9 - LPMM18/1766  Respondent: Lawrence Harris 10839649  Agent:

MM9…Green Belt

I would question whether this policy will actually protect the Green Belt it seems that in reality it will lead to the development of any land on the edge of our village where developers and speculators will be able to circumvent the Policy by providing judicious responses to the subjective test required under the Policy.

Attached documents:

Comment: MM9 - LPMM18/2273  Respondent: John Pyne 10840641  Agent:

MM9 GREEN BELT POLICY

• I object to the GBC claim that they are protecting the Green Belt as this is highly subjective and exposing any land on the edge of our village for excessive and over-development.
• I object as the approach proposed will create significant opportunities for interested parties to undermine and erode the protections enshrined in the green belt designation and will certainly lead to the continued expansion of the settlement boundaries.
• I object to the wording of policy paragraph (1) as it is devoid of meaning. The paragraph states that "Inappropriate development will not be permitted unless very special circumstances can be demonstrated". Are we to understand that inappropriate development will be permitted in special circumstances? The paragraph goes on to state that "Very special circumstances will not exist unless the potential harm to the Green Belt by reason of inappropriateness, and any other harm, is clearly outweighed by other considerations". This is clearly nonsense masquerading as reason and provides no objective criteria for its application.
• I object to all proposals to build on Green Belt land in the borough and that GBC uses discredited and exaggerated housing 'need' data to support this. Urban brownfield areas could accommodate all the true and required development that is needs and such sites are close to existing transport systems and links. NO such infrastructure exists in our village.

Attached documents:

Comment: MM9 - LPMM18/1244  Respondent: Rosemarie Haxton 10840769  Agent:

MM9 Green Belt Policy

My objections to this proposal are:

• The modifications to the Green Belt policy actually leave it open to more development, not less, as it now becomes subjective reasoning open to abuse and misinterpretation so that it will no longer be protected.
Comment: MM9 - LPMM18/4361  Respondent: Rosemary Key 10844641  Agent: 

MM9 Green Belt Policy

Is the green belt a greenbelt or is it something that the Guildford council is negating and leaving future development/speculators possibly using loopholes - ineffective legislation to safeguard the greenbelt which was set up to ensure mass housing did not occur around the outer London areas, of which Ripley, Send Marsh and Garlicks Arch are part of.

Comment: MM9 - LPMM18/4591  Respondent: James Purkiss 10844673  Agent: 

It has become evident that GBC planners are attempting to exhaust the local residents with dozens of plans and modifications in the hope that we will let them do as they please with our villages and tire of objecting to these clearly ill conceived plans.

The thousands upon thousands of objections and strong opposition should show that this is nothing to do with nimbyism but fear for our communities.

I strongly object to any underhanded council attempt to reclaim our green belt to sell land to developers. I do appreciate that as housing needs grow we must find new space to accommodate. I support the use of Wisley airfield for housing.

I do support adding additional exit and entry points to the A3 in the hope it will alleviate the pressure on Ripley village.

I object to MM9 as I have stated there is no need to pillage the green belt, it is there for a reason despite it not being convenient for GBC. There are no valid exceptions.

Comment: MM9 - LPMM18/2566  Respondent: John Wright 10844929  Agent: 

I object to Modification MM9 Green Belt Policy due to the following points:

The modifications in this policy are supposed to protect the Green Belt. However in reality, they allow ‘limited infilling outside the identified settlement boundary’ in certain circumstances. In other words, a loophole which allows indiscriminate development.

Comment: MM9 - LPMM18/377  Respondent: John Ford 10846241  Agent: 

809 of 2575
It is with extreme disappointment that I have to, yet again, protest against the over development of Send. It beggars belief that the Planning Inspectorate in collusion with GBC have increased the number of properties planned for the village (as per the refs. above).

Do the PI and GBC not recognise the damage this will do to the infrastructure of this area? At the same time I understand there will be some incursion onto Green Belt land which contradicts Green Belt Policy.

I hope that the Local Plan is reviewed to allow Send to be relieved of the developments planned and more suitable sites found.

5. The grounds for green belt development are invalid because the Council has not demonstrated ‘exceptional circumstances’

Attached documents:

**Comment:** MM9 - LPMM18/492  **Respondent:** Evan Parry-Morris 10853249  **Agent:**

1. I wish to raise the following objections to the Guildford Local Plan MM9:

Green belt is not being protected if ‘very special circumstances’ are allowed. Preservation of green belt is sacrosanct. There are no special circumstances for the removal of green belt. I object to the proposals for the removal of Send, Ripley and Clandon from green belt. Once taken, the green belt is forever lost.
Having received so many written objections to the previous plans, did you seriously feel the villagers of Send would not continue to save their village and environment. The Surrey infrastructure as a whole is at breaking point to say the least and so increasing the traffic whether by increasing the number of houses or industrial/storage space is absolutely stupid.

Clearly the Planning Inspector is ignoring the Green Belt (MM9) and under no circumstances can the actions proposed be said to be protecting it. Your plans are inviting developers and speculators to purchase land for development..

MM9 Green Belt Policy

I OBJECT to the modifications of that GBC want to make to the Green Belt boundaries, as this negate Green Belt protection.

MM9 GREEN BELT POLICY.

How can you say the modifications claim to protect our precious GREEN BELT except in very special circumstances?

GBC make an exception for LIMITED INFILLING OUTSIDE THE IDENTIFIED SETTLEMENT BOUNDARIES WHERE IT CAN BE DEMONSTRATED THAT THE SITE SHOULD BE CONSIDERED TO BE WITHIN THE VILLAGE.

This is a catch all statement which is completely subjective causing complete uncertainty and completely negates GREEN BELT PROTECTION.

Virtually any land on the then ever increasing edges of the village can be picked off by developers and is open season for speculators at the expense of villagers.

I wish the above objections to be considered and this huge imposition of housing and commercial development to be largely abandoned as Send Village is at present at bursting point.

Re: Send Planning Policy

As residents in Send since 1970 we are devestated at the continuing proposals for our beautiful village. Although we realise new developments are necessary there is plenty of land available without concentrating on Send Village & immediate surroundings. The following are of great concern.

MM9 Green Belt Policy

You are not honouring our Green Belt areas which makes Green Belt just a farce & meaningless. Developers etc are just waiting to cover them beautiful areas.

Attached documents:
**Comment: MM9 - LPMM18/572  Respondent: Richard Vickery 10869345  Agent:**

**Green Belt Policy**

This green belt land, which is precious to us as residents, should be unobtainable to speculative developments.

**Attached documents:**

**Comment: MM9 - LPMM18/560  Respondent: Rosalyn Vickery 10870305  Agent:**

'Limited infilling outside the indentified settlement boundaries' is so vague as to remove existing protection for the green belt. It should not be considered unless ALL other options have been tried, and it should only be done in conjunction with the local (parish) planners.

**Attached documents:**

**Comment: MM9 - LPMM18/2600  Respondent: Lynn Durbridge 10871169  Agent:**

**My First objections are to : MM41,MM42,MM44,MM9, MM27.**

At the public examination the figure for Guildford Borough Council housing need used by the inspector was 789 per year. This figure was obtained by G.B.C Consultants and was greatly exaggerated by including Surrey University Student figures. These Consultants and GBC refused to disclose how this figure was calculated. (This is illegal, by law you have to show how you have arrived at such figures... To this end Police involvement may be necessary as fraud may have taken place.)

The figure now published by a highly respected consultancy Barton Wilmore has said the correct figure is 431 houses per year.

The data from the Office of National Statistics, doing population forecasts says the appropriate growth in GBC can be achieved by 460 houses per year.

This latest data makes a mockery of G.B.C consultants figures which have always been very suspicious.

My expectation is that the Inspector and GBC will now drastically reduce the housing need to reflect the true figures, and particularly in our already very congested village of Send.

**table S2b: Spatial Strategy: Distribution of Housing 2015 – 2034 (net number of homes) states that the net number of homes within villages is 154, this contradicts other figures and is obviously a lie?**

[Response has been redacted due to statements being considered contrary to the Council’s duty under the Equalities Act 2010 to eliminate discrimination, harassment, victimisation against persons with a protected characteristic; and to foster good relations between persons with a protected characteristic and persons who do not share it]

And 2000 new homes at Wisley airfield is totally unacceptable. Not only will Send and Ripley be joined but the whole of Guildford...the whole of surrey will be connected in one sprawling mass of houses and industrial parks with barely a patch of green as far as the eye can see. Individual communities will no longer have their own identities and roads will be
even more congested. Services have only received lip service, Gps and schools (and parking) that are already at bursting point have not been thought about at all.

**MM9 Green Belt Policy.**

How can you say the modifications claim to protect our precious GREEN BELT except in very special circumstances?

GBC make an exception for LIMITED INFILLING OUTSIDE THE IDENTIFIED SETTLEMENT BOUNDARIES WHERE IT CAN BE DEMONSTRATED THAT THE SITE SHUOLD BE CONSIDERED TO BE WITHIN THE VILLAGE.

This is a catch all statement which is completely subjective causing complete uncertainty and completely negates GREEN BELT PROTECTION.

Virtually any land on the then ever increasing edges of the village can be picked off by developers and is open season for speculators at the expense of villagers.

I wish all the above objections to be considered and this huge imposition of housing and commercial development that is simply not needed for it to be largely abandoned as Send Village is presently at bursting point.

It is so obvious to all and sundry this is not being done to government requirements but for private gains!

It is obvious that financial gain motivates the reasoning behind the proposed plans, when non green belt areas are available (but not as profitable from a sales point of view) that this is not being done to government requirements.

If real housing need is the only motivation then the proposed sites need to be explained fully and transparently.

All the previous letters and objections should still be taken into account at this time.

**MM9 Green Belt Policy**

These modifications do not appear to uphold protection of the Green Belt and render the village of Send liable to further infilling and development.

**Attached documents:**

---

**Comment:** MM9 - LPMM18/2212  **Respondent:** Derek and Lilian Scholes 10902113  **Agent:**

**Local Plan Modifications MM44, MM41, MM42, MM9**

We strongly object to the main modifications to the Local Plan for Send. This area is not suitable for such development. There is not the infrastructure to support this, and the real need is for just a small number of AFFORDABLE houses. With regard to MM9, the Green Belt Policy, Alderton's Farm in particular cannot be "considered to be within the village" and such intrusion into the Green Belt will benefit no one but the developers.

**Attached documents:**

---

**Comment:** MM9 - LPMM18/2999  **Respondent:** M Stokes 10903265  **Agent:**

**Changes in MM9 Green Belt Policy**

GBC make an exception for limited infilling outside the identified village boundaries where it can be shown that the site should be considered within the village. This new policy could allow development to be picked off around the edge of the village and is an open invitation to developers and speculators.

**Attached documents:**

---

**Comment:** MM9 - LPMM18/538  **Respondent:** Linda Freeland 10903681  **Agent:**

I am strongly opposed to the latest Local Plan: Strategy & Sites and in particular the following:-

MM9 Green Belt Policy is designed to protect against overdevelopment unless there are exceptional circumstances. What are the exceptional circumstances in the cases of MM41, MM42 and MM44? This alone should be sufficient to reject these excessive and unsustainable proposals.

**Attached documents:**

| I object in principle and in practice to the modification of the Green Belt Policy MM9. The proposal that development can take place outside settlement boundaries where “the site should be considered to be within the village” means that a subjective judgement can be made to allow otherwise unjustified building on our Green Belt. This is in fact what is happening with the other proposals – no justification is given for using the Green Belt for development, yet it is being proposed on this basis.
| I object to the use of the Green Belt land for mass housing provision. Sajid Javid, as Secretary of State for Communities and Local Government, has stated in Parliament that the Green Belt is ‘absolutely sacrosanct’. Guildford’s own development policy states the circumstances under which Green Belt may be built on: “Whilst most forms of development are considered inappropriate in the Green Belt, national planning policy lists certain exceptions which are not inappropriate. These are set out in paragraphs 89 and 90 of the National Planning Policy Framework. The exceptions listed include development such as new buildings for agriculture and forestry, and the redevelopment of previously developed land where it would not have a greater impact on the openness of the Green Belt.” So, nothing to that would provide for a huge sprawl of new houses then. |

Comment: MM9 - LPMM18/2604  Respondent: Ray Partridge 10911297  Agent:

It has been brought to my attention that Worplesdon is included in MM9 of the Local Plan.

Worplesdon is in Green Belt and has a defined settlement and conservation areas. The guidelines under the heading Green Belt say that inappropriate development will not be permitted unless very special circumstances can be demonstrated and goes on to say that a very special circumstance would be where the potential harm is clearly outweighed by other considerations. With due respect these are catch-all phrases which can allow the planners to approve almost anything. I know because we have seen a neighbour's application in Green Belt approved in such circumstances.

The Green Belt should be protected. Strictly controlled infilling may be appropriate, but extensions into Green Belt should not be allowed. Worplesdon should be removed from the list of areas where limited infilling is allowed outside the settlement area.

---------------------------------------- added at later date--------------------------------------------------

Further to my email yesterday regarding the inclusion of Worplesdon in MM9 of the Local Plan. I now understand that Worplesdon should have been listed in red, to show that it is an addition. Instead it is listed in black which implies that it has been listed for some time and that there has been time for consultation. In fact it has been added at the last minute in a manner which could be considered as designed to avoid scrutiny and consultation.

This is unacceptable. It raises the possibility that other similar changes have been made. The consultation period should be extended to allow a proper study of, and consultation on, the final version of the Plan.

MM9 GREEN BELT POLICY.
These modifications claim to protect our precious GREEN BELT-they DO NOT! These are NOT very special circumstances?
GBC make an exception for limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered; this catch all statement is completely subjective, makes the edges of villages ‘open season’ to developers and therefore completely negates GREEN BELT PROTECTION policy.

Send is CANNOT accommodate any commercial or huge housing developments. As villagers, at times, we cannot move in our vehicles to our places of work, this will also be the same for emergency vehicles, walk safely along our pavements, our village school is at capacity, secondary school placements are a huge problem, we fight to get a Drs appointments and know that our utility services in the area are already struggling.

Attached documents:

Comment: MM9 - LPMM18/2324  Respondent: J.A. Millard 10919841  Agent:

MM9 Green Belt Policy.
This policy effectively drives a coach and horses through the principle of Green Belt protection. Its subjectiveness undermines all Green Belt in Guildford and alters games to be played to the benefit of developers and the disbenefit of local inhabitants. I object to this proposal.

Attached documents:

Comment: MM9 - LPMM18/3593  Respondent: Arthur Thomas 10922017  Agent:

MM9 Green Belt Policy

I object to the qualification 'limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the the village'. This would appear to allow development on any Green Belt land on the boundary of Send.

Attached documents:
1. MM9 Green Belt Policy

The modifications claim to protect the Green Belt. I cannot understand how these modifications can claim to protect the Green Belt. They will just result in the Green Belt disappearing over time as the boundaries of the village increase.

Attached documents:

Comment: MM9 - LPMM18/2641  Respondent: AA Bailey 10924001  Agent:

MM9

The modification is a weakening of the protection of the countryside, changing the site being 'as a matter of fact within the village' to 'should be considered to be'. The new text has a prospective element to it - how the village ought in the future to be perceived rather than how it presently is.

In the context of a very diffused settlement such as Ockham, it is difficult to identify what is within the village at present, let alone what should be considered to be. The proposed modification would bring an uncertain, but potentially large, area into possible 'infill' development.

The Sustainability Appraisal Report Addendum asserts that there is 'a considerable re-write of the policy; however, this is presentational, i.e. there is no change in policy approach' (para 9.11.3). Firstly, there is a change in the policy and either way the current text is not unsound. A presentational re-write cannot be addressing a failure of a plan to be sound.

Attached documents:

Comment: MM9 - LPMM18/1934  Respondent: Ms Victoria French 10924161  Agent:

The definitions and reasoned justification relating to Limited Infilling completely negate the policy paragraphs 1-4. These proposed modifications are not fit for the purpose of protecting the Green Belt. Far from reassuring residents that the villages mentioned will not be over developed, they pave the way for endless objections and court hearings in an effort to protect the clean air and amenity value of their local green spaces. This is extremely costly, onerous and stressful. Tax payers and residents deserve better defence against this threatened encroachment.

Attached documents:

Comment: MM9 - LPMM18/1546  Respondent: Benedict Phillips 10924193  Agent:

I am writing to object strongly to some of the main modifications to Guildford's local plan.

I live on Send Road and will be hugely adversely affected by the massive growth in traffic on a road that is already too busy. The big increase in houses at Garlick's Arch (MM41), the doubling in size of the Burnt Common industrial estate (MM42), the Alderton's Farm housing development (MM44) and the Clandon A3 slip road (MM27, MM42, MM48) will
combine to put intolerable pressure on Send Road. This will result in increased noise, delays and gridlock, not to mention the extra pollution which is a major health concern for those living on the road. In particular, the industrial estate is bound to increase HGV traffic on Send Road, which poses a major safety risk to young children. The 30mph limit is not usually adhered to and there are no speed cameras on the road or any traffic-slowing devices.

Furthermore, the Garlick's Arch housing development (MM41) is now increased by 150 houses. This is excessive and ignores the 7,000 objections to the original, smaller plans. This land is Green Belt land and ancient woodland. This will be lost while at the same time morphing Send and Ripley into one big sprawling mass of houses. Surely the whole point of the Green Belt is to stop this happening? The extra population will also put intolerable pressure on local schools and medical facilities - particularly after the council's recent decision to close Ripley Primary School in extremely dubious circumstances, which attracted negative coverage in the national press.

As far as the industrial estate at Burnt Common is concerned, the doubling of the size to 14,800 sq m seems a total insult to all those who objected to previous incarnations of the local plan. There is no need to put new industrial sites in the Green Belt when Slyfield has unused capacity. There are no special circumstances so it goes against your own Green Belt policy (MM9). There is already a 25% increase in the Send Business Centre, while the huge new Vision Engineering factory and the fact that the old factory is being kept as a commercial property despite residents being told it would become housing, all combines to fundamentally change the nature of Send by massively increasing the amount of industrial and commercial activity.

And why has the Alderton's Farm housing development reappeared in the latest local plan? It is Green Belt with no special circumstances so again contravenes your own rule MM9. Added to the other proposed housing, it makes 770 houses added to the current 1,700 in Send. That is an unnecessarily high increase which is unfair on the people who live in Send already.

Moreover, the wording of the MM9 policy on the Green Belt seems to leave open the possibility of more 'infilling' of any land left that hasn't been developed.

It is staggering that after all the complaints, Guildford Borough Council has come back with these modifications.

**Attached documents:**

**Comment:** MM9 - LPMM18/6056  **Respondent:** Paul Dench 10926689  **Agent:**

**MM9 Green Belt Policy**

The claim that this will protect the Green Belt is vague and subjective. It will be abused to the advantage of those seeking to develop land regardless of whether it is Green Belt I don’t understand how ‘infilling outside the current settlement boundaries’ can happen. Infill means to place between not outside. I don’t believe that there is any protection for the Green Belt in this Local Plan just the exact opposite.

**Attached documents:**

**Comment:** MM9 - LPMM18/5808  **Respondent:** Peter Clifford 10939841  **Agent:**

The grounds for green belt development are inadequate because of points 1 and 3 and do not represent "exceptional circumstances".

It is obvious that with the above policies & strategies are still reflecting directly from what has gone before; amending & increasing on the Local Planning Foot Print. These changes are shown in shaving bits off here and adding bits to there.

These amendments: -

Still disregards all technical impacts on current & future structures. Most structures sit on a deep clay base which needs peculated ground water to function as a foundation base.

Tweaking weak infrastructures, no way puts in place any future proofed infrastructures.

Increasing these capacities will greatly increase all impacts on enviroment. Not all of which is yet to be fully understood or been considered.

Concreting over "Green Belt" is just not on, now or anytime in the future. We all complain about the forests in South America being cut down, along with plastic waste; this is no different.

The impact of such large developments, will swamp Send & all surrounding areas. If Wisley was a no no; then these proposals are doubly bad.

So what part of NO, does the current dominant political power not understand?

It seems as if the first judgement, common sense (Wisley) went against the current political-monied power houses. How strange that with a new judge conforms now to their wishes. How did all this happen?

Stop faffing about! Ask the local populous "What they want to happen by holding a Local Referendum." Just like Switzerland.

MM9 In Green Belt, proposed limited infilling outside identified settlement boundaries should not be allowed as it will harm openness and become a loophole for inappropriate development.

Stop faffing about! Ask the local populous "What they want to happen by holding a Local Referendum." Just like Switzerland.

MM9 In Green Belt, proposed limited infilling outside identified settlement boundaries should not be allowed as it will harm openness and become a loophole for inappropriate development.

Stop faffing about! Ask the local populous "What they want to happen by holding a Local Referendum." Just like Switzerland.
MM9 Green Belt policy. This is a subjective test and open to abuse and removes effective protection

Attached documents:

Comment: MM9 - LPMM18/3603  Respondent: Alison Humberstone 10952161  Agent: 

My initial objection is to : MM41,MM42,MM44,MM9, MM27.

POLICY S2.

The housing number predictions have been shown to be incorrect so this is all starting from a incorrect basis. The latest data makes a mockery of G.B.C consultants figures.

At the public examination the figure for Guildford.B.C. housing need used by the inspector was 789 per year. This figure was obtained by G.B.C Consultants and was greatly exaggerated by including Surrey University Student figures. These Consultants and GBC refused to disclose how this figure was calculated.

The figure now published by a highly respected consultancy Barton Wilmore has said the correct figure is 431 houses per year.

The data from the Office of National Statistics, doing population forecasts says the appropriate growth in GBC can be achieved by 460 houses per year.

I trust the Inspector and GBC will now drastically reduce the housing need to reflect the true figures, and particularly in our already very congested village of Send.

MM9 GREEN BELT POLICY.

The modifications claim to protect our precious GREEN BELT except in very special circumstances, clearly that is not true.

GBC make an exception for "LIMITED INFILLING OUTSIDE THE IDENTIFIED SETTLEMENT BOUNDARIES WHERE IT CAN BE DEMONSTRATED THAT THE SITE SHOULD BE CONSIDERED TO BE WITHIN THE VILLAGE."

This is vague and benefits only those who wish to ignore the protection. Its a catch all statement which is completely subjective causing complete uncertainty and completely negates protecting the Green belt and simply means that any land on the then ever increasing edges of the village can be picked off by developers and is open season for speculators at the expense of villagers.

I wish the above objections to be considered and this huge imposition of housing and commercial development to be largely abandoned as Send Village is at present at bursting point.

**MM9 Green Belt Policy**

The Green Belt in this area was so named in order to provide ‘breathing lungs’ around the very necessary major developments in London, following the Second World War.

The so called ‘modifications’ to the Plan claim to protect the Green Belt with the apparent exception of claiming to limit the development to areas which could be believed to be within the ‘settlement boundaries of the villages of Ripley and Send’. This area does not fulfil this criteria. The so called ‘development areas’ detailed below, actually join the two villages to become one – presumably because the person with the pen drawing the line, is unaware of the distinctive character of the two villages or simply does not care, about the implications of the proposal.

**MM9 Green Belt Policy**

It appears that GBC does not adhere to the Green Belt Policy with the current version of its plan with many encroachments on said Green Belt. No erosion of this worthy policy is justifiable and there is a strong suspicion that this is the thin end of the wedge with more rapacious developers grabbing what they can.

<td>I object to the &quot;limited infilling&quot; proposals at MM9 relating to Send/Sendmarsh and Ripley. These are separately identifiable settlements with their own specific demarcations and this should be recognised as preventing &quot;infilling&quot; which would sacrifice their separate identities. The wording of this modification is sufficiently vague as to provide opportunity for development which would sacrifice the valuable Green Belt in these village locations at the expense of local communities. Further building on the edge of Send would risk it merging with locations such as Sendmarsh, Burnt Common, Burpham Ripley and Old Woking.</td>

MM9: Policy P2: Green Belt

This policy appears to have been completely redrafted however no mention is made of the overall reduction in households from ONS. It is thus very concerning that the council plans to put 66% of the proposed housing on land which currently sits in Green belt land rather than looking to descale their proposals and protect this special space!

Further I would like to draw the Council’s attention to the “Exceptional circumstances” that are required to amend the Green Belt boundaries or the “Very special circumstances” necessary to justify any developments in the Green belt. In my opinion I do not see how the Council can claim that either of these can exist. It feels like the Council are simply looking for any easy way to build bulk housing. There are no special sets of circumstances that exist to justify building 66% of all housing in the Green belt! I believe the Council’s time would be much better spent re-examining policy S3 town centres where there is much more opportunity for development.

MM9 In Green Belt, proposed limited infilling outside identified settlement boundaries should not be allowed as it will harm openness and become a loophole for inappropriate development.

MM9 Green Belt Policy

Although the “modifications” claim to protect the Green Belt except in very special circumstances GBC make an exception for “limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village.” This introduces a subjective test, considerable uncertainty and effectively negates Green Belt protection. Any land on the edge of our village could be picked off for development, an open invitation to developers and speculators at the expense of residents.
MM9 Green Belt Policy. I am totally against any development of Green Belt land. I think it is important to keep our villages separate and continually eating at the outskirts with development will not do achieve this.

Comment: MM9 - LPMM18/4944  Respondent: Mrs Janet Williams 11011041  Agent:

1. MM9 Green Belt Policy

The ‘modifications’ claim to protect the Green Belt but it allows infilling outside the current settlement boundaries where it can be shown that the site could be considered to fall within the village. This is a very vague statement that has no teeth. It gives no firm protection at all but will leave the Green Belt open to gradual erosion.

Attached documents:

Comment: MM9 - LPMM18/3336  Respondent: Hannah Earle 11011297  Agent:

MM9  Infilling in and around villages will result in the weakening of protection of the countryside.

Attached documents:

Comment: MM9 - LPMM18/905  Respondent: Mary Warren 11011713  Agent:

Once again, I was astonished to read the latest version of the local plan. Despite the huge number of objections, there has been an increased allocation of houses and industrial space for what is, after all, just a village. Guildford Borough Council has claimed that their housing need is 789 new houses per year. (Policy S2). I understand that independent bodies, including the Office for National Statistics, suggest that the need is far lower - between 350 - 450. So why is Send singled out for another 770 houses - an increase of 45% - and an increase in the industrial sites?

Green Belt

Main Modification MM9

There is a new test for determining whether the Green belt can be ignored. This is a very subjective one which states 'Limited infilling may also be appropriate outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village.' It will be all too easy to say that areas of Green Belt are so close to a village as to be considered within it, when the idea of the Green Belt is to prevent urban sprawl and to maintain the individual identity of the villages.

• MM9 – infilling in and around villages will result in the weakening of protection of the countryside

Attached documents:

Comment: MM9 - LPMM18/630  Respondent: Brenda Tulloch 11016001  Agent:

MM9 – I object on the following grounds

The green belt should not be built on except in very special circumstances – there are plenty of brown fill land around which could be used. I understand that this would be more expensive – but we can never get the green belt land back again when it has been developed. We should be thinking of future years for our children and grandchildren – and not just currently.

Attached documents:

Comment: MM9 - LPMM18/4066  Respondent: Trevor Pound 11023489  Agent:

With respect to MM9 and the Green Belt in general, I am adamantly against dismantling the protection to our communities provided by the Green Belt in large developments or by a thousand cuts as would be the result of accepting the wording proposed covering “limited infilling”. This protection is more necessary now than ever if the whole of the area is not to just become an urban outpost of Woking. I believe the villages and open spaces of Surrey are valued equally by people living in the bigger towns in the way that parks are valued by people living in cities; they do not want to see the wanton destruction of the countryside. With the current outcome of Brexit still up in the air and general wider economic uncertainties, I think now is a particularly bad time to commit to large scale building, particularly at the cost of Green Belt land.

**MM9 Green Belt**

Guildford used some nice words and rephrasing, to enable them to claim all this building is necessary on Green Belt land. In nobody’s mind can the infiltration of the Green Belt here in the Send, Burnt Common area be seen as limited infilling. Introducing a subjective test is wrong and negates the Green Belt protection.
Comment: MM9 - LPMM18/1001  Respondent: Len Ozanne 11036417  Agent:

Ref: Objection to Planning MM41, MM42, MM44, MM9 and transport strategies

I write to object most strongly to the planning modifications to the above developments.

I object because the excess number of properties being planned will change the village out of recognition, we do not have the space and infrastructure for this number of properties.

The vast enlargement of the industrial areas will cause excessive noise, damage and danger to the younger and older residents in the village. These developments are again out of proportion to the village of Send.

The traffic changes on and off the A3 will cause major traffic congestion, mainly due to the lack of road space in Old Woking at all times and Ripley during the peak rush hour periods.

The Green Belt should be protected and not ignored.

Overall these planning applications cause a vast overdevelopment of the village and area of Send and should not be continued at the scale of the current proposals.

Attached documents:

Comment: MM9 - LPMM18/1692  Respondent: Brian Slade 11036705  Agent:

I object to Green Belt Policy MM9 GBC want an exception for "limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered within the village". This introduces a subjective test, inviting speculators and developers to pick off opportunities at the edge of the village at the expense of villagers' environment.

Attached documents:

Comment: MM9 - LPMM18/4795  Respondent: Judith Mercer 11036801  Agent:

This policy has not taken into account the large reduction in projected households (see MM2 above). Despite previous promises to the residents to protect the Green Belt in the borough, 66% of the Plan’s proposed housing is planned to be built on land that currently lies within the Green Belt.

In view of the reduced housing projections from ONS, and the Plan stating that “more housing is likely to come forward over the plan period” (being an unknown quantity), the exceptional circumstances necessary to amend Green Belt boundaries OR the very special circumstances necessary to justify any development in the Green Belt do not exist,
especially as
- 66% of the planned development is on land currently in the Green Belt
- The new policy S3 on the town centre( largest and most sustainable location in the borough and with more urban and brownfield sites available) is weak and unacceptable.

I call for the Council to commit in the Plan to protecting the Green Belt pursuant to NPPF 2012( current Planning law). The current version of the Plan where it proposes infilling in and around villages will result in a weakening of the protection of the countryside. It will directly impact the Green Belt around Guildford which is an important green “lung” for this borough. It will create urban sprawl contrary to the principles of Green Belt policy in the NPPF.

Attached documents:

Comment: MM9 - LPMM18/3348  Respondent: Debra Somner Fraser 11041025  Agent:

MM9 In Green Belt, proposed limited infilling outside identified settlement boundaries should not be allowed as it will harm openness and become a loophole for inappropriate development.

Attached documents:

Comment: MM9 - LPMM18/4963  Respondent: Sam Thompson 11042433  Agent:

MM9 Green Belt Policy

The council is trying to develop the green belt by simply relabeling parts of it as "no longer green belt" so that it can claim not have have built on green belt land; because that cannot be done without special circumstances - of which there are none in these instances.

[Response has been redacted due to statements being considered defamatory, derogatory, inflammatory or offensive in nature]

Attached documents:

Comment: MM9 - LPMM18/4414  Respondent: Christopher Barrass 11044129  Agent:

MM9 In Green Belt, proposed limited infilling outside identified settlement boundaries should not be allowed as it will harm openness and become a loophole for inappropriate development.

Attached documents:

Comment: MM9 - LPMM18/3102  Respondent: Gesh Doyle 11046017  Agent:
MM9 - Green Belt policy

I object to this on the following grounds;

Any modifications to definition of Green Belt should be done following a parliamentary review

Attached documents:

Comment: MM9 - LPMM18/3719  Respondent: Peter McGowan 11047201  Agent:

MM9 Green Belt policy

These modifications involve a test that is not objective with respect to the exception for enabling "limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village". This exception is a significant loophole to the protection afforded to the Green Belt and this derogation from the protection of the Green Belt could easily be exploited by developers to the detriment of residents. It renders the Green Belt protection meaningless.

Attached documents:

Comment: MM9 - LPMM18/2910  Respondent: Hazel Corstin 11047329  Agent:

MM9 In Green Belt, proposed limited infilling outside identified settlement boundaries should not be allowed as it will harm openness and become a loophole for inappropriate development.

Attached documents:

Comment: MM9 - LPMM18/4307  Respondent: Steve Lawson 11047713  Agent:

MM9

Development in the Green Belt should be restricted in accordance with the NPPF. This policy appears to broaden loopholes in Green Belt protections beyond the exceptional circumstances permitted in the NPPF.

MM9 adds ambiguous interpretation to national policy which confuses what is and is not permitted.

There is a clear absence of any positive defence of the Green Belt, despite this covering 81% of the borough’s area!! As currently worded, MM9 risks going completely against the sensitive balance between protection and development set out in national policy. In setting and settlement boundary extension on this major scale is unnecessary.

Attached documents:
MM9, The Green Belt.

The amendments to the Plan claim to protect the Green Belt save in the "exceptional circumstances" that can justify development in the Green Belt. However the Council make an exception for in their words "limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be within the village". This is effectively allowing development at all the above-discussed sites, all of which are in the Green Belt but to which this test can be subjectively applied, given their proximity to already developed areas. GBC has in any event indicated it intends to remove both Send and Ripley from the Green Belt, thus making Send, Send Marsh and Ripley liable to even further development in due course.

Attached documents:

Comment: MM9 - LPMM18/4293  Respondent: Mrs Sue Wright 11049633  Agent:

MM9 In Green Belt, proposed limited infilling outside identified settlement boundaries should not be allowed, would harm openness and become a loophole.

**MM9 Green Belt Policy**

- The ability to make exceptions for limited infilling outside the identified settlement boundaries undermines confidence in Green Belt Protection and could lead to more development around an already heavily affected village.

**Attached documents:**

---

**Comment: MM9 - LPMM18/5391  Respondent: Anthony Maine 11070977  Agent:**

I write to register my objection to the planned changes to Send and Send Marsh outlined in the Draft Local Plan.

The retention of the Green Belt is, I feel, the most vital issue in the Local Plan. It must not be slackened to allow expansion, but kept to protect the character and rural distinctiveness of the countryside and to keep villages as just that, villages and not large sprawling towns.

**OBJECTION – Policy MM9**

I object in particular to removing the green belt status from the areas surrounding Send.

The loss of significant swathes of greenbelt land will have a very detrimental impact upon the social, leisure and recreational activities that the local population currently use this land for – football, walks, rambling, dog walking, exercise, usage by young people. In particular young people will have less natural open space and green fields within which to exercise and socialise. At a time when childhood obesity is on the rise, allow the insetting of this land and future development will have a detrimental impact on achieving this objective as vital areas for play and exercise will be lost, impacting upon both child and adult health.

Removing the greenbelt status would jeopardise the habitats of numerous species of wildlife. The open spaces around Send are home to many wildlife species such as bats, badgers, rabbits and many many more, along with wild plants which should all be protected. The council has a duty to protect woodland and the wildlife under the UK BIO Diversity Action Plan.

The NPPF states that new Green Belt boundaries should only be established in exceptional circumstances, for example when planning for larger scale developments such as new settlements or major urban extensions. If proposing a new Green Belt, local planning authorities should:

1. demonstrate why normal planning and development management policies would not be adequate;
2. set out whether any major changes in circumstances have made the adoption of this exceptional measure necessary;
3. show what the consequences of the proposal would be for sustainable development;

4. demonstrate the necessity for the Green Belt and its consistency with local plans for adjoining areas;

5. and show how the Green Belt would meet the other objectives of the framework.

I question whether the removal of the Green Belt in and around Send has been shown to meet any of the above requirements. There is no evidence presented in the Core Strategy to demonstrate that the proposed strategic extension meets the fundamental aim of Green Belt policy.

The NPPF (para 85, bullet point 6) requires LPAs to define boundaries clearly, using physical features that are readily recognisable and likely to be permanent. The removal of the Green Belt does not relate to any physical features on the ground and does not fulfil this criterion. The lack of physical features against which the proposed boundary is drawn highlights the inappropriateness of the proposed Green Belt removal and the lack of justification for its insetting.

Whilst I wholeheartedly object to the green belt removal plans, should their inclusion in the Local Plan be forced through, the Council must clearly demonstrated that the new boundaries take account of the need to promote sustainable patterns of development as required by paragraph 84 of the NPPF. The Council must review the boundaries of those settlements which would be covered by the Green Belt to ensure that sites are identified for development to achieve their long term sustainability and clearly define the reason for the insetting, fully detailing the future usage of the inset land.

Importantly if the Council chooses to continue with the alteration, it is essential when submitting the Core Strategy for examination that it is considered ’sound’ in that it is justified with the plan being the most appropriate strategy, when considered against reasonable alternatives, based on proportionate evidence.

Allowing the removal of the Green Belt around Send generally, and thereby facilitating the future development of the sites, will allow the urban sprawl of Guildford and Woking to further encroach on Send. Send is not a suburb of Guildford or Woking and clear separation should be maintained by the retention of the current Green Belt boundary.

Attached documents:

**Comment:** MM9 - LPMM18/2561  **Respondent:** Tony Millership 11076161  **Agent:**

4. POLICY P2: GREEN BELT (MM9)

- This Policy has been almost completely redrafted, but takes no account of the large reduction in projected households (see paragraph 1 above).

- 66% of the Plan’s proposed housing is planned to be built on land that currently lies within the Green Belt.

- The Local Plan states that “more housing is likely to come forward over the plan period” (“Reasoned Justification”, paragraph 4.1.21).

- Given the reduced housing projections from ONS, and the apparent likelihood of as yet unknown additional housing during the period of the Plan, the exceptional circumstances necessary to amend Green Belt boundaries or the very special circumstances necessary to justify any development in the Green Belt do not exist, especially when

- 66% of the development is proposed on land that is currently in the Green Belt.

- The new Policy S3 on the town centre (the largest and most sustainable location in the borough) is weak, wordy and unacceptable.
Objections to the main modifications to the draft Guildford Borough Council Local Plan 2017

I am writing to object to the following main modifications (MM) following the planning inspector’s report which place additional undue and disproportionate over-development on the village of Send. It is my understanding that as consultation on the local plan is still in progress it will be assessed against the 2012 edition of the government’s National Planning Policy Framework (NPPF) rather than the 2018 revision.

POLICY P2: GREEN BELT. MM9 2c) “ii. Limited infilling may also be appropriate outside the inset settlement boundaries, as designated on the Policies Map, of the following villages where it can be demonstrated that the site should be considered to be within the village...Send...” I object to this modification, which includes Send, as it has no objective basis, but could be abused to allow any development on any Green Belt land around the village. It is contrary to government planning policies for sustainable development in the NPPF which state that “The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open” (NPPF paragraph 79). It would also side-step the test for “exceptional circumstances” required by NPPF paragraphs 79-92 to justify allocating Green Belt land for development.

Comment: MM9 - LPMM18/3845  Respondent: Andy Freebody 11160001  Agent: MM9 In Green Belt, proposed limited infilling outside identified settlement boundaries should not be allowed as it will harm openness and become a loophole for inappropriate development.

Comment: MM9 - LPMM18/4298  Respondent: David Avery 11164225  Agent: MM9 Green Belt Policy

Although the “modifications” claim to protect the Green Belt except in very special circumstances GBC make an exception for “limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village.” This introduces a subjective test, considerable uncertainty and effectively negates Green Belt protection. Any land on the edge of our village could be picked off for development, an open invitation to developers and speculators at the expense of residents.

Comment: MM9 - LPMM18/6015  Respondent: Karen Lord 11550561  Agent:
MM9 GREEN BELT POLICY

I feel that land on the ever increasing edges of the village can be picked off by developers and is opportunities for speculators.

I cannot see this is use of greenbelt except in very special circumstances.
GBC make an exception for limited infilling outside the identified settlement boundaries where it can be can be demonstrated that the site should be considered to be within the village.
This will be a catch all statement and is subjective causing complete uncertainty.
Virtually any land on the the increasing edges of the village can be picked off by developers and is opportunities for speculators at the expense of villagers.

A figure published by Barton Wilmore Consultancy says the correct figure is 431 houses per year.

The data from the Office of National Statistics regarding population forecasts says the appropriate growth in GBC can be achieved by 460 houses per year.
I trust the Inspector and GBC will reduce the housing need to reflect the latest figures, especially in our already very congested village of Send.

Attached documents:

Comment: MM9 - LPMM18/3289  Respondent: Barry Lewis 11556161  Agent:

MM9

Infilling within villages (disproportionately to the east of the Borough) will weaken the protection of the Countryside.

Attached documents:

Comment: MM9 - LPMM18/745  Respondent: Michael Cumper 12129889  Agent:

I object to 'limited infilling'. This is not grounds for special circumstances and green belt land should not be used other than where special circumstances can be demonstrated each time a development is considered. This would open up the probability for decisions to be hidden from the public and it is underhand. Local Government should ensure transparency and this goes against the theory of that.

Attached documents:

Comment: MM9 - LPMM18/3360  Respondent: Michael Forster 14177217  Agent:

The grounds for green belt development are inadequate because of 1 and 3 and do not represent 'exceptional circumstances’

Attached documents:
3. The grounds for green belt development are inadequate and do not represent ‘exceptional circumstances’.

3. The grounds for green belt development are inadequate and do not represent ‘exceptional circumstances’.

MM9 GREEN BELT POLICY

• I object to the GBC claim that that they are protecting the Green Belt as this is highly subjective and exposing any land on the edge of our village for excessive and over-development.
• I object as the approach proposed will create significant opportunities for interested parties to undermine and erode the protections enshrined in the green belt designation and will certainly lead to the continued expansion of the settlement boundaries.
• I object to the wording of policy paragraph (1) as it is devoid of meaning. The paragraph states that “Inappropriate development will not be permitted unless very special circumstances can be demonstrated”. Are we to understand that inappropriate development will be permitted in special circumstances? The paragraph goes on to state that “Very special circumstances will not exist unless the potential harm to the Green Belt by reason of inappropriateness, and any other harm, is clearly outweighed by other considerations”. This is clearly nonsense masquerading as reason and provides no objective criteria for its application.
• I object to all proposals to build on Green Belt land in the borough and that GBC uses discredited and exaggerated housing ‘need’ data to support this. Urban brownfield areas could accommodate all the true and required development that is needs and such sites are close to existing transport systems and links. NO such infrastructure exists in our village.

1) The settlement boundary for West Horsley is inappropriately drawn in the area to the East of the Street, in immediate proximity to the Village Green (Local Green Space). The proposed line encapsulates agricultural land adjacent to the Green which, should it be developed, would permanently and detrimentally impact the natural landscape of this heritage community space. We urge GBC to redraw the line to exclude this land and maintain the existing settlement edge.

2) Infilling beyond the existing settlement boundary should not be considered as appropriate given the considerable risk to the rural nature of the villages.
Map area associated with West Horsley settlement boundary - red area highlights agricultural land which should be excluded from settlement boundary or risk permanently and detrimentally damaging the heritage Village Green.

**MM9 Green Belt Policy.** A subjective test should not be at the heart of Green Belt Policy. Need anymore be said – different people will the test differently and the result will be an inconsistent and incongruent application of policy, a highly undesirable result.

**Attached documents:**

**Comment:** MM9 - LPMM18/2482  **Respondent:** Sylvia Pyne 15138433  **Agent:**

MM9 Green Belt Policy

Your “modifications” claim to protect the Green Belt but the exception for “limited infilling outside the identified settlement boundaries but where you consider it “within the village” takes away the Green Belt protection and leaves Send open to exploitation and is totally unfair given we already seem to be being sacrificed for the rest of the Guilford area plans for more housing and industrial development and major road junctions. I object and feel we will be the victims of developers and speculators if this is passed.

**Attached documents:**

**Comment:** MM9 - LPMM18/510  **Respondent:** Bav Majithia 15141633  **Agent:**

I wish to object to the Local Plan both in general and specifically to Main Modifications MM9, MM7, MM41, MM42 and MM44.

My general objection is that the proposed modifications to the Local Plan are unjustified. Has anyone considered what the limit is on continued development? At what stage will we be full up? That is: 'When does the built environment take precedence over the remaining green belt'.

When will the road infrastructure no longer be sufficient to serve all those living in the Guildford area? Traffic densities coupled with infrastructure maintenance costs overwhelm the tax payer. It is now a lottery to plan getting around without encountering heavy traffic and delays. On roads that are a poor state of repair.

Get that balance right first before attempting mass developments that are destroying apparently protected green space.

MM9

Full of loopholes in so far as everything is protected except for very special circumstances. Who decides what special circumstances? Residents’ views are ignored. It appears that the needs of speculators and developers take precedence over the views of residents.

The Green belt was developed and designated to protect the public from over development. Already the most densely populated country in Europe; it is time to say ‘no more’.

MM9 –infilling in and around villages will result in the weakening of protection of the countryside

Attached documents:

Comment: MM9 - LPMM18/1784  Respondent: Stephen John Tully 15238881  Agent:

MM9. These "modifications" do not protect the Greenbelt but negates any Greenbelt protection; again completely against government policy putting decisions in the hands of local people.

Nobody, it appears, considers the views of local people-what a sham.

Attached documents:

Comment: MM9 - LPMM18/939  Respondent: Michael McGrath 15251105  Agent:

1. MM9 GREEN BELT POLICY
I object to Guildford Borough Council making exceptions to existing designated Green Belt in and around Send, to allow “limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village”, because:

- Such exceptions would permanently remove Green Belt land which is more valuable to society now than it ever has been because, even if such land is not obviously with any special visual merit, it provides natural habitats supporting local biodiversity for a variety of plant, animal and insect life.

- The loss of such Green Belt land, in and around Send, however small or seemingly without any special attractiveness also reduces the opportunities for atmospheric CO2 capture that is now vital to help the environment. And this Green Belt also allows for natural dispersion of rain water, which will be even more important in the future, if forecasts for the UK to experience much more rainfall are fulfilled.

- Any additional houses and other developments in Send would increase the urbanisation of what is a semi-rural area protected by Green Belt from the closeness of the already built-up Woking Borough and lead to a merging of Send and nearby Ripley, which would lose their identity as individual villages.

Attached documents:

Comment: MM9 - LPMM18/5912  Respondent: Kath Frackiewicz 15257281  Agent:

Policy P2 - Green Belt (MM9): The proposed changes to the insetting of East Horsley and West Horsley as well as the movement of the settlement boundaries of the respective villages in unacceptable and against the policy of having a protected Green Belt.

Attached documents:

Comment: MM9 - LPMM18/862  Respondent: Mr Brian Middlemiss 15257953  Agent:

Sirs I write for the fourth time to voice my strong opinions on the potential decimation of what has been for me a lovely place to live with beautiful surroundings for many years now. The percentage increase in housing of 45% if approved is an enormous amount and totally out of proportion with large areas of green belt affected in the making. The recent headline in the local paper stated that numbers had been overestimated by several thousand in the Guildford area which would include our little village of Send. Although I am not allowed to go over previous objections I would like to highlight the latest additions starting with

MM9 Green Belt Policy.

This offers considerable uncertainty and could negate Green Belt protection still further to which I object.

Attached documents:

Comment: MM9 - LPMM18/1858  Respondent: Robert Peake 15264001  Agent:
MM9 In Green Belt, proposed limited **infilling outside identified settlement** boundaries should not be allowed as it will harm openness and become a loophole for inappropriate development.

</thead>
<tbody>
<tr>
<td>I object strenuously to the removal of West Horsley from the Green Belt. Para 4.3.12 states that &quot;However, the NPPF states that only those villages whose open character makes an important contribution to the openness of the Green Belt</td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Attached documents:</strong></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
should be included in the Green Belt. Those that do not should be inset, or removed, from the Green Belt and other development management policies used to restrict any inappropriate development."

It is clear to all who live or pass through the village that the open character of the village contributes to the Green Belt, and that this open character would no longer be present were limited infilling to be permitted in the village, and on this basis I request that the ambition for West Horsley to be removed from the Green Belt to be dropped from the Local Plan.

**Attached documents:**

**Comment:** MM9 - LPMM18/1371  **Respondent:** Mr Tom Davies 15282977  **Agent:**

Re. MM9 Policy Paras 1-4:

I object to the inclusion of the following text:

ii. Limited infilling may also be appropriate outside the inset settlement boundaries, as designated on the Policies Map, of the following villages where it can be demonstrated that the site should be considered to be within the village.

Ash Green, Chilworth, East Horsley, Effingham, Fairlands, Flexford, Jacobs Well, Normandy, Peasmarsh, Ripley, Send, Send Marsh/ Burnt Common, Shalford, West Horsley and Wood Street Village.

With regard to West Horsley, the character of the village is defined in part by the spacious nature of the settlement and the generous plot sizes and distance between houses. I see no benefits to allowing infilling outside the current (note: current, NOT proposed) settlement boundaries as this will lead to a denser population of housing and a reduction in the spacious character of the village. Please remove this text.

**Attached documents:**

**Comment:** MM9 - LPMM18/1373  **Respondent:** Mr Tom Davies 15282977  **Agent:**

Re. Para 4.3.25:

I object to the proposed change to the settlement boundary in the region of West Horsley Village Green and the surrounding housing. The proposed changes would place West Horsley village green within the settlement boundary and would thus enable the existing track across it to be used as access for future property development to the rear of numbers 180 to 200 The Street.

The Village Green is of iconic importance to West Horsley - indeed the oak tree therein is the village symbol, used widely on signage as a motif of the village, To allow this to be included in the settlement boundary and thus subject to adjacent development and use as an accessway for construction traffic would be a travesty and an injustice to the nature of the village.

The reason given for the change to the settlement boundary was that "we're just tidying up the boundary". I submit that this is insufficient reason to alter the existing settlement boundary and that this reason does not fall in line with any of the stated policy changes, thus the proposed change in this area should be dropped.

**Attached documents:**
I object to the removal of West Horsley from the Green Belt. The Plan shows no positive defence of the Green Belt, despite this covering 81% of the borough’s area. The plan is widely seen by residents as declaring war on the countryside by “insetting” most of the borough’s villages, extending settlement boundaries, removing SNCI protections and prioritising greenfield housing estates over urban regeneration.

No justification has been given for the insetting of West Horsley from the green belt. “SPECIAL CIRCUMSTANCES” are required to remove any areas from the Green Belt, which have not been given. I object to Greenbelt removal.

4. MM9 Green Belt policy

This introduces a very subjective test and actually negates Green Belt policy. Speculators may be able to ‘pick off’ land at the edge of the village.

My objections are;

• The modifications to the Green Belt policy will lead to more development by stealth and it will no longer be protected.

The proposed modification to the policy would allow subjective judgements to be made about building on green-belt land. In effect, this would open the flood gates to more and more development on green-belt land that can never be reversed. The policy should be tightened to preserve the nature of the area, not relaxed.
I OBJECT to MM9 Green Belt Policy

Although the “modifications” claim to protect the Green Belt except in very special circumstances GBC make an exception for “limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village.” This introduces a subjective test, considerable uncertainty and effectively negates Green Belt protection. Any land on the edge of our village could be picked off for development, an open invitation to developers and speculators at the expense of residents.

Attached documents:

Comment: MM9 - LPMM18/4212  Respondent: Gillian Thorpe 15341441  Agent:

Finally the proposed developments MM9 and MM27 will not help but hinder the road congestion. Send will undoubtedly be a cut through from the A3 and Woking, especially when the M25 is at a standstill. Coupled with through traffic and increased car use by the new developments, local people will be unable to travel. If all these developments go ahead, GBC will be creating a horrific conurbation. Small developments can be tolerated by local rate payers but huge developments are totally unreasonable and cannot be supported by the local infrastructure.

Please consider smaller developments throughout Surrey. More housing should be shared throughout Surrey not imposed on a few villages.

Attached documents:

Comment: MM9 - LPMM18/2626  Respondent: Mr John Kettle 15349761  Agent:

Policy P2 Green Belt (MM9)

66% of the Local Plan’s proposed housing is planned to be built on land that currently lies within the Green Belt.

As the latest ONS housing projections indicate a significantly lower housing requirement the “exceptional circumstances necessary to amend Green Belt boundaries or the very special circumstances necessary to justify any development in the Green Belt do not exist”.

Attached documents:

Comment: MM9 - LPMM18/250  Respondent: Mr John Peed 15350689  Agent:

The special circumstances justifying destruction of the Green Belt appear to be very subjective and can be breached at any time.

The policy appears to represent an open invitation to developers to financially profit at the expense of local residents.

Attached documents:
Comment: MM9 - LPMM18/3686  Respondent: John Burns 15359905  Agent:

MM9; Rural exception sites / infilling around villages: there does not appear to be any boundaries placed on this activity. It could resemble a free for all and thus ruin the ancient character and social environment of places such as Ockham and Ripley – the latter has already had to sustain major infilling with resulting loss of social open space and local employment facilities.

Attached documents:

Comment: MM9 - LPMM18/4018  Respondent: Sylvia Newton 15366721  Agent:

I object to MM9
Any residential and commercial development proposals within the Green Belt should as a matter of policy and public interest not be approved.

Attached documents:

Comment: MM9 - LPMM18/2466  Respondent: Alison Gee 15370593  Agent:

MM9 In Green Belt, proposed limited infilling outside identified settlement boundaries should not be allowed as it will harm openness and become a loophole for inappropriate development.

Attached documents:

Comment: MM9 - LPMM18/5577  Respondent: Tim Poyntz 15381089  Agent:

MM9 In Green Belt, proposed limited infilling outside identified settlement boundaries should not be allowed as it will harm openness and become a loophole for inappropriate development.

Attached documents:

Comment: MM9 - LPMM18/4779  Respondent: Bernard Callanan 15383745  Agent:

MM9 - it is unacceptable to lose any more Green Belt while there are Brown field sites available. Prime example is site A22, land north of Keens Lane is Green Belt land & should remain as such. There are no special circumstances to remove this area from Greenbelt so why are the Government guidelines not being followed? There are NO special circumstances to develop this land, just greedy, over zealous developers.

MM9

20. Although special circumstances are required to justify Green Belt developments there are none apparent in the proposed increases in MM41 and MM44

21. Local Plan Final Consultation Version 2018 Policies.pdf clause 4.3.26 on page 54 of Policy P2 Green Belt states:

For the purposes of this policy, limited infilling is considered to be the development of a small gap in an otherwise continuous build-up frontage, or the small-scale redevelopment of existing properties within such a frontage. It also includes infilling of small gaps within built development. It should be appropriate to the scale of locality and not have an adverse impact on the character of the countryside or the local environment.

Neither MM41 nor MM44 comes close to complying with these policy requirements.

Attached documents:

Comment: MM9 - LPMM18/2235  Respondent: C Knaggs 15443265  Agent:

I protest most strongly.

Medical facilities, roads cannot cope, noise, dirt, dust, bus service cannot cope. Area being ruined.

Attached documents:

Comment: MM9 - LPMM18/117  Respondent: Peter Hoar 15446561  Agent:

MM9.

There are NO very special circumstances to justify the decimation of the Green Belt in the Send area. To allow these proposals to proceed would lead to the elimination of the Green Belt in the UK.

Attached documents:

Comment: MM9 - LPMM18/5489  Respondent: Edward Bates 15448385  Agent:
MM9 In Green Belt, proposed limited **infilling outside identified settlement** boundaries should not be allowed as it will harm openness and become a loophole for inappropriate development.

<td>MM23 In (9) strategic sites should not be exempt from a requirement to reflect <strong>locally distinct</strong> patterns and character of development. This would be compatible with sites creating their own identity and would avoid “could be anywhere” estates. MM23 (D1) does not incorporate sufficient elements of deleted policy (D4) to address <strong>character</strong> adequately. MM23 Promotion of “<strong>green approaches</strong>” should clearly include protecting and enhancing greenness along transport corridors within settlements, as well as tree screens around the edge of settlements. MM23 If (D1) does not capture the qualities, including landscape, to be protected along the <strong>Wey Corridor</strong> then MM29 should be amended to specifically provide for this. MM23 should place great emphasis on height and bulk of development given the importance of views into and out of the town, including from the AONB. A <strong>height limit</strong> should be introduced given the importance of the rise and fall of the downs in the urban landscape. MM23 – POLICY D1. Guildford Borough Council, as a major landowner in the centre, must accept the same obligations as imposed on the other strategic site owners by the council as planning authority. In conclusion I would point out that the Inspector raised a considerable number of questions about the sustainability, viability and reasoning of Guildford Borough Council’s Local Plan and, despite modifications, these questions have not been addressed adequately in the modifications proposed by the Council in this consultation. The Plan is unsound and should be re-examined.</td>

MM9 Green Belt Policy

Although the ‘modifications’ claim to protect the Green Belt except in very special circumstances GBC make an exception for ‘limited infilling outside of the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village’. This introduces a subjective test, considerable uncertainty and effectively negates Green Belt protection. Any land on the edge of our village could be picked off for development, an open invitation to developers and speculators at the expense of the residents and the environment.

Attached documents:

Comment: MM9 - LPMM18/4177  Respondent: Zoe Kollov 15468833  Agent:

I object to MM9 Green Belt Policy because;
- this introduces a loophole in the very clear current definition of Green belt land and the exceptional circumstances test and instead allows the question to be posed whether it boarders a village rather than whether it is green belt. No changes are necessary to this existing definition or rules

Attached documents:

Comment: MM9 - LPMM18/228  Respondent: Nicholas Brown 15468993  Agent:

MM9 Green Belt Policy

This modification introduces a degree of uncertainty as to what constitutes "limited infilling outside settlement boundaries" and negates Green Belt protection. This clearly puts any land outside settlements at risk and is an abuse of the original policy.

Attached documents:

Comment: MM9 - LPMM18/1005  Respondent: Lorraine Ozanne 15472833  Agent:

Objection to MM41, MM42, MM44, MM9 and associated Transport strategies

I’m writing to formally object to the above Main Modifications on the following grounds:

- The excessive number of houses proposed
- Over development of Send and Ripley
- Excessive new industrial allocation of land
- Additional traffic causing major congestion of local roads and resultant safety concerns for pedestrians
- Green Belt land should be protected

I trust you will take these objections into consideration.

Attached documents:
Comment: MM9 - LPMM18/1565  Respondent: Jill Murphy 15502433  Agent:  

MM9 GREEN BELT POLICY. 

How can you say the modifications claim to protect our precious GREEN BELT except in very special circumstances? 

GBC make an exception for LIMITED INFILLING OUTSIDE THE IDENTIFIED SETTLEMENT BOUNDARIES WHERE IT CAN BE DEMONSTRATED THAT THE SITE SHOULD BE CONSIDERED TO BE WITHIN THE VILLAGE. 

This is a catch all statement which is completely subjective causing complete uncertainty and completely negates GREEN BELT PROTECTION. 

Virtually any land on the then ever increasing edges of the village can be picked off by developers and is open season for speculators at the expense of villagers. 

I wish the above objections to be considered and this huge imposition of housing and commercial development to be largely abandoned as Send Village is at present at bursting point.  

Attached documents:

Comment: MM9 - LPMM18/4186  Respondent: Richard Golding 15509057  Agent:  

MM9 GREEN BELT POLICY 

I object to the proposal to allow, "limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village." this would enable the development to grow which would be totally out of keeping with the rural location, is totally against the government so called policy of protecting the green belt. It is in fact a Developers Charter allowing them to pick off odd pieces of land at will.  

Attached documents:

Comment: MM9 - LPMM18/4446  Respondent: Hazel Thompson 15571745  Agent:  

MM9 Green Belt Policy 

These proposals do not protect the Green Belt as claimed and causes considerable uncertainty and negates Green Belt protection in the area.

<tr>
<td>There is no justification for removing villages from the Green Belt, or changing their boundaries - GBC have failed to give specific details of the exceptional circumstances that warrant this action.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

The points provided regarding limited infilling are now confusing. The implication is that as a developer you can find a piece of land adjacent to the boundary of the village, prove it is part of the village, and build houses. This will have a serious impact on the village of West Horsley, already targeted for 285 new homes on 3 sites and a further 100 homes on a site in East Horsley that borders West Horsley. 385 new homes, with no new infrastructure proposed, no consideration of the environmental and social impact that these developments will have on the residents and wildlife is outrageous and uncalled for.

To state that limited infilling is not appropriate within the boundary of West Horsley, but then add that it may be appropriate outside of the settlement boundary if it can be considered to be 'within the village' is illogical and will set a dangerous precedent for more development, bringing great harm to the rural and open character of our village.

There is no provision within the NPPF for limited infilling outside of villages and therefore I object most strongly to the inclusion of the definitions of limited infilling.

861 of 2575
I object to the increase in industrial allocation at the Burnt Common site (MM9). Despite numerous objections to the original proposals for 7,000 sq.m of the industrial floor space, the revised Plan now proposes “a minimum of 14,800 sq.m”. This is excessive and will be very damaging to the local environment. There are already large scale and underutilised brownfield sites within the borough that would be far better suited to any possible requirement for such development.

I object to the proposed insetting of the green belt land within the villages of Ripley, Send and Clandon. The revised proposals appear to make no concessions to any of the thousands of previously submitted objections made in respect earlier drafts of the Local Plan. Rather, the proposed amendments seek to expand the proposed new developments resulting in erosion of the unique individuality of the local villages.

Attached documents:

Comment: MM9 - LPMM18/3667  Respondent: John Thompson 15591585  Agent:

I object to MM9 as the infilling in and around villages will result in the weakening of protection of the countryside. If this modification of the local plan is accepted it will result in the loss of separate identities for the villages if Send and Ripley.

Attached documents:

Comment: MM9 - LPMM18/3680  Respondent: John Thompson 15591585  Agent:

I object to MM9 - Green Belt Policy

The claim that the modifications protect the Green Belt 'except in very special circumstances' is questionable. The inclusion of 'limited infilling outside the settlement boundaries where it can be demonstrated that the site should be considered to be within the village' is highly subjective and open to interpretation. It does not constitute protection for the Green Belt in any way.

Attached documents:

Comment: MM9 - LPMM18/89  Respondent: Mr Martin Billard 15601857  Agent:

I object to MM9 para(1)

Other considerations should not include meeting housing targets or financial contributions for CIL or S106 payed to GBC

**MM9 Green Belt policy**

The "modifications" claim to protect the Green Belt, but in very special circumstances GBC can make an exception for "limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village". This introduces a subjective test, considerable uncertainty and effectively negates Green Belt protection. Any land on the edge of our village could be picked off for development, an open invitation to developers and speculators at the expense of our lovely village.

Attached documents:

**Comment:** MM9 - LPMM18/3376  **Respondent:** Frances Turner 15657057  **Agent:**

**Objections to the main modifications to the draft Guildford Borough Council Local Plan 2017**

I am writing to object to the following main modifications (MM) following the planning inspector’s report which place additional undue and disproportionate over-development on the village of Send. I understand that as consultation on the local plan is still in progress it will be assessed against the 2012 edition of the government’s National Planning Policy Framework (NPPF) rather than the 2018 revision.

POLICY P2: GREEN BELT. MM9 2c) “ii. Limited infilling may also be appropriate outside the inset settlement boundaries, as designated on the Policies Map, of the following villages where it can be demonstrated that the site should
be considered to be within the village...Send... "I object to this modification, which includes Send, as it has no objective basis, but could be abused to allow any development on any Green Belt land around the village. It is contrary to government planning policies for sustainable development in the NPPF which state that “The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open” (NPPF paragraph 79). It would also side-step the test for “exceptional circumstances” required by NPPF paragraphs 79-92 to justify allocating Green Belt land for development.

Attached documents:

Comment: MM9 - LPMM18/4545  Respondent: Graham Vickery 15703937  Agent:

Element MM9- “Infilling” in and around Ockham and West Horsley will lead to a weakening of the protection of the countryside.

Attached documents:

Comment: MM9 - LPMM18/4667  Respondent: David Roberts 17164033  Agent:

MM9

Development in the Green Belt should be restricted in accordance with the NPPF, full stop. Instead, this policy appears to be to seek out and broaden loopholes in Green Belt protections beyond the exceptional circumstances permitted in the NPPF.

With its tortured and ambiguous wording, MM9 adds dangerous layers of challengeable interpretation to national policy that only confuse what is and is not permitted.

The repeated phrases under MM9 (1), for example, appear to go round in circles and are impossible to follow. Under “limited infilling” (2)c(i)-(iii) subjectivity reigns. It could be made a little clearer by deleting “should be considered to be” by “is” in each case. Many villages are highly diffuse or leggy in shape, so any room for confusion about what is “within the village” needs to be restricted.

MM9’s biggest defect, however, is the absence of any positive defence of the Green Belt, despite this covering 81% of the borough’s area. The plan is widely seen by residents as declaring war on the countryside by “insetting” most of the borough’s villages, extending settlement boundaries, removing SNCI protections and prioritising greenfield housing estates over urban regeneration. As currently worded, MM9 risks upsetting the difficult balance between protection and development set out in national policy. Insetting and settlement boundary extension on this major scale is unnecessary and amounts to a general pre-determination in favour of future planning applications. MM9 should not pre-judge these and the relevant maps at Appendix H should be removed.

Attached documents:

Comment: MM9 - LPMM18/221  Respondent: Laura Frankland 17178113  Agent:

MM9 Green Belt policy and  MM27 MM42 MM48 Transport Strategy
The Green Belt should be protected and preserved for future generations. Wild life and walkers alike need our greenbelt areas and over development of our villages devastating the rurality of the area. I do not wish to live in a town, choked by increased volume of traffic with reduced places to enjoy nature, peace and a walk with my family and dogs.

Attached documents:

Comment: MM9 - LPMM18/1040  Respondent: Ian William Groden 17206177  Agent:

MM9 Green Belt Policy

- The modification in MM9 makes an exception for limited infilling outside the identified settlement where it can be demonstrated that the site should be considered to be within the village. This creates uncertainty and the threat of yet more development on existing Green Belt with impact on Send.

Attached documents:

Comment: MM9 - LPMM18/2418  Respondent: Robyn Cormack 17296321  Agent:

MM9 In Green Belt, proposed limited infilling outside identified settlement boundaries should not be allowed as it will harm openness and become a loophole for inappropriate development.

Attached documents:

Comment: MM9 - LPMM18/1309  Respondent: Mrs Lynda Turner 17301473  Agent:

The housing and commercial development proposed in the green belt should not as a matter of policy be approved

Attached documents:

Comment: MM9 - LPMM18/5275  Respondent: Eileen Stone 17307457  Agent:

Having expressed my concerns back in July 2017 as a concerned parent of a West Horsley resident I find myself having to disagree with one of the aspects of the current proposals.

The proposal to inset several towns and villages from the Green Belt thus making development in those areas that much easier is in my view fundamentally wrong.

What a legacy for our grandchildren if this unwarranted proposal is adopted!!

Attached documents:
**Comment: MM9 - LPMM18/1646  Respondent:** Shirley Bowerman 17308417  **Agent:**

I live at Send Marsh in one of the most beautiful and delightful heritage spots in Surrey, albeit that access is already much hindered by traffic on the nearby Portsmouth Road and the A3 at one end of the hamlet and by the A247 through the village of Send at the other end. I am appalled by the total and contemptuous dismissal of the thousands of local objections to the previous plan and the literally punitive proposed increase in development of this area. I regret to say that it smacks more of the abuse of power by over-mighty autocratic rulers seen recently elsewhere in the world than of responsible local democracy in action in rural Surrey.

Specifically, I object as follows:

1) MM9 Green Belt Policy.

As everybody knows, the Green Belt is not supposed to be built on except in exceptional circumstances and no exceptional circumstances have been suggested here. Therefore this proposal appears to be illegal. The same would seem to apply to the device of removing areas from Green Belt protection and then proposing development.

**Attached documents:**

**Comment: MM9 - LPMM18/4438  Respondent:** David Banham 17321089  **Agent:**

**MM9 Green Belt Policy**

Although the “modification” claim to protect the Green Belt except in very special circumstances, GBC make an exception for “limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village”. This introduces a subjective test, considerable uncertainty and effectively negates Green Belt protection. Any land on the edge of our village could be picked off for development, an open invitation to developers and speculators at the expense of residents.

This shows no respect or preservation of the local village history and way of life. There are many listed properties in the village of Send that have been listed and preserved to maintain the heritage of the village and the English countryside. I do not see how you can trample over the village history and Green Belt while still having Listed buildings.

The development will also have a large negative impact on the local wildlife, some of which are legally protected such as the local barn owls adjacent to and on my property. The increase in the local human population will scare off the resident woodpeckers, dears, badgers, moles and other local British wildlife.

**Attached documents:**

**Comment: MM9 - LPMM18/1111  Respondent:** Gail Wicks 17328641  **Agent:**

**MM9 Green Belt Policy**

Guildford Borough Council claim to be protecting the Green Belt except in very special circumstances yet make an exception for limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village. This is very subjective and means that there is no protection of the Green...
Belt. Any land at the edge of our village could be used for development. This is an open invitation to developers and speculators at the expense of the villagers.

Attached documents:

Comment: MM9 - LPMM18/3972  Respondent: Andrew Hollis 17329025  Agent:

MM9 Green Belt Policy

We are taking up the slack from Woking who are not building on the Green Belt. Why do we have to in Send? This policy will join us up with Ripley and Burpham (ie Gosden Farm proposal in Burpham). By the time you have finished there will be no Green Belt at all.

Attached documents:

Comment: MM9 - LPMM18/4494  Respondent: Nicola Banham 17380161  Agent:

MM9 Green Belt Policy

Although the “modification” claim to protect the Green Belt except in very special circumstances, GBC make an exception for “limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village”. MM9 Green Belt Policy

Although the "modifications" claim to protect the Green Belt except in very special circumstances GBC make an exception for "limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village." This effectively negates Green Belt protection introduces and subjective view and test that is not compliant with its intentions. Hence any land on the edge of our village could be picked off for development, an open invitation to developers and speculators at the expense of residents. Hence object to this use.
Comment: MM9 - LPMM18/4147  Respondent: Jill Thomas 17408225  Agent:

MM9 Green Belt Policy

I object to the qualification 'limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the the village'. This would appear to allow development on any Green Belt land on the boundary of Send.

Attached documents:

Comment: MM9 - LPMM18/4402  Respondent: Sally Novell 17413025  Agent:

MM9 In Green Belt, proposed limited infilling outside identified settlement boundaries should not be allowed as it will harm openness and become a loophole for inappropriate development.

Attached documents:

Comment: MM9 - LPMM18/3128  Respondent: Katherine Pound 17413729  Agent:

I OBJECT TO MM9 Green Belt Policy

ANY attempt to attack the Green Belt should be rejected as it undermines the whole reason the Green Belt came into existence. You don't take down a sea wall just because it comes under more pressure as sea levels rise, if anything you reinforce it more, and similarly our Green Belt should be increasingly protected as it comes under more pressure. “Limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village” is just an excuse to get around Green Belt policy and is a dangerous start of a slippery slope. It by no means excuses building on Green Belt at the cost of future generations.

Attached documents:

Comment: MM9 - LPMM18/5082  Respondent: Paul Good 17417217  Agent:

MM9 Green Belt Policy

Although the “modifications” claim to protect the Green Belt except in very special circumstances GBC make an exception for “limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village.” This introduces a subjective test, considerable uncertainty and effectively negates Green Belt protection. Any land on the edge of our village could be picked off for development, an open
invitation to developers and speculators at the expense of residents. This is not rigorous enough to protect the very precious Green Belt encircling the village boundary.

Attached documents:

---

Comment: MM9 - LPMM18/1462  Respondent: Claire Attard 17417633  Agent:

With regard to the rest of the modifications there are several points which are not acceptable.
MM9 - the infilling in and around villages will result in the weakening of protection of the countryside.

Attached documents:

---

Comment: MM9 - LPMM18/4249  Respondent: Valerie Golding 17422881  Agent:

MM9 GREEN BELT POLICY

I object to the proposal to allow,” limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village.” This is nothing more than a green light for developers to destroy the green belt. And totally against the green belt principals of stopping villages merging into one.

Attached documents:

---

Comment: MM9 - LPMM18/2531  Respondent: Simon Wright 17423681  Agent:

I object to Modification MM9 Green Belt Policy due to the following points:

The modifications in this policy are supposed to protect the Green Belt. However in reality, they allow ‘limited infilling outside the identified settlement boundary’ in certain circumstances. In other words, a loophole which allows indiscriminate development.

Attached documents:

---

Comment: MM9 - LPMM18/4089  Respondent: Reverend Ruth Broithwell 17424705  Agent:

MM9

I object most strongly to the removal of green belt in this locality. Using 'limited infilling outside the identified settlement boundaries' as an excuse for this development shows very poor concern for loyal residents, is entirely subjective and produces uncertainty. Investment in property in this area was made believing certain areas were inviolate and this may well cause a change in the nature of the wealth of the entire area which would be a loss to GBC.
MM9 Green Belt Policy

Unfortunately the modifications made to this policy introduce a subjective test. The phrase “limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village” begs the question - how will it be demonstrated and who will consider that the development is within the village?

It is unacceptable that residents should need to fight against developers continuously to maintain the character of the villages within which they live.

MM9 GREEN BELT POLICY.

These modifications claim to protect our precious GREEN BELT-they DO NOT! These are NOT very special circumstances?

GBC make an exception for limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered; this catch all statement is completely subjective, makes the edges of villages ‘open season’ to developers and therefore completely negates GREEN BELT PROTECTION policy.

Send CANNOT accommodate any commercial or huge housing developments. As villagers, at times, we cannot move in our vehicles to our places of work, this will also be the same for emergency vehicles, our village school is at capacity, secondary school placements are a huge problem, we fight to get a Drs appointments and know that our utility services in the area are already struggling.

MM9 – Policy P2 – Green Belt – this policy states that the Metropolitan Green Belt will continue to be protected against inappropriate development unless Very Special Circumstances can be demonstrated. To-date no Very Special Circumstances have been put forward for these sites and therefore what the Council are proposing is inappropriate development and should not be considered. Furthermore the Council would appear to be giving themselves the power to re-designate Green Belt land on the edge of the local villages in order to create development sites outside of protected status and to the detriment of the local village environment.
Comment: MM9 - LPMM18/2043  Respondent: Valerie Ann Lazenby 17427777  Agent:

MM9

I object to these proposals as they really will impact on our Green Belt & turn Send & Ripley into one town.

I object strongly to the overloading that will take place if these proposals go ahead.

Attached documents:

Comment: MM9 - LPMM18/5999  Respondent: Anya Williamson 17434689  Agent:

Green Belt Policy. To summarise, all these developments in Green Belt land have attracted many thousands of objections from local residents - they are not wanted, but more importantly, they are simply not needed. There are many brown field sites throughout the borough that have not been taken advantage of; only because they would not yield as good a profit for developers. Housing is needed, but it must be built in the right places, not just the most convenient or most profitable, and be accompanied with investment in local services for the huge increase in numbers of people that would come along with the proposed construction. The real tragedy is that were these developments in Send, Send Marsh and Burnt Common allowed to go ahead, the quality of life for existing and new residents alike would be much poorer than it is now. Local roads, schools and medical facilities are already fully stretched. There would be a considerable human cost for simply attempting to hit government targets.

**MM9 Green Belt Policy**

This can hardly claim to be a policy when the above developments all impinge on the existing Green Belt which GBC seem prepared to sacrifice. Following GBC’s logic, all greenbelt land can be sacrificed and therefore is able to be built on. This breaches all GBC’s own policies and government directives.

**MM9: Policy P2: Green Belt**

We believe that the proposed modification to Policy P2 does not go far enough and request an amendment to the supporting text to draft Policy P2 to remove the Merrist Wood Campus from the Green Belt.

There is a continuing need to rationalise and modernise the college campus to protect its longevity into the future. The College has suffered from underinvestment for a number of years. The College are currently exploring development plans with the council through the pre-application process to expand and modernise the campus. These current development plans will ensure that the college is allowed to maintain and improve its facilities and realise capital funds, to secure its long-term future.

It is therefore important that the emerging Guildford Borough Local Plan allows for the continual evolution and current growth plans for Merrist Wood. Our contention is that the Merrist Wood campus should be inset from the Green Belt as has been proposed for other major developed sites in the Green Belt. The Merrist Wood campus is larger, with more built development than many of the other major developed sites that have been proposed to be inset from the Green Belt. The campus is well contained in the landscape with opportunities on its own land to strengthen defensible boundaries.

We request an amendment to the supporting text to draft Policy P2 as follows:
Para 4.3.15 The following major previously developed sites are now inset from the Green Belt: Henley Business Park, HM Prison Send, Keogh Barracks, Mount Browne, Pirbright Barracks, Pirbright Institute, the University of Law Guildford and Merrist Wood College.

**3.POLICY P2: GREEN BELT (MM9)**

Given the greatly reduced housing projections from ONS, and the fact that 66% of the Plan’s proposed housing is planned to be built on land that currently lies within the Green Belt, then by definition the exceptional circumstances necessary to amend Green Belt boundaries or the very special circumstances necessary to justify any development in the Green Belt do not exist. I strongly object to development in Green Belt under these circumstances.

| Comment: MM9 - LPMM18/6266  | Respondent: Miss P McAleese 20554817  | Agent: |
| I object to the erosion of the Green Belt.  |  |  |
| Why bother to spend all the money and time constructing the Green Belt in the first place, if you can just remove what you wish to at will.  |  |  |
| It is very sad and ill conceived that the Borough wishes to remove any Surrey Villages from the Green Belt.  |  |  |
| **Attached documents:** |  |  |

| Comment: MM9 - LPMM18/168  | Respondent: Matthew Woods 20560225  | Agent: |
| In with MM9 the document refers to the 'limited infilling' which suggests that any land on the edge of villages could be used for development. Is there any point in having Green Belt land if councils like GBC feel they can override this, find loopholes and continue with building works?  |  |  |

| **Attached documents:** |  |  |
My favourite part of the whole farce is the lack of any transport 'strategy'. GBC seem intent on building on every plot of land around Send and Ripley, yet they cannot come up with any suggestions on how the local transport network will cope. This excellently highlights just how ridiculous and incompetent the planning committee at GBC are. I am sure that should everything proceed, it won't be long before the same people are scratching their heads and wondering why the pollution levels have sky rocketed and the roads are gridlocked heading into Woking and on both carriageways on the A3 and M25. With the population continuing to rise, the national transport networks are extremely strained, I think it is laughable how anybody can conceivably think that the roads around Send and Ripley will be able to cope with any increase of traffic.

Finally, please can somebody explain to me how the Villages Medical Practice and Send Primary School will cope with the suggested increases? Once again, this is another failure of GBC and continues to highlight what a shambles the local plans are.

I hope that this email will not be cast aside (Like the 7000 I have previously mentioned), however the people at GBC should remember that the residents of Send

It is obvious that with the above policies & strategies are still reflecting directly from what has gone before; amending & increasing on the Local Planning Foot Print. These changes are shown in shaving bits off here and adding bits to there.

These amendments: -

Still disregards all technical impacts on current & future structures. Most structures sit on a deep clay base which needs peculated ground water to function as a foundation base.

Tweaking weak infrastructures, no way puts in place any future proofed infrastructures.

Increasing these capacities will greatly increase all impacts on enivironment. Not all of which is yet to be fully understood or been considered.

Concreting over "Green Belt" is just not on, now or anytime in the future. We all complain about the forests in South America being cut down, along with plastic waste; this is no different.

The impact of such large developments, will swamp Send & all surrounding areas. If Wisley was a no no; then these proposals are doubly bad.

So what part of NO, does the current dominant political power not understand?

It seems as if the first judgement, common sense (Wisley) went against the current political-monied power houses. How strange that with a new judge conforms now to their wishes. How did all this happen?
Stop faffing about! Ask the local populous "What they want to happen by holding a Local Referendum." Just like Switzerland.

**MM9 Green Belt Policy**

Although the ‘modifications’ claim to protect the Green Belt except in very special circumstances GBC make an exception for ‘limited infilling outside of the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village’. This introduces a subjective test, considerable uncertainty and effectively negates Green Belt protection. Any land on the edge of our village could be picked off for development, an open invitation to developers and speculators at the expense of the residents and the environment.

Attached documents:

Comment: MM9 - LPMM18/406  Respondent: Mrs Lesley Peed 20589281  Agent:

**MM9 The Green Belt protection is being put at risk by GBC policy. Uncertainty has been introduced when GBC says it will make an exception for ‘limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village’. Land on the edge of the village could be taken for development by speculators, adding further pressure to an already stretched infrastructure and further destroying the village feel of the area.**

Comment: MM9 - LPMM18/729  Respondent: Christina Reeves 20634753  Agent:

MM9 Green Belt Policy

Although green belt is supposed to be protected Guildford Borough Council allow “limited infilling” in exceptional circumstances. This leads to uncertainty for residents. Any land on the edge of our village could be “picked off” for development!

Attached documents:

Comment: MM9 - LPMM18/737  Respondent: Mr. David Minnett 20636033  Agent:
I am most concerned that the terminology which was intended to protect our Green Belt can be reinterpreted so as to suit the immediate needs of Guildford Borough Council instead of as was originally intended. Picking off sections of land or fields on the borders of our villages as 'exceptions' suitable for 'limited infilling' can only erode the protective strength of our Green Belt policy and will certainly weaken it further for future generations. There is no uncertainty as to what the residents of Send and other villages effected by these plans believe 'Green Belt' to mean. There only seems certainty that Guildford Borough Council is willing to disregard their views. Let us hope I am wrong.

MM9 Green Belt Policy, MM27, MM41, MM42 and MM48 Transport Policy - I object

I think the planning committee pays no attention to Green Belt and public transport they just want [unreadable text] increased noise, nitrogen dioxide pollution, delays and gridlock plus there are other developments coming up. We need less houses and more amenities. These plans are rubbish.

Attached documents:

Comment: MM9 - LPMM18/858  Respondent: Berkeley Homes Ltd (Olivia Forsyth) 20644961  Agent:
Policy P2: Green Belt

Paragraph 139 of the NPPF sets out the guidance to local authorities when defining Green Belt boundaries and states that plans should:

"a) ensure consistency with the development plan's strategy for meeting identified requirements for sustainable development;

b) not include land which it is unnecessary to keep permanently open;

c) where necessary, identify areas of safeguarded land between the urban areas and the Green Belt, in order to meet longer-term development needs stretching well beyond the plan period;

d) make clear that the safeguarded land is not allocated for development at the present time. Planning permission for the permanent development of safeguarded land should only be granted following an update to a plan which proposes the development;

e) be able to demonstrate that Green Belt boundaries will not need to be altered at the end of the plan period; and

f) define boundaries clearly, using physical features that are readily recognisable and likely to be permanent."

With specific reference to f), the granting of permission for the replacement Howard of Effingham School and associated residential development at Lodge Farm creates a "leftover" parcel of land between the residential development and Thornet Wood. Thornet Wood, as ancient woodland, is a physical feature that is both recognisable and likely to be permanent and as such, would create a much robust and defensible boundary to the Green Belt.

It is considered appropriate that the whole of Lodge Farm is removed from the Green Belt and incorporated in the settlement boundary of Effingham. This would create additional opportunities for residential development, and the delivery of much needed affordable housing, thereby also ensuring the Green Belt boundary would not need to be altered again at the end of the plan period.

**Attached documents:**

**Comment:** MM9 - LPMM18/927  **Respondent:** Duncan Speight 20654049  **Agent:**

I am writing to you to object to the planning inspectors report relating to the development of Send Village and the surrounding area, in particular MM41, MM42, MM44 and the related impact on the Green belt covered under MM9 and the transport strategy that impacts the above sites and site MM27.

Upon reading the outputs from the latest report it would appear that rather than listening to and addressing local residents’ concerns raised in the previous consultation periods you have just ignored those and continued to drive the plans forwards. In addition, GBC has significantly increasing the sizes of the Garlicks Arch development, doubled the industrial and storage development in Burnt Common and reinstated the Alderton’s Farm development which was previously deleted due to previous objections.

I would also seriously question that accuracy of the Public Examination figures (Policy S2) for Guildford Borough Housing, recommending 789 houses are built each per year. Reviewing the Barton Wilmore figures (suggesting 431 houses a year) and the ONS population forecasts suggesting the development of 460 houses a year across the borough. These well-respected authors reports suggest the need for new houses in this specific part of GBC has been significantly overinflated

The plans GBC lays out in the report do not support the policy for the protection of the Green Belt. Furthermore, the subjective test proposed puts the Green Belt at considerable risk and negates Green Belt protection. This means any land
on the edge of the village could be picked off for future development. This point is clearly of serious concern to local residents.

Send Village and the surrounding area already suffers from significant traffic congestion. Traffic on the local roads is gridlocked in busy periods. It is clear from the plans that the suggested remedies do not adequately address the significant increases in traffic we will see if these developments are allowed to go ahead. In particular, Send Barns Lane, Send Road and Broadmead Road will not cope with the increased traffic heading in and out of Woking every day. Not only will the increases in traffic cause significant delays but will also impact residents with increased noise and nitrogen dioxide pollution levels.

As the people that live and experience the local area every day we are well positioned to provide an accurate point of view on the impact developments of this size will undoubtedly have on the area. On that basis I hope you give this issue the time and attention it deserves.

Attached documents:

---

Comment: MM9 - LPMM18/963  Respondent: Mr Tom Holwell 20658625  Agent:

Having received so many written objections to the previous plans, did you seriously feel the villagers of Send would not continue to save their village and environment. The Surrey infrastructure as a whole is at breaking point to say the least and so increasing the traffic whether by increasing the number of houses or industrial/storage space is absolutely stupid.

Clearly the Planning Inspector is ignoring the Green Belt (MM9) and under no circumstances can the actions proposed be said to be protecting it.

Comment: MM9 - LPMM18/1222  Respondent: Jim Allen 20674913  Agent:

Page 16: Policy P2; Green Belt

(2) This should identify the current (2018) NPPF.

Green Belt Limited Infilling
This is very dangerous and destroys the inset village line before it is agreed - the inset village boundary should include all potential eventualities of such a challenge, such that no challenge can ever be valid. This statement opens up the whole of
the Green Belt around a village, 'infill' is not specifically defined within the NPPF thus has an ‘open’ definition. Using the argument ‘a barrister will sort out the challenges’ is a cop out – if the policy is written correctly no Barrister would need to be engaged

The village / inset boundaries should be comprehensively thought through, as to make this wording redundant.

Attached documents:

Comment: MM9 - LPMM18/1269  Respondent: Alstair Haxton 20676417  Agent:

MM9 Green Belt Policy

The Green Belt will no longer be protected leading to more development, not less, as the policy would now be open to abuse and misinterpretation.

Comment: MM9 - LPMM18/2309  Respondent: Mr David Willis 20688449  Agent:

Re: Guildford Modified Local Plan

MM9 Worplesdon is in the Green Belt, is an historic village with extensive Conservation Area and Special Protection Area with protected species in danger of extinction, and a site of Special Scientific Interest. There has been no democratic consultation surrounding the sudden, disingenuous, inclusion in the modified local plan. Please, therefore, exclude it.

Furthermore, we understand that the number of houses allegedly required is now less than the number assumed in the development plan.

We urge to full use of brownfield sites rather than encroach on rural villages or take green bank land.

Attached documents:

Comment: MM9 - LPMM18/2401  Respondent: Mrs Eleanor Ayers 20688481  Agent:

MM9

Our Green Belt is precious, it protects us from air pollution. Send is a rural village not an urban centre. Development should not increase the size of the village.

Attached documents:

Comment: MM9 - LPMM18/1340  Respondent: Mrs Janet Ashton 20689281  Agent:
It is unacceptable to lose any more Green Belt with current levels of wildlife extinction and illegal air pollution. Also, Worplesdon, not previously included in the local plan, is in the Green Belt, is an historic village with extensive Conservation Area and Special Protection Area with protected species in danger of extinction, and a site of Special Scientific Interest. There has been no democratic consultation surrounding it’s sudden, disingenuous, inclusion in the modified local plan. Please, therefore, exclude it.

Attached documents:

Comment: MM9 - LPMM18/1341  Respondent: Mrs Janet Ashton 20689281  Agent:  

Worplesdon is an example of a village with a clearly defined settlement boundary. It would be disingenuous to remove clarity and meaning from such boundaries, leaving the the door open for abuse, manipulation and uncertainty. Please uphold boundaries at all costs.

Attached documents:

Comment: MM9 - LPMM18/1922  Respondent: Mrs Janet Ashton 20689281  Agent:  

Re: Guildford’s Modified Local Plan - MM9, Policy P2, Infilling - Worplesdon  

Please be aware that for some reason the village of Worplesdon has been added, in black ink, to the list of villages under the heading c) “limited infilling.” This village was not proposed in the original draft plan, has not been inset from the Green Belt and there has been no public consultation as to its sudden inclusion. This is the first ‘proposal’ of its kind to suggest the idea of infilling inside or outside the village of Worplesdon.

As it is not highlighted in red ink, it is positioned so as to appear not to be a modification at all. However, it was never part of the draft local plan in the first place and it’s late inclusion in this manner is highly irregular and inappropriate.

c) "limited infilling" shall mean:

i. Limited infilling within the identified settlement boundaries, as designated on the Policies Map, of the following villages. Limited infilling may also be appropriate outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village.

Albury, Compton, East Clandon, East Horsley (south), Gomshall, Holmbury St Mary, Peaslake, Pirbright, Puttenham, Ripley, Shere, West Clandon and Worplesdon.

As to the modified text highlighted in red, please do not allow the modification for infilling outside settlement boundaries. This could open the door for misplaced justification to overlook not only the Green Belt, but also Conservation Areas, Historic Settings, SPAs and SSSIs and allow ‘garden grabbing,’ and inappropriate changes to the patterns of housing.

By way of information, Worplesdon is an historic village mentioned in the Doomsday Book. Its Grade I listed Church, St Mary’s sits at the top of a hill with surrounding heritage environment and stunning views of Guildford. The Conservation
Area includes other listed buildings and Special Protection Area and Site of Special Scientific Interest, Whitmoor Common, part of The Thames Basin Heaths.

Please would you reject this modification and see that Worplesdon is removed from the list so that a fair, democratic process may take place.

Re: Guildford’s Modified Local Plan - MM9, Policy P2, Green Belt.

While there is overwhelming focus on development and economic growth, our hearts and souls lie in the natural world. The importance of the Green Belt, with its ability to heal our minds and bodies, should not be underestimated.

A recent article in *The New York Times* notes that doctors are now prescribing time in nature.

With its capacity to nourish the senses and soothe the mind, nature stimulates and uplifts: the sound of the wind through leaves of a tree, the haunting cry of an animal; the sight of birds flying in formation or a butterfly landing on your coat...

Nature gets you out of your head and into your heart.

While more facts are being collected, human instinct, common sense, and the urgent need to reconnect to nature is all too apparent. However much of this world relates to what we can not measure, what can not be seen or quantified.

The natural world is a place where we experience quiet, where we don’t have to figure things out, we can just be and enjoy what it is to be alive. It’s a different world, a soft, comforting space that helps lead us to thoughts of kindness, compassion, spirituality, God and love. It gives us faith. It is what connects us to ourselves, what connects us to the planet, and what connects us to each other.

With so many species under threat of extinction, precious ecosystems once full of plant and animal life are in threat of complete collapse. The speed at which this is happening is all too startling. This is not a legacy to leave behind and it is our responsibility to care for and preserve our natural resources - but most of all, to remember what it is to be a human being.

Please help preserve the Green Belt. Please help Guildford do something remarkable and set a good example, like Costa Rica perhaps, and make us proud to be part of the borough by protecting our natural heritage.

**Comment:** MM9 - LPMM18/1926  **Respondent:** Mrs Janet Ashton 20689281  **Agent:**

Re: Guildford’s Modified Local Plan - MM9, Policy P2: Settlement Boundaries.

There is cause for concern, particularly with many modifications of this plan, that the door is being opened for the meaning and purpose of words to be eroded. Please let any such discretionary play be reserved only for exemplary professions such as those found in the court room, and not extended to local planning officers and councillors - else the public will find themselves at the mercy of those insufficiently equipped to hold such powers.
For example, this modification seeks to blur and overlook the settlement boundaries in the borough by allowing development both inside and outside the boundary line, depending. What is the point of a boundary if overlooked? What if France or Russia were to overlook our boundaries? Please let a boundary be exactly that so there is clarity, certainty and a stable environment in which to operate. It does not seem a good idea to have ‘it is and it isn’t,’ together, simultaneously in this context at Local Government level.

Please help implement clear language and guidance to uphold policies such as settlement and boundary lines, and avoid loose, controversial phrasing in the local plan.

Comment: MM9 - LPMM18/3713  Respondent: Mrs Janet Ashton 20689281  Agent:

Re: Guildford's Modified Local Plan - MM9, Policy P2, Infilling - Worplesdon

Please be aware that for some reason the village of Worplesdon has been added, in black ink, to the list of villages under the heading c) “limited infilling.” This village was not proposed in the original draft plan, has not been inset from the Green Belt and there has been no public consultation as to its sudden inclusion. This is the first ‘proposal’ of its kind to suggest the idea of infilling inside or outside the village of Worplesdon.

As it is not highlighted in red ink, it is positioned so as to appear not to be a modification at all. However, it was never part of the draft local plan in the first place and it’s late inclusion in this manner is highly irregular and inappropriate.

c) "limited infilling" shall mean:

i. Limited infilling within the identified settlement boundaries, as designated on the Policies Map, of the following villages. Limited infilling may also be appropriate outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village. Albury, Compton, East Clandon, East Horsley (south), Gomshall, Holmbury St Mary, Peaslake, Pirbright, Puttenham, Ripley, Shere, West Clandon and Worplesdon.

As to the modified text highlighted in red, please do not allow the modification for infilling outside settlement boundaries. This could open the door for misplaced justification to overlook not only the Green Belt, but also Conservation Areas, Historic Settings, SPAs and SSSIs and allow ‘garden grabbing,’ and inappropriate changes to the patterns of housing.

By way of information, Worplesdon is an historic village mentioned in the Doomsday Book. Its Grade I listed Church, St Mary’s sits at the top of a hill with surrounding heritage environment and stunning views of Guildford. The Conservation Area includes other listed buildings and Special Protection Area and Site of Special Scientific Interest, Whitmoor Common, part of The Thames Basin Heaths.

Please would you reject this modification and see that Worplesdon is removed from the list so that a fair, democratic process may take place.

Comment: MM9 - LPMM18/4861  Respondent: Mrs Janet Ashton 20689281  Agent:

Re: Guildford’s Modified Local Plan - MM9, Policy P2, Green Belt.
While there is overwhelming focus on development and economic growth, our hearts and souls lie in the natural world. The importance of the Green Belt, with its ability to heal our minds and bodies, should not be underestimated.

A recent article in The New York Times notes that doctors are now prescribing time in nature. With its capacity to nourish the senses and soothe the mind, nature stimulates and uplifts: the sound of the wind through leaves of a tree, the haunting cry of an animal; the sight of birds flying in formation or a butterfly landing on your coat... Nature gets you out of your head and into your heart.

While more facts are being collected, human instinct, common sense, and the urgent need to reconnect to nature is all too apparent. However much of this world relates to what we can not measure, what can not be seen or quantified.

The natural world is a place where we experience quiet, where we don’t have to figure things out, we can just be and enjoy what it is to be alive. It’s a different world, a soft, comforting space that helps lead us to thoughts of kindness, compassion, spirituality, God and love. It gives us faith. It is what connects us to ourselves, what connects us to the planet, and what connects us to each other.

With so many species under threat of extinction, precious ecosystems once full of plant and animal life are in threat of complete collapse. The speed at which this is happening is all too startling. This is not a legacy to leave behind and it is our responsibility to care for and preserve our natural resources - but most of all, to remember what it is to be a human being.

Please help preserve the Green Belt. Please help Guildford do something remarkable and set a good example, like Costa Rica perhaps, and make us proud to be part of the borough by protecting our natural heritage.

Attached documents:

Comment: MM9 - LPMM18/1379  Respondent: Mrs Alison Warne 20689665  Agent:

MM9 says that limited infilling may be acceptable within settlement boundaries. The proposals in this plan are not restricting themselves to this. Taking the example of Send and Ripley, it appears that the proposals within this plan, especially MM41, MM42 and MM44, will result in eventually joining the two villages, to the detriment of local residents. It will change the nature and culture of the two villages, which are currently semi-rural.

Attached documents:

Comment: MM9 - LPMM18/1388  Respondent: Mrs Christine Mote 20689729  Agent:

The Council and the Planning Inspector have ignored the wishes and voices of the residents of Send and Ripley. What exceptions can GBC come up with to justify the modifications to the green belt here and not in many other potential areas in the borough? How can such a huge increase in housing, industrial and road infrastructure be fair and viable?

Attached documents:

Comment: MM9 - LPMM18/3033  Respondent: Mr Martin Threakall 20689761  Agent:
MM9 Green Belt Policy

I object to the modification to allow an exception for "limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village." My concern is that this "opens the door" for developers and speculators to buy up and develop land on the edge of Send (and other villages) and no longer provides a clear objective position on whether planning permission will be granted. There is now a level of subjectivity involved in the decision making as to whether a site "should be considered to be within the village", introducing uncertainty and significantly negating Green Belt protection.

Attached documents:

Comment: MM9 - LPMM18/1498  Respondent: Mrs Corinne Singleton 20692385  Agent:

I object the the proposals as although it's suggested that the modifications will protect the green belt it doesn't seem that will happen.

Attached documents:

Comment: MM9 - LPMM18/1500  Respondent: Mrs Lesley Tregaskes 20692737  Agent:

Policy P2 – Green Belt insetting  The evidence against, and deficiencies in, the Pegasus Planning Group Greenbelt and Countryside Study used by GBC to justify village insetting were openly acknowledged by the examiner at the public hearing, yet in his summing up in July he found the Green Belt proposals to be basically sound. Given those deficiencies, the absence of any one village being proposed for removal from insetting implies that the examination may have been no more than a token exercise. The examiner suggested that the Horsleys parish councils should meet with GBC and review deficiencies in the insetting justification but GBC refused on the grounds that it was unnecessary. I therefore concur with EHPC that the proposed insetting of East Horsley from the Green Belt is unsound and should be removed from the list of proposed insetting villages.

Attached documents:

Comment: MM9 - LPMM18/1502  Respondent: Mrs Lesley Tregaskes 20692737  Agent:

Policy P2: Green Belt (MM9)  66% of the proposed housing is planned to be built on land currently within the Green Belt when the exceptional circumstances necessary to amend Green Belt boundaries or the very special circumstances necessary to justify any development in the Green Belt do not exist. Why is the Council not proposing to use the largest and most sustainable location for a greater part of the housing need, especially bearing in mind that an increasing large part of the retail market for goods and services is conducted on line and there is therefore less need for retail premises?

Attached documents:
**Comment: MM9 - LPMM18/3265  Respondent: Ms. (Ms Maria Schirmer) 20698529  Agent:**

**MM9 GREEN BELT POLICY.**

According to GBC MM9 / Policy Para 1… “The Metropolitan Green Belt, as designated on the Policies Map, will continue to be protected against inappropriate development in accordance with the NPPF. Development will not be permitted unless very special circumstances can be demonstrated. Very special circumstances will not exist unless the potential harm to the Green Belt by reason of inappropriateness, and any other harm, is clearly outweighed by other considerations”

That itself speaks volumes and shows that proposals MM42 and MM44 are in total contradiction to the promise made by MM9 as there is NO NEED for neither a huge industrial estate, nor the additional 120 houses (on top of the other 550). So just how can you say the modifications claim to PROTECT our precious Green Belt, when MM42 and MM44 are doing the complete opposite.?

Limited infilling seems to be an easy cop out for GBC; resulting in virtually any land on the (what will be) ever increasing edges of the village at risk of being bought by developers with no regard whatsoever for any impact it may have on the current infrastructure and environment.

**Attached documents:**

---

**Comment: MM9 - LPMM18/5932  Respondent: Dirk Mercer 20699553  Agent:**

**MM9-Green Belt**

This policy has not taken into account the large reduction in projected households (see MM2 above).

Despite previous promises to the residents to protect the Green Belt in the borough, 66% of the Plan’s proposed housing is planned to be built on land that currently lies within the Green Belt.

In view of the reduced housing projections from ONS, and the Plan stating that “more housing is likely to come forward over the plan period” (being an unknown quantity), the exceptional circumstances necessary to amend Green Belt boundaries OR the very special circumstances necessary to justify any development in the Green Belt do not exist, especially as:

- 66% of the planned development is on land currently in the Green Belt
- The new policy S3 on the town centre (largest and most sustainable location in the borough and with more urban and brownfield sites available) is weak and unacceptable.

I strongly object to the current proposals and insist that GBC to commits in the Plan to protecting the Green Belt pursuant to NPPF 2012 (the current planning law). The current version of the Plan where it proposes infilling in and around villages will result in a weakening of the protection of the countryside. It will directly impact the Green Belt around Guildford which is an important green “lung” for this borough. It will create urban sprawl contrary to the principles of Green Belt policy in the NPPF.

**Attached documents:**

---

**Comment: MM9 - LPMM18/1795  Respondent: Dr R S Mackinnon 20701633  Agent:**

I strongly object to the current proposals and insist that GBC to commits in the Plan to protecting the Green Belt pursuant to NPPF 2012 (the current planning law). The current version of the Plan where it proposes infilling in and around villages will result in a weakening of the protection of the countryside. It will directly impact the Green Belt around Guildford which is an important green “lung” for this borough. It will create urban sprawl contrary to the principles of Green Belt policy in the NPPF.
MM9 In Green Belt, proposed limited infilling outside identified settlement boundaries should not be allowed as it will harm openness and become a loophole for inappropriate development.

Attached documents:

Comment: MM9 - LPMM18/1878  Respondent: J A Aldridge 20703521  Agent:

**MM9 Green Belt Policy**

These modifications do not appear to uphold protection of the Green Belt and render the village of Send liable to further infilling and development.

Attached documents:

Comment: MM9 - LPMM18/1957  Respondent: kenneth harrington 20705153  Agent:

The proposal to infill houses within what is considered the village undermines the green belt protection.

Attached documents:

Comment: MM9 - LPMM18/2110  Respondent: Zach Drennan 20708481  Agent:

**MM9 GREEN BELT POLICY**

- I object to the GBC claim that they are protecting the Green Belt as this is highly subjective and exposing any land on the edge of our village for excessive and over-development.
- I object as the approach proposed will create significant opportunities for interested parties to undermine and erode the protections enshrined in the green belt designation and will certainly lead to the continued expansion of the settlement boundaries.
- I object to the wording of policy paragraph (1) as it is devoid of meaning. The paragraph states that "Inappropriate development will not be permitted unless very special circumstances can be demonstrated". Are we to understand that inappropriate development will be permitted in special circumstances? The paragraph goes on to state that "Very special circumstances will not exist unless the potential harm to the Green Belt by reason of inappropriateness, and any other harm, is clearly outweighed by other considerations". This is clearly nonsense masquerading as reason and provides no objective criteria for its application.
- I object to all proposals to build on Green Belt land in the borough and that GBC uses discredited and exaggerated housing 'need' data to support this. Urban brownfield areas could accommodate all the true and required development that is needs and such sites are close to existing transport systems and links. NO such infrastructure exists in our village.

Attached documents:
MM9 Green Belt Policy.

I object to the modifications claims made to protect the Green Belt by GBC, as this negates Green Belt protection.

Comment: MM9 - LPMM18/2294  Respondent: Sean E.N Henry 20723905  Agent:

RE: Guildford Borough Submission Local Plan: Strategy and Sites - Main Modifications

I wish to make representations in relation to the following proposed main modifications:
MM9 Policy P2: Green Belt

MM9 Policy Paragraphs 1-4:

- I support the principle of Policy P2: Green Belt which allows for some limited infilling outside identified settlement boundaries.
- The policy promotes sustainable patterns of development in accordance with paragraph 138 of the National Planning Policy Framework (NPPF)
- The policy accords with paragraph 145 of the NPPF in that 'limited infilling in villages' is an exception in terms of 'inappropriate' development.
- Paragraph 145 does not specify whether the 'villages' referred to under criteria (e) should have a settlement boundary or not, therefore sites that are considered to be suitable for infilling and are part of the village should be acceptable.
- The identified settlement policy boundaries are considered to be tightly drawn as most development opportunities have been taken up and scope for further development is very limited. This is borne out by information contained in the 2017 Land Availability Assessment (LAA), which shows that between 2018 and 2032, 154 homes could possibly be built on sites within 12 of the 28 village settlement boundaries listed in Policy P2. (There are currently no sites available within the remaining 16 villages).
- I support limited infilling both within and outside the settlement boundary for Pirbright which has a good range of local community facilities including a primary school, public house and community hall.
- In order to continue and flourish, these facilities need supporting. Some additional development could help achieve this. However, the 2017 LAA shows that only 9 homes could be built on sites within the settlement policy boundary for Pirbright between 2028 and 2032. No sites within the village boundary are currently included for the period 2017-2028

MM9 Reasoned Justification para 4.3.25

- Sites adjacent to settlement policy boundaries should be considered favourably.
- I believe that some additional land must be included outside and adjacent to settlement boundaries to allow for some further development, especially where it will help maintain existing facilities and help provide for local needs.

Please confirm that these comments will duly be taken into consideration by the Inspector.

Comment: MM9 - LPMM18/2334  Respondent: Stephen Hewett 20726113  Agent: REF - MM41, MM42, MM44, MM9, MM27, MM41, MM42 and MM48

I "object" in the strongest possible terms to the proposed developments on the above mentioned REF's for many and [unreadable text] reasons that have been waived before many thousands of [unreadable text] in the form of protest letters and emails that now seem to have been ignored.

At least 2 of the above mentioned sites are on Green Belt Land. What is the point of a Green Belt if you chose to ignore it.

The original purpose of the Green Belt was to prevent unrestricted development on and around the main road and rail amenities around London and at the large towns and cities. A very considerable policy of which until now it has been largely successful. This policy has seen to be abandoned by these proposals. Ripley state school is to be closed so where are all these new children supposed to go to school.
Send in particular seems to be singled out for such contained action. Why is this; is it because the Ripley, [unreadable text], East + West-Horsley they have had the courage to stand up to the bully boy tactics of GBC planning. Led by the inspiring leadership of Sue Parker and others in the 'Green Belt Group' these people are standing up to the G.B.C planning jugganaughts made up of "TORY + LIB-DEM [Response has been redacted due to statements being considered defamatory, derogatory, inflammatory or offensive in nature]" this unholy alliance of [Response has been redacted due to statements being considered defamatory, derogatory, inflammatory or offensive in nature] characters seem to have no feelings for local concerns, but are hell-bent on making money and getting revenge on people who have the courage to stand up to them. I ask you to think again and reject these [unreadable text] proposals.

PS Is Send being so certainly [unreadable text] because Sue Parker is a Send Borough Councillor and Green Belt group leader and founder!!

Attached documents:

Comment: MM9 - LPMM18/2356  Respondent:  L Smith 20729793  Agent:

I object to: MM9 Green Belt Policy

• These "modifications" do not protect the green belt around the village in any way whatsoever
• This is designated green belt land and there are no "special circumstances"
• This modification is unclear, subjective and has been done to deliberately create uncertainty and it is unbecoming of the council to even consider supporting this
• There is little reliable evidence or objective need assessment to justify such a massive development in Send's Green Belt
• The scale of development proposed for Send and Send Marsh/Burnt Common is excessive, unnecessary, and destructive to our community and Green Belt. There is NO justification for an overall additional 652 houses per annum. It goes absolutely against the principles of community planning and is no more than a green light to developers backed by Guildford Borough Council to carve up rural Surrey
• There has been no enviromental impact assessment
• There has been no effective traffic impact assessment

MM9 Green Belt policy

- This introduces a very subjective test and actually negates Green Belt policy. Speculators may be able to ‘pick off’ land at the edge of the village

Attached documents:

Comment: MM9 - LPMM18/2699  Respondent: Roger Parslow 20768001  Agent:

My initial objection is to: MM41, MM42, MM44, MM9, MM27.

POLICY S2.

At the public examination the figure for Guildford.B.C. housing need used by the inspector was 789 per year. This figure was obtained by G.B.C Consultants and was greatly exaggerated by including Surrey University Student figures. These Consultants and GBC refused to disclose how this figure was calculated.

The figure now published by a highly respected consultancy Barton Wilmore has said the correct figure is 431 houses per year.

The data from the Office of National Statistics, doing population forecasts says the appropriate growth in GBC can be achieved by 460 houses per year.

This latest data makes a mockery of G.B.C consultants figures which have always been very suspect.

I trust the Inspector and GBC will now drastically reduce the housing need to reflect the true figures, and particularly in our already very congested village of Send.

MM27, MM41, MM42, and MM48 Transport Strategy.

Why have the effect of thousands more cars in an already heavily congested area not been taken into account?

The increased traffic for Send from Burnt Common Garlicks Arch, Aldertons, Clockbarn in addition to Gosden Hill and Wisley Ockham is not in any meaningful fashion addressed by the Road changes of the A3 and Clandon Slip Roads. They seem both the developers and GBC to offer narrative and not action.

This massive increase in traffic of all sorts heading to and from Woking along Send Barns Road and Send Road will cause horrendous noise, air pollution delays and gridlock.

MM41 Land at Garlicks Arch, Send Marsh, Policy A43.

I object to the increase from 400 to 550 houses of which 450 are to be built in the first 5 years.

This is an increase of 37% in the number of houses to be built.

Despite the promises by the developers and GBC the ancient woodland after hundreds of years of peace will be ruined once the fuss has died down and nobody is checking. This over development will effectively join Ripley to Send, and spoil the wisdom of our Green Belt Planners of many years ago.

Up to a thousand cars and between 1600 to 1700 extra people will block the surrounding roads and overwhelm the already full to capacity schools and health facilities, sewage, water etc.

Why have over 7000 objections to the earlier plan been ignored and more houses etc added?

MM42. Land at Burnt Common, London road Send Policy A58.

As the Employment Lands Needs Assessment showed a reduction in demand for Industrial Land why has again Send been picked on again to have the largest industrial allocation in any village in the Borough, is it politics?
This is a further increase of 25% making it a huge increase in Send, bigger than any other village.

There is no need for new industrial sites when Slyfield is has unused capacity. There are NO SPECIAL CIRCUMSTANCES so it contradicts MM9.

There is no need to put Industrial premises in our precious GREEN BELT. This plan has since being deleted from 2014 plans, has been increased twice from 7000 to a MINIMUM of 14800 sq m.

MM44 Land at Aldertons Farm, Send Road, Policy A63

New site for 120 homes which was deleted because of objections and not reinserted until the public examination in JULY. With Garlics Arch 550, Clockbarn 60, Winds Ridge 40, that means 770 houses to the 1700 currently in Send AN INCREASE OF 45%

How are our roads, sewage, water, healthcare, schools etc going to allow us to live normal lives in this polluted gridlocked stressful environment. Again this is GREEN BELT and with NO special circumstances and contradicts policy MM9.

MM9 GREEN BELT POLICY.

How can you say the modifications claim to protect our precious GREEN BELT except in very special circumstances? GBC make an exception for LIMITED INFILLING OUTSIDE THE IDENTIFIED SETTLEMENT BOUNDARIES WHERE IT CAN BE DEMONSTRATED THAT THE SITE SHOULD BE CONSIDERED TO BE WITHIN THE VILLAGE.

This is a catch all statement which is completely subjective causing complete uncertainty and completely negates GREEN BELT PROTECTION. Virtually any land on the then ever increasing edges of the village can be picked off by developers and is open season for speculators at the expense of villagers.

I wish the above objections to be considered and this huge imposition of housing and commercial development to be largely abandoned.

Green Belt MM9

This land has been in agricultural use for over 75 years as part of the Metropolitan Green Belt. It has also been within an AGLV. The adjacent bridleway is much used by the local community, providing splendid views, for walkers and cyclists, across open landscape to Blackdown, the Devil’s Punchbowl and, on a clear day, the South Downs on the horizon. Sunsets are spectacular. It has not been demonstrated that there are special circumstances to justify Inspector Bore’s recommendation that it be withdrawn from the Green Belt and AGLV status. Under the 2018 NPPF the Council is required to do a detailed prior assessment of whether the local housing need can be met in other ways including uses of brownfield sites. The NPPF 2018 at paragraph 170 requires planning decisions to recognise “the intrinsic beauty of the countryside”.

---
Unfortunately, the consultation period on the Main Modifications closes on 23rd October, which is likely to be before the final judgement on the Judicial Review of Waverley Borough Council’s decision to remove their Aarons Hill site from the Green Belt and AGLV in LPP1 and the proposed housing numbers. The outcome of these proceedings could affect issues for the Guildford site.

1. The grounds for green belt development are inadequate because of 1 and 3 and do not represent ‘exceptional circumstances’

**Attached documents:**

**Comment:** MM9 - LPMM18/3254  **Respondent:** Tony Rogers 20778881  **Agent:**

I live at [Response has been redacted due to statement containing personal data which cannot be disclosed due to the provisions of the General Data Protection Regulation 2018/Data Protection Act 2018] and am extremely concerned about plans to move the green belt boundary which adjoins my property as it would have an immediate detrimental effect on the amenity, view and character of the area.

A local house developer has already cleared a plot immediately opposite my property, having cut down several mature trees, and it is likely that when, under proposed plans, it becomes developable land the property, which adjoins the village
green, will be denuded of all existing hedges, trees and natural vegetation, thereby destroying a wonderful natural environment and a lovely view.

MM9 – infilling in and around villages will result in the weakening of protection of the countryside

**Attached documents:**

**Comment:** MM9 - LPMM18/3368  **Respondent:** Stephen Marriott 20789409  **Agent:**

5. The grounds for green belt development are inadequate because of 1 and 3 and do not represent ‘exceptional circumstances’. Not until the brown field sites are used and other sites considered creatively – what about building above some of the open car-parks, or creating a North-east bypass and building along the wide Woking Road?

**Attached documents:**

**Comment:** MM9 - LPMM18/3406  **Respondent:** Brian & Helene Pavey 20789921  **Agent:**

MM9: This proposal does not offer protection to the Green Belt despite the ‘modifications’ it simply suggests that in special circumstances Green Belt can become included in future developments if the council so wish.

**Attached documents:**

**Comment:** MM9 - LPMM18/3416  **Respondent:** Sally Anderson 20790081  **Agent:**

MM9 Green Belt Policy

Although the “modifications” claim to protect the Green Belt except in very special circumstances GBC make an exception for “limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village.” This introduces a subjective test, considerable uncertainty and effectively negates Green Belt protection. Any land on the edge of our village could be picked off for development, an open invitation to developers and speculators at the expense of residents.

**Attached documents:**
1.0 INTRODUCTION

1.1 Colin Smith Planning Ltd are instructed to submit representations on behalf of West Horsley Parish Council (WHPC) in relation to the Main Modifications (MM) published by the Council on 11.09.18.

1.2 The MM have arisen out of the Local Plan Examination hearing sessions that took place in June and July 2018, following the representations submitted at that time by interested parties and questions from the Inspector. At the close of the hearing sessions, the Inspector concluded that the plan could be found sound subject to main modifications being made.

1.3 The representations below are focussed on those MM that relate mainly to West Horsley, but also include more generalised comments of a wider nature where necessary and appropriate.

1.4 These representations review whether the MM assist in the draft Plan meeting the tests of soundness set out in the NPPF, namely that the Plan is:
- positively prepared – based on a strategy which seeks to meet objectively assessed development and infrastructure requirements;
- justified – the most appropriate strategy when considered against the reasonable alternatives, based on proportionate evidence;
- effective – deliverable over its period and based on effective joint working;
- consistent with national policy – able to achieve sustainable development in accordance with the Framework’s policies.

Population growth

1.5 The assumptions relating to housing growth, and therefore the amount of land to be released from the Green Belt and allocated for housing developments within and around villages, are based on published population growth figures. Further detailed representations on this issue will be submitted by others. However, the following is drawn to the Inspectors attention.

1.6 The Office for National Statistics (ONS) published the 2016-based household projections for local authorities (the ‘2016 Sub-national Household Projections’ - 2016 SNHP’) on 20 September 2018. The last set of projections (produced by the MHCLG) were the 2014-based projections (the ‘2014 SNHP’). The new projections use more recent data and a different methodology. Generally, the new set suggests slower household growth than the 2014 SNHP.

1.7 As a result of the slower population growth, the following projections can be made:
- The number of homes implied by the unadjusted 2016-based household projections is 325 homes a year (2015-34) – compared with 420 homes a year based on using the 2016 SNPP to update the 2014-based projections. This is a reduction of 23%
- The NMSS calculation of the number of homes needed to support the Inspector’s view of the rate of jobs growth is 361 homes a year – compared with 460 homes a year previously estimated. This is a reduction of 22%.
- There will be similar reductions in the GL Hearn figures, suggesting a revised estimate in the range 480-490 homes a year 2015-34, although the exact number cannot be calculated without the detailed population age profiles for the GL Hearn projections.

1.8 WHPC is fully aware of the projections and that their acceptance by the Inspector would lead to significant reductions of land due to be taken from the Green Belt.
1.9 West Horsley Parish Council therefore find this draft Guildford Borough Council Local Plan unsound in that the removal of West Horsley from the Green belt through insetting has not been justified.

1.10 West Horsley Parish Council therefore continue to OBJECT to this Local Plan and ask that the hearings are re-opened to examine fully the implications of the new housing figures.

2.0 RESPONSE TO MAIN MODIFICATIONS

MM9 - Policy P2 Green Belt

2.1 Recommendations

i. Retain the revised wording to P2(1) and P2(2) to reflect the wording of the NPPF;

ii. Retain the original wording to (3) to make it clear that extensions and alterations should not be disproportionate;

iii. Retain the modifications to define the “original building”;

iv. Retain the original wording of (4)(a) and (b) to define the control over replacement buildings;

v. Replace the original wording of (4)(c) with the modified wording;

vi. Remove the following modification - “Limited infilling may also be appropriate outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village”;

vii. Remove modification (c) ii, identifying that limited infilling might be appropriate outside the listed villages;

viii. Add wording to paragraph 4.3.25 to include reference to whether the site is sustainable, has access to public transport and shops, and community facilities, and that supporting infrastructure is in place.

Comments

2.2 The proposed modification to Policy P2 (1) reflects the wording of the revised NPPF (published in July 2018) and sets out the presumption against inappropriate development. The proposed modification to Policy P2 (2) also reflects the wording of the revised NPPF and refers to the list of exceptions to inappropriate development set out in paragraph 145 of the NPPF.

2.3 Proposed modifications to parts (3) and (4) are renumbered parts (a), (b) and (c). These parts add further clarity to the definitions of the exceptions to inappropriate development. However, the original wording should be included to ensure clarity over the extent of extensions and alterations that are not inappropriate, and the limits to replacement buildings.

2.4 Part (c) defines the meaning of limited infilling. An extra element has been added to the definition setting out that “Limited infilling may also be appropriate outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village.”

2.5 It is noted that West Horsley, and its identified settlement boundary, is not included within the list of settlements where limited infilling is considered to be appropriate. However, West Horsley has been included within the list of settlements where “Limited infilling may also be appropriate outside the inset settlement boundaries, as designated on the Policies Map, of the following villages where it can be demonstrated that the site should be considered to be within the village.”

2.6 The effect of this is that limited infilling is not appropriate within the settlement boundary of West Horsley (excluded from the Green Belt) but may be appropriate outside the settlement boundary of West Horsley (within the Green Belt) if it can be considered to be “within the village.”

2.7 This is illogical, and contrary to the policies of the NPPF. There is no provision within the NPPF for limited infilling outside of villages. Bullet point (e) of paragraph 145 of the NPPF simply states that one of the exceptions to inappropriate development is “limited infilling in villages”. There is nothing in the NPPF that identifies development outside villages as being an exception to inappropriate development.

2.8 The inclusion of the differentiation between some villages with a settlement boundary where limited infilling is appropriate, and those where it is not is relatively clear. However, the inclusion of villages which have a settlement boundary where limited infilling is not appropriate but might be appropriate outside the settlement boundary in the Green Belt is not. The introduction of this statement will not preserve the openness of the Green Belt and is contrary to
Government policy set out in the NPPF. This will have a devastating effect on West Horsley as there are many parcels of land that could then be open for development opportunities, setting a precedent for further changes to Green Belt boundaries and resulting in significant loss of the rural and open character of the village.

Comment: MM9 - LPMM18/3695  Respondent: Colin Cross 20795169  Agent:

1. The LP is fundamentally unsound as a whole as it fails to correctly observe the hierarchy of the development opportunities in the borough. Urban brownfield sites have been bypassed in favour of large scale rural green belt sites, this is favoured by developers and deemed an easier option.

5. MM9 Policy for massive development in our Greenbelt is now wholly undermined by the above and the underlying arguments for this do not represent exceptional circumstances in any way.

Attached documents:

Comment: MM9 - LPMM18/3700  Respondent: Colin Cross 20795169  Agent:

6. MM7/9 refer to huge infill development at Ockham/ FWA which will cause untold damage to the area as a whole and represent totally disproportionate scaling and a complete lack of local infrastructure coming forward to cope with it.

Attached documents:

Comment: MM9 - LPMM18/3743  Respondent: Anthony Thompson 20796225  Agent:

MM9 I object because the stated intention of protecting the countryside is not achieved by the detailed policies proposed

Attached documents:

Comment: MM9 - LPMM18/3760  Respondent: Andrew and Miriam Gilkerson 20796417  Agent:

MM9 Green Belt Policy - a misuse of the policy that is leading to strain on our villages, not in fact protecting the green spaces and leading to a built up, traffic congested situation.

Along with the loss of green belt land, unserviceable demand on facilities and traffic delays, it will be directly my children, and many others, that will be impacted by significant increases in Nitrogen Dioxide levels when we’re encouraging cycling or walking to school.

I urge the planning team to reconsider their assessments and the proposal that will have a significant negative impact on our village.

Attached documents:

Comment: MM9 - LPMM18/3857  Respondent: Sue Algeo 20797473  Agent:
MM9 In Green Belt, proposed limited **infilling outside identified settlement** boundaries should not be allowed as it will harm openness and become a loophole for inappropriate development.

**MM9 Green Belt Policy**

By making an exception for "limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village", this effectively makes any land on the edge of our village open to development, which results in Green Belt protection being meaningless. This would potentially create an opportunity for developers to change the character of our village through unsuitable housing proposals designed to fill housing quotas, that may not properly take into account existing natural habitats for wildlife and the quality of life the residents currently enjoy, ultimately changing the character of our village.

**Attached documents:**
Comment: MM9 - LPMM18/3993  Respondent: Jocelyn Patterson 20804513  Agent:

MM9 once again this policy does not take into account the latest ONS data – 66% of the plan is on green belt! This is no longer required.

Attached documents:

Comment: MM9 - LPMM18/4152  Respondent: Nicolas and Judith Ware 20808161  Agent:

**MM9 – Green Belt**

None of the proposed sites seem to carry any tangible ‘special circumstances’ to warrant insetting from the Green Belt

The concern of many villagers is that – once a little development is permitted – it can establish a basic footprint for greater density of development in future

Woking Borough Council has acted to preserve its open spaces and concentrate development in the town centre

For example, the proposed ‘new Woodham town’ was heavily criticised, and recent planning documents suggest the site will be safe-guarded from development

(The main reasons are to prevent urban sprawl and an encroachment into the countryside, a loss of open space, and limited scope to mitigate traffic)

For the same reasons, the modifications proposed for Send should be similarly dismissed

Therefore I OBJECT to the re-drawing of the GREEN BELT boundaries in the above proposals, and believe other boroughs have set a precedent in this regard

Attached documents:
Comment: MM9 - LPMM18/4314  Respondent: Annmarie Shenton 20819521  Agent:

MM9 In Green Belt, proposed limited infilling outside identified settlement boundaries should not be allowed as it will harm openness and become a loophole for inappropriate development.

Comment: MM9 - LPMM18/4362  Respondent: Martin Taplin 20820321  Agent:

I wish to submit objections to the proposed Modifications to the Local Plan Review.

Issue 1

The proposed allocations of Green Belt land are damaging to the character of the town and the surrounding countryside. It is clear that in the light of the latest Government projections in relation to the housing, the present figure for the Borough need to be reduced.

Attached documents:

Comment: MM9 - LPMM18/4529  Respondent: Neil Graham-Wigan 20824417  Agent:

RE: Guildford Borough Council Local Plan – Public Consultation on modifications

As a long-term resident of East Horsley (8 years), I wanted to write to make comment on the proposed Local plan submission ahead of the deadline 23rd Oct 1200. In particular I would like to make comment on 2 of your modifications MM9 and MM40.

MM9: Policy P2: Green Belt

This policy appears to have been completely redrafted however no mention is made of the overall reduction in households from ONS. It is thus very disconcerting that the council plans to put 66% of the proposed housing on land which currently sits in Green belt land rather than looking to descale their proposals and protect this special space!

Further I would like to draw the Council’s attention to the “Exceptional circumstances” that are required to amend the Green Belt boundaries or the “Very special circumstances” necessary to justify any developments in the Green belt. In my opinion I do not see how the Council can claim that either of these can exist. It feels like the Council are simply looking for any easy way to build bulk housing. There are no special sets of circumstances that exist to justify building 66% of all housing in the Green belt! I believe the Council’s time would be much better spent re-examining policy S3 town centres where there is much more opportunity for development.

Attached documents:

Comment: MM9 - LPMM18/4536  Respondent: Gary Pask 20824737  Agent:

MM9 – infilling land in and around villages will inevitably result in the weakening of the protection of the countryside.
MM9 Green Belt Policy

Despite the apparent policy that the Green Belt will be protected, I consider that this is not being implemented in practice. Given that the modifications include substantial additional settlements in GB, SNCI removal, that all the key sites have been found sound, that insetting is being permitted (which will remove wildlife corridors as large gardens are developed) it seems that the Local Plan sees our wildlife and biodiversity as an obstacle to be swept aside. This is not in either the spirit or the letter of the rules as proposed by the NPPF.

Attached documents:

Comment: MM9 - LPMM18/4862  Respondent: Anna-Louise Clough 20833537  Agent: MM9 Green Belt Policy

Building to increase in the number of homes on Green Belt Land is not what Green Belt Land is protected for. Green Belt Land should remain protected. This is why I chose to buy my home in this area.

Attached documents:

Comment: MM9 - LPMM18/4903  Respondent: Nicholas Brown 20834593  Agent: MM9 Green Belt Policy

This can hardly claim to be a policy when the above developments all impinge on the existing Green Belt which GBC seem prepared to sacrifice. Following GBC’s logic, all greenbelt land can be sacrificed MM44 Land at Alderton’s Farm, Send Marsh Road Policy A63
I object to the proposal for 120 homes at this location which is a wholly unsuitable development in such an area, and for the same reasons as the other locations in Send - namely excessive pressure on local services and additional traffic on a road system which was never intended for such potential traffic volumes.

The only way in and out of this site is straight onto Send Marsh Road which is unsuitable to carry this amount of extra traffic generated by this many houses. Access either end, at Send Dip and Mays Corner onto Send Road is already very difficult due to the congestion through Send and Ripley and the result will be long traffic jams along Send Marsh Road.

This is prime green belt land and there is no reason to make an exception for housing here when there are other areas outside of the greenbelt or on brownfield sites. GBC do not have any explanation as to the reason for the exception to put this land on greenbelt land for this site.

This is not acceptable.

and therefore is able to be built on. This breaches all GBC’s own policies and government directives.

Attached documents:
MM9 Green Belt Policy

- I strongly object to the Green Belt being used for development, which I understand is not Government Policy, and particularly so when there is an unproven demand for this level of development and other sites and places that could be developed without forever destroying our precious Green Belt for future generations.
- Although ‘modifications’ claim to protect the Green Belt, except in very special circumstances, Guildford Borough Council have made an exception for “limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village”. This is an entirely subjective test and a charter for unscrupulous developers to pick off any land they can acquire around the village for development. In this regard, a number of Green Belt fields around the village have already been acquired by potential developers in anticipation of the pay day to be awarded to them by this change in policy. They will get rich at the expense of the local residents who will see their lovely village destroyed by this ill-conceived policy change.
- The end result will be that the existing sprawl of London will no longer be restrained by the natural barrier of the M25, but will instead continue to reach into our precious countryside all the way down to and including Guildford itself. This makes a nonsense of the very concept of Green Belt protection as the authors of these proposed changes well know but clearly believe they can disregard.

Comment: MM9 - LPMM18/5127  Respondent: Ann Smith 20842305  Agent:

MM9 Green Belt Policy

- I object to the Green Belt being used for development.
- Although ‘modifications’ claim to protect the Green Belt, except in very special circumstances Guildford Borough Council make an exception for “limited infilling outside the identified settlement boundaries where it can be demonstrated that the site should be considered to be within the village. This results in uncertainty and makes a nonsense of the Green Belt protection and any land surrounding our villages is in danger of being taken for development so giving an open invitation to developers and speculators at the expense of residents.

Comment: MM9 - LPMM18/5241  Respondent: Sam McWilliams 20843617  Agent:

MM9 In Green Belt, proposed limited infilling outside identified settlement boundaries should not be allowed as it will harm openness and become a loophole for inappropriate development.

Guildford already has a terrible problem with traffic, which can take hours out of your daily commute. The A3 is often completely blocked not even allowing for the emergency services to get to the hospital.

I am objecting to limited infilling.

**Attached documents:**
Main Modification: MM10  Number of representations: 5

Comment: MM10 - LPMM18/3146  Respondent: The Guildford Society (Julian Lyon) 8561377  Agent:

Main Modification 10 – Policy P3 (Countryside)

We have no objection to the principle in (1)(c) except that this may be overly prescriptive when considering minor developments such as extensions, dormer windows, etc.

Paragraph 4.3.34a is poorly constructed and needs to be redrafted for the sake of clarity. Perhaps the meaning is intended to be: “Significant growth is planned in the south eastern corner of the previously-defined (when?) Ash and Tongham Urban Area. Whilst it is accepted that some merging will result between the previously-defined urban area and the northern settlement boundary of Ash Green Village (is this shown on any of the local plan maps?), development should be limited to that south eastern corner to preserve and protect the respective identities of Ash & Tongham and Ash Green. Development within the remaining area of buffer between these two settlements, designated as countryside, will be strongly resisted.”

Monitoring Indicators

The target should be zero.

Attached documents:

Comment: MM10 - LPMM18/1194  Respondent: Burpham Neighbourhood Forum (Jim Allen) 8581505  Agent:

Policy P3; Countryside

The wording relating to Ash, Tongham and Ash Green is not consistent with Countryside policy as set out in the NPPF regarding how and when development in the countryside can occur. We note specifically that two of the three properties along the road (White Lane) in this area are referred to as ‘farms’ and can thus be developed under normal planning policies that apply to farms and countryside (regardless of whether or not they are in or near Ash, Tongham or Ash Green).

Attached documents:

Comment: MM10 - LPMM18/5738  Respondent: Sarah Belton 8598561  Agent:

MM10 the wording ‘strongly resisted’ is insufficient. Real protection of the countryside (and greenbelt) only comes from the definite wording ‘not permitted’. The plan uses these rubbery statements time and again, always opening the way in favour of development and evidence of a strong bias towards development without proper control.

Attached documents:

Comment: MM10 - LPMM18/1327  Respondent: Mr Richard D Jarvis 8599201  Agent:
Changes welcome.

Attached documents:

**Comment**: MM10 - LPMM18/1223  **Respondent**: Jim Allen 20674913  **Agent**:

**Policy P3; Countryside**

This is not consistent with National Policy regarding how and when to develop in the countryside can occur. Note: two of the three properties along the road in this area are referred to ‘farms’ thus can be ‘repurposed within the countrysid

Policy paragraph 3 states “Development proposals in the 'developed' flood zone 3b will also only be approved where the footprint of the proposed building(s) is not greater than that of the existing building(s) and there will be no increase in development vulnerability.” This should be reworded to ensure that the criterion of increased flood risk is not confined exclusively to the development site itself. Developments on a ‘developed’ flood zone can be designed and engineered to adequately mitigate flood risk on the development itself, but can substantially increase the flood risk on other neighbouring sites. Suitable re-wording is required to address this issue.

Attached documents:

Ripley Parish Council does not agree with the statement in Policy P4 MM11 (3), that: “there will be no increase in development vulnerability” with regard to the Garlick’s Arch development. The parish council again draws attention to local knowledge that this site floods REGULARLY during the winter months and the wider area, including Send Marsh, is built on a large clay-based bowl which will be compromised by the massive new housing addition and worsen the flood risk. More locally in Send Marsh, gardens of existing properties are known to flood in wet weather. Building extensively on the Aldertons Farm site will cover natural run-off areas and thereby exacerbate flooding in existing gardens, possibly leading to homes being flooded.

The parish council fails to understand how these areas of ancient woodland can remain unharmed if the development is squeezed into every square metre of the proposed site, to allow for the increase in housing numbers. Either the ancient woodland is protected or it is not and GBC has an obligation to ensure that the biodiversity of this site is maintained to the highest standard. Furthermore, in Ripley Parish Council’s opinion the potential for allocating a SANG elsewhere does not mitigate any harmful erosion of this important ancient woodland designation.

Furthermore, the proposal to site Travelling Showpeople and their fairground equipment on the Garlick’s Arch site also seems poorly considered as this will not sit comfortably in a normal residential area. The more natural place for such heavy plant and lorries. etc., would be at the Burnt Common Site.

Attached documents:

Thank you for consulting Surrey County Council on the schedule of proposed Main Modifications to the Guildford Borough Submission Local Plan.

Attached documents:
We have comments to make which relate to our role as the county authority for flooding, education and minerals and waste planning policy. You notified our heritage conservation team directly about the consultation and so the team has submitted separate comments, via the online portal, regarding Main Modification 25.

With regard to surface flood water management, by way of a general comment, we would draw the borough council’s attention to the recent changes to the National Planning Policy Framework July 2018. In particular, it should be noted that paragraph 165 strengthens the requirement for SUDs for all developments at risk of flooding, unless there is clear evidence that this is inappropriate. It also includes a reference to the County Council’s role as lead local flood authority. We suggest that consideration should be given to incorporating this new guidance in the final version of the Local Plan.

Our comments on two specific Main Modifications are set out below.

**Guildford Borough Council Submission Local Plan: Strategy and Sites - Main Modifications October 2018**

**Background - Regulation 19 Consultation and Statement of Common Ground**

Our response, ref: WA/2011/111091/CS-04/PO1-L01 dated 20 July 2017, to the Guildford Borough Council Proposed Submission Local Plan: Strategy and Sites Regulation 19 Consultation June 2017, found the plan to be unsound due to issues relating to flood risk.

We had concerns regarding Policy P4: Flooding, flood risk and groundwater protection zones. With regard to development within the functional floodplain, page 5 of the Strategic Flood Risk Assessment (SFRA) Level 1 states “there should be no increase in development vulnerability or intensification in use”. However, this is not reflected in Policy P4.

Therefore, we considered the policy to not be ‘justified’ by the evidence base or ‘consistent’ with the National Planning Policy Framework (NPPF) and associated Planning Practice Guidance (PPG).

To overcome this point of soundness we suggested the following policy wording:

“**Development proposals in the ‘developed’ flood zone 3b will also only be approved where the footprint of the proposed building(s) is not greater than that of the existing building(s) and there will be no increase in development vulnerability or intensification in use. Proposals within these areas should facilitate greater floodwater storage.**” This was captured in a Statement of Common Ground that was agreed between Guildford Borough Council and the Environment Agency in January 2018.

**Guildford Borough Submission Local Plan: Strategy and Sites – Main Modifications 2018**

We are pleased to see The Guildford Borough Submission Local Plan: Strategy and Sites – Main Modifications 2018 document includes the wording ‘there will be no increase in development vulnerability’. However, we are disappointed to see that the text does not include ‘or intensification in use’.

**Environment Agency Position**

We can confirm we no longer have any points of soundness with regards to the Local Plan.
Final Comments

Once again, thank you for contacting us. Our comments are based on our available records and the information submitted to us. If I can be of any further assistance, please contact me directly.

**Comment:** MM12 - LPMM18/3148  **Respondent:** The Guildford Society (Julian Lyon) 8561377  **Agent:**

Main Modification 12 – Policy P5 (Thames Basin Heaths SPA)

We do not believe the Council has met the criteria set out in the People over Wind verdict (**CJEU Case C-323/17 People over Wind v Coillte Teoranta**).

We continue to protest that there is likely to be minimal incremental harm to the Thames Basin Heath’s Special Protection Area resulting from residential development in the town centre, and that no SANG payment should automatically be sought from developers of town centre homes.

**Attached documents:**

---

**Comment:** MM12 - LPMM18/2812  **Respondent:** Harry Eve 8573793  **Agent:**

**MM12**

I object to the apparent weakening of Policy P5. I object to the continued disregard for existing wildlife in the choice of sites declared as SANG.

**Attached documents:**

**Comment:** MM12 - LPMM18/4647  **Respondent:** Worplesdon Parish Council (Gaynor) 8627393  **Agent:**

**Policy P5 – Thames Basin Heaths Special Protection Area**

Policy MM12 4.3.50c

**OBJECT:** Worplesdon Parish Council does not believe that SANG and SAMM will prevent the adverse effects of residential development on recreational use of the SPA/SSSI based on previous experience.

**Attached documents:**

---

**Comment:** MM12 - LPMM18/5342  **Respondent:** Helen Jefferies 8717921  **Agent:**

**MM12**

It is clear that the Council has relied on out of date guidance from Natural England which does not take into account the latest legal position.
4.3.50c Does not take current case law into account. Further there is no reference to “adverse effects on integrity” other than recreational pressure when clearly, nitrogen deposition and air pollution are potentially of greater impact and are also incapable of being mitigated.

4.3.54 The latest NE visitor surveys do not support this assertion.

Attached documents:

Comment: MM12 - LPMM18/414  
Respondent: Mr Howard Turner 8819457  
Agent: I object to the change in wording in policy para's 1, 2(c), 3(d), and 4. The wording 'The measures must be agreed with Natural England' should be retained. 4.3.60 should retain the wording 'must be agreed with Natural England'. Reasoning - to protect the erosion of the Green Belt

Attached documents:

Comment: MM12 - LPMM18/10  
Respondent: Martin O'Hara 8835425  
Agent: 2. Policy 5: Thames Basin Special Protection Area – MM12  
I write to OBJECT to the proposed modification to this policy.

I believe that this amendment only requires consultation with Natural England rather than their agreement as previously drafted. This, in my opinion, puts too much control in the hands of Guildford Borough Council over this matter of National and Regional importance. I believe that the ultimate judgement on the impacts or benefits to the Thames Basin SPA should rest with the appropriate national body, in this case Natural England.

Attached documents:

Comment: MM12 - LPMM18/1104  
Respondent: Paul Gerrard 8848033  
Agent: Regardless of updates to this policy, and following on from the Inspector's "Matters and Issues for Examination" 1.2 ("is the plan’s approach towards the Thames Basin Heaths Special Protection Area sound?"), the Council's response is still currently inadequate. According to NPPF para 31 "The preparation and review of all policies should be underpinned by relevant and up-to-date evidence.” More importantly, it must not contravene the law, i.e. the Habitats Regulations. The plan is not sound and not legally compliant at a basic level, because it relies very heavily upon the concept of SANG in the Thames Basin Heaths Special Protection Area Avoidance Strategy 2017 SPD, which in turn derives from Policy NRM6 of the (otherwise abandoned) South East Plan, which itself is not sound. Such a policy is only an attempt to implement the law; it does not replace the law. Laws require evidence. For more than 12 years now, no evidence has been provided that SANG is effective as mitigation. No scientific research, no trials. Surely this is a prerequisite of any legally compliant strategy, and surely 12 years is long enough to validate it properly before rolling it out on such a widespread scale. If evidence exists, it should be referenced in the planning documents. Wishful thinking is not evidence. The only study that gets referenced time and again is NECR136_edition_2_SPAvi

 Attached documents:
somewhat conveniently this was deemed "statistically insignificant". There are vague references to a further report from Natural England that was due in 2017, but where is it?

What is there to stop a developer challenging the effectiveness of SANG mitigation (e.g. in court), and refusing to pay financial contributions, or worse, reclaiming them retrospectively?

I realize this isn't an easy issue for Council officers, as they feel obliged to conform to Policy NRM6 and follow guidance from Natural England. However, this shouldn't be done unquestioningly, considering the strategy was completely unproven when the policy was originally formulated, and is still unproven now. They have to be absolutely certain there are sufficient grounds to demonstrate they are acting lawfully since it's the Council that ends up liable. It's not just Guildford - no councils around the country should be coerced by central government into arbitrary housing targets that completely fail to take into account the percentage of land protected by legislation.

Attached documents:

Comment: MM12 - LPMM18/1512  Respondent: Sue Reeve 8928961  Agent:

1. MM12 SANGS AND SPAS OBJECTIONS

   • Policy paragraph 3(d) states that “Large developments may be required to provide bespoke SANG.” This sentence is insufficiently prescriptive for a planning Policy, and fails to meet the requirements of NPPF paragraph 154, which states that “Only policies that provide a clear indication of how a decision maker should react to a development proposal should be included in the Plan.” The strongest statements of all must be used in order that developers cannot excuse their way out of commitments to provide proper SANGs. The proposed change in the text should be reversed.

   • The proposed change in Policy paragraph 4 has the effect of providing a potential waiver regarding the provisions of the other clauses of this Policy and the Thames Basin Heaths SPA Avoidance Strategy. The correct way to achieve that would be to amend the Avoidance Strategy itself (although that itself would be contentious and probably unacceptable). Having an Avoidance Strategy, and also having ad hoc waivers that appear in different documents is unacceptable.

   • The last sentence of paragraph 4.3.50c of the reasoned justification, states that “If these residential developments provide or contribute to appropriate SANG and SAMM measures in accordance with the Thames Basin Heaths Special Protection Area Avoidance Strategy (the strategy), it is likely that it can be concluded that no adverse effects on the integrity of the SPA will occur as a result of increased recreational pressure.” Unfortunately, experience indicates that it is not at all likely that no adverse effects on the integrity of the SPA will occur; in the planning application for the former Wisley airfield the SANG proposals were apparently regarded as acceptable despite encouraging dog walkers towards the SPA.

Attached documents:

Comment: MM12 - LPMM18/4496  Respondent: Wisley Property Investments Ltd. (Wisley Property Investments Ltd.) 9079393  Agent: Savills (Ruth Bryan)
### MM12 Paragraph 4.3.50c

“All net new residential development up to five km from the SPA...are considered likely to have a significant effect, and proposals must undergo Appropriate Assessment to identify measures that avoid, as a first step and mitigate any adverse effects. However if these residential development provide or contribute to appropriate SANG and SAMM measures in accordance with the Thames Basin Heaths Special Protection Area Avoidance Strategy (the strategy) they will not be required to undergo Appropriate Assessment. It is likely that it can be concluded that no adverse effects on the integrity of the SPA will occur as a result of increased recreational pressure.”

WPIL **object** to this modification as this requires all development within the 5km buffer of the SPA to automatically proceed to an Appropriate Assessment, without having first considered the Screening Stage Assessment.

The proposed amendment appears to broadly follow recent and emerging case law in respect of Appropriate Assessments, however this may be subject to change in the future. This could result in the Local Plan containing out of date policies in this respect. The stepwise approach to Habitats Regulations Assessment is set out clearly by Article 6(3) of the European Habitats Directive and Regulation 63 of the Conservation of Habitats and Species Regulations 2017, and therefore does not need to be repeated in the supporting text of Policy P5.

If GBC insist on including the proposed revision, then in order to address the recent implications of the People over Wind Judgement, the text should read as follows:

“In light of the People over Wind Ruling in the European Court of Justice which requires consideration of impact avoidance and mitigation measures to be excluded at the Screening Stage of the Habitats Regulations Assessment process, all net new residential development up to five km from the SPA is now considered likely to have a significant effect on the SPA, and proposals are therefore required to undergo Appropriate Assessment during which measures that avoid, as a first step and mitigate any adverse effects on site integrity can be identified and considered. If these residential developments provide or contribute to appropriate SANG and SAMM measures in accordance with the Thames Basin Heaths Special Protection Area Avoidance Strategy (the strategy) it is likely that GBC (as the competent authority under the Regulations) will be able to conclude that no adverse effects on the integrity of the SPA will occur as a result of increased recreational pressure.”

WPIL consider the change to be a minor legal clarification and would not require main modification.
Policy P5: Thames Basin Heaths Special Protection Area

MM12 – OBJECTION P5-1

Policy paragraph 3(d) states that “Large developments may be required to provide bespoke SANG.” This sentence is insufficiently prescriptive for a planning Policy, and fails to meet the requirements of NPPF paragraph 154, which states that “Only policies that provide a clear indication of how a decision maker should react to a development proposal should be included in the plan.”

In addition the provisions of paragraph 3(d) should not have been weakened. The proposed change in the text should be reversed.

MM12 – OBJECTION P5-2

The proposed change in Policy paragraph 4 has the effect of providing a potential waiver regarding the provisions of the other clauses of this Policy and the Thames Basin Heaths SPA Avoidance Strategy. The correct way to achieve that would be to amend the Avoidance Strategy itself (although that itself would be contentious and probably unacceptable). Having an Avoidance Strategy, and also having ad hoc waivers that appear in different documents is unacceptable.

MM12 – OBJECTION P5-3

The last sentence of paragraph 4.3.50c of the reasoned justification, states that “If these residential developments provide or contribute to appropriate SANG and SAMM measures in accordance with the Thames Basin Heaths Special Protection Area Avoidance Strategy (the strategy), it is likely that it can be concluded that no adverse effects on the integrity of the SPA will occur as a result of increased recreational pressure.” Unfortunately, experience indicates that it is not at all likely that no adverse effects on the integrity of the SPA will occur; in the planning application for the former Wisley airfield the SANG proposals were apparently regarded as acceptable despite encouraging dog walkers towards the SPA.

I object to MM12
The change in wording in policy para's 1, 2(c), 3(d), and 4. The wording 'The measures must be agreed with Natural England' should be retained 4.3.60 should retain the wording 'must be agreed with Natural England'. Reasoning - to protect against the erosion of the Green Belt.
MM12

Given that the requirement for addressing Habitats Regulations is governed by a separate regime, and in light of the implications of recent case law, it is suggested that in order to maintain absolute er the requirements and robust approach to HRA and Appropriate Assessment, that the policy refer to legislation and best practice, rather than setting this out within the text of the plan, given the potential for updates to guidance and legislation over the course of the plan period. GBC should retain flexibility to allow the most up to date regime to be followed.

The reference to all proposals requiring Appropriate Assessment within 5km of the SPA as set out at the proposed change to 4.3.50c is not in accordance with the Regulations and instead reference should be made to the requirements of the Regulations (i.e. screening), as it is not in accordance with the Regulations to immediately require Appropriate Assessment in every case.

Attached documents:

---

I object to MM12

The change in wording in policy para's 1, 2(c), 3(d), and 4. The wording 'The measures must be agreed with Natural England should be retained. 4.3.60 should retain the wording 'must be agreed with Natural England'. Reasoning - to protect against the erosion of the Green Belt.

Attached documents:

---

I object to the term 'in consultation with' at MM12 2c, MM12 4, and MM12 4.3.54. The change of terms weakens the policy considerable. There must be agreement with Natural England. This effects other parts of the policy where the agreement has become 'woolley'.

The wording of this policy needs strengthening as there are now too many loopholes.

Attached documents:

---

I object to MM12

Para 1. Unlikely does not mean not. Natural England must agree. The original wording should remain.

Para 2c. Consultation does not mean agreed. Natural England must agree. The original wording should remain.
Para 4.3.54 Consultation does not mean agreed. Natural England must agree. The original wording should remain.

Para 4.3.60 As above the original wording should remain.

With GBC intent on carving up our greenbelt and SPA zones with an increasing amount of dwelling Natural England must be in agreement rather than in consultation.

**Attached documents:**

---

**Comment:** MM12 - LPMM18/3549  **Respondent:** Natural England (Marc Turner) 15661921  **Agent:**

**Planning consultation:** Local Plan: Strategy and Sites – Main Modifications 2018  
**Location:** Guildford BC

Thank you for your consultation on the above dated 10 September 2018 which was received by Natural England on the same date.

Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development.

The main modifications have been read while looking at Natural England’s previous advice, which was sent on 12 July 2017, reference 217709. Aspects of the previous correspondence have been included in this letter, if they did not appear in the main modifications draft.

**Policy P5: Thames Basin Heaths Special Protection Area**

It was advised that under point (3) a separate point should be included to state that the amount of SANG land needed can also depend on the size, scale and proximity of the development to the SPA as well as the number of expected occupants. The 8ha per 1,000 people standard is only the minimum that could be required.

It was advised that Natural England disagrees with paragraph 4.3.51 which should be revised. This paragraph does not appear in the main modifications, so is assumed to have remained the same. Previous correspondence suggests Natural England advise that there is potential for developments under the use class C2 to have a significant impact upon the SPA even if they are not for staff. The main consideration for applications, particularly those including care facilities (in either use class C2 or C3), is the mobility of the residents and therefore the risk that the residents could recreate on the SPA, causing a likely significant effect on the integrity of the site. C1 accommodation could also have a significant effect on the SPA depending on the length of time that people could stay at the facility and whether it could be a person’s fixed address e.g. ‘apart-hotels’. C1 and C2 applications should be assessed on a case by case basis in consultation with Natural England.

Paragraph 4.3.62 does not appear in the main modifications and it was advised that the statement should be revised to state that SAMM contributions are held by Hampshire County Council and that Natural England only act as a host to the project.

924 of 2575
I object to the change in wording to policy paragraphs 1.2(c), 3(d) and 4?the measures must be agreed with Natural England.

Attached documents:

Comment: MM12 - LPMM18/1342  Respondent: Mrs Janet Ashton 20689281  Agent:

It would appear there has been a major collapse of statutory bodies such as Natural England. In view of this, and the speed in which mass extinction of species is taking place, The Thames Basin Heath Special Protection Area should be given full protection, without exception. It is vital to prevent any further assault on populations and ecosystems, else everything will cease to function. SANGs are no longer a viable option, species are priceless. Please abolish SANGs and close all loopholes.

Attached documents:

Comment: MM12 - LPMM18/1925  Respondent: Mrs Janet Ashton 20689281  Agent:

Dear Sir,

Re: Guildford’s Modified Local Plan - MM12, Policy P5: Thames Basin Heaths Special Protection Area

A recently leaked document from Natural England reveals they soon hope to be in a position to protect 37% of Sites of Special Scientific Interest (SSSI). This makes it clear they are no longer able to effectively monitor our nature conservation areas. As a result, it has become imperative to ensure as much as possible is done to ensure this role is most conscientiously and resolutely upheld at local government level.

However, currently in the Borough of Guildford a climate of economic assault has created an atmosphere of seeking out loopholes, eliminating obstacles to development. The notion of protection, and value of the 'non-material,' long forgotten. Natural England has become a tick box in the planning process, yet a body no longer able to provide credible evidence with which to justify development.

For example, where I live permission was recently granted to build luxury housing within the buffer zone of the Special Protection Area (SPA) and SSSI, land which is also Green Belt, a Conservation Area and Historic Setting. All in return for a few thousand pounds SANG. As you know, these areas are irreplaceable, of enormous value to the community and our wildlife, is priceless.

The problem is now of such magnitude that some ecosystems are ceasing to function and the basic foundations of life are under threat.

Please would you simplify this policy, perhaps by ruling out development which would adversely affect the SPA and SSSI over the next five years so wildlife and other endangered species have chance to recover? Please would you consider removing loopholes such as SANG, it is not a sustainable idea and has done much damage already.

Please would you use all that is within your power to help protect the Thames Basin Heaths SPA/SSSI.

Yours Faithfully

Janet Ashton

MM12 - Policy P5 Thames Heath Basin

2.11 Recommendations;

i. Retain the modification to (1);
ii. Retain the original wording to (2)(c) to ensure agreement with Natural England, not consultation;
iii. Retain the original wording to (3) to maintain the strength of the policy;
iv. Include wording that large development must be required to provide SANG, as well as additional green open space within the development;
v. Reference the requirement for an Appropriate Assessment within the Council’s validation checklist;
vi. Retain the original wording in paragraph 4.3.54 to require agreement with Natural England, not consultation;
vii. Retain the original wording in paragraph 4.3.60 to require agreement with Natural England, not consultation.

Comments

2.12 Taken overall, it appears that this policy is being weakened. There are a number of wording changes that remove the requirement for matters to be agreed with Natural England, and for the Council to only consult with them. This leaves open the opportunity for the Council to allow developments without necessarily agreeing with Natural England. There is the potential that the requirement in NPPF paragraph 176 that Special Protection Areas should be given the same protection as habitats sites could be compromised, and the policy would be in conflict with Central Government policy.

Attached documents:

Comment: MM12 - LPMM18/5813  Respondent: Bloor Homes 20855809  Agent: Turley (Clara Millar)

Main Modification 12

2.6 Main modification 12 relates to Policy P5: Thames Basin Heaths Special Protection Area. Whilst we have no comments on the policy itself and the approach which it promotes, we are somewhat concerned that there is still no provision of strategic SANG in the Borough.

2.7 At present, there is no evidence to demonstrate that there is sufficient SANG to support the development proposed. This will, therefore, compromise the delivery of many sites across the Borough that do not benefit from their own bespoke SANG. The Council must, therefore, identify adequate SANG in order to secure the proposed development over the plan period.

2.8 Our client’s site at Nutbourne Farm, benefits from having the capacity to allow for an extension to the SANG currently proposed to support the Gosden Hill Farm allocation. Therefore, Nutbourne Farm’s delivery – as a comprehensive development with the adjoining allocation - would not be compromised by the lack of strategic SANG.

Attached documents:
Main Modification: MM13  

Number of representations: 75

Comment: MM13 - LPMM18/3149  
Respondent: The Guildford Society (Julian Lyon) 8561377  
Agent:

Main Modification 13 – Policy E1 (Meeting Employment Needs)

Policy E1 (1a) provides for a “Borough-wide” allocation of comparison goods retail with an “Assumed gross capacity” of 40,289 sqm. As we have previously pointed out (to no avail) Policy A6 allocates “approximately 41,000 sqm” of comparison retail to the North Street development. The North Street Site is slated to also provide approximately 6,000 sqm of food and beverages space, against an “approximate net gain” of 6,000 to 8,000 sqm of “Assumed gross capacity”.

Clearly, in our minds, this policy is out of step with the allocations. The Inspector pointed out that this land-use allocation seems to be at odds with the national trend for retail floorspace. It is also, in our view, likely to preclude the development of key town centre sites with active street frontages (for example on Bedford Wharf, where retail and food & beverage will be critical components of the new communities (whether offices, residential or a mixture of both).

The Society has also pointed out the anomaly in the Evidence Base that, whereas homes and office & industrial space needs are assessed according to population projections (Objectively Assessed Need), the retail and leisure needs are shown to be a function of Demand. We do not think it appropriate to mix the drivers of need in this way, and we are also concerned that, of the demand identified in the latest retail report, at least two of the major space users have gone out of business since the report was written.

Furthermore, the Town Centre Regeneration Strategy is cited as key evidence for this policy, and yet, the allocation of retail space ignores the proposed development areas in the Town Centre Regeneration Strategy (assuming that, whilst it may be desirable to regenerate these areas, there is no allocation remaining to accommodate within those Regeneration sites).

This policy still does not work effectively, and we would recommend the Inspector holds a further session relating to these critical uses and the Town Centre, having particular regard to Policy S3.

Agent:

MM13 Retail Needs

The retail needs figures are revised to show an increase in net capacity to 2030 of 28,202 m². This flies in the face of all projected retail trends, in particular the increases in online shopping and shows the Council have not done a proper analysis of future requirements. They risk therefore sterilising land with unrealistic allocations and demands. The retail requirements should therefore be reduced.

Attached documents:

Comment: MM13 - LPMM18/1937  
Respondent: Mrs Fiona Curtis 8570273  
Agent: Mrs Fiona Curtis

MM13
The retail figures are unrealistically high and should be downwardly reviewed.

Attached documents:

Comment: MM13 - LPMM18/5947  Respondent: Jennie Kyte 8585601  Agent:

MM31  (Policy A6)  North Street redevelopment, Guildford

A reliable up-to-date retail study should be a matter of urgency. An over-expansion of retail when retail is shrinking would threaten the High St as a historic retail street.

Attached documents:

Comment: MM13 - LPMM18/3224  Respondent: Michael Bruton 8591169  Agent:

1. MM13. There is overemphasis on retail development in the town centre. Retail requirement everywhere is diminishing - as evidenced by the plight of House of Fraser and John Lewis amongst many others. The space would be better used for housing.

Attached documents:

Comment: MM13 - LPMM18/2668  Respondent: CPRE Surrey Branch & Guildford District (Tim Harrold) 8607169  Agent:

MM13
+There is too much allocation for retail in the town centre. The evidence base on retail is out of date and current trends (eg online shopping) are not properly taken into account. The retail allocation could be put to better use providing sustainable housing.

Attached documents:

Comment: MM13 - LPMM18/5442  Respondent: Julian Cranwell 8640353  Agent:

MM13

The projected need for retail space is vastly inflated and should be severely cut to make room for urban homes. The projections presented, which might have seemed credible five years ago, seem to ignore how high streets are evolving with retail bankruptcies, the rise of online shopping etc.

Attached documents:
Comment: MM13 - LPMM18/3280  Respondent: Valerie Thompson 8671969  Agent: 

9 Policy MM13 I object to GBC reserving brownfield sites in Guildford town centre for further retail outlets. Shops are closing all around the town. These sites should be used for low-cost housing in low-rise flats. With the change in policy regarding Council Housing, GBC should not be lending money to the university for student accommodation but borrowing in order to provide social housing.

Attached documents:

Comment: MM13 - LPMM18/6106  Respondent: Mr Kes Heffer 8672993  Agent: 

- The evidence base for retail provision is also out of date and does not take into account the growing trend towards online shopping. The land allocated for retail in Guildford centre could be better used for housing, thereby relieving some of the development proposed for the Green Belt land in the Borough. Estimates have been made that some 3500 dwellings could be added to the town centre, contrasting with just 863 as proposed in the draft Local Plan. It would be a disastrous legacy to build further shopping centres that are not occupied in the town centre whilst destroying more of the Green Belt than necessary. I object to MM13.

Attached documents:

Comment: MM13 - LPMM18/4774  Respondent: Rosmarie Roberts-Kunz 8711841  Agent: 

MM13

The projected need for retail space is inflated and should be cut by, say, 30% to make room for urban homes. The projections presented might have seemed credible five years ago but ignore how high streets have evolved since then, with shop bankruptcies, the rise of online shopping etc.

Attached documents:

Comment: MM13 - LPMM18/3192  Respondent: Simon Marshall 8732353  Agent: 

MM13. The allocation of this amount of additional retail space is completely unrealistic in today's retail environment. The evidence base is widely out-of-date given the current trends and impact of online shopping. Rather than develop more retail, redevelop unsustainable town centre retail sites into affordable and sustainable housing.

Attached documents:

Comment: MM13 - LPMM18/2316  Respondent: Nicholas Howe 8751169  Agent:

**MM13 - Retail Needs**

GBC are out of step with the rest of the UK by burying their heads in the sand and not acknowledging the effect online shopping is having on retail. House of Fraser and Debenhams in Guildford are under threat and there are numerous vacant shops in Guildford town, including the recently modernised Tunsgate. Even the department stores in Oxford Street are recognising traditional retail is reducing and are looking at other means of using their upper floors to bring in customers. Guildford could use any redundant department store upper floors for housing.

**Attached documents:**

---

**Comment: MM13 - LPMM18/5985  Respondent: Patrick Sheard 8954977  Agent:**

**MM13 Retail Needs**

The retail needs figures are revised to show an increase in net capacity to 2030 of 28,202 m². This flies in the face of all projected retail trends, in particular the increases in online shopping and shows the Council have not done a proper analysis of future requirements. They risk therefore sterilising land with unrealistic allocations and demands. The retail requirements should therefore be reduced.

**Attached documents:**

---

**Comment: MM13 - LPMM18/4339  Respondent: WAAG (Wisley Airfield Action Group) 8968961  Agent:**

**MM13 retail needs**

The retail needs figures are revised to show an increase in net capacity to 2030 of 28,202 m². This is hopelessly optimistic given retail trends, in particular the increases in online shopping. They risk therefore sterilising land with unrealistic allocations and demands. The retail requirements should therefore be reduced as proposed by the Guildford Society/Guildford Vision Group

**Attached documents:**

---

**Comment: MM13 - LPMM18/2067  Respondent: Tim J. Harrold 8971233  Agent:**

**MM13**

+There is too much allocation for retail in the town centre. The evidence base on retail is out of date and current trends (eg online shopping) are not properly taken into account. The retail allocation could be put to better use providing sustainable housing.

**Attached documents:**
MM13: In the town centre, retail is allocated too much. High streets are losing customers and the current trend is for increased online shopping, which means that some of this allocation could be used for sustainable housing.

Attached documents:

MM13 There is too much allocation for retail in the town centre. The evidence base on retail is out of date and current trends (e.g., online shopping) are not properly taken into account. The retail allocation could be put to better use providing sustainable housing.

Attached documents:

MM13 There is too much allocation for retail in the town centre. The evidence base on retail is out of date and current trends (e.g., online shopping) are not properly taken into account. The retail allocation could be put to better use providing sustainable housing.

Attached documents:

MM13 retail needs

The retail needs figures are revised to show an increase in net capacity to 2030 of 28,202 m². This is hopelessly optimistic given retail trends, in particular the increases in online shopping. They risk therefore sterilising land with unrealistic allocations and demands. The retail requirements should therefore be reduced.

Attached documents:

I object to MM13 as there is too much allocation for retail in the town centre. The evidence base on retail is out of date and current trends (e.g., online shopping) are not properly taken into account. The retail allocation could be put to better use providing sustainable housing.

5. MM13 Too much retail space proposed. Not based on current information.

4. MM13: The evidence base for retail need and usage in Guildford town centre is out of date and does not take account of current trends (i.e. online shopping). Part of the current (over)-allocation for retail usage in the draft Plan could be reallocated to providing sustainable housing. The conclusions in the Draft Plan are therefore unsound and the Examination should be reopened.

4. MM13 There is too much allocation for retail use in the town centre. The evidence base used for retail demand is out of date and current trends (e.g. online shopping) are not properly taken into account. The retail allocation could be put to better use providing sustainable housing.

4. MM13 There is too much allocation for retail in the town centre. The evidence base on retail is out of date and current trends (e.g. online shopping) are not properly taken into account. The retail allocation could be put to better use providing sustainable housing.

I object to this amendment because given current shopping trends and the decline in the “High Street” there is far too much allocation for retail use in the town centre. The retail allocation should be put to better use, i.e. providing sustainable housing.
• MM13: There is too much allocation for retail in the town centre. The evidence base on retail is out of date and current trends (e.g. online shopping) are not properly taken into account. The retail allocation could be put to better use providing sustainable housing.

Attached documents:

MM13 - the town centre retail allocation should be lowered to reflect more accurately current and emerging shopping trends and the floorspace not allocated should be assessed for alternative residential use.

Attached documents:

There is too much allocation for retail in the town centre. The evidence base on retail is out of date. More sustainable housing could be allocated in its place.

Attached documents:

The projected need for retail space is just not accurate and should be cut to make room for urban homes. The projections presented are not true today and seem to ignore how high streets are evolving with the rise of online shopping etc.

Attached documents:

MM13: the challenge to physical retailing from online shopping has not been adequately considered, which means there is too much allocation for retail in the town centre that could be better used to provide sustainable housing.

Attached documents:
Comment: MM13 - LPMM18/3290  Respondent: Barry Lewis 11556161  Agent:

MM13

There is too much allocation for retail in the town centre, recent collapses of high street chains demonstrates the changing shopping model and GBC’s proposals are totally at odds with the needs and market conditions which prevail.

Attached documents:

I object to this amendment because given current shopping trends and the decline in the “High Street” there is far too much allocation for retail use in the town centre. The retail allocation should be put to better use, i.e. providing sustainable housing.

**Attached documents:**

**Comment:** MM13 - LPMM18/3486  **Respondent:** Gavin Teague 20791265  **Agent:**

MM13: the Plan continues to ignore the excess of retail use in Guildford town centre, and the current retail allocation could be re-allocated to sustainable housing

**Attached documents:**

**Comment:** MM13 - LPMM18/3541  **Respondent:** Colin Carmichael 20793185  **Agent:**

MM13: the decline in physical retailing has not been adequately considered, in the face of the rapid growth of online shopping, which means there is too much allocation for retail in the town centre that could be better used to provide sustainable housing.

**Attached documents:**

**Comment:** MM13 - LPMM18/3701  **Respondent:** Colin Cross 20795169  **Agent:**

7.MM13 Guildfords retail needs are being greatly over-sourced in this Plan as 40,000 sq m of new certainly does not mirror current retail trends in any way and thereby misses a great opportunity for more residential development in the centre.

**Attached documents:**

**Comment:** MM13 - LPMM18/3744  **Respondent:** Anthony Thompson 20796225  **Agent:**

MM13 I object because the increase in retail figures ignores market retail trends. The figures need to be reduced not increased.

**Attached documents:**

**Comment:** MM13 - LPMM18/4035  **Respondent:** TSG Consulting (Mr Mark Watson) 20805057  **Agent:**

MM13
• MM13 There is too much allocation for retail in the town centre. The evidence base on retail is out of date and current trends (e.g. online shopping) are not properly taken into account. The retail allocation could be put to better use providing sustainable housing

Attached documents:

Comment: MM13 - LPMM18/4328  Respondent: Angela Gill 20819713  Agent:

4 MM13: The evidence base for retail need and usage in Guildford town centre is out of date and does not take account of current trends (eg, online shopping). Part of the current (over)-allocation for retail usage in the draft Plan could be reallocated to providing sustainable housing. The draft Plan is unsound. The Examination should be reopened.

5 Proposal for another 500 houses in Send, in the Green Belt: Please see objection 1 above. Please also note that these proposed houses will be car-dependent, and accordingly, the proposed development would not be sustainable development. Further, no account appears to have been taken of the impact of the increased volume of traffic that such development would have on the Portsmouth Road, Ripley, or on the surrounding local lanes and narrow roads. The draft Plan is unsound. The Examination should be reopened.

Attached documents:

Comment: MM13 - LPMM18/4537  Respondent: Gary Pask 20824737  Agent:

MM13 – Again the evidence used by the Council in relation to retail shopping is out of date and does not consider the current crisis on the High Street as a result of the shift to online shopping. The overall UK retail market is not growing, and an increasing percentage is now held by online players. Retailers are currently closing outlets.

Attached documents:

Comment: MM13 - LPMM18/4623  Respondent: Nigel Baines 20826369  Agent:

MM13 Retail

The retail needs figures are revised to show an increase in net capacity to 2030 of 28,202 m2. This is hopelessly optimistic given retail trends away from the high street towards online shopping. They risk therefore sterilising land with unrealistic allocations and demands. The retail requirements should therefore be reduced.

Attached documents:

Comment: MM13 - LPMM18/4947  Respondent: C Davies 20835105  Agent:
MM13
More sustainable housing should be allocated in the town centre rather than retail outlets

Attached documents:

Comment: MM13 - LPMM18/6073  Respondent: Nicola Fox 20867425  Agent:

MM13. The allocation of this amount of additional retail space is completely unrealistic in today’s retail environment. The evidence base is widely out-of-date given the current trends and impact of on-line shopping. Rather than develop more retail, redevelop unsustainable town centre retail sites into affordable and sustainable housing.

Attached documents:

Comment: MM13 - LPMM18/6085  Respondent: Neal Fox 20867873  Agent:

MM13. The allocation of this amount of additional retail space is completely unrealistic in today’s retail environment. The evidence base is widely out-of-date given the current trends and impact of on-line shopping. Rather than develop more retail, redevelop unsustainable town centre retail sites into affordable and sustainable housing.

Attached documents:
Main Modification: MM14  Number of representations: 6

Comment: MM14 - LPMM18/3150  Respondent: The Guildford Society (Julian Lyon) 8561377  Agent:

Main Modification 14 – Policy E2 (Locations for Employment)

Paragraph (1) has created a sequential hierarchy that now places equal weight to sites on the edge of centres and those within 500m of a public transport interchange. This does not seem sensible as it has the propensity to cause additional traffic generation at edge of centre sites without mitigation.

Paragraph 4.4.21a seems to suggest an applicant may wish to draw its red line so as to pass the test rather than to illustrate the true extent of the proposals. We think this is an indication of a poorly-conceived Policy in the first place (paragraphs (3) and (4) of Policy E2).

Attached documents:

Comment: MM14 - LPMM18/5343  Respondent: Helen Jefferies 8717921  Agent:

MM14

(2) Does the 500m from a public transport interchange limitation apply and if not why not?

Attached documents:

Comment: MM14 - LPMM18/5904  Respondent: Claire Yates 8859585  Agent:

MM14. I can see no justification for further allocations for leisure and retail. High street shopping is declining and this area is adequately provided for re leisure.

I hope you will bear these comments in mind when finalising the Local Plan and in particular reduce the horrendous proposed increase in both housing and industrial development in the Send area.

Attached documents:

Comment: MM14 - LPMM18/6066  Respondent: Julia Osborn 10729537  Agent:

MM42/ MM14

Furthermore, in addition to an increase in dwellings, the proposed modifications will lead to a substantial increase in industrial development within the Parish of Send.

**Comment: MM14 - LPMM18/6246  Respondent: Monique Harrison 20834945  Agent:**

The UN Intergovernmental Panel on Climate Change (IPCC) Report was published on 8 October under the headline “12 years to limit climate change catastrophe” which is within the Plan period. The scientific consensus calls for "urgent and unprecedented changes” to limit the use of fossil fuels. The plan (MM1 S1 and MM24) in no way reflects the urgency or importance called for. The Inspector should reopen the examination to ensure that these latest findings are incorporated into the plan philosophy and that best practice towards sustainability is adopted. The crucial omission are policies aimed at reducing car usage which should not only be included in these MMs, but also MM9 (P2 Greenbelt development), MM14 (E2 Employment) and MM5 (H1 Homes for all) limiting private parking

Main Modification 15 – Policy E3 (Employment Capacity)

We do not understand the rationale behind deletion of paragraph 0(b)(a).

We agree the amendments to (3) and, reluctantly, (4) because it is generally in line with Government policy.

Paragraph (6) is unnecessarily wordy and seems to contradict paragraphs (3) and (4) rather than perhaps to qualify those paragraphs. We would suggest: “Where redevelopment or change of use to a non-employment use is envisaged in accordance with paragraphs (3) and (4) of this policy, such change of use or redevelopment will only be acceptable where the land or premises are suitably located having regard to: its impact on the environment, levels of traffic movement, accessibility to public transport, links to infrastructure, and impact on the amenity of the area or adjoining occupiers.”

We support the inclusion of Paragraph (7) and supporting paragraph 4.4.31a.

### Policy E3 Addition of (7):

“the provision of ancillary uses on a Strategic or locally Significant Employment Site that complement and positively enhance the functioning of the employment area will be supported”

Paragraph 4.4.31a goes on to set out:

“the provision of ancillary uses as referred to in Policy E3(7) within employment areas can serve to enhance the function and attraction of these sites to businesses and their employees and reduce the need for staff to travel to alternative facilities away from the workplace. Such uses may be provided on site either as new buildings by means of expansion of an existing B1, B2 or B8 use or as redevelopment of part of an existing B1, B2 or B8 use. Examples of ancillary uses considered appropriate on a Strategic or Locally Significant Employment site that would be supported include small local shops, gymnasia, crèches and canteens.”

D. MM15: POLICY E3: MAINTAINING EMPLOYMENT CAPACITY AND IMPROVING EMPLOYMENT FLOORSPE

26. Whilst CTI consider the designation of the Site as a LSES to be an unsound approach (as explained above), the proposed modification of Policy E3 through MM15 to allow additional flexibility and that other suitable B class employment uses are considered as part of the marketing exercise, rather than thereafter, is welcomed.

27. Should the Council continue to retain the proposed LSES designation, CTI are likely to bring forward a planning application, responding to the detailed policy requirements, to change the use of the Site to residential in any event.

Attached documents:

We are instructed to make further representations to the proposed Main Modifications to the Local Plan as they affect land controlled by our client, Peveril Securities, between Walnut Tree Close and the River Wey. Previous objections were made to Policy E3 seeking to remove the Peveril site from the proposed allocation given it is being pursued for housing purposes and is suitable for such purposes (an application is shortly to be submitted for student housing on the site). In this regard it is noted that in the wider consideration of the scope for housing development within the Guildford urban area and Guildford town centre, the Council has made conclusions that (paragraph 5.3.8 of the sustainability appraisal addendum) “There are no sites within the wider urban area that might potentially deliver additional supply within the early part of the Plan period. Neither is there any potential for additional supply early in the Plan period at any of the sites that are allocations within the submission Plan”.

As has been indicated earlier in the Local Plan process and as part of the pre-application process which will shortly culminate in a submission of an application for student housing on the site, the Peveril site is immediately available and deliverable for student housing which will have a knock on effect in reducing the housing requirement for Guildford – based on assumptions that the student housing provision within the Local Plan is taking up around 500 of the dwelling requirement previously assumed necessary in the borough. The objection to the inclusion of the Walnut Tree Close site as a strategic employment site in Policy E3 remains. A marketing report was submitted in association with an application for residential development on the site in December 2017 which demonstrated in any event the lack of deliverability of the site for employment (offices) in accordance with an extant planning permission. An updated report has been prepared to accompany the student housing application – see attached.

The 2018 NPPF in its section 11 (making effective use of land) states at paragraph 120 that “Planning policies and decisions need to reflect changes in the demand for land”. Where there is considered not to be a reasonable prospect of an application coming forward for the use allocated in the Plan the Council should consider the re-allocation of land for a more deliverable use that can help address identified needs.

In this case despite a permission for offices existing, the marketing of it has demonstrated no reasonable prospect of that scheme being implemented. It should therefore in accordance with paragraph 120 be de-allocated or allocated for residential development including student housing. In this regard the proposed allocation for employment purposes is in itself unsound given the location of the site which is effectively severed from the rest of the proposed allocation by the railway bridge. There are proposals for redevelopment for housing and student housing in the immediate vicinity and the western boundary is marked by the river within the conservation area and listed buildings. Part of the site has a car showroom on it which is being relocated. In environmental terms it is best suited for housing. Whilst offices were an acceptable option in environmental terms (see below) the lack of market interest in delivering the scheme would suggest in accordance with paragraph 120 of the NPPF that an alternative non-employment use should be allocated for the site.

Notwithstanding those comments, the proposed modification to Policy E3 (MM15 relating to policy paragraph 3 and 4) should be reconsidered. Paragraph 3 of the modifications seems to suggest that there should be marketing of all types of
B Class use (the Peveril site is proposed for allocation for light industry, industry and storage and distribution) or indeed other employment generating uses before a change of use to residential would be permitted. This, however, does not reflect the fact that some sites would only be suitable for a certain type of employment use so there should not be a requirement to market for other forms of less suitable employment use. In the case of the Peveril site it has a planning permission for offices which in environmental terms is the most suitable use (for employment purposes) given its location close to the river and adjacent to a conservation area and listed buildings. Other B2 or B8 uses would be unsuitable given the location of the site so the requirement (as it would appear in the modification) to market it for unsuitable employment uses would be unnecessary and therefore unsound. The Council should reword this modification to allow a consideration of the suitability of B Class or other employment generating uses without the need to market them.

**Policy E7: Retail and Leisure Uses in Guildford Town Centre**

**MM18 – OBJECTION E7-1**

The intention of the new paragraph 1a is probably correct, but it should not be the case that retail and/or leisure development should be permitted unconditionally. Suitable wording (or numerical limits) should be included to prevent the development of additional unnecessary excess space (especially retail) when sustainable residential development sites in the town centre are so scarce.
Paragraphs 4.4.85 and 4.4.89 are worded slightly differently, but appear to have the same meaning. They should be made identical in the interests of consistency.

Comment: MM22 - LPMM18/5946  Respondent: Jennie Kyte 8585601  Agent: 

MM22 (Policy D1) Place Shaping

The excellent section outlining design and character for new developments, which has been deleted from Policy D4, should be reinstated in full in Policy D1. This section needs including, particularly in view of the time lag before supplementary documents will be produced. New estates will be designed well before estates are built, particularly if they are clones of estates elsewhere. Consequently guidelines are needed sooner rather than later.

- **2nd sentence**: New development in the town centre should not impact on residential areas and other surrounding areas, such as height of buildings, loss of views, rat runs, etc. This needs including to explain the words “with clear thought given to the interrelationship of land use to external space” in the second sentence of no.(1).

**Distinct local character**

(4) **2nd sentence**: The word ‘will’ should be replaced with the word ‘must’, eg.

‘Proposals must take account of local design guidance …..’
‘The Residential Design Guide and ‘Landscape Character Assessment’ (extremely useful and much used documents) should be added to the list after the words “conservation area appraisals”, eg.,

‘Proposals must take account of local design guidance contained within conservation area appraisals, the Residential Design Guide, Landscape Character Assessment, DPD’s, neighbourhood plans and SPDs.’

(4) New development should follow the lie of the land both at ground level and roof level, a typical feature of houses and buildings in Guildford, which is built on hills and slopes. Buildings which follow the topography of Guildford enhance both near and distant views.

Over-high buildings, out of harmony with their surroundings, are harmful to views.

Flat roofed buildings are ugly in views and out of keeping with Guildford’s character.

The height of development in the countryside should be restricted in line with their countryside setting, and also the height of new development in the town.

Such locally distinct patterns of development should be reflected and safeguarded in this policy, particularly in view of the time lag before supplementary documents are produced. New estates and buildings will be designed well before they are built, particularly if they are clones of estates elsewhere.

(5) All new development should reflect locally distinct pattern of development. New estates need to avoid being inappropriate clones of estates built elsewhere in the country, which have no connection to Guildford or its hilly landscape with views.

New estates must not downgrade existing views or introduce views out of character with Guildford’s landscape, particularly when visible from the AONB, or harm character in adjoining areas.

Attached documents:

Comment: MM22 - LPMM18/5741  Respondent: Sarah Belton 8598561  Agent:

MM22 This addition conveniently future-proofs major new developments (which are subject to a high level of objection from local residents for reasons outlined in this and my previous letters), yet future-proofing protection of the greenbelt, countryside, villages and infrastructure is not built into the plan.

Attached documents:

 Attached documents:
MM23

In (9) strategic sites should not be exempt from a requirement to reflect locally distinct patterns and character of development. This would be compatible with sites creating their own identity and would avoid “could be anywhere” estates.

MM23

(D1) does not incorporate sufficient elements of deleted policy (D4) to address character adequately. It should shape windfall as well as larger sites notwithstanding the anticipated, overdue Development Management Policies.

MM23

Promotion of “green approaches” should clearly include protecting and enhancing greenness along transport corridors within settlements, as well as tree screens around the edge of settlements.

This policy should place great emphasis on height and bulk of development given the importance of views into and out of the town, including from the AONB. A height limit should be introduced given the importance of the rise and fall of the downs in the urban landscape.

If (D1) does not capture the qualities, including landscape, to be protected along the Wey Corridor then MM29 should be amended to specifically provide for this.

Attached documents:

---

POLICY D1. Modification MM 23.

“Efficient use of natural resources (12). All new development will be designed with regard to efficient use of natural resources including passive solar gain to maximise the use of the sun’s energy for heating and cooling.” Add “The loss of materials and embedded energy in demolition of a building is to be taken into account, and opportunity to convert buildings is to be considered in accordance with the NPPF”.

Add, under (6) “Appropriate building height limits will be set for each area”.

Attached documents:

---

Main Modification 23 – Policy D1 (Place Shaping)
The Design Policies have been substantively and substantially amended. We are generally unhappy that these policies do not adequately safeguard the character and heritage of most settlements in the Borough.

Policy D4 has been deleted entirely, but the design elements in D4 have not been entirely replaced in D1.

The Guildford Society is adamant that we need to move some of the D4 design policies into D1 where they don’t duplicate.

Policy D1 is too focused on strategic and major sites, rather than being a “merged policy” addressing all development to avoid duplication. We understand that the latter was the intention in scrapping D4 in the first place.

The essential requirement of D1 is set out at the start of the new policy, namely that:-

“All new developments will be required to achieve high quality design that responds to distinctive local character (including landscape character) of the area in which it is set.”

What is important is the interpretation and application of those words, by both planning officers and Councillors, in the consideration and determination of planning applications – and much is left to individual interpretation.

At the time of the consideration of the Solum application the Council was, and still is, operating under the policies contained in the 2003 Local Plan (albeit as modified by the NPPF). For “Land and buildings at Guildford Railway Station” (Policy G8), paragraph 9.60 states:-

“Development should be in scale with the surrounding environment”

Other supporting paragraphs to Policy G8 refer to the requirements for affordable housing; that any proposals should promote improvements to the townscape; they should respect and provide enhancement of views and improvements to public access to the river; and should incorporate “…improved pedestrian and cycling links between the station, Town Centre and the surrounding areas to the west.”

The Guildford Society’s principal objection to the Solum application was to the fact that the proposals were massive and totally out of scale with the surrounding area; they had an adverse impact on views; there was a less-than-adequate requirement in relation to the provision of affordable housing; there was no improvement in pedestrian and cycling links to the surrounding areas to the west; and (aside from making a contribution to the cost of replacing Walnut Bridge) nothing of any meaningful benefit in respect of securing improvements to the riverside and links to the town centre.

The point is, however good the policies may be, the key issue is whether, in the consideration and determination of planning applications, the Borough Council will seek to ensure that developments comply with the Council’s own planning policy. (Much the same analysis could be made in respect of the (totally out-of-scale) proposals for the Pegasus site on Portsmouth Road).

Sadly, based on its handling of the Solum and Pegasus applications (both at the negotiation and determination stage), Guildford Borough Council showed a track record of non-adherence to its own policies.

Furthermore, a shortcoming in the modifications is in not stressing (or even mentioning!) that as part of the Master-planning process for the major sites (e.g. Gosden Hill, Blackwell Farm) these developments (and the Town Centre) will need to take into account the importance of successfully integrating with the surrounding area. As far as we can see, the guidance contained in the policy only talks about on-site considerations.

The Master-planning process for the major sites should demonstrate that these developments will not give rise to unacceptable consequences in terms of traffic and the impact on existing community facilities such as schools. In short, they need to show how the new development will satisfactorily integrate with the adjoining areas and, if there are problems and/or deficiencies, these should be addressed in tandem with the proposals for new development.
D1

MM23 contains the re-written 'The Place Shaping' Policy' D1, and the deletion of 'Character and Design of New Development' Policy D4.

The Guildford Society is concerned that Policy D4 has been deleted without being fully reinstated elsewhere.

The context of our concerns is that it remains unclear to a user of the Local Plan which policies are saved from the 2003 Local Plan pending publication, consultation and adoption of the impending Development Management DPD; we are, therefore, uneasy that the design and protection policies in this Local Plan do not provide sufficient guidance or protection to ensure good planning nor the maintenance of the character of key areas of the Borough.

We consider that D1 should contain more of the Policies in the abolished D4, adequately addressing character. This is particularly important pending publication, consultation, examination and adoption of the Development Management Local Plan (due in or around 2021).

Formally any 2003 Policy not covered by a new Submission Plan Policy will be covered by the Development Management Policies, with the exception of M8 and the seven Policies which were not saved (H1, H10, S1, G74, RE9, HE11 and U1). Appendix E of the Submission Plan tabulates the Submission Plan's new Policies. For each Policy it sets out the Policies in the 2003 Plan which the new Policy supersedes.

Presumably, any Policy not on the list, except for the above exceptions, will still be valid in so far as they are consistent with the latest version of the NPPF right up until the Development Management Policies are adopted.

We would have preferred this to be made more explicit to ensure the limited policy protections we have are still in play until replaced by the forthcoming DPD.

At present Appendix E says D1 will replace G1(5) on crime prevention and G5(1) on context for design which reads "New development respects established street patterns, plot sizes, building lines, topography, established views, landmark buildings, roof treatment, aspects and relationships with other buildings". Amendments to Appendix E are given in MM49. G5(6) on important views and roofscape is added; it reads "Important public views are protected and opportunities to create attractive new vistas are provided and encouraged".

Are these two Policies G5 (1) and (6) covered adequately by D1 as set out in MM23, taking into account if possible the NPPF.

Appendix E under D4 also listed the 2003 Policies which were covered by D4 but will not be covered following the deletion of D4, namely H4, H10, G1(3) and (12), and G5 (1), (2), (3) and (7). These will have to be covered by Development Management Policies. So for any suggested insertions into D1 from D4 someone will need to check whether any of the above eight Policies need to be added to the list for D1. One could also go through all eight of the 2003 Policies seeing what could be moved to D1 rather than left to Development Management Policies, but I am not suggesting that: It would entail a lot of cross-checking with the NPPF.

In Paragraph (9), strategic sites should not (by omission) be exempt from a requirement to reflect locally distinct patterns and character of development. This would remain compatible with sites creating their own identity, and would allow them to be high quality developments fitting in with the general grain and fabric of Guildford’s market town heritage and its more successful suburbs.

Promotion of green approaches, should clearly include protecting and enhancing greenness along transport corridors within settlements, as well as tree screening around the edge of settlements.

If D1 fails adequately to capture the qualities (including landscape) to be protected along the Wey corridor, then Main Modification 29 should be revised to specifically provide for this.

D1 needs to place greater emphasis on height and bulk of development, given the importance of views into and out of the town, including to and from the AONB.
Policy D1 (12) refers to "including passive solar gain to maximise the use of the sun’s energy for heating and cooling". This appears a very muddled and dangerous statement. Passive solar gain is a double-edged sword which can lead to the desire for air conditioning, particularly in commercial buildings or residential properties with large south facing glazed areas. There is a real risk that this well-intentioned idea could have the perverse effect of increasing energy demand for cooling particularly in flats and large houses aimed at overseas buyers and others not constrained by the cost of energy.

Attached documents:

Comment: MM23 - LPMM18/5353  Respondent: Miss Edwina Attwood 8568193  Agent:

MM23 In (9) strategic sites should not be exempt from a requirement to reflect locally distinct patterns and character of development. This would be compatible with sites creating their own identity and would avoid “could be anywhere” estates.

MM23 (D1) does not incorporate sufficient elements of deleted policy (D4) to address character adequately.

MM23 Promotion of “green approaches” should clearly include protecting and enhancing greenness along transport corridors within settlements, as well as tree screens around the edge of settlements.

MM23 If (D1) does not capture the qualities, including landscape, to be protected along the Wey Corridor then MM29 should be amended to specifically provide for this.

MM23 should place great emphasis on height and bulk of development given the importance of views into and out of the town, including from the AONB. A height limit should be introduced given the importance of the rise and fall of the downs in the urban landscape.

MM23 – POLICY D1. Guildford Borough Council, as a major landowner in the centre, must accept the same obligations as imposed on the other strategic site owners by the council as planning authority.

In conclusion I would point out that the Inspector raised a considerable number of questions about the sustainability, viability and reasoning of Guildford Borough Council’s Local Plan and, despite modifications, these questions have not been addressed adequately in the modifications proposed by the Council in this consultation.

The Plan is unsound and should be re-examined.

Attached documents:

Comment: MM23 - LPMM18/1938  Respondent: Mrs Fiona Curtis 8570273  Agent: Mrs Fiona Curtis

MM23 MasterPlan

I would ask the Inspector to take heed of the following comments by GGG

'They [plans] are produced by and approved by the developer. They do not have the status of supplementary planning documents or other local development documents and are not approved by the local planning authority. If the Council does not agree with them, it can do nothing. Notwithstanding that, para 17 requires planning applications to be consistent with the masterplans, so in those respects is determining the acceptability of the developer’s own application on its compliance with the developer’s own master plan.
The master plans are required to respond to very vague criteria in para 16. Those are much less precise and useful than the expectations in the submitted D1(2). Almost any scheme could, in a developer’s eyes, meet para 16, even if it was a failure.

There is no obvious justification for the removal of policy D4 and D1 does not adequately replace it. D4 should be reinstated or D1 should be embellished to adequately reflect ‘character’ and equal protection should be given to settlement areas as is given to approaches.

The height of developments in the town should take account of views in and out of it, especially from AONB.

Attached documents:

Comment: MM23 - LPMM18/5850  Respondent: Mr Gordon Farquharson 8571617  Agent:

MM23- I support and appreciate the importance of Master Planning. This is especially important for Gosden Hill Farm (Policy A25) to ensure that no development takes place until agreement is reached between the developer and GBC on the key infrastructure requirements for the whole site covering the road network, accessibility, transport, and provision of both water and sewage.

• I am very concerned that with this site there is a suggestion that some development might take place before any infrastructure improvements have been made. This would be unacceptable.
• This policy makes no specific reference to infrastructure nor to the means by which the Master Plan will be approved.
• The position of the Master Plan in the planning process is left vague.
• This deficiency should be rectified and the Local Plan should require that a Master Plan for Gosden Hill Farm be approved before any development takes place.

Comment: MM23 - LPMM18/1021  Respondent: John Baylis 8579905  Agent:

COMMENTS ON MM3 (NEW POLICY S3) AND MM23

I have the following comments on MM3 containing the new Policy S3: ‘Delivery of development and regeneration within Guildford Town Centre’. I also refer to MM23 and the Policy D1

1. The Policy presented in MM3 needs to be put into the format of the other Policies in the Plan as regards use of coloured boxes etc.
2. The Policy needs a brief Introduction which expresses the great importance of the Town Centre (TC) to the Borough.
3. This Introduction should also explain that the TC sits within the Guildford Urban Area.
4. The words ‘most efficient’ in (3) can be interpreted as a need to put as much development on a site as possible, hence encouraging very high rise development. Item (5), especially the new D1 set out in MM23, may prove insufficient to control excessive height and bulk. The words ‘most efficient’ should be suitably qualified.
5. In the new D1 quite a lot of local policy has been lost from the deleted D4. This needs to be checked. Just as one of many examples, D4 Policy 1 (e) reads “ensure appropriate density to make the most efficient use of the land whilst responding to local character and context”. The caveat ‘whilst responding to local character and context’
is removed in the new S3: it should be added. Para 4.5.52 of D4, which refers to the RDG and LCAs, is not reproduced in MM23. It should be retained in the new D1.
6. The words ‘local character’ should definitely appear in (5).
7. 6(c) should read ‘attractive and safe public spaces and public realm’
8. 6(e) is insufficient. As a minimum, the word ‘towpaths’ should be added.
9. 4.1.18(b) and 4.1.19 give status to the Town Centre Regeneration Strategy (TCRS). This Strategy says that it has virtually no status. It contains a large number of proposals, many good, some doubtful (e.g. praise for the Pop up Village). It gives a much welcome emphasis to the creation of a riverside park, see 8 above. Under the heading ‘Principles for good design’ it says: “The height and scale of any new development must sit well with the surrounding townscape. Guildford is predominately a low-rise town and proposals for buildings that are substantially taller than surroundings will need to ensure that they do not impact negatively on views of historic buildings and respect urban grain and the skyline.” Thus the status of the TCRS is of much importance. One could give other examples. Also, the TCRS refers positively to the 2015 TCMP. It should be made even clearer that the TCRS will carry weight in planning decisions.
10. 4.1.19(g) expresses a very desirable objective, but S3 does little to achieve it.
11. 4.1.21 and 4.1.22 seem to be trying to express in a rather awkward way the need to strike a balance between: (a) provision of the essential functions of a town centre: shops, places of work, entertainment facilities, public realm and civic buildings (library, town hall etc.), and (b) provision of housing. The two paragraphs should be reworded to express the need for a balance more directly.
12. 4.1.23, 24 and 25 are a very welcome expression of the importance of the public realm.

D4; Character and Design of New Development.

We disagree with the deletion of this policy. Although more detailed development control policies will form part of the second part of the Local Plan, it is important to have an overarching character and design policy to guide strategic considerations, particularly where multiple site allocations are close together.

Attached documents:

Comment: MM23 - LPMM18/5089  Respondent: Elizabeth Critchfield 8586785  Agent:

MM23

• Strategic sites should be required to reflect locally distinct characteristics.

Attached documents:

Comment: MM23 - LPMM18/3582  Respondent: Linda Parker-Picken 8587105  Agent:
**MM23 states:** all new development will be designed to maximise the opportunity for and linkages between green spaces and public places, and include high quality landscaping that reflects the local distinctive character. The allocations at Alderton’s and Garlick’s Arch are designed to *destroy* green spaces and the local distinctive character!

**MM23** further requires that a new site “provides access to services from a range of providers.” The above two sites will not be able to fulfil this requirement since the school is at capacity and Ripley School has recently closed; the Medical Centre is at capacity; and there are only small shops locally.

**Attached documents:**

**Comment:** MM23 - LPMM18/3226  **Respondent:** Michael Bruton 8591169  **Agent:**

1. MM23 (D1). Waters down the requirement for development linked to walking and cycling. Contrary to policies on sustainability

Strategic sites are exempt from design constraints

**Attached documents:**

**Comment:** MM23 - LPMM18/270  **Respondent:** Susan Hibbert 8606113  **Agent:**

MM23

The exemption for strategic sites from the need to respond to distinctive local character is potentially worrying. Guildford’s particular character as an historic market town must be preserved.

**Attached documents:**

**Comment:** MM23 - LPMM18/5518  **Respondent:** Susan Hibbert 8606113  **Agent:**

MM23: A height policy should be introduced. Developers are seeking (and in the notorious Solum case already have) permission to build inappropriately tall tower blocks in the town centre which are not in keeping with Guildford’s character as a historic market town surrounded by AONB. Guildford unfortunately already has two blocks (aptly described by one previous planning officer as ‘Guildford’s sixties moment’) which blight certain views across the Wey from the town centre, and it cannot afford to repeat this mistake.

MM23 (in 9): Strategic sites should NOT be exempt from the requirement to reflect locally distinct character .. not in a unique historic gap town like Guildford. Reinforcing our town’s sense of place is vital.

In the light of these concerns and of the Inspector’s comments, I believe that - notwithstanding the dangers of delaying the Local Plan - it would be reasonable to ask the Inspector to re-open the Inquiry. This is a long term plan which will decide Guildford’s future and thus it is vital to get it right.

**Attached documents:**
The changes to Policy D1 water down some vital social requirements, set out in national policy, that aim to make development sustainable. Provisions on walking distances and cycle routes and on large developments of over 25 units, for instance, have been deleted and replaced with less specific text that gives a freer hand to developers to get away with socially unsustainable building.

Similarly, the deletion of Policy D4 is not justified as it met the soundness test.

I object to the "insetting" of any villages around Guildford, and the disproportionate level of development proposed to the Horsleys.

GBC has never given any rational explanation for doing this and have failed to offer any reasoned "EXCEPTIONAL CIRCUMSTANCES" to remove any areas from the Greenbelt.

I object to Greenbelt removal .

I object to the development of over 2000 houses at Wisley/Ockham, "Three Farms Meadows" (also called Wisley airfield) was refused by the Secretary of State. His reasons included unsustainability, catastrophic impact on local rural life and the impact on the character of the area. GBC should not give the owners more time and consultations in order for this land to be developed. I object to this area being included again

**Attached documents:**

---

In (9) strategic sites should not be exempt from a requirement to reflect locally distinct patterns and character of development. This would be compatible with sites creating their own identity and would avoid “could be anywhere” estates.

MM23 (D1) does not incorporate sufficient elements of deleted policy (D4) to address character adequately.

MM23 Promotion of “green approaches” should clearly include protecting and enhancing greenness along transport corridors within settlements, as well as tree screens around the edge of settlements.

MM23 If (D1) does not capture the qualities, including landscape, to be protected along the Wey Corridor then MM29 should be amended to specifically provide for this.

MM23 should place great emphasis on height and bulk of development given the importance of views into and out of the town, including from the AONB. A height limit should be introduced given the importance of the rise and fall of the downs in the urban landscape.

MM23 – POLICY D1. Guildford Borough Council, as a major landowner in the centre, must accept the same obligations as imposed on the other strategic site owners by the council as planning authority.

In conclusion I would point out that the Inspector raised a considerable number of questions about the sustainability, viability and reasoning of Guildford Borough Council’s Local Plan and, despite modifications, these questions have not been addressed adequately in the modifications proposed by the Council in this consultation.

The Plan is unsound and should be re-examined.

Attached documents:

Comment: MM23 - LPMM18/6109  Respondent: Mr Kes Heffer 8672993  Agent:

• MM23 (policy D1). “Sustainability” is a nebulous term in planning documents, but if it means anything at all it should refer to the efficiency and compactness of developments that minimise and/or ease transport requirements and maximise the ability to walk or cycle between key locations of a neighbourhood. Policy D1 dilutes the mandate on developers to take any account of this objective; it therefore reduces rather than enhances sustainability.

• MM23. Policy paragraph 7 states that “Given the size, function and proposed density of the strategic allocations it may not always be desirable to reflect locally distinct patterns of development. These sites must create their own identity to ensure cohesive and vibrant neighbourhoods.” These two sentences comprise an oxymoron: if a site creates its own identity (ignoring the anthropomorphism associated with building sites!), it will probably not be cohesive with its neighbourhood. Whether or not it is vibrant is logically unconnected with whether it reflects locally distinct patterns of development. GBC have resorted to buzz-words to mask the paucity of their planning logic.

I therefore object to MM23.

• Much of the proposed development in the draft Local Plan relies on a transport strategy focussed on increasing the capacity of the A3. That is particularly the case for Send (500 additional houses) and Three Farm Meadows at Wisley (a new town). Yet even the improvements to Junction 10 A3/M25 interchange have now been delayed by at least 2 years, and funding for further improvements to the A3 is entirely uncertain. The draft Local Plan in its current incoherent form raises the prospect of far too many houses beyond need being built, but with the lives of the population blighted by horrendous traffic jams on an unimproved A3, and consequently on all linking minor roads. The Public Examination of the Plan by the Planning Inspector must be re-opened to sort out this disaster in waiting.

In conclusion I would point out that the Inspector raised a considerable number of questions about the sustainability, viability and reasoning of Guildford Borough Council’s Local Plan and, despite modifications, these questions have not been addressed adequately in the modifications proposed by the Council in this consultation.

The Plan is entirely unsound and should be re-examined, reconsidered and amended to take into account a sprinkling of common sense.

Attached documents:

Comment: MM23 - LPMM18/1683  Respondent: Robert Taylor 8795553  Agent:

2. Policy D1, Place shaping: Modification MM23

Paragraph 7 of Modification MM23 allows development on strategic sites in the borough to propose patterns of development which are not in character with their surrounding neighbourhoods – which is contrary to the policy set out in Paragraph 6 immediately before it. I do not support Paragraph 7. In my opinion it is vital that new settlements should be in keeping with the character of their areas. If not, we will see concrete jungles sprouting up in the middle of long-established rural communities.

Accordingly, I OBJECT to Modification MM23 Paragraph 7.

Attached documents:

Comment: MM23 - LPMM18/2510  Respondent: Nick Etches 8796321  Agent:

MM23 In (9) strategic sites should not be exempt from a requirement to reflect locally distinct patterns and character of development. This would be compatible with sites creating their own identity and would avoid “could be anywhere” estates.

Comment: MM23 - LPMM18/3214  Respondent: Sally Erhardt 8796481  Agent:

MM23 – POLICY D1. Guildford Borough Council, as a major landowner in the centre, must accept the same obligations as imposed on the other strategic site owners by the council as planning authority

Attached documents:

Comment: MM23 - LPMM18/3091  Respondent: David Williams 8798849  Agent:

MM23 In (9) strategic sites should not be exempt from a requirement to reflect locally distinct patterns and character of development. This would be compatible with sites creating their own identity and would avoid “could be anywhere” estates.

MM23 (D1) does not incorporate sufficient elements of deleted policy (D4) to address character adequately.

MM23 Promotion of “green approaches” should clearly include protecting and enhancing greenness along transport corridors within settlements, as well as tree screens around the edge of settlements.

MM23 If (D1) does not capture the qualities, including landscape, to be protected along the Wey Corridor then MM29 should be amended to specifically provide for this.

MM23 should place great emphasis on height and bulk of development given the importance of views into and out of the town, including from the AONB. A height limit should be introduced given the importance of the rise and fall of the downs in the urban landscape.

Attached documents:
Comment: MM23 - LPMM18/3098  
Respondent: David Williams 8798849  
Agent:

MM23 – POLICY D1. Guildford Borough Council, as a major landowner in the centre, must accept the same obligations as imposed on the other strategic site owners by the council as planning authority.

In conclusion I would point out that the Inspector raised a considerable number of questions about the sustainability, viability and reasoning of Guildford Borough Council’s Local Plan and, despite modifications, these questions have not been addressed adequately in the modifications proposed by the Council in this consultation.

The Plan is unsound and should be re-examined.

- MM23 (Policy D1) is waters down the requirement for the social dimension of sustainability (e.g., walking distances and pedestrian and cycle routes)
- Strategic sites are to be exempt from design constraints allowing free reign to unscrupulous tax avoiding developers.
- There is no evidence that recent case law such as “People over Wind” has been taken into account

### Attached documents:

### Comment: MM23 - LPMM18/416  **Respondent:** Mr Howard Turner 8819457  **Agent:**

Policy D4 1(b), 1(m) and 2(a) and (b) should be retained in order to ensure that development respects existing open space vistas and takes due account of factors such as air pollution and increased noise when considering planning proposals.

### Attached documents:

### Comment: MM23 - LPMM18/5163  **Respondent:** Merrow Residents' Association (Keith Meldrum) 8825057  **Agent:**

MM23- We support and appreciate the importance of Master Planning. This is especially important for Gosden Hill Farm (Policy A25) to ensure that no development takes place until agreement is reached between the developer and GBC on the key infrastructure requirements for the whole site covering the road network, accessibility, transport, and provision of both water and sewage. We are very concerned that with this site there is a suggestion that some development might take place before any infrastructure improvements have been made. This would be unacceptable.
However, this policy makes no specific reference to infrastructure nor to the means by which the Master Plan will be approved. The position of the Master Plan in the planning process is left vague. This deficiency should be rectified and the Local Plan should require that a Master Plan for Gosden Hill Farm be approved before any development takes place.

MM23 – POLICY D1. Guildford Borough Council, as a major landowner in the centre, must accept the same obligations as imposed on the other strategic site owners by the council as planning authority.

In conclusion I would point out that the Inspector raised a considerable number of questions about the sustainability, viability and reasoning of Guildford Borough Council’s Local Plan and, despite modifications, these questions have not been addressed adequately in the modifications proposed by the Council in this consultation. The infrastructure consequences of the Plan have received scant attention.

The Plan is unsound and should be re-examined.

Attached documents:

Comment: MM23 - LPMM18/1392  Respondent: Mr John Dumbleton 8831393  Agent:
As a resident of Merrow I consider a Master Plan is essential for Gosden Hill Farm (A25) and should be approved before any development takes place. In particular, no development should take place until the key infrastructure elements required for the whole site including roads, water and sewage have been agreed by GBC with the developer as part of the Master Plan. This is particularly important since houses are to be built on part of the site in the 1st 5 years of the Plan and they should not be allowed to be built before a Master Plan for the whole site has been approved.

Comment: MM23 - LPMM18/4578  Respondent: R Brind 8837281  Agent:

- MM23 (Policy D1) waters down the requirement for the social dimension of sustainability (eg walking distances and pedestrian and cycle routes)
- Strategic sites should NOT be exempt from design constraints.
- There is no evidence that recent case law such as “People over Wind” has been taken into account

Attached documents:

Comment: MM23 - LPMM18/1577  Respondent: David K Reynolds 8840193  Agent:

MM23. Policy D1 reduces the requirement for the social dimension of sustainability which is unrealistic in this day and age. The proposal that strategic sites should be exempt from design constraint will allow developers to put up ghettos.

Attached documents:

Comment: MM23 - LPMM18/2006  Respondent: Brendan McWilliams 8840353  Agent:

MM23 In (9) strategic sites should not be exempt from a requirement to reflect locally distinct patterns and character of development. This would be compatible with sites creating their own identity and would avoid “could be anywhere” estates.

**Agent:**

MM23 In (9) strategic sites should not be exempt from a requirement to reflect *locally distinct* patterns and character of development. This would be compatible with sites creating their own identity and would avoid “could be anywhere” estates.

MM23 (D1) does not incorporate sufficient elements of deleted policy (D4) to address *character* adequately.

MM23 Promotion of “*green approaches*” should clearly include protecting and enhancing greenness along transport corridors within settlements, as well as tree screens around the edge of settlements.

MM23 If (D1) does not capture the qualities, including landscape, to be protected along the *Wey Corridor* then MM29 should be amended to specifically provide for this.

MM23 should place great emphasis on height and bulk of development given the importance of views into and out of the town, including from the AONB. A *height limit* should be introduced given the importance of the rise and fall of the downs in the urban landscape.

1. **The Guildford Vision Group’s Objections and Concerns which I share**

MM3 – POLICY S3. Guildford Borough Council must deliver real and coordinated results. The Town Centre must be designated a strategic site or sites

MM3 – POLICY S3. Guildford must have an effective local plan. Development rules must ensure quality of development across the Town Centre

MM3 – POLICY S3. Guildford Borough Council should adopt Guildford Vision Group’s proposals, including the new crossing or equivalent effective alternative, to deliver a safer, pedestrianised town centre with transport resilience and opened riverside

MM23 – POLICY D1. Guildford Borough Council, as a major landowner in the centre, must accept the same obligations as imposed on the other strategic site owners by the council as planning authority.

In conclusion I would point out that the Inspector raised a considerable number of questions about the sustainability, viability and reasoning of Guildford Borough Council’s Local Plan and, despite modifications, these questions have not been addressed adequately in the modifications proposed by the Council in this consultation.

The Plan is unsound and should be re-examined.

**Attached documents:**

Comment: MM23 - LPMM18/5876  Respondent: Clare Bevan 8859553  Agent:

1. MM23 (policy D1) by modifying the social dimension for sustainability makes things for developers but not the people who will live in and around new housing

Attached documents:

Comment: MM23 - LPMM18/5895  Respondent: Claire Yates 8859585  Agent:

MM23 states: all new development will be designed to maximise the opportunity for and linkages between green spaces and public places, and include high quality landscaping that reflects the local distinctive character. The allocations at Alderton’s and Garlick’s Arch are designed to destroy green spaces and the local distinctive character!

MM23 further requires that a new site “provides access to services from a range of providers.” The above two sites will not be able to fulfil this requirement since the school is at capacity and Ripley School has recently closed; the Medical Centre is at capacity; and there are only small shops locally.

Attached documents:

Comment: MM23 - LPMM18/1977  Respondent: Sean Gilchrist 8875969  Agent:

MM23 In (9) strategic sites should not be exempt from a requirement to reflect locally distinct patterns and character of development. This would be compatible with sites creating their own identity and would avoid “could be anywhere” estates.

**Comment: MM23 - LPMM18/5386  Respondent: Judith Allen 8880353  Agent:**

MM23

this reduces the social dimension of sustainability, walking distances, pedestrians, cycling etc, this makes it easier for developers.

Strategic sites are to be exempt from design constraints resulting in the type of development such as that proposed on Three Farms Meadows. The inclusion of land to the south of this site does not mitigate the density obis sue and much of the land is constrained by the VOR requirements.

Land to the south abuts the Ockham Conservation area and increases the visibility of the site to and from the Surrey Hill AONB.

**Attached documents:**

**Comment: MM23 - LPMM18/5213  Respondent: Pamela French 8883841  Agent:**

MM23 D1

Removal of sustainability expectations

The important expectations on developments of 25 dwellings or more in D1(2) are **removed without any justification**. The submitted text provided a series of requirements which met the social dimension of sustainable development in national policy. As submitted, **the text is sound and so cannot be changed at this stage**.

The replacement text is less precise, for example, on community interaction, walking distances, active lifestyles, routes to nearby areas for pedestrians and cyclists.

MM23 D1 para13- 15

Masterplan for Former Wisley Airfield (FWA/TFM)

The masterplans proposed suffer from **two main defects**:
(i) They are **produced by and approved by the developer**. They do not have the status of supplementary planning documents or other local development documents and are not approved by the local planning authority. If the Council does not agree with them, it can do nothing. Notwithstanding that, para 17 requires planning applications to be consistent with the masterplans, so in those respects is determining the acceptability of the developer’s own application on its compliance with the developer’s own masterplan. That is allowing the developer to mark his own homework.

**Developers can get master planning very badly wrong, as the FWA/TFM appeal decision demonstrated.**

(ii) The masterplans are required to respond to very vague criteria in para 16. Those are much less precise and useful than the expectations in the submitted D1(2). **Almost any scheme could, in a developer’s eyes, meet para 16, even if it was a failure.**

37 D4

Deletion

**The submitted policy D4 is sound** and there is no rational basis upon which it could be unsound. No amendment is therefore justified.

Whilst some elements are incorporated into the main modifications for D1, other details such as (1)(d) ‘e street patterns, spaces around buildings, layout, grain, scale, massing, proportions, height and materials of surrounding buildings’ are omitted from the proposed text

**Comment:** MM23 - LPMM18/2931  **Respondent:** Tessa Crago 8899713  **Agent:**

MM23 – POLICY D1. Guildford Borough Council, as a major landowner in the centre, must accept the same obligations as imposed on the other strategic site owners by the council as planning authority.
In conclusion I would point out that the Inspector raised a considerable number of questions about the sustainability, viability and reasoning of Guildford Borough Council’s Local Plan and, despite modifications, these questions have not been addressed adequately in the modifications proposed by the Council in this consultation.

The Plan is unsound and should be re-examined.

Comment: MM23 - LPMM18/3332  Respondent: Mr Glen Travers 8920865  Agent:

MM23 D1

Removal of sustainability expectations

The important expectations on developments of 25 dwellings or more in D1(2) are removed without any justification. The submitted text provided a series of requirements which met the social dimension of sustainable development in national policy. As submitted, the text is sound and so cannot be changed at this stage.

The replacement text is less precise, for example, on community interaction, walking distances, active lifestyles, routes to nearby areas for pedestrians and cyclists.

MM23 D1 para13- 15

Masterplan for Former Wisley Airfield (FWA/TFM)

The masterplans proposed suffer from two main defects:

(i) They are produced by and approved by the developer. They do not have the status of supplementary planning documents or other local development documents and are not approved by the local planning authority. If the Council
does not agree with them, it can do nothing. Notwithstanding that, para 17 requires planning applications to be consistent with the masterplans, so in those respects is determining the acceptability of the developer’s own application on its compliance with the developer’s own masterplan. That is allowing the developer to mark his own homework.

Developers can get master planning very badly wrong, as the FWA/TFM appeal decision demonstrated.

(ii) The masterplans are required to respond to very vague criteria in para 16. Those are much less precise and useful than the expectations in the submitted D1(2). Almost any scheme could, in a developer’s eyes, meet para 16, even if it was a failure.

37 D4

Deletion

The submitted policy D4 is sound and there is no rational basis upon which it could be unsound. No amendment is therefore justified.

Whilst some elements are incorporated into the main modifications for D1, other details such as (1)(d) ‘e street patterns, spaces around buildings, layout, grain, scale, massing, proportions, height and materials of surrounding buildings’ are omitted from the proposed text

Attached documents:

**Comment: MM23 - LPMM18/4428  Respondent: Annie Cross 8926529  Agent:**

**MM23 - Sustainability + Policy D4**

Guildford should be promoting sustainability, thereby providing specific sustainability requirements, not reducing the requirements. A perfect example is the former Wisley Airfield, a site that will have high car usage and currently does not offer good, public, transport.

Any site of 25+ homes must have a clear and positive policy on infrastructure, street patterns and spacial awareness of density, proportions, height and materials. Excluding these give developers free rein, particularly on Greenbelt sites. Include these very important guidelines.

Attached documents:

**Comment: MM23 - LPMM18/5328  Respondent: P. Richardson 8928033  Agent:**

MM23 In (9) strategic sites should not be exempt from a requirement to reflect locally distinct patterns and character of development. This would be compatible with sites creating their own identity and would avoid “could be anywhere” estates.

The Plan is unsound and should be re-examined.

Attached documents:

1. POLICY D1 & D2: SUSTAINABLE DESIGN, CONSTRUCTION AND ENERGY

**MM23 OBJECTION**

- This policy waters down the requirement for sustainability (walking distances and cycle routes). This makes it easier for developers to ignore these very important considerations.

Attached documents:

3. POLICY D1 Place Shaping

Proposed Modification MM23 significantly revises the Place Shaping policy D1 of the Local Plan. EHPC supports many of the revisions now proposed, in particular Paragraph 6 addressing distinct local character which states that:

“All new development will be designed to reflect the distinct local character of the area and will respond and reinforce locally distinct patterns of development, including landscape setting.”

EHPC fully endorses and supports this policy. However, it is then immediately followed in Paragraph 7 by an entirely new policy, as follows:

“All given the size, function and proposed density of the strategic allocations it may not always be desirable to reflect locally distinct patterns of development. These sites must create their own identity to ensure cohesive and vibrant neighbourhoods.”

A consequence of Paragraph 7 is to effectively nullify the policy set out in Paragraph 6 for all of the strategic sites within the local plan. In our opinion this is inconsistent and illogical. Moreover, since the strategic sites are all located in picturesque Green Belt locations close to existing settlements, it is precisely these sorts of places where Paragraph 6 assumes its most importance. We believe that it is very important to ensure large new developments are in keeping with the character of their local areas – as Paragraph 6 sets out. Paragraph 7 is effectively giving a licence to developers to ignore Paragraph 6 and to propose whatever form of mass urban housing they believe is most cost effective, irrespective of its impact on the overall character of the local area.
The importance of this matter was well illustrated by comments made by the appeal inspector at one of the strategic sites, the former Wisley airfield, following the 2017 planning appeal. In refusing planning permission, the Secretary of State commented in his report (Paragraph 27):

“...although some of the harmful impacts on the appearance of the area could be partially mitigated by extensive landscaping, this would not disguise the basic fact that a new settlement in a rural area would, inevitably, cause substantial harm to both its character and its appearance.”

The appeal inspector, Mr Clive Hughes, provided rather more graphic detail in his report when he commented (Paragraph 20.95) that:

“...the overall impact would result in substantial harm to the character of the immediate area. Being sited at the very heart of Ockham parish it would, in effect, link all the surrounding hamlets. It would erode the historic pattern of development in the area to the detriment of the character of these settlements. It would fail to reflect or respect its immediate setting and I agree with the nearby residents that this impact would be catastrophic on their rural way of life.”

If MM23 Paragraph 7 of the revised local plan is included, as GBC propose, this fundamental harm, as identified by the Secretary of State and the appeal inspector, would have been over-ridden by this new local plan policy.

EHPC believes that MM23 paragraph 7 is both inconsistent and inappropriate. Accordingly, we OBJECT to MM23 Paragraph 7 and recommend that it be deleted from the local plan.

Concluding remarks

EHPC has provided GBC with many detailed comments at each stage of the public consultations held for the local plan, although to date none of our suggestions have been acted upon.

As set out in previous submissions EHPC believes the local plan to be defective. It fails to optimise development within the Guildford metropolitan area and instead proposes to build too many houses within the Green Belt, particularly in the eastern part of the borough.

The large majority of housing within this local plan will be built on land being removed from the Green Belt, the long term consequences of which will be a continuous urban development stretching beside the A3 from Guildford to the M25 and undermining the entire conception of the Metropolitan Green Belt.

This is not a vision, nor a local plan, which East Horsley parish council can support.

Appendices:
1. Examination Statement (extract). Part One: The insetting of East Horsley
2. EHPC hearing statement addressing the insetting of East Horsley

Appendix 1:

Examination statement by East Horsley parish council: The insetting of East Horsley

The following is an extract from the examination statement submitted by East Horsley parish council to the local plan examiner, Mr. Bore, on 8th May 2018.

1. PART ONE: The insetting of East Horsley

Matters & Issues: 9.6

1.1 In paragraph 9.6 of Matters & Issues the inspector asks: “Does the plan take a sound approach towards the insetting of various villages from the Green Belt?”

1.2 EHPC contends that, in the case of East Horsley, it does not. In particular the plan fails on each of the four tests for soundness indicated in the inspector’s Guidance Notes (ID-2, paragraph 4), as discussed in turn below.
Tests for soundness:

1.3 **Is the policy positively-prepared?** - based on a strategy which seeks to meet objectively assessed development and infrastructure requirements

1.3.1 The objectively assessed housing needs of East Horsley were analysed for the East Horsley Neighbourhood Plan (‘EHNP’) and are available in the Evidence Base document, Housing Needs Assessment, (see www.easthorsley.info). This assessment indicates a mean OAN for East Horsley of 170 homes over the period 2017 to 2033. Six sites are identified in GBC’s Land Availability Assessment (‘LAA’) within East Horsley with an estimated capacity to deliver over 220 homes. The largest site of 100 homes is allocated in the plan (Site Policy A39) and four others are allocated in the EHNP. All six LAA sites fall within the expanded settlement area of the village as proposed in the plan and therefore could be developed irrespective of whether or not East Horsley is inset from the Green Belt.

1.3.2 During the period 2000-2015 windfall housing in East Horsley contributed 110 net new homes. With an increase in the East Horsley settlement area of 37% proposed in the plan, a further significant contribution from windfall housing is expected over the period to 2033. Together with the five allocated sites in the village, it is therefore highly likely that new housing delivery within the expanded settlement area will significantly exceed the OAN of 170 homes over the life of the plan.

1.3.3 Accordingly, the objectively assessed housing needs of East Horsley are highly likely to be satisfied under the current ‘washed over’ Green Belt planning regime, implying that insetting is unnecessary for the long term sustainable development of the village. Being unnecessary, EHPC believes that this policy cannot be regarded as positively-prepared.

1.4 **Is the policy justified?** - the most appropriate strategy when considered against the reasonable alternatives, based on proportionate evidence.

1.4.1 The main justification in the plan for insetting is provided by the Green Belt & Countryside Study (‘GBCS’), prepared by Pegasus Planning Group (‘Pegasus’). Volume IV deals with the insetting of villages including East Horsley and contains detailed mapping of each inset village together with a descriptive narrative explaining their conclusions.

1.4.2 Pegasus assess the suitability for insetting of villages against three criteria:

**CRITERION 1:** Does the majority of the village exhibit open character?

**CRITERION 2:** Do open areas within the village generally appear continuous with surrounding open land beyond the village?

**CRITERION 3:** Do the majority of the village edges exhibit incomplete, distinguishable boundaries that would not permit the provision of new Green Belt boundaries?

The Pegasus Methodology states that: “...if the responses to the criteria were considered to be positive, positive, positive (+, +, +) then the village would not be considered appropriate for insetting within the Green Belt.”

1.4.3 Whilst EHPC does not dispute the general Pegasus methodology, we believe their detailed analyses contain many errors, which undermine their conclusions. In Appendix A to this Statement we provide detailed comments on these errors, supported by an independent mapping assessment conducted for EHPC by a professional mapping agency, Maps4planners.

1.4.4 EHPC asserts that East Horsley does make an important contribution to the openness of the Green Belt due to its distinctively open character, a consequence of the numerous large residential gardens to be found across the village settlement area. These represent the most dominant landscape feature of the village settlement area, a feature which Pegasus failed to recognise in their desk-based assessment of the open character of East Horsley. Specifically:

a) Pegasus characterise the East Horsley settlement area as being of Medium Density Development. However, as evidenced in the EHNP, East Horsley has an average housing density across the current settlement area of just 8.1 dph. On any reasonable interpretation this should be considered as Low Density Development, as discussed further in Appendix A, paragraphs A1.2.2 and A1.4.2;
b) Pegasus claim there are few open areas outside the settlement area which are visible from inside it. However, in Appendix A, paragraphs A1.3.1 to A1.3.3, we show that the majority of the settlement area (60.7%) is bordered by open spaces adjacent to the settlement area and visible from within it;

c) Pegasus claim the East Horsley settlement area is surrounded by “recognisable and defensible Green Belt boundaries”. However, such boundaries represent only a minority part (39.3%) of the current settlement boundary.

1.4.5 With positive responses against each of the three Pegasus criteria, the conclusion follows under the Pegasus methodology that East Horsley is not appropriate for insetting. The only alternative strategy available is not to inset East Horsley from the Green Belt. This is also the most logical approach given that this strategy satisfies both the objectively assessed housing needs of the village and will also preserve the openness of the Green Belt within this low density settlement area.

1.4.6 Pegasus has provided a Green Belt Purposes Assessment in Appendix 1 of their GBCS. Land parcels across the borough are classified on their Green Belt sensitivity according to how they meet the NPPF defined purposes of the Green Belt. The settlement area of East Horsley covers the three land parcels D6, D7 and C16 (See our Appendix A1.6 below for further details). The first two (D6 & D7), covering over 90% of the settlement area of East Horsley, are classified by Pegasus as High Sensitivity Green Belt. The third parcel, C16, covers the small Effingham Junction area of East Horsley and is classified as being Medium Sensitivity Green Belt.

1.4.7 Given that the large majority of the settlement area of East Horsley is classified by Pegasus as being High Sensitivity Green Belt, it is wholly inconsistent for them recommend that it should be inset from the Green Belt.

1.4.8 Since East Horsley meets the three Pegasus criteria for not insetting the settlement area and with a predominant Pegasus classification as High Sensitivity Green Belt, EHPC believes that the justification offered in the plan for the insetting of East Horsley must be considered unsound.

1.5 Is the policy effective? - deliverable over its period and based on effective joint working.

1.5.1 Whilst the authority to inset a settlement from the Green Belt is clearly available to GBC under the local plan process, as we have demonstrated above such insetting is unnecessary for the achievement of objectively assessed development needs. Moreover, significant harm is also likely to arise from the insetting of East Horsley as a result of the more intensive development permissible under non-Green Belt planning rules. Such harm may include:

a) Harm to the openness of the Green Belt across a low-density settlement area;

b) Harm to the purposes of the Green Belt - Pegasus have assessed three defined purposes as currently being achieved;

b) Harm to the character of the rural village settlement;

c) Harm to local biodiversity and loss of wildlife corridors.

1.5.2 ‘Effective joint working’ has not been in evidence during the plan preparation. EHPC objected to the proposed insetting of East Horsley at three separate consultations. At no time did officers of GBC attempt to engage directly with EHPC to discuss the proposed insetting, nor suggest any alternatives. Joint working has been non-existent.

1.5.3 Since the proposed insetting policy offers no benefit in terms of meeting housing needs and is likely to cause significant harm to both the openness and purposes of the Green Belt and to the rural character of the village, on the effectiveness test EHPC believes this policy is unsound.

1.6 Is the policy consistent with national policy? – able to achieve sustainable development in accordance with the Framework’s policies.

1.6.1 NPPF paragraph 86 states: “If it is necessary to prevent development in a village primarily because of the important contribution which the open character of the village makes to the openness of the Green Belt, the village should be included in the Green Belt.”
As discussed in Paragraph 1.4.4 earlier, East Horsley does meet the three criteria as tested by Pegasus for remaining within the Green Belt.

1.6.2 Moreover, as discussed in Paragraph 1.4.6 earlier, the large majority of the East Horsley settlement area is classified as High Sensitivity Green Belt in the Pegasus Green Belt Purposes Assessment.

1.6.3 On these grounds EHPC contends that the open character of the village does make an important contribution to the Green Belt in this area. As such it is contrary to NPPF paragraph 86 to propose the insetting of East Horsley.

1.6.4 NPPF paragraph 155 on Plan Making states:
“Early and meaningful engagement and collaboration with neighbourhoods, local organisations and businesses is essential. A wide section of the community should be proactively engaged, so that Local Plans, as far as possible, reflect a collective vision and a set of agreed priorities for the sustainable development of the area, including those contained in any neighbourhood plans that have been made.”

1.6.5 As paragraph 1.5.2 above explained, there has been no such ‘meaningful engagement’ and therefore the insetting policy is also contrary to NPPF paragraph 155.

1.7 Overall assessment

1.7.1 On each of the inspector’s four criteria for testing the soundness of the policy, in proposing the insetting of East Horsley from the Green Belt, Policy P2 should be considered unsound.

1.8 Proposed modification to the plan:

How can the plan be modified to make it sound?

1.8.1 EHPC contends that the plan can only be made sound if East Horsley is removed from the list of villages proposed for insetting from the Green Belt under Policy P2. The East Horsley Neighbourhood Plan and the 37% expansion of the village settlement area as proposed in the plan together form an effective basis for ensuring the long term sustainable development of East Horsley.

Appendix 2:

EHPC hearing statement addressing the insetting of East Horsley

The following address was delivered by EHPC’s representative, Mr Peter Bennett-Davies, at the examiner’s hearing held in Millmead on 26th June 2018.

Sir, I should like to make some brief comments about the proposed insetting of East Horsley, supplementing the Statement submitted by East Horsley parish council in May.

Essentially, there are three reasons why insetting of East Horsley is unsound:

Firstly, in their Countryside Study Pegasus classify over 90% of the East Horsley settlement area as being High Sensitivity Green Belt. If it is so sensitive, where is the logic in proposing it to be inset?

Secondly, the justification provided by Pegasus for insetting is flawed. They take a 3 step approach but at each stage their analysis contains material errors. In Step 1 they classify East Horsley as being a Medium Density settlement but at 8 dph, it must surely be Low Density. In Step 2 they say East Horsley is mainly surrounded by defensible green belt boundaries, whereas the figure measured by our planning mapper comes to just 39% of the total settlement boundary. And in Step 3 Pegasus claim that East Horsley is not surrounded by open areas whereas in actuality 61% of the settlement boundary adjoins open land.

Thirdly, insetting is unnecessary for meeting the objectively assessed housing needs of East Horsley. Five sites are allocated in the local and neighbourhood plans, sufficient to meet the assessed needs of 170 homes by 2033. Together with a high historic rate of windfalls, (110 homes in the last 15 years), plus a 37% expansion in the settlement area...
proposed in the Local Plan, the OAN of East Horsley is likely to be substantially exceeded over the lifetime of the local
and neighbourhood plans. None of this development is dependent upon the village being inset from the Green Belt.

The parish council believes that the site allocations in the local and neighbourhood plans, combined with an expanded
settlement boundary, form a sound basis for the long term sustainable development of East Horsley. Insetting is
unnecessary and risks harm to the character of the village.

Accordingly, East Horsley parish council believes, sir, you should find the proposed insetting of East Horsley to be
unsound.

Comment: MM23 - LPMM18/2899  Respondent: Ray Corstin 8930209  Agent:

MM23 In (9) strategic sites should not be exempt from a requirement to reflect locally distinct patterns and character of
development. This would be compatible with sites creating their own identity and would avoid “could be anywhere”
estates.

MM23 (D1) does not incorporate sufficient elements of deleted policy (D4) to address character adequately.

MM23 Promotion of “green approaches” should clearly include protecting and enhancing greenness along transport
corridors within settlements, as well as tree screens around the edge of settlements.

MM23 If (D1) does not capture the qualities, including landscape, to be protected along the Wey Corridor then MM29
should be amended to specifically provide for this.

MM23 should place great emphasis on height and bulk of development given the importance of views into and out of the
town, including from the AONB. A height limit should be introduced given the importance of the rise and fall of the
downs in the urban landscape.

Attached documents:

Comment: MM23 - LPMM18/2907  Respondent: Ray Corstin 8930209  Agent:

MM23 – POLICY D1. Guildford Borough Council, as a major landowner in the centre, must accept the same obligations
as imposed on the other strategic site owners by the council as planning authority.

In conclusion I would point out that the Inspector raised a considerable number of questions about the sustainability,
viability and reasoning of Guildford Borough Council’s Local Plan and, despite modifications, these questions have not
been addressed adequately in the modifications proposed by the Council in this consultation.

The Plan is unsound and should be re-examined.

**Comment:** MM23 - LPMM18/4341  **Respondent:** WAAG (Wisley Airfield Action Group) 8968961  **Agent:**

**MM23 D1 Removal of sustainability expectations**

The important expectations on developments of 25 dwellings or more in D1(2) are removed without any justification. The submitted text provided a series of requirements which met the social dimension of sustainable development in national policy. As submitted, the text is sound and so cannot be changed at this stage.

The replacement text is less precise, for example, on community interaction, walking distances, active lifestyles, routes to nearby areas for pedestrians and cyclists.

**MM23 D1 para 13-15 Masterplan for fWA**

The masterplans proposed suffer from two main defects:

(i) They are produced by and approved by the developer. They do not have the status of supplementary planning documents or other local development documents and are not approved by the local planning authority. If the Council does not agree with them, it can do nothing. Notwithstanding that, para 17 requires planning applications to be consistent with the masterplans, so in those respects is determining the acceptability of the developer’s own application on its compliance with the developer’s own masterplan. That is allowing the developer to mark his own homework.

Developers can get masterplanning very badly wrong, as the Former Wisley Airfield appeal decision demonstrated.

(ii) The masterplans are required to respond to very vague criteria in para 16. Those are much less precise and useful than the expectations in the submitted D1(2). Almost any scheme could, in a developer’s eyes, meet para 16, even if it was a failure.

37 Policy D4 Deletion

The submitted policy D4 is sound and there is no rational basis upon which it could be unsound. No amendment is therefore justified.

Whilst some elements are incorporated into the main modifications for D1, other details such as (1)(d) ‘e street patterns, spaces around buildings, layout, grain, scale, massing, proportions, height and materials of surrounding buildings’ are omitted from the proposed text.

these will be subject to assessment by a Design Review Panel. The Masterplanning process shall engage with the local community”

(17) “Planning applications will be consistent with the Masterplans, which must be kept under review”

MM23 Policy D1 Addition at (5):

“New development shall be of a high quality and inclusive design, as per the Design Guide Supplementary Planning Document (SPD), and all new development will be required to address the following”

WPIL object to the reference in the Policy to the Design Guide SPD. It is not clear which SPD this refers to or whether this refers to an emerging SPD to be produced and is therefore ambiguous and unclear.

For example if this reference relates to the Residential Design Guide Supplementary Planning Guidance for example, this was adopted by GBC in 2004 and is therefore considerably out of date and was not produced to advise on the development or design of strategic sites.

The policy should therefore be amended to remove the unclear reference to an SPD and be amended to be clear on whether a new SPD is being proposed. It would also be positive for GBC to outline that the SPD would not apply to strategic sites which have specific policy requirements set out in D1 (15-17). WPIL consider this to be a minor change.

Attached documents:

Comment: MM23 - LPMM18/4353  Respondent: Patricia Wood 9237953  Agent:

MM23: Policy D1 dilutes the requirement for the social dimension of sustainability, making things easier for the developer, for example with regard to pedestrian and cycle routes and walking distances.

MM23: There should not be exemptions from design constraints. This would favour the developer over the general public.

MM23: No evidence is shown that recent case law such as "People over Wind" has been taken into account.

Attached documents:

Comment: MM23 - LPMM18/5206  Respondent: G4 residents association (Sir or Madam) 9238593  Agent:

MM23
D1 can we strengthen the need to insist on the use of the latest environmental heating systems and other issues that are important given the current fears over climate change. We seem to be concentrating on solar energy and ducting for digital connectivity. This is particularly important in the master plan for strategic sites when systems can be designed in rather than retro fitted. I can see this is covered in MM24 but surely applies to both?

Attached documents:

Comment: MM23 - LPMM18/5188  Respondent: David Reeve 9335041  Agent: 

Policy D1: Place Shaping

MM23 – OBJECTION D1-1

Policy paragraph 7 states that “Given the size, function and proposed density of the strategic allocations it may not always be desirable to reflect locally distinct patterns of development. These sites must create their own identity to ensure cohesive and vibrant neighbourhoods.” It may perhaps be argued that the first sentence is acceptable (though I would prefer that it more positively encouraged the style of new developments to reflect the existing distinct patterns). However, the second sentence is a complete non sequitur, and it unconditionally mandates that the allocated strategic sites must create their own identity. That has to be wrong, and it would free the developers of strategic sites from their reasonable obligations to reflect the context of the local area.

MM23 – COMMENT D1-2

Policy paragraph 13 should include and additional sentence as follows:

(e) facilitates the installation of charging units for electric vehicles.

Policy D4: Character and Design of New Development

MM23 – OBJECTION D4-1

This Policy seems to be eminently sensible, but has been deleted. Unless all its provisions have been fully included elsewhere, it should be retained in full.

Attached documents:

Comment: MM23 - LPMM18/4870  Respondent: Guildford Vision Group (John Rigg) 9531041  Agent: 

MM23 - Policy D1: Place shaping

GVG assumes that Guildford, as a borough, will need to grow to ensure its economic future. Thus it is essential the local plan will ensure delivery of high-quality amenity space, places and buildings. Paragraph 4.5.8e of the reasoned justification supporting policy D1 makes reference to the Corporate Plan (2018-2023) where the latter identifies the regeneration of the town centre and other urban areas as one of three strategic priorities in the 'place making' theme. The Corporate Plan is internally produced by the council. It is important that matters driving strategic priorities are placed front and centre in the Local Plan and a commitment is made by the council which cannot be subject to political change at a later date. Since issuing S3 for consultation, it is noted that Policy D4: Character and design of new development has been deleted with some of the policies transferred into D1, but not all of them.
There is no nowhere in the plan where there are any simple guidelines for mass and scale to protect Guildford in the absence of more carefully formulated policies. Whilst it is anticipated that an element of these should come through in the subsequent Development Management DPD, it would be detrimental to allow a policy vacuum to exist until these policies were adopted, which is some years away.

**Comment:** MM23 - LPMM18/4877  **Respondent:** Guildford Vision Group (John Rigg) 9531041  **Agent:**

### Appendix 2 - Policy D1: Place shaping

**Introduction**

4.5.1 The design of the built environment has a direct effect upon how places are used. The relationship between buildings, spaces and landscape as well as detailed design and materials are all relevant factors. Good design will influence how people move around our settlements, how they interact and how places make people feel. We place a high value on the importance of good design in the built environment and making places better for people. It is important and fundamentally affects people’s lives on a day to day basis.

4.5.2 The NPPF states that the creation of high-quality buildings and places is fundamental to what the planning and development process should achieve. Good design is a key aspect of sustainable development, creates better places in which to live and work and helps make development acceptable to communities. Urban design and architecture can contribute to health outcomes through encouragement of more active lifestyles. Development should be encouraged to create places that create mixed communities catering for the needs of different types of people, including the young and old, encourage walking and cycling, improve access to public transport, and ensure that new development connects with existing parks and open spaces for recreation. Building exteriors and public realm should be designed in a way that contributes to pedestrian friendly environments.

4.5.3 We need to accommodate growth over the plan period including the provision of sufficient residential and economic development in order to meet identified needs as outlined elsewhere in this Plan.

*The council need to accept responsibility for masterplanning the town centre and assist developers in others to deliver the plan.*
4.5.4 It will be important to ensure that new housing and employment areas are designed to respect the existing character of the borough, and create great places for people to live in or use. The development of the strategic sites offers the opportunity of creating their own identity and character.

4.5.5 Through detailed design considerations we can ensure that design quality is an important consideration in the planning process, but we also have an opportunity now to ensure strategic design considerations are in place. The following policy seeks to provide a strategic framework of requirements to achieve this, to be augmented through a more detailed design policy at a later stage.

**POLICY D1: Place shaping**

<table>
<thead>
<tr>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Who is the arbiter of good design as there is no evidence that GBC are capable of judging this?</td>
</tr>
</tbody>
</table>

| (1) All new developments must achieve high quality design and enhance the environment in which they are set. |

| (2) Residential developments of 25 or more dwellings should: |
| **(a)** provide a harmonious, integrated mix of uses, where appropriate, that fosters a sense of community and contributes to inclusive communities that provide the facilities and services needed by them. |
| **(b)** provide places for communities to meet and interact, such as play and recreation and other public spaces. |
| **(c)** be designed to facilitate and promote walking, providing a high-quality environment for pedestrians, and where possible allowing short walking distances to amenities. |
| **(d)** create places that are easy to get to and through, foster active lifestyles, are easy to understand and navigate, and feel safe during the day and night, and |
| **(e)** be designed to facilitate the delivery of high quality communications infrastructure to support sustainable modern living, and |
| **(f)** provide convenient and safe routes through the development and to nearby areas for pedestrians and cyclists. |

| It is noted that these matters have been struck out of the latest policy – surely, they are fundamental and should be included within 3 below. |

| All of these matters are fundamental in the town centre. The policies listed here should apply in the town centre through identifying regeneration areas as strategic sites. Commercial and Leisure Space also shapes spaces – so why is this left out? |

| (3) All new developments will be required to achieve high quality design that responds to distinctive local character (including landscape character) of the area in which it is set. Essential elements of place making include creating economically and socially successful new places with a clear identity that promote |

| ADD Schemes must make provision for Infrastructure facilities e.g. Health Care Facilities, Education Establishments and Cultural Facilities. |
healthy living; they should be easy to navigate, provide natural security through layout and design with attractive, well enclosed, and overlooked streets, roads and spaces with clear thought given to the interrelationship of land use to external space.

(4) All new development is expected to have regard to and perform positively against the recommendations set out in the latest Building for Life guidance and conform to the nationally described space standards as set out by the Ministry of Housing, Communities and Local Government (MHCLG).

(5) New development shall be of a high quality and inclusive design, as per the Design Guide Supplementary Planning Document (SPD), and all new development will be required to address the following;

<table>
<thead>
<tr>
<th>Distinct local character</th>
</tr>
</thead>
<tbody>
<tr>
<td>All new development will be designed to reflect the distinct local character of the area and will respond and reinforce locally distinct patterns of development, including landscape setting. Proposals will take account of local design guidance contained within conservation area appraisals, DPD’s, neighbourhood plans and SPDs.</td>
</tr>
</tbody>
</table>

This paragraph would not apply in several areas across the town centre and wider area as there is no distinct local character.

(6) Given the size, function and proposed density of the strategic allocations it may not always be desirable to reflect locally distinct patterns of development. These sites must create their own identity to ensure cohesive and vibrant neighbourhoods.

<table>
<thead>
<tr>
<th>Safe, connected and efficient streets</th>
</tr>
</thead>
<tbody>
<tr>
<td>All new development will be designed to ensure it connects appropriately to existing street patterns and creates safe and accessible spaces. Particular regard shall be given to maximise opportunities for pedestrian and cycle movement and the creation of a high-quality public realm.</td>
</tr>
</tbody>
</table>

Should this cover modal separation wherever possible.

<table>
<thead>
<tr>
<th>Network of green spaces and public places</th>
</tr>
</thead>
<tbody>
<tr>
<td>All new development will be designed to maximise the opportunity for and linkages between green spaces and public</td>
</tr>
</tbody>
</table>
places and include high quality landscaping that reflects the local distinctive character.

**Crime prevention and security measures**

(10) All new development will be designed to reduce opportunities for crime and antisocial behaviour.

**Access and inclusion**

(11) All new development will be designed to meet the needs of all users, this includes the setting of the building in the wider environment, the location of the building on the plot, the gradient of the plot, transport infrastructure and public realm.

**Efficient use of natural resources**

(12) All new development will be designed with regard to efficient use of natural resources including passive solar gain to maximise the use of the sun’s energy for heating and cooling. *Not clear should does this cover PV cell arrays.*

**Infrastructure to create smart places**

(13) All new development will be designed in a manner that:

(a) supports technological and digital advances, including the provision of sufficient ducting space for future digital connectivity infrastructure;

(b) seeks to achieve high quality digital connectivity, enabling Fibre To The Premises (FTTP) where practical;

(c) enables mobile connectivity within the development;

(d) provides access to services from a range of providers.

(14) Further innovation and provision for 5G, Wifi and other technologies will be encouraged.

**Masterplans for strategic sites**
(15) Developers will be required to produce Masterplans for Slyfield Area Regeneration Project (A24), Gosden Hill Farm (A25), Blackwell Farm (A26) and the former Wisley airfield (A35) and these will be subject to assessment by a Design Review Panel. The masterplanning process shall engage with the local community.

Add that Policy S3 Town Centre should be also considered as a Strategic Site and that the Council and Partners is required to produce a Masterplan covering a development programme for next 15-20 years.

Why is North Street Left out as it appears as a Strategic Site 4.1.9?

Also Masterplans for Strategic sites need to accommodate infrastructure resulting from Transforming Guildford's town centre and future continues - “We have also commissioned David Lock Associates to produce a Strategic Development Framework, which will look at overall high level master planning for strategic sites in the borough, including their connections to and from the town centre.”

(16) In order to ensure future cohesive and vibrant neighbourhoods, they must demonstrate how the development responds to the immediate context as well as;

(a) Creates functional places
(b) Supports mixed use tenures
(c) Includes successful public spaces
(d) Is adaptive and resilient
(e) Has a distinctive character
(f) Is attractive
(g) Encourages ease of movement
(h) Creates a sustainable environment in relation to access to services and facilities

Strengthen Adaptive and Resilient to include phrases that building can be repurposed or their use changed without major impact on the surrounding built environment

(17) Planning applications will be consistent with the Masterplans, which must be kept under review.

Use of Design Review Panel

(18) In addition to the strategic sites, the Council will expect other large schemes to be subject to assessment by a Design Review Panel.

Public consultation will also be required as part of this process, including consultation and engagement as part of the design process.
### Villages

(19) Proposals for new development within villages will have particular regard to;

(a) The distinctive settlement pattern of the village and the important relationship between the built development and the surrounding landscape

(b) Important views of the village from the surrounding landscape

(c) Views within the village of local landmarks

### Ash & Tongham

(20) In order to avoid piecemeal development and to protect and enhance the existing character of Ash & Tongham and Ash Green, proposals within the area will have particular regard to;

(a) The relationship and connectivity with the existing urban area

(b) The relationship and connectivity between allocated sites in different ownerships

(c) The existing character of Ash & Tongham and Ash Green

(d) The future urban edge and its relationship with the surrounding countryside at the allocated site’s boundaries

### Definitions

4.5.6 Local landmarks are prominent buildings within the village such as churches, village schools, public houses and war memorials. This is not an exhaustive list and does not exclude other buildings being referred to as local landmarks as it will differ between villages. Accessible places are those where the public would reasonably have access, and which make provision for safe and convenient access by people with disabilities.

### Reasoned justification

4.5.7 It is important that we set out how we will plan positively to achieve very high-quality design for all developments. The NPPF requires the inclusion of a robust policy for design quality and states that permission should be refused for development of
poor design that fails to take opportunities available for improving the character and quality of an area and the way it functions. This policy forms the strategic element with more detailed policy to follow as we prepare the Development Management Policies DPD.

4.5.8 We want to create places that we can be proud of, that are inclusive and promote community and healthy living. We are keen to encourage a mix of uses, particularly on larger sites, but also on smaller sites. This provides the potential to create places where services and facilities are readily accessible to residents, in particular through walking or cycling. We want to create places that allow access to facilities and support the use of sustainable modes of transport.

The council need to accept responsibility for masterplanning the town centre and assist developers in others to deliver the plan.

4.5.8a We will expect development to respond to local character and history, reflecting the identity of its context whilst allowing for innovative and forward thinking design. This should include taking account of the existing grain and street patterns and established building lines, local building vernacular and considering the effects upon views, topography, natural features, skylines, landscape setting and character, and the setting of designated and non-designated heritage assets. The relationship of the built environment to the landscape must be taken into account and the transition from urban to rural character will need to be reflected in the design of new development with the green approaches to settlements respected. Balanced with this is a requirement to develop with flair, imagination and style, reflecting our position as a regional centre and County town. These design considerations will be set out in more detail in the Development Management Policies DPD. This approach is not confined to our urban areas but will be applicable throughout the borough.

The council need to accept responsibility for masterplanning the town centre and assist developers in others to deliver the plan.

4.5.8b Historically, development has been focused in the urban areas of Guildford and Ash and Tongham. The Plan identifies a number of strategic sites for development and we will expect masterplans for these sites to be produced as part of the planning process.

There needs to be a matching obligation placed on major sites in the town centre.

4.5.8c Development in the villages has been limited due to the Green Belt designation which previously washed over all but one of the villages. Fifteen villages are now inset from the Green Belt meaning that development is no longer, by definition, considered inappropriate. In accordance with national policy, the important character of these inset villages should instead be protected using other development management policies.
4.5.8d Regard will be had to various Council documents in assessing the design of new development to ensure that it provides positive benefit in terms of landscape and townscape character, and enhances local distinctiveness. This includes the Residential Design Guide SPD and the Landscape Character Assessment (LCA). The LCA explores how change through built development and land management can be guided to protect, conserve and enhance the landscape character of the borough from the rural countryside to the townscape in the urban centres.

4.5.8e Our Corporate Plan (2018-2023) identifies regenerating and improving Guildford town centre and other urban areas as one of three strategic priorities supporting its “Place Making” theme.

Development within Guildford Town Centre will need to have regard to a very particular set of circumstances and this policy should be read in conjunction with Policy S3: Delivery of development and urban regeneration within Guildford Town Centre.

4.5.8f Innovation is a fundamental theme of the Council’s Corporate Plan and the creation of smart places infrastructure across Guildford is a priority. In this regard, the Plan identifies the need for potential future technological and digital advances to be taken into account in planning, regeneration and development decisions.

The Town Centre as a totality needs to be designated as an a Strategic site that needs masterplanning

4.5.8g The greater part of urban Guildford has good broadband and mobile phone signal connectivity. However, digital connectivity has been identified as a challenge by business, particularly in rural areas. Furthermore, because of the reliance on copper wire connections from street cabinets for many subscribers, download and upload speeds vary greatly.

Infrastructure of all types is the biggest issue facing Guildford. Proposals to address all Infrastructure issues are required.

4.5.8h The Council considers it essential that new development is planned and designed to enable appropriate digital infrastructure and to be at the forefront of advances in broadband technology. Doing so will help ensure that Guildford borough remains a highly attractive location for businesses and residents alike and development supports delivery of the Government’s Industrial Strategy.

Water, power and flooding also need masterplanning

4.5.8i A flexible, but ambitious approach is regarded as appropriate in achieving development that supports innovation and is responsive to the rapid rate of change in relation to digital technology. The provision of FTTP is viewed a desired default
technology, however it is recognised that this may not be practical in all cases. Similarly, the Council’s aspiration is that connectivity speeds of at least 1Gbps offered by full, symmetric FTTP could be achieved. FTTP and high-quality connectivity will thus be encouraged in relation to new development, and particularly at development of major residential and employment sites.

4.5.8j The Council will be working closely with external strategic partners like Superfast Surrey, and Network Rail to optimise fibre network interventions, including enabling the use of “dark” (unlit) fibre and to promote further innovations relating to improving digital connectivity.

Comment: MM23 - LPMM18/5589  Respondent: F McHugh 10299041  Agent:

MM23 In (9) strategic sites should not be exempt from a requirement to reflect *locally distinct* patterns and character of development. This would be compatible with sites creating their own identity and would avoid “could be anywhere” estates.

MM23 (D1) does not incorporate sufficient elements of deleted policy (D4) to address *character* adequately.

MM23 Promotion of “*green approaches*” should clearly include protecting and enhancing greenness along transport corridors within settlements, as well as tree screens around the edge of settlements.

MM23 If (D1) does not capture the qualities, including landscape, to be protected along the *Wey Corridor* then MM29 should be amended to specifically provide for this.

MM23 should place great emphasis on height and bulk of development given the importance of views into and out of the town, including from the AONB. A *height limit* should be introduced given the importance of the rise and fall of the downs in the urban landscape.

MM23 – POLICY D1. Guildford Borough Council, as a major landowner in the centre, must accept the same obligations as imposed on the other strategic site owners by the council as planning authority.

In conclusion I would point out that the Inspector raised a considerable number of questions about the sustainability, viability and reasoning of Guildford Borough Council’s Local Plan and, despite modifications, these questions have not been addressed adequately in the modifications proposed by the Council in this consultation.

The Plan is unsound and should be re-examined.

Attached documents:

**Comment:** MM23 - LPMM18/5497  **Respondent:** Guildford Greenbelt Group (Susan Parker) 10799425  **Agent:**

**MM23 D1 Removal of sustainability expectations**

The important expectations on developments of 25 dwellings or more in D1(2) are removed without any justification. The submitted text provided a series of requirements which met the social dimension of sustainable development in national policy.

The replacement text is less precise, for example, on community interaction, walking distances, active lifestyles, routes to nearby areas for pedestrians and cyclists.

**MM23 D1 para13- 15 Masterplan**
The masterplans proposed suffer from two main defects:

(i) They are produced by and approved by the developer. They do not have the status of supplementary planning documents or other local development documents and are not approved by the local planning authority. If the Council does not agree with them, it can do nothing. Notwithstanding that, para 17 requires planning applications to be consistent with the masterplans, so in those respects is determining the acceptability of the developer’s own application on its compliance with the developer’s own masterplan.

(ii) The masterplans are required to respond to very vague criteria in para 16. Those are much less precise and useful than the expectations in the submitted D1(2). Almost any scheme could, in a developer’s eyes, meet para 16, even if it was a failure.

**Policy D4 Deletion**
The submitted policy D4 is sound and there is no rational basis upon which it could be unsound. No amendment is therefore justified.

Whilst some elements are incorporated into the main modifications for D1, other details such as (1)(d) ‘e street patterns, spaces around buildings, layout, grain, scale, massing, proportions, height and materials of surrounding buildings’ are omitted from the proposed text.

**Comment:** MM23 - LPMM18/1956  **Respondent:** Mr Christopher Parker 10955713  **Agent:**

This comment relates to MM23

MM23 (15) introduces the requirement for Developers of Strategic Sites to produce Masterplans and states that "**the master planning process shall engage with the local community**". It is essential that MM23 (15) also states who will set and independently validate the parameters and outcomes of this very important engagement process with the local community. If the engagement process is not managed competently and with integrity the goodwill and faith of the local community will be lost.
MM23 (16) lists various criteria that Developers must address in formulating their Masterplans. Conspicuous by its absence from the list is any specific mention or reference to a cohesive *transport infrastructure*. At the very outset of the local planning process GBC made it clear in the Draft Local Plan published in 2014 that appropriate infrastructure is central to Guildford's continuing prosperity (para 2.15) and that ensuring the Borough will have a strong infrastructure is at the very top of visionary ambitions for Guildford (para. 3.2). So, at the very least, Developers should be required to identify in their Master Plans how the plans satisfy GBC ambitions in respect of transport infrastructure. Otherwise how can the local community engage meaningfully in the process?

The Plan is unsound and should be re-examined.
**Comment: MM23 - LPMM18/2584  Respondent: Inger & Ron Ward 10959265  Agent:**

MM23 In (9) strategic sites should not be exempt from a requirement to reflect **locally distinct** patterns and character of development. This would be compatible with sites creating their own identity and would avoid “could be anywhere” estates.

MM23 (D1) does not incorporate sufficient elements of deleted policy (D4) to address **character** adequately.

MM23 Promotion of “**green approaches**” should clearly include protecting and enhancing greenness along transport corridors within settlements, as well as tree screens around the edge of settlements.

MM23 If (D1) does not capture the qualities, including landscape, to be protected along the **Wey Corridor** then MM29 should be amended to specifically provide for this.

MM23 should place great emphasis on height and bulk of development given the importance of views into and out of the town, including from the AONB. A **height limit** should be introduced given the importance of the rise and fall of the downs in the urban landscape.

MM23 – POLICY D1. Guildford Borough Council, as a major landowner in the centre, must accept the same obligations as imposed on the other strategic site owners by the council as planning authority.

In conclusion I would point out that the Inspector raised a considerable number of questions about the sustainability, viability and reasoning of Guildford Borough Council’s Local Plan and, despite modifications, these questions have not been addressed adequately in the modifications proposed by the Council in this consultation.

The Plan is unsound and should be re-examined.

MM23(D1)

The requirement for the strategic sites to be sustainable for residents who need to walk or cycle and cannot rely on cars to transport them has been reduced in the amended Plan. It cannot be right to propose development which might well exclude a portion of the population who do not wish to or can’t rely on motor transport to socialise or travel to work (I.e cycle to a station or place of work). These factors should be a significant consideration/requirement in this policy.

This policy states the constraints on design should not be considered in respect of Strategic sites. This is wrong. The Council should commit to a standard of design to protect the borough as a whole.

The changes to Policy D1 play down some vital social requirements, set out in national policy, that aim to make development sustainable. Provisions on walking distances and cycle routes have been deleted and replaced giving opportunity for developers to exploit with socially unsustainable building.

Similarly, Policy D4 should not have been deleted as it met the soundness test.”

I hope this is given due consideration and happy to discuss by phone.

**Comment: MM23 - LPMM18/4940  Respondent: John Harrison 11157345  Agent:**

MM23 Policy D1 (3) the original draft related to residential developments in excess of 25 units, but the redraft states it will apply to all development, whilst the original D4 has been deleted.

The new D1 is still headed Place Making and all the issues (e.g. "landscape character") really relate to major development. However, since it says all developments - and D4 seems to have been dispensed with - it seems to me that it needs at least a new subsection covering normal small-scale development, including extensions, that comprise 99% of applications. This is not a minor drafting matter. It seems a big omission so I wonder if this is by accident. But it seems yet another example of the modifications being made too hastily. It is important that these everyday developments relate to neighbouring and adjoining property in terms of scale, massing, materials and design; that they are not overbearing or otherwise adverse in their impact. As drafted it seems to me that none of these ordinary controls might be available; one could envisage a legal challenge around this. Since this omission relates to the vast majority of applications I believe the Inspector should reopen the examination so that the issues can be properly considered.

MM23 Policy D1 The council is a major landowner and controls and number of sites within the town centre. There is clearly a significant potential conflict of interest between its obligation to maximise the value of its estate and its role as planning authority. It should be clear that the council accepts the same obligations as any other landowner.

MM23 Policy D1 (12) refers to "including passive solar gain to maximise the use of the sun’s energy for heating and cooling". This appears a very muddled and dangerous statement. Passive solar gain is a double-edged sword because what may be beneficial in cool months can lead to overheating in the summer. This can lead to uncomfortable living conditions or the desire for air conditioning, particularly in commercial buildings or residential properties with large south facing glazed areas. There is a real risk that this well-intentioned idea could have the perverse effect of increasing energy demand for cooling particularly in flats and large houses aimed at overseas buyers and others not constrained by the cost of energy. There is a real danger that, as stated, this policy is seized upon for excessively large windows breaching many concerns of privacy and aesthetics, and ending up being counter-productive from a conservation perspective. To apply this policy effectively the Council would need to understand and apply criteria covering extent of glazing, type of glazing (modern glass has reflective coatings aimed at increasing the greenhouse effect) and aspect. Maybe this is available in the building regulations but if so the plan should make reference to this. To be effective year round there really needs to be solar screening on the southern elevation which would ideally be movable screening. The plan should require this for commercial buildings and flats. This is another example of how poorly thought through the plan is.

MM23

We support the inclusion of Policy D1, which proposes a comprehensive approach to the design of places. This policy provides a helpful framework to guide the development management process for both applicants and GBC, and we consider that its structure will assist in bringing forward planning applications for high quality places.

Points (15) and (16) relate specifically to strategic site masterplans. GBC has commenced work on these strategic masterplans and we have actively engaged with other stakeholders, landowners and GBC officers. We look forward to undertaking further work in this regard.

However, we would like to ensure that this work does not prejudice the progress of any planning application preparation work that may be ongoing, and also to clarify that the role of these masterplans is to act as strategic and high level framework documents, establishing key principles and suggestions rather than acting as a rigid approach to each site. This is particularly pertinent to sites with multiple landowners given that they could come forward in a variety of phases.

MM23 should place great emphasis on height and bulk of development given the importance of views into and out of the town, including from the AONB. A *height limit* should be introduced given the importance of the rise and fall of the downs in the urban landscape.

MM23 – POLICY D1. Guildford Borough Council, as a major landowner in the centre, must accept the same obligations as imposed on the other strategic site owners by the council as planning authority.

In conclusion I would point out that the Inspector raised a considerable number of questions about the sustainability, viability and reasoning of Guildford Borough Council’s Local Plan and, despite modifications, these questions have not been addressed adequately in the modifications proposed by the Council in this consultation.

The Plan is unsound and should be re-examined.

**Comment:** MM23 - LPMM18/5496  **Respondent:** Edward Bates 15448385  **Agent:**

MM23 In (9) strategic sites should not be exempt from a requirement to reflect **locally distinct** patterns and character of development. This would be compatible with sites creating their own identity and would avoid “could be anywhere” estates.

MM23 (D1) does not incorporate sufficient elements of deleted policy (D4) to address **character** adequately.

MM23 Promotion of “green approaches” should clearly include protecting and enhancing greenness along transport corridors within settlements, as well as tree screens around the edge of settlements.

MM23 If (D1) does not capture the qualities, including landscape, to be protected along the **Wey Corridor** then MM29 should be amended to specifically provide for this.

MM23 should place great emphasis on height and bulk of development given the importance of views into and out of the town, including from the AONB. A **height limit** should be introduced given the importance of the rise and fall of the downs in the urban landscape.

MM23 – POLICY D1. Guildford Borough Council, as a major landowner in the centre, must accept the same obligations as imposed on the other strategic site owners by the council as planning authority.

**MM23**- I support and appreciate the importance of Master Planning. This is especially important for Gosden Hill Farm (Policy A25) to ensure that no development takes place until agreement is reached between the developer and GBC on the key infrastructure requirements for the whole site covering the road network, accessibility, transport, and provision of both water and sewage.

However, this policy makes no specific reference to infrastructure nor to the means by which the Master Plan will be approved. This deficiency should be rectified and the Local Plan should require that a Master Plan for Gosden Hill Farm be approved before any development takes place.

I **OBJECT** to the removal of Policy D4. There is not enough of this policy reflected in the other parts of D1 etc. If this policy is deleted there is not enough protection of views and the open rural landscape of much of West Horsley. I object to the fact that protection and respect for the local environment and it's wildlife has significantly watered down, or removed. There is no reference to protecting the dark skies of our villages.

I **OBJECT** to D1 point 7 where larger development do not need to have regard to the local character - I believe that this is in contradiction to the NPPF, and will give developers a free hand to build what they like, where they like, in what form they like. There has always been guidance to respect local character, form and density and I do not believe that GBC have the right to take that away.

Reference to the SPD on Design needs supported - this Guide has not been published and we do not know when it will be available. Therefore reference should be made to the existing guids and also Neighbourhood Plans where they are in place and significantly along the route of approval.

Comment: MM23 - LPMM18/5109  Respondent: Elizabeth Maycock 15611361  Agent:

MM23 Policy 01 waters down the requirement for the social dimension of sustainability (eg walking distances and pedestrian and cycle routes). Development without proper consideration of these factors will lead to development without a social connection to its immediate surroundings or those nearby.

The above is amplified by the fact that strategic sites are to be exempt from design constraints.

There is no evidence that recent case law (such as "People over Wind" case in the European Court of Justice) has been taken into account.

Attached documents:

Comment: MM23 - LPMM18/4542  Respondent: Graham Vickery 15703937  Agent:

Element MM23 - Underestimates the social dimensions of sustainability - far too optimistic around walking distances and pedestrian and cycling routes.

Attached documents:

Comment: MM23 - LPMM18/6263  Respondent: Highways England (Patrick Blake) 15746081  Agent:

We look forward to working with all parties which include Guildford Borough Council and Surrey County Council to develop Masterplans for the strategic sites. This work will include establishing the deliverability of the identified transport mitigation packages that directly or indirectly relate to the SRN which is set out within the individual associated policies. This will likely be informed by outputs from subsequent updates to Surrey County Council’s SINTRAM model and also be used to inform updates to the Infrastructure Delivery Plan supporting the Local Plan. We further look forward to working towards and agreeing an updated Statement of Common Ground or similar with Guildford Borough Council.

Attached documents:

Comment: MM23 - LPMM18/4669  Respondent: David Roberts 17164033  Agent:

MM23

The changes to Policy D1 water down some vital social requirements, set out in national policy, that aim to make development sustainable. Provisions on walking distances and cycle routes and on large developments of over 25 units,
for instance, have been deleted and replaced with less specific text that gives a freer hand to developers to get away with socially unsustainable building.

Similarly, the deletion of Policy D4 is not justified as it met the soundness test.

**Attached documents:**

**Comment:** MM23 - LPMM18/2419  **Respondent:** Robyn Cormack 17296321  **Agent:**

Policy D4. 1(b), 1(m), 2(a) and b should be kept so the development respects existing open space views and takes account of increased air pollution and noise when considering planning proposals.
MM23 Place Shaping

paragraphs 6&7

The policy in paragraph 6 of this modification is welcome but it is negated by paragraph 7 for the proposed major sites. This may be ameliorated by the requirement in Para 16 that Masterplans for the major sites" shall engage with the local community" but it appears to be a loophole for unsuitable development.

paragraph 19 Villages.

The criteria listed are welcomed but there should be a fourth criterion added "d. the provisions of the relevant Neighbourhood Plan if one exists".

Comment: MM23 - LPMM18/4403  Respondent: Sally Novell 17413025  Agent:

Comment: MM23 - LPMM18/5221  Respondent: Katherine Ray 17424513  Agent:

The changes to Policy D1 dilute some vital social requirements and deletion of Policy D4 is not justified as it met the soundness test. Less specific text gives a freer hand to developers to get away with socially unsustainable building - a comment which can be read for many of your proposed changes.

I understand that many people who took place in feeding back to the first consultation have not been reminded that this new consultation is taking place, which surely brings its legitimacy into doubt.

Comment: MM23 - LPMM18/1758  Respondent: Wisley Action Group (Dr Malcolm Aish) 19627297  Agent:

3. MM23 reduces the requirements for sustainability on pedestrian and cycle routes and for design constraints. The recent case of 'People over Wind' needs to be taken into account

Attached documents:

Comment: MM23 - LPMM18/860  Respondent: Berkeley Homes Ltd (Olivia Forsyth) 20644961  Agent:

Policy D1 - Place Shaping

Berkeley acknowledges the importance of a "design" policy but questions the need to include a specific requirement for a Design Review Panel on all large schemes. The policy also requires that proposals within villages should have regard to:

a) The distinctive settlement pattern of the village and the important relationship between the built development and the surrounding landscape.

b) Important views of the village from the surrounding landscape

c) Views within the village of local landmark

The use of a Design Review Panel on schemes within villages, carries a risk that the above requirements are diluted and more bespoke and individual design influences from the Panel are introduced where they may not be appropriate. The requirement for the use of a Design Review Panel should be at the discretion of officers on a case by case basis rather than being a core requirement of "large" schemes.

Conclusions

Following the grant of planning permission for the replacement Howard of Effingham School and associated residential development on Lodge Farm, Effingham, there should be a review of the settlement and Green Belt boundaries around Effingham. The whole of Lodge Farm should be removed from the Green Belt and allocated for the replacement Howard of Effingham School and residential development, with the existing school sites on Lower Road and Browns Lane, allocated for residential development.

The current allocations of land within Effingham contradict the recent planning permissions and as such will result in a Local Plan that is out of date before it is even adopted.

Please do not hesitate to contact us if you would like to discuss any of the above points in more detail.
**Comment: MM23 - LPMM18/1017  Respondent: Jim Rattray 20658689  Agent:**

Following my attendance at the Guildford Vision meeting on 16 Oct I remain concerned about the modified local plan.

In particular I have the following comments:

- MM23 – POLICY D1. Guildford Borough Council, as a major landowner in the centre, must accept the same obligations as imposed on the other strategic site owners by the council as planning authority

**Comment: MM23 - LPMM18/1225  Respondent: Jim Allen 20674913  Agent:**

Page 37: D4; Character and Design of New Development.
Disagree with removal of this policy - it leaves the door open for inadequate low quality design with no consideration to quality of life of the residents.

**Comment: MM23 - LPMM18/1417  Respondent: Derek Carley 20690369  Agent:**

1. MM3- POLICY D1: GBC as a major landowner in the centre of the town, must accept the same obligations as imposed on other strategic site owners by the council as planning authority.

The Council have shown to me that hidden in its midst it has an awareness and understanding of what good and excellent looks like through the Guildford Design awards. Now it is desperately urgent that it transposes this into a meaningful Local Plan. A Plan that all Residents Businesses and local services in Guildford can aspire and look forward to. A plan that hopefully can save the future of this once beautiful place set amidst a designated Area of Outstanding Natural Beauty.

**Comment: MM23 - LPMM18/5936  Respondent: Dirk Mercer 20699553  Agent:**

MM23(D1)

The requirement for the strategic sites to be sustainable for residents who need to walk or cycle and cannot rely on cars to transport them has been reduced in the amended Plan. It cannot be right to propose development which might well
exclude a portion of the population, i.e those who do not wish to, or can’t rely on motor transport to socialise or travel to work (cycle to a station or place of work). These factors should be a significant consideration/requirement in this policy. 

This policy states the constraints on design should not be considered in respect of Strategic sites. This is wrong. The Council should commit to a standard of design to protect the borough as a whole.

**Comment:** MM23 - LPMM18/1715  **Respondent:** Stephen Rossides 20700577  **Agent:**

MM23 policy D1 (place shaping). Guildford Borough Council, as major landowner in the centre, must accept the same obligations as imposed on other strategic site owners by the council as planning authority

In summary:

The current draft of the Local Plan is unsound because:-

1. The revised Housing Need figures mean that much proposed greenbelt development is no longer justified, and the “exceptional circumstances” that are required as grounds to allow greenbelt development do not exist.
2. The Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited.
3. Proper planning of the town centre would help to promote more relevant sensitive development. The hastily added section is based on pre-Internet retail models and numbers.
4. There is no policy dealing with urban areas beyond the town centre such as the one where we live.
5. There are few concrete proposals for reducing congestion. Where there are any, these are outside Guildford’s control, like widening the A3, and therefore there is nothing really to prevent the major greenbelt development taking place irrespective of the congestion.

**Attached documents:**

**Comment:** MM23 - LPMM18/1739  **Respondent:** Karen and Marcus Browne 20700929  **Agent:**

MM23 In (9) strategic sites should not be exempt from a requirement to reflect locally distinct patterns and character of development. This would be compatible with sites creating their own identity and would avoid “could be anywhere” estates.

MM23 (D1) does not incorporate sufficient elements of deleted policy (D4) to address character adequately.

MM23 Promotion of “green approaches” should clearly include protecting and enhancing greenness along transport corridors within settlements, as well as tree screens around the edge of settlements.

MM23 If (D1) does not capture the qualities, including landscape, to be protected along the Wey Corridor then MM29 should be amended to specifically provide for this.

MM23 should place great emphasis on height and bulk of development given the importance of views into and out of the town, including from the AONB. A height limit should be introduced given the importance of the rise and fall of the downs in the urban landscape.
MM23 policy D1 (place shaping). Guildford Borough Council, as major landowner in the centre, must accept the same obligations as imposed on other strategic site owners by the council as planning authority

MM23 – POLICY D1. Guildford Borough Council, as a major landowner in the centre, must accept the same obligations as imposed on the other strategic site owners by the council as planning authority. In conclusion I would point out that the Inspector raised a considerable number of questions about the sustainability, viability and reasoning of Guildford Borough Council’s Local Plan and, despite modifications, these questions have not been addressed adequately in the modifications proposed by the Council in this consultation.

The Plan is unsound and should be re-examined.

Attached documents:
Comment: MM23 - LPMM18/2166  Respondent: Godalming Town Council (Andrew Jeffery) 20712257  Agent:

MM23 - Policy D1 - Place Shaping

Masterplans for strategic sites

(15) Developers will be required to produce Masterplans for Slyfield Area Regeneration Project (A24), Gosden Hill Farm (A25), Blackwell Farm (A26) and the former Wisley Airfield (A35) and these will be subject to assessment by a Design Review Panel. The master planning process shall engage with the local community.

If (A61) Aarons Hill - Urban Extension to Godalming remains within Policy D1 then it should be added to the list of those sites required to produce masterplans to be subject to review by a design review panel. Additionally the following should be added: "The Master planning process shall engage with the local community, including those communities within adjoining planning authority areas where development in Guildford Borough is likely to have a significant impact on that community."

MM23 (Policy D1) is waters down the requirement for the social dimension of sustainability (eg walking distances and pedestrian and cycle routes). Strategic sites are to be exempt from design constraints

There is no evidence that recent case law such as “People over Wind” has been taken into account

**Attached documents:**

**MM23 - Policy D1 Place Shaping**

2.13 Recommendations;

i. Retain the removal of the distinction between residential developments of 25 units or more and those smaller than 25 units;

ii. In (3) as proposed to be modified, include the need for environmentally successful new places as well as economically and socially, to reflect the three objectives in paragraph 8 of the NPPF;

iii. In (4), development should **conform** to the Building for Life guidance, not just “have regard to”;

iv. Part (5) of the proposed modified policy refers to the Design Guide SPD. This does not appear to have been prepared or published to date, so reference to it should be removed. Reference should therefore be made to the existing residential Design Guide (2004) which would be the default document;

v. In part (7), include wording from the NPPF paragraph 127 “are sympathetic to local character and history, including the surrounding built environment and landscape setting, while not preventing or discouraging appropriate innovation or change (such as increased densities)”, and delete reference it not always being desirable for strategic allocations to reflect locally distinct patterns of development;

vi. In part (15), masterplans should be required to conform to the wording in paragraph 127 of the NPPF (above);

vii. A threshold for the size of development to be submitted to a Design Panel should be included within (18) for clarity;

viii. Part (19) for “Villages” is supported. However, wording should be included to allow for important views of and within the village, and local landmarks to be identified within Neighbourhood Plans. Wording should also be included to ensure new developments have regard to heritage assets, and conservation area appraisals.
2.14 The increased detail of the modified policy is welcomed as it will enable a greater level of control over development in sensitive areas (such as the allocated sites in West Horsley, particularly where heritage assets are affected). It will also allow for locally important views and landmarks to be material considerations in assessing the design and layout of new developments, which will help to preserve the distinctive character of places.

2.15 There are some contradictions in the policy in relation to responding to local character and distinctiveness, but these relate to the larger strategic sites, and could be resolved through adoption of the NPPF wording. The adoption of the NPPF wording in paragraph 127 should ensure that strategic sites will not be exempt from a requirement to reflect locally distinct patterns and character of development. This could lead to individual sites creating their own identity which would be harmful and is not supported.

MM23 – POLICY D1. Guildford Borough Council, as a major landowner in the centre, must accept the same obligations as imposed on the other strategic site owners by the council as planning authority.

In conclusion I would point out that the Inspector raised a considerable number of questions about the sustainability, viability and reasoning of Guildford Borough Council’s Local Plan and, despite modifications, these questions have not been addressed adequately in the modifications proposed by the Council in this consultation.

The Plan is unsound and should be re-examined.

MM23 (D1) does not incorporate sufficient elements of deleted policy (D4) to address character adequately.

MM23 Promotion of “green approaches” should clearly include protecting and enhancing greenness along transport corridors within settlements, as well as tree screens around the edge of settlements.

MM23 If (D1) does not capture the qualities, including landscape, to be protected along the Wey Corridor then MM29 should be amended to specifically provide for this.

MM23 should place great emphasis on height and bulk of development given the importance of views into and out of the town, including from the AONB. A height limit should be introduced given the importance of the rise and fall of the downs in the urban landscape.

Comment: MM23 - LPMM18/4322  Respondent: Annmarie Shenton 20819521  Agent:

6 MM23, Policy D1: The requirement for the social dimension of sustainability (eg, walking distances, pedestrian and cycle routes) should not be watered down, as this proposed amendment would do.

Comment: MM23 - LPMM18/4363  Respondent: Martin Taplin 20820321  Agent:

Issue 2

I object to MM23/D1 paragraphs 15-17 on Masterplans in respect of two issues.

Issue 2a

Generally I think the wording of MM23/D1 is OK. However under point 15 (Masterplans for Strategic Sites), the matters for consideration only appear to relate to ‘on site’ issues.
I feel there is a major shortcoming in the wording of MM23/D1 that the policy does not contain reference to the need, as part of the Masterplanning process, for these major development sites (e.g. Gosden Hill, Blackwell Farm, etc) to take into account the importance of any new development successfully integrating with the surrounding area. I particular am concerned that the development of these major sites should not give rise to unacceptable consequences for the surrounding areas in terms of traffic and the impact on existing community facilities such as schools.

MM23 Policy D1

GBC, as a major landowner in the centre, must accept the same obligations as imposed on the other strategic site owners by the council.

Attached documents:

---

Comment: MM23 - LPMM18/4632  Respondent: Mark Rymell 20827297  Agent:

MM23 – the importance of Master Planning is appreciated and supported. This is especially important for Gosden Hill Farm (Policy A25) to ensure that no development takes place until agreement is reached between the developer and GBC on the key infrastructure requirements. However, this Policy makes no specific reference to infrastructure nor to the means by which the Master Plan will be approved..

Comment: MM23 - LPMM18/5024  Respondent: Mr Chris Britton 20839361  Agent:

As someone who lived in Guildford for almost 30 years, ran a business in the town, and still have my social life, church and shopping centred in Guildford, I have taken an interest in the new Local Plan and am very concerned at its current state, and believe the Main Modifications put forward do not make the Plan sound. This particularly applies to MM3 and MM23. My main concerns are;

- The Spatial Strategy does not grasp the opportunity to maximise the use of brownfield land in the town centre, which ends up resulting in unacceptable and unsustainable allocation of greenfield sites on the margins.

- The lack of a proper vision (masterplan) for the town centre means the whole Plan is back-to-front; if there was a proper masterplan in place for the central areas, and the associated infrastructure investment, then subsequent allocation of sites for housing and mixed use can be put in the right places, minimising sacrifice of greenfield development.

- Quality of the urban environment. I agree with the Inspector that, with the exception of the High Street, central Guildford is a disgrace - abandoned derelict sites, eye sore car parks, roads and footways in appalling condition, inconsistent use of lighting, street furniture and signs etc. which are of mixed quality and lack a cohesion in design. This should be corrected in a proper town centre design and masterplan policies.

- Transport; everyone knows that road traffic is the bane of the lives of residents, visitors, businesses alike, and no 'tinkering at the edges' or provision of more buses and one or two disjointed cycle lanes will solve the problem. Neither is relying on delivery by Highways England of some (yet to be agreed) improvements in the A3 a viable way out. The 'Solum' development of the station site is a travesty and misses the ideal opportunity to use that space creatively for improving the lot of rail travellers, and creating better connectivity between West and East sides of the town. The Borough Council should be brave and bold and go for radical transport solutions.

Attached documents:

Comment: MM23 - LPMM18/5247  Respondent: Sam McWilliams 20843617  Agent:

MM23 In (9) strategic sites should not be exempt from a requirement to reflect locally distinct patterns and character of development. This would be compatible with sites creating their own identity and would avoid “could be anywhere” estates.

MM23 (D1) does not incorporate sufficient elements of deleted policy (D4) to address character adequately.

MM23 Promotion of “green approaches” should clearly include protecting and enhancing greenness along transport corridors within settlements, as well as tree screens around the edge of settlements.
MM23 If (D1) does not capture the qualities, including landscape, to be protected along the Wey Corridor then MM29 should be amended to specifically provide for this.

MM23 should place great emphasis on height and bulk of development given the importance of views into and out of the town, including from the AONB. A height limit should be introduced given the importance of the rise and fall of the downs in the urban landscape.

MM23 – POLICY D1. Guildford Borough Council, as a major landowner in the centre, must accept the same obligations as imposed on the other strategic site owners by the council as planning authority.

In conclusion I would point out that the Inspector raised a considerable number of questions about the sustainability, viability and reasoning of Guildford Borough Council’s Local Plan and, despite modifications, these questions have not been addressed adequately in the modifications proposed by the Council in this consultation.

**Comment:** MM23 - LPMM18/5786  **Respondent:** Ptarmigan Land 20855201  **Agent:** Iceni Projects Ltd (Stuart Mills)

**MM23 – Policy D1**

2.6 With regard to the proposed new wording relating to local character, we note that section 6 of the policy states that all new development should be designed to reflect the distinct local character of the area and will respond and reinforce locally distinct patterns of development, but that this requirement appears to be contradicted by section 7, which indicates that it may not be desirable for the strategic allocations to reflect locally distinct patterns of development. This could result in unintended confusion as to how a decision maker should react, given section 6 as currently worded indicates that all development should reflect local character.

2.7 In order to resolve this apparent contradiction, we suggest that it would be helpful to make a minor adjustment to the updated wording of section 6 to indicate that where appropriate, new development should be designed to reflect the distinct local character of the area.

**MM24 – OBJECTION**

- Policy paragraphs 4, 5, 6 and 7 are good in their intent, but there will be many development sites in the borough where there is no neighbouring (C)CHP scheme, or where the scale of the development is too small to justify a new scheme. In these cases, the Policy should give explicit encouragement to the consideration of ground-source or air-source heat pump solutions, which are likely to be the most energy efficient of all heating schemes.

The intent of Policy paragraph 9 is generally welcomed, but it is not sufficiently ambitious to meet the current climate change threat (see the IPCC’s report “Global Warming of 1.5 °C” published on 6th October 2018, eg. paragraph C2: “Pathways limiting global warming to 1.5°C with no or limited overshoot would require rapid and far-reaching transitions..."
in energy, land, urban and infrastructure (including transport and buildings), and industrial systems. These systems transitions are unprecedented in terms of scale, but not necessarily in terms of speed, and imply deep emissions reductions in all sectors, a wide portfolio of mitigation options and a significant upscaling of investments in those options”). This Local Plan will be in place until 2034, and – while they might sound substantial – the proposed carbon emission reductions of 20% will not be sufficient to effectively address this serious global problem. Guildford must lead the way for other Councils to adopt forward thinking and essential sustainable development of all new building

Attached documents:

Comment: MM24 - LPMM18/5189  Respondent: David Reeve 9335041  Agent:

Policy D2: Sustainable Design, Construction and Energy

MM24 – OBJECTION D2-1

Policy paragraphs 4, 5, 6 and 7 are good in their intent, but there will be many development sites in the borough where there is no neighbouring (C)CHP scheme, or where the scale of the development is too small to justify a new scheme. In these cases, the Policy should give explicit encouragement to the consideration of ground-source or air-source heat pump solutions, which are likely to be the most energy efficient of all heating schemes.

MM24 – OBJECTION D2-1

The intent of Policy paragraph 9 is generally welcomed, but it is not sufficiently ambitious to meet the current climate change threat (see the IPCC’s report “Global Warming of 1.5 °C” published on 6th October 2018, eg. paragraph C2: “Pathways limiting global warming to 1.5°C with no or limited overshoot would require rapid and far-reaching transitions in energy, land, urban and infrastructure (including transport and buildings), and industrial systems. These systems transitions are unprecedented in terms of scale, but not necessarily in terms of speed, and imply deep emissions reductions in all sectors, a wide portfolio of mitigation options and a significant upscaling of investments in those options”). This Local Plan will be in place until 2034, and – while they might sound substantial – the proposed carbon emission reductions of 20% will not be sufficient to effectively address this serious global problem.

MM24 – OBJECTION D2-3

As currently drafted, Policy paragraph 10 and Definitions paragraph 4.5.30 provide developers of retail facilities with a complete waiver of responsibility for the climate change impacts of their developments. This is totally unacceptable, especially considering the profligate way in which many retail businesses blast warm air from their doorways into the street.

Attached documents:

Comment: MM24 - LPMM18/4936  Respondent: John Harrison 11157345  Agent:

MM27 MM24 I could find no reference to wind turbines or commercial solar power generation. The council should have a policy for where these can and cannot be sighted having regard to existing cable routes, landscape quality and other material factors: Another important area where the plan falls short. Similarly I could see no reference to fracking. We need to leave around 80% of proven hydrocarbon reserves in the ground to avoid catastrophic global warming. The borough is variously densely populated and of exceptional landscape quality. Together these are good reasons for a policy against fracking here. Another reason to reopen the enquiry.
Guildford Borough Council – Submission Local Plan: Strategy and Sites – Main Modifications

Thank you for allowing Thames Water Utilities Ltd (Thames Water) to comment on the above.

As you will be aware, Thames Water are the statutory sewerage undertaker for the whole of the Guildford Borough and the statutory water undertaker for the southern part of the Borough and are hence a “specific consultation body” in accordance with the Town & Country Planning (Local Planning) Regulations 2012.

We have the following comments on the proposed amendments:

MOD Ref MM24 Definitions para 4.5.20
We support the amended wording in relation to setting most challenging water efficiency targets.

Page 33: Policy D2; Sustainable Design, Construction and Energy.

The amendment should include ‘With care taken to ensure sufficient water is provided to flush sewers, too great a reduction in water usage will result in blocked sewers’. This number (volume of water) is an unknown but in Germany this was reported in 2012.

Note: https://www.theguardian.com/commentisfree/2012/apr/18/german-toilet-flushing-waterconservation

“While Britain frets about the drought, Germany can’t get enough of saving water. Germans are good at saving water, so good in fact that they have created a problem for their canalisaiton system: many pipes are clogged with grease, excrement and leftovers because they aren’t being flushed sufficiently with water. Especially in the summer, gutters in German cities can reek horribly. In some parts of the country, water suppliers even have to flush their pipes artificially with hundreds of thousands of litres of water.”

MM24 - Policy D2 Sustainable Design, Construction and Energy

2.23 Recommendations;
i. The proposed modification (2a) requires smaller developments to provide “proportionate information”. Some clarity is
to what “proportionate” means should be included;
ii. The original wording in (1)(c) to achieve the “lowest level of carbon emissions” rather than to reduce energy consumption should be retained;
iii. The original hierarchy set out in (6) should be retained;
iv. Modifications to (9) clarifies the required carbon emissions reduction target, which is supported.

Comments

2.24 The modifications to the policy provide a greater degree of clarity, but the requirements are less robust, particularly with the removal of the hierarchy in part 6. The use of the term “adequate consideration” for (C)CHP leaves the requirement open to argument.

Attached documents:

Comment: MM24 - LPMM18/6244  Respondent: Monique Harrison 20834945  Agent:

The UN Intergovernmental Panel on Climate Change (IPCC) Report was published on 8 October under the headline "12 years to limit climate change catastrophe" which is within the Plan period. The scientific consensus calls for "urgent and unprecedented changes" to limit the use of fossil fuels. The plan (MM1 S1 and MM24) in no way reflects the urgency or importance called for. The Inspector should reopen the examination to ensure that these latest findings are incorporated into the plan philosophy and that best practice towards sustainability is adopted. The crucial omission are policies aimed at reducing car usage which should not only be included in these MMs, but also MM9 (P2 Greenbelt development), MM14 (E2 Employment) and MM5 (H1 Homes for all) limiting private parking.

Attached documents:

Comment: MM24 - LPMM18/5814  Respondent: Bloor Homes 20855809  Agent: Turley (Clara Millar)

Main Modification 24

2.9 This modification relates to Policy D2: Sustainable design, construction and energy. We support the fact the Council has added more flexibility into this policy, particularly in relation to the sustainable development; renewable, low carbon and decentralised energy and carbon reduction sub-sections. Our representations to the Proposed Submission Local Plan in July 2017 expressed concerns that policies therein lacked clarity and flexibility and would subsequently compromise the viability of developments.

2.10 We consider these modifications will ensure that this policy does not prejudice the delivery of development throughout the plan period.

Attached documents:
Main Modification: MM25  Number of representations: 18

Comment: MM25 - LPMM18/3163  Respondent: The Guildford Society (Julian Lyon) 8561377  Agent:

Main Modification 25 – Policy D3 (Historic Environment)

The Society is alarmed in respect of the main modifications to Policy D3 (2).

This does not seem to us to convey the level of responsibility the Council should have for our heritage assets – particularly at issue in the Guildford historic town centre.

Paragraphs 184 to 202 of the new NPPF may appear to provide adequate reassurance; NPPF 2012, upon which this Local Plan is based, says:

“126. Local planning authorities should set out in their Local Plan a positive strategy for the conservation and enjoyment of the historic environment, including heritage assets most at risk through neglect, decay or other threats. In doing so, they should recognise that heritage assets are an irreplaceable resource and conserve them in a manner appropriate to their significance.”

There is no such strategy for conservation or enjoyment. There is no strategy for the heritage assets most at risk. Heritage assets are irreplaceable but this has been deleted from the policy.

It is hugely unfortunate that the Council has chosen to delay its Development Management Local Plan until 2020 or 2021. In the meantime, this revised wording is simply not strong enough to protect Guildford’s heritage assets.

The Development Management Local Plan will be examined under the new NPPF, but in the meantime, we are somewhat underwhelmed by the protection that the NPPF and Policy D3 will afford.

Attached documents:

Comment: MM25 - LPMM18/6029  Respondent: C Sheard 8562561  Agent:

MM25 Policy D3 Historic environment

I object most strongly to the watering down of Policy Paragraph 2 which contradicts all the additional hoops and incurred costs which those living in Listed Buildings and Heritage Assets are obliged to go through / bear which according to the rewording will now be undermined by inappropriate development on adjacent land.

Attached documents:

Comment: MM25 - LPMM18/5742  Respondent: Sarah Belton 8598561  Agent:

MM25 Again weak wording – ‘will be considered’ opens the door for historic/heritage sites to be developed. It needs defined conditions where consideration may be possible.

Attached documents:
Comment: MM25 - LPMM18/5346  Respondent: Helen Jefferies 8717921  Agent:

MM25

Object

(2) Leave as it is without current changes

Attached documents:

Comment: MM25 - LPMM18/45  Respondent: Surrey County Council (Mr. Tony Howe) 8798721  Agent:

The NPPF requires that Local Plans should set out a "positive strategy for the conservation and enjoyment of the historic environment" (para 185). The proposed modification reduces the positive conservation vision set out in the local plan and effectively proposes a case-by-case consideration of impact on heritage significance, rather than a strategic approach.

More importantly, the reliance the proposed modification places on "case law, legislation and the NPPF" ignores the ongoing development of professional approaches to heritage conservation, which evolve as greater understanding of the resource is achieved. Case law precedents in particular might be significantly outdated, especially when considering heritage assets such as historic landscapes, parks, gardens or 19th-20th century sites, which are relatively recent additions to the list of what we consider to be "heritage assets" and the where methodology for assessing character, significance and importance is still being refined. At the very least, the schedule of considerations in assessing the impact of development proposals upon heritage significance should include reference to "current professional standards and guidance" in addition to those given above.

The monitoring indicator will be difficult to implement. It does not define "loss", and "harm" is a subjective consideration. Excavating an archaeological site might be considered a "loss" by some due to its physical removal, but the resulting acquisition of hitherto unknown data about the site and historic environment of the borough could be considered to offset this, meaning a net result of "no harm". A demolition of an extension to a listed building might be considered a "partial loss", but if the extension has no significance then there is no concern. A more pragmatic and manageable monitoring indicator might be to catalogue the number of planning applications that involved impacts on heritage assets (buildings and archaeology) against the number where programmes of management and mitigation were successfully and satisfactorily completed and discharged.

Attached documents:

Comment: MM25 - LPMM18/417  Respondent: Mr Howard Turner 8819457  Agent:

The Green Belt should be regarded as an irreplaceable heritage asset. I therefore object to the proposed revision of wording to ensure that the absolute protection of this asset is retained.

</table>
Dear Sir,

Guildford is privileged to have thirty Grade I Listed Buildings inside the Borough.

Twelve of these Grade I Listed Buildings are churches with their remarkable, unique surroundings, which provide an important source of peace, tranquility and sanctuary from the world in which we live. These sites are accessible to all and provide a perfect haven for wildlife. Ancient canon law means the churchyards themselves are enclosed and so create small scale areas of wildlife protection, a compelling and significant source for the conservation of our country’s biodiversity.

Also, as is the case with the Grade I Listed Church in the village in which I live, it is sited at the top of a hill where the views over to Guildford are simply stunning!

Other heritage assets within the borough include a castle, chapels and historic country houses.

The modified policy, paragraph 2, does nothing to ensure the protection of these precious sites. In fact it opens the door to destruction of these irreplaceable settings and does not portray the level of pride and responsibility one would expect with such charges in one’s care.

With the over stretched resources of Historic England, it is no longer realistic to expect another body to step in to help preserve our country’s historic buildings and settings. It has become more crucial than ever to ensure these environments and assets continue to be valued and protected for generations to come and it is vital this is reflected in our local plan.

Please do not allow these proposed modifications for the Historic Environment.

Yours Faithfully

Janet Ashton

MM25 - Historic Environment

2.21 Recommendation;

i. The simplified wording of the policy is supported.

Comments

2.22 The modification is clearly in accordance with central Government policy, as it makes explicit reference to the NPPF. The NPPF provides relatively detailed policy control over developments impacting heritage assets, and therefore the modifications to the policy are supported.

Attached documents:
Main Modification: MM26  Number of representations: 19

Comment: MM26 - LPMM18/3164  Respondent: The Guildford Society (Julian Lyon) 8561377  Agent:

Main Modification 26 – Policy ID1 (Infrastructure)

The Society supports the amendment to ID1 (4).

All the more important that the Council brings forward town centre developments within its control, so that the Plan does not become unsound due to Grampian conditions leading to a shortfall in housing delivery.

The wording of Policy ID1 (5a) is somewhat odd but generally acceptable to the Society, as are the remainder of the modifications.

Attached documents:

Comment: MM26 - LPMM18/2813  Respondent: Harry Eve 8573793  Agent:

MM26/MM27

I note that the Local Plan preparation continues to proceed with inadequate and understated evidence for the infrastructure requirements that it will generate. An improved traffic model was promised but, at the time of writing, it has not been published and made available for public scrutiny.

Attached documents:

Comment: MM26 - LPMM18/1199  Respondent: Burpham Neighbourhood Forum (Jim Allen) 8581505  Agent:

Policy ID1: Infrastructure and Delivery

Para (4): The wording ‘if appropriate’ needs to be deleted and the word ‘should’ need to be changed to ‘shall’. The current wording leaves the door open for inadequate infrastructure supply as has occurred at Cranleigh within the Waverley Local Plan.

Para (5a to 8): The proposed wording provides too great an opportunity for developers to avoid payments towards infrastructure. This is likely to place an additional burden on the local authority to provide the infrastructure or mean that infrastructure is not provided. Stronger wording which denies developers the chance to escape their infrastructure responsibilities is needed in this policy.

Page 40: Reasoned Justification

We object to this wording on two grounds

1. The proposed wording is vague and does not contain specific dates for a review to take place. Neither does it name specific allocations to which these issues may apply. Also, alternative road arrangements are not defined. This is too open to interpretation. For this reason the wording is not strong enough to ensure that a Local Plan review will take place, potentially resulting in the development of many thousands of dwellings without the necessary supporting infrastructure,
leading to unsustainable development. The presence of this wording is itself a strong reminder of the Local Plan’s unsoundness in relation to infrastructure generally.

2. Based on the current proposed housing numbers and corresponding number of vehicles (please see hearing statement for calculations), 45,000+ additional vehicles are projected to belong to residents in the HMA area over the life of the Plan. Development on any site adjacent to the A3 prior to the Highways England implementing its currently unknown ‘A3 solution’ is unsound. There are already published significant delays to road improvements in the vicinity of the A3 through Guildford and M25 J10.

The current order of Highways England’s proposals is:-

a. The introduction of a Smart motorway on the M25, followed by;

b. The J10 improvements (project is some six months delayed in an 18 month time window), followed by;

c. Investigation and implementation of A3 ‘improvements’ between the A320 and the A31.

Thus it is conceivable that no development site adjacent to the A3 will have the required road improvements to make the Local Plan sound within the next 15 years. Unless Highways England steps up its game no A3 site will be sustainable or viable for 20 plus years.

Attached documents:

Comment: MM26 - LPMM18/1330  Respondent: Mr Richard D Jarvis 8599201  Agent:

Re para (40  Omit 'If appropriate' please.

Attached documents:

Comment: MM26 - LPMM18/1544  Respondent: Mr Richard D Jarvis 8599201  Agent:

Please can the intention behind (5a) be explained? How does this impinge on a developer's obligation to provide the infrastructure necessary to support a development?

Attached documents:

Comment: MM26 - LPMM18/6038  Respondent: Downsedge Residents' Association (Rosemary Morgan) 8601537 Agent:

• Lack of Adequate Transport Infrastructure to support three large Strategic Sites

The three large Strategic development sites (Blackwell Farm, Gosden Hill and Wisley airfield) would all result in additional traffic using the A3, which is already at breaking point (e.g. the A3 regularly jams and results in substantial
traffic flows through the town centre and residential urban area – the M25 / A3 improvements will only make matters worse). Such large-scale development sites should therefore not be included in the Local Plan until a substantial capacity increase to the existing transport infrastructure, notably the A3 through Guildford, is agreed. (Policy ID1)

We therefore ask that the Local Plan Examination be re-opened, in order to consider the consequences of the revised population forecasts, ensuring that Guildford has a “proper” town centre Masterplan and is provided with the improvements in transport infrastructure that it deserves.

On behalf of the members of Downsedge R.A., I therefore urge you to allow the Local Plan Examination to be re-opened.

The introduction to this policy states Historically infrastructure provision and upgrading has not always kept pace with the growth of population, employment and transport demands, and in parts of the borough some infrastructure is currently at or near to capacity, or of poor quality. The policy needs to be far more robust in seeking to plan infrastructure for the town centre where pollution, accidents and congestion are rife. Co-ordinated developer contributions are likely to be a suboptimal delivery mechanism. A true masterplan for Infrastructure, including alignment of Network Rail, Surrey County Council and the Highways Agency, is required to drive an investment strategy over several years. Sticking plaster solutions e.g. Network Rail’s proposed bridge works for the Farnham Road Bridge are a waste of funding and do little to address the town’s issues with the major bottleneck of the bridge continuing indefinitely. At Appendix 6 – is attached a report from Motion Consultants Ltd – ‘Guildford Gyratory, Highways Matters for Guildford Vision Group’ showing how a revision of the transport corridors in the town could provide major benefits, and much of the required resilience, for all forms of movement.

**Attached documents:**
Appendix 3 -- Policy ID1: Infrastructure and Delivery

**Introduction**

4.6.1 The timely provision of suitable, adequate infrastructure is crucial to the well-being of the borough's population, and of its economy. The Guildford borough Infrastructure Delivery Plan summarises the capacity and quality of existing infrastructure, including planned improvements. The non-site specific and more general infrastructure requirements are set out in the Planning Contributions Supplementary Planning Document 2017, which will be updated as required. Historically infrastructure provision and upgrading has not always kept pace with the growth of population, employment and transport demands, and in parts of the borough some infrastructure is currently at or near to capacity, or of poor quality.

**Policy ID1: Infrastructure and Delivery**

| (1) Infrastructure necessary to support new development will be provided and available when first needed to serve the development's occupants and users and/or to mitigate its otherwise adverse material impacts. To achieve this, the delivery of development may need to be phased to reflect the delivery of infrastructure. | **Should be modified to include reference to Masterplanning in areas of the Borough**

Should be modified to include reference to Masterplanning in areas of the Borough e.g. Strategic Sites and the Strategic Sites to Town Centre Links Study in that Masterplans will drive delivery plans with infrastructure addressed. |

| (2) The delivery of necessary infrastructure will be secured by planning condition and/or planning obligation | **And strategic integrated plans with key suppliers such as the Highways Agency, Network Rail, Surrey County Council and the M£ LEP??** The Council needs to be active facilitator of developing and delivering solutions. |

| (3) When determining planning applications, and attaching appropriate planning conditions and/or planning obligations, regard will be had to the delivery and timing of delivery of the key infrastructure, or otherwise alternative interventions which provide comparable mitigation. |

| (4) If appropriate, the imposition of Grampian conditions should be considered as a means to secure the provision of |
infrastructure when it is needed. If the timely provision of infrastructure necessary to support new development cannot be secured in line with this policy, planning permission will be refused.

(5) The key infrastructure on which the delivery of the Plan depends is set out in the Infrastructure Schedule at Appendix C, or any updates in the latest Guildford borough Infrastructure Delivery Plan. The Local Plan also includes land allocated for infrastructure.

Recommend an additional Policy

Policy 6)

In addition to supporting the Department for Transport’s Road Investment Strategy the council will integrate this policy into plans for the road network managed by Surrey County Council, including the provision of resilient and safe transport corridors in the town centre. This policy will for the town centre support:

- Separation of modes of transport
- Better transport interchanges
- Improve resilience of the road network
- Reduce pollution, accidents and congestion

Policy ID3 focuses on Sustainable transport for new developments many of its principles should be adopted for the Town Centre which will be a mix of new and existing developments.

(5a) Where an applicant advises that their development is unviable with the policy and infrastructure requirements, the Council will consider whether these costs were taken into account in the price paid for the site (or any agreement to purchase the site). If these costs were taken into account, as is required by the Council, but there are higher costs associated with the site that were unknown at this time, then the Council will take this factor into account when considering the viability and acceptability of the proposal.

(6) The non-site specific and more general infrastructure requirements are set out in the Planning Contributions.
Supplementary Planning Document 2011, which will be updated as required

(7) Where appropriate, we will collect the Community Infrastructure Levy from developments in the borough. We will use Community Infrastructure Levy receipts towards providing infrastructure to support development, and will facilitate the spending of up to one quarter of Community Infrastructure Levy receipts originating from each parish and from Guildford town on local priorities to support development.

(8) In allocating developer infrastructure contributions, we will prioritise Thames Basin Heaths Special Protection Area mitigation and avoidance in order to ensure that we meet our legal responsibilities.

Definitions

4.6.2 Infrastructure is a very broad term. The Planning Act 2008 as amended defines infrastructure as roads and other transport facilities, flood defences, schools and other educational facilities, medical facilities, sporting and recreational facilities, and open spaces. Guidance on the CIL advises that infrastructure also includes cultural and sports facilities, district heating schemes, police infrastructure and other community safety facilities.

Reasoned Justification

4.6.3 The Infrastructure Schedule that supports this Plan focuses on the following types of infrastructure:

- Strategic Road Network, Local Road Network, park and ride, Sustainable Movement Corridor, bus transport, active modes, and rail
- Schools, utilities, including electricity and gas distribution and supply, water supply and waste water treatment, flood risk minimising
- GPs and dental surgeries, hospital and community health care, libraries, cemeteries and sports facilities.

4.6.4 Maintenance of adequate infrastructure and expansion to meet growing needs is generally the Masterplanning and identifying need ahead of being required allows providers to plan ahead and deliver more.
responsibility of the relevant infrastructure provider. Most infrastructure providers work to statutory requirements and have set, short-term planning cycles and asset management plans. This is particularly the case with utility providers.

4.6.5 The Infrastructure Schedule sets out the key infrastructure needed, and the sources of funding, and is provided at Appendix C. This Schedule is also included in the Guildford borough Infrastructure Delivery Plan which supports the Local Plan. This provides more detail regarding future infrastructure needs, and will be regularly reviewed as further detail becomes available, particularly regarding infrastructure needed to support development later in the plan period. By allocating sites for new transport infrastructure, new primary and secondary schools, allotments, and a burial ground, we are facilitating the delivery of some of the infrastructure to support this Plan.

4.6.5a Through the planning system, the Council is able to ensure that there is adequate infrastructure in place to support new development. For instance, where applicable, developers will be required to demonstrate that there is adequate wastewater capacity and surface water drainage both on and off the site to serve the development, and that it would not lead to problems for existing or new users. Where there is an infrastructure capacity constraint, the Council will require the developer to set out what appropriate improvements are necessary and how they will be delivered and may use the planning system to ensure timely provision (e.g. through the imposition of Grampian-style conditions of appropriate phasing).

4.6.6 The law requires us to ensure that all planning obligations comply with three legal tests. These tests are that the planning obligation is:

Ø necessary to make the development acceptable in planning terms,

Ø directly related to the development, and

Ø fairly and reasonably related in scale and kind to the development.

These legal tests prevent us using planning obligations to fund existing infrastructure deficits, but they can be used where the proposed development would worsen the situation.
4.6.8a To ensure that the scale of development set out in the Local Plan can be delivered, we have considered the impact of the Plan policies and other requirements on the viability of development included in the Plan. On this basis, we require that these impacts and related costs are accounted for in the price paid for the site (or any agreement to purchase the site). Furthermore, in line with paragraph 57 of the NPPF, applicants will need to justify the need for a viability assessment at the application stage. Where an applicant advises that their development is unviable with the policy and infrastructure requirements, we will consider whether these were taken into account in the price paid for the site (or option on the site). If these had been taken into account, but there are higher costs associated with the site, we will consider negotiating.

4.6.6b In allocating developer infrastructure contributions, we will prioritise Thames Basin Heaths Special Protection Area mitigation and avoidance in order to ensure that we meet our legal duties. This should be optional for the council to impose as in many cases it is illogical.

4.6.7 We intend to introduce the Community Infrastructure Levy (CIL) to assist in funding infrastructure to support development. CIL must be spent on infrastructure needed to support development in the borough. With the exception of the "neighbourhood portion" of CIL which is passed on to the relevant parish councils, we will decide what infrastructure the CIL money is spent on. We may not use the CIL to remedy existing deficiencies in infrastructure provision unless those deficiencies would be worsened by new development. CIL funds can also be used to increase the capacity of existing infrastructure or to repair failing existing infrastructure, if that is necessary to support development.

4.6.10 We will allocate a "neighbourhood" portion of our CIL funds to parish councils in accordance with national legislation.
Parishes and Neighbourhood Forums that have an adopted Neighbourhood Plan will be allocated a larger proportion to spend on their priorities to support development (although CIL receipts cannot be released to the latter).

4.6.11 Guildford Borough Council is required to retain the neighbourhood portion for the areas of the borough with no parish council, which in Guildford borough is the Guildford urban area and Wisley parish. A working group will be established to prioritise the neighbourhood CIL spending for those areas. This will include ward councillors, existing community groups and neighbourhood forums.

Attached documents:

Comment: MM26 - LPMM18/595  Respondent: Thames Water (Thames Water) 17415521  Agent: Savills (Tasha Hurley)
MOD Ref MM26 Policy ID1: Infrastructure

We support the amended wording in principle, but are disappointed that the changes do not go far enough in relation to Thames Water’s response to the submission draft.

As previously indicated we consider that the additional text should be added to support Policy ID1: “The Local Planning Authority will seek to ensure that there is adequate water and wastewater infrastructure to serve all new developments. Developers are encouraged to contact the water/waste water company as early as possible to discuss their development proposals and intended delivery programme to assist with identifying any potential water and wastewater network reinforcement requirements. Where there is a capacity constraint the Local Planning Authority will, where appropriate, apply phasing conditions to any approval to ensure that any necessary infrastructure upgrades are delivered ahead of the occupation of the relevant phase of development.”

Local Authorities should also consider both the requirements of the utilities for land to enable them to meet the demands that will be placed upon them. This is necessary because it will not be possible to identify all the water and wastewater/wastewater infrastructure required over the plan period due to the way water companies are regulated and plan in 5 year periods (AMPs). Thames Water are currently in year 1 of the AMP6 period which runs from 1st April 2015 to 31st March 2020 and does not therefore cover the whole Local Plan period. AMP7 will cover the period from 1st April 2020 to 31st March 2025. The next Price Review, whereby the water companies’ AMP7 Business Plan will be agreed with Ofwat, will take place in 2019.

We therefore recommend the Local Plan include the following policy/supporting text:

“The development or expansion of water supply or waste water facilities will normally be permitted, either where needed to serve existing or proposed development in accordance with the provisions of the Development Plan, or in the interests of long term water supply and waste water management, provided that the need for such facilities outweighs any adverse land use or environmental impact that any such adverse impact is minimised.”

MOD Ref MM26 Policy ID1: Infrastructure

We support the amended wording at 13a in relation to ensuring that sufficient capacity is available within Ripley wastewater treatment works.

Attached documents:

Comment: MM26 - LPMM18/859  Respondent: Berkeley Homes Ltd (Olivia Forsyth) 20644961  Agent:

Policy ID1: Infrastructure and Delivery

Policy I1 sets out the Council's proposed approach to infrastructure delivery and cross-refers to Appendix C which is a schedule of infrastructure items. Infrastructure delivery is regarded as a crucial element of Local Plan making by government and is one of the five strategic policy areas identified by the NPPF (para 20) that Local Plans should cover, namely: "the provision of health, security, community and cultural infrastructure and other local facilities".

In our view, Policy I1 continues to take a narrow view of infrastructure provision without providing a proper reasoned justification for the items identified in Appendix C or their relationship to the overall Spatial Strategy for the Borough.

There is no reference to the Howard of Effingham School within Appendix C and the additional school places permitted within the existing planning permission for the redevelopment on Lodge Farm.

Attached documents:
Comment: MM26 - LPMM18/1226  Respondent: Jim Allen 20674913  Agent:

**Page 39: Policy ID1:**

Para (4): The wording of 'should' needs to be changed to "shall be used to secure the provision of infrastructure" currently this leaves the door open for inadequate infrastructure supply. Note; failed infrastructure supply has occurred at Cranleigh (Waverley Local Plan). Which had the houses built on appeal without the upgraded off site infrastructure.

Para (5a to 8): Will they consider the site unviable/ unsustainable or will they supply the money for the infrastructure? This paragraph should be enhanced by specifying open book and specifically requiring the need to seek the opinion of an independent financial viability specialist.

**Page 40: Reasoned Justification**

This is car free modal shift proposals are utter nonsense devoid of reality; 45,000 additional vehicles are calculated (via census date people to car ownership numbers) to enter the HMA over the life of the plan - Starting a site adjacent the A3, prior to the A3 solution being provided is irrational madness, as there will be, as occurred before elsewhere planning creep, “just a few more, just a few more”, and still no action, currently the schedule of Roads improvements are:

- Smart motorway M25. On site work expected 2020
  “From HE website: Why we need this scheme; The M25 junction 10/A3 Wisley interchange has been identified for improvements as it experiences heavy congestion on a daily basis. This causes queues and prevents access from Ockham Park junction (A3) to the M25 junction 10 and on to Painshill junction (A3) in both directions. A similar problem is experienced by traffic entering and exiting the M25 junction 10/A3 Wisley interchange.”
- The J10 project is currently some six months delayed in an 18 month time window.
- When J10 is completed the ‘assessment’ of the A3 between A320 - A31 will start, noting there are no planned improvements identified as of 14th October 2018 on the HE web site.
- The A3 - J10 to A320, is not even mentioned in ‘notes’ thus it is conceivable that Gosden Hill road access to the A3 nor the A247 North facing slips will not occur before 2035. Thus this A3 adjacent site will be unsustainable and is unsound with reference to its offsite infrastructure (Roads) unless Highways England step up their game - this site will be unsustainable and Unsound for another 30 plus years.

Alternative transport measures are not defined. However we note the admitted need for flexibility to review and amend the plan at the earliest opportunity once these issues have formerly recognised by the transport and water stake holders.

**Conclusion:**

While the amendments are welcomed in broad general terms – The Strategic polices (noting the missing Town Centre as a strategic classification) results in an overall failure to supply a positive requirement for (b) transport infrastructure... waste water and fails (d) to conserve and enhance the natural environment taking both Green Belt and ANOB merely ad hoc mitigation as opposed to providing readily available ‘Solutions’ to all problems created by this plan.

I find it disappointing that Thames Water has not been honest in respect of capacity in Local Plan documents, and future timing of upgrades to the sewer systems. Their true knowledge of the systems considering they took them over 40 plus years ago is as if they only took over last month. This lack of knowledge which has proved catastrophic in recent months in the Borough has led to:
1. Four sewer collapses.
2. Two catastrophic blockages and numerous smaller ones.
3. Engineers are unaware of the pipe diameters components within the system.

I believe Thames Water area manager or above should be called to the EiP in person so they can be questioned as to the viability of the Housing number proposals.

GBC are not apparently aware of their own historic statements on the subject. choosing to ignore serious problems down playing them to a level bordering on negligence. The Moorfields ‘improvements’ delayed for 15 years While GBC attempt to convince TW to move when they don’t want to, and still no further advance other than clear demonstration that Thames Water PLC has no intention paying for any move to a different location. The upgrading will never happen until a ‘final’ political decision is made as
to ‘move’ or ‘stay where it is’, at least ten years into the future. In respect of traffic infrastructure, poorly assessed road needs, inaccurate statistics and ‘very long term upgrades’ to the A3, not in reality occurring within the life of the plan between J10 and the A320 displays such distinct lack of cooperation by SCC and HE that it can be no longer called ‘cooperation’. Both Surrey Country council head of Roads and Highways England should be called to the EiP to display their true intentions and time scales. Much as everything in this Local Plan; ‘cooperation’ has an unusual non-standard definition of ‘informative’ and serious ongoing flat batteries in the hearing aids of the Guildford Planners in respect of responses from the community.

Their attitude is they ‘tell’ people what they are going to do, and when people point out any errors, they use the unspoken Americanism “Taken under advisement” the standard response to the community who request or advises the council to do something when the council never had or has no intention of doing anything!

This means this plan is totally unsound and cannot be made so by default of outside bodies controlling infrastructure and failing to act in a cohesive manner most probably due to a deliberate policy of ignoring advice from all quarters.

So, as the exceptional circumstance of sewers and roads exceeding design capacity and those responsible hiding their heads in the sand, mean none of ‘X’ number homes can be built with causing the contravention of para 92 (c) of the 2018 NPPF (sic) “Guard against the unnecessary loss of valued facilities and services, particularly where this would reduce the communities ability to meet its daily need”. For sewers will flood the streets (as is already occurring Ockham, West Clandon and Guildford Town Centre) and cars will remain stationary on all roads (also already occurring due to failed infrastructure.)

I end with a formally request that the EiP is reopened to allow myself and other interested parties to revisit the Housing numbers as promised on day 3 session 3 and subsequent removal of the oversupply of sites and undersupply of infrastructure in public session.
2.3.2 Environment Agency

The Environment Agency response noted a number of concerns with the New Local Plan in its present form, specifically with reference to wastewater:

- The New Local Plan was found not to be consistent with the NPPF; paragraph 109, with reference to wastewater capacity issues and the potential impact on water quality and so was classified as unsound;
- Within the draft Infrastructure Delivery Plan (IDP) there was no evidence focused on environmental capacity and water quality, specifically with reference to sewerage infrastructure needs and impact on the WFD;
- The Environment Agency noted that the smaller allocated sites anticipated to be built within the first five years of the plan might be in advance of sufficient funding and infrastructure being in place, which would be inconsistent with paragraph 177 of the NPPF; and;
- To overcome these challenges the Environment Agency recommended the completion of a Water Cycle Study or equivalent assessment to assess the impacts on water quality and WFD objectives of proposed growth during the plan period to 2033.

Strategic policies

20. Strategic policies should set out an overall strategy for the pattern, scale and quality of development, and make sufficient provision\textsuperscript{12} for:

a) housing (including affordable housing), employment, retail, leisure and other commercial development;

b) infrastructure for transport, telecommunications, security, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat);

Parking Zone. The forthcoming parking review may provide an opportunity to consider permit eligibility issues, particularly for new developments in areas within the Controlled Parking Zone where existing residents’ demand exceeds the supply of spaces prioritised for their use.”

The highlighted words and phrases point at work that should have been done in preparing the Local Plan, and this woolly wording is inappropriate for a statutory strategic planning document.

The final sentence of that paragraph:

“The possible exclusion of new developments, and any other restrictions on permit eligibility, would operate outside of the planning system.” Is presumably a reference to other measures – maybe legal agreements, which would take two sides to agree. This, again, seems to be inappropriate in the GSDLP.

These Main Modifications make it all the more urgent to bring forward, positively, development in the Town Centre and the Guildford Urban Area to ensure the Local Plan can be kept on track through the Plan Period.

TRANSPORT STRATEGY

OBJECTIONS: There would be total gridlock at rush hours if this amount of development overall is allowed in our small village.

Attached documents:

Comment: MM27 - LPMM18/5852  
Respondent: Mr Gordon Farquharson 8571617  
Agent:

MM27 – 4.6.18a which follows the discussion in the Examination of the Local Plan gives us real concerns. I contend that the proposed two-way junction with the A3 in Policy A25 should be a 4 way
junction. I refute the suggestion that if the A3 Improvement Schemes do not take place, the traffic problems can be mitigated by other measures. GBC suggested at the Examination in Public that these could include the Sustainable Movement Corridor and the new railway station in Merrow. I do not accept that these mitigating measures - even if they are implemented - are likely to deliver the level of necessary mitigation to address the potential serious traffic problems in the area which underlines the critical importance of a 4 way junction with the A3 on the Gosden Hill Farm site.

In addition I contend that the Sustainable Movement Corridor is not sustainable or viable at all in view of the restricted nature of the roads between Burpham and the Town Centre along the A3100.

More comment on this can be found at MM35.

Attached documents:

Comment: MM27 - LPMM18/2814  Respondent: Harry Eve 8573793  Agent:

MM26/MM27

I note that the Local Plan preparation continues to proceed with inadequate and understated evidence for the infrastructure requirements that it will generate. An improved traffic model was promised but, at the time of writing, it has not been published and made available for public scrutiny.

Attached documents:

Comment: MM27 - LPMM18/5700  Respondent: Douglas French 8574369  Agent:

MAIN MODIFICATIONS MM27 MM41 MM48 Transport Strategy

I object that consideration of the full traffic implications of all these proposals have received such scant attention. With the neighbouring sites at Ockham and Gosden Hill the aggregate impact on traffic in Send Barns Lane and Send Road have simply not been appreciated, still less calculated. The authors of this part of the plan show all the signs of a lack of familiarity with what they are writing about, including in respect of non-vehicular transport routes. Clearly they do not understand the magnet effect of Woking especially Woking Station. Increased noise and nitrogen dioxide pollution will rise to intolerable levels for people living on those two roads, made worse by the impact of the proposed Clandon slip roads. None of this should happen unless and until an in depth study is made to measure the effects and establish whether there would be any ameliorating solutions. I strongly object to the cavalier approach of Guildford Council that it will sort out these matters later.

Attached documents:

Comment: MM27 - LPMM18/2249  Respondent: Leslie Brown 8586017  Agent:

MM27 MM41 MM42 and MM48 Transport Strategy
All of the above proposals will involve a considerable increase of traffic on roads which are already inadequate for the amount of traffic they carry and there are no proposals which will alleviate or improve the situation in the face of the concentration of building activity which seems unfairly to be focussed on Send.

GBC seem to be intent on joining Send to Ripley and changing them from villages into towns. I am also unclear as to who all this additional housing is for, because there is no industrial development which requires more people to live in the area and the type of housing proposed is not low cost housing which would be affordable to most. Furthermore no mention has been made of the number of people the Council is seeking to provide accommodation for.

Attached documents:

Comment: MM27 - LPMM18/3498  Respondent: Trans Lease Services (Mrs Lisa Scott) 8586625  Agent:

MM27, MM41, MM42 and MM48 Transport Strategy

The traffic implications for Send of Garlick’s Arch, Burnt Common, Clockbarn and Alderton’s added to the nearby Golden Hill and Wisley / Ockham are not adequately addressed by the A3 changes and the Clandon slip roads. GBC offer fine words but no proper assessment of the aggregate traffic impact on Send Barns Lane and Send Road as thousands more cars head to Woking every day, causing increased noise, nitrogen dioxide pollution, delays and gridlock.

Other Developments

This consultation only allows comment on main modifications and so excludes the chance to object again to 40 houses and a travellers’ site on Send Hill, 60 Houses at Clockbarn in Tannery Land and a 25% increase in the size of the Send Business Centre despite the Wey Conservation area. Added to the other housing sites and industrial space such heavy concentration in one village, which could be more evenly shared with 40, is unreasonable.

Attached documents:

Comment: MM27 - LPMM18/1550  Respondent: Michael R. Murphy 8589953  Agent:

MM27. MM41. MM42.and MM48 Transport Strategy.

Why have the effect of thousands more cars in an already heavily congested area not been taken into account?

The increased traffic for Send from Burnt Common Garlicks Arch,Aldertons, Clockbarn in addition to Gosden Hill and Wisley Ockham is not in any meaningful fashion addressed by the Road changes of the A3 and Clandon Slip Roads. They seem both the developers and GBC to offer narrative and not action.

This massive increase in traffic of all sorts heading to and from Woking along Send Barns Road and Send Road will cause horrendous noise, air pollution delays and gridlock.

I have three Grandchildren who live on SendBarns Road and I despair at how their lives will be affected.

Attached documents:
Traffic Snarl up

Should all the above mentioned and the formerly proposed developments go ahead, and the new London bound entry and exit slip roads to the A3 by the A247 bridge also be constructed, then traffic will be totally gridlocked around the A247/B2215 roundabout at Burntcommon, by the Shell petrol station/Little Waitrose. As the only access to and from Boughton Hall Avenue is just 50 metres or so from this roundabout, on to the B2215, I have serious doubts as to whether our residents will actually be able to get in or out of this Avenue, at rush hours particularly. Portsmouth Road will be jammed from Kiln Lane/Send Marsh Road to the roundabout; Clandon Road (A247) will be queueing probably from about West Clandon station to the A3 slip road, whilst Send Road will be solid with traffic for its whole length from the Old Woking roundabout. Traffic trying to exit the A3 from Guildford will be clogging up the whole of the 1/2 mile slip road to Burntcommon roundabout, and probably back on to the A3 itself. **Very, very dangerous!**

It seems to me that there has been very little, if any, real thought or planning given to the infrastructure problems that will occur due to all this development. What about lack of school spaces? And the local Villages Medical Centre? **There is only just about enough capacity in these facilities NOW.**

I attended the special Send Parish Council meeting at the Lancaster Hall on Tuesday 14th June 2016. Also present were Cllrs Paul Spooner and Matt Furniss, plus our local borough councillors Cllrs Mike Hurdle and Susan Parker (both of whom spoke against the Plan). The Hall was packed full of very angry local residents!! [text redacted: the text included a quote that was not wholly accurate] They emphasised this. I cannot help but wonder whether this was merely political assurances, given in order to appease the locals, or whether it will actually be written into the Local Development Plan as a positive legal requirement before planning approvals are handed out wholesale to hungry developers!!

I ask that a copy of this letter be passed on to the Government's Planning Inspector.

**Attached documents:**

**Comment: MM27 - LPMM18/3940  Respondent: Allen Fencing (Mr Paul Cope) 8598433  Agent:**

**MM27 / MM41 / MM42 / MM48 – Transport Strategy**

The transport / traffic strategy confirms that cycling routes need to be vastly improved and protected, as current ‘flow’ is not good enough

Regarding road (vehicle) traffic, the Transport Strategy is not robust and not truly reflective of the needs and concerns of our highways infrastructure

With so many recent developments (Skene Close in Send, Vision Engineering, Clockbarn/marina in Tannery Lane), the main road through Send has struggled

Having temporary lights has become a regular feature, and continues even today (4-way lights at the A247 junction to Old Woking, and along Portsmouth Road into Ripley)

Send is a VILLAGE, not a town – and the main road through Send regular gets clogged with traffic, and backs up most mornings and evenings – in both directions

The Local Plan attempts to address the issue of transport, but is inaccurate in several places (eg ‘on most local roads in urban areas and in villages, there is at least one footway, usually two’)

Other than the main routes out of the village (which are already under pressure), most roads are in fact lanes, often with no footways at all (eg Polesden Lane, parts of Vicarage Lane & Potters Lane)
Many other routes are lanes which cannot accommodate free-moving two-way traffic (Newark Lane, Burnt Common Lane, Rose Lane, Send Hill, Woodhill, Potters Lane, Church Lane, Vicarage Lane)

The existing bends around Potters Lane / Send Hill are already treacherous, with several blind corners and narrow apertures – these need attention already, not more traffic volume!

Overall, the slightest developments can create significant traffic, pollution, delays and backlogs, putting more pressure on people using ‘back roads’ (ie lanes) and clogging up the villages

In summary, the modifications are simply too much for the village of Send and Burnt common, that already suffer from increased traffic and congestion / pollution

Send has already taken on many developments (Skene Close, Vision Engineering, re-building Send school, Tannery Lane, Woodhill) as part of gentle but considered ‘in-filling’

ONS reports show that the actual levels of housing needs have been grossly over-estimated by the Council in its Local Plan

It is not appropriate to try to ‘absorb’ unused housing capacity needs from Woking

Noise levels are already uncomfortable, and it has been reported that nitrogen dioxide levels are rising. A loss of more countryside/Green Belt would exacerbate this

Abandoning the new A3 slip-road (policy A43a) would save money which could be better spent on other services for existing residents, who pay high levels of Council Tax

(such measures could include traffic-calming, road repairs and noise reduction)

Attached documents:

Comment: MM27 - LPMM18/5743  Respondent: Sarah Belton 8598561  Agent:

MM27 is a good addition, but needs to have public consultation included as part of the review process to keep the borough, county and central government honest, as we have already seen the impetus of the local plan is pro-development. Without this, it is probable that most developments would go ahead regardless of proper provisions being made.

Attached documents:

Comment: MM27 - LPMM18/1555  Respondent: Mr Richard D Jarvis 8599201  Agent:

The final sentence of the reasoned justification should be amended to read ‘a review of the Local Plan will be undertaken.’

Attached documents:

Comment: MM27 - LPMM18/2142  Respondent: Susan Greenman 8606081  Agent:
MM27, MM41, MM42 and MM48 - Transport Strategy

The traffic implications on Send from the proposed plans for Garlick's Arch, Burnt Common, Clockbarn and Aldertons added to nearby Gosden Hill and Wisley/Ockham are not being taken into account re the changes to the A3 and Clandon slip roads.

The impact from these developments on Send Barns Lane and Send Road will be huge. The roads in Send are already totally congested particularly during rush hour in the morning and evening. Send Road is now one of the main roads from Woking to the M25. Also from Guildford to Woking.

The increase in traffic will cause more chaos, noise, nitrogen dioxide pollution, gridlock and hazards.

Potters Lane, Send has now become a "Rat Run" in the morning and evening. Traffic starts at 5am and when there are problems on the northbound A3 (which is frequently) the traffic diverts down Potters Lane. This lane is in its name a "LANE" not a major road. It is narrow and has many bends some of which are blind and very dangerous. I have encountered huge lorries and it is only a question of time before there is a major accident and fatality. The Police I believe want this Lane shut off from the A3 due to the many accidents when drivers think it is the Ripley exit slip road. In fact there is now traffic using Potters Lane constantly all day long and throughout the night - often by taxi drivers.

I have written many times to the appropriate Councils and authorities on this specific problem - to no avail. We just have to wait for the accidents.

The increase in noise and pollution for the local residents in the Lane, is now a serious problem.

Attached documents:

Comment: MM27 - LPMM18/904  Respondent: West Clandon Parish Council (John Stone) 8609217  Agent:

Guildford Submission Local Plan: Strategy and Sites - Main Modifications

Thank you for the opportunity to respond to the consultation on the above.

West Clandon Parish Council has very grave concerns about many of the proposed main modifications within the proposed plan and the subsequent impact on increased traffic problems on The Street, West Clandon (A247) which is already totally inappropriate to be classed as an A road and experiences many difficulties.

The road does not have the capacity to carry the expected increase in traffic. Problems already include:
1. The sharp bend at the Lime Grove junction with The Street (A247) where traffic routinely exceeds the 30mph limit.
2. The dangerous junction with the approach road to Clandon Station where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump.
3. The site lines for the exit of the Onslow Arms car park.
4. The narrowness of the road near Summers.
5. Heavy lorries and buses being unable to pass each other in the narrow parts of the road without mounting the pavement.
6. The sharp bend near Clandon Regis.
7. The narrowness of the road at the Bull’s Head Public House.
8. The speed of traffic past Clandon Junior School and in places the narrow footpath for children walking to school.
9. The sharp bend with poor sight lines in either direction at the Church.
10. The lack of a continuous footpath through the length of the village
11. The speed of traffic
12. The classification as an A-road without it having the capability of an A-road.
Our concerns also include the following:

Policy S2 MM2
We believe the OAN included in the Plan may be overstated. We note the latest ONS household projections and current uncertainties over the methodology to be used in the calculation of the OAN. These issues must be fully explored and outstanding issues resolved before the housing need is finalised if we are to have any confidence in the figure adopted.

We also object to any unmet need for housing in the Woking area being added to the Guildford Plan when the review of the Woking Plan provides an alternative mechanism for correcting any shortfall within the Woking area.

Guildford has been obliged to introduce additional green belt sites in the early years of the plan. Should these prove to be unnecessary, Green Belt will have been damaged without good reason.

There will be greatly increased traffic flow because of the following modifications:

1. MM41. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247.
2. MM35 The development of 1800 houses at Gosden Hill.
3. MM44 The development of 120 houses (new site) at Alderton’s Farm, Send Marsh.
4. MM42 The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic.
5. A43a The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247. We object to the proposed opening of the Burnt Common Rds as this will direct additional traffic along an unsuitable road. In any event this should not be considered until the A3 widening is completed.

As an alternative to access to the A3 at Burnt Common further consideration should be given to South facing slip roads at Ockham Park which will have less negative impact on unsuitable local roads.

In any event Policy ID2 (MM27) generally gives insufficient assurance that developments will not be allowed before the A3 widening scheme is committed in that it appears to allow a series of incremental developments each in itself unlikely to make an already difficult situation much worse. Cumulatively we are concerned that the severe impacts envisaged will occur by stealth.

We are pleased to see allowance made for environmental and traffic mitigation measures on the A247 through Clandon. Funding for this scheme is specifically linked in the Plan to MM41 Garlicks Arch and MM42 Burnt Common. Other schemes likely to have an impact on the A247 include MM35 (Gosden Hill) and A35 (Wisley Airfield) which do not have such a condition at present. This should be rectified in the final plan.

We note however, that while it may be possible to implement measures which have a positive impact on traffic speed and vehicle/pedestrian safety there is no easy solution to the problems of increased traffic volume that the above developments will produce. The development of Park Lane/Merrow Lane as an alternative route to the A3 and the improvement of the Railway Bridge at Merrow Park remain the only long-term solution and provision for a future scheme should be included in the Plan.

In any event Policy ID2 (MM27) generally gives insufficient assurance that developments will not be allowed before the A3 widening scheme is committed in that it appears to allow a series of incremental developments each in itself unlikely to make an already difficult situation much worse. Cumulatively we are concerned that the severe impacts envisaged will occur by stealth.

**Attached documents:**

**Comment:** MM27 - LPMM18/1059  **Respondent:** Allan Howlett 8656417  **Agent:**
Transport strategy MM27, MM41, MM42, MM48

The proposed developments will add to the already overcrowded roads, where journeys take far longer than necessary. Most residents now have to factor in the probability that there will be delays.

The road network is in desperate need of a major maintenance programme. In Send the surface at the traffic light intersection has completely broken up with holes appearing in all approaches. This non slip surface has broken down, wasted money, poor design. Or too much traffic?

The bridge over the A3 on the Clandon road has had the road surface pushed into the kerb resulting in large undulations that force motorists into the middle of the road.

Priority should be given to getting existing roads into a reasonable condition over the building new developments that will only increase traffic and make the matters worse. Most roads in the areas have kerb stones, and service covers dislodged and numerous potholes.

Who decides what a reasonable time is to queue on the roads into and out of Guildford and Woking getting to and from work. What is the environmental impact of thousands of cars, Lorries and busses queuing every morning and evening polluting the atmosphere, wasting fuel and residents and commuter’s time?

Attached documents:

Comment: MM27 - LPMM18/5351  Respondent: Helen Jefferies 8717921  Agent:

MM27

(2) There is no definition of material therefore the policy is meaningless.

4.6.18a This is even considering that small sites are not included in the plan. Transport modelling must include traffic from all sites not just allocated sites. There is no evidence to show that the delay in the delivery of J10RIS has been taken into account or indeed its’ impact on A35 and other sites which rely on it.

The incompetence of the Council and Surrey County Council to accurately model traffic was shown up very clearly at the Appeal into the Planning application on the former Wisley airfield. Unfortunately, it would appear that the councils rely on developer data and either do not have the skills to understand the model or collude with the developers to agree completely inaccurate figures.

Attached documents:

Comment: MM27 - LPMM18/773  Respondent: Shaun Cheyne 8775169  Agent:

MM27 MM41 MM42 and MM48 Transport Strategy

The traffic implications for Send of Garlick’s Arch, Burnt Common, Clockbarn and Alderton’s added to nearby Gosden Hill and Wisley/Ockham are not adequately addressed by the A3 changes and the Clandon slip roads. GBC offer fine words but no proper assessment of the aggregate traffic impact on Send Barns Lane and Send Road as thousands more cars head to Woking every day, causing increased noise, nitrogen dioxide pollution, delays and gridlock.

Attached documents:
**Comment: MM27 - LPMM18/448  Respondent: Janet Manktelow 8793025  Agent:**

**MM27, MM41, MM42 and MM48 Transport Strategy**

The traffic changes for this village are hideous. The situation of the 4 way junction will pile on the traffic nightmares for local people. No changes are planned to relieve congestion in the surrounding villages which already suffer congestion every day. The current A3 is blocked every morning and evening. Adding a four way junction will do nothing to relieve this situation. Any slight accident blocks within minutes and takes hours to clear.

**Attached documents:**

---

**Comment: MM27 - LPMM18/954  Respondent: Wellesley Theodore Wallace 8803841  Agent:**

**Policy A25 : Gosden Hill Farm (MM27) (MM48)**

Under Opportunities (6), Policy A25 refers to "land on-site which would form part of the future route of a connector road to the B2215 London Road/ A247 Clandon Road, and so realise an all movements junction of the A3 trunk road with the A3100 London Road, the B2215 London Road and the A247 Clandon Road ". This Opportunity is connected with Requirement (2).

The A247 intersects the B2215 at Burnt Common roundabout, which is over a mile from the point at which the B2215 joins the A3 (see the plans on pages 259 and 397 both of which show Site 58).

No explanation is given as to how such an "all movements junction" could be effected. Opportunity (6) appears to envisage three separate junctions covering well over a mile including a connector road rather than "an all movements junction" in the singular. At present the B2215 connects the A247 at Burnt Common with the A3 and the A3100. The plan at page 205 is misleading since it gives the impression that it is neither possible to access the A3 going south from the B2215 nor to access the A3 going north from the A3100, the A3 being dual carriageway. An all movements junction would involve access to the A3 in both directions or two separate junctions. Opportunity (3) provides for a potential diversion of the B2234 Merrow Lane to form a direct link to the A3 at "the improved junction" which must refer to Requirement (1).

Inevitably a material proportion of traffic from Site 25 will go north to the Burnt Common roundabout and part of that traffic will go south down the A247 which is already heavily trafficked.

Opportunity (6) should be amended to delete the references to the A247 Clandon Road and to clarify whether a single junction is envisaged or more than one. The inclusion of the A247 in a single junction is wholly unrealistic given the distance of a mile between the Burnt Common roundabout and Site 25 and still more from the A3100. SRN4 and LRN6 provide no clarification. The inevitable inference is that the traffic impacts of the development on Site A25 have not been adequately considered.

Policy A25 does not meet the requirements of paragraph 154 of the NPPF.

**Attached documents:**

---

**Comment: MM27 - LPMM18/6102  Respondent: Alena Thomas 8805633  Agent:**
Proposed changes to the A3 and the Clandon slip roads (document 003a, sections 11.14 to 11.34) will help to feed traffic more quickly into the local road system - what then? Jams will feed back onto the major roads and cause massive problems for both local and longer-distance motorists. Remember my remarks in the beginning of the letter, yes, it was me standing in traffic trying to get on time to RSH for work.

GBC's assessment of possible solutions to this is extremely superficial - it's easy to write a few sentences promising infrastructure will follow but this is a real problem to which there won't be an acceptable solution: a proper amount of infrastructure to cope with this amount of development will devastate the green belt and destroy the character of the area. Will make the life of existing and new residents miserable, extend commute time and pollute the air.

Your current document suggests (Appendix 11.4 of GBC Responses to Matters, Issues and Questions reference 003b) that the increase in morning traffic on the A247 Send Road will be just 3% - after adding nearly 40% to the housing stock of the village. The estimate is out by an order of ten and as far as I am concerned is just plain falsification.

MM9 Green belt policy

Iwrite to object to the local plan for Send

I feel for all the sites in this area no consideration appears to have been given to the congestion on local roads, school places, parking and the medical centre where it's difficult to get an appointment and this is now (looking further afield the parking and appointments at the Royal Surrey are also hard to come by)

I think the council should think carefully before wiping out the green belt and turning another Surrey village into suburbia

We need to keep the small pockets of countryside for the wildlife and our health benefits instead of increasing the pollution in the village

**Comment:** MM27 - LPMM18/2120  **Respondent:** Mrs. (Mrs. Kim Meredith) 8817537  **Agent:**

MM27 MM41 MM42 and MM48 Transport Strategy
Implications to traffic increasing to thousands more cars using our local roads and causing complete chaos, gridlock and air pollution have not been addressed. I therefore object and wish for more effort to be used to sort this major problem out.

Attached documents:

Comment: MM27 - LPMM18/419  Respondent: Mr Howard Turner 8819457  Agent:

There has been inadequate assessment of the increased traffic implications of the huge development proposals concentrated on the northern boundaries of the borough.

Policy MM27 needs to provide a proper assessment of the transport implications on the A3, M25 and A247 Clandon Road of the proposed increases in both housing and industrial areas at Wisley, Gosden Hill and Send Marsh/Burnt Common and for this assessment to dictate the extent to which these development areas are feasible.

Attached documents:

Comment: MM27 - LPMM18/5165  Respondent: Merrow Residents' Association (Keith Meldrum) 8825057  Agent:

MM27 – 4.6.18a which follows the discussion in the Examination of the Local Plan gives us real concerns. We contend that the proposed two-way junction with the A3 in Policy A25 should be a 4 way junction. We refute the suggestion that if the A3 Improvement Schemes do not take place, the traffic problems can be mitigated by other measures. GBC suggested at the Examination in Public that these could include the Sustainable Movement Corridor and the new railway station in Merrow. We do not accept that these mitigating measures - even if they are implemented - are likely to deliver the level of necessary mitigation to address the potential serious traffic problems in the area which underlines the critical importance of a 4 way junction with the A3 on the Gosden Hill Farm site.

In addition we contend that the Sustainable Movement Corridor is not sustainable or viable at all in view of the restricted nature of the roads between Burpham and the Town Centre along the A3100.

More comment on this can be found at MM35.

Comment: MM27 - LPMM18/1397  Respondent: Mr John Dumbleton 8831393  Agent:

Practical experience of current traffic problems around Guildford would contradict the assertion that if the A3 Guildford Improvement scheme is delayed or cancelled alternative measures may mitigate the impact of development traffic. For example, the impact on the local road network in Burpham and Merrow of regular problems on the A3 in recent times indicates that without the scheme new development traffic will create insoluble challenges which a Sustainable Movement Corridor and/or new railway station in Merrow cannot hope to solve. Common sense would indicate a Sustainable Movement Corridor in the area is not viable in view of the restricted width roads between Burpham/Merrow and the Town Centre.

Comment: MM27 - LPMM18/4973  Respondent: Lynn Yeo 8839521  Agent:

I object to MM41,MM42,MM44,MM9, MM27, POLICY S2.

At the public examination, the figure for Guildford Borough housing need used by the inspector was 789 per year. This figure was obtained by Guildford Borough Council (GBC) Consultants and was greatly exaggerated by including Surrey University Student figures. These Consultants and GBC refused to disclose how this figure was calculated. The figure now published by a highly respected consultancy Barton Wilmore has said the correct figure is 431 houses per year. In addition, using data from the Office of National Statistics population forecasts, suggests that the appropriate growth in GBC can be achieved by 460 houses per year.

This latest data makes a mockery of GBC consultants figures which have always been very suspect. I believe the number of houses per year to be unreasonably high, and that the actual figure should be revised downwards for more responsible and reasonable levels of development.

Attached documents:

Comment: MM27 - LPMM18/4974  Respondent: Lynn Yeo 8839521  Agent:

I object to MM27, MM41, MM42 and MM48 Transport Strategy.

The increased traffic for Send from Burnt Common Garlicks Arch, Aldertons, Clockbarn in addition to Gosden Hill and Wisley Ockham is not in any meaningful way addressed by the Road changes of the A3 and Clandon Slip Roads. This massive increase in traffic heading to and from Woking along Send Barns Road and Send Road, which are single lane roads, will cause horrendous noise, air pollution delays and gridlock. I live just off Send Road on Wharf Lane and find the road is already congested during rush hours. Additional development to the scale described in the plan would
undoubtedly result in significant increased congestion, air and noise pollution and very real decrease in quality of life for Send’s residents.

Attached documents:

**Comment:** MM27 - LPMM18/188  **Respondent:** Mr Charles Gibson 8853025  **Agent:**

**MM27, MM41, MM42 and MM48 Transport Strategy**

- The traffic implications for Send and Send Marsh as a result of the above modifications are not addressed by the A3 changes and the proposed Clandon slip roads. Indeed the traffic on Send Barns Lane and Send Road will suffer an increase not merely on account of the proposed new housing but also as a result of traffic and particularly commercial traffic using these new slip roads to access Woking rather than at present accessing Woking via Guildford
- No proper assessment has been made by the Council to any od the proposed development yet alone the modifications. Increased noise and pollution will add to the inevitable delays and gridlock on local roads

Guildford Local Plan: Strategy and Sites - Main Modifications 2018

As a Chartered Surveyor operating in Guildford dealing with property matters on a daily basis I am particularly perturbed that the bulk of the new housing being proposed in the Guildford Local Plan does appear to be in the North-West section of the Borough, specifically in the Send, Ripley, Burnt Common area etc. Additionally I would comment on the transport strategy as follows:

MM27, MM41, MM42 and MM48

As a resident in Send Marsh I use the car every day for travel to and from work and it is preposterous that no proper assessment as to the aggregate traffic impact on Send Barns Lane and Send Marsh Road will be affected. The pace of development in Woking and the proposed scale of new residential development in Guildford and more specifically Garlicks Arch (MM41) and potentially Aldertons Farm (MM44) will have a major impact on the roads in the immediate area, a situation which has got steadily worse during the last five to ten years.

Whilst I accept that there has been population growth Surrey and particularly West Surrey, is a popular place to live and the traffic implications for Send Marsh are worrying. The A3 is gridlocked on a regular basis, particularly during school term time and it often takes me over an hour to reach the office which via the A3 is only some 5.5 miles distant.

The proposed development is 550 houses at Garlicks Arch, 60 units at Clockbarn, 40 units at Winds Ridge adds over 770 houses to the 1,700 currently in Send, an increase of some 45% which is simply too much for the current infrastructure to accommodate.

I find it abhorrent that Guildford Borough Council are proposing to set aside such an astronomical number in the North-West part of the Borough when there are far more appropriate sites for development closer to Guildford Town Centre where there are adequate transport nodes, particularly following the recent consent on appeal for the redevelopment of Guildford mainline railway station.

Attached documents:

Comment: MM27 - LPMM18/3870  Respondent: Claire Bridges 8923905  Agent:

MM27 MM41 MM42 and MM48 Transport Strategy
All of the above proposals will involve a considerable increase of traffic on roads which are already inadequate for the amount of traffic they carry and there are no proposals which will alleviate or improve the situation in the face of the concentration of building activity which seems unfairly to be focussed on Send.

GBC appear to want to merge the villages of Send to Ripley into one and adopt an aggressive building policy which will change them from villages into towns.

There is no improved traffic policy or any plans to upgrade or improve roads or bus routes.

Currently buses run one an hour to Woking and so people are forced to use cars.

Comment: MM27 - LPMM18/3112  Respondent: Colin Selvin 8934401  Agent:

1. Advantage should indeed be taken of improvements to the A3, but these are not in the control of the Council.
2. Transport infrastructure initiatives are not adequate.

Attached documents:

Comment: MM27 - LPMM18/3174  Respondent: Jenny Austin 8946113  Agent:

1. The council has not properly observed its hierarchy of development. Brownfield sites have not been fully explored. It is unsafe to rely on a third party to improve A3, the council has no control over these improvements and cannot guarantee that they will take place.

Attached documents:

Comment: MM27 - LPMM18/2414  Respondent: Joan Wrenn 8946497  Agent:

MM27 Simply widening part of the A3 is an inadequate response to current congestion. More radical solutions should be considered such as a tunnel or mechanisms to actively reduce peak time single car usage and to promote and facilitate travel to school by staff and pupils by other than private car. Major Greenbelt development should not be commenced until traffic congestion has been reduced below its current level.

Attached documents:

Comment: MM27 - LPMM18/1508  Respondent: Earl of Onslow and the Trustees of Onslow Estate 8957345  Agent: Nexus Planning (Adam Ross)

MM27 – Policy para (2)
We agree with and support the proposed change at MM27 which identifies the potential need for a Local Plan Review in the event of material delay of anticipated RIS schemes in the Borough. Given the significant uncertainties in terms of both the funding for and timing of such key strategic road improvements, and notwithstanding the requirement of paragraph 33 of the NPPF 2018 which requires that Local Plans are reviewed no later than 5 years from the adoption date of the Plan, we consider that the Council is right to specifically acknowledge that material delays in the delivery of RIS 1 schemes should in any event specifically trigger a review of the Local Plan.

Attached documents:

Comment: MM27 - LPMM18/4501  Respondent: Wisley Property Investments Ltd. (Wisley Property Investments Ltd.) 9079393  Agent: Savills (Ruth Bryan)

MM27  Policy ID2 Addition at (2):

“in the event that there is a material delay in the anticipated completion and/or a reduction in scope of the A3 Guildford (A320 Stoke interchange junction to A31 Hogs Back junction) “Road Investment Strategy” scheme form that assumed in plan-making, or cancellation of the scheme, Guildford Borough Council will review its transport base to investigate the consequent cumulative impacts of approved developments and Local Plan growth including site allocations on the safer operation and the performance of the Local Road networks and Strategic Road Networks.

In the case of material delay in the anticipated completion and or a reduction in scope in the A3 Guildford scheme, the review will consider the period up to the revised date of completions of the scheme. This review will be undertaken with input as appropriate from Surrey County Council and Highways England or any other licenced strategic highway authority appointed by the Secretary of state under the Infrastructure Act 2015. The outcome of this review will determine whether development can continue to be completed in accordance with the Local Plan trajectory or will determine whether there needs to be review of the Local Plan”.

Attached documents:

Comment: MM27 - LPMM18/5192  Respondent: David Reeve 9335041  Agent:

Policy ID2: Supporting the Department for Transport’s “Road Investment Strategy”

MM27 – COMMENT ID2-1
During the hearing sessions there was in-depth scrutiny on the delivery of the improvements to the A3 and M25. The reasoned justification which accompanies policy ID2 sets out at paragraph 4.6.18a that the evidence provided at examination demonstrated that, without the implementation of the A3 scheme, the cumulative impacts of development in line with housing trajectory would become severe during the second half of the plan period. It is surely now the case with the revised housing trajectory putting more traffic on greenfield sites that the cumulative impacts would become severe far sooner in the plan period. It is noted that on several key criteria the traffic network is already at capacity.

Paragraph 4.6.18a then goes on to state that a review will be carried out to establish whether this severe impact can be mitigated, but if it cannot then a review of the Local Plan is likely to be required. This is almost certainly the case and it is therefore also patently the case that the plan is set to fail. This cannot be said to be positive planning in plan making terms. A logical step would be for the council to properly consider how the housing trajectory can be retained through the use of sites which would have a much lower impact on the A3 infrastructure, even though they are mostly council-owned sites. There is obvious merit in much stronger consideration of town centre sites where there is much greater access to sustainable transport options. Car ownership is likely to be lower, and is easier to control through development management tools. If holistic masterplanning is required by the council of the strategic sites then it applies equally to the council’s own sites.

I strongly object to even more traffic resulting from your intentions in the plan modifications. As above, the increased pollution and the resulting gridlocked roads in the immediate area are already evident. The A3 and local A Roads are already at breaking point and this has a continuous overflow impact on surrounding village and the nearby narrow B roads. Your assessment for your proposed transport strategy is unrealistic and inadequate.

I object to Modifications MM27, MM41, MM42 & MM48 Transport Strategy due to the following points:

The result of proposed Local Plan development in the area of Send would cause so much traffic congestion, that the plans to improve the A3 and Clandon slip roads would not make any significant difference at all. The rural roads in the centre...
of Send / Send Marsh couldn’t cope with the extra traffic. Regardless of traffic surveys that have been carried out in recent months and years, it doesn’t take much to realise it.

Attached documents:

Comment: MM27 - LPMM18/318  Respondent: Mrs Janet Govey 10544353  Agent:

They’re really bad traffic implications for send but common cock barn Wisley

The 83 changes and the Clarendon slip roads are not properly addressed Guildford Borough Council need to do proper assessments on the impact of all of the traffic in the centre area and the thousands more cars then will be heading towards Woking every day causing even more congestion on the road that is regularly gridlocked increasing noise delay is gridlocked and increasing the nitrogen dioxide pollution on road that has a school and a nursery.

Attached documents:

Comment: MM27 - LPMM18/2197  Respondent: John Creasey 10563457  Agent:

MM27/MM41/MM42 and MM48 Transport Strategy

I object to the proposed changes to the A3 junction at Burnt Common. The increased traffic on the A247 through Send will be intolerable as at peak times it is already at capacity. It will cause unavoidable congestion, pollution and traffic will come to a standstill.

Attached documents:

Comment: MM27 - LPMM18/2205  Respondent: Hazel Creasey 10563777  Agent:

MM27/MM41/MM42 and MM48 Transport Strategy

MM27, MM41, MM42 AND MM48, TRANSPORT STRATEGY
• I object that GBC has failed to assess the implications of excessive and unwarranted development on traffic and infrastructure of traffic driving through Send each day.

Attached documents:

Comment: MM27 - LPMM18/707  
Respondent: Zareena Linney 10718625  
Agent: MM27, MM41/MM42 and MM48

Traffic implication again as more cars will use my road Send road, as it is my son is learning to drive and the road is too congestion for us to even get out of. The speeding and level of traffic dangerous. The house has experienced cracking and damage due to it being roadside and volume and amount of traffic.

Will we as home owners be compensated? we have complained previously? the increase in volume of traffic in Send Road is damaging our house and its losing value and council increasing numbers and traffic this will make it worse.

Its often gridlock in Send road outside our house. If an incident on A3 nothing moves. Its impacting on our ability to work/drive and move about.

Pollution would be increased with even more traffic and we may have health issues due to this. With weight and volume of traffic the house cracking i mentioned could become unsafe made worst by the councils plans.

Attached documents:

Comment: MM27 - LPMM18/5070  
Respondent: Stewart Fenton 10719297  
Agent: MM27/MM41/MM42 and MM48 Transport Strategy

I object to the changes to the A3 junction. They will encourage more traffic from the A3 to divert through Send in order to gain access to and from Woking and beyond. This will cause more traffic problems on Send Barns Lane and Send Road, which are already subject to heavy congestion on a daily basis, particularly during rush hours. This will be in addition to the extra traffic that will result from the increased development in and around the immediate area.

Attached documents:

Comment: MM27 - LPMM18/720  
Respondent: Linda Holland 10719553  
Agent: MM27/MM41/MM42 and MM48

The traffic implications for the above have not been adequately addressed and no proper assessment has taken place bearing in mind more traffic increased noise nitrogen pollution delays and gridlock

Attached documents:
I object to G.B.C MM27, MM41, MM42 AND MM48 TRANSPORT STRATEGY

Traffic implications for Send Garlick's Arch, Burnt Common, Clockbarn and Alderton's Farm added to nearby Gosden Hill and Wisley/Ockham are not adequately addressed by the A3 changes and the Clandon slip roads. G.B.C offer fine words but NO proper assessment of the aggregate traffic impact on Send Barns Lane and Send Road as thousands more cars head to Woking every day, causing increased Noise, Nitrogen pollution, delays and gridlock.

Attached documents:

I object to G.B.C. MM27,MM41,MM42 AND MM48 TRANSPORT STRATEGY

Traffic implications for Send Garlick's Arch, Burnt Common, Clockbarn and Alderton's Farm added to nearby Gosden Hill and Wisley/Ockham are not adequately addressed by the A3 changes and the Clandon slip roads. Attached documents:

I object to MM27 MM41 MM42 and MM48 Transport Strategy because:-

Currently, heavy traffic from the A3 already heads to Woking through Send and even small roadworks cause major traffic jams, particularly at rush hour. This will be exacerbated when the proposed changes to the A3 improvements take place. With the extra industrial and housing developments in the areas mentioned above, Send will regularly become gridlocked.

Attached documents:

MM27 / MM41 / MM42 / MM48 – Transport Strategy

Regarding road traffic, the Transport Strategy is not robust and not truly reflective of the needs and concerns of our highways infrastructure

With so many recent developments (Skene Close in Send, Vision Engineering, Clockbarn-marina in Tannery Lane), the main road through Send has struggled

Having temporary lights has become a regular feature, and continues even today (4-way lights at the A247 junction to Old Woking, and along Portsmouth Road into Ripley)
Send is a VILLAGE, not a town – and the main road through Send regular gets clogged with traffic, and backs up most mornings and evenings – in both directions

The Local Plan attempts to address the issue of transport, but is inaccurate in several places (eg ‘on most local roads in urban areas and in villages, there is at least one footway, usually two’)

Other than the main routes out of the village (which are already under pressure), most roads are in fact lanes, often with no footways at all (eg Polesden Lane, parts of Vicarage Lane & Potters Lane)

Many other routes are lanes which cannot accommodate free-moving two-way traffic (Newark Lane, Burnt Common Lane, Rose Lane, Send Hill, Woodhill, Potters Lane, Church Lane, Vicarage Lane)

The existing bends around Potters Lane / Send Hill are already treacherous, with several blind corners and narrow apertures – these need attention already, not more traffic volume!

Overall, any further developments will create significant traffic, pollution, delays and backlogs, putting more pressure on people using ‘back roads’ (ie lanes) and clogging up the villages

The modifications are simply too much for the villages of Send and Burnt common, that already suffer from increased traffic and congestion / pollution

Send has already taken on many developments (Skene Close, Vision Engineering, re-building Send school, Tannery Lane, Woodhill) as part of gentle but considered ‘in-filling’

ONS reports show that the actual levels of housing needs have been grossly over-estimated by the Council in its Local Plan. Send residents have repeatedly been voicing their concerns in previous feedback, but these have been largely ignored

It is not appropriate to try to ‘absorb’ unused housing capacity needs from Woking

Noise levels are already uncomfortable, and it has been reported that nitrogen dioxide levels are rising.

A loss of more countryside/Green Belt/nature/openness would exacerbate this

Abandoning the new A3 slip-road (policy A43a) would save a great deal of money which could be better spent on other services for existing residents, who already pay substantial levels of Council Tax (such measures could include traffic-calming, road repairs and noise reduction)

Local residents and Parish Councils feel they are now being ‘punished’ for simply voicing their concerns over the years – concerns which ONS and other boroughs seem to be taking heed of – except, it would seem, Guildford Borough Council

Attached documents:

The transport / traffic strategy confirms that cycling routes need to be vastly improved and protected, as current ‘flow’ is not good enough

Regarding road (vehicle) traffic, the Transport Strategy is not robust and not truly reflective of the needs and concerns of our highways infrastructure
With so many recent developments (Skene Close in Send, Vision Engineering, Clockbarn/marina in Tannery Lane), the main road through Send has struggled.

Having temporary lights has become a regular feature, and continues even today (4-way lights at the A247 junction to Old Woking, and along Portsmouth Road into Ripley).

Many residents feel they are now being ‘punished’ for simply voicing their concerns over the years.

The Wisley airfield could perhaps be re-considered for some light industrial development, if demand can be proven, given its greater proximity to the M25/A3.

It is also better suited to having an appropriate traveller pitch allocation (instead of Winds Rush A44 – practically opposite the cemetery!!) as part of a mixed development.

MM27 MM41 MM42 and MM48 Transport strategy

I object to the A3 changes and the Clandon slip roads as the GBC has not carried out a proper assessment of the traffic implications on Send Barnes Lane and Send Road. These changes will lead to thousands more cars making their way through Send to get into Woking town centre. There are serious implications for such an enormous increase in traffic on pollution levels, noise, traffic jams etc. This has not been carefully assessed.

Attached documents:

Comment: MM27 - LPMM18/623  Respondent: Nicola Jones 10743105  Agent:

MM27, MM41, MM42, MM48 – taken together as the transport strategy. The implications of the increase in traffic from nearly doubling the housing in the village, other local development plans such as Wisley and Gosden Farm, plus the proposed changes to the A3 junction at Burnt Common have not been adequately addressed by Guildford Borough Council or any other responsible agency. Thousands of extra vehicles will be heading through Send on the A247 every day. The road is already over congested with long queues at peak hours. [Response has been redacted due to statement containing personal data which cannot be disclosed due to the provisions of the General Data Protection Regulation 2018/ Data Protection Act 2018] I am extremely concerned for my health and that of my children. I, and two of my children are asthmatic and I am very worried about the increase in levels of nitrogen dioxide and other pollutants and particulates which would be inevitable with additional traffic. There is also a primary school along this route and the traffic increase would have a deleterious affect on the health of the children.

Attached documents:

Comment: MM27 - LPMM18/61  Respondent: Jo Williams 10750593  Agent:

MM27, MM41, MM42, MM48 - Transport Strategy

The implications have not been properly assessed or addressed by the A3 changes and the Clandon slip roads. Potential significant traffic impact upon Send Barnes Lane and Send Road of traffic heading for Woking, increased noise and pollution levels, additional delays and gridlock on the roads.

Attached documents:

Comment: MM27 - LPMM18/146  Respondent: Mrs Lizzie George Buchhaus 10757185  Agent:

The traffic implications for Send Road and Send Barnes road are horrific including pollution, increased noise delays, accidents and gridlock. I live on Send Road and this is not acceptable

Attached documents:

Comment: MM27 - LPMM18/782  Respondent: Kate Cheyne 10774881  Agent:
MM27 MM41 MM42 and MM48 Transport Strategy

The traffic implications for Send of Garlick's Arch, Burnt Common, Clockbarn and Alderton's added to nearby Gosden Hill and Wisley/Ockham are not adequately addressed by the A3 changes and the Clandon slip roads. GBC offer fine words but no proper assessment of the aggregate traffic impact on Send Barns Lane and Send Road as thousands more cars head to Woking every day, causing increased noise, nitrogen dioxide pollution, delays and gridlock.

Attached documents:

Comment: MM27 - LPMM18/4844  Respondent: Wendy Lodge 10775137  Agent:

I object to MM27, MM41, MM42 and MM48.

Traffic has increased considerably through Send Village in the past ten years. The extra traffic that is bound to clog the A247 from the new slip roads with the A3 will expose villagers to significantly increased pollution levels. Children walking to the local school already are subjected to this. Another 700 houses with, maybe, a further 1400 cars are not going to help. I do not believe GBC has looked at this in a sufficiently robust manner.

Attached documents:

Comment: MM27 - LPMM18/308  Respondent: Prue Robinson 10776033  Agent:

MM27, MM14, MM42 AND MM48 Transport Strategy

I object most strongly to The Transport Strategy

These are my reasons:

The traffic implications for Send of developments at Garlick's Arch, Burnt Common, Clockbarn and Alderton's Farm, added to nearby Gosden Hill and Wisley/Ockham are not adequately addressed by the A3 changes and the Clandon slip roads.

GBC appear not to have carried proper assessment of the aggregate traffic impact on Send Barns Lane and Send Road. It would be anticipated that thousands more cars will head to Woking every day. Imagine the increased noise levels, nitrogen dioxide pollution, horrendous delays and total gridlock!

Attached documents:

Comment: MM27 - LPMM18/802  Respondent: Jane Baker 10784769  Agent:

MM27 MM41 MM42 and MM48 Transport Strategy

The traffic implications of the above developments plus those for nearby Gosden Hill and Wisley/Ockham have not been adequately addressed by GBC who has made no real assessment of the traffic situation as thousands of cars head down Send Barns Lane and Send Road towards Woking.
Regarding MM27, MM41, MM42 and MM48 Transport Strategy

- There has been no adequate assessment by GBC of the impact of this transport strategy on congestion, noise pollution and air pollution as thousands more cars head to Woking each day. There is the possibility of gridlock.

I object to this revised proposal.

In common with many of these Main Modifications, no notice or understanding of the previous 7000plus objections has can be seen.

This does not seem to show any evidence of a proper and full impact assessment of the combined / aggregated traffic increases that will affect Send Barnes Lane, Send Road and Old Portsmouth Road.

The impact on Send (and by implication Ripley and Clandon) of this apparent lack of clear assessment of the Garlick's Arch, Burnt Common, Clockbarn and Alderton's proposals is extremely worrying for the existing residents.

The likely impacts of the new proposals are at least significant increases on NOx levels, thereby affecting health, and increases in traffic congestion. It is not too far to believe an increase in motor accidents will also result.

MM27 and MM48

Traffic is already excessive.

Attached documents:

Comment: MM27 - LPMM18/439  Respondent: Belinda Middleton 10807745  Agent:

MM27, MM41, MM42 and MM48 Transport Strategy

The traffic implications for Send of Garlick’s Arch, Burnt Common, Clockharn and Alderton’s added to the nearby Golden Hill and Wisley / Ockham are not adequately addressed by the A3 changes and the Clandon slip roads. As noted above nearby roads are popular with cyclists and children travelling to Send Primary and Clandon CofE Schools. Increasing the traffic on these roads will be dangerous, noisy and massively increase pollution to the cyclists, runners and children as they travel to school.

Attached documents:

Comment: MM27 - LPMM18/4224  Respondent: Mrs Penelope Corlett 10815681  Agent:

There are no definite plans laid out and it is impossible to widen Send Road or the Clandon Road to accommodate the increase in traffic approaching or returning from the A3. These are narrow roads in many places and the traffic is already at a standstill at peak times. A full assessment must be made and published and I ask the inspector to revisit at peak times.

Attached documents:

Comment: MM27 - LPMM18/1287  Respondent: Jeff Waine 10816481  Agent:

MM27, MM41MM42 and MM48

Traffic implication again as more cars will use my road Send road, as it is my son is learning to drive and the road is too congestion for us to even get out of. The speeding and level of traffic dangerous. The house has experienced cracking and damage due to it being roadside and volume and amount of traffic.
Will we as home owners be compensated? we have complained previously? the increase in volume of traffic in Send Road is damaging our house and its losing value and council increasing numbers and traffic this will make it worse.

Its often gridlock in Send road outside our house. If an incident on A3 nothing moves. Its impacting on our ability to work/drive and move about.

Pollution would be increased with even more traffic and we may have health issues due to this. With weight and volume of traffic the house cracking i mentioned could become unsafe made worst by the councils plans.

Attached documents:

Comment: MM27 - LPMM18/480  Respondent: Maggie Cole 10816705  Agent:

MM27, MM41, MM42 and MM48 Transport Strategy

If GBC go ahead with all the sites in the local plan the road system will come to a grinding halt. The increase in traffic will just cause more gridlock, more frustration to road users, and hence more accidents. Drivers will try to circumnavigate the problem areas down single track roads and cause endless damage and accidents will happen. Every day there will be more noise, more pollution, more delays and more gridlock.

Attached documents:

Comment: MM27 - LPMM18/1637  Respondent: Julie Brown 10829121  Agent:

**Transport strategy for MM27, MM41, MM42 nd MM48**

There has been no rigorous assessment of the impact of the proposed developments on traffic flows in the area. The road to Woking is already gridlocked in rush hour times. The proposed developments would lead to significantly worse traffic which would be intolerable to existing residents.
As highlighted in the Parish Council report, it is unclear how the traffic implications associated with development contained within the local plan, will be addressed. The proposed changes to the A3 are not adequate and a full and proper assessment needs to be carried out to examine the impact that thousands more vehicles will have around our existing village and environs.

All the proposed developments do not take into consideration the impact of traffic on the community. There could be a further 2000+ cars and lorries going through Send creating noise and air pollution and traffic gridlock. I have lived on Send Barns Lane for the last 6 years and have noticed the traffic get increasingly worse without any new developments. The pollution is evident from the pollution deposits I find on the inside window sills, I have no idea what it is doing to my lungs.

GBC has no transport strategy.

I object to the inadequate changes to the A3 and Clandon slip roads proposed by Guildford Borough Council which will not accommodate the huge increase in traffic if the Garlick Arch, Burnt Common Clockbarn and Alderton’s Farm developments go ahead. These developments added to the nearby Gosden Hill and Wisley/Ockham developments will augment the traffic on Send Barns Lane and Send Road as thousands more cars head to Woking every day and the damaging effect of this on pollution, noise, gridlock and delays has not been properly assessed.

I would like these objections to be noted and preferably listened to - unlike the 33,000 earlier objections sent in by me and other local residents which seem to have been completely ignored.

Attached documents:
MM27 MM41 MM42 and MM48 Transport Strategy

The traffic implications for Send with Garlick’s Arch, Burnt Common, Clockbarn and Alderton’s added to the nearby Gosden Hill and Wisley/Ockham developments have not been adequately addressed by the A3 changes and the Clandon slip roads. You have not assessed the amount of traffic that is currently on the roads let alone the thousands more cars heading to Woking everyday causing increased noise, pollution and gridlock!

Comment: MM27 - LPMM18/1157  Respondent: F.A. Howell 10839393  Agent:

Re: MM41 - Land at Garlick’s Arch, Send Marsh, Policy A43

MM42 - Land at Burnt Common, London Road, Send, Policy A58

MM44 - Land at Alderton’s Farm, Send Marsh Road - Policy A63

MM9 - Green Belt Policy

MM27, MM41, MM42 and MM48 - Traffic

There are unimaginable difficulties with your proposed plan for Send and Send Marsh. There is not enough infrastructure to house the proposed amount (for example)

- of cars (and the extra pollution that they will bring)
- a lot more people needing healthcare
- schooling
- our small country lanes
- and we are DEFINITELY NOT AN INDUSTRIAL AREA, why not enlarge Slyfield, which has empty space readily available?
- plan to route the A3 traffic towards Woking through Burpham.

The proposed 750 houses will more than likely mean 1500 more cars on our narrow roads. We can't move freely now when there are roadworks or an accident or breakdown, let alone move with all this extra traffic.

Try coming around to this area at 'rush' hour or when there has been an accident - it's a nightmare.

NO, NO, NO TO YOUR PLAN

Attached documents:

Comment: MM27 - LPMM18/1767  Respondent: Lawrence Harris 10839649  Agent:

MM27, MM41, MM42 and MM48....Transport Strategy

I cannot see any evidence that a proper traffic impact assessment has been carried out to ‘prove’ the actual impact on the villages of Send and Clandon of the proposed changes to the A3 at Burnt Common. It is not acceptable to merely ‘state’ that everything will be ‘fine’ when it clearly will not as thousands more vehicles head through both villages every day!!
The impact on Send Barns Lane and Send Road as thousands more cars lead to Woking every day, causing increased noise, pollution, delays and gridlock, will be much heavier.

I object that GBC has failed to assess the implications of excessive and unwarranted development on traffic and infrastructure of traffic driving through Send each day.

This will not address the excessive increase in cars causing gridlock, extensive delays, noise and nitrous dioxide pollution.

I am writing to object to plans for our village. I have lived here for 20 years and have seen traffic increase dramatically. I have to use the A3 up to M25 J10 most weekdays and it is perfectly clear that Send cannot cope with further traffic.

Increasing industrial areas and a massive increase in housing is completely the wrong thing for a village. We have a strong village feel in both Ripley and Send and I have lived in North London as a child and saw my village merge with the next one and eventually become part of London and it destroyed the area. I don’t want to see this happen here. There are some glorious greenbelt areas and ancient woodland and so there will be far better places to build that are brownfield sites.
I have already watched the Tannery Lane industrial area increasing in size. This is already a ridiculous place for an industrial site, right by the river along a narrow country lane and to increase the size is just not thought through!

I live on Send Marsh Road and building at Alderton’s will make an already dangerous and busy road, even worse. The sharp bend is very difficult to drive around and to cross over to get to Polesden Lane and with a dramatic increase in traffic, this would be impossible.

Along with Garlick’s Arch, Clockbarn, Winds Ridge etc, it is just too much for our infrastructure to bare. I have just had to wait 2 weeks for an appointment at the doctors and increased housing will just exacerbate the problem so that it is out of control.

My children were lucky enough to get into George Abbot school, but what do you intend doing with all the new children and associated traffic that so much building would create? Closing Ripley Primary was ill-thought out if you are intent on going ahead with this building, despite objections and the traffic at the Burntcommon roundabout to get to Send Primary will be ridiculous, especially if you’re considering building new slip roads to the A3 too.

So my main concerns are traffic congestion, destruction of the green belt, no provision for increased infrastructure such as doctors with so many new homes, increase in industrial space not appropriate for a village setting, over-development, flooding and a completely ignoring all previous objections!

Please reconsider destroying our villages of Send and Ripley. They will be destroyed if even a portion of this building goes ahead along with the modifications we are not able to object against such as the traveller’s site and Clockbarn etc. Please listen to your residents and think of the future of Surrey as a beautiful place to live and not just the financial advantages. In the long run, stopping this dense build up of population will save money, as the social problems in north London now, where I grew up are immense.

Attached documents:

Comment: MM27 - LPMM18/4364  Respondent: Rosemary Key 10844641  Agent: MM27 MM41 MM42 and MM48 Transport Strategy

Traffic management and infrastructure has not been properly addressed by the changes at the A3 slip roads, there needs to be a proper independent traffic impact analysis on the increase of traffic, through traffic as well as local due to the proposed increase in both housing and industrial estate development. The noise, pollution, delays and problems on the roads in these small poorly managed current roading has not been addressed in any documents provided to residents.

Attached documents:

Comment: MM27 - LPMM18/2567  Respondent: John Wright 10844929  Agent: I object to Modifications MM27, MM41, MM42 & MM48 Transport Strategy due to the following points:

The result of proposed Local Plan development in the area of Send would cause so much traffic congestion, that the plans to improve the A3 and Clandon slip roads would not make any significant difference at all. The rural roads in the centre of Send / Send Marsh couldn’t cope with the extra traffic. Regardless of traffic surveys that have been carried out in recent months and years, it doesn’t take much to realise it.

Attached documents:
It is with extreme disappointment that I have to, yet again, protest against the over development of Send. It beggars belief that the Planning Inspectorate in collusion with GBC have increased the number of properties planned for the village (as per the refs. above).

Do the PI and GBC not recognise the damage this will do to the infrastructure of this area? At the same time I understand there will be some incursion onto Green Belt land which contradicts Green Belt Policy.

I hope that the Local Plan is reviewed to allow Send to be relieved of the developments planned and more suitable sites found.

Attached documents:

---

MM27, MM41, MM42 AND MM48, TRANSPORT STRATEGY

- I object that GBC has failed to assess the implications of excessive and unwarranted development on traffic and infrastructure of traffic driving through Send each day.

Attached documents:

---

2. I wish to raise the following objections to the Guildford Local Plan MM27, MM41, MM42, MM48:

Many local roads around the villages of Send, Ripley and Clandon are narrow and there are already many instances of vehicles having to mount pavements to allow large vehicles to pass. This is particularly an issue on the A247 between Burnt Common and Clandon Crossroads. The inclusion of the Garlick’s Arch proposal, particularly the industrial and warehousing elements of the plan, is certain to make the situation far worse. I object to the development proposed in the local plan, which will result in more traffic using narrow roads.

Many of the villages are suffering from severe congestion, for example the Shell roundabout at Burnt Common, and the Newark Road & Rose Lane junction in Ripley. I object to the further development which will cause further congestion in and around our villages.

The A3 and M25 already suffer from severe congestion during rush hours, in addition, Highways England have no plans to improve the A3 prior to 2020. I object to the development of these sites shown in the local plan because trunk roads would be unable to cope.

Attached documents:
MM27 MM41 and MM48 Transport Strategy

I OBJECT to what appears to be a lack of common sense to how the traffic situation can be solved, the infrastructure is just not there to be able to cope.

Attached documents:

Comment: MM27 - LPMM18/1280  Respondent: Neil Haxton 10859265  Agent:
MM27, MM41, MM42, MM48 Transport Strategy

This will not address the excessive increase in cars causing gridlock, extensive delays, noise and nitrous dioxide pollution.

Attached documents:

Comment: MM27 - LPMM18/383  Respondent: Christine Reeves 10866305  Agent:

MM41 - Policy A43
MM42- Policy A58
MM44 -Policy A63
MM9
MM27 MM41 MM42 MM48

I objected to the Land at Garlicks Arch Send Marsh being developed on in my last objection letter so to consider having another 37% development on the site would be outrageous considering 7000 objections were ignored previously for a fewer number of houses being built.

Businesses and employees that have been on the site for many years would lose their jobs as companies have to close or relocate. Their jobs have been their lifeline and income in some cases for their lifetime.

Over the years all the roads locally have been transformed from quiet country lanes to Grand Prix tracks and the lanes and roads infrastructure certainly couldn’t cope with extra housing, cars producing more dangerous nitrogen dioxide putting more people at health risk which they hoped to escape from by moving to the country. We certainly don’t need more people, housing or cars choking our village depleting our woodland areas and picturesque Send March green.

 Roads, schools, health centres and hospitals are already overstretched.

Attached documents:

Comment: MM27 - LPMM18/4131  Respondent: Kristine Good 10866945  Agent:

MM27 MM41 MM42 and MM48 Transport Strategy

The traffic implications for Send of Garlick’s Arch, Burnt Common, Clockbarn and Alderton’s added to nearby Gosden Hill and Wisley/Ockham are not adequately addressed by the A3 changes and the Clandon slip roads. GBC offer no proper assessment of the aggregate traffic impact on Send Barns Lane and Send Road as thousands more cars head to Woking every day, causing increased noise, nitrogen dioxide pollution, delays and gridlock, as already stated in previous points. This area is unable to support increased residential traffic and is unsuitable for heavy commercial traffic.

In conclusion, development of this scale in this rural village will be detrimental to the character of this living space, and impact hugely on residents, there is insufficient consideration of the enormous size of development being placed in one small area of the constituency, as opposed to spacing out development, which would ease traffic overloading, decrease the escalating problem of pollution, share the increased strain on services; education, health.
I urge the planners to take these objections into consideration and listen to the observations regarding these plans from the people who live and work in these areas and see each day how the infrastructure is completely inappropriate to support such huge development in squeezed into one small area of the borough.

Attached documents:

Comment: MM27 - LPMM18/1535  Respondent: Steve Loosley 10867105  Agent:

MM27 MM41 MM42 and MM48 Transport Strategy

The traffic implications for Send of Garlick’s Arch, Burnt Common, Clockbarn and Alderton’s added to nearby Gosden Hill and Wisley/Ockham are not adequately addressed by the A3 changes and the Clandon slip roads. MM27 MM41 MM48

The transport in Send Barns Lane and Send Road is now very bad at peak times. Cars standing in traffic increases air pollution, noise, gridlock and frustration getting to work every day. The school and medical centre are in the middle of this chaos.

Attached documents:

Comment: MM27 - LPMM18/573  Respondent: Richard Vickery 10869345  Agent:

MM27 MM41 MM42 and MM48 Transport Strategy

This area suffers from very high traffic throughout the week. The surrounding villages, Ripley, Clandon, Ockham and Old Woking, are overwhelmed at times. This plan will increase the problem and make it intolerable to get anywhere by bringing more traffic through the villages, especially Send, to get on and off the A3 at Burnt Common.

Attached documents:

Comment: MM27 - LPMM18/561  Respondent: Rosalyn Vickery 10870305  Agent:

Traffic implications for the Send, Burnt Common, Ripley area are not improved by the proposed alterations to the A3 and Clandon access. Access to the A3 may be improved but the surrounding roads will be severely impacted by the number
of additional cars coming from the huge number of new homes. During rush hour there are already long queues on Send Barns Lane, Send Road and adjoining roads - some of which are single lane. Send school has totally inadequate parking now for parents to drop off children and with both parents working there is no time to walk.

The whole area will be affected by the number of additional vehicles and the local roads are not suitable now for the current volume of traffic.

Attached documents:

---

Comment: MM27 - LPMM18/2598  Respondent: Lynn Durbridge 10871169  Agent:

My First objections are to: MM41,MM42,MM44,MM9, MM27.

At the public examination the figure for Guildford Borough Council housing need used by the inspector was 789 per year. This figure was obtained by G.B.C Consultants and was greatly exaggerated by including Surrey University Student figures. These Consultants and GBC refused to disclose how this figure was calculated. (This is illegal, by law you have to show how you have arrived at such figures. ... To this end Police involvement may be necessary as fraud may have taken place.)

The figure now published by a highly respected consultancy Barton Wilmore has said the correct figure is 431 houses per year.

The data from the Office of National Statistics, doing population forecasts says the appropriate growth in GBC can be achieved by 460 houses per year.

This latest data makes a mockery of G.B.C consultants figures which have always been very suspicious.

My expectation is that the Inspector and GBC will now drastically reduce the housing need to reflect the true figures, and particularly in our already very congested village of Send.

table S2b: Spatial Strategy: Distribution of Housing 2015 – 2034 (net number of homes) states that the net number of homes within villages is 154, this contradicts other figures and is obviously a lie?

[Response has been redacted due to statements being considered contrary to the Council’s duty under the Equalities Act 2010 to eliminate discrimination, harassment, victimisation against persons with a protected characteristic; and to foster good relations between persons with a protected characteristic and persons who do not share it]

And 2000 new homes at Wisley airfield is totally unacceptable. Not only will Send and Ripley be joined but the whole of Guildford...the whole of surrey will be connected in one sprawling mass of houses and industrial parks with barely a patch of green as far as the eye can see. Individual communities will no longer have their own identities and roads will be even more congested. Services have only received lip service, Gps and schools (and parking) that are already at bursting point have not been thought about at all.

MM27, MM41, MM42 and MM48 Transport Strategy.

Why have the effect of thousands more cars in an already heavily congested area not been taken into account ?

The increased traffic for Send from Burnt Common Garlicks Arch, Aldertons, Clockbarn in addition to Gosden Hill, Wisley and Ockham is not in any meaningful fashion addressed by the Road changes of the A3 and Clandon Slip Roads. It seem both the developers and GBC to offer narrative and not action.

This massive increase in traffic of all sorts heading to and from Woking along Send Barns Road and Send Road will cause horrendous noise, air pollution delays and gridlock.
This massive increase in traffic and associated air pollution will affect pupils of Send 1st school which will take brunt of the increased pollution as will St Beads middle school. The dropping off of children at Send 1st school is already absolute mayhem and it is only a question of time before a fatality happens. With an increase of traffic the chances of a fatality goes up exponentially

**Comment:** MM27 - LPMM18/5101  **Respondent:** Margaret Powell 10876609  **Agent:**

I wish to object to ALL the above Main Modifications 9, 27, 41, 42 & 48

Our village is big enough already - the roads get very congested & Send Primary School would not be big enough to take all the extra children especially as Ripley School is closing ! It is getting increasingly difficult to get teachers - so are our children going to get any decent education

I have lived the village most of my life & over the last ten years there are now fewer places to walk & get out into the countryside ! The Green Belt land & woodlands are becoming non existent .

Why build more Industrial Units - in the past they have been left empty & some now turned into living space - so why do we need more !!! Places are being vacated weekly & left into disrepair- so definitely don't need anymore !

The houses that have recently been built in the village & surrounding areas have not sold - so how are they going to sell a few hundred more ! You are DESTROYING village life & going to pollute the countryside ! Therefore a lot more health problems without sufficient Medical facilities available - what a NIGHTMARE !

I Strongly object to ALL the above Modifications. - so please re think your policies .

MM27 MM41 MM42 and MM48 Transport Strategy

The traffic implications for Send of Garlick’s Arch, Burnt Common, Clockbarn and Alderton’s added to nearby Gosden Hill and Wisley/Ockham are not adequately addressed by the A3 changes and the Clandon slip roads. GBC offer fine words but no proper assessment of the aggregate traffic impact on Send Barns Lane and Send Road as thousands more cars head to Woking every day, causing increased noise, nitrogen dioxide pollution, delays and gridlock.

Other Developments

This consultation only allows comment on main modifications and so excludes the chance to object again to 40 houses and a travellers’ site on Send Hill, 60 houses at Clockbarn in Tannery Lane and a 25% increase in the size of the Send Business Centre despite the Wey Conservation area. Added to the other housing sites and industrial space such heavy concentration in one village, which could be more evenly shared with 40, is unreasonable.

The existing infrastructure will not be able to support the above developments. The roads are already gridlocked, insufficient hospitals, schools, doctor surgeries, transport and the list of these items just keep on growing.

Perhaps it is now time to consider new towns in other parts of the UK as this area of the South East is already at breaking point.

Attached documents:

**Comment: MM27 - LPMM18/3000  Respondent: M Stokes 10903265  Agent:**

**MM27 MM41 MM42 & MM48 Transport Strategy**

The traffic implication for our village with all the new proposed development is untenable. GBC has not been clear in their assessment of the impact of the movement of the thousands of extra cars travelling along congested roads, the pollution levels, delays and gridlocks that will ensue. Even with the proposed A3 changes this still does not address the issues that will arise.

It would seem that GBC has decided that Send and Ripley are to be the fall guys in their planning due to our proximity to two major routes. I ask the Planning Inspector to please see some sense and consider the views of our communities. I personally have no problem with developments that reflect the need within our village but not this huge proposed over development in our area.

Attached documents:

**Comment: MM27 - LPMM18/2242  Respondent: D White 10905185  Agent:**

**MM27 MM41 MM42 MM48 Transport Strategy.**

 Guildford B.C. have produced, what they call a Transport Strategy, without addressing the wider vehicle movement problems. The Leader of Guildford B.C has already acknowledged in public that the area has significant congestion and transport problems and yet still adds his name to policies that are clearly flawed.

The traffic on the North Bound A3 backs up from the M25 junction, "rat running" takes place off the Burnt Common exit and through Ripley village. This has not been referred to in any document.

The Southbound traffic backs up from Stag Hill to the Burpham Junction exit. This has not been referred to in any document.

None of the roads surrounding Send were designed to take large volumes of traffic. They were and still are, in effect, village streets, despite their A road classification.

Burnt Common roundabout will be gridlocked by the increase in the number of vehicles, of commuters, school run drivers and the manoeuvring of HGV vehicles visiting the proposed new industrial site at Burnt Common, and the new units in Send Business Centre.

Emotionally this is a Transport Strategy for disaster.

| MM27, MM41, MM42 and MM48-Transport Strategy.  
This area is already very heavily congested! There has been no investigation into the effect caused by 1000’s more cars on these local roads. Why?  
The increased traffic for Send from Burnt Common Garlicks Arch, Aldertons, Clockbarn in addition to Gosden Hill and Wisley, Ockham will bring the area more regularly to a standstill and has not been adequately addressed by the Road changes to the A3 and Clandon Slip Roads. It will become impossible for residents of Potter’s Lane to actually leave their driveways or pull out into the flow of traffic. There are many high-sided, wide and heavy goods vehicles who take up the entire width of the Potter’s Lane as they steam down the road ignoring any other vehicles and the speed limits. It is a daily occurrence that residents, trying to access their homes both as drivers and pedestrians, are verbally abused, cars damaged and are at risk of being run over as drivers regularly mount the pavement to get down the lane.  
This massive increase in traffic of all sorts heading to and from Woking along Potter’s Lane, Send Barns Road and Send Road will cause horrendous noise, air pollution delays and gridlock. We will become PRISONERS IN OUR OWN HOMES!

The development of the Clandon slip roads on the A3M will cause the local roads to be completely overwhelmed. Already the traffic from Burnt Common to Woking is horrendous and this development will cause it to virtually gridlock. None of this will be to the benefit of the land inhabitants who will also suffer increased pollution. I object to this proposal. |

<tbody>
<tr>
<td>I am writing to object strongly to some of the main modifications to Guildford's local plan.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>I live on Send Road and will be hugely adversely affected by the massive growth in traffic on a road that is already too busy. The big increase in houses at Garlick's Arch (MM41), the doubling in size of the Burnt Common industrial estate (MM42), the Alderton's Farm housing development (MM44) and the Clandon A3 slip road (MM27, MM42, MM48) will combine to put intolerable pressure on Send Road. This will result in increased noise, delays and gridlock, not to mention the extra pollution which is a major health concern for those living on the road. In particular, the industrial estate is bound to increase HGV traffic on Send Road, which poses a major safety risk to young children. The 30mph limit is not usually adhered to and there are no speed cameras on the road or any traffic-slowing devices.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Furthermore, the Garlick's Arch housing development (MM41) is now increased by 150 houses. This is excessive and ignores the 7,000 objections to the original, smaller plans. This land is Green Belt land and ancient woodland. This will be lost while at the same time morphing Send and Ripley into one big sprawling mass of houses. Surely the whole point of the Green Belt is to stop this happening? The extra population will also put intolerable pressure on local schools and medical facilities - particularly after the council's recent decision to close Ripley Primary School in extremely dubious circumstances, which attracted negative coverage in the national press.

As far as the industrial estate at Burnt Common is concerned, the doubling of the size to 14,800 sq m seems a total insult to all those who objected to previous incarnations of the local plan. There is no need to put new industrial sites in the Green Belt when Slyfield has unused capacity. There is no need to put new industrial sites in the Green Belt when Slyfield has unused capacity. There are no special circumstances so it goes against your own Green Belt policy (MM9). There is already a 25% increase in the Send Business Centre, while the huge new Vision Engineering factory and the fact that the old factory is being kept as a commercial property despite residents being told it would become housing, all combines to fundamentally change the nature of Send by massively increasing the amount of industrial and commercial activity.

And why has the Alderton's Farm housing development reappeared in the latest local plan? It is Green Belt with no special circumstances so again contravenes your own rule MM9. Added to the other proposed housing, it makes 770 houses added to the current 1,700 in Send. That is an unnecessarily high increase which is unfair on the people who live in Send already.

Moreover, the wording of the MM9 policy on the Green Belt seems to leave open the possibility of more 'infilling' of any land left that hasn't been developed.

It is staggering that after all the complaints, Guildford Borough Council has come back with these modifications.

**Attached documents:**

**Comment:** MM27 - LPMM18/6057  **Respondent:** Paul Dench 10926689  **Agent:**

**MM27 MM41 MM42 and MM48 Transport Strategy**

The transport strategy will not compensate or eradicate the problem that will occur when you put so many new houses in one area rather than spreading them throughout the borough. E.g to make access north bound on the A3 is not going to solve any problems only create more as it will encourage more cars through the village from the Woking direction. To increase the number of houses by 45% in Send is a recipe for disaster unless far more though and planning is put into the infrastructure. This Local Plan does not address the problem of the already overloaded infrastructure.

The traffic implications have not been adequately addressed

**Attached documents:**
**Comment: MM27 - LPMM18/302  Respondent: JN Boardman 10945793  Agent:**

It is obvious that with the above policies & strategies are still reflecting directly from what has gone before; amending & increasing on the Local Planning Foot Print. These changes are shown in shaving bits off here and adding bits to there.

These amendments: -

Still disregards all technical impacts on current & future structures. Most structures sit on a deep clay base which needs peculated ground water to function as a foundation base.

Tweaking weak infrastructures, no way puts in place any future proofed infrastructures.

Increasing these capacities will greatly increase all impacts on environment. Not all of which is yet to be fully understood or been considered.

Concreting over "Green Belt" is just not on, now or anytime in the future. We all complain about the forests in South America being cut down, along with plastic waste; this is no different.

The impact of such large developments, will swamp Send & all surrounding areas. If Wisley was a no no; then these proposals are doubly bad.

So what part of NO, does the current dominant political power not understand?

It seems as if the first judgement, common sense (Wisley) went against the current political-monied power houses. How strange that with a new judge conforms now to their wishes. How did all this happen?

Stop faffing about! Ask the local populous "What they want to happen by holding a Local Referendum." Just like Switzerland.

---

Comment: MM27 - LPMM18/3570  Respondent: Robin L. Smith 10972833  Agent:

**MM27, MM42, MM42 and MM48 Transport Strategy**

The implications upon traffic that MM41 (Policy A43), MM42 (Policy A58), MM44 (A63) will bring are not addressed to any worthwhile depth outline at a high-level by the A3 changes, the Clandon slip roads. GBC offers up find sounding words but no serious "meat" with regards to full assessments to serious increase in traffic with impact on Send Barnes and Send Road with an increase of several thousands of cars acerbating the current, existing traffic problems.

More houses will be hit by traffic pollution, noise, delays and gridlock.

Attached documents:

---

Comment: MM27 - LPMM18/2541  Respondent: Ian Pigram 10987745  Agent:

The transport strategy (MM27, MM41, MM42 and MM48), especially the A3 Clandon Road slip roads, inadequately addresses the health and transport implications for traffic due to the proposed developments at Garlick's Arch, Burnt Common, Clockbarn and Alderton's, together with Gosden Hill, Ockham and Wisley. A3 slip roads to and from London would attract traffic from Woking and further afield, to the detriment of village life and health.

Attached documents:
the traffic implications on the village are huge, it would not be able to cope with thousands more cars everyday. The roads would be gridlocked, there would be increased noise and air pollution.

The village cannot cope with the huge number of proposed houses and industrial units, it will change and destroy the village environment.

Attached documents:

---

The traffic implications for Send of Garlick’s Arch, Burnt Common, Clockharn and Alderton’s added to nearby Gosden Hill and Wisley/Ockham are not adequately addressed by the A3 changes and the Clandon slip roads. GBC offer fine words but no proper assessment of the aggregate traffic impact on Send Barns Lane and Send Road as thousands more cars head to Woking and the A3 every day, causing increased noise, nitrogen dioxide pollution, delays and gridlock.

Attached documents:

---

The A3 changes will not prevent a massive traffic impact on Send Barns Lane and Send Road.

Attached documents:

---

Again no proposal is made regarding the major increase in traffic to the immediate or surrounding areas, narrow roads and tight junctions in the villages of Ripley, Send, Old Woking and Clandon already prove problematic at peak times, how emergency services will be able to attend callouts at peak times is unthinkable. The tremendous increase in pollutants caused by the increase in traffic is yet another cause for concern, especially in the light of the removal of trees, hedges and grassland required to build all the homes in the immediate area, going against the environmentalists latest requests to plant more trees and create green spaces in an effort to improve air quality.

Attached documents:
**Comment: MM27 - LPMM18/885  Respondent: Elizabeth Milner 11003681  Agent:**

MM27 MM41 MM42 and MM48 Transport Strategy

The traffic implications for Send with Garlick's Arch, Burnt Common, Clockbarn and Alderton's would not be adequately solved by the A3 changes and the Clandon slip roads. Add in the developments at Gosden Hill and Wisley/Ockham and you will have major problems in the future with traffic. I would suggest you come out to view Send Barns Lane and the roundabout by Little Waitrose at the rush hour, around 8.30 am and just imagine how the levels of noise, pollution, delays would be increased intolerably both for the existing residents and for the proposed new residents. The roads would be gridlocked.

**Attached documents:**

**Comment: MM27 - LPMM18/3777  Respondent: Nick Thomas 11005473  Agent:**

MM27 MM41 MM42 and MM48 / Transport Strategy

Proposed changes to the A3 and the Clandon slip roads (document 003a, sections 11.14 to 11.34) will help to feed traffic more quickly into the local road system - what then? Jams will feed back onto the major roads and cause massive problems for both local and longer-distance motorists. GBC's assessment of possible solutions to this is extremely superficial - it's easy to write a few sentences promising infrastructure will follow but this is a real problem to which there won't be an acceptable solution: a proper amount of infrastructure to cope with this amount of development will devastate the green belt and destroy the character of the area.

Your current document suggests (Appendix 11.4 of GBC Responses to Matters, Issues and Questions reference 003b) that the increase in morning traffic on the A247 Send Road will be just 3% - after adding nearly 40% to the housing stock of the village. Heaven only knows how anyone arrived at this figure, but you don't need complex calculations to see that an estimate is out by an order of ten, as this is.

**Attached documents:**

**Comment: MM27 - LPMM18/1593  Respondent: Russell Pascoe 11008225  Agent:**

MM27 MM41 MM42 and MM48 Transport Strategy

MM27 MM42 MM48 Transport Strategy  These proposals are all quite out of proportion for Send. Anybody forced to travel at rush hours on these local roads will know all too well the delays are already totally unreasonable.

Attached documents:

Comment: MM27 - LPMM18/1402  Respondent: Mrs Janet Williams 11011041  Agent:

MM27 MM41 MM42 and MM48 Transport Strategy

Changes to the A3 slip road will in no way make up for the increased traffic that will be generated by all the planned developments. In fact it is far more likely to make the situation worse. What assessments have been done to predict the actual changes in traffic that will occur as the result of the planned developments?

Attached documents:

Comment: MM27 - LPMM18/906  Respondent: Mary Warren 11011713  Agent:

Transport

Modifications MM27, MM41, MM42, MM48.

As before, there appears to be no clear plan for transport links or other facilities such as schools and medical facilities, just fine words. Without such a document, the local plan is useless and will only lead to chaos and gridlock on the roads and impossible class sizes in our schools. Already, the roads around Send, Ripley and West Clandon are overloaded with enormous European sized lorries which rumble through the villages with no thought given to parked cars or pedestrians, mounting the pavements if they meet a lorry coming the other way. In addition, they emit considerable diesel fumes, risking the health of the children in the schools, at least two of which are very close to the road.

Attached documents:

Comment: MM27 - LPMM18/631  Respondent: Brenda Tulloch 11016001  Agent:

MM27 – MM41 – MM42 – MM48 – I object on the following grounds

Already congestion exists in Send at rush hours mainly with people travelling into Woking etc and at school drop off and pick up times. Are the proposed changes to the A3 really going to improve this – I don’t think so. This causes delays – pollution and gridlock.

Attached documents:

Comment: MM27 - LPMM18/4253  Respondent: Nik Proctor 11023969  Agent:
I object to the fact that the proposed Transport Strategy places far too much reliance on infrastructure improvements some of which are uncertain and all of which are beyond the council’s control and have no fixed timescale. There is already a 2 year delay on Highways England RIS scheme for J10 of the M25 and this has a direct effect on the development of Site A35 – TFM; Site A43 – Garlicks Arch; and Site MM44 – Aldertons Farm.

Attached documents:

Comment: MM27 - LPMM18/602  Respondent: Julian Harnor 11024225  Agent:

MM27 MM41 MM42 and MM48 Transport Strategy

The traffic implications for Send of Garlick’s Arch, Burnt Common, Clockbarn and Alderton’s added to nearby Gosden Hill and Wisley/Ockham are not adequately addressed by the A3 changes and the Clandon slip roads. GBC offer fine words but no proper assessment of the aggregate traffic impact on Send Barns Lane and Send Road as thousands more cars head to Woking and the A3 every day, causing increased noise, nitrogen dioxide pollution, delays and gridlock.

Attached documents:

Comment: MM27 - LPMM18/179  Respondent: Mike Tarrant 11032705  Agent:

I object to MM27, MM41, MM42, MM48, Transport Strategy.

Because we have no verified assessment from Guildford Borough Council of the Traffic implication these modifications will impact on Send.

Common sense tells me development on the scale proposed in Send and wider a field at Gosden Hill, Wisley and Ockham. Plus the proposed M25/A3 Junction will increase traffic in our Village and with it the problems it brings.

Attached documents:

Comment: MM27 - LPMM18/4274  Respondent: Jo Komisarczuk 11033057  Agent:

MM27, MM41, MM42, transport strategy

Burnt Common, Send, Ripley, will all be unduly affected by the road changes at Garlick’s Arch, ClockBarn, SendHill, Send Business Centre, and nearby Gosden Hill, the changes which are frequently on/off at Wisley/Ockham have not been addressed by the plan, beyond the use of the A3 with its proposed changes and the Clandon slip roads. No survey has been done on the current flows of traffic, no proper assessment has been completed at all of the aggregate traffic increases and impact on Burnt Common Lane, Send Barns Lane and Send Road. The constant gridlock at heavy use times – morning and evening - and the increase in pollution especially Nitrogen Dioxide which is already bordering on dangerous levels. There will be many thousands of extra cars travelling through the area, increasing the already loud noise from the A3.

Attached documents:
MM27, MM41, MM42, MM48 Transport Strategy

Increased traffic density caused by the proposed addition of 770 dwellings to Send, an increase of 45%; the majorly expanded industrial and storage area; and the new sliproads to and from the A3 resulting in thousands of extra cars and lorries travelling into Woking daily via the A247 together with the serious congestion and air pollution (which is already at dangerous levels) does not seem to have had any form of formal traffic assessment undertaken by GBC otherwise they would realise that their proposed plan will result in the destruction of Send's current infrastructure and that of its surrounding areas as well as increased noise and nitrogen dioxide pollution causing damage to the health of residents as well as serious traffic delays and gridlock of local roads.

Attached documents:

---

Comment: MM27 - LPMM18/1752  Respondent: Beryl Sussex 11041633  Agent:

MM27, MM41, MM42 and MM48 Transport Strategy

All the combined developments planned will place a huge burden on the present traffic system.

Send is already used by many Woking Commuters to reach the A3.

It is already a very busy road. More traffic will lead to more delays, gridlock, noise and pollution

Attached documents:

---

Comment: MM27 - LPMM18/4964  Respondent: Sam Thompson 11042433  Agent:

MM27, MM41, MM42 and MM48, Transport Strategy

The local roads are narrow, already over congested and badly maintained. Send Marsh Road, Polesdon Lane and Newark Lane are busy commuting roads that constantly have pot holes that are not repaired. There is frequent gridlock and also no real public transport options as an alternative. The local area cannot sustain thousands more cars transiting in the area that would be the result of 770 more houses in the area.

The proposed changes to the A3 and Clandon slip roads do nothing to address these issues.

Attached documents:

---

Comment: MM27 - LPMM18/3720  Respondent: Peter McGowan 11047201  Agent:

MM27, MM41, MM42 and MM48 Transport Strategy

The proposed A3 amendments and the Clandon slip roads do not properly address the impact of traffic for Send of development proposals for Aldertons, Clockbarn, Burnt Common and Garlick's Arch in addition to Gosden Hill and
Wisley/Ockham. There is no adequate analysis of the total traffic implications on Send Barns Lane and Send Road especially taking into account the fact that thousands more cars will transit the area daily, bringing about increased noise and chemical pollution as well as delays, which noticeably have increased significantly over the 18 years that I have lived in the area, at the expense of residents and the natural environment.

Other Developments

The consultation only permits commentary on the principal changes and thus denies residents the opportunity to object again to 40 houses and a travellers' site on Send Hill, 60 Houses at Clockbarn in Tannery Lane and a 25 per cent increase in the size of the Send Business Centre notwithstanding the existence of the Wey Conservation area. Added to the other housing sites and industrial space such heavy concentration in one village, which could be more evenly shared with 40, is unreasonable.

As a general point, many of the amendments can only be viewed without the context of appropriate infrastructure, with mention only being made that consideration need only be given to issues, including schools. It is unreasonable and unfair to put the amendments forward without mention of the infrastructure needed to support the original proposals, earlier modifications and these modifications.

Attached documents:

Comment: MM27 - LPMM18/5896  Respondent: Patrick Oven 11048481  Agent:

MM27, MM41, MM42 and MM48 - Transport Strategy.

GBC has grossly underestimated the effect on the local roads of the proposed developments discussed above and the other developments proposed in the Plan at Clockbarn Nurseries, Send Hill and the expansion of the Send Business Centre in Tannery Lane, which are not the subject of amendments and so precluded from discussion here. At the Public Inquiry GBC indicated only a minor increase was anticipated in traffic through Send on the A247 was anticipated. That totally fails to take into account that such huge development has to bring a large increase in both car and HGV traffic, which can only use the existing roads - no new ones are proposed. The proposed 4 way slip roads at the Burnt Common Clandon slip, currently only a northbound exit and a southbound joining will inevitably lead to increased traffic through Send. At present, traffic on the clockwise M25, bound for Woking generally leaves at junction 11. It is possible leave at junction 10 and take the A3 for a mile, leaving and going through Ripley, then Send and Old Woking. However the bottleneck that Ripley presents at busy times morning and evening at present dissuades this. Traffic turning right into the very narrow entrance to Newark Lane, heading for Pyrford and Byfleet, blocks the High Street, causing tailbacks that often stretch back to the A3 junction. GBC has completely failed to take into account that the provision of the 4 way slips at Burnt Common will also serve a new road from the proposed large development at Wisley Airfield, running parallel with the A3 and bypassing Ripley. M25 clockwise traffic intending to go to Woking will thus find it worthwhile when the M25 has it's usual morning and evening queues from Cobham Services to leave at junction 10 and take the new route to Burnt Common without any fear of hold-ups in Ripley. That traffic will however have to travel along Send Barns Lane and Send Road, already gridlocked morning and evening, adding even more congestion, noise and pollution. Ripley meanwhile, will bask in relative peace.

Send had the temerity to elect Guildford Greenbelt Group Borough Councillors in 2015. It is impossible to avoid the conclusion that this Plan is punishing the village for doing this. The proposed development, even as it stood prior to the increases provided by the amended Plan and the Inquiry, concentrated 40% of the housing development in an area with 18% of the Borough's population. We are also now intended to take a huge industrial area, the only one of its size in the Plan - all in one rural location. This Plan, taken as a whole as it must be, is utterly disproportionate and unfair to Send, Send Marsh and Burnt Common.

4 Road Investment Strategy – MM27

It was generally accepted throughout the Examination that the Council has formulated a spatial strategy that places a great reliance upon the A3 corridor. This has resulted in a Local Plan with a significant reliance on the implementation of the Highways England “Road Investment Strategy” proposals for this route. This position is reflected within MM27 and specifically at paragraph 4.6.18a, which states “without the implementation of the A3 Guildford scheme, the cumulative impacts of the quantum and distribution of development in the Local Plan could be considered to become severe during the second half of the plan period”.

In this context, the principle established within MM27 to provide the need for a review should the circumstances around the A3 upgraded scheme change is supported in principle. However, it is not just the four strategic sites adjacent the A3 which rely to some degree on the delivery of the RIS scheme, but allocations across the Borough. This goes to the very heart of the spatial strategy focusing on sites in and around Guildford.

Accordingly, without the delivery of the proposed A3 RIS scheme, the Local Plan can no longer be considered deliverable. With the supply of housing historically suppressed and the resulting affordability crisis so acute, the Council should avoid timely and costly studies on short-term mitigation, and undertake a comprehensive review of the Plan focused on the delivery of sites that would not cause further significant impact to the A3.

Comment: MM27 - LPMM18/4935  Respondent: John Harrison 11157345  Agent:

MM27 MM24 I could find no reference to wind turbines or commercial solar power generation. The council should have a policy for where these can and cannot be sighted having regard to existing cable routes, landscape quality and other material factors: Another important area where the plan falls short. Similarly I could see no reference to fracking. We need to leave around 80% of proven hydrocarbon reserves in the ground to avoid catastrophic global warming. The borough is variously densely populated and of exceptional landscape quality. Together these are good reasons for a policy against fracking here. Another reason to reopen the enquiry.

Comment: MM27 - LPMM18/4939  Respondent: John Harrison 11157345  Agent:

MM27 The plan states that the A3 runs through the centre of the borough and in the appendix that it contributes to congestion. The council pledges to support the Highways Agency proposals to improve conditions but it should use its local knowledge to consider whether those proposals are optimal and it should ensure that future development does not make matters worse, which suggests that major out-of-town development should not be commenced before the improvements are complete, or at least irrevocably approved. An alternative to widening is a tunnel to separate through traffic from local traffic. This will avoid the major noise, pollution and visual impact of the widening and noise.
attenuation measures which are likely to be strongly resisted by local residents so may not happen. It is a major design flaw that local traffic has to use the A3. For example, from some locations there is no alternative way to get to the A3 cathedral exit, which serves the University and Tesco, without getting onto the A3 from the A25 for a short hop. This is a highly unsatisfactory arrangement when the A3 is carrying large amounts of through traffic given the short length of the A25 slip road and it’s very high usage. The proposed improvement of the A3/M25 junction, whilst valuable in itself, is likely to increase usage of the A3 if anyone has learnt anything about road improvements over the last 50 years, meaning there will be even more traffic passing through the middle of Guildford.

It is worth reflecting that the Guildford bypass was opened in 1934. That is 84 years ago. In any other comparable town the other half of the ring road would have been constructed by now effectively doubling capacity. Clearly this has not been done due to the landscape quality to the south of the town, but that Guildford has not received adequate major infrastructure investment explains why it is more congested than any comparable sized town. It is the 6th most congested in the UK and the 10th most in Europe at peak times. There is now the threat of unprecedented quantities of development in Greenbelt locations as well as expectations of organic growth, with no precondition about solving the current mess. The solution is out of Guildford’s hands and it is therefore unsound to rely on the widening being made in time, and solving the problem, when there is no guarantee that this will be the case, but that major development might proceed in any event.

Attached documents:

Comment: MM27 - LPMM18/4299  Respondent: David Avery 11164225  Agent:

MM27 MM41 MM42 and MM48 Transport Strategy

The traffic implications for Send of Garlick’s Arch, Burnt Common, Clockbarn and Alderton’s added to nearby Gosden Hill and Wisley/Ockham are not adequately addressed by the A3 changes and the Clandon slip roads. GBC offer fine words but no proper assessment of the aggregate traffic impact on Send Barns Lane and Send Road as thousands more cars head to Woking every day, causing increased noise, nitrogen dioxide pollution, delays and gridlock.

Attached documents:

Comment: MM27 - LPMM18/6016  Respondent: Karen Lord 11550561  Agent:

MM27, MM41, MM42 and MM48 TRANSPORT STRATEGY

The increased traffic for Send from Burnt Common, Garlicks Arch, Clockbarn, Aldertons as well as Gosden Hill and Wisley Ockham is properly been addressed by the road changes of the A3 and Clandon Slip Roads. The massive increase in traffic going to and from Woking along Send Barns Lane and Send Road will cause air pollution delays and gridlock in our village.

Attached documents:

Comment: MM27 - LPMM18/747  Respondent: Michael Cumper 12129889  Agent:

The changes to the A3 junction have not taken into account the increased traffic and do not address the traffic issues for Send and Ripley for the proposed new developments in Send and the locality. There has been significant assessment of
the route from Send to Woking which is already under considerable pressure. Vehicles will not just head to get to Woking but the use of Woking Station will increase dramatically and those people will be travelling through Send to get the train to London. This needs to be properly considered and it will result in the conclusion that the infrastructure just can't take it.

Attached documents:

Comment: MM27 - LPMM18/4757  Respondent: Katherine Pyne 15057889  Agent:

MM27, MM41, MM42 AND MM48, TRANSPORT STRATEGY

- I object that GBC has failed to assess the implications of excessive and unwarranted development on traffic and infrastructure of traffic driving through Send each day.

Attached documents:

Comment: MM27 - LPMM18/488  Respondent: Ann Elms 15067585  Agent:

MM27 MM41 MM42 and MM48 Transport Strategy

The traffic implications for Send with Garlick's Arch, Burnt Common, Clockbarn and Alderton's would not be adequately solved by the A3 changes and the Clandon slip roads. Add in the developments at Gosden Hill and Wisley/Ockham and you will have major problems in the future with traffic. I would suggest you come out to view Send Barns Lane and the roundabout by Little Waitrose at the rush hour, around 8.30 am and just imagine how the levels of noise, pollution, delays would be increased intolerably both for the existing residents and for the proposed new residents. The roads would be gridlocked.

Attached documents:

Comment: MM27 - LPMM18/328  Respondent: Sabine Marke-Deleau 15081281  Agent:

MM27, MM41, MM42 and MM48 Transport Strategy

The traffic implications for Send of Garlick’s Arch, Burnt Common, Clockbarn and Alderton’s added to the nearby Golden Hill and Wisley / Ockham are not adequately addressed by the A3 changes and the Clandon slip roads. GBC offer fine words bu no proper assessment of the aggregate traffic impact on Send Barns Lane and Send Road as thousands more cars head to Woking every day, causing increased noise, nitrogen dioxide pollution, delays and gridlock.

Attached documents:

Comment: MM27 - LPMM18/337  Respondent: Antony Marke 15082049  Agent:
MM27, MM41, MM42 and MM48 Transport Strategy

The traffic implications for Send of Garlick’s Arch, Burnt Common, Clockbarn and Alderton’s added to the nearby Golden Hill and Wisley / Ockham are not adequately addressed by the A3 changes and the Clandon slip roads. GBC offer fine words but no proper assessment of the aggregate traffic impact on Send Barns Lane and Send Road as thousands more cars head to Woking every day, causing increased noise, nitrogen dioxide pollution, delays and gridlock.

Attached documents:

Comment: MM27 - LPMM18/520  Respondent: Malcolm Holland 15102049  Agent:

MM27/MM41/MM42 and MM48

The traffic implications for the above have not been adequately addressed and no proper assessment has taken place bearing in mind more traffic increased noise nitrogen pollution delays and gridlock

Attached documents:

Comment: MM27 - LPMM18/83  Respondent: Simon Crane 15104769  Agent:

MM27, MM41, MM42 and MM48 Transport Strategy

- The planned changes to the A3 and Clandon slip roads are not sufficient to cope with the increased traffic that will arise from the proposed developments of Garlick’s Arch, Burnt Common, Clockbarn and Alderton’s.
- Queuing traffic for the A3 will back up into Send, again clogging the roads and increasing air pollution, plus traffic in to Woking through Send will also increase hugely.

Attached documents:

Comment: MM27 - LPMM18/3810  Respondent: Y C Smithers 15106977  Agent:

MM27, MM41, MM42 and MM48 Transport Strategy

The traffic implications for the area are devastating and as such totally overburdens traffic on local roads and also the A3, entering and leaving this enormously busy road which is regularly a car park! The new proposals don’t take into consideration the traffic impact of the additional thousands of cars, let alone increased pollution, noise and likelihood of more accidents, especially during peak times.

Other developments

This consultation does not include the chance to comment/object to the 40 houses and travellers’ site on Send Hill, 60 houses at Clockbarn in Tannery Lane and the increase in size to the Send Business Centre despite the Wey Conservation area, these proposals are again devastating to the local roads in all of these areas, they are too narrow, often difficult to pass and have many blind spots, and the larger roads are already standing traffic during peak times, let alone at other times of the day, the small village cannot take any more development especially of the sizes proposed.
We do hope you consider our strong objections to all of the above, as not only us but our family and friends will be severely impacted. We are pensioners and are already finding the amount of traffic too much and has significantly risen in recent years, especially with commuters using our village as a cut throughs from the A3 and M25.

Attached documents:

**Comment:** MM27 - LPMM18/68  **Respondent:** Andy Williams 15107041  **Agent:**

**MM27, MM41, MM42, MM48 - Transport Strategy**

The implications have not been properly assessed or addressed by the A3 changes and the Clandon slip roads. Potential significant traffic impact upon Send Barns Lane and Send Road of traffic heading for Woking, increased noise and pollution levels, additional delays and gridlock on the roads.

Attached documents:

**Comment:** MM27 - LPMM18/350  **Respondent:** Louise Majithia 15109601  **Agent:**

**MM27, MM41, MM42 and MM48 Transport Strategy**

The traffic implications for Send of Garlick’s Arch, Burnt Common, Clockbarn and Alderton’s added to the nearby Golden Hill and Wisley / Ockham are not adequately addressed by the A3 changes and the Clandon slip roads. GBC offer fine words but no proper assessment of the aggregate traffic impact on Send Barns Lane and Send Road as thousands more cars head to Woking every day, causing increased noise, nitrogen dioxide pollution, delays and gridlock.

Attached documents:

**Comment:** MM27 - LPMM18/4049  **Respondent:** Jo Wright 15114017  **Agent:**

**MM27 MM41 MM42 MM48 Transport Strategy**

I object to the planned A3 junction changes at Burnt Common due to the effect on the surrounding villages.

I object to the amount of additional cars that will be on the road causing further risk to our children as they travel to and from school.

Attached documents:

**Comment:** MM27 - LPMM18/136  **Respondent:** Roger Mutton 15131425  **Agent:**
MM27, MM41, MM42 and MM48 Transport Strategy has not been properly assessed with regard to the new proposed A3 and Clandon intersections, which will only encourage more vehicles to head into Woking every day increasing noise, NO2, delays and worse still past a new Junior school and Primary School right beside the main A road through the village.

Attached documents:

Comment: MM27 - LPMM18/2483  Respondent: Sylvia Pyne 15138433  Agent:

MM27 MM41 MM42 and MM48 Transport Strategy

The changes to the A3 will make things even worse for Send with the traffic from the above developments coming straight through the village to Woking. This will mean unacceptable pollution, which has been increasing over the years and which I find is already causing more breathing problems for me as an asthmatic living on Send Road, so what it will do to children walking to school along Send Road and Send Barnes Lane with increasing nitrogen dioxide pollution exacerbated by the delays and gridlock it will cause. We are supposed to be encouraging more children to walk and this will only give parents an excuse to use their cars even more, and who could blame them.

More consideration should be given to the siting of additional housing elsewhere, as we are bearing an unacceptably large proportion of the new housing and development in the Guildford area, which should be spread more evenly through the villages etc. It appears we are getting about 50% of all development in the next 5 years, which can’t be right. For this reason I feel I have no other alternative but to object strongly to the enlarged burden which we are now being asked to bear, and it seems every time we object we are just given more development as our reward.

Attached documents:

Comment: MM27 - LPMM18/122  Respondent: none (Mr. Jeffrey Greenwood) 15140417  Agent:

I object to this

Attached documents:

Comment: MM27 - LPMM18/511  Respondent: Bav Majithia 15141633  Agent:

MM27, MM41, MM42 and MM48 Transport Strategy

The traffic implications for Send of Garlick’s Arch, Burnt Common, Clockbarn and Alderton’s added to the nearby Golden Hill and Wisley/Ockham are not adequately addressed by the A3 changes and the Clandon slip roads. GBC offer fine words but no proper assessment of the aggregate traffic impact on Send Barns Lane and Send Road as thousands more cars head to Woking every day, causing increased noise, nitrogen dioxide pollution, delays and gridlock.

Attached documents:
I object to MM27, MM41, MM42, MM48 - there is no way to introduce the amount of traffic you are proposing into the area!

Attached documents:

Finally, the MM27, MM41, MM42 and MM48 Transport Strategy

Changes to the A3 do not alter the narrow winding roads that lead off of the main Send Road. These small roads are not designed for large numbers of cars and the risk of accidents will dramatically increase with more traffic on them.

Attached documents:

There are no definite plans laid out and it is impossible to widen Send Road or the Clandon Road to accommodate the increase in traffic approaching or returning from the A3. These are narrow roads in many places and the traffic is already at a standstill at peak times. A full assessment must be made and published and I ask the inspector to revisit at peak times

Attached documents:

Transport strategy MM27, MM41, MM42, MM48

The proposed developments will add to the already overcrowded roads, where journeys take far longer than necessary. Most residents now have to factor in the probability that there will be delays.

The road network is in desperate need of a major maintenance programme. In Send the surface at the traffic light intersection has completely broken up with holes appearing in all approaches. This non slip surface has broken down, wasted money, poor design. Or too much traffic?

The bridge over the A3 on the Clandon road has had the road surface pushed into the kerb resulting in large undulations that force motorists into the middle of the road.

Priority should be given to getting existing roads into a reasonable condition over the building new developments that will only increase traffic and make the matters worse. Most roads in the areas have kerb stones, and service covers dislodged and numerous potholes.
Who decides what a reasonable time is to queue on the roads into and out of Guildford and Woking getting to and from work. What is the environmental impact of thousands of cars, Lorries and busses queuing every morning and evening polluting the atmosphere, wasting fuel and residents and commuter’s time?

**Attached documents:**

**Comment: MM27 - LPMM18/1785  Respondent: Stephen John Tully 15238881  Agent:**

MM27, MM41, MM42, MM48,

Transport Strategy:

The GBC assessment is non existent, the roads around Send could not cope with this extra traffic even with modifications to A3 etc.

**Attached documents:**

**Comment: MM27 - LPMM18/943  Respondent: Michael McGrath 15251105  Agent:**

5. **MM27, MM41, MM42, AND MM48, TRANSPORT STRATEGY**

I object to these Strategies because:

- The various Modifications refer to “mitigation schemes to address the otherwise adverse material (and visual) impacts on communities and the environment” without declaring any conditions that would have to be met by any such “mitigation schemes”. The absence of any defined scope for “mitigation schemes” is to deny the objectors to the Transport Strategy the chance to assess and comment on the desirability of any “mitigation scheme”. The prospect of implementing “mitigation schemes” without any pre-conditions would be poor governance and unacceptable to the communities affected by this Transport Strategy.

- Guildford Borough Council have not demonstrated any assessment of the aggregated traffic impacts on Send Barnes Lane and Send Road from the proposed changes for additional slip roads to the junction of the A247 with the A3, which will substantially increase the traffic flows to and from Woking each day.

- The Transport Strategy will lead to yet more vehicle traffic being added to the minor ‘A’ road (the A247) through Send, with already high volumes of traffic, where the ‘uktrafficflow’ web site shows an average of nearly 14000 vehicles passing along the A247 in Send each day. This high volume already has an adverse effect on the quality of life for the residents of Send with congestion, noise, and pollution from vehicle emissions. Such daily high traffic flow is excessive and must not be increased further by senseless and unnecessary developments.

- The loss of open spaces for additional roads will reduce the ability of the natural environment to remove pollutants such as CO\textsubscript{2} from the atmosphere.

**Attached documents:**

**Comment: MM27 - LPMM18/866  Respondent: Mr Brian Middlemiss 15257953  Agent:**
MM27, MM41, MM42 and MM48 Transport strategy for the whole area.

There appears to be no proper assessment of the combined traffic impact on the Send Road and Send Barnes Lane with potentially thousands of extra cars passing through the village daily. What would Mr Hammond think of this? It is bad enough at present trying to get to Woking or Guildford. This I object to.

Attached documents:

Comment: MM27 - LPMM18/4524  Respondent: Hannah Green 15303457  Agent:

5. MM27, MM41, MM42 and MM48 Transport Strategy

There has been no adequate assessment by GBC of the impact of this transport strategy on congestion, noise pollution and air pollution as thousands more cars head to Woking each day. There is the possibility of gridlock

Attached documents:

Comment: MM27 - LPMM18/1263  Respondent: Eloise Haxton 15313697  Agent:

MM27, MM41, MM42, MM48 Transport Strategy

• No assessment has been made of the impact on Send and Ripley of the increase in cars with the resultant gridlock, delays, noise and nitrous dioxide pollution.

Attached documents:

Comment: MM27 - LPMM18/1629  Respondent: Steven Brown 15320737  Agent:

Transport strategy for MM27, MM41, MM42 and MM48

There has been no rigorous assessment of the impact of the proposed developments on traffic flows in the area. The road to Woking is already gridlocked in rush hour times. The proposed developments would lead to significantly worse traffic which would be intolerable to existing residents.

Common sense tells me development on the scale proposed in Send and wider a field at Gosden Hill, Wisley and Ockham. Plus the proposed M25/A3 Junction will increase traffic in our Village and with it the problems it brings.

Attached documents:

**Comment:** MM27 - LPMM18/5971  **Respondent:** Jennifer Slade 15429985  **Agent:**

**Transport Strategy: MM27 / MM41 / MM42 and MM48**  GBC has not published any assessment of the increased traffic density which will be caused by the proposed addition of 770 dwellings to Send, which is an increase of 45%; the significantly expanded industrial and storage area and the new slip roads to and from the A3, which will result in thousands of extra cars and lorries traveling daily along the A247, together with the serious congestion and air pollution (which is already at dangerous levels). Any proper assessment would show that the proposed plan will result in the destruction of Ripley and Send's current infrastructure and that of its surrounding areas as well as increased noise and nitrogen dioxide pollution, causing damage to the health of residents and particularly children at the School on the A247 in Send, as well as serious traffic delays and gridlock of the local road network.

Attached documents:

**Comment:** MM27 - LPMM18/2742  **Respondent:** Helen Green 15433153  **Agent:**

Regarding MM27, MM41, MM42 and MM48 Transport Strategy

- There has been no adequate assessment by GBC of the impact of this transport strategy on congestion, noise pollution and air pollution as thousands more cars head to Woking each day. There is the possibility of gridlock

Attached documents:

**Comment:** MM27 - LPMM18/2375  **Respondent:** David A Sprigings 15438049  **Agent:**

**MM27 MM40 MM41 MM42 MM48 Transport Strategy**

The transport strategy in the Send/Send Marsh/Burntcommon/Ripley area does not look as though it will help deal with traffic congestion in the area but more likely to make it worse.

The timing is such that the developments in the area are front end loaded, mostly in the first 5 years of the plan, whilst major road improvements are mostly scheduled to not be completed until later years.

The road developments appear anyway to be designed to bring yet more traffic through these villages including to and from Woking which will increase pollution, delays and gridlock. To build many of the proposed new homes in advance of road improvements will only make matters worse.

The potential future all movements junction of the A3 with the A3100 London Road, the B2215 London Road and the A247 Clandon Road for the provision of land for a connector road to the B2215 London Road/A247 Clandon Road in MM35 Gosden Hill Farm under Transport Strategy (2) and Opportunities (6) sounds like a recipe for yet more traffic to
be drawn through Burntcommon/Send Marsh/ Send/Ripley making things even worse so although a plan for the future I object to it now.

Attached documents:

Comment: MM27 - LPMM18/2236  Respondent: C Knaggs 15443265  Agent:

I protest most strongly.

Medical facilities, roads cannot cope, noise, dirt, dust, bus service cannot cope. Area being ruined.

Attached documents:

Comment: MM27 - LPMM18/5477  Respondent: Margaret Ashmore 15449409  Agent:

Nobody has yet come up with plans for roads and other transport needs MM27, MM41, MM42, MM48. You as a Council know how important it is to get this done IF your plans are to go ahead. At present the current roads cannot take any extra traffic, all roads into and out of the Villages will be complete gridlock. Please think very carefully what you want to destroy, such as Green Belt, Village Life, and the History of this area.

Attached documents:

Comment: MM27 - LPMM18/471  Respondent: Janet Tarbet 15454529  Agent:

MM27, MM41, MM42 and MM48 Transport Strategy

The traffic implications for Send of Garlick’s Arch, Burnt Common, Clockbarn and Alderton’s added to the nearby Golden Hill and Wisley / Ockham are not adequately addressed by the A3 changes and the Clandon slip roads. GBC offer fine words bu no proper assessment of the aggregate traffic impact on Send Barns Lane and Send Road as thousands more cars head to Woking every day, causing increased noise, nitrogen dioxide pollution, delays and gridlock.

Attached documents:

Comment: MM27 - LPMM18/3751  Respondent: K C Meldrum 15458081  Agent:

MM27 – On 4.6.18a I still believe that the proposed two-way junction with the A3 in Policy A25 at Gosden Hill Farm should be a 4 way junction.

In addition I believe that the Sustainable Movement Corridor isn’t viable in view of the restricted nature of the roads between Burpham and the Town Centre along the A3100 and the whole concept should be reviewed and, if appropriate, amended.
**Comment: MM27 - LPMM18/4139**  **Respondent: Pauline East 15468705**  **Agent:**

MM27, MM41, MM42 & MM48 Transport Strategy.

The traffic implications for Send of Garlicks Arch, Burnt Common, Clockbarn and Alderton's plus of course Gosden Hill and Wisley/Ockham are major and not adequately addressed with the proposed A3 changes etc.

It will I feel result in thousands more cars daily using Send Barns Lane and Send Road going to/from Woking etc past schools, medical centre and shops with major delays and gridlocks, noise and air pollution all to an intolerable and unacceptable level for our village.

**Attached documents:**

---

**Comment: MM27 - LPMM18/4178**  **Respondent: Zoe Kollov 15468833**  **Agent:**

I object to MM27, MM41, MM42 and MM48 Transport Strategy because;

- The traffic implications for Send as a result of proposed changes at Garlicks Arch, Burnt Common, Clockbarn and Alderton's added to nearby Gosden Hill and Wisley/Ockham are not adequately addressed by the A3 changes and the Clandon slip roads. GBC has performed no proper assessment of the resulting aggregate traffic and the way that this will build up to every working day causing pollution, delays gridlock and noise.

I object to the proposal to inset Send Business park from the green belt because;

- It will generate further traffic that will clog up the area to the detriment of all those currently living here

- It is an areas of outstanding beauty and is quite rightly protected as green belt that would be completely destroyed by this change

- there is no exceptional circumstance why the current green belt allocation should be changed for this purpose

I object to policy A42 change at Cockbarn in tannery lane because:

- I believe it should not take place in the first place, however a further increase in the number of homes is proposed which make the situation even worse

- The traffic in this area is getting worse and especially at the A247 junction

- Green belt land is protected in law and I see no reason that it should be built on.

**Attached documents:**
Comment: MM27 - LPMM18/229  Respondent: Nicholas Brown 15468993  Agent:

MM27, MM41, MM42 & MM48

It appears that GBC has not carried out a proper assessment of the aggregate traffic impact on Send Barns Lane and Send Road of building at Garlick's Arch, Burnt Common, Clockbarn and Alderton's. This transport strategy will witness a huge increase in traffic which will add to an already inadequate road system and will see an increase in noise, pollution, delays and gridlock. This is a very worrying prospect.

Send seems to have been singled out for a disproportionate increase in development when compared with neighbouring villages.

I hope that these objections are seriously taken into account.

Attached documents:

Comment: MM27 - LPMM18/291  Respondent: M.M.L Prosser 15477089  Agent:

What an extraordinary amount of building planned for Send Village; it would certainly stop being a village and turn into a town. However it would still only have one road going through which means traffic would be [unreadable text], and non-stop.

If you could build a flyover to Woking - great! [unreadable text] those extra people [unreadable text] doctor's surgery and one chemist and no extra school isn't feasible.

I do think a permanent gipsy site would be preferable to them parking, [unreadable text] ever they like and [Response has been redacted due to statements being considered contrary to the Council’s duty under the Equalities Act 2010 to eliminate discrimination, harassment, victimisation against persons with a protected characteristic; and to foster good relations between persons with a protected characteristic and persons who do not share it]

Please have a rethink

Attached documents:

Comment: MM27 - LPMM18/1561  Respondent: Jill Murphy 15502433  Agent:

MM27, MM41, MM42, and MM48 Transport Strategy.

Why have the effect of thousands more cars in an already heavily congested area not been taken into account?

The increased traffic for Send from Burnt Common Garlick's Arch, Aldertons, Clockbarn in addition to Gosden Hill and Wisley Ockham is not in any meaningful fashion addressed by the Road changes of the A3 and Clandon Slip Roads. They seem both the developers and GBC to offer narrative and not action.

This massive increase in traffic of all sorts heading to and from Woking along Send Barns Road and Send Road will cause horrendous noise, air pollution delays and gridlock.
I have three Grandchildren who live on SendBarns Road and I despair at how their lives will be affected.

MM27. MM41. MM42 and MM48 Transport Strategy

Send is a highly congested village. My own road, Potters Lane, is evidence of this; in July my parked car was written off
by a council van when the driver found himself boxed in by rush hour traffic and panicked, driving in to the side of my
car and then reversing in to the front of it. 'Road rage' is becoming a serious problem in Potters Lane, with almost daily
conflicts; this was not the case when I moved in five years ago. My question, therefore, is why has the potential effect of
thousands of extra cars in an already heavily congested area not been taken into account? Nothing has been done to
address this in the most recent document.

Attached documents:

Comment: MM27 - LPMM18/3683  Respondent: John Thompson 15591585  Agent:

I object to MM27, MM41, MM42, MM48 Transport Strategy

The cumulative impact on the traffic and pollution issues on the village, when all of the proposed developments at
Garlick's Arch, Clockbarn, Alderton's Farm, Gosden Hill and Wisley and Ockham, is totally unacceptable. Our road
systems are already heavily congested, especially at key points in the day. My daughter lives on Send Road where it is
often difficult to enter and exit her drive because of the ceaseless flow of vehicles. Crossing the road is perilous. The
pollution levels are a real cause for concern as I have a young grandchild. We already know that far too many of today's
youngsters suffer from asthma, a direct result of the increasing levels of pollution. This can only be exacerbated if these
proposals go ahead.

Attached documents:

Comment: MM27 - LPMM18/4515  Respondent: Ann Watkins 15603361  Agent:

None of these proposals will help an already chaotic traffic problem.

Attached documents:

Comment: MM27 - LPMM18/4656  Respondent: Jackie van Heesewijk 15640897  Agent:

MM27, MM41, MM42 and MM48 Transport Strategy

The traffic implications of the increased developments at Garlick's Arch, Burnt Common, Clockbarn and Alderton's have
not been properly thought through. The proposed changes to the A3 and Clandon slip roads will not address the problems
created by the extra traffic on top of the usual rush hour Woking commuter traffic congestion, causing increased noise,
nitrogen dioxide pollution delays and gridlock.

Attached documents:

Comment: MM27 - LPMM18/4311  Respondent: Highways England (Patrick Blake) 15746081  Agent:
An improvement of the A3 through Guildford was included in the first Road Investment Strategy (RIS1) announced in 2015 as a scheme to be developed for potential construction during Road Period 2, subject to value for money and availability of funding. Highways England is presently undertaking feasibility studies and initial analysis and appraisal in order to assess the viability of potential options for improvement of the A3 at Guildford. There are complex challenges to address and we are currently in stage 0 (pre-project/strategy, shaping and prioritisation) of HE’s Project Control Framework. This work is ongoing.

The next Road Investment Strategy (RIS2) will be for the period 2020-2025. The Secretary of State for Transport will decide on the components of RIS 2, such as allocating budget and naming specific schemes. Highways England is currently working with DfT to advise the Secretary of State on potential investment portfolios. The Government is expected to publish the next Road Investment Strategy in summer 2019, at which point commitments to a number of schemes will be made. Until this point, we will not be in a position to make any commitments to the construction of a scheme on the A3 at Guildford. Further, it should be noted that delivery of any proposal named in RIS2 will still require successful completion of the necessary statutory planning process and the continued development of business cases to ensure the demonstration of value for money.

It is understood how the amended Policy ID2 will, if required could trigger a review of the Local Plan.

When considering proposals for growth, any impacts on the SRN will need to be identified and mitigated as far as reasonably possible. We will support proposals that consider sustainable measures which manage down demand and reduces the need to travel. Infrastructure improvements on the SRN should only be considered as a last resort. Proposed new growth will need to be considered in the context of the cumulative impact from already proposed development on the SRN. It is vital that the deliverability of any required infrastructure that proposed growth is reliant upon is fully assessed.

We look forward to working with all parties which include Guildford Borough Council and Surrey County Council to develop Masterplans for the strategic sites. This work will include establishing the deliverability of the identified transport mitigation packages that directly or indirectly relate to the SRN which is set out within the individual associated policies. This will likely be informed by outputs from subsequent updates to Surrey County Council’s SINTRAM model and also be used to inform updates to the Infrastructure Delivery Plan supporting the Local Plan. We further look forward to working towards and agreeing an updated Statement of Common Ground or similar with Guildford Borough Council.

Comment: MM27 - LPMM18/222  Respondent: Laura Frankland 17178113  Agent:

MM9 Green Belt policy and MM27 MM42 MM48 Transport Strategy

The Green Belt should be protected and preserved for future generations. Wild life and walkers alike need our greenbelt areas and over development of our villages devastating the rurality of the area. I do not wish to live in a town, choked by increased volume of traffic with reduced places to enjoy nature, peace and a walk with my family and dogs.

Attached documents:

Comment: MM27 - LPMM18/1044  Respondent: Ian William Groden 17206177  Agent:

MM27 MM41 MM42 and MM48 Transport Strategy
• I would respectfully suggest that, although individual site allocations may in the outcome be judged by the Council to be without severe impact in the Strategic Road Network, my concern throughout has been for the traffic implications, primarily for Burnt Common Roundabout itself, as well as its converging roads including the road through Send, from the combination of extremely large developments at Wisley, Gosden Hill, Garlick’s Arch, commercial development at Burnt Common and the new north-facing sliproads.

• All will individually lead to new or changed traffic patterns with substantially increased volumes, congestion, noise, and fumes but the combined impact at Burnt Common roundabout merits your utmost confidence that it works without extreme consequences, particularly with the increases at Garlick’s Arch (MM41) and the commercial development at MM42.

• I have mentioned that the increased Garlick’s Arch will still create traffic via the roundabout to Send and Woking.

• In addition, even if the link road through Garlick’s Arch proves sufficient to divert southbound and eastbound traffic (from the Wisley development and Newark Lane), increased numbers from the Wisley development could choose to turn right at the Burnt Common roundabout and take a route to Woking and beyond, which is less tortuous than via Newark Lane. Importantly, traffic coming off the M25 and A3 North could also choose this route (particularly heavy vehicles?). In the same way the Gosden Hill development could lead to larger numbers heading to Woking from the south on the A3.

• The very fact that Guildford’s development figures could now include numbers to make up for Woking’s housing needs surely suggests there will be related increased movement that way.

• The vehicle figures could be in thousands through this small roundabout which will be the crunch point.

• I note that the statistics in response to the Inspector’s query 11.37 re the road through Send are shown in terms of annual average daily traffic and annual average weekday traffic.

• Have GBC projected all the above possible movements, including of course the additions at MM41, MM42 and MM44, to reflect scenarios of future peak hour travel, at Burnt Common roundabout and its feeder roads? It is at these times that the most impact will be felt by the most people in terms of queuing and emissions and local inconvenience and it is this which requires the most attention.

Attached documents:

**Comment: MM27 - LPMM18/1314  **Respondent: Mrs Lynda Turner 17301473  **Agent:**

There has been an inadequate assessment of increased traffic problems of the huge development proposals concentrated on the northern boundaries of the borough. There needs to be a proper assessment of the transport implications on the A3, M25, and A247 of the proposed increase in housing and industrial areas at Send Marsh, Burnt Common, Wisley and Gosden Hill

Attached documents:

**Comment: MM27 - LPMM18/1650  **Respondent: Shirley Bowerman 17308417  **Agent:**

Objection applying generally to MM27, MM41, MM42 & MM48. Transport Strategy,

The traffic implications for Send of Garlick’s Arch, Burnt Common, Clockbarn and Aldertons when considered with nearby Gosden Hill and Wisley/Ockham are not sufficiently dealt with by the A3 changes and the Clandon slip-roads. The over-all effect of the total extra traffic on Send Barns Lane and Send Road does not appear to have been addressed, bearing in mind that thousands of extra cars and trade vehicles, combined with HGVs will be going to and from Woking every day, causing increased noise, pollution, delays and tail-backs.
The traffic implications for Send of Garlick’s Arch, Burnt Common, Clockbarn and Alderton’s added to nearby Gosden Hill and Wisley/Ockham are not adequately addressed by the A3 changes and the Clandon slip roads. GBC offer fine words but no proper assessment of the aggregate traffic impact on Send Barns Lane and Send Road as thousands more cars head to Woking and the A3 every day, predominantly at peak times, causing increased noise, nitrogen dioxide pollution, delays and gridlock. Should you not think this is a problem I would invite you to recreate a commute from Send during rush hour times. I would not feel comfortable cycling with my children on the local roads should the proposed developments go ahead as the narrow roads, currently with no special provisions or lanes for cycling, will become too busy and dangerous to consider risking the lives of my children.

Guildford Borough Council want to implement changes to the A3 with a slip road south at Burnt Common/Clandon. This does not take into account the massive impact on Send Barns Lane and Send Road as thousands more cars and lorries etc head to Woking every day from the added nearby sites including Wisley and Gosden Hill. This will mean increased pollution, noise, delays and gridlock on these already busy roads. The rush hour will be intolerable as it is now when there is a problem on the A3 or M25.

Most traffic will use the existing roads, which already in the rush hour when there is a problem with the A3 or M25 or where there are road works, causes huge hold ups this will be a continuous traffic jam if the new developments go ahead

The Statistics office states that Guildford can achieve its housing need with 460 houses per year. and the consultancy firm, Barton Willmore states that growth can be achieved with 431 houses per year. Yet Guildford Borough Council and the Inspectorate are intending to plan for 789 houses per year. This figure must be looked at again and reduced in line with the latest growth figures.
Comment: MM27 - LPMM18/2290  Respondent: T Hodkinson 17370209  Agent:

MM27, MM41, MM42 and MM48 Transport Strategy

Opening new entry/exit slip roads off the A3 will overload Send Village, Send Barns Lane and Send Road with unacceptable levels of vehicular traffic. A lot of it HGV. The road network is unsuitable for this level of traffic and will give rise to unacceptable levels of pollution of all types. I therefore OBJECT.

MM27 MM41 MM42 and MM48 Transport Strategy

The traffic implications for Send of Garlick's Arch, Burnt Common, Clockbarn and Alderton's added to nearby Gosden Hill and Wisley/Ockham are not adequately addressed by the A3 changes and the Clandon slip roads. Guildford Borough Council offer no proper assessment of the aggregate traffic impact on Send Barns Lane and Send Road as thousands more cars head to Woking every day, causing increased noise, nitrogen dioxide pollution, delays and gridlock.

Attached documents:

Comment: MM27 - LPMM18/3130  Respondent: Katherine Pound 17413729  Agent:

I OBJECT TO MM27, MM41, MM42 and MM48 Transport Strategy

As alluded to above, traffic in the area of Send is already at dangerous levels for the environment and health of individuals, most notably at peak time when it's often already at gridlock. It is ridiculous to consider adding thousands more cars to this chaos, which would result in significant noise and nitrogen dioxide pollution, which increases
significantly with queuing traffic. This will significantly impact the time it takes me and other local residents to travel to work or school, which is not productive for the local economy, our well-being or the environment.

Attached documents:

**Comment:** MM27 - LPMM18/5083  **Respondent:** Paul Good 17417217  **Agent:**

**MM27 MM41 MM42 and MM48 Transport Strategy**

The traffic implications for Send of Garlick’s Arch, Burnt Common, Clockbarn and Alderton’s added to nearby Gosden Hill and Wisley/Ockham are not adequately addressed by the A3 changes and the Clandon slip roads. GBC offer no proper assessment of the aggregate traffic impact on Send Barns Lane and Send Road as thousands more cars head to Woking every day, causing increased noise, nitrogen dioxide pollution, delays and gridlock, as already stated in previous points. This area is unable to support increased residential traffic and is unsuitable for heavy commercial traffic.

In conclusion, development of this scale in this rural village will be detrimental to the character of this living space, and impact hugely on residents, there is insufficient consideration of the enormous size of development being placed in one small area of the constituency, as opposed to spacing out development, which would ease traffic overloading, decrease the escalating problem of pollution, share the increased strain on services; education, health.

I urge the planners to take these objections in to consideration and listen to the observations regarding these plans from the people who live and work in these areas and see each day how the infrastructure is completely inappropriate to support such huge development in squeezed into one small area of the borough.

Attached documents:

**Comment:** MM27 - LPMM18/4251  **Respondent:** Valerie Golding 17422881  **Agent:**

**MM27 MM41 MM42 and MM48 Transport Strategy**

The amount of development proposed will bring major traffic problems to the area most properties have a minimum of two cars so the developments proposed would add another 1540 cars to the roads of Send. This excludes the development proposed for the surrounding area.

Attached documents:

**Comment:** MM27 - LPMM18/2532  **Respondent:** Simon Wright 17423681  **Agent:**

I object to Modifications MM27, MM41, MM42 & MM48 Transport Strategy due to the following points:

The result of proposed Local Plan development in the area of Send would cause so much traffic congestion, that the plans to improve the A3 and Clandon slip roads would not make any significant difference at all. The rural roads in the centre of Send / Send Marsh couldn’t cope with the extra traffic. Regardless of traffic surveys that have been carried out in recent months and years, it doesn’t take much to realise it.
MM27, MM41, MM42 and MM48 Transport Strategy

The proposed Garlicks Arch, Alderton’s Farm, Clock Barn and Winds Ridge developments mean that 770 houses are proposed to be added to the current stock of 1700 currently in Send – an increase of 45%. This in itself is excessive and disproportionate in the context of Send’s size within the Borough. Send needs to be treated fairly and it currently seems as though the village is being singled out for development by the plan.

However, the huge increase in traffic that these developments, the industrial developments that are proposed in Send and the large developments at Gosden Hill and potentially Wisley/Ockham are not adequately addressed by the modifications referenced above.

A full assessment of the changes resulting from the proposed access on and off the A3 from Clandon Road has not been completed. At present residents of Clandon Road may wait more than 5 minutes to leave their drives during commuting periods. Would I ever be able to leave for work if these developments proceeded? The scale of development proposed in Send and Burnt Common, the limited capacity of local roads and the proposed introduction of new access to the A3 will be catastrophic for the local area and the Borough as a whole.

I most strongly urge the Council to rethink the Local Plan, stand up to central government if the planning policies for England are not appropriate for Guildford, and to provide a just and reasonable outcome for its citizens.

Attached documents:

This area is already very heavily congested! There has been no investigation into the effect caused by 1000’s more cars on these local roads. Why? The increased traffic for Send from Burnt Common Garlicks Arch, Aldertons, Clockbarn in addition to Gosden Hill and Wisley, Ockham will bring the area more regularly to a standstill and has not been adequately addressed by the Road changes to the A3 and Clandon Slip Roads. It will become impossible for residents of Potter’s Lane to actually leave their driveways or pull out into the flow of traffic. There are many high-sided, wide and heavy goods vehicles who take up the entire width of the Potter’s Lane as they steam down the road ignoring any other vehicles and the speed limits. It is a daily occurrence that residents, trying to access their homes both as drivers and pedestrians, are verbally abused, cars damaged and are at risk of being run over as drivers regularly mount the pavement to get down the lane. I have witnessed this personally and it continues to get worse and this over development of Send will only exacerbate this.

This massive increase in traffic rat running to and from Woking along Potter’s Lane, Send Barns Road and Send Road will cause horrendous noise, air pollution delays and gridlock. We will become PRISONERS IN OUR OWN HOMES!

Attached documents:
MM27 – Policy ID2: DoT Road Investment Strategy – if it is inevitable that the local developments proposed around the A3 are to be a reality then it is acknowledged that road infrastructure will require major modification and improvement to cater for the vast number of new homes and businesses thus created. Improvements to the A3/M25 junction 10 are well documented and now finalised, whilst the new slip roads on to the A3 at Burnt Common/Clandon Road will only funnel more traffic into the local areas causing substantial traffic chaos at peak times with the inevitable delays, increased air and noise pollution and a substantial negative impact on the village environment. More research is required into the latter proposal in order to avoid creating a hostile thoroughfare to feed the M25!

Attached documents:

5. MM27 MM41 MM42 and MM48 Transport Strategy

The traffic implications for Send of Garlick’s Arch, Burnt Common, Clockbarn and Alderton’s added to nearby Gosden Hill and Wisley/Ockham are not adequately addressed by the A3 changes and the Clandon slip roads. GBC offer fine words but no proper assessment of the aggregate traffic impact on Send Barns Lane and Send Road as thousands more cars head to Woking every day, causing increased noise, nitrogen dioxide pollution, delays and gridlock.

Attached documents:

MM27 (ID2) The addition of 550 houses at Garlick’s Arch, 120 at Aldertons Farm and a major industrial site at Burnt Common will add significant traffic to the A3, contributing to the cumulative impact of development on that road. These allocations, along with the development at Gosden Hill, will severely impact the A247 through Send and West Clandon which is unsuitable for increased traffic flows due its narrowness and alignment.

Attached documents:

MM27 MM41 MM42 and MM48 Transport Strategy

All of the above proposals will involve a considerable increase of traffic on roads which are already inadequate for the amount of traffic they carry and there are no proposals which will alleviate or improve the situation in the face of the concentration of building activity which seems unfairly to be focussed on Send.

GBC appear to want to merge the villages of Send to Ripley into one and adopt an aggressive building policy which will change them from villages into towns.

There is no improved traffic policy or any plans to upgrade or improve roads or bus routes.
Currently buses run one an hour to Woking and so people are forced to use cars.

**Attached documents:**

**Comment:** MM27 - LPMM18/5975  **Respondent:** Guildford College Group (Guildford College Group) 17467233  
**Agent:** Indigo Planning Limited (Aaron Peate)

**MM27: Policy ID2 - Supporting the Department for Transport’s “Road Investment Strategy”**

Policy ID2 states that Guildford Borough Council is committed to working with Highways England to facilitate major, long-term improvements to the A3 trunk road and M25 motorway in terms of both capacity and safety, as mandated by the Department for Transport’s “Road Investment Strategy”.

The Council has added in a paragraph to this policy to commit to reviewing its transport evidence base in the event that there is a material delay in the anticipated completion and or a reduction in scope of the A3 Guildford (A320 Stoke interchange junction to A31 Hog’s Back junction) “Road Investment Strategy” scheme from that assumed in planning, or cancellation of the scheme.

It states that such a review would investigate the consequent cumulative impacts of approved developments and Local Plan growth including site allocations on the safe operation and the performance of the Local Road Networks and the Strategic Road Network.

Further, it states that in the case of material delay in the anticipated completion and or a reduction in scope in the A3 Guildford scheme, the review will consider the period up to the revised date of completion of the scheme. The outcome of this review will determine whether development can continue to be completed in accordance with the Local Plan trajectory or will determine whether there needs to be a review of the Local Plan.

Whilst the inclusion of such a commitment is welcome and a step in the right direction, it does not go far enough in committing the Council to reviewing its Local Plan at the earliest opportunity should delays be incurred in completing the A3 Road Investment Schemes or if they are reduced in scope.

The SNR2 A3 Guildford (A320 Stoke interchange junction to A31 Hog’s Back junction) ‘Road Investment Strategy’ scheme is reported in the Local Plan to be completed between 2024 and 2027.

However, despite SRN2 being a scheme that the Council considers to be necessary to enable the three main strategic allocations to be delivered, it is only a scheme that Highways England (HE) is exploring. HE has not yet come up with a design or a conclusion on whether there is the business case for it to be delivered. There is also no funding in place for the scheme.

Given this uncertainty, a review mechanism must be built into the Local Plan which commits the Council to review its Local Plan should HE report that SRN2 has been scaled back or cancelled.

In light of the impact that such changes would have on the deliverability of the three main strategic allocations (and others in close proximity to the A3), the Local Plan should commit to undertaking a review at the earlier of either:

- HE reporting changes to / or a cancellation of the SRN2; or
- Within three years of the Local Plan being adopted.

We consider that the above is required in order to assess whether additional allocations should be identified in light of any changes to SRN2.

The Green Belt should be protected and preserved for future generations. Wild life and walkers alike need our greenbelt areas and over development of our villages devastating the rurality of the area. I do not wish to live in a town, choked by increased volume of traffic with reduced places to enjoy nature, peace and a walk with my family and dogs.

Attached documents:

Comment: MM27 - LPMM18/257  Respondent: Neil Frankland 20576257  Agent:

It is obvious that with the above policies & strategies are still reflecting directly from what has gone before; amending & increasing on the Local Planning Foot Print. These changes are shown in shaving bits off here and adding bits to there.

These amendments: -

Still disregards all technical impacts on current & future structures. Most structures sit on a deep clay base which needs percolated ground water to function as a foundation base.

Tweaking weak infrastructures, no way puts in place any future proofed infrastructures.

Increasing these capacities will greatly increase all impacts on environment. Not all of which is yet to be fully understood or been considered.

Concreting over "Green Belt" is just not on, now or anytime in the future. We all complain about the forests in South America being cut down, along with plastic waste; this is no different.

The impact of such large developments, will swamp Send & all surrounding areas. If Wisley was a no no; then these proposals are doubly bad.

So what part of NO, does the current dominant political power not understand?

It seems as if the first judgement, common sense (Wisley) went against the current political-monied power houses. How strange that with a new judge conforms now to their wishes. How did all this happen?

Stop faffing about! Ask the local populous "What they want to happen by holding a Local Referendum." Just like Switzerland.

<tr>
<td>Upon reading the outputs from the latest report it would appear that rather than listening to and addressing local residents’ concerns raised in the previous consultation periods you have just ignored those and continued to drive the plans forwards. In addition, GBC has significantly increasing the sizes of the Garlicks Arch development, doubled the industrial and storage development in Burnt Common and reinstated the Alderton’s Farm development which was previously deleted due to previous objections.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>I would also seriously question that accuracy of the Public Examination figures (Policy S2) for Guildford Borough Housing, recommending 789 houses are built each per year. Reviewing the Barton Wilmore figures (suggesting 431</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
houses a year) and the ONS population forecasts suggesting the development of 460 houses a year across the borough. These well-respected authors reports suggest the need for new houses in this specific part of GBC has been significantly overinflated.

The plans GBC lays out in the report do not support the policy for the protection of the Green Belt. Furthermore, the subjective test proposed puts the Green Belt at considerable risk and negates Green Belt protection. This means any land on the edge of the village could be picked off for future development. This point is clearly of serious concern to local residents.

Send Village and the surrounding area already suffers from significant traffic congestion. Traffic on the local roads is gridlocked in busy periods. It is clear from the plans that the suggested remedies do not adequately address the significant increases in traffic we will see if these developments are allowed to go ahead. In particular, Send Barns Lane, Send Road and Broadmead Road will not cope with the increased traffic heading in and out of Woking every day. Not only will the increases in traffic cause significant delays but will also impact residents with increased noise and nitrogen dioxide pollution levels.

As the people that live and experience the local area every day we are well positioned to provide an accurate point of view on the impact developments of this size will undoubtedly have on the area. On that basis I hope you give this issue the time and attention it deserves.

**Comment:** MM27 - LPMM18/982  **Respondent:** Carmen Niblett 20658817  **Agent:**

MM27 MM41 MM42 MM48  Transport Strategy

The traffic implications for Send of the extra traffic generated by Garlick's Arch, Burnt Common, Clockbarn and Alderton's will have a totally detrimental effect in the area which already is over used by traffic from A3 and Clandon and Woking commuters.

GBC is offering solutions on paper but for the last 20 years of people and car growth in that area has been ignored by GBC.

I have lived in the Send area for 35 years and I can categorically confirm that nothing has changed in that time, except for the replacement of the bridge at the end of Send Road, which now permits higher number of articulated lorries to travel along the Send Road to Ripley, the A3 and Clandon (as the old bridge couldn't cope before with the weight or width of these lorries).

This increase traffic through Send put children, vulnerable people and adults at risk of accidents when crossing the road to either go to school or to the shops or for a walk.

The traffic on the Send Barns Lane and Send Road are usually at a stand still, especially at key times, when children are walking to school. Air pollution is a terrible danger to our children and we should be minimising this risk instead of adding thousands of more cars to our roads.

I would request that you supply details that show you are being fair and reasonable to all village councils in the Guildford Borough in a form that shows existing number of houses in that area and the number of new applications (as a total number of houses) and express this as a percentage %.

This would then show that the GBC are being totally unfair and overburdening SEND village with their insistence in putting all their "eggs" in SEND's basket.

<td>This is car free modal shift proposals are utter nonsense devoid of reality; 45,000 additional vehicles are calculated (via census date people to car ownership numbers) to enter the HMA over the life of the plan - Starting a site adjacent the A3,</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
prior to the A3 solution being provided is irrational madness, as there will be, as occurred before elsewhere planning creep, “just a few more, just a few more”, and still no action, currently the schedule of Roads improvements are:

- Smart motorway M25. On site work expected 2020
  “From HE website: Why we need this scheme; The M25 junction 10/A3 Wisley interchange has been identified for improvements as it experiences heavy congestion on a daily basis. This causes queues and prevents access from Ockham Park junction (A3) to the M25 junction 10 and on to Painshill junction (A3) in both directions. A similar problem is experienced by traffic entering and exiting the M25 junction 10/A3 Wisley interchange.”
- The J10 project is currently some six months delayed in an 18 month time window.
- When J10 is completed the ‘assessment’ of the A3 between A320 - A31 will start, noting there are no planned improvements identified as of 14th October 2018 on the HE web site.
- The A3 - J10 to A320, is not even mentioned in ‘notes’ thus it is conceivable that Gosden Hill road access to the A3 nor the A247 North facing slips will not occur before 2035. Thus this A3 adjacent site will be unsustainable and is unsound with reference to its offsite infrastructure (Roads) unless Highways England step up their game - this site will be unsustainable and Unsound for another 30 plus years.

Alternative transport measures are not defined. However we note the admitted need for flexibility to review and amend the plan at the earliest opportunity once these issues have formerly recognised by the transport and water stake holders.

**Conclusion:**
While the amendments are welcomed in broad general terms – The Strategic polices (noting the missing Town Centre as a strategic classification) results in an overall failure to supply a positive requirement for (b) transport infrastructure... waste water and fails (d) to conserve and enhance the natural environment taking both Green Belt and ANOB merely ad hoc mitigation as opposed to providing readily available ‘Solutions’ to all problems created by this plan.

I find it disappointing that Thames Water has not been honest in respect of capacity in Local Plan documents, and future timing of upgrades to the sewer systems. Their true knowledge of the systems considering they took them over 40 plus years ago is as if they only took over last month. This lack of knowledge which has proved catastrophic in recent months in the Borough has led to:
1. Four sewer collapses.
2. Two catastrophic blockages and numerous smaller ones.
3. Engineers are unaware of the pipe diameters components within the system.

I believe Thames Water area manager or above should be called to the EiP in person so they can be questioned as to the viability of the Housing number proposals.

GBC are not apparently aware of their own historic statements on the subject. choosing to ignore serious problems down playing them to a level bordering on negligence. The Moorfields ‘improvements’ delayed for 15 years While GBC attempt to convince TW to move when they don’t want to, and still no further advance other than clear demonstration that Thames Water PLC has no intention paying for any move to a different location. The upgrading will never happen until a ‘final’ political decision is made as to ‘move’ or ‘stay where it is’, at least ten years into the future. In respect of traffic infrastructure, poorly assessed road needs, inaccurate statistics and ‘very long term upgrades’ to the A3, not in reality occurring within the life of the plan between J10 and the A320 displays such distinct lack of cooperation by SCC and HE that it can be no longer called ‘cooperation’. Both Surrey Country council head of Roads and Highways England should be called to the EiP to display their true intentions and time scales. Much as everything in this Local Plan; ‘cooperation’ has an unusual non-standard definition of ‘informative’ and serious ongoing flat batteries in the hearing aids of the Guildford Planners in respect of responses from the community.

Their attitude is they ‘tell’ people what they are going to do, and when people point out any errors, they use the unspoken Americanism “Taken under advisement” the standard response to the community who request or advises the council to do something when the council never had or has no intention of doing anything!

This means this plan is totally unsound and cannot be made so by default of outside bodies controlling infrastructure and failing to act in a cohesive manner most probably due to a deliberate policy of ignoring advice from all quarters.
So, as the exceptional circumstance of sewers and roads exceeding design capacity and those responsible hiding their heads in the sand, mean none of 'X' number homes can be built with causing the contravention of para 92 (c) of the 2018 NPPF (sic) “Guard against the unnecessary loss of valued facilities and services, particularly where this would reduce the communities ability to meet its daily need”. For sewers will flood the streets (as is already occurring Ockham, West Clandon and Guildford Town Centre) and cars will remain stationary on all roads (also already occurring due to failed infrastructure.)

I end with a formally request that the EiP is reopened to allow myself and other interested parties to revisit the Housing numbers as promised on day 3 session 3 and subsequent removal of the oversupply of sites and undersupply of infrastructure in public session.

**Comment:** MM27 - LPMM18/1454  **Respondent:** Lauren Stafford 20690977  **Agent:** MM27, MM41, MM42 and MM48

- Traffic implications are not adequately addressed by the A3 changes and the Clandon slip roads. The increase in noise, pollution, delays and gridlock as cars drive through to Woking would be terrible. How you can let that happen past a PRIMARY SCHOOL?

Attached documents:
MM27 – Policy para (2)

We agree with and support the proposed change at MM27 which identifies the potential need for a Local Plan Review in the event of material delay of anticipated RIS schemes in the Borough. Given the significant uncertainties in terms of both the funding for and timing of such key strategic road improvements, and notwithstanding the requirement of paragraph 33 of the NPPF 2018 which requires that Local Plans are reviewed no later than 5 years from the adoption date of the Plan, we consider that the Council is right to specifically acknowledge that material delays in the delivery of RIS 1 schemes should in any event specifically trigger a review of the Local Plan.

Main Modifications Reps Combined_Redacted.pdf (6.1 MB)

Comment: MM27 - LPMM18/1503  Respondent: Mrs Corinne Singleton 20692385  Agent:

I object to the proposals as the extra traffic that will come as result of the plans will have a huge impact on our roads, with increased nitrogen dioxide pollution, delays, increased traffic jams which are already ridiculous and increased noise.

These comments should also be applied to MM42 and MM48.

Attached documents:

Comment: MM27 - LPMM18/3259  Respondent: Ms. (Ms Maria Schirmer) 20698529  Agent:

MM27, MM41, MM42 and MM48 Transport Strategy.

The roads in and around Send, Send Marsh, Ripley, Burnt Common etc are already running at capacity. They will not cope with the addition of what potentially would be hundreds if not thousands more cars; never mind the hugely negative impact on the environment; has this been considered?

This massive increase in traffic of all types of vehicles, not just cars, heading to and from Woking along Send Barns Road and Send Road will cause horrendous noise and air pollution. Furthermore delays and gridlock are going to be worse than they already are.

Attached documents:

Comment: MM27 - LPMM18/1714  Respondent: Stephen Rossides 20700577  Agent:

MM27 Simply widening part of the A3 is an inadequate response to current congestion. More radical solutions should be considered such as a tunnel or mechanisms to actively reduce peak time single car usage and to promote and facilitate
travel to school by staff and pupils by other than private car. Major Greenbelt development should not be commenced until traffic congestion has been reduced below its current level.

MM27 MM41 MM42 MM48 TRANSPORT STRATEGY

Has a proper assessment of the traffic impact on Send Barns Lane, Send Road been made as thousands of new cars head to Woking every day. Again causing increased noise, air pollution and delays.

I hope the above points will be seriously taken into consideration.

**Attached documents:**
MM27, MM41, MM42 and MM48 Transport Strategy

The proposed changes in the A3 and Clandon slip roads do not adequately address the impact of thousands more cars travelling along the Portsmouth Road, Send Barns Lane and Send Road past a school and through residential areas, with resulting noise, delays and gridlock and more severe pollution. The infrequent bus services in the area will do nothing to reduce the number of car use.

Attached documents:

Traffic in the A3 is one thing, but all the small roads through Send and Ripley cannot cope with the extra traffic that would be generated by the huge number of additional houses in Send that this plan would allow. Traffic gridlock and potential increase in road accident injuries seems to have been ignored in the rush to build new houses at any price. This is not acceptable.

Attached documents:

I am concerned that the proposed changes to the A3 junction Clandon slip roads will result in heavy traffic and congestion in the area making commuting difficult. The junctions at Send Marsh lane and the Portsmouth road are already difficult and dangerous to navigate in peak times and I am not sure what additional measures could mitigate these. The A3 north bound to the M25 and south bound through Guildford regularly grind to a queue during peak times and I am sure this change will draw in more traffic.

Attached documents:

MM27 – 4.6.18a which follows the discussion in the Examination of the Local Plan is a serious concern. I believe that the proposed two-way junction with the A3 in Policy A25 should be a 4-way junction. If the A3 Improvement Schemes do not take place, the traffic problems cannot be mitigated by other measures. GBC suggested at the Examination in Public that these could include the Sustainable Movement Corridor and the new railway station in Merrow. I cannot believe that these mitigating measures - even if they are implemented - will deliver the level of necessary mitigation to address the potential serious traffic problems in the area which underlines the critical importance of a 4-way junction with the A3 on the Gosden Hill Farm site.

**Respondent:** Barry Konkle 20712385  
**Agent:**

MM27 MM41 MM42 and MM48 Transport Strategy

I object. To GBC offering fine words, but no real assessment of the traffic impact in Send Barns Lane, Send Road. Vehicles heading to Woking and vehicle from Woking making their way Send and Ripley to gain access to the A3 both North and South bound.

**Attached documents:**

### Comment: MM27 - LPMM18/2228
**Respondent:** Alan A. White 20720737  
**Agent:**

MM27 MM41 MM42 MM48 Transport Strategy.

Guildford B.C. have produced, what they call a Transport Strategy, without addressing the wider vehicle movement problems. The Leader of Guildford B.C has already acknowledged in public that the area has significant congestion and transport problems and yet still adds his name to policies that are clearly flawed.

The traffic on the North Bound A3 backs up from the M25 junction, "rat running" takes place off the Burnt Common exit and through Ripley village. This has not been referred to in any document.

The Southbound traffic backs up from Stag Hill to the Burpham Junction exit. This has not been referred to in any document.

None of the roads surrounding Send were designed to take large volumes of traffic. They were and still are, in effect, village streets, despite their A road classification.

Burnt Common roundabout will be gridlocked by the increase in the number of vehicles, of commuters, school run drivers and the manoeuvring of HGV vehicles visiting the proposed new industrial site at Burnt Common, and the new units in Send Business Centre.

Emotionally this is a Transport Strategy for disaster.

**Comment: MM27 - LPMM18/2335  Respondent: Stephen Hewett 20726113  Agent:**

REF - MM41, MM42, MM44, MM27, MM41, MM42 and MM48

I "object" in the strongest possible terms to the proposed developments on the above mentioned REF's for many and [unreadable text] reasons that have been waived before many thousands of [unreadable text] in the form of protest letters and emails that now seem to have been ignored.

At least 2 of the above mentioned sites are on Green Belt Land. What is the point of a Green Belt if you chose to ignore it.

The original purpose of the Green Belt was to prevent unrestricted development on and around the main road and rail amenities around London and at the large towns and cities. A very considerable policy of which until now it has been largely successful. This policy has seen to be abandoned by these proposals. Ripley state school is to be closed so where are all these new children supposed to go to school.

Send in particular seems to be singled out for such contained action. Why is this; is it because the Ripley, [unreadable text], East + West-Horsley they have had the courage to stand up to the bully boy tactics of GBC planning. Led by the inspiring leadership of Sue Parker and others in the 'Green Belt Group' these people are standing up to the G.B.C planning jugganaughts made up of "TORY + LIB-DEM [Response has been redacted due to statements being considered defamatory, derogatory, inflammatory or offensive in nature]" this unholy alliance of [Response has been redacted due to statements being considered defamatory, derogatory, inflammatory or offensive in nature] characters seem to have no feelings for local concerns, but are hell-bent on making money and getting revenge on people who have the courage to stand up to them. I ask you to think again and reject these [unreadable text] proposals.

PS Is Send being so certainy [unreadable text] because Sue Porter is a Send Borough Councillor and Green Belt group leader and founder!!

Comment: MM27 - LPMM18/2635  Respondent: Rebecca Green 20762817  Agent:

MM27, MM41, MM42 and MM48 Transport Strategy

- There has been no adequate assessment by GBC of the impact of this transport strategy on congestion, noise pollution and air pollution as thousands more cars head to Woking each day. There is the possibility of gridlock

Attached documents:

Comment: MM27 - LPMM18/2700  Respondent: Roger Parslow 20768001  Agent:

My initial objection is to: MM41,MM42,MM44,MM9, MM27.

POLICY S2.

At the public examination the figure for Guildford.B.C. housing need used by the inspector was 789 per year. This figure was obtained by G.B.C Consultants and was greatly exaggerated by including Surrey University Student figures. These Consultants and GBC refused to disclose how this figure was calculated.

The figure now published by a highly respected consultancy Barton Wilmore has said the correct figure is 431 houses per year.

The data from the Office of National Statistics, doing population forecasts says the appropriate growth in GBC can be achieved by 460 houses per year.

This latest data makes a mockery of G.B.C consultants figures which have always been very suspect.

I trust the Inspector and GBC will now drastically reduce the housing need to reflect the true figures, and particularly in our already very congested village of Send.

MM27, MM41, MM42 and MM48 Transport Strategy.

Why have the effect of thousands more cars in an already heavily congested area not been taken into account?

The increased traffic for Send from Burnt Common Garlick’s Arch, Aldertons, Clockbarn in addition to Gosden Hill and Wisley Ockham is not in any meaningful fashion addressed by the Road changes of the A3 and Clandon Slip Roads. They seem both the developers and GBC to offer narrative and not action.
This massive increase in traffic of all sorts heading to and from Woking along Send Barns Road and Send Road will cause horrendous noise, air pollution delays and gridlock.

**MM41 Land at Garlicks Arch, Send Marsh, Policy A43.**
I object to the increase from 400 to 550 houses of which 450 are to be built in the first 5 years.
This is an increase of 37% in the number of houses to be built.

Despite the promises by the developers and GBC the ancient woodland after hundreds of years of peace will be ruined once the fuss has died down and nobody is checking. This over development will effectively join Ripley to Send, and spoil the wisdom of our Green Belt Planners of many years ago.

Up to a thousand cars and between 1600 to 1700 extra people will block the surrounding roads and overwhelm the already full to capacity schools and health facilities, sewage, water etc.

Why have over 7000 objections to the earlier plan been ignored and more houses etc added?

**MM42 Land at Burnt Common, London road Send Policy A58.**
As the Employment Lands Needs Assessment showed a reduction in demand for Industrial Land why has again Send been picked on again to have the largest industrial allocation in any village in the Borough, is it politics?

This is a further increase of 25% making it a huge increase in Send, bigger than any other village.

There is no need for new industrial sites when Slyfield is has unused capacity. There are NO SPECIAL CIRCUMSTANCES so it contradicts MM9.

There is no need to put Industrial premises in our precious GREEN BELT. This plan has since being deleted from 2014 plans, has been increased twice from 7000 to a MINIMUM of 14800 sq m.

**MM44 Land at Aldertons Farm, Send Road, Policy A63.**

New site for 120 homes which was deleted because of objections and not reinserted until the public examination in JULY. With Garlicks Arch 550, Clockbarn 60, Winds Ridge 40, that means 770 houses to the 1700 currently in Send an increase of 45%.

How are our roads, sewage, water, healthcare, schools etc going to allow us to live normal lives in this polluted gridlocked stressful environment. Again this is GREEN BELT and with NO special circumstances and contradicts policy MM9.

**MM9 GREEN BELT POLICY.**
How can you say the modifications claim to protect our precious GREEN BELT except in very special circumstances? GBC make an exception for LIMITED INFILLING OUTSIDE THE IDENTIFIED SETTLEMENT BOUNDARIES WHERE IT CAN BE DEMONSTRATED THAT THE SITE SHOULD BE CONSIDERED TO BE WITHIN THE VILLAGE.

This is a catch all statement which is completely subjective causing complete uncertainty and completely negates GREEN BELT PROTECTION. Virtually any land on the then ever increasing edges of the village can be picked off by developers and is open season for speculators at the expense of villagers.

I wish the above objections to be considered and this huge imposition of housing and commercial development to be largely abandoned.

1. There is too much reliance on A3 improvements and they are beyond the council’s control

Attached documents:

Comment: MM27 - LPMM18/3407  Respondent: Brian & Helene Pavey 20789921  Agent:  

MM27 MM41 MM42 MM48.: this proposal will impact negatively on the traffic within our village. We already have gridlocked roads when there is a problem on the A3, we have speeding cars, thundery lorries and traffic build ups. This village needs less traffic coming through it not more. In Potters Lane where we live it is a speed run for cars accessing the A3, with weekly aggressive road rage witnessed by us the residents. We do not need anymore traffic damaging our roads and putting lives at risk.

Attached documents:

Comment: MM27 - LPMM18/3417  Respondent: Sally Anderson 20790081  Agent:  

MM27 MM41 MM42 and MM48 Transport Strategy

The traffic implications for Send of Garlick’s Arch, Burnt Common, Clockbarn and Alderton’s added to nearby Gosden Hill and Wisley/Ockham are not adequately addressed by the A3 changes and the Clandon slip roads. GBC offer fine words but no proper assessment of the aggregate traffic impact on Send Barns Lane and Send Road as thousands more cars head to Woking every day, causing increased noise, nitrogen dioxide pollution, delays and gridlock.

Other Developments

This consultation only allows comment on main modifications and so excludes the chance to object again to 40 houses and a travellers’ site on Send Hill, 60 houses at Clockbarn in Tannery Lane and a 25% increase in the size of the Send Business Centre despite the Wey Conservation area. Added to the other housing sites and industrial space such heavy concentration in one village, which could be more evenly shared with 40, is unreasonable.

Attached documents:

Comment: MM27 - LPMM18/3433  Respondent: Paul Kenny 20790305  Agent:  

MM27 MM41 MM42 and MM48 Transport Strategy

Attached documents:

Comment: MM27 - LPMM18/3980  Respondent: Catherine Louise McGowan 20802593  Agent:

MM27 MM41 MM42 and MM48 Transport Strategy

The implications of the extra traffic through Send Barns Lane and Send Road have not been adequately addressed. At present, during peak times, these roads do not adequately support the volume of traffic.
MM27 / MM41 / MM42 / MM48 – Transport Strategy

The transport / traffic strategy confirms that cycling routes need to be vastly improved and protected, as current ‘flow’ is not good enough.

Regarding road (vehicle) traffic, the Transport Strategy is not robust and not truly reflective of the needs and concerns of our highways infrastructure.

With so many recent developments (Skene Close in Send, Vision Engineering, Clockbarn/marina in Tannery Lane), the main road through Send has struggled.

Having temporary lights has become a regular feature, and continues even today (4-way lights at the A247 junction to Old Woking, and along Portsmouth Road into Ripley).

Send is a VILLAGE, not a town – and the main road through Send regular gets clogged with traffic, and backs up most mornings and evenings – in both directions.

The Local Plan attempts to address the issue of transport, but is inaccurate in several places (eg ‘on most local roads in urban areas and in villages, there is at least one footway, usually two’).

Other than the main routes out of the village (which are already under pressure), most roads are in fact lanes, often with no footways at all (eg Polesden Lane, parts of Vicarage Lane & Potters Lane).

Many other routes are lanes which cannot accommodate free-moving two-way traffic (Newark Lane, Burnt Common Lane, Rose Lane, Send Hill, Woodhill, Potters Lane, Church Lane, Vicarage Lane).

The existing bends around Potters Lane / Send Hill are already treacherous, with several blind corners and narrow apertures – these need attention already, not more traffic volume!

Overall, the slightest developments can create significant traffic, pollution, delays and backlogs, putting more pressure on people using ‘back roads’ (ie lanes) and clogging up the villages.

Comment: MM27 - LPMM18/4153  Respondent: Nicolas and Judith Ware 20808161  Agent:

Comment: MM27 - LPMM18/4869  Respondent: Anna-Louise Clough 20833537  Agent:

MM27 MM41 MM42 and MM48 Transport Strategy

- No recognised assessment has taken place for increased volume of traffic, noise and air pollution.

Attached documents:
MM27 MM41 MM42 and MM48 Transport Strategy

All of the above proposals will involve a considerable increase of traffic on roads which are already inadequate for the amount of traffic they carry. There are no proposals which will alleviate or improve the situation in the face of the concentration of building activity which seems unfairly to be focussed on Send.

GBC appear to want to merge the villages of Send to Ripley into one and adopt an aggressive building policy which will change them from villages into towns.

There is no improved traffic policy or any plans to upgrade or improve roads or bus routes.

Currently buses run one an hour to Woking and so people are forced to use cars.

Attached documents:

Comment: MM27 - LPMM18/4924  Respondent: Monique Harrison 20834945  Agent:

MM27 Simply widening part of the A3 is an inadequate response to current congestion. More radical solutions should be considered such as a tunnel or mechanisms to actively reduce peak time single car usage and to promote and facilitate travel to school by staff and pupils by other than private car. Major Greenbelt development should not be commenced until traffic congestion has been reduced below its current level.

The UN Intergovernmental Panel on Climate Change (IPCC) Report was published on 8 October under the headline "12 years to limit climate change catastrophe" which is within the Plan period. The scientific consensus calls for "urgent and unprecedented changes" to limit the use of fossil fuels. The plan (MM1 S1 and MM24) in no way reflects the urgency or importance called for. The Inspector should reopen the examination to ensure that these latest findings are incorporated into the plan philosophy and that best practice towards sustainability is adopted. The crucial omission are policies aimed at reducing car usage which should not only be included in these MMs, but also MM9 (P2 Greenbelt development), MM14 (E2 Employment) and MM5 (H1 Homes for all) limiting private parking.

Attached documents:

Comment: MM27 - LPMM18/5117  Respondent: Richard Smith 20841889  Agent:

MM27 MM41 MM42 and MM48 Transport Strategy

- I strongly object to the proposed transport strategy, which contains fine words but no solution to the traffic chaos that will result as a consequence of the proposed developments at Garlicks Arch, Burnt Common, Clockbarn and Alderton’s Farm together with Wisley/Ockham and Gosden Hill.
- The existing M25 junction is unable to cope with current demands and needs to be redeveloped just to satisfy this demand. The proposed redevelopment will resolve the existing problem only and is very unlikely to be sufficient to meet the demands created by the proposed developments listed above in aggregate.
- The A3 already backs up to the Clandon slip roads during the rush hour due to the lack of a ring road or other credible alternative for traffic travelling through Guildford. The Portsmouth Road passing through the historic and beautiful village of Ripley is already a nightmare to join or cross during the rush hour due both to the number of cars using the old A3 through Ripley as a work around for the congestion on the A3 backing up from the M25 and the number of cars using the village roads to provide a link between Woking and Guildford.
already. The proposals will simply make these problems worse by adding more traffic than the proposed Transport Strategy will solve.

- The significant increase in traffic will impact greatly on Send Barns Lane, Send Road, Ripley High Street, causing considerable delays, excessive pollution and gridlock. The suggested improvements will condemn the local population and many other travellers to months, if not years, of misery while they are being implemented, all to meet a demand which appears to be the invention of local politicians seeking to increase their fiefdom and unsustainable Government policies on immigration.

Attached documents:

---

**Comment:** MM27 - LPMM18/5128  **Respondent:** Ann Smith 20842305  **Agent:**

MM27 MM41 MM42 and MM48 Transport Strategy

- I object to this transport strategy as the increase in traffic implications due to the proposed site at Garlick’s Arch, Burnt Common, Clockbarn and Alderton’s Farm together with Wisley/Ockham and Gosden Hill appear not to have been properly addressed by the changes to the A3 and Clandon slip roads.
- The significant increase in traffic will impact greatly on Send Barns Lane, Send Road, Ripley High Street, causing considerable delays, pollution and gridlock.

Attached documents:

**Comment:** MM27 - LPMM18/6260  **Respondent:** Hazel McGee 20850017  **Agent:**

I OBJECT to the Modified Local Plan as a whole as I believe it is fundamentally unsound because:

1. Guildford Borough Council has not properly observed its hierarchy of development. Brownfield opportunities, especially in the town centre, have not been fully exploited
2. There is too much reliance on A3 improvements and these are beyond the council’s control
3. The town centre policy, S3, is inadequate and also does not address the infrastructure deficit
4. The grounds for Green Belt development are inadequate and do not fulfil the criteria for ‘exceptional circumstances’.

I would like the Inspector to RE-EXAMINE the Local Plan because:

1. There has been a number of major changes made to the Plan by the Council which have changed it significantly, including, but not exclusively, the editing of D1 and removal of D4, and the addition of new housing and increased commercial development on the Green Belt
2. New figures and projections for housing numbers have been released by the ONS which clearly demonstrate that the housing number in the Local Plan is too high

In case Guildford Borough Council is not prepared to accept my request in Section A above I am including the key points made by those three organisations in my full objection to the Modified Local Plan below:

The Clandon Society Objections and Concerns Which I Share

The A247
I am very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Clandon Society and others expressed concerns in the strongest terms, pointing out the inadequacies of the road.

The major modifications now proposed to the Plan will bring additional pressure on this road, and surrounding roads (eg through East Clandon) which will be used to avoid the inevitable traffic build ups on the A247.

I welcome the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 and the amount of development proposed in the area nearby. However, the provision of a £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the increase in traffic.

I do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available - if indeed it is technically feasible.

I believe that in a few years’ time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs on the A247 when traffic diverts because of congestion on the A3 and leads to dangerous manoeuvres with lorries and coaches mounting the pavements. This was pointed out in detail in previous submissions by the Clandon Society, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint, but this is not a unique problem viz. the widening of the Boxgrove Rd. bridge. It is already the intention to build a station next to the bridge.

The £1million funding is totally inadequate for reducing the inevitable increase in traffic through the villages of West and East Clandon. At most it could be used to make the A247 marginally safer for pedestrians and cyclists by improving speed control measures.

**I believe that traffic will increase significantly because:**

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh
4. The development of 1800 houses at Gosden Hill
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane to access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247 - potentially an easier route than any existing
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic - presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford, servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

**Problems with the West Clandon section of the A247**
The A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 south-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump. It was for these reasons, among others, that Surrey County Council rejected Guildford Borough Council’s proposal to build a 1,000 place school on the site behind the station.
4. The sight lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries, buses and coaches being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and the, in places, narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

THIS ROAD SHOULD BE DE-CLASSIFIED TO THE B-ROAD WHICH IS ALL IT IS ADEQUATE ENOUGH TO BE. TRAFFIC FOR THE A3 FROM THE A25 SHOULD BE SENT THROUGH MERROW TO THE ROUNDABOUTS & DUAL CARRIAGEWAY ALREADY BUILT FOR THE PURPOSE YEARS AGO.

MM41-Policy A43---MM42-Policy A58---MM44 Policy A63

MM9 Green Belt Policy

MM27-MM41-MM42-MM48 Transport Strategy

Other Developments

I strongly object to the above planning proposals, especially now as the Office of National Statistics confirm that this is far more developments than what is required.

The existing infrastructure will not be able to support the above developments. The roads are already gridlocked, insufficient hospitals, schools, doctor surgeries, transport and the list of these items just keep on growing.

Perhaps it is now time to consider new towns in other parts of the UK as this area of the South East is already at breaking point.

Attached documents:

**Comment:** MM27 - LPMM18/6049  **Respondent:** Michael R Bennett 20865729  **Agent:**
Simply widening part of the A3 is an inadequate response to current congestion. More radical solutions should be considered such as a tunnel or mechanisms to actively reduce peak time single car usage and to promote and facilitate travel to school by staff and pupils by other than private car. Major Greenbelt development should not be commenced until traffic congestion has been reduced below its current level.

Main Modification: MM28  Number of representations: 9

Comment: MM28 - LPMM18/3166  Respondent: The Guildford Society (Julian Lyon) 8561377  Agent:

Main Modifications 27, 28 – Policy ID2 (Supporting RIS)

This Main Modification is something of a concession that the Council is unable to control or materially influence the delivery of the Road Infrastructure Strategy.

It will also not be clear, until a package of measures is presented by the Department for Transport, consulted on and adopted, exactly what development this would support on any of the key sites.

The text at 4.6.24ba seems to be rather feeble for a Local Plan:

“Guildford Borough Council proposes to engage with Surrey County Council, the Local Highway Authority, to investigate the potential to amend the Traffic Regulation Order that supports the Guildford town centre Controlled Parking Zone. The forthcoming parking review may provide an opportunity to consider permit eligibility issues, particularly for new developments in areas within the Controlled Parking Zone where existing residents’ demand exceeds the supply of spaces prioritised for their use.”

The highlighted words and phrases point at work that should have been done in preparing the Local Plan, and this woolly wording is inappropriate for a statutory strategic planning document.

The final sentence of that paragraph:

“The possible exclusion of new developments, and any other restrictions on permit eligibility, would operate outside of the planning system.” Is presumably a reference to other measures – maybe legal agreements, which would take two sides to agree. This, again, seems to be inappropriate in the GSDLP.

These Main Modifications make it all the more urgent to bring forward, positively, development in the Town Centre and the Guildford Urban Area to ensure the Local Plan can be kept on track through the Plan Period.

Comment: MM28 - LPMM18/5853  Respondent: Mr Gordon Farquharson 8571617  Agent:

MM28 – I suggest that consideration should not only be given to setting maximum parking standards but also minimum standards. Parking allowances in current developments are totally inadequate.

Attached documents:

Comment: MM28 - LPMM18/1200  Respondent: Burpham Neighbourhood Forum (Jim Allen) 8581505  Agent:

Policy ID3 Sustainable transport for new developments

1. Policy Para’s (4) and (5) (a)
We are disappointed that the Council is seeking to restrict car usage by way of legal obligation. If adequate parking provision cannot be made as part of a proposed development then planning permission should be refused. This should simply state that ‘All vehicles for new developments must be parked off the adopted highways so, if the highway is to be adopted in the future, parking will be off road.’

2. Para 4.6.24a:

We object to the final sentence in this paragraph. Car-free housing is simply unrealistic and unsustainable. Provision 'somewhere' should be made for all homes to have private transport and chargers for electric cars.

3. Para 4.6.24ba to 4.6.24e

Our concerns are as laid out above with the suggestion that a sentence be included to the effect that the developer must provide adequate parking for the expected on-site needs of the development.

Attached documents:

Comment: MM28 - LPMM18/5744  Respondent: Sarah Belton 8598561  Agent:

MM28 is weak on ensuring developments are only permitted with sufficient off-road parking for residents. It is unrealistic to consider that people will use public transport until we have a sea-change with legislated planning for a coherent, frequent, inexpensive and accessible public transport system like that in other countries. At present there is no evidence of the will to do this, locally nor across the UK.

Attached documents:

Comment: MM28 - LPMM18/5166  Respondent: Merrow Residents' Association (Keith Meldrum) 8825057  Agent:

MM28 – We suggest that consideration should not only be given to setting maximum parking standards but also minimum standards.

Agent:  

MM28 Policy ID3 Sustainable transport for new developments.  
Policy Paras 4 and 5a We do not agree with using legal obligation to restrict the use of cars. Developers must provide adequate parking provision for any proposed development. We also strongly object to the suggestion that car free new developments could be considered; this is totally unrealistic and could be considered to discriminate against groups of people reliant on personal transport.  

Attached documents:  

Comment: MM28 - LPMM18/1227  Respondent: Jim Allen 20674913  
Agent:  

Page 41: Policy ID3 Sustainable transport for new developments  
1. Policy Para’s (4) and (5) (a)  
This should simply be all vehicles for new developments must be parked off the 'adopted highways' so when the highway is to be adopted in the future parking must be off road.  
2. Para 4.6.24a: 
'Car free' housing is simply unsustainable. Provision 'somewhere' should be made for all homes to have private transport'. Stored off road and within Walking distance (disability discrimination, if no parking provided)  
3. Para 4.6.24ba to 4.6.24e  
Put simply, the developer must provide adequate parking for the expected needs via underground parking, or 'lift' parking where the car is parked inside a cellar via a lift mechanism.  
Note: You previously raised this proposal that refusing to issue new parking permits to new homes is in fact illegal under current legislation.  

Attached documents:  

Comment: MM28 - LPMM18/3660  Respondent: Angus McIntosh 20794881  
Agent:  

It is clear the Planning Inspector needs to re-open this plan; the plan needs to be re-examined. It should not progress with a few amendments but needs far more verifiable evidence; at present it is unsound which might lead to a Judicial Review.  
Here are a few examples why it should be re-considered: -  
There is a “sustainable corridor” going from no-where to no-where. It does not seem to link into the current road, footpath, cycle track infrastructure and there is there a clear plan showing how this might happen, including how it links westwards with the SOLUM rail station project, and eastwards into Guildford town centre.

42: Policy ID4; Green Blue Infrastructure

1. Policy Para (1) and (2)

‘Where appropriate’ is a very broad get out clause, likely to result in minimal implementation of this policy and should be removed.

Attached documents:

Comment: MM29 - LPMM18/3583  Respondent: Linda Parker-Picken 8587105  Agent:

**ID4 MM29:** The Council will maintain, conserve and enhance biodiversity. How is that possible with such a lot of development on Green Belt land??

Attached documents:

Comment: MM29 - LPMM18/5745  Respondent: Sarah Belton 8598561  Agent:
Drainage infrastructure across the borough and beyond is inadequate, poorly designed and antiquated. Before new developments are even considered, existing roads and drainage needs to be upgraded to 21st century standards. It is beyond belief that just a couple of hours of steady to heavy rain inevitably results in minor flooding due to poorly drained, uneven and pot-holed roads, poorly located and sized drains, or blocked drains due to lack of adequate maintenance or design. Britain is fast becoming a third world country due to years of neglect due to privatisation and profiteering.

ID4 MM29: The Council will maintain, conserve and enhance biodiversity. How is that possible with such a lot of development on Green Belt land??

Attached documents:

Comment: MM29 - LPMM18/5888  Respondent: Thakeham Homes (Sarah Sutcliffe) 17345441  Agent: 

These representations have been made by Thakeham Homes Ltd (‘Thakeham’) in respect of the land interest at Land to the rear of Greenhill and Burnside, Chinthurst Lane, Shalford (‘the site’). It should be noted that Thakeham are members of the Guildford Housing Forum (GHF). As a result, these representations should be read in conjunction with those made by the GHF.

Thakeham have been involved in the Examination sessions for the Local Plan, both through their involvement in respect of the GHF but also through the submission of Hearing Statements in respect of the above site, where concerns were raised regarding inconsistencies in the council application of landscape impacts in the assessment and designation of sites. Thakeham do not consider that the proposed Main Modifications address these concerns, and this alongside wider issues may result in the Council being unable to demonstrate a deliverable supply of housing.

In accordance with Representations made on behalf of Thakeham, Thakeham remains of the view that the MMs are not appropriate and further work is therefore necessary to ensure that concerns can be addressed.

**Policy ID4: Green and Blue Infrastructure (Main Modification 29)**

Objections have been raised previously to the proposed designation of the site as ‘Open Space’ and the findings of the Council’s Assessment of Sites for Amenity Value 2017, which has informed this designation. The designation of this site is not justified, nor appropriate, and the Main Modifications have not sought to address these objections.

The NPPF defines Open space as open space of public value which offers opportunities for sport and recreation and can act as visual amenity. In addition to this, Policy ID4 goes on to define Open Space as ‘all types of open land, both public and private, of public sport/recreation and/or amenity value.’ Within the ‘reasoned justification’ for this policy at paragraph 4.6.55, the Council explain that the Amenity Assessment 2017 has identified and informed the designation of Open Spaces across the Borough:

‘The Council has produced an Amenity Assessment to identify open spaces of public amenity value within villages that are inset from the Green Belt by the plan. This assessment looked at land within the proposed village inset boundaries, excluding land where inset boundaries were expanded to take in allocations on the edge of villages. Sites that were assessed as having public value are identified as Open Space on the Policies Map and will be protected in line with national planning policy to ensure that the value for which the space has been identified is retained. Open spaces outside inset village boundaries are protected by the Green Belt designation so have not been considered for further protection. Land of public value in inset villages that is used for sport and recreation is identified through the Open Space Sport and Recreation Assessment and will be protected in line with the NPPF.’

Following a site visit and basic desktop assessment, the Amenity Assessment 2017 deemed the site (Ref: ETH_088) had an amenity value score of ‘High’, accompanied by the following reasoning:

‘Site is a grass field which is inaccessible to the public. The site is adjacent to a private sports centre. There is also a PROW along the southern boundary. The site is in an elevated position and offers aesthetic value.’

The site is private land which is inaccessible to the public and therefore has no amenity value with respect to providing opportunities for sports and recreations. It therefore appears that this site has been designated solely due to its considered ‘aesthetic value’ and that as a result the overall amenity value is scored as ‘High’. This is the only basis upon which the site is designated as Open Space under proposed Policy ID4.

As set out in previous representations, the site is well contained by high hedgerow to its southern boundaries adjacent to the public footpath, and is set substantially back from the road frontage of Chinthurst Lane. Due to the location and positioning of the site, there are very limited views towards the site from the public realm on Chinthurst Lane and further afield. The elevated position of the site means any views into the site from the tennis club are limited. The only views into the land are from private properties at first floor level, and limited views from the private sports club. To demonstrate the minimal visual amenity value of this site, we have again appended a series of images at Appendix 2 which accompanied representations made in July 2016. These images show that the site is not visible from the public footpath, with the
exception of over the entrance gate, and that there is very limited visibility towards the site from the public realm on Chinthurst Lane or the sports club.

We object to the conclusion within the Amenity Assessment that this site is of high amenity value and we consider that the proposed allocation of the land as Open Space should be removed from the Local Plan.

The designation of sites of no amenity value is not consistent with the NPPF and does not constitute positive planning and would seriously compromise the ability of the Borough to provide much needed housing in sustainable locations within the villages and towns.

This site is set within a highly sustainable location in the village and would be suitable for residential development in the emerging plan period. Sites such as this within the village envelope can make an important contribution to meeting housing needs in the locality.

We trust that these representations will be useful and clear, and we would be grateful of confirmation of receipt. In the meantime, please do not hesitate to contact me if you have any queries or require any further information.

Comment: MM31 - LPMM18/5233  Respondent: Guildford Residents Association, EGRA (Amanda Mullarkey) 8556385  Agent:

MM31

The North Street policy should be amended to reflect the more flexible and less specific approach of promoting mixed use development in MM18. Placing so much retail floorspace in one site is an outdated model, would threaten the viability of existing retail, including the High Street, and the scope for retail as part of other new mixed development.

A height limit for North Street is required.

Where is the allocation for an all-direction bus interchange?

Attached documents:

Comment: MM31 - LPMM18/5013  Respondent: Holy Trinity Amenity Group (Robert Bromham) 8559297  Agent:

POLICY A6, North Street Development. Modification MM31.

Originally this was “Minimum of 41,000 sq m (gross) comparison retail floorspace” and is changed to “Approximately 41,000 sqm – or a figure that is consistent with subsequent updates to the Guildford Retail and Leisure studies.”

Delete this sentence, as 41,000 is now known to be a false estimate for current circumstances. Replace by “Provision of retail to match retail need assessment made at time of implementation.”

Add “A component of the development will be a high-quality bus station”.

Attached documents:

Comment: MM31 - LPMM18/3168  Respondent: The Guildford Society (Julian Lyon) 8561377  Agent:

Main Modification 31 – Policy A6 (North Street)

This Main Modification needs to be read alongside our comments to Main Modification 2 – Policy S2 (Spatial Strategy), which seems to suggest that “provision has been made for at least 41,000 sq m of comparison retail floorspace” across the Borough, and yet Policy A6(1) says that North Street alone will deliver “Approximately 41,000 sqm (gross) comparison retail floorspace…”

A height guide and limit should be imposed on this allocation.

We have not seen an allocation anywhere in the GSDLP for an all-direction bus interchange.

We consider this allocation should be amended to reflect the more flexible and less specific approach of promoting high quality mixed-use development (MM18).
As we have commented extensively previously, we are concerned that (a) the amount of retail in one centre is an outdated model; and (b) the impact on the High Street – especially if the retail sector continues to implode – could be devasting to Guildford, its attractiveness and its heritage.

**Attached documents:**

**Comment:** MM31 - LPMM18/4830  **Respondent:** Richard Edwin 8794945  **Agent:**

MM31 on **North Street** should be amended to reflect the more flexible and less specific approach of promoting mixed use development in MM18. Placing so much retail floorspace in one site is an outdated model, would threaten the viability of existing retail, including the High Street, and the scope for retail as part of other new mixed development.

MM31: A height limit for **North Street** is required.

MM31: There appears to be no allocation for an **all-direction bus interchange**.

**Attached documents:**
Comment: MM31 - LPMM18/2511  Respondent: Nick Etches 8796321  Agent:

MM31 on North Street should be amended to reflect the more flexible and less specific approach of promoting mixed use development in MM18. Placing so much retail floorspace in one site is an outdated model, would threaten the viability of existing retail, including the High Street, and the scope for retail as part of other new mixed development.

MM31 A height limit for North Street is required.

MM31 There appears to be no allocation for an all-direction bus interchange.

Attached documents:

Comment: MM31 - LPMM18/3092  Respondent: David Williams 8798849  Agent:

MM31 on North Street should be amended to reflect the more flexible and less specific approach of promoting mixed use development in MM18. Placing so much retail floorspace in one site is an outdated model, would threaten the viability of existing retail, including the High Street, and the scope for retail as part of other new mixed development.

MM31 A height limit for North Street is required.

MM31 There appears to be no allocation for an all-direction bus interchange.

Attached documents:

Comment: MM31 - LPMM18/4055  Respondent: H L Cousins 8798881  Agent:

MM31 on North Street should be amended to reflect the more flexible and less specific approach of promoting mixed use development in MM18. Placing so much retail floorspace in one site is an outdated model, would threaten the viability of existing retail, including the High Street, and the scope for retail as part of other new mixed development.

MM31 A height limit for North Street is required.

MM31 There appears to be no allocation for an all-direction bus interchange.

Attached documents:

Comment: MM31 - LPMM18/4283  Respondent: Bill Taylor 8800545  Agent:

MM31 on North Street should be amended to reflect the more flexible and less specific approach of promoting mixed use development in MM18. Placing so much retail floorspace in one site is an outdated model, would threaten the viability of existing retail, including the High Street, and the scope for retail as part of other new mixed development.

Attached documents:
| Comment: MM31 - LPMM18/4813 | Respondent: Gaenor Richards 8813601 | Agent: |

Policy MM31 Where is the allocation for an all-direction bus interchange?

Attached documents:

Comment: MM31 - LPMM18/4722  Respondent: Fiona Yeomans 8996481  Agent:

I wish to register the following two comments:
• **North Street**: the time for yet more retail space has passed. There is plenty of retail space for the “super centres” – and online shopping is increasingly apace. This land should be used for additional/badly needed housing. The reuse of brownfield sites, proximity to transport links and other facilities etc makes a lot of sense. (Ref MM31 North Street development)

**Attached documents:**

**Comment**: MM31 - LPMM18/5590  **Respondent**: F McHugh 10299041  **Agent:**

**Comment:** MM31 - LPMM18/3350  **Respondent:** Debra Somner Fraser 11041025  **Agent:**

MM31 on **North Street** should be amended to reflect the more flexible and less specific approach of promoting mixed use development in MM18. Placing so much retail floorspace in one site is an outdated model, would threaten the viability of existing retail, including the High Street, and the scope for retail as part of other new mixed development.

MM31 A height limit for **North Street** is required.
MM31 There appears to be no allocation for an all-direction bus interchange.

Comment: MM31 - LPMM18/3796  Respondent: Terence O'Rourke for M&G Real Estate (Andrew Elliott) 17145569  Agent:

Guildford Borough Submission Local Plan: Strategy and Sites - Main Modifications

This letter provides the comments of M&G Real Estate (M&G) in relation to the proposed Main Modification to Policy A6: North Street redevelopment, reference MM31.

As per its statement to the Matter 11 Hearing, M&G supports a policy approach that provides for a balance of uses at the North Street site, reflecting its suitability for mixed-use redevelopment and offering sufficient flexibility to ensure a successful and financially viable scheme. In principle, therefore, M&G supports the further modifications as set out in MM31 which will help to provide greater flexibility for the planning and delivery of site A6.

M&G very much sees site A6 as a mixed-use development site for mutually compatible retail, residential and leisure activity, providing multiple benefits from the redevelopment of underused urban land in the town centre. Nevertheless, M&G identifies that the retail market and wider economic conditions have been, and may continue to be, subject to rapid change in terms of need and demand. This could have significant implications for project content and therefore there will continue to be a need for flexible and responsive policy making and decision taking.

POLICY A60, White Lyon Walk.
Add “Height to be restricted to 4 storeys, and design to be appropriate for the Conservation Area and Historic Core”.

Attached documents:

Comment: MM32 - LPMM18/3169  Respondent: The Guildford Society (Julian Lyon) 8561377  Agent:

Main Modification 32 – Policy A60 (White Lion Walk)
The Society has no objection in principle to the new allocation of this site specifically in the GSDLP.
We are, nevertheless, concerned that there is no height, bulk or mass guide, that this is one site that does not appear to have been subjected to a rigorous test to see what can actually be accommodated on the site.
The Society believes that this allocation should be viewed in conjunction with the site to the east of the current allocation (including Marks & Spencer) to allow for a reallocation of retailers and to regenerate the M&S store, which we understand has some restrictions due to deleterious building materials. (red line below)
We also believe that this development should extend westwards to include the loading bays for the White Lion Walk development and also the unused/underused Phoenix Court, and to improve the residential space above the shops fronting Friary Street. (orange line below)
A plan is set out below incorporating the larger site:
Comment: MM32 - LPMM18/5358  Respondent: Miss Edwina Attwood 8568193  Agent:

MM32 A height limit for White Lion Walk is required.

Attached documents:

Comment: MM32 - LPMM18/1202  Respondent: Burpham Neighbourhood Forum (Jim Allen) 8581505  Agent:
The Inspector said that the Plan must look to the town centre for more housing. The addition of just 50 extra properties shows a distinct lack of enthusiasm to do this, as all other additional sites are within the existing Green Belt. The Council should redouble efforts to find additional housing in the town centre area.

**Comment:** MM32 - LPMM18/1208  **Respondent:** Burpham Neighbourhood Forum (Jim Allen) 8581505  **Agent:**

**Policy A60 White Lion Walk**
We welcome the use of town centre land for residential, in addition to the continued use of retail at ground floor level. Please see above reference regarding car free sites - if redevelopment is to occur, it is quite feasible to make an underground car park and delivery area for the stores in this location. We believe that this site is not viable for redevelopment in the first five years of the Plan.

**Comment:** MM32 - LPMM18/5948  **Respondent:** Jennie Kyte 8585601  **Agent:**

**MM32 (Policy A60) White Lion Walk, High Street Guildford**
Part of Guildford’s charm is its small shops. Larger retail premises will be taken over by chains. Both chains and smaller shops have vacated premises during the decline in retail. Before sacrificing smaller premises, evidence is needed that larger shops will be commercially more viable, or will they migrate from the High St leaving behind vacated premises. (The former shop ‘River Island’ on a large corner site in the High St, was split into two small shops after it vacated its premises.)

The height of White Lion Walk needs to be restricted in line with the character of the High St and the architecture needs to live up to the beauty of its surroundings.

Site Allocations Summary Table
A60
The Council would appear to have taken little cognizance of the Inspector’s comment about using the town centre for more housing. Putting just 50 extra dwellings in the town suggests minimal enthusiasm and the Council should make a far greater effort.

**Attached documents:**

On behalf of our client, we are supportive of the allocation of this site for a mixed-use redevelopment to include residential. However, we have the following comments on the drafting of Policy A60.

1. We consider that the word ‘comparison’ should be omitted from the retail floorspace reference in the allocation. Whilst our client’s intention would be to provide comparison floorspace, making the allocation specific to the comparison category would be inconsistent with the requirements section, that simply refers to ‘retail uses on the ground floor with active frontages’.

2. We object to the ‘requirement’ to ‘Retain the existing walk-through from North Street to the High Street’. In our view, the extent to which such a walk through is retained in such a development is more properly judged through an urban design analysis through other policies in the Plan (including new policy S3) that considers the options for development. Specifically, we note the following:

   - The walk through is not a public right of way
   - As far as we are aware, the walk through is not an explicit requirement of any previous planning permissions or conditions
   - There are other walk throughs available between North Street and the High Street
   - Applying a blanket insistence that this walk through should be retained is likely to curtail the ability of any development to provide larger, more commercially viable retail units on the ground floor as set out in the opportunities element of the policy.

3. Under the opportunities element, we consider that the Council should acknowledge the ability of the site to accommodate more than 50 dwellings should it be acceptable on townscape grounds and complies with other policies within the Plan. This reflects the requirements in new Policy S3 that ‘Schemes must demonstrate that they have made the most efficient use of land both in terms of the quantum of development and the mix of uses’

**Guildford Borough Council Submission Local Plan: Strategy and Sites - Main Modifications October 2018**

Thank you for consulting us on the Guildford Borough Council Submission Local Plan: Strategy and Sites - Main Modifications 2018. Further to our response, ref: WA/2011/111091/CS-05/PO1-L01 dated 16 October, we have the following points we would like to highlight.

**Points of clarity and accuracy**

**POLICY A60: White Lion Walk, High Street, Guildford**

The site is allocated for a mixed-use redevelopment, comprising approximately 50 homes (C3) and comparison retail floorspace (A1).

We understand the sequential test (2017) identified the site as being in Flood Zone 1. According to our Flood Map for Planning a very small proportion of the site lies in Flood zone 2 and 3. Any future development proposals will need to include a site specific flood risk assessment. Development proposals should follow the sequential approach in order to steer development away from areas which are at the highest risk of flooding.

**Comment:** MM32 - LPMM18/1235  **Respondent:** Jim Allen 20674913  **Agent:**

**Page 44: Site Allocations summary Table**

1. **Row A60**

You said the plan must look to the town centre for more housing just 50 extra shows a distinct lack of enthusiasm to do this, as all other additional sites are within the existing Green Belt.

**Page 45 Policy A60 White Lion Walk**

I welcome the use of urban land for residential; however, this site is currently an active retail site and would result in lost employment and retail space although not all are occupied - as for car free site - if redevelopment is to occur, it is quite feasible to make an underground car park and delivery are for the stores. This is not viable in the first five years.

MM33

This should require sensitive, low-rise design that is well set back and screened along the Wey Corridor at Slyfield and green roofs for commercial buildings within the site to minimise impact on views from the AONB eg Merrow Downs.

**Attached documents:**

**Comment:** MM33 - LPMM18/3170  **Respondent:** The Guildford Society (Julian Lyon)  8561377  **Agent:**

Main Modification 33 – Policy A24 (Slyfield – SARP)

The Society remains concerned that there is still no policy paragraph on height and bulk, on set-back from the River Wey, and providing that walkways and cycle ways alongside the river are accommodated.

APPENDIX 1 – Procedural Practice in the Examination of Local Plans, June 2016 (4th Edition v.1)

Post-Submission Changes Initiated by the LPA

- 5.20 The Inspector will take the published plan (and if relevant, the addendum submitted with the plan to address matters arising from the public consultation on the plan at regulation 19 stage) as the final word of the LPA on the Therefore, there is a very strong expectation that further LPA-led changes to the plan will not be necessary and this is a key premise of delivering an efficient examination timetable. Provision for changes after submission of the plan is to cater for the unexpected. It is not intended to allow the LPA to complete or finalise the preparation of the plan. In order for the Inspector to take forward any change (in effect a proposed main modification) initiated by the LPA (or any other party in the examination), the requirements of section 20(7B) and (7C) of the PCPA must be met. For example, a LPA’s change of preferred approach to a policy (including a site allocation) could not be accommodated unless the policy/site as submitted is, in the Inspector’s view, unsound or not legally compliant and the proposed change initiated by the LPA (or any other party) would make the plan sound/compliant.

- Any such proposed change should, where appropriate, be subject to the same process of publicity and opportunity to make representations as at regulation 19 stage and it would usually be handled as part of the section 20(7C) process set out in the paragraphs If the proposed change were to alter the thrust of a policy, extend the range of development to which a policy applies, delete a policy or introduce a new policy, two very important considerations need to be borne in mind. Firstly, the proposed change must not undermine, or possibly undermine, the sustainability appraisal process that has informed the preparation of the plan. Secondly, it should be subject to adequate community engagement. If the LPA has taken appropriate steps to address these matters, the proposed change may in some instances be acceptable as set out in the paragraph above.

5.22. The consultation on the proposed change may generate new representations. If so, in the interests of fairness, the Inspector will provide an opportunity to appear at the hearings to those who seek an amendment which follows directly from the LPA’s proposed post-submission change(s) to the plan.

- Where the LPA proposes such changes, the Inspector will expect all the relevant material to be made available without the need for undue delay to the examination Guidance on the consideration of and procedures for suspension of the examination to allow further work to be carried out by the LPA, is provided in Section 9 ‘Exceptional Procedures’ of this guide.
APPENDIX 2 – Landmark Chambers: Exceptional Circumstances

http://www.landmarkchambers.co.uk/nppf9

This document is reproduced in full as indication of case law as it relates to the Green Belt.

There are some very useful cues as to the interpretation of very special circumstances and exceptional circumstances (the latter being the test for Local Plans where there is an intention to amend Green Belt boundaries or allocate development within the Green Belt. The emphases are ours.

SECTION 9 – PROTECTING GREEN BELT LAND NPPF 79-92

Timmins v Gedling DC [2014] EWHC 654 (Admin), Green J

Paul Brown QC appeared for the first Claimant

The Council found that the proposed development (cemetery) was appropriate development in the Green Belt, since it would preserve openness and would not conflict with the purposes of including land in the Green Belt.

“In my judgment, properly interpreted, section 9 NPPF means that any development in the Green Belt is treated as prima facie “inappropriate” and can only be justified by reference to “very special circumstances” save in the defined circumstances set out in paragraphs 89 and 90.” [25]

R (Lee Valley Regional Park Authority) v Epping Forest DC [2016] EWCA Civ 404, Treacy, Underhill, Lindblom LJJ

“The true position surely is this. Development that is not, in principle, “inappropriate” in the Green Belt is, as Dove J. said in paragraph 62 of his judgment, development “appropriate to the Green Belt”. On a sensible contextual reading of the policies in paragraphs 79 to 92 of the NPPF, development appropriate in – and to – the Green Belt is regarded by the Government as not inimical to the “fundamental aim” of Green Belt policy “to prevent urban sprawl by keeping land permanently open”, or to “the essential characteristics of Green Belts”, namely “their openness and their permanence” (paragraph 79 of the NPPF), or to the “five purposes” served by the Green Belt (paragraph 80). This is the real significance of a development being appropriate in the Green Belt, and the reason why it does not have to be justified by “very special circumstances”.” [24]

NPPF 79

R (Lee Valley Regional Park Authority) v Epping Forest DC [2016] EWCA Civ 404, Treacy, Underhill, Lindblom LJJ

“The concept of “openness” here means the state of being free from built development, the absence of buildings – as distinct from the absence of visual impact” [7]

NPPF 80

Smith [2017] EWHC 2562 (Admin), Sir Ross Cranston

Richard Turney appeared for the Claimant

Zack Simons appeared for the Secretary of State
“No authority was cited for the proposition that "urban sprawl" mentioned in para.80 of the NPPF is confined to urban sprawl through building.” [33]

NPPF 81

Fordent Holdings v Secretary of State for Communities and Local Government [2013] EWHC 2844 (Admin), HHJ Pelling QC

Change of use can fall within NPPF 81, but this does not mean by definition that a change of use falling within NPPF 81 is necessarily not inappropriate development for the purposes of NPPF 90. [23]

LOCAL PLANS

NPPF 83

Gallagher Homes Ltd v Solihull Borough Council [2014] EWHC 1283 (Admin), Hickinbottom J

Christopher Lockhart-Mummery QC and Zack Simons appeared for the Claimant

Preparing a new local plan is not, of itself, an exceptional circumstance justifying alteration to a green belt boundary. [125]

125. From these authorities, a number of propositions are clear and uncontroversial.
126. Planning guidance is a material consideration for planning plan-making and decision-taking. However, it does not have statutory force: the only statutory obligation is to have regard to relevant
127. The test for redefining a Green Belt boundary has not been changed by the NPPF (nor did Mr Dove suggest otherwise).
128. In Hunston, Sir David Keene said (at [6]) that the NPPF "seems to envisage some review in detail of Green Belt boundaries through the new Local Plan process, but states that 'the general extent of Green Belts across the country is already established'”. That appears to be a reference to paragraphs 83 and 84 of the Paragraph 83 is quoted above (paragraph 109). Paragraph 84 provides:

"When drawing up or reviewing Green Belt boundaries local planning authorities should take account of the need to promote sustainable patterns of development?".

However, it is not arguable that the mere process of preparing a new local plan could itself be regarded as an exceptional circumstance justifying an alteration to a Green Belt boundary. National guidance has always dealt with revisions of the Green Belt in the context of reviews of local plans (e.g. paragraph 2.7 of PPG2: paragraph 83 above), and has always required "exceptional circumstances" to justify a revision. The NPPF makes no change to this.

2. For redefinition of a Green Belt, paragraph 7 of PPG2 required exceptional circumstances which "necessitated" a revision of the existing boundary. However, this is a single composite test; because, for these purposes, circumstances are not exceptional unless they do necessitate a revision of the boundary (COPAS at [23] per Simon Brown LJ). Therefore, although the words requiring necessity for a boundary revision have been omitted from paragraph 83 of the NPPF, the test remains the same. Mr Dove expressly accepted that interpretation. He was right to do so.

1. Exceptional circumstances are required for any revision of the boundary, whether the proposal is to extend or diminish the Green That is the ratio of Carpets of Worth.
ii) Whilst each case is fact-sensitive and the question of whether circumstances are exceptional for these purposes requires an exercise of planning judgment, what is capable of amounting to exceptional circumstances is a matter of law, and a plan-maker may err in law if he fails to adopt a lawful approach to exceptional circumstances. Once a Green Belt has been established and approved, it requires more than general planning concepts to justify an alteration.” [124]-[125] 

Gallagher Homes Ltd v Solihull DC [2014] EWCA Civ 1610, Laws, Patten and Lloyd LJJ

“Christopher Lockhart-Mummery QC and Zack Simons appeared for the Claimant Christopher Katkowski QC appeared for the Council

“The fact that a particular site within a council’s area happens not to be suitable for housing development cannot be said without more to constitute an exceptional circumstance, justifying an alteration of the Green Belt by the allocation to it of the site in question.” [36]

IM Properties Development Ltd v Lichfield DC [2014] EWHC 2440 (Admin), Patterson J

“What is clear from the principles distilled in the case of Gallagher is that for revisions to the green belt to be made exceptional circumstances have to be demonstrated. Whether they have been is a matter of planning judgment in a local plan exercise ultimately for the inspector. It is of note that in setting out the principles in Gallagher there is no reference to a falsification doctrine [that the basis on which land was excluded from the Green Belt has been falsified] or that any release of green belt land has to be seen as a last resort.” [96]

Richard Turney appeared for the Claimant

“Mr Turney … submitted that the fact that a particular site happens to be suitable for housing development cannot, without more, constitute an exceptional circumstance justifying an alteration of the Green Belt. I agree with Mr Turney insofar as this goes… Suitability simpliciter cannot logically be envisaged as an exceptional circumstance…; suitability and availability may do, subject to the refinements discussed below.

NPPF 83-84

Richard Turney appeared for the Claimant

“The second sentence of paragraph 84 is not altogether clear. On the face of things, it might well be argued that it appears to reinforce the need to protect the Green Belt, but in my view it is capable of being interpreted slightly more broadly. The consequences for sustainable development may require revision of the Green Belt. Nonetheless, I do not readily agree with Miss Ellis that paragraph 84 throws any light on the meaning of “exceptional circumstances” within paragraph 83, or should be taken as somehow diluting this aspect. Sustainable development embraces environmental factors, and such factors are likely to be negatively in play where release of Green Belt is being considered. The second sentence of paragraph 83 supplies a fetter or brake on development which would, were it not for the Green Belt, otherwise be sustainable; but in deciding whether exceptional circumstances pertain regard must be had to the whole picture, including as I have said the consequences.” [19]

NPPF 84

IM Properties Development Ltd v Lichfield DC [2014] EWHC 2440 (Admin), Patterson J Paragraph 84 “is clear advice to decision makers to take into account the consequences for sustainable development of any review of green belt boundaries. As part of that patterns of development and additional travel are clearly relevant.” [98]

NPPF 87
Matthew Reed appeared for the Council

On the facts, the Inspector was obliged to find a housing shortfall. However, the weight to be given to such a housing shortfall (and whether it constituted ‘very special circumstances’ for the purposes of NPPF 87) was a matter of planning judgment. The weight to be attached to the shortfall may, as a matter of planning judgment, be reduced where a shortfall is inevitable due to a district being subject to policies which restrict development (such as AONBs, National Parks or Green Belts).

Fordent Holdings v Secretary of State for the Home Department [2013] EWHC 2844 (Admin), HHJ Pelling QC

The meaning of ‘development’ in the NPPF is the same as in s.55 of the TCPA 1990. A material change of use can be inappropriate development for the purposes of NPPF 87: [18].

R (Khan) v LB Sutton [2014] EWHC 3663 (Admin), Patterson J

[After quoting from Wychavon District Council v Secretary of State for Communities and Local Government [2008] EWCA Civ 692]

"The guidance in the NPPF is unchanged in relation to very special circumstances. As such, whether a factor constitutes a very special circumstance is a matter for the decision maker in the exercise of his judgment in any particular case.” [80]

R (Luton Borough Council) v Central Bedfordshire Council [2015] EWCA Civ 537 (Longmore, Tomlinson, Sales LJJ)

“…paras. 87-88 of the NPPF provide guidance regarding the approach to be adopted if there is a proposal for development of an area within the Green Belt set out in a local plan: “very special circumstances” have to be shown. This is a stricter test than that in para. 83 in respect of changing the boundaries of the Green Belt in the local plan.” [54]

NPPF 88

Redhill Aerodrome Ltd [2014] EWCA Civ 1386, Sullivan, Tomlinson, Lewison LJJ

James Maurici QC appeared for the First Appellant Secretary of State

Stephen Whale appeared on behalf of the Second and Third Appellant Councils

Christopher Katkowski QC and Alistair Mills appeared on behalf of the Respondent, Redhill Aerodrome

The phrase “and any other harm” means any harm, not only harm the Green Belt.

Copas v Secretary of State for Communities and Local Government [2014] EWHC 2634 (Admin), Supperstone J

Matthew Reed appeared on behalf of the Claimants

NPPF 88 deals with the issue of weight to be attached to factors [32].

R (Luton BC) v Central Bedfordshire Council [2014] EWHC 4325 (Admin), Holgate J

“The NPPF does not require the planning authority to chop up a mixed use proposal into separate components and to apply the very special circumstances test separately in relation to each such component. No authority was cited to support that interpretation and I do not think that it is justifiable on the language used in paragraph 88 of the NPPF.” [167]

Dear v Secretary of State for Communities and Local Government [2015] EWHC 29 (Admin), HHJ Belcher

Stephen Whale appeared for the Secretary of State
The case concerned the weight to be given to harm to the Green Belt, in circumstances where the best interests of children must also be a primary consideration,

“In my judgement, provided the decision-maker ascribes the correct weight at the outset, in carrying out any adjustment to the weighting when considering the individual circumstances of the case, it matters not whether he reduces the weight on one side of the balance, or increases the weight on the other. The effect will be the same.” [47]

R (Lee Valley Regional Park Authority) v Broxbourne Borough Council [2015] EWHC 185 (Admin), Ouseley J

“A shortfall in housing land supply can, as a matter of policy, be a very special circumstance, although the occasions when it is likely to suffice by itself to warrant the grant of permission for housing development in the Green Belt are expected to be few and far between. That is in effect what the NPPF and the Ministerial statement say. So there is nothing unlawful in the committee treating it as one of a number of very special circumstances. I do not accept Mr Harwood's submission that the committee considered it as another material consideration rather than as a very special circumstance. But, if so, it does not help the claimant. Once the issue is whether or not inappropriate development should be permitted in the Green Belt, all factors which tell in favour of the grant go to making up very special circumstances, which may or may not suffice. It is not necessary to go through the process of considering whether a factor is not a very special circumstance but nonetheless falls to be taken into account in favour of the development as another relevant material consideration. See Secretary of State for Communities and Local Government v Redhill Aerodrome Ltd [2014] EWCA Civ 1386.” [68]

Atkins v Tandridge City Council [2015] EWHC 1947 (Admin), Dove J

Adopted the need for Green Belt harm and other harm to be clearly outweighed, in Doncaster MBC v Secretary of State [2002] EWHC 808 (Admin), para 70:

“Given that inappropriate development is by definition harmful, the proper approach is whether the harm by reason of inappropriateness and the further harm, albeit limited, cause to the openness and purpose of the Green Belt, was clearly outweighed by the benefit to the appellant’s family and particularly to the children so as to amount to very special circumstances justifying an exception to Green Belt policy.”

R (Lee Valley Regional Park Authority) v Epping Forest DC [2016] EWCA Civ 404, Treacy, Underhill, Lindblom LJJ

“The first sentence of paragraph 88 of the NPPF must not be read in isolation from the policies that sit alongside it. The correct interpretation of it, I believe, is that a decision-maker dealing with an application for planning permission for development in the Green Belt must give “substantial weight” to “any harm to the Green Belt” properly regarded as such when the policies in paragraphs 79 to 92 are read as a whole (consistent with the approach taken, for example, in the judgment of Sullivan L.J., with whom Tomlinson and Lewison L.JJ. agreed, in Redhill Aerodrome Ltd. v Secretary of State for Communities and Local Government [2015]

P.T.S.R. 274 , at paragraph 18). Reading these policies together, I think it is quite clear that “buildings for agriculture and forestry”, and other development that is not “inappropriate” in the Green Belt, are not to be regarded as harmful either to the openness of the Green Belt or to the purposes of including land in the Green Belt. This understanding of the policy in the first sentence of paragraph 88 does not require one to read into it any additional words.” [17]

NPPF 89

R (Lee Valley Regional Park Authority) v Broxbourne Borough Council [2015] EWHC 185 (Admin), Ouseley J

“The words “agricultural building” in the NPPF, as in the legislation, in my view mean a building used for the purposes of agriculture alone and do not include one which was used for the purposes of agriculture alone and do not include one which was used for agricultural purposes but which, lawfully, is now used for another purpose, mixed with agriculture or not. These buildings were in fact no longer used for agricultural purposes alone. A barn now converted to a dwelling was once used for agricultural purposes, it was an agricultural building, but it is now a dwelling house and not an agricultural building.
The second aspect of this issue is whether nonetheless, as Mr Jones contended, the previous agricultural use of the buildings meant that the land was still excluded from “previously developed land” as it remains land which “is or has been occupied by agricultural buildings”. The language of the exclusion was quite straightforward. Mr Harwood contended that the exclusion could not apply where the agricultural use of the buildings had ceased and had been replaced by another use, whether a permitted use, or one which had become a lawful use. The position would be even more obvious if the buildings had been demolished and lawfully replaced with other buildings for use for non-agricultural purposes, but which logically on Mr Jones' submission would still mean that the land “has been occupied” by agricultural buildings.

In my judgment, those words must be read in the context of the words defining previously developed land. That is land which “is or was occupied by a permanent structure”. The exception uses the words “is or has been occupied by agricultural buildings”. The policy first looks at the present position and asks what buildings occupy the site, to which the answer is: buildings lawfully not used for agricultural purposes. The present tense deals with the position as it is. The policy then looks at whether the land “was” or “has been” occupied by permanent structures or certain buildings. The past tense deals with the position where the buildings which once occupied the land no longer do so, having been demolished, or fallen down. Their removal does not in general prevent land being previously developed land, and in the case of agricultural buildings, their removal does not end the exception. The past tense is not used to deal with former agricultural buildings which continue occupy the land but which are no longer agricultural buildings. That is covered by what “agricultural building” means.

The problem with Mr Jones' approach is threefold, although I can see that his interpretation is a possible one. First, it does not seem to me the most natural reading of the language of the policy. The policy would have to cover the position where buildings still occupy on the site, and where they once occupied the site but have since been demolished or have fallen down. That is what the two tenses deal with. The use of the past tense to cover both sites no longer occupied by any buildings, and sites still occupied by buildings but which have changed from a use within the exception to one outside it, rather strains the scope of quite simple language. Second, the policy justification for his suggested interpretation is not strong enough to overcome that reading. The aim of the agricultural building exception is to avoid a necessary exception to normal policies, agricultural buildings in the countryside and the Green Belt, often permitted development not requiring specific planning permission, becoming the vehicle, through this new policy, for allowing built development which would otherwise be inappropriate in the Green Belt, or not normally allowed in the countryside. Were the lawful change of use of an agricultural building to become the vehicle for a new non-agricultural building, the aim of the policy could be to some degree undermined though it would still cover the erection of new non-agricultural buildings. I do not think that that makes a sufficient dent in the rationale for the policy to overcome the simple reading of straightforward language. Third, it would introduce some very odd consequences which I cannot accept are intended. If agricultural buildings had once occupied a site, whether they had changed their use long ago, or had been demolished and replaced with non-agricultural buildings with permission, the site could not be previously developed land. If the whole of the southern site is redeveloped for housing, it would still be within the exception to previously developed land when any further redevelopment took place. Accordingly, I conclude that the southern part of the site was correctly treated as previously developed land.” [38]-[41]

Gill [2015] EWHC 2660 (Admin), Rhodri Price Lewis QC

Stephen Whale appeared for the Secretary of State

“The description of development was amended to refer to the retention of the building and its change of use to offices but it still did not involve the construction of a new building applying the ordinary and natural meaning of those words.” [31]

R (Robb) v South Cambridgeshire District Council [2017] EWHC 594 (Admin), Ouseley J

Andrew Parkinson appeared for the Claimant

“Where the NPPF refers to exceptionally treating as appropriate limited affordable housing for local community needs "under policies set out in the Local Plan", it plainly intends that the relevant policy, here HG/5, should be properly complied with; that is, complied with according to its terms. Its terms require compliance in full with the criteria.” [24]

R (Tate) v Northumberland County Council [2017] EWHC 664 (Admin), HHJ Belcher
This case concerned whether a settlement was a village for the purpose of the penultimate bullet point of NPPF 89.

“Whilst accepting that there is no one definition of a village, Miss Graham Paul submitted that in interpreting Green Belt policy, and giving the word 'village' its ordinary reasonable meaning, for a settlement to be considered a village it must have at least one of the following: a clear core, boundaries, an evolution of different housing types and styles, basic services, highway frontage, or a population of between hundreds and thousands. Her skeleton characterise this submission as "must have" at least one of those criteria. In her oral submissions, she accepted the position was more nuanced. She accepted that no one factor was determinative, but she submitted that a village should have at least one of those criteria.”

“In my judgment, that discussion and Miss Graham Paul's responses, served to emphasise that the question of whether a given settlement is, or is not, a village, is inevitably a matter of planning judgement. The fact that different members of the public, or indeed a different planning authority might take a different view of the matter does not undermine the planning judgment unless it can properly be said to be irrational, that is a decision that no reasonable planning authority could have reached, or in the words of Sedley J (as he then was) in R v Parliamentary Commissioner for Administration, ex-parte Morris and Balchin [1997] JPL 917 at 927 "…… a decision which does not add up - in which, in other words, there is an error in reasoning which robs the decision of logic.”

“In my judgment I cannot possibly conclude that a village must have at least one of the items on Miss Graham Paul's list, or that in the absence of at least one of the criteria in her list, a decision that a particular settlement amounts to a village is, therefore, irrational. There is no proper basis upon which I could conclude that any of the criteria is required. It would amount to my own subjective view and, in effect, a review of the decision itself (which is not the function of judicial review) rather than a review of the decision making process (which is the function of judicial review). In my view Miss Graham Paul's list is inevitably subjective, and the subjective decisions to be made on the facts of this case are properly to be made collectively by those exercising planning judgement.”

R (Robb) v South Cambridgeshire District Council [2017] EWHC 594 (Admin), Ouseley J

Andrew Parkinson appeared for the Claimant

“Where the NPPF refers to exceptionally treating as appropriate limited affordable housing for local community needs "under policies set out in the Local Plan", it plainly intends that the relevant policy, here HG/5, should be properly complied with; that is, complied with according to its terms. Its terms require compliance in full with the criteria.”

Attached documents:

Comment: MM33 - LPMM18/3171  Respondent: The Guildford Society (Julian Lyon) 8561377  Agent: NPPF 89-90

Fordent Holdings v Secretary of State for Communities and Local Government [2013] EWHC 2844 (Admin), HHJ Pelling QC

“Previous national policy in relation to Green Belt development defined material changes of use as inappropriate unless they maintained openness and did not conflict with the purposes of including land within the Green Belt – see PPG2, Paragraph 3.12. That approach has not been carried through into the NPPF however, where the preferred approach is to attempt to define what is capable of being “not inappropriate” (footnote) development within the Green Belt with all other development being regarded as inappropriate by necessary implication. It is for this reason that there is no definition within Chapter 9 of the NPPF of what constitutes inappropriate development, or any criteria by which whether a proposed development is or is not appropriate could be ascertained. It is for that reason that Paragraph 89 of the NPPF provides that a particular form of development - the construction of new buildings – in the Green Belt is inappropriate unless one of the exceptions identified in the Paragraph applies. Paragraph 90 defines the “other forms of development” there referred to as
also at least potentially not inappropriate. The effect of Paragraphs 87, 89 and 90, when read together is that all development in the Green Belt is inappropriate unless it is either development (as that word is defined by s.55 of the TCPA) falling within one or more of the categories set out in Paragraph 90 or is the construction of a new building or buildings that comes or potentially comes within one of the exceptions referred to in Paragraph 89.” [19]

Footnote: “In the course of the submissions before me, I was told that the correct distinction was between inappropriate development and development that was “not inappropriate”. I note that this is not the phraseology adopted for example in Europa Oil and Gas Limited v. SSCLG (ante) where the antithesis of inappropriate is said to be “appropriate”. In this judgment I have maintained the phraseology used by the parties without reaching any judgment as to whether its use is correct.”

Change of use can fall within paragraph 81, but this does not mean by definition that a change of use falling within paragraph 81 is necessarily not inappropriate development for the purposes of paragraph 90: [23].

“There is no general exception for changes of use that maintain openness and do not conflict with the purposes of the Green Belt.” [24]

Paragraph 89 is a “closed list of classes” [25]. It applies only to the construction of new buildings [26].

“Merely because a proposed development is inappropriate does not mean that there is a prohibition on it. The categories of what constitute very special circumstances are not closed.” [28]

R (Wildie) v Wakefield Metropolitan BC [2013] EWHC 2769 (Admin), Stephen Morris QC

Zack Simons appeared for the Claimant

Considering “very special circumstances”

“First, the correct approach to the very special circumstances test is to ask the following question (adapting the wording of §70 in [Doncaster Metropolitan Borough Council v Secretary of State for the Environment, Transport and the Regions [2002] EWHC 808 (Admin)] (as approved by Carnwath LJ in [Wychavon District Council v Secretary of State for Communities and Local Government [2008] EWCA Civ 692 [2009] PTSR 19] §26)):

“Given that inappropriate development is by definition harmful, the proper approach [is] whether the harm by reason of inappropriateness and the further harm, albeit limited, caused to the openness and purpose of the Green Belt was clearly outweighed by the [countervailing benefit arising from the development] so as to amount to very special circumstances justifying an exception to the Green Belt policy”

“Thus, in considering whether to allow development in the Green Belt, the decision maker must consider, first , the “definitional” harm arising from the inappropriate development as well as such further harm to the Green Belt as is identified as being caused by the development in that case, and then secondly consider countervailing benefits said to be served by the development; and then consider whether those benefits clearly outweigh the harm so as to amount to very special circumstances. Secondly , in order to qualify as "very special", circumstances do not have to be other than “commonplace” i.e. they do not have to be rarely occurring. Thirdly , the test is not one of whether the harm to the Green Belt (definitional or specific) is “significant or unacceptable”, either of itself or following the balancing exercise.

“I add that, whilst principally a case on the content of the “very special circumstances” test, Doncaster is also a case on the adequacy of the reasons given for a finding of very special circumstances. Although this is a case of an inspector's decision and so does not directly relate to the Article 31 duty upon a local authority, nevertheless it does demonstrate the need for sufficient reasons so as not to be left in doubt as whether the very special circumstances test has been correctly applied: see Doncaster , §§74 and 75.”

R (Lloyd) v Secretary of State for Communities and Local Government [2014] EWCA Civ 839, Lord Dyson MR, Sullivan and Patten LJ

Sullivan LJ held that paragraph 89 of the NPPF had to be interpreted in its statutory context, which distinguishes between operational development and change of use. [38]
References in national policy to “buildings”, or “the construction of new buildings”, do not include mobile homes. [39]

New Forest DC v Owen [2013] EWHC 265 (QB), Judge Thornton QC

Paul Brown QC appeared as Leading Counsel for the Council

The Green Belt policies in the NPPF can require consideration of temporary use of sites. [198]

Timmins v Gedling DC [2015] EWCA Civ 10, Richards and Tomlinson LJJ, Mitting J

Paul Brown QC appeared for the Claimants

Paragraph 89 is concerned with new buildings, and not with other types of development. [30]

“Paragraph 89, as its opening sentence makes clear, lays down a general rule that the construction of new buildings in the Green Belt is inappropriate development: “building” for this purpose has the wide meaning given by section 336 of the Town and Country Planning Act 1990 (see paragraph 7 above). The various bullet points are exceptions to that general rule and are therefore likewise concerned only with the construction of new buildings. Thus the second bullet point covers the construction of a building (for example, a café) as an appropriate facility for an existing cemetery, but it does not cover a material change in the use of land so as to create a new cemetery.” [30]

Tandridge DC [2015] EWHC 2503 (Admin), David Elvin QC

“It is common ground here that the meaning of the replacement building exception should be approached in a similar manner to the earlier manifestation of the exception considered in R (Heath and Hampstead Society) v Camden LBC [2008] 2 P&CR 13.” [18]

“Here the apparently simple question is whether “building” should be understood as meaning only a single building and excluding any group of two or more buildings. I agree that this term, and its role as an exception to the general principle that new buildings are inappropriate development in the Green Belt, should be considered in its context of the NPPF as a whole and in the context of the Green Belt policies in particular” [33]

“However, while noting the change in language from PPG2, the exception under consideration here is still found in the NPPF, and all parties urged me to adopt the same approach in respect of the “not materially larger” test as was endorsed in the Heath and Hampstead case with regard to paragraph 3.6 of PPG2.

I agree that this is the appropriate approach, because it appears to me that the exceptions, though modified, generally replicate those in PPG2 and more importantly the underlying purpose of this exception does not appear to me to have changed. This is not a case like Timmins where the court is being asked to imply a category of appropriate development omitted from the NPPF, but concerns the interpretation of a category of appropriate development which has been included, and is broadly similar to its predecessor.” [42]-[43]

Turner [2016] EWCA Civ 466, Arden, Floyd and Sales LJJ

The Inspector stated at para. 11 ‘Openness is essentially freedom from operational development and relates primarily to the quantum and extent of development and its physical effect on the appeal site.’

“I should mention that although in paras. 11 and 12 of the decision the Inspector referred to “operational development” rather than simply “development”, the judge correctly found that this was an immaterial slip and there is no appeal in that regard” [9]

“14 The concept of “openness of the Green Belt” is not narrowly limited to the volumetric approach suggested by Mr Rudd. The word “openness” is open-textured and a number of factors are capable of being relevant when it comes to applying it to the particular facts of a specific case. Prominent among these will be factors relevant to how built up the Green Belt is now and how built up it would be if redevelopment occurs (in the context of which, volumetric matters may be a material concern, but are by no means the only one) and factors relevant to the visual impact on the aspect of openness which the Green Belt presents.
• The question of visual impact is implicitly part of the concept of “openness of the Green Belt” as a matter of the natural meaning of the language used in 89 of the NPPF. I consider that this interpretation is also reinforced by the general guidance in paras. 79-81 of the NPPF, which introduce section 9 on the protection of Green Belt Land. There is an important visual dimension to checking “the unrestricted sprawl of large built-up areas” and the merging of neighbouring towns, as indeed the name “Green Belt” itself implies. Greenness is a visual quality: part of the idea of the Green Belt is that the eye and the spirit should be relieved from the prospect of unrelenting urban sprawl. **Openness of aspect is a characteristic quality of the countryside, and “safeguarding the countryside from encroachment” includes preservation of that quality of openness. The preservation of “the setting … of historic towns” obviously refers in a material way to their visual setting, for instance when seen from a distance across open fields. Again, the reference in para. 81 to planning positively “to retain and enhance landscapes, visual amenity and biodiversity” in the Green Belt makes it clear that the visual dimension of the Green Belt is an important part of the point of designating land as Green Belt.**

16. The visual dimension of the openness of the Green Belt does not exhaust all relevant planning factors relating to visual impact when a proposal for development in the Green Belt comes up for For example, there may be harm to visual amenity for neighbouring properties arising from the proposed development which needs to be taken into account as well. But it does not follow from the fact that there may be other harms with a visual dimension apart from harm to the openness of the Green Belt that the concept of openness of the Green Belt has no visual dimension itself.

17 Mr Rudd relied upon a section of the judgment of Green J sitting at first instance in R (Timmins) v Gedling Borough Council [2014] EWHC 654 (Admin) at [67]-[78], in which the learned judge addressed the question of the relationship between openness of the Green Belt and visual impact. Green J referred to the judgment of Sullivan J in R (Heath and Hampstead Society) v Camden LBC [2007] EWHC 977 (Admin); [2007] 2 P&CR 19, which related to previous policy in relation to the Green Belt as set out in Planning Policy Guidance 2 (“PPG 2”), and drew from it the propositions that “there is a clear conceptual distinction between openness and visual impact” and “it is therefore wrong in principle to arrive at a specific conclusion as to openness by reference to visual impact”: para. [78] (Green J's emphasis).

The case went on appeal, but this part of Green J's judgment was not in issue on the appeal: [2015] EWCA Civ 10; [2016] 1 All ER 895.

18 In my view, Green J went too far and erred in stating the propositions set out This section of his judgment should not be followed. There are three problems with it. First, with respect to Green J, I do not think that he focused sufficiently on the language of section 9 of the NPPF, read as part of the coherent and self-contained statement of national planning policy which the NPPF is intended to be. The learned judge does not consider the points made above. Secondly, through his reliance on the Heath and Hampstead Society case Green J has given excessive weight to the statement of planning policy in PPG 2 for the purposes of interpretation of the NPPF. He has not made proper allowance for the fact that PPG 2 is expressed in materially different terms from section 9 of the NPPF. Thirdly, I consider that the conclusion he has drawn is not in fact supported by the judgment of Sullivan J in the Heath and Hampstead Society case.” [14-18]

“The openness of the Green Belt has a spatial aspect as well as a visual aspect, and the absence of visual intrusion does not in itself mean that there is no impact on the openness of the Green Belt as a result of the location of a new or materially larger building there. But, as observed above, it does not follow that openness of the Green Belt has no visual dimension.” [25]

“It was rational and legitimate for [the Inspector] to assess on the facts of this case that there is a difference between a permanent physical structure in the form of the proposed bungalow and a shifting body of lorries, which would come and go; and even following the narrow volumetric approach urged by the appellant the Inspector was entitled to make the assessment that the two types of use and their impact on the Green Belt could not in the context of this site be “directly compared as proposed by the appellant” (para. 13). The Inspector was also entitled to take into account the difference in the visual intrusion on the openness of the Green Belt as he did in para. 14.” [27]

LB Bromley [2016] EWHC 595 (Admin), David Elvin QC

‘In my judgment, it is unnecessary to gloss the paragraph 89 exceptions and they should be read naturally and in the context that it is part of the statutory planning code that permission for new buildings always carries with it permission
for the use of the buildings. The paragraph 89 exceptions can only be concerned with the use of new buildings, since the exceptions must all involve new buildings of some description. To include changes of use with respect to those new buildings does not involve contradicting the judgment of Timmins since it was concerned with whether there was a unstated general category of appropriate development comprising a material change of use of land. …

It goes too far to extend the reasoning of the Court of Appeal in Timmins, concerned as it was with whether material changes of use comprised a category of appropriate development, to apply it to the paragraph 89 exceptions when the Court's reasoning was closely based on the fact that what was appropriate development was what was set out in the NPPF and the NPPF made no provision for a material change of use as a freestanding category of appropriate development. There was nothing inherent in the concept of a material change of use which led the Court in Timmins to consider that it was not suitable in principle to be appropriate development. Indeed given that there had been such a category in the former PPG2 demonstrates otherwise. The point was, put at its simplest, that what is appropriate development is what is set out in the NPPF and the NPPF does not make provision for a general category of material change of use which preserves openness.’ [36]-[37]

‘It follows that, in my judgment, providing the new buildings fall within the use and other restrictions of the applicable indent of paragraph 89 the mere fact that permission for a new building may also involve a material change of use does not mean that it ceases to be appropriate development. This is a matter of the construction of language and purpose of the paragraph and that to interpret it according to that meaning and purpose appears to me to be consistent with a straightforward reading of it. Contrary to Miss Grogan's submission, it simply does not bring in via the back door the general material change of use of land category rejected in Timmins. The only changes of use permitted in paragraph 89 are those arising from the new buildings defined as appropriate under it and in accordance with the conditions there set out.’ [47]

Davis [2016] EWHC 274 (Admin)

HHJ Cooke considered whether there was a “general test” that development is appropriate so long as it preserves the openness of the Green Belt and does not conflict with the purposes of including land within the Green Belt. Referring to Timmins at [31]:

‘Neither Mitting J nor Tomlinson LJ therefore expressed a view as to whether there was any "general test" such as Richards LJ had rejected. But the clear inference must be that they did not consider that there was any such test, since if there had been it would have been relevant to the outcome of the case. The cemetery had been agreed not to affect openness; if it was to be presumed not to be inappropriate for that reason the appeal should have succeeded. Further, none of the judges in the Court of Appeal disagreed with Green J's conclusion that prima facie all development in the Green Belt is to be regarded as inappropriate unless within the stated exclusions. The only scope for expanding the list of exclusions left open is development complying with the positive obligations in para 81.’ [66]

R (Lee Valley Regional Park Authority) v Epping Forest DC [2016] EWCA Civ 404, Treacy,

Underhill, Lindblom LJ

“Implicit in the policy in paragraph 89 of the NPPF is a recognition that agriculture and forestry can only be carried on, and buildings for those activities will have to be constructed, in the countryside, including countryside in the Green Belt. Of course, as a matter of fact, the construction of such buildings in the Green Belt will reduce the amount of Green Belt land without built development upon it. But under NPPF policy, the physical presence of such buildings in the Green Belt is not, in itself, regarded as harmful to the openness of the Green Belt or to the purposes of including land in the Green Belt. This is not a matter of planning judgment. It is simply a matter of policy. Where the development proposed is an agricultural building, neither its status as appropriate development nor the deemed absence of harm to the openness of the Green Belt and to the purposes of including land in the Green Belt depends on the judgment of the decision-maker. Both are inherent in the policy.

If the policy in the first sentence of paragraph 88 of the NPPF meant that “substantial weight”

must be given to the effect a proposed agricultural building would have on the openness of the Green Belt and on the purposes of including land within the Green Belt, the policy in paragraph 89 categorizing such buildings as appropriate
development in the Green Belt, regardless of such effects, would be negated. This cannot have been the Government’s intention.” [20]-[21]

R (Boot) v Elmbridge Borough Council [2017] EWHC 12 (Admin), Supperstone J

Andrew Parkinson appeared for the Claimant

Neil Cameron QC and Zack Simons appeared for the Defendant

The Officer Report found that there was an impact upon the openness of the Green Belt, but concluded that “the proposal represents appropriate development within the Green Belt. The proposal is not considered to have a significant adverse impact on the openness of the Green Belt or the amenity of nearby properties.” The Council therefore approved the application for planning permission without applying the ‘very special circumstances’ test.

This decision was quashed as being unlawful.

“It seems to me that the general policy approach to development in an area of Green Belt is clearly set out in paragraphs 89 and 90. That approach is different, dependent upon whether the proposed development is in principle inappropriate or in principle not inappropriate (i.e. in principle appropriate). The former includes both the construction of new buildings other than those that fall within the exceptions in paragraph 89; and, because the paragraph 89 and 90 lists are closed, also any development not listed in the bullet points in either of those paragraphs. The latter includes both new buildings which fall within any of the paragraph 89 exceptions; and development which falls within any of the paragraph 90 listed categories, even if, in either case, to fall within the category, the development has to satisfy additional criteria such as the preservation of the openness of the Green Belt and that the development does not conflict with the purposes of including land in the Green Belt. It is noteworthy that those two particular criteria feature both generically in paragraph 90, but also specifically in the second bullet point exception in paragraph 89 (“provision of appropriate facilities for outdoor sport, outdoor recreation and for cemeteries, as long as it preserves the openness of the Green Belt and does not conflict with the purposes of including land within it”). In my view, this illustrates the similarity of approach to the bullet point exceptions in paragraph 89, and the development considered not inappropriate as listed under paragraph 90.” [14]

“For the reasons I have set out (in paragraph 14 and following above), I do not accept Mr Village's submission that both paragraph 89 and paragraph 90 start from the same general proposition that development in the Green Belt is inappropriate. In my view – and, on my understanding of their submissions, this is not exactly as either Ms Lieven or Mr Easton put it– the relevant policy distinction is not between paragraphs 89 and 90 as such, but rather between, on the one hand, proposed development that is in principle inappropriate, and, on the other hand, proposed development that is in principle not inappropriate. This was the distinction crisply drawn by Lindblom LJ in Lee Valley (see paragraphs 19-20 above). As I have described (in paragraph 14 above), the former includes both the construction of new buildings other than those that fall within the exceptions in paragraph 89; and, because the paragraph 89 and 90 lists are closed, also any development not listed in the bullet points in either of those paragraphs. The latter includes both new buildings which fall within any of the paragraph 89 exceptions; and development which falls within any of the paragraph 90 listed categories, even if, in either case, to fall within the category, the development has to satisfy additional criteria.” [48]

“Mr Village submitted that, as a result of the principles set out in Turner, in considering openness, a planning decision-maker is obliged to take into account visual impact of the proposed development. However, that is not what Turner held. The case concerned whether the inspector had erred in taking into account visual impact of the development. Both Lang J and the Court of Appeal held, not that he was obliged to take visual impact into account, but only that, in the circumstances of the particular case, he was entitled to do so. The judgment of Sales LJ is particularly clear in this regard.” [51]

“I appreciate, of course, that the proper interpretation of the NPPF is a matter of law for the court to determine. However, given that we are dealing with (to use Sales LJ's epithet) an “open-textured” concept, in a policy for the guidance of planning decision-makers, I am persuaded by Ms Lieven's submission that factors such as visual impact, purpose,
degree of permanence and reversibility, are not matters to which, as a matter of law, a planning decision-maker must have regard in every case in which a proposed development is in a Green Belt area, or even in every such case in which openness is an issue. They are (as Ms Lieven put it) “CREEDNZ factors”, a reference to CREEDNZ Inc v Governor-General [1981] 1 NZ 172 at page 183 per Cooke J, as approved in In re Findlay [1985] AC 318 at pages 333H-334C per Lord Scarman. They are factors to which the decision-maker may have regard if, on the facts of the particular case, in the exercise of his judgment and discretion he thinks it right to do so: in other words, the decision-maker has a margin of appreciation within which he may decide just which considerations should play a part in his reasoning process (see R v Somerset County Council ex parte Fewings [1995] 1 WLR 1037 at pages 1049H-1050A per Simon Brown LJ). In deciding which considerations should play a part, the decision-maker must of course be guided by the policy looked at as a whole, including its broad objects; but, once he has made that decision, this court will only interfere, on conventional public law grounds, if he strays outside that margin (R (Plant) v London Borough of Lambeth [2016] EWHC 3324 (Admin) at [62]-[63] per Holgate J, and the cases to which he there refers).” [58]

Europa Oil and Gas [2014] EWCA Civ 825

Stephen Whale appeared for the Leigh Hill Action Group

The meaning of “mineral extraction” in paragraph 90 should be interpreted consistently with the meaning of the word later in the NPPF. Later paragraphs lean in favour of “mineral extraction” meaning exploration as well as production. [16]

Timmins v Gedling DC [2015] EWCA Civ 10, Richards and Tomlinson LJ, Mitting J

Paul Brown QC appeared for the Claimants

Richards LJ and Mitting J differed on the question of whether NPPF 90 should be regarded as a closed list. Tomlinson LJ preferred not to express a firm view on the question, it not being necessary to determine on the facts.

R (Lee Valley Regional Park Authority) v Broxbourne Borough Council [2015] EWHC 185 (Admin), Ouseley J

“I would accept that the effect of development on openness may involve questions of degree, and that there may be scope for some reduction in height and bulk offsetting some greater extent or spread of built area, and, if so, that how far the offset goes before the impact on openness increases can be a matter of impression. A conclusion on the degree of impact on openness is essential to reliance on the new flexibility for “previous developed land” in the first place … and to the analysis of harm.” [59]

Turner [2015] EWHC 2728 (Admin), Lang J

Sasha Blackmore appeared for the Secretary of State

““Openness” is not defined in the NPPF. The Inspector, at paragraph 11, described it as “essentially freedom from operational development”. I agree with the Claimant that the meaning of openness is freedom from any development, not just operational development. However, in my view, this was a slip by the Inspector which did not materially affect his reasoning, so as to give rise to an arguable ground of appeal. It is apparent from paragraph 79 of the NPPF that openness is an “essential characteristic” of the Green Belt which the policy protects.” [26]

“These are two different concepts, though often closely related…” [33]

R (Lee Valley Regional Park Authority) v Epping Forest DC [2016] EWCA Civ 404, Treacy,

Underhill, Lindblom LJ

“There is no difference between the concept of development being not “inappropriate” and the concept of its being “appropriate”” [8]

Smith [2017] EWHC 2562 (Admin), Sir Ross Cranston
Richard Turney appeared for the Claimant

Zack Simons appeared for the Secretary of State

“I cannot accept that in the light of Sales LJ cogent analysis [in Turner] the concept of openness is confined to the visual impact arising from buildings. Indeed, that is clear from Turner (supra) itself, when the impact on existing openness of the vehicles and so on around the site were taken into account. Even if the visual impacts the inspector identified in this case could not be said to be part of the development, that did not mean that they were to be ignored. The NPPF does not require an inspector to disaggregate the impacts of non-development features from the impacts of proposed development more generally.” [30]

APPENDIX 3 – Settlement Profiles Report

13.1 Guildford urban area

Size

Guildford urban area has a population of approximately 73,779 (just over half of the total population in the borough) and is located in the centre of the borough. It is one of two principal urban areas in Guildford borough.

Form

Guildford urban area contains a range of different forms

Character

It is important to note that the Guildford urban area is dissected by the strategic road network (A3) and rail infrastructure forming barriers to movement. As a result the urban wards to the north and north west of the borough are poorly connected to the rest of the Guildford urban area and town centre, where the majority of the services and facilities are located, due to limited crossing locations.

Economic and social sustainability indicators

Community services and facilities

Guildford urban area is well equipped with social and community facilities, it offers all of the community facilities and services assessed, and offers more leisure facilities including the Spectrum leisure centre. Northern (sic.)

Retail and employment

The town centre and 22 local shopping centres provide a broad range of goods and services to the local community.

Guildford urban area is home to the University of Surrey and Surrey Research Park. There is also Guildford College and the College of Law. They are important in not only generating a supply of well qualified personnel but also in establishing and facilitating the formation of a number of new businesses. Guildford urban area contains some of the borough’s key employment sites that include the Surrey Research Park, Guildford Business Park, Slyfield Industrial Estate and Woodbridge Meadows. Together these provide premises for a varied cross section of businesses from manufacturing through to high knowledge based industries.

Three urban wards, two in the town centre and one adjacent to the A3, account for the majority of employment. Retail and transport are predominantly located in urban areas. There are two large edge-of-town supermarkets. Manufacturing jobs are predominantly located in the urban wards of Friary and St Nicolas, Onslow and Stoke Guildford borough Settlement profiles 39 whilst construction and transport jobs are concentrated in the urban wards of Friary and St Nicolas, Stoke and Merrow.

Transport
Residents within Guilford urban area have access to a range of transport options. The River Wey runs through the town centre and acts as a transportation route primarily for recreation and tourism purposes. Guildford mainline railway station is located within the town centre and provides excellent connectivity to London, Portsmouth, Reading, Gatwick Airport and many other destinations. The second railway station is located to the north of the town centre away from the main shopping areas but also provides excellent connectivity. The main road that links Guildford urban area with London and Portsmouth is the A3. This contributes to the congestion issues in the town. There are frequent bus services into and out of Guildford town centre and the wider urban area.

Given the significant concentration in employment and the reliance of both residents and businesses on the private vehicle, the urban area suffers from traffic congestion during peak hours. The northern A320 corridor into Guildford urban area from Woking, past the Slyfield Industrial Estate and along the A322 Worplesdon Road, becomes heavily congested at peak times. The Stoke crossroads and junction with the A3 are already at their capacity. A lack of investment in associated junctions will continue to have an adverse effect on the communities and major businesses operating in the Guildford urban area. In addition to investment in roads and junctions, there is also a need for more investment in sustainable transport, including improvements to walking, cycling and public transport in the borough.

Further information

- There are 268 Listed Buildings within Guildford urban
- Flood zones 2 and 3 associated with the River Wey run south to north through the urban area and town centre affecting some
- There are several conservation areas within Guildford urban
- The area lies within the 400m-5km buffer zone of the Thames Basin Heaths Special Protection Area (SPA).
- There are three areas of High Archaeological potential, one to the south and two to the south
- An Area of Outstanding Natural Beauty (AONB) and Area of Great Landscape Value (AGLV) lie to the south of Guildford urban

Conclusion

Guildford is designated as an urban area and contains a high level of services. As such it could support a level of development which exceeds that of any of the borough’s other settlements. If suitable sites are found, there is the option to extend the urban area to enable more development however this may lead to development away from key services. The sustainability of any extension should be assessed in more detail through other evidence base studies. This will include further work to assess the level of infrastructure needed to support the level of growth.

<td>CPRE concentrates most of its attention on sites outside the town centre and urban development. However, we feel obliged to refer to the Response of the Burpham Community Association which clearly outlines the problems experienced in this community when it states that &quot;the transport strategy is untenable&quot; and &quot;the Sustainable Movement Corridor is not a viable proposition&quot;. The ongoing issue of Godsden Hill and the traffic problems associated with its Green Belt entry to the town have been with us for many years. If anything the problems seem to grow in complexity for the community with more and more elements on the agenda for the regular meetings revolving around the issues of Aldi, Clay Lane, Merrow Lane, Park &amp; Ride, Slyfield, and Thames Water to list a few. In our view it seems necessary for some form of infrastructure master plan to be prepared and reviewed in a public hearing on this topic in such a way that the strategy to be followed and the likely cost is discussed openly. If a change has to be envisaged for the Green Belt, then this will need to be addressed as &quot;exceptional circumstances&quot; at the time of the GBC Plan.</td>

MM33 should require sensitive, low-rise design that is well set back and screened along the Wey Corridor at Slyfield and green roofs for commercial buildings within the site to minimise impact on views from the AONB.

Attached documents:

**Comment:** MM33 - LPMM18/4115  **Respondent:** Caroline Gray 8896993  **Agent:**

MM33 should require sensitive, low-rise design that is well set back and screened along the Wey Corridor at Slyfield and green roofs for commercial buildings within the site to minimise impact on views from the AONB.

Attached documents:

**Comment:** MM33 - LPMM18/2926  **Respondent:** Tessa Crago 8899713  **Agent:**

MM33 should require sensitive, low-rise design that is well set back and screened along the Wey Corridor at Slyfield and green roofs for commercial buildings within the site to minimise impact on views from the AONB.

Attached documents:

**Comment:** MM33 - LPMM18/3948  **Respondent:** Susan Fuller 8900705  **Agent:**

MM33 should require sensitive, low-rise design that is well set back and screened along the Wey Corridor at Slyfield and green roofs for commercial buildings within the site to minimise impact on views from the AONB.

Attached documents:

**Comment:** MM33 - LPMM18/4385  **Respondent:** Duncan Gray 8901633  **Agent:**

MM33 should require sensitive, low-rise design that is well set back and screened along the Wey Corridor at Slyfield and green roofs for commercial buildings within the site to minimise impact on views from the AONB.

Attached documents:

**Comment:** MM33 - LPMM18/2781  **Respondent:** Burpham Community Association (Liz Critchfield) 8908513  **Agent:**

**MM33 Policy A241 Slyfield Area Regeneration**
This is dependent on the re-siting of the current sewage works, a subject much debated over many years but no nearer agreement. The number of new dwellings proposed in the Local Plan makes an efficient sewage treatment plant essential; we would look for a rational, practical and affordable approach to this issue.

Attached documents:

Comment: MM33 - LPMM18/30  Respondent: Ms Anne Deacon 20453409  Agent:

is it possible to change the access? Either add an entrance off the A3 or make the filter lane coming from Woking direction longer, which is the easiest option and would take a few foot of the waste ground which nobody uses any more as nobody walks anymore. This causes traffic bottlenecks at 7.30 am!! Just to get through the Slyfield traffic lights.

Attached documents:

Comment: MM33 - LPMM18/1236  Respondent: Jim Allen 20674913  Agent:

Page 46 Policy A24: SARP
Justification of removal of Policy A24 Slyfield regeneration (in its current format)

The project is currently publically declared [public works loan?] cost over £100 Million to the Local Council simply to move the foul water treatment works, which is the responsibility of Thames Water PLC and OFWAT to approve the move. TW PLC has signed a Water Undertakers agreement with the Government to provide such services that are needed for the Community. After 15 years of one sided discussion, nothing has been achieved, due to the company clearly implying by its reluctance to become involved, in all that time, that the move is not to be encouraged. The proposed new site is beset with technical difficulties including Methane release, land instability and organic contamination over 4 metres deep, and cost versus Engineering and cleansing of the site is not a commercially viable proposition. Total estimated cost of £350 Million. Thus the project needs revisiting with a preference for commercial use not Residential. Removing the need for the Burnt Common release of Green Belt for industrial use.

Slyfield is not a commercially viable site and no finance has been provided for its clearance and re-use. It is thus unsustainable and highly unlikely to proceed past May of next year. (Date of the next local elections local Council)

The current site is essential for the New Sewage treatment plant / transfer station and as all sites are dependent on this site. A more practical and rational approach should be taken as to its future use.
• When an engineer says it isn’t sensible, there are good practical reasons not to do it! Level of difficulty against end result.
• When an accountant says it’s not viable after 15 years of talking and accounting, then it means it is not commercial / financially viable, acknowledged by the Council Planners at the EiP
• When a chemist says its contaminated, it will be – don’t pick it up or eat it! Waste settlement tanks and household waste sites are ‘naturally contaminated– they do not have the same contamination level as a farmer’s field built on in 1908!, despite what the council reports claim to the contrary.
• When an Accountant, Chemist and an Engineer say it isn’t viable – its time the Politician realised he does not know what he’s doing!

“This is the state of play of this proposal after 15 years everyone with practical experience says ‘ do not do it’ in their own technical languages. This plan singularly fails to realise this. If it [the movement of the treatment plant] does not go ahead, then there is no waste water treatment capacity for the Local Plan and the water undertaker is clearly refusing to cooperate in its move. You (the council) pay for and design the move and the council does not have the expertise to actually plan such a move nor the finance to pay for it. We [TW PLC] do not want anything to do with it [The Move].

Until this move is stopped then and only then will Thames Water fulfil its statutory obligations to provide adequate capacity for the final number of homes.”

As the council claim it is not commercially viable, I have been looking at the proposed numbers, if borrowing £100,million to facilitate SARP is non commercial but none the less a rational approach to this site. The maths are 1,500 homes, average cost when sold £250,000 total value of homes £375,million, Suggesting a smart profit of £250,million after the cost of moving and clean up – yet Thames Water PLC, GBC and outside finance say it is not commercially viable – Which strongly suggests we are not being told the full truth..... about the implications of the move and cleanup such that £250 million will be absorbed by ‘expected events’ most probably additional site cleanup? suggesting each home will in effect cost a staggering £416,666 to build including the site clean-up cost, when the average homes sale value is just half that figure. If all homes were rented out at £1,000 per month the £375 million would take 20 years to recoup... noting if they are sold off at a discount this year period rapidly extends. Noting 40% of these homes are meant to be low cost homes.

The use of this site for housing and proposal to move the treatment plant is summed up by Alec Samuels, Barrister and former leader of Southampton City Council when discussing council lending in general “If the private sector is unwilling to lend or invest in a venture perceived by to be unviable or unsound should not the public sector get the message and keep away?” This site falls into this category.

Transport Strategy:

There is not a rational defined entrance to this site after 15 years on the drawing board, let alone an internal design, A proper safe guarded entrance should be included and identified through/ via the Bellfield’s roundabout.......within the plan policy should this site move forward in its present guise.

Object I object to the change so that LA pay for the pitches. The developer should be made to pay. This is about trying to make the site acceptable because of the benefit it brings – if the LA has to pay there may be many more important and more deserving things for the LA to finance in it’s limited social care budget for example.

Comment: MM35 - LPMM18/5854  Respondent: Mr Gordon Farquharson 8571617  Agent:

MM35 – Transport Strategy (1) is clear but Transport Strategy (2) is less so and the paragraph suggests that there could be an all movements junction of the A3 with roads north of the A3, 1st of the site and also to the east of the site. The wording of this condition should be amended to be absolutely clear as to what is being proposed to avoid confusion and debate at the planning application stage.

I say this because advice had been sought from GBC Officers prior to the Examination of the Local Plan and they raised the possibility of the connecting road running north east of the site but south of the A3 until it reached approximately Ewbanks offices (on the north side) where a new road and bridge could cross the A3 and link up with the existing B2215 thence on to the A247.

I continue to take the view that there should be a 4 way junction with the A3 at Gosden Hill Farm. The 3 way junction at Garlick’s Arch together with the two-way junction at Gosden Hill Farm does provide a spread-eagled 4 way junction but does not avoid the reality that traffic for London from the site would have to go through Burpham or Merrow to get onto the A3. In order to prevent additional traffic congestion and snarl ups in Burpham I continue to believe that there should be a 4 way junction on the Gosden Hill Farm site. I suggest that Transport Strategy (2) should be amended to provide for the option of either such a 4 way junction or the suggestion from Officers mentioned in the preceding paragraph to be finally determined at the Master Planning stage.

I suggest that the last sentence of Transport Strategy (2) should be a separate condition as a link road to the A247 is a separate issue to a possible all movements junction on the A3.

Comment: MM35 - LPMM18/1581  Respondent: Mr John Sweeting 8579393  Agent:

Re: Sites numbered:

A25 – Gosden Hill
A35 – Former Wisley Airfield
A42 – Land at Burny Common Heath
A43 and A43a - Land at Burnt Common – known as Garlick’s Arch
A58 - Land around Burnt Common warehouse
A63 - Land at Aldertons Farm
in the revised draft local plan.
I would like to object to the inclusion of these sites in the draft local plan for the following reasons:

1. There remains considerable uncertainty in the number of houses needed in the Borough. In view of the recent EU referendum vote and its impact on future immigration, the number of houses required is likely to reduce further.
   This view is now confirmed by the recent Office for National Statistics (ONS) prediction that the number of homes needed in the Borough in the plan period is 4662 – a substantial reduction compared to the earlier forecast of 7717. To increase the number of sites – i.e. the addition of site A63 - and to increase the development at other sites is perverse to say the least and simply ignores ONS figures and the wishes of most of the residents to keep the area semirural.

2. With the revised ONS forecast, the requisite number of homes can be met from brownfield sites – as noted by Councillor Susan Park. Continuing with the increased number will result in unnecessary loss of the Greenbelt. This is a tragedy and contradicts policy MM9 as 'special circumstances' necessary for reclassification have not been established.

3. Wisley/Ripley/Send/Burnt Common/Send Marsh is a semi-rural area and development on this large scale will lead to urbanisation and permanently change the nature of the area.
   In particular this could provide the starting link in connecting Guildford to the M25. The Greenbelt policy was originally introduced to counteract urban spread and has worked well for many years and there does not appear to be any reason to abandon it at this time as once the space has gone it will never be recovered.

4. These developments place a disproportionate burden on the north east of the Borough.

5. Traffic will increase significantly and the access and exit roads to and from the A3 are too narrow to cope with the resultant increase in traffic - particularly at peak hours when additional congestion at the junctions in the vicinity of the A3 is likely.

6. With specific reference to site A63, there is currently less than 100 homes with a frontage on Send Marsh Road, adding 120 homes at this site with access from Send Marsh Road will inevitably increase the traffic and during peak hours is likely to cause serious congestion at both ends of the road and Send Marsh Green.

7. Other infrastructure.
   The Garlick's Arch, Clockburn and Winds Ridge sites are estimated to result in an increase demand of 45% on the infrastructure in that area. Is there adequate power, drainage and sewage provision for industrial development? And are there sufficient school, medical and similar provisions for domestic expansion?

8. Light and sound pollution.
   The area enjoys fairly dark skies for its proximity to London. Any additional development will add to the light pollution unless provisions are made to ensure strict control of any additional lighting. Please consult Guildford Astronomical Society.
   It already suffers from noise pollution from the A3. Traffic noise pollution seems inevitable if development proceeds.
   If, despite their adverse impact, the sites continue to be included in the plan, provision should be made for strict control of noise and light pollution emanating from the sites – particularly at night time.

9. The sites contain a substantial number of trees many of which are quite mature and must make a significant contribution to the Borough's carbon reduction target. Examples are Garlick's Arch in particular contains ancient woodlands and even the Aldertons site contains a large mixed hedge. It seems perverse that planning permissions have been refused because of the impact on individual trees whilst the wholesale destruction of woods and hedges seems inevitable if these sites are included.
   It seems difficult to reconcile these two extreme positions.
   If, despite their adverse impact, the sites continue to be included in the plan, preservation orders should be placed on appropriate trees as a minimum requirement.

Attached documents:

Comment: MM35 - LPMM18/1210  Respondent: Burpham Neighbourhood Forum (Jim Allen) 8581505  Agent:
**Policy A25: Gosden Hill Farm, Merrow Lane, Guildford**

We welcome the reduction to the proposed housing numbers on this site, despite our concerns regarding this allocation. The Plan needs to be consistent throughout as to whether it is referring to housing delivery numbers within the Plan period or on the site as a whole (see comments above).

We welcome the reduction in traveller pitches. See our comments above as to the wider concerns regarding lack of movement /pitch turnover amongst the travelling community.

**Policy Box, Transport strategy and other infrastructure**

The transport strategy is unsustainable for the following reasons:

(2) This wording suggests an all-ways junction onto the A247. However the location described is too far north of its required location to provide a solution to future traffic problems. The junction is required south west of the A247, not on the A247.

This is a cost saving measure, not a practical planning solution to traffic problems. In addition the wording is very loose and will not guarantee a solution.

(4) The Sustainable Movement Corridor is yet to be proven viable or sustainable. The London Road in Burpham is not capable of being widened to accommodate additional bus and continuous cycle lanes. Delaying the progress of private vehicles along the London Road and giving preference / right of way to public transport vehicles is unsound due to location and cost of getting to destinations of travel by local residents. The proposed park and ride buses (which do not ‘stop en route’) should use the A3 to access the town centre via the A320 Stoke Road and return the same way through an all-ways junction to the north of the site at Potters Lane. Note: The return journey via the proposed A247 route is not a viable park and ride bus route as this will increase the return journey by several miles, resulting in unacceptable journey times.

(5) The provision of new bus services into this area (Burpham) is totally impractical when local bus services have been cut due to congestion within Burpham housing estates.

(6) The site is not within reasonable walking distance of Guildford urban area amenities, and is highly dangerous for cyclists due to volume of traffic.

(7) In the 1980's Guildford Borough Council raised concerns (during the 1980’s appeal) that the presence of a railway station at this location would make any housing estate a dormitory for London rather than providing housing for residents of Guildford. We share these ongoing concerns today.

(8) The implications of development of this site on the local road network will be substantial. Mitigation after the fact, via financial contributions, is an unacceptable approach. Supporting infrastructure must be an integral part of the development plan, not ignored during the planning process, or provision made elsewhere.

**Policy A25; Other Infrastructure**

(14) This is poorly worded and makes no attempt to better the situation. This should read ‘Run-off does not exceed current average rates. Any additional rates of run-off should be controlled by balancing ponds to ensure this rate is not exceeded during times of high rainfall or flooding.’

(25) We welcome the additional landscaping buffer requirement between Gosden Hill and the A3. However this could be enhanced further with the addition of a commitment ‘To have regard to the cumulative visual impact of all new site allocations along this section of the A3’.

(28) The wording should include the words ‘without using the back country lanes known as "Merrow Lane" and "New Inn Lane" as routes to and from this site by vehicular traffic.’

**Policy A25; Box Opportunities**

(3) This route should specify leaving the site at the location of the proposed new railway station, about which we have
raised concerns, and connecting with the A25 without interfering with local traffic on Merrow Lane or Park Lane. This would be a similar proposal to the expanded Blackwell Farm exit onto a main road.

(6) This proposal clearly acknowledges the justified need for an ‘all-ways junction’ to the London side of the Gosden Hill site. Indeed this was proposed as part of the failed appeal application on this site in the 1980’s. However the position of the current overall road proposals fails to provide a ‘realistic solution’ as opposed to a ‘very poor mitigation’ to the known problem. The all-ways should be located closer to Potters Lane, forming a ‘tight layout’ all-ways junction serving both Gosden Hill and the industrial site at Burnt Common. As currently worded the proposals for any it is simply too close to the M25 and with a high level of land-take. In our view the allways junction should be located south of the A247 and not on it.

2. Row A25

This number is underscored at 1,800 while previously it has been reduced to 1,700. This is inconsistent with earlier references. The correct number is 1,700 within the Plan period. This needs further clarification re site allocation and Plan period allocation as these were previously different.

MM35

- Revised housing figures lessen the justification for Green Belt development. The proposed 1800 homes on Gosden Hill Farm would have a huge impact on Burpham, especially the influx of so much extra traffic on already congested roads, and I would ask that this strategic site be dropped from the Plan.

The lack of clarity on the requirement for a four-way junction with the A3 and provision for a connector road is unsatisfactory, and contrasts with the detail required for Blackwell Farm in Policy 26a. Para (2) should be amended to specify a requirement.
para (25) is welcome.

Attached documents:

Comment: MM35 - LPMM18/2660  Respondent: CPRE Surrey Branch & Guildford District (Tim Harrold) 8607169
Agent:

5. BURPHAM MM33 Policy A241; MM35 Policy A25
CPRE concentrates most of its attention on sites outside the town centre and urban development. However, we feel obliged to refer to the Response of the Burpham Community Association which clearly outlines the problems experienced in this community when it states that "the transport strategy is untenable" and "the Sustainable Movement Corridor is not a viable proposition". The ongoing issue of Godsden Hill and the traffic problems associated with its Green Belt entry to the town have been with us for many years. If anything the problems seem to grow in complexity for the community with more and more elements on the agenda for the regular meetings revolving around the issues of Aldi, Clay Lane, Merrow Lane, Park & Ride, Slyfield, and Thames Water to list a few. In our view it seems necessary for some form of infrastructure master plan to be prepared and reviewed in a public hearing on this topic in such a way that the strategy to be followed and the likely cost is discussed openly. If a change has to be envisaged for the Green Belt, then this will need to be addressed as "exceptional circumstances" at the time of the GBC Plan.

Attached documents:

Comment: MM35 - LPMM18/900  Respondent: West Clandon Parish Council (John Stone) 8609217  Agent:

Guildford Submission Local Plan: Strategy and Sites - Main Modifications

Thank you for the opportunity to respond to the consultation on the above.

West Clandon Parish Council has very grave concerns about many of the proposed main modifications within the proposed plan and the subsequent impact on increased traffic problems on The Street, West Clandon (A247) which is already totally inappropriate to be classed as an A road and experiences many difficulties.

The road does not have the capacity to carry the expected increase in traffic. Problems already include:
1. The sharp bend at the Lime Grove junction with The Street (A247) where traffic routinely exceeds the 30mph limit.
2. The dangerous junction with the approach road to Clandon Station where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump.
3. The site lines for the exit of the Onslow Arms car park.
4. The narrowness of the road near Summers.
5. Heavy lorries and buses being unable to pass each other in the narrow parts of the road without mounting the pavement.
6. The sharp bend near Clandon Regis.
7. The narrowness of the road at the Bull’s Head Public House.
8. The speed of traffic past Clandon Junior School and in places the narrow footpath for children walking to school.
9. The sharp bend with poor sight lines in either direction at the Church.
10. The lack of a continuous footpath through the length of the village
11. The speed of traffic
12. The classification as an A-road without it having the capability of an A-road.
Our concerns also include the following:

Policy S2 MM2
We believe the OAN included in the Plan may be overstated. We note the latest ONS household projections and current uncertainties over the methodology to be used in the calculation of the OAN. These issues must be fully explored and outstanding issues resolved before the housing need is finalised if we are to have any confidence in the figure adopted.

We also object to any unmet need for housing in the Woking area being added to the Guildford Plan when the review of the Woking Plan provides an alternative mechanism for correcting any shortfall within the Woking area.

Guildford has been obliged to introduce additional green belt sites in the early years of the plan. Should these prove to be unnecessary, Green Belt will have been damaged without good reason.

There will be greatly increased traffic flow because of the following modifications:

1. MM41. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247.
2. MM35 The development of 1800 houses at Gosden Hill.
3. MM44 The development of 120 houses (new site) at Alderton’s Farm, Send Marsh.
4. MM42 The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic.
5. A43a The opening of North-facing slip roads to/from the A3 at Burnt Common. The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247. We object to the proposed opening of the Burnt Common Rds as this will direct additional traffic along an unsuitable road. In any event this should not be considered until the A3 widening is completed.

As an alternative to access to the A3 at Burnt Common further consideration should be given to South facing slip roads at Ockham Park which will have less negative impact on unsuitable local roads.

In any event Policy ID2 (MM27) generally gives insufficient assurance that developments will not be allowed before the A3 widening scheme is committed in that it appears to allow a series of incremental developments each in itself unlikely to make an already difficult situation much worse. Cumulatively we are concerned that the severe impacts envisaged will occur by stealth.

We are pleased to see allowance made for environmental and traffic mitigation measures on the A247 through Clandon. Funding for this scheme is specifically linked in the Plan to MM41 Garlicks Arch and MM42 Burnt Common. Other schemes likely to have an impact on the A247 include MM35 (Gosden Hill) and A35 (Wisley Airfield) which do not have such a condition at present. This should be rectified in the final plan.

We note however, that while it may be possible to implement measures which have a positive impact on traffic speed and vehicle/pedestrian safety there is no easy solution to the problems of increased traffic volume that the above developments will produce. The development of Park Lane/Merrow Lane as an alternative route to the A3 and the improvement of the Railway Bridge at Merrow Park remain the only long-term solution and provision for a future scheme should be included in the Plan.

Comment: MM35 - LPMM18/4347  Respondent: Anthony & Anne Bond 8773377  Agent:

MM35 - Gosden Hill should be kept as Green Belt. It’s development will lead to severe congestion along Epsom & London Road.

Attached documents:

Comment: MM35 - LPMM18/1376  Respondent: Mr Paul Tubman 8794529  Agent:

The inclusion of this development at Gosden Hill Farm with the new expanded development at Burnt Common (MM42) and Garlick's Arch (MM41) will effectively connect the urban conurbation of Guildford with that of Burnt Common / Send Marsh and Send, removing much of the distinct local character of the area and going against Policy D1 item (6) in MM23. Send will no longer be a separate village but will be part of the Guildford conurbation.

Attached documents:

Comment: MM35 - LPMM18/3059  Respondent: Andrew Beckett 8794753  Agent:

MM35 Gosden Hill Farm should be retained as highly effective Green Belt along the A3 and NOT removed from the Green Belt as proposed in the Plan. Revised housing need figures weaken the justification for this development.

MM35 Transport (2) is too woolly and should clearly require a new access road to a four-way junction onto the A3 at Gosden Hill Farm.

MM35 If some early development occurs at Gosden Hill to fund the scheme, it should be a condition of any access that it does not subsequently become an access for the whole site because the traffic impact on the London and Epsom Roads would be unacceptable.

Attached documents:

Comment: MM35 - LPMM18/4833  Respondent: Richard Edwin 8794945  Agent:

MM35 Gosden Hill Farm should be retained as highly effective Green Belt along the A3 and NOT removed from the Green Belt as proposed in the Plan. Revised housing need figures weaken the justification for this development.

<th>Agent:</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Policy A25 : Gosden Hill Farm (MM27) (MM48)</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Under Opportunities (6), Policy A25 refers to &quot;land on-site which would form part of the future route of a connector road to the B2215 London Road/ A247 Clandon Road, and so realise an all movements junction of the A3 trunk road with the A3100 London Road, the B2215 London Road and the A247 Clandon Road &quot;. This Opportunity is connected with Requirement (2).</td>
<td></td>
<td></td>
</tr>
<tr>
<td>The A247 intersects the B2215 at Burnt Common roundabout, which is over a mile from the point at which the B2215 joins the A3 (see the plans on pages 259 and 397 both of which show Site 58).</td>
<td></td>
<td></td>
</tr>
<tr>
<td>No explanation is given as to how such an &quot;all movements junction&quot; could be effected. Opportunity (6) appears to envisage three separate junctions covering well over a mile including a connector road rather than &quot;an all movements junction&quot; in the singular. At present the B2215 connects the A247 at Burnt Common with the A3 and the A3100. The plan at page 205 is misleading since it gives the impression that it is neither possible to access the A3 going south from the B2215 nor to access the A3 going north from the A3100, the A3 being dual carriageway. An all movements junction would involve access to the A3 in both directions or two separate junctions. Opportunity (3) provides for a potential diversion of the B2234 Merrow Lane to form a direct link to the A3 at &quot;the improved junction&quot; which must refer to Requirement (1)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Inevitably a material proportion of traffic from Site 25 will go north to the Burnt Common roundabout and part of that traffic will go south down the A247 which is already heavily trafficked.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Opportunity (6) should be amended to delete the references to the A247 Clandon Road and to clarify whether a single junction is envisaged or more than one. The inclusion of the A247 in a single junction is wholly unrealistic given the distance of a mile between the Burnt Common roundabout and Site 25 and still more from the A3100. SRN4 and LRN6 provide no clarification. The inevitable inference is that the traffic impacts of the development on Site A25 have not been adequately considered.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Policy A25 does not meet the requirements of paragraph 154 of the NPPF.</td>
<td></td>
<td></td>

Attached documents:

Comment: MM35 - LPMM18/4334  Respondent: Merrow Residents' Association (Keith Meldrum) 8825057  Agent:

MM2- I consider that the housing number of 672 is too high and should be lowered to take into account the new data from the ONS and to remove the figure of 42 new households per year to meet Woking’s unmet need now that the housing need in Woking has been re-evaluated.

Attached documents:

Comment: MM35 - LPMM18/5167  Respondent: Merrow Residents' Association (Keith Meldrum) 8825057  Agent:

MM35 – We appreciate the drafting behind these modifications but the detail is less than clear.

Transport Strategy (1) is clear but Transport Strategy (2) is less so and the paragraph suggests that there could be an all movements junction of the A3 with roads north of the A3, west of the site and also to the east of the site. The wording of this condition should be amended to be absolutely clear as to what is being proposed to avoid confusion and debate at the planning application stage.
We say this because advice had been sought from GBC Officers prior to the Examination of the Local Plan and they raised the possibility of the connecting road running north east of the site but south of the A3 until it reached approximately Ewbanks offices (on the north side) where a new road and bridge could cross the A3 and link up with the existing B2215 thence on to the A247.

We continue to take the view that there should be a 4 way junction with the A3 at Gosden Hill Farm. The 3 way junction at Garlick’s Arch together with the two-way junction at Gosden Hill Farm does provide a spread-eagled 4 way junction but does not avoid the reality that traffic for London from the site would have to go through Burpham or Merrow to get onto the A3. In order to prevent additional traffic congestion and snarl ups in Burpham we continue to believe that there should be a 4 way junction on the Gosden Hill Farm site. We suggest that Transport Strategy (2) should be amended to provide for the option of either such a 4 way junction or the suggestion from Officers mentioned in the preceding paragraph to be finally determined at the Master Planning stage.

We suggest that the last sentence of Transport Strategy (2) should be a separate condition as a link road to the A247 is a separate issue to a possible all movements junction on the A3.

Comment: MM35 - LPMM18/3479  Respondent: Mr Olaf Karlsen 8900385  Agent:

1. MM40 and MM35

On the 20th September the ONS released new household growth projections for Guildford for the Plan period. The new figures reduced the projected growth in households from 11,142 (applied to the previous version of the Plan) to 6,635, a reduction of 4,507 households, a 40.5% reduction. This change should have come as no surprise as in May 2018 ONS had already released their population projections that clearly foreshadowed a substantial drop in household projection. A reduction of 4,507 households equates to well over 2 strategic sites, for example MM40 and MM35.

Attached documents:

Comment: MM35 - LPMM18/3949  Respondent: Susan Fuller 8900705  Agent:

MM35 Gosden Hill Farm should be retained as highly effective Green Belt along the A3 and NOT removed from the Green Belt as proposed in the Plan. Revised housing need figures weaken the justification for this development.

MM35 Policy A25 Gosden Hill Farm, Merrow Lane, Guildford

The reduction in proposed housing numbers is welcome but we have many reservations about this allocation.

**Attached documents:**

**Comment:** MM35 - LPMM18/2783  **Respondent:** Burpham Community Association (Liz Critchfield) 8908513  **Agent:**

**Transport strategy and other infrastructure.**

We consider the transport strategy is untenable.

(2) The opening sentence is so vague as to be meaningless. An all-ways junction on the A247 is not going to solve future traffic problems; it should be located further to the south, closer to Potters Lane.

(4) The Sustainable Movement Corridor is not a viable proposition. The A3100 London Road through Burpham is not wide enough to accommodate additional bus and cycle lanes. This road is already congested and additional traffic will exacerbate the problem.

(5) Local bus services have already been cut because of traffic congestion in Burpham roads so the provision of new bus services in even more congested roads seems at odds with reality.

(6) The aforementioned volume of traffic with the concomitant issue of pollution makes a very dangerous environment for pedestrians and cyclists.

(7) Back in the 1980’s, Guildford Borough Council were concerned that a railway station at Merrow would mean that any new development on Gosden Hill Farm would become a dormitory for London rather than provide homes for local people. We agreed then and still do today.

(8) We take issue with the use of the word “mitigate.” **All** supporting infra structure must be part of the whole development proposal.

We consider that the revised housing figures weaken the case for extensive Green Belt development.

**Attached documents:**

Comment: MM35 - LPMM18/6117  Respondent: Martin Grant Homes (Martin Grant Homes) 8944737  Agent: Barton Willmore (Michael Knott)

GUILDFORD BOROUGH LOCAL PLAN: STRATEGY AND SITES MAIN MODIFICATIONS CONSULTATION

REPRESENTATIONS SUBMITTED ON BEHALF OF MARTIN GRANT HOMES RELATING TO GOSDEN HILL, NORTH EAST GUILDFORD

We are pleased to enclose representations on behalf of Martin Grant Homes in response to the Guildford Borough Local Plan: Strategy and Sites Main Modifications consultation. The representations respond specifically to proposed main modification MM35 (Policy A25).

Martin Grant Homes is promoting Gosden Hill as a new sustainable neighbourhood and fully supports the identification of Gosden Hill as a strategic urban extension in the Guildford Local Plan. The site is in the sole ownership of Martin Grant Homes and is immediately available, deliverable and critical to the delivery of the housing strategy over the plan period.

These representations are submitted further to the representations submitted on behalf of Martin Grant Homes at previous stages of the Local Plan process, notably the two regulation 19 stage consultations undertaken in June/July 2016 and June/July 2017 and the further written statement submitted as part of the Examination process.

For the sake of brevity, the issues and matters put to the examination both orally and in writing relating to the soundness of the approach taken by Guildford Borough Council (GBC) in respect of the allocation of Gosden Hill are not repeated and are asked to be taken as duly made.

We broadly support the modifications proposed to Policy A25. However, we object to the proposed changes in relation to the potential opportunity for an all movements junction of the A3 trunk road with the A3100 London Road, the B2215 London Road and the A247 Clandon Road, particularly with regard to Requirement (2).

Surrey County Council (SCC), as the Highway Authority, have confirmed that there is no need to deliver this aspirational junction in relation to Gosden Hill or to deliver the Local Plan' strategy. Indeed, all of the work which has been undertaken by Martin Grant Homes' consultant team confirms these findings and demonstrates that neither the development of Gosden Hill nor the delivery of the Plan as a whole requires the delivery of this 'aspirational' link. As such, the proposal is not supported by any technical evidence.

We therefore maintain that this aspirational proposal cannot be justified.

The inclusion of the requirement is therefore contrary to paragraph 41 of the NPPF (2012) which states that:

'Local planning authorities should identify and protect, where there is robust evidence, sites and routes which could be critical in developing infrastructure to widen transport choice.' (our emphasis)

The further written statement submitted on behalf of Martin Grant Homes included a technical note prepared by i-Transport relating to this aspirational proposal. The note demonstrated that the strategic modelling which supports the Local Plan identifies that infrastructure proposed at Gosden Hill meets the needs of the development, whilst providing a strategic benefit to the operation of both the local and strategic highway. For ease of reference, a copy of this technical note is provided at Appendix 1.
The policy requirement was discussed at the Examination hearing session on Policy A25 which took place on 27th June, 2018. We understood that our points relating to this requirement were accepted by the Inspector and that this would lead to a recommendation to the Council to delete the requirement from the policy.

Against this background, it is surprising that this part of Policy A25 has been retained and that its wording has been modified to impose a potentially more onerous requirement on the developer. Specifically, we are deeply concerned that discussions with Council officers during the consultation has indicated that Martin Grant Homes could be required to design and assess an aspirational all movements junction as part of the Transport Assessment supporting a planning application. The requirement for a 'deliberative process of consideration' has no clear meaning and does not provide a clear framework for decision-making with its meaning entirely open to interpretation. It is therefore inconsistent with the first core planning principle set out in paragraph 17 of the NPPF (2012) which states that plans:

'should provide a practical framework within which decisions on planning applications can be made with a high degree of predictability and efficiency,' (our emphasis)

Furthermore, through the pre-application discussions relating to the development of Gosden Hill, and the associated access strategy, as part held with GBC, sec and Highways England over the last 4-5 years, Martin Grant Homes' consultant team have never been asked to consider these proposals in any detail, given that they are not necessary for the delivery of Gosden Hill or the Local Plan. On this basis, the requirement is wholly unjustified and, therefore, unsound. We, therefore, maintain our position and seek the deletion of Requirement (2). This additional work, which is not necessary to deliver the Gosden Hill site would be costly and time consuming, frustrating the preparation of a planning application and, ultimately, the delivery of this development.

We understand that GBC's case is that this aspirational scheme could be required if, for an unforeseen reason, the proposed access with the A3 as set out in Requirement (1) is undeliverable. Whilst this contradicts the pre-application discussions which have been held over many years, it is simply unprecedented for a strategic site allocation policy to contain a contingency for the primary access.

This is reinforced when one takes into account that GBC's aspirational scheme requires third party land and has been the subject of representations from Highways England (see Appendix 2) which sought clarification on how such a scheme should be taken forward by GBC.

For all of the above reasons, we ask that the Inspector deletes Requirement (2) from Policy A25.

Notwithstanding our in-principle objection to Requirement (2), if reference to an aspirational all movements junction of the A3 is to be retained within Policy A25, it should be contained as an opportunity, rather than a requirement, to reflect the aspirational nature of the proposal and the lack of evidence demonstrating a need for a link between the Gosden Hill site and an all-movements junction, now or in the foreseeable future. As drafted, Policy A25 includes both a requirement and an opportunity relating to a potential future all movements junction (Requirement (2) and Opportunity (6)). We therefore seek the amendment of the policy to remove the unnecessary duplication.

We have considered the wording of the requirement proposed by the Council and recommend that it is replaced with the following revised wording, if the Inspector is of the view that an opportunity or requirement could be justified:

Deliberative preeess ef eensiEleratien te be undertalten aAs part of the development management process a route alignment on site is to be identified and potentially safegua rded between the improved A3 southbound access and the north east boundary of the site for use by the Borough Council to enable el-the potential opportunity to provide an all movements junctions of the A3 trunk road with the A3100 London Road, the 82215 London Road and the A247 Clandon Road. LanEI eould rtetentially be requireEI te be safeguarded fer the prevision ef a eenneeter read te the 82215 Landen Read/ A247 Glanden Read.

Our revised wording seeks to make explicitly clear that detailed design and assessment of an all movements junction is not required to be carried out by Martin Grant Homes as part of a planning application for Gosden Hill whilst ensuring that the longer-term opportunity for a strategic improvement to the highway network to be delivered by the Council is not
prejudiced. As such, the wording is consistent with the Council's aspirations for a potential scheme while not burdening the delivery of Gosden Hill.

As set out in representations previously submitted on behalf of Martin Grant Homes, the draft masterplan for Gosden Hill has been designed to accommodate a road network which will not prejudice the potential opportunity for the Council to provide a connector road within the Gosden Hill site between the improved A3 junction and the north east boundary of the site to the 82215 London Road and I or A247 Clandon Road. The draft masterplan is, therefore, consistent with the revised wording proposed above and the aspiration of GBC.

We trust that the enclosed representations are duly made and look forward to receiving confirmation of their receipt.

Comment: MM35 - LPMM18/5060  Respondent: Dr Graham Hibbert 8970785  Agent:

Policy MM35 Should Gosden Hill be retained as highly effective Green Belt along the A3 and removed from the Plan? Revised housing need figures weaken the justification for development.

... Policy MM35 Transport (2) is too woolly and should clearly require a new access road to a four-way junction onto the A3 at Gosden Hill Farm.

Attached documents:

Comment: MM35 - LPMM18/4612  Respondent: Victoria Sandu 9042049  Agent:

Change MM35

- The proposed development at Gosden Hill Farm together with the new expanded developments at Burnt Common (MM42) and Garlick's Arch (MM41) will effectively connect the urban conurbation of Guildford with that of Send / Send Marsh / Burnt Common. This will remove much of the distinct local character of Send and Send Marsh and will go against Policy D1 item (6) in MM23. Send will no longer be a separate village but will be part of the Guildford conurbation.

Policy A25: Gosden Hill Farm, Merrow Lane, Guildford
**MM35 – OBJECTION A25-1**

Given the excess number dwellings proposed in the Local Plan (see Objection S2-1 to modification MM2), the equivalent of at least two strategic sites should be removed from the Plan in accordance with Objection S2-3 above. This review should include Site A25 (Gosden Hill Farm).

**Attached documents:**

Comment: MM35 - LPMM18/3135  Respondent: Wendy Critchlow 10619169  Agent:

MM35 Gosden Hill should be removed from the Plan. Revised housing need figures weaken the justification for development. Traffic congestion on the Epsom Road is already very serious, particularly at school run times. If Gosden Hill were to become a new cut from the A3, congestion in the area where I live would be totally unacceptable. REMOVE GOSDEN HILL FROM THE PLAN.

Attached documents:

Comment: MM35 - LPMM18/6269  Respondent: Mr Roy Baker 10649185  Agent:

MM35

This cannot be allowed to go ahead unless and until proper infrastructures are present. This covers not only the normal house services such as water gas and electricity and sewerage etc but more particularly the roads. At present the roads are barely adequate in the area as in the mornings from the A246 down to the second roundabout in Park lane there is a queue. If there is no access both north and southbound off the A3 there will be an impossible situation either by the railway bridge or on the roads that lead past Sainsbury’s to the northbound A3. In addition the provision of a railway station will entice further traffic from the south down Park Lane towards the station and prevent reasonable access to Park Lane from Kestrel Close. Apart from this the road towards the roundabout by the BP garage is nearly always blocked not only because of the southbound traffic towards Guildford and the blockage caused by Aldi.

**Comment:** MM35 - LPMM18/880  **Respondent:** Mrs Julia Ellis 10834625  **Agent:**

MM35 – Transport Strategy (1) for Gosden Hill Farm covers a two-way junction with the A3 whilst Transport Strategy (2) covers the possibility of an all movement junction of the A3, A3100, the B2215 and the A247. However, I continue to hold the view that there should be a four-way junction on the A3 itself at Gosden Hill Farm to avoid the unacceptable traffic congestion that this development will cause to both Burpham and Merrow and that Transport Strategy(1) should be amended accordingly.

MM35 – in view of the impact that the development of Gosden Hill Farm will have on the residents of Merrow I am pleased to note that consideration should be given at the Planning Application stage to safeguard land for a possible connector road to the B2215 London Road/A247 Clandon Road. I trust that this provision will be retained in the Local Plan as it goes forward.

**Attached documents:**

---

**Comment:** MM35 - LPMM18/1918  **Respondent:** Neil Langridge 10862977  **Agent:**
The proposals for the improved infrastructure are completely insufficient. Burpham is already highly congested, and adding southern slip roads will further reduce traffic to halt in what is already a very busy village/suburb. The sustainable movement corridor along London Road is impossible, with no scope to widen the road, and the only option to improve local traffic is the A3 tunnel which this development could threaten (due to building on the point at which it would start). The local sewage infrastructure is already barely capable of current loads, and so further development would create horrendous potential consequences. GBC does not run buses, and indeed local bus services have been reduced, not increased, so the implication of a greater focus on non-car traffic is unrealistic. Previous reports have found development, and a rail station here, to be undesirable in creating a London commuter settlement, and nothing has changed that.

This comment relates to MM35

If the only new access junction to the A3 at Gosden Hill will be two way (i.e. on and off the southbound carriageway) as per MM35(1) then to avoid serious traffic congestion in both Burpham and Merrow it is self evident a connector road will at some stage be required to link the Gosden Hill site with the B2215 London Road/A247 Clandon Road (and thence the A3 northbound carriageway via the new on-slip proposed at Garlicks Arch). Therefore the two words "could potentially" in the final sentence of MM35(2) should be replaced with the single word "will" to ensure land is safeguarded for this purpose.

**Attached documents:**

---

My Comment relates to MM35 - Transport Strategy.

It is self evident that the improved junction on the A3 described by MM23(1) will largely need to be in place at the beginning of the phased construction operations on site, to provide safe access to the site for heavy earth moving plant, construction equipment, materials, personnel and the provision of temporary works associated with large projects of this nature. Otherwise this heavy traffic will seriously overload and disrupt the already congested local Burpham and Merrow road systems. Clearly the Highways agencies will need to have capital resources in place if this is to be achieved in a timely fashion. This rational programme requirement should be made explicit within the transport strategy set out in MM23(1).

Transport and Infrastructure - Even with new slip roads to/from the A3, there will be a heavy increase in traffic on the A3100 London Road. This traffic will be for all sorts of reasons, one being access to the Supermarkets and also for all the other amenities Burpham has to offer. This road is already heavily congested and will not cope with this increased traffic, It is certainly not wide enough to take additional lanes for buses and cycles.

**Attached documents:**

Comment: MM35 - LPMM18/4292  Respondent: Mr David Howells 11015745  Agent:

Policy MM35

If the housing need is reduced as proposed under my comments in MM2 above, there is arguably no need for a development at Gosden Hill at all. The visually welcoming Green Belt land on the Northern entrance to Guildford would therefore be preserved.

In the event that the Gosden Hill Green Belt land is surrendered to development I remain concerned about the proposed access to the new development. In particular the phrase ‘Deliberative process of consideration to be undertaken as part of the development management process…’ is horrendously vague and/or meaningless. Before any development is permitted, the developer and/or Surrey Highways must have agreed to construct a new four way access road from the A3 to the site to be completed at the same time as any first phase development. Any development there is otherwise unsustainable. It would also be a missed opportunity to improve the road infrastructure to the North of Guildford and improve traffic safety on the A3.

**Attached documents:**

**Comment:** MM35 - LPMM18/4805  **Respondent:** Judith Mercer 11036801  **Agent:**

**MM35-Site A25 Gosden Hill Farm**

I object to this strategic site because Gosden Hill is located entirely in Green Belt land. No exceptional circumstances under NPPF have been shown to allow for development of the land on this site or for this land to be removed from Green Belt.

This part of the Green Belt protects Guildford from urban sprawl, a prime purpose of the Green Belt.

A development of 1800 houses is not needed because it is based on out of date housing need figures. I refer to the updated ONS figures of reduced population and household statistics for Guildford during the Plan period, made known from May 2018.

Any restructuring of local roads as part of any development would have a severe detrimental impact on an already congested area. It would impact on all surrounding roads connecting Guildford.

**Attached documents:**

---

**Comment:** MM35 - LPMM18/3353  **Respondent:** Debra Somner Fraser 11041025  **Agent:**

MM35 **Gosden Hill Farm** should be retained as highly effective Green Belt along the A3 and NOT removed from the Green Belt as proposed in the Plan. Revised housing need figures weaken the justification for this development.

MM35 Transport (2) is too woolly and should clearly require a new access road to a four-way junction onto the A3 at Gosden Hill Farm.

MM35 If some early development occurs at **Gosden Hill** to fund the scheme, it should be a condition of any access that it does not subsequently become an access for the whole site because the traffic impact on the London and Epsom Roads would be unacceptable.

Re the Transport strategy. Nothing short a full 4 way junction on the A3 at Gosden Hill will be sufficient. All the current two junctions on the A3 in Guildford cause a huge amount of congestion and we do not need another one

---

**Comment: MM35 - LPMM18/3752  Respondent: K C Meldrum 15458081  Agent:**

MM35 – I appreciate the drafting behind these modifications but the detail is less than clear. Transport Strategy (1) is clear but Transport Strategy (2) is less so and the paragraph suggests that there could be an all movements junction of the A3 with roads north of the A3, west of the site and also to the east of the site. The wording of this condition should be amended to make it an obligation to have a 4 way junction on the Gosden Hill site rather than a matter that will be considered at any Planning Application stage. This is necessary to prevent additional and unnecessary traffic congestion in Burpham and Merrow.

**Attached documents:**

---

**Comment: MM35 - LPMM18/3809  Respondent: Stan Long 15569281  Agent:**

The Gosden Hill development proposal is unacceptable because of the impact that the additional road traffic that would inevitably result. This area of Guildford is already suffering from very bad and regular congestion along all main routes at peak times, and the impact of additional school runs and commuter journeys would have a disproportionate and wide adverse effect. The current frequent jams already create significant local pollution. Now it has become clear to all Planning Authorities just how detrimental to health vehicle exhaust pollution is (particularly for school age children), all large scale housing plans should include an impact study to avoid any development that would grossly overload surrounding roads and exacerbate existing pollution problems.

Policy A25: Gosden Hill Farm, Merrow Lane, Guildford

This site includes an area of Registered Common Land. This is covered by the Commons Act 2006 and will have rights of access by the public which must be considered in the proposed use of the site and may also affect the capacity of the proposed SANG area. Guidance on common land is available at https://www.gov.uk/guidance/carrying-out-works-on-common-land. In particular we draw your attention to the Secretary of State’s policy for casework related to common land and town or village greens in England and the requirement, in the case of deregistration of common land, for the provision of replacement land. Natural England is a specified consultee under the Commons Act 2006 and will respond to any consultations in line with the above guidance.

This site is adjacent to and includes ancient woodland within the site. Any direct or indirect impacts on this site should be avoided or mitigated.

Comment: MM35 - LPMM18/12  Respondent: Mr Raymond Whiteley 20391521  Agent:

The proposed addition of 1800 new houses and therefore over 4000 additional cars at Gosden Hill Farm will cause gridlock at Burpham that the modifications to the transport strategy fail to address.

At present there are constantly very long queues along the B2234 New Inn Lane up to the roundabout with the A3100 which have recently been made much worse by the new Aldi situated opposite the roundabout. Cars in the queue to get into the Aldi car park regularly block the roundabout allowing no cars to proceed along the B2234 and turn right onto the A3100.

With the addition of the Golden Hill Farm development cars coming from Merrow to the A3 will no longer be able to go down Merrow Lane to avoid this roundabout and in addition many of the over 4000 new cars from this development will have to use this same roundabout to access the A3100 into Guildford.

I can see no provision in the original local plan or modifications to the transport strategy to to address this serious road traffic issue.

I therefore object to the local plan Policy A25 Golden Hill Farm and the proposed main modifications MM35 as they are currently set out.

Attached documents:

Comment: MM35 - LPMM18/16  Respondent: Mr James Masterman 20392641  Agent:

MM35 - 1800 new homes at Gosden Hill will double the housing stock of Merrow and Burpham. Infrastructure cannot cope today - have any of you stood outside Aldi Burpham recently, pretty much any time of day? The infrastructure / rail link / schools …….part of "the plan" remains inspirational and not factual. Anyone who thinks a rail station will be built by any rail company , or who believes that the local residents believe this will happen, must be completely delusional . No local area should suffer more than their natural proportion of the local plan for new house building, meaning max 600 houses at Gosden Hill.

And please also refer to your own section 27, green belt protected from development. Which means no houses at Gosden Hill, unless I am missing something??

Attached documents:

Comment: MM35 - LPMM18/31  Respondent: Ms Anne Deacon 20453409  Agent:
If you are going to build a new estate (or have to to fit government plans which who knows if they get their immigration policy together we might not need all this extra housing for our already overcrowded island - please do not replace a farm/rural area with a high density estate with no front gardens and no possibility for mature trees to ever grow. A "Green" in the centre is not the same.

Attached documents:

Comment: MM35 - LPMM18/150  Respondent: Mr Andrew Johnson 20550849  Agent:

My biggest concern is after they built Aldi, Burpham ground to a halt pretty much every weekend and evening...with 1800 new houses just a mile away is the current Burpham infrastructure going to cope. I know there are provisions for new on and off ramps on the A3 up near Clandon area, but people wanting to get to town or to Sainsbury's etc...they're going to come down New Inn Lane? A narrow country lane. The roundabout by Aldi/BP really needs redesigning as it is, with 1800 more houses nearby it will turn into a nightmare!

Attached documents:

Comment: MM35 - LPMM18/703  Respondent: The Clandon Society (Eric Palmer) 20626273  Agent:

The Clandon Society is the Residents’ Association of the villages of East and West Clandon.

The Association is restricting its comments in this consultation to matters which could directly affect our residents.

The Association is very concerned that the latest modifications to the Plan will put even more pressure on the A247 through West Clandon and Send. In the previous consultation, the Association expressed its concerns in the strongest terms, pointing out the inadequacies of the road. The major modifications now proposed to the Plan will bring additional pressure on this road.

The Association welcomes the recognition in the proposed modifications to the Plan that problems will be created for the A247 by the north facing slip roads to the A3 (MM48) and the amount of development proposed in the area nearby. (MM41. MM42. MM44. MM35.) However, residents are of the view that the provision of £1million of developer funded mitigation measures for the A247 through West Clandon will not change the fact that the A247 through West Clandon does not have the capacity to deal with the likely traffic.

Residents do not believe that increasing the carrying capacity of the road is realistic because of the close proximity to the road of listed structures and other buildings and the limited width available, if indeed it is technically feasible.

We believe that in a few years time the traffic will be stop-start heading to the A3 during the morning peak and similarly in the evening peak away from the A3. Such congestion already occurs when traffic diverts because of congestion on the A3. This was pointed out in detail in previous submissions by the Association, the Parish Council and many residents.

What is needed is an alternative route for traffic. The Plan calls for Merrow Lane to be modified in conjunction with the Gosden Hill development so that it connects to the A3. Together with Park Lane this forms a good, full width road which could divert traffic from the A247. It is recognised that the railway bridge is a constraint but this is not a unique problem viz. the widening of the Boxgrove Road bridge. It is already the intention to build a station next to the Merrow Lane bridge.

The £1million funding could with advantage be used to make the A247 safer.
Why do we believe that traffic will increase significantly?

1. The development of an industrial estate at Burnt Common. At greater than 1.4ha, this is now doubled in size from the previous consultation and presumably will generate at least double the amount of commercial traffic. (MM42).
2. The development of 550 houses at Garlick’s Arch (an addition of 150) with the main entrance/exit on the A247. (MM41).
3. The development of 120 houses (new site) at Alderton’s Farm, Send Marsh. (MM44).
4. The development of 1800 houses at Gosden Hill. (MM35).
5. The opening of North-facing slip roads to/from the A3 at Burnt Common. (A43a). The timing of the building of these North facing slip roads now appears to be unconnected with the timing of possible relief measures by Highways England for the A3. The implication is that traffic facing continued congestion on the A3 will divert along the A247.
6. The conversion of the Burnt Common roundabout to an all-ways junction with the A3.
7. The development of a road from the Gosden Hill development to the A247/Burnt Common roundabout. This would allow traffic leaving Gosden Hill and Merrow Lane access the A3 northbound at Burnt Common, avoiding Burpham. It would also allow any traffic from Gosden Hill/Burpham wishing to go due south of Guildford to use the A247-potentially an easier route than any existing.
8. A statement from GBC that the North-facing slip roads at Burnt Common are critical to the delivery of the Local Plan and are necessary for re-distribution of traffic—presumably as part of the policy of directing traffic around Guildford.
9. The obvious implication is that the slip roads will form a northern bypass for Guildford servicing a wide area to the East and South of the town and using the A247 to access the A3. The pressure caused by this re-distribution is in addition to any increase caused by new developments.
10. The Strategic Highways Assessment showing that much of the additional traffic on the A247 will come from the South (i.e. through West Clandon village) during the a.m. assessment period.

Problems with the West Clandon section of the A247

The Association reiterates its belief that the A247 through the village of West Clandon does not have the capacity to carry the expected increase in traffic. Starting at the A3 and working South on the A247 the issues are:

1. The junction with the current A3 S-bound slip road (modifications are underway)
2. The sharp bend at the Lime Grove junction with The Street (A247) where traffic is still in excess of 30mph
3. The dangerous junction with the station road where the exit sight line to the North is limited by the hump and parapet of the bridge over the railway. The visibility of traffic emerging from the station road is also poor for traffic approaching the bridge from the North because of the hump
4. The site lines for the exit of the Onslow Arms car park
5. The narrowness of the road near Summers
6. Heavy lorries and buses being unable to pass each other in the narrow parts of the road without mounting the pavement
7. The sharp bend near Clandon Regis
8. The narrowness of the road at the Bull’s Head
9. The Clandon Junior School and in places the narrow footpath for children walking to school
10. The sharp bend with poor sight lines in either direction at the church
11. No continuous footpath through the length of the village
12. The speed of traffic
13. The classification as an A-road without it having the capability of an A-road.

Comment: MM35 - LPMM18/1237  Respondent: Jim Allen 20674913  Agent:
Page 47 Policy A25: Gosden Hill Farm, Merrow Lane, Guildford

Justification for the Removal of Policy A25:

I would put to you that Gosden Hill should be removed for the following reasons;

- Its infrastructure has already been deemed inadequate in 1980’s and
- Has been rejected in every Local Plan including the regional Southeast Plan.
- Has been denied on two appeals
- Further the traffic proposals have not been fully explored or documented unlike the other two sites and
- No provision for a second exit to be provided or agreed with the local communities
- It only has provision for two right turns to gain North bound access to the J10 A3 M25 while blocking the narrow (single lane) exit ~ London Road ~ from North Guildford.
- Relying on a South side slip and to two undocumented North facing slips on the A247 dependant on the Wisley development is simply unsustainable.
- In respect to other points to be considered:

  o safeguard land for a future A3 tunnel entrance
  o reduce extra traffic along the chronically over-used London Road
  o avoid the Epsom Road seizing up
  o protect the strategic and highly visible Green Belt gap on the London side of Guildford
  o acknowledge that there is insufficient space for an effective sustainable movement corridor
  o preserve the ancient woodland in its landscape setting
  o the loss of so much Green Belt can no longer be justified.

- This also fails to take into account section 95 of the NPPF(2018) which requires consideration of National Security; which requires the Local Plan to include appropriate and proportionate steps that can be taken to reduce vulnerability, increase resilience and ensure public safety and security. Introduction of two right turns effectively turning off Fire Ambulance police and security services access to the A3 north bound is contrary to the above section.
- The current width of roads through the Burpham community without destruction of existing buildings and substantial modifications to many road layouts to meet current and predicted demands of the Clay Lane slip road and New Inn Lane to Merrow means any security vehicles will simply be delayed and or held up.
- Noting the worst case to date was when a vehicle overturned south bound A3 by the university and the recovery vehicle took three hours to arrive due to the weight of traffic which tailed back to Ockham. In a security situation such a scenario is untenable.

Not withstand the lack of need of this site to meet OAN requirements:

I welcome the reduction on the numbers on this site, notwithstanding our concerns regarding this allocation, which could be removed due to the gross over supply of housing plots compared with the predicted reduction in OAN. The plan needs to be consistent through as to whether it is referring to housing delivery numbers within the plan period or as a whole.

Policy Box, Transport strategy and other infrastructure

The transport strategy is fundamentally unsustainable -

(2) This description suggests an all-ways junction onto the A247 - The location is too far north of its required location, thus is a nonsensical. The junction is required south west of the A247, not on the A247 - this is a cost saving mitigation, not a practical solution proposal – Lacking in basic planning credentials and traffic modelling.

(4) The Sustainable movement corridor is yet to be proven viable or sustainable the London Road in Burpham is singularly impassable with no ability to find additional road width. The delaying private vehicles in preference to public
transport vehicles is unsustainable due to cost and location of destinations of local residents. The proposed park and ride buses (which do not ‘stop on route’) proposal should be using the A3 to access the town centre via the A320 Stoke Road intersection and returning the same way, through an all-ways to the north of the site at Potters Lane. Note: this on A3 Park and Ride route would not be viable via the A247 as this will increase the return journey by several miles, thus would render park and ride time inefficient

(5) The provision of ‘new’ bus services into this area is totally impractical when local bus services have been cut ‘due to congestion’ within Burpham housing estates.

(6) The site is not ‘walking’ distance from anywhere on a cold winters night and highly dangerous for cyclists due to weight of traffic. The site assessment document was criticised for its poor methodology on this site when first placed out for public consultation yet again a notification of a documents existence not a consultation –No actual and identifiable reassessment or this documents errors were taken of these observations.

(7) This station was described in the 1980's by Guildford Borough Council during their appeal objection to using this site for housing, as a ‘route’ to making the estate a dormitory village, for London, physically separate from Guildford, and not providing housing for the local residents of Guildford the requirement for the Local Plan. Nothing has changed to suggest any other use.

(8) Clearly the impacts off site are considerable, if only ‘mitigation’ is available over a real solution to solve the expected problems this will make this site unsustainable and unsound in all its formats.

**Page 48: Policy A25; Other Infrastructure**

(14) Poorly worded this should read “run-off does not exceed current average rates any additional rates of runoff should be controlled by balancing ponds to ensure this rate is not exceeded during times of high rainfall or flooding causing flooding downstream.”

(25) We welcome the additional landscaping buffer requirement between Gosden Hill and the A3. However this could be enhanced further with the addition a commitment “to have regard to the cumulative visual impact of all new site allocations along this section of the A3”

(28) Should include the words "without using the back country lane known as "Merrow Lane" and "New Inn Lane” as routes to and from this site by non pedestrians.

**Page 49: Policy A25; Box Opportunities**

(3) This route should specify ‘leaving the site at the proposed new Railway station and reaching the A25 without interfering and connecting with local traffic on Merrow or Park Lane.’ (similar to the expanded Blackwell farm Exit onto a main road.)

(6) This proposal clearly acknowledges the justified need for an ‘all-ways Junction’ to the London side of the Gosden Hill site as proposed in the 1980’s failed appeal application on this site. A fact denied by both SCC and Highways England in their limited submissions using uneducated and untested assumptions. The acknowledgment of the requirement I welcome. However the position of the overall layout fails to provide a ‘realistic practical solution’ as opposed to a ‘very poor mitigation’ to the known problem. The five way (all-ways) should be closer to Potters lane forming a ‘tight layout’ ‘always’ (five points of interchange) junction serving both Gosden Hill and the Industrial site at Burnt common it is simply too close to the M25 and should be south of the A247 not part of the A247.

2. **Row A25**

This number is underscored at 1,800 while previously it has been reduced to 1,700..this is inconsistent with earlier references the correct number is 1,700 within the plan period. Noting this site could be removed if the housing number is corrected to the current predicted level. Further the boundary (land taken from the Green Belt should be reduced to reflect the reduction in Housing Plots.
Comment: MM35 - LPMM18/5939  Respondent: Dirk Mercer 20699553  Agent:

MM35-Site A25 Gosden Hill Farm

I object to this strategic site because Gosden Hill is located entirely in Green Belt land. No exceptional circumstances under NPPF have been shown to allow for development of the land on this site or for this land to be removed from Green Belt.

This part of the Green Belt protects Guildford from urban sprawl, a prime purpose of the Green Belt.

A development of 1800 houses is not needed because it is based on out of date housing need figures. I refer to the updated ONS figures of reduced population and household statistics for Guildford during the Plan period, made known from May 2018.

Any restructuring of local roads as part of any development would have a severe detrimental impact on an already congested area. It would impact on all surrounding roads connecting Guildford.

Attached documents:

Comment: MM35 - LPMM18/1800  Respondent: Dr R S Mackinnon 20701633  Agent:

MM35 Gosden Hill Farm should be retained as highly effective Green Belt along the A3 and NOT removed from the Green Belt as proposed in the Plan. Revised housing need figures weaken the justification for this development.

MM35 Transport (2) is too woolly and should clearly require a new access road to a four-way junction onto the A3 at Gosden Hill Farm. 

MM35 If some early development occurs at Gosden Hill to fund the scheme, it should be a condition of any access that it does not subsequently become an access for the whole site because the traffic impact on the London and Epsom Roads would be unacceptable.

Attached documents:

Comment: MM35 - LPMM18/1808  Respondent: Lynne Sherwood 20701761  Agent:

4) MM35 – Transport Strategy (1) for Gosden Hill Farm covers a two-way junction with the A3 whilst Transport Strategy (2) covers the possibility of an all movement junction of the A3, A3100, the B2215 and the A247. However, I continue to hold the view that there should be a four-way junction on the A3 itself at Gosden Hill Farm to avoid the unacceptable traffic congestion that this development will cause to both Burpham and Merrow and that Transport Strategy(1) should be amended accordingly.

5) MM35 – in view of the impact that the development of Gosden Hill Farm will have on the residents of Merrow we are pleased to note that consideration should be given at the Planning Application stage to safeguard land for a possible
connector road to the B2215 London Road / A247 Clandon Road. I trust that this provision will be retained in the Local Plan as it goes forward.

**Attached documents:**

---

**Comment:** MM35 - LPMM18/2081  **Respondent:** Mrs (Mrs Gay Rickman) 20707777  **Agent:**

I am concerned about the encroachment on Green Belt and the enormous proposed development on Gosden Hill Farm area. The number of houses should be reduced in accordance with revised Government requirements. The approach to Guildford along the A 3 will be spoilt and the Green Belt is needed for the wellbeing of both city and those outside. I also feel the traffic is already too congested in the Burpham area.

**Attached documents:**

---

**Comment:** MM35 - LPMM18/2108  **Respondent:** Mr ANDREW STRAWSON 20708033  **Agent:**

MM35 – I support the intent of this drafting but the detail is still unclear.

Transport Strategy (1) is clear but Transport Strategy (2) is not and the paragraph suggests that there could be an all movements junction of the A3 with roads north of the A3, west of the site and also to the east of the site. The wording of this condition should be amended to be completely clear on what is being proposed and to avoid confusion and debate at the planning application stage.

This is because advice had been sought from GBC Officers prior to the Examination of the Local Plan and they raised the possibility of the connecting road running north east of the site but south of the A3 until it reached approximately Ewbanks offices (on the north side) where a new road and bridge could cross the A3 and link up with the existing B2215 thence on to the A247.

I believe that there should be a 4-way junction with the A3 at Gosden Hill Farm. The 3-way junction at Garlick’s Arch together with the two-way junction at Gosden Hill Farm does provide a spread-eagled 4-way junction but does not avoid the reality that traffic for London from the site would have to go through Burpham or Merrow to get onto the A3. In order to prevent serious traffic congestion and blockages in Burpham I continue to believe that there needs to be a 4-way junction on the Gosden Hill Farm site. The Transport Strategy (2) should be amended to take in the proposal from Officers, ‘the possibility of the connecting road running north east of the site but south of the A3 until it reached approximately Ewbanks offices (on the north side) where a new road and bridge (or underpass) could cross the A3 and link up with the existing B2215 thence on to the A247’.

The last sentence of Transport Strategy (2) should be a separate condition as a link road to the A247 is a separate issue to a possible all movements junction on the A3.

Land should be set aside to allow for a 4 way access with A3 near Gosden Hill Farm.

Extra traffic via the present access to A3 via Burpham, Clandon and Ripley will become intolerable to local residents.

Attached documents:

Comment: MM35 - LPMM18/5822    Respondent: Bloor Homes 20855809    Agent: Turley (Clara Millar)

Main Modification 35

2.11 We strongly support the proposed allocation of land at Gosden Hill Farm, Merrow Lane for a residential mixed use development. It is considered the site will assist Guildford Borough Council (GBC) in meeting its housing requirement, whilst also promoting sustainable patterns of growth owing to its proximity to Guildford, the main urban centre of the Borough. As such, Gosden Hill Farm is an appropriate location for such an allocation and the proposed mix of uses will create a vibrant, mixed community.

2.12 However, we contest the reduction in capacity from 2,000 to 1,800 homes, as per Main Modification 35. This is disconcerting owing to the fact that housing delivery is a major issue in the Borough as acknowledged by the Council in its Housing Topic Paper. It is, therefore, somewhat concerning that there is limited flexibility within the spatial strategy to accommodate further growth and this reduction will serve to further hinder the Council’s ability to meet its housing requirement. As such, we consider that this does not represent pro-active, positive planning.

2.13 This could, however, be overcome by the retention of the overall housing allocation figure and the inclusion of Nutbourne Farm within the allocated site.

2.14 It has been evidenced in our previous representations that Nutbourne Farm – controlled by Bloor Homes - would form a logical extension to the proposed allocation; as such, enabling the site (as a whole) to provide a further 300-400 homes with an associated extension to the SANG currently proposed to support the Gosden Hill Farm allocation. As such, this logical extension would allow for flexibility, aiding the Council to meet its housing requirement within the plan period and ensuring that the figure for this part of the Borough does not need to be reduced.

2.15 To summarise the previous representations, we consider Nutbourne Farm to be suitable for further development. It is considered there are exceptional circumstances in order to justify Nutbourne Farm’s release from the Green Belt.

2.16 These parcels are currently used for car boot sales, as well as agricultural purposes; as such, the site does not truly represent greenfield land and there is a case to be made that such uses render the site previously developed. This, therefore, weigh in favour of the release of Green Belt.

2.17 Furthermore, prior representations have provided a critique of the Council’s Green Belt review and the performance of the relevant assessment parcel against the wider Green Belt purposes. The main disputes were in relation to: Purpose 2 – to prevent neighbouring towns from merging into one another. The Council considers that the site is essential in order to prevent Guildford and West Clandon from merging. Our assessment of the site highlighted the importance of specifically considering land under control of Bloor Homes, rather than the wider assessment parcel; developing Nutbourne Farm in isolation would not compromise the gap between Guildford and West Clandon. This gap would be further reinforced, as part of any future development of Nutbourne Farm, with substantial buffering in order to secure a defensible boundary which endures beyond the plan period.

2.18 All further technical studies undertaken to support the promotion of the site – with respect to ecology, landscape, archaeology, flood risk and heritage – have demonstrated that the site is suitable for development. There are, therefore, no constraints – in principle – to development of the site.

2.19 The Council’s own evidence base seemingly supports the allocation of the site. GBC has recognised the need to release Green Belt in order to assist GBC in meeting its full OAN and to ‘promote sustainable patterns of development’ in
the most appropriate locations. We consider that Nutbourne Farm represents such site owing to its sustainable location in
close proximity to Guildford and adjoining a proposed allocation.

2.20 As such, the principle of development at this location has already been established as land to the east of Guildford
has been pinpointed as suitable for strategic growth. This, therefore, further highlights the appropriateness of Green Belt
release in this location. GBC should, therefore, be seeking to maximise these opportunities, especially on sites which
align with their own evidence base alongside the Sustainability Appraisal.

2.21 We consider within the context of GBC’s spatial strategy and evidence base, as well as the demonstrated suitability
of Nutbourne Farm that further growth should be planned at this site. The wider landholdings of Bloor Homes represent a
logical opportunity to extend the existing allocation at Gosden Hill Farm and further enhance its sustainability credentials
and meets the needs of the Borough and the adjoining authorities.

Comment: MM35 - LPMM18/5961  Respondent: Sue and Stuart Brown 20859233  Agent:

We object to the local plan, particularly, with regard to Gosden Hill development. Apart from the intrusion into Green
Belt which seems to be disregarded but should be more necessary now with the need for trees and green spaces to counter
climate change.

This seems a desperate plan to build houses with no regard to a Master Plan for completing infrastructure or even
necessity of the number.

The roads round Merrow and Burpham are so congested already causing pollution and disruption to local residents.
Traffic is displaced through housing estates to avoid the major hold-ups usually with increased speed and disregard of
other road users as their exasperation mounts.

The A3 is one of the busiest non-motorway roads in the country and even minor disruption can cause major diversions
through Burpham and onwards. The increased traffic caused by the new housing, station and park and ride will
significantly increase traffic in the whole area. Burpham has already been badly affected by the Aldi store.

Traffic trying to get on and off the A3 at the existing junctions cause jams even now and the proposed plans will not
improve the situation, even if they are in place before Gosden Hill and Garlick Arch are built on making thousands more
cars to use them.

The plans for Slyfield Green and Garlick Hill will also impact on Burpham and Merrow.

The sewage system, particularly around Burpham, has difficulty coping. Rain storms have caused flooding in both
Burpham and Merrow at their major roundabouts this year.

It is obvious there is no clear infrastructure plan and the accuracy of the number of houses needed, including student and
Woking accommodations, is still unproven.

MM36

In view of the lower housing need, Blackwell Farm should be removed from the list of sites approved for development. Development here damages the overall beauty and cohesion of Guildford as a fine example of an English town at peace and complementing its surrounding beautiful countryside. This idea is particularly unwelcome. And now shown to be unnecessary!

Development here also presents serious access and egress problems to an already dangerously congested section of the A31.

Thirdly: Blackwell Farm. As Guildford Borough Council is aware, this is very sensitive land and I have made representations on behalf of residents before. I understand that it is suggested that the access road to the A31 should go through the AONB which would have a further detrimental effect on the AONB. I also understand that Highways
England are proposing to shut the access on the southbound A3 to Beechcroft Drive whilst we also still await an update on the long term solution to the A3. Access to Blackwell Farm and Beechcroft Drive needs to be achieved in conjunction with the longer term plans for the A3 and we should not bind our hands before making further decisions about the road network in this area which is under considerable strain. I sincerely hope that Guildford Borough Council will look again at this decision. (Policy A26 and A26a)

SUPPORT: Worplesdon Parish Council welcomes the changes in respect of flooding and supports them, insofar as they go.

Policy box opportunities Use of Blackwell Farm as a strategic site

SUPPORT: Worplesdon Parish Council welcomes the changes in respect of flooding and supports them, insofar as they go.

Policy A26

OBJECT: The Council strenuously objects to the proposed use of Blackwell Farm due to its proximity to the AONB and the likely detrimental impact on traffic.

Attached documents:

Comment: MM36 - LPMM18/3282  Respondent: Valerie Thompson 8671969  Agent:

I object to Blackwell Farm being included in the Plan. It will impact on an area more than 20 miles to the North.

Attached documents:

Comment: MM36 - LPMM18/5471  Respondent: Ramsey Nagaty 8858113  Agent:

If site allocations A26 and A26a are taken out of the green belt for development, as proposed in the draft Local Plan (which, incidentally, I object to completely), then there does not appear to be any logic behind not removing Down Place Estate from Greenbelt as well due to:

1. Taking Down Place Estate out of Greenbelt would result (according to the NPPF) in a more defensible boundary than is currently being proposed as it follows identifiable features on the ground (ie a road with a high wall forming a Victorian walled garden, which would screen development to the north). Currently what is being proposed as the boundary to the new urban area, comprises nothing more than a 2 foot high rabbit fence at the end of a private garden. the NPPF requires the local plan to “define boundaries clearly, using physical features that are readily recognisable and likely to be permanent.”

2. If development went ahead as currently proposed in the modified local plan, then the land at Down Place Estate would form a small island of Greenbelt land surrounded on three of its sides by development. This land at Down Place Estate, once isolated by surrounding development, would be let fulfilling none of the purposes of green belt. This is in stark contrast to the surrounding land that is proposed to be taken out of Greenbelt, which currently fulfils all five purposes.
3 Land at Down Place Estate has the same designation (AGLV) to adjacent land on site allocation A26, which forms part of the proposed development and is separated by a low rabbit fence. The area proposed to take out of Greenbelt does not affect the views from the southern slopes of the Hogs Back as protected by trees to the south. There would be an inconsistent application of planning rules to keep Down Place Estate in Green Belt if development was to take place all around.

4. It seems strange that the boundary of site allocation A26 follows the same farm track along its southern edge but suddenly deviates from this line at the very point where a high wall provides a more defensible boundary and screening. The result of this is a contorted boundary around Down Place Estate to omit land not owned by the University of Surrey. This does not appear to be consistent with NPPF (68 and 69).

5. Down Place Estate includes Brownfield land (the footings of army barracks, which were used for accommodation by the local council after the war as well as the site of two former cottages). This again makes Down Place Estate more suitable to be removed from Green belt than any of the green fields / working farmland that form the existing proposed A26 and A26a site allocations.

The diagram overleaf shows the southern part of the existing boundary for site allocation A26 (as proposed by GBC in blue), with a more defensible boundary highlighted in red. If the development of Blackwell Farm goes forward into the Final plan, then modifications to the boundary on the south west corner of site allocation A26 should be made to include Down Place Estate (as indicated by the red dotted line). This would square off the corner of the site allocation A26, provide a more defensible boundary and address the points made above.

5. MM36 Blackwell Farm should not be removed from the Greenbelt. Revised housing need figures suggest there is no need for development of this site.

8. MM36 Blackwell Farm, I object to the following modification within Policy A26: The increase in employment space on the Surrey Research Park in Allocation paragraph 3 from 30,000 to 35,000m². Whilst I welcome densification of development in the right areas; any increase in office space at this particular location would attract additional traffic and put pressure on a junction that would already be over capacity. There are plenty of existing available office sites close to the University and town.

Attached documents:  

Comment: MM36 - LPMM18/5804  Respondent: Lyndell Mussell 8902689  Agent:

In view of the lower housing needs, Blackwell Farm should be removed from the list of sites approved for development. (MM36).

Attached documents:

Comment: MM36 - LPMM18/2122  Respondent: Mo Usher 8957953  Agent:

Please can you REVIEW Policy A26 in the light of the latest ONS housing figures and amend the Local Plan to take into account the new lower figures especially with regard to Blackwell Farm which adjoins the Surrey Hills
AONB and is Green Belt in an area, which is already severely congested with traffic with a hospital and business park.

There is now a strong case for taking out a strategic site to enable town centre provision and better use of brownfield sites. This makes table S2b out of date and MM3 inadequate and in need of re-examination.

I OBJECT to the addition of Policy 26A (Blackwell Farm Access Road) as this development should not be going ahead for the above reasons.

Thank you for responding to my request.

Comment: MM36 - LPMM18/2073  Respondent: Tim J. Harrold 8971233  Agent:

POLICY A61 LAND AT AARON’S HILL, GODALMING : MAIN MODIFICATION MM36 & MM2

CPRE objects to this development proposal for 200 houses within the Pilgrims Ward of Guildford.

We have asked in our submission for the Inspector under MM2 to reopen the current examination to take account of the new lower population and household figures for Guildford and Waverley that have recently been produced by the Office for National Statistics. CPRE has worked closely in this context with the leading national expert Neil MacDonald both in Waverley District and in collaboration with the Guildford Residents Association (GRA) in Guildford.

We are opposed to the Aaron’s Hill development proposals made for both sides of the Waverley/Guildford boundary which total 462 houses. It is clear to us that housing on a scale of 200 dwellings in Guildford District will result in adverse traffic congestion implications for the local road network and in particular Eashing Lane. It seems likely that there would be a substantial increase in vehicles seeking to reach the A3 and beyond on a daily basis. This could be very damaging to the small hamlet of Eashing with its ancient medieval bridge and community of attractive houses.

The submission of Shackleford PC (SPC) makes it clear that Aaron’s Hill is currently protected as Green Belt and as part of an Area of Great Landscape Value (AGLV). It is intended that a review of the boundary of the nationally important countryside within and adjoining the Surrey Hills Area of Outstanding Natural Beauty (AONB/AGLV) in this area is to be made once the current study by Natural England of the Suffolk Coastal AONB has been completed. The proposed site is described by the SPC as “manifestly unsuitable for such a large-scale development” especially if the 262 homes proposed for Waverley District go ahead as well. Neither proposed settlement is consistent with the National Planning Policy Framework (NPPF). Development of the Green Belt is only permitted in “exceptional circumstances” that in our view should not be considered relevant in the current situation.

We are informed that the Leader of Guildford Council attended SPC’s July meeting at which Ashill was also present and stated that GBC did not believe that the site was suitable for a large development which would be harmful to the area. We
fully endorse the comments subsequently made by SPC in their submissions to GBC dated 30th August and 22nd October. We therefore urge that this proposed development be refused.

**MM36-A26 Blackwell Farm**

I object to this Strategic site because Blackwell Farm is located entirely in Green Belt. No exceptional circumstances have been demonstrated to justify proposed development on this land under the NPPF, or for the land to be removed from Green Belt.

This land at this site fulfils all 5 important functions of the Green Belt, prevents urban sprawl around Guildford and provides a vital “lung” to protect us from pollution, harmful effects of inappropriate development and traffic congestion.

The development of 1800 houses is not needed as it is based on out of date figures for household projections for the borough. These have been reduced substantially by 40.5%.

Attached documents:

**Comment:** MM36 - LPMM18/1472  **Respondent:** Mrs Roshan Bailey 15264065  **Agent:**

This proposed development is completely inappropriate. Not only is this area in the Green Belt, but it is also an Area of Great Landscape Value and potentially for inclusion within the Area of Outstanding Natural Beauty. It is part of the very special view from the Hogs Back. Once ruined, we will never be able to retrieve this incredibly beautiful area which currently provides walking, cycling and horse riding for many members of the surrounding villages and Guildford itself, thus also protecting the Thames basin Special Protection Area. The housing needs as indicated by up to date ONS population figures do not justify development on this site.

**Policy A26: Blackwell Farm, Hogs Back, Guildford**

It was previously advised that this site is within the setting of the Surrey Hills Area of Outstanding Natural Beauty. We advise the LPA to take into account the relevant Management Plan for the area and should seek the views of the AONB Partnership. Development proposals brought forward through the plan should avoid significant impacts on protected landscapes, including those outside the plan’s area and early consideration should be given to the major development tests set out in paragraph 116 of the National Planning Policy Framework (NPPF).

This site is adjacent to ancient woodland. Any direct or indirect impacts on this site should be avoided or mitigated.

It is also noted that the main modifications suggest an increase in square footage for the proposed development.

MM36-A26 Blackwell Farm

I object to this Strategic site because Blackwell Farm is located entirely in Green Belt. No exceptional circumstances have been demonstrated to justify proposed development on this land under the NPPF, or for the land to be removed from Green Belt.

This land at this site fulfils all 5 important functions of the Green Belt, prevents urban sprawl around Guildford and provides a vital “lung” to protect us from pollution, harmful effects of inappropriate development and traffic congestion.

The development of 1800 houses is not needed as it is based on out of date figures for household projections for the borough. These have been reduced substantially by 40.5%.

**Attached documents:**
We consider that Blackwell Farm (now covered by Policies A26 and A26a) should be the first site to be removed. The reasons being:

- It is the only proposed development site which has a significant impact on the AONB.
- The site currently protects views from the AONB along the Hog’s Back ridge - an important public viewing platform.
- The site cannot be fully built out until after the A3 has been widened, which Highways England states is not certain to happen. Even if the A3 widening scheme was shown to be economically viable (which we consider unlikely), it would be at least another 10 years before 1,500 of the site’s housing allocation could be built.
- Problems related to access to the site have not been resolved. Although the Main Modifications document might address some of the on-site problems relating to the steep gradients on the slopes of the Hog’s Back (by taking much more land within the AONB), it does not address fundamental problems on the local roads:
  - The new junction on the A31 would be over capacity and would fail thereby increasing the existing tailbacks on the Hog's Back at peak morning hours.
  - Additional pressure would be placed on the Tesco roundabout, which would be over capacity once the development is built out. GBC, which has developed the plan, continues to overlook the fact that this junction provides the only access to the hospital’s A&E department and that this access should be kept clear for emergency vehicles. Presumably the local authority has a duty to ensure the safety of future patients/users of the emergency services.
  - There are operational concerns regarding how the proposed ‘through vehicle link’ would be controlled to prevent rat running through the new development, how the enforcement would be carried out (and by whom), whether there is a guarantee that this will be in place for the road’s lifetime (ie in perpetuity), and whether any scheme would be effective at removing the potential for ‘rat-running’ between the A31 and the A3 given the wide range of permitted users of the road.

**MM36 –** The standalone Policy A26 provides just one access to the proposed development on Blackwell Farm. This would be inadequate and impractical for a development of this size (1800 homes, 2 schools and an extension to the Research Park) and the site allocation should be removed as there is no guarantee that Policy A26a (as a separate policy) would be fulfilled.

I agree with all the points raised by Compton Parish Council, which are as follow:

1. Compton Parish Council objects to the addition of Policy A26A (Blackwell Farm Access Road) within the Local Plan for the following reasons:

   • In written and oral evidence to the Examination, not a single party advocated the use in any way of the existing Down Place access road for the new access road to Blackwell Farm. This was because, self-evidently, it is too narrow and steep for the purpose, and is bounded on both sides by trees which should not be removed for road-widening because they contribute greatly to the landscape and have historic interest. Proposals did suggest crossing this access road at some point, but were otherwise presented as solutions that specifically avoided damage to the existing Down Place. It is therefore inappropriate now to include the option of using Down Place in some way. The proposed Main Modification Policy A26a Requirement 2 should therefore be reworded to read: “The access road will be a new road which avoids the line of the existing Down Place and its associated tree belts.”

   • The revised land allocation for the link road between Blackwell Farm and the A31, shown in the mapped part of proposed Main Modification in new Policy A26a, is substantially different from the options presented in writing and orally to the Examination. It goes well beyond the change which the Inspector would have anticipated from the submissions made. In particular there is no justification for a land allocation for the road on the north-east side of Down Place on the steeply-rising ground on the A31 side of the sharp bend in Down Place (ie above the 120m AOD contour). There were no proposals considered at the Examination which would have involved road building in this area, or a junction with the A31 taking land north-east of Down Place. The allocated area of search for the new road on the principal slope should be amended so that it is confined to land south west of Down Place, and additionally be set back from Down Place to avoid damage to the tree belt alongside this road.

2. Compton Parish Council objects to the inclusion of policy A26a (access road to the Blackwell Farm development site) as a separate policy to the Policy A26 (the Blackwell Farm allocation). The separation should not be allowed to proceed because:
• The submitted Plan is clear that the Blackwell Farm development cannot proceed without the link road, so the two parts of the scheme are completely linked and separation is entirely unnecessary: if a solution to the link road problem cannot be found, then Blackwell Farm itself cannot be developed;
• The proposed separation was not raised, by any mechanism, as a matter for discussion at the Local Plan Examination: there is no authority for it from the Inspector;
• The separation would give the impression that the Blackwell Farm development was entirely outside the Area of Outstanding Natural Beauty, whereas it is 100% dependent on the link road through the AONB;
• By separating off the link road, the Plan would enable significant parts of the development to proceed without that element of the package: that was not what the submitted Plan proposed.

We doubt that it was the intention of the Council or the Inspector that Policy A26a should be separated from Policy A26, and this should be clarified by including in Policy A26 in Requirement 1, after the insertion of the Main Modification “see Policy A26a”, but within the brackets, the words “which shall be treated as an integral part of Policy A26”. This clarification would deal with our objections.

3. Compton Parish Council objects to the following modification within Policy A26:
   • The increase in employment space on the Surrey Research Park in Allocation paragraph 3 from 30,000m$^2$ to 35,000m$^2$. Whilst the PC welcomes densification of development in the right areas, any increase in office space at this particular location would attract additional traffic and put pressure on a junction that would already be over capacity.

5. Compton Parish Council requests that Guildford Borough Council revisits the housing figures in the modified Policy S2 in the light of recently published ONS household projections. The PC believes that there should be a further hearing to consider both the June 28 ONS population projections and the September ONS household projections (on which, we understand, GBC has been invited to comment). We would then expect the Plan to be modified accordingly to include the removal of a strategic site.

Comment: MM37 - LPMM18/1211  Respondent: Burpham Neighbourhood Forum (Jim Allen) 8581505  Agent: 

Policy A26a Land access road between A31 Blackwell Farm, Hogs Back, Guildford

This policy shows clear thought has been given to road layout to serve the development, unlike policy A25 which is devoid of a comprehensive assessment. A new Policy A25a should be included in the Plan to provide a rear exit route from the Gosden Hill site and should cover a route to the A25 from the Gosden Hill site onto the park and ride roundabout at Merrow via the proposed Merrow railway station (a possible underpass). This would provide a direct link between both park and ride sites and their bus services.

Para (2) should be amended to remove reference to using the existing Down Place.

**Attached documents:**

**Comment:** MM37 - LPMM18/2671  **Respondent:** CPRE Surrey Branch & Guildford District (Tim Harrold) 8607169  **Agent:**

SITE SPECIFIC : A35 FORMER WISLEY AIRFIELD, OCKHAM (MM37 & MM47)
1. The addition of land to the South of the appeal site does not mitigate the density issue as much of the new land is constrained by the VOR air traffic control beacon regulations. This prevents construction within a certain radius.

2. Land to the South abuts the Ockham Conservation Area and increases the visibility of the site to and from the Surrey Hills AONB.

3. The biodiversity of the SNCI will be destroyed by the proposed development.

**CPRE CONSULTATION RESPONSE: BLACKWELL FARM A26a**

CPRE objects to the addition of Policy A26a (Blackwell Farm Access Road) to the Local Plan. CPRE has studied the submission made by Compton Parish Council in this context and is in full agreement with it in all respects. There seems no justification for adding this late item as a separate policy to A26 which covers the Blackwell Farm allocation. It is clear in the submitted Plan that the Blackwell Farm development cannot proceed without the link road so the two parts of the scheme should be presented together and separation is entirely unnecessary. The issue is clear: If a solution to the link road problem cannot be found then Blackwell Farm itself cannot be developed. The proposed separation was not raised as a matter for discussion at the Local Plan examination and there is no authority for it from the Inspector. It is necessary to make clear that the Blackwell Farm development depends on its link road to the A31 through part of the nationally important Surrey Hills Area of Outstanding Natural Beauty (AONB) and is located within an Area of Great Landscape Value (AGLV). CPRE therefore requests that Policy A26a is rejected and removed.

Attached documents:

Comment: MM37 - LPMM18/1107  Respondent: Lisa Wright 8729313  Agent:

On point A26a. AONB land should not be used for development. It has been given AONB protection for a reason. Within the Local Plan I understand land can be taken out of the Greenbelt but this is not the case with AONB. AONB Protection stands and should be respected.

Attached documents:

Comment: MM37 - LPMM18/5470  Respondent: Ramsey Nagaty 8858113  Agent:

If site allocations A26 and A26a are taken out of the green belt for development, as proposed in the draft Local Plan (which, incidentally, I object to completely), then there does not appear to be any logic behind not removing Down Place Estate from Greenbelt as well due to:

1. Taking Down Place Estate out of Greenbelt would result (according to the NPPF) in a more defensible boundary than is currently being proposed as it follows identifiable features on the ground (ie a road with a high wall forming a Victorian walled garden, which would screen development to the north). Currently what is being proposed as the boundary to the new urban area, comprises nothing more than a 2 foot high rabbit fence at the end of a private garden. the NPPF requires the local plan to “define boundaries clearly, using physical features that are readily recognisable and likely to be permanent.”

2. If development went ahead as currently proposed in the modified local plan, then the land at Down Place Estate would form a small island of Greenbelt land surrounded on three of its sides by development. This land at Down Place Estate, once isolated by surrounding development, would be let fulfilling none of the purposes of green belt. This is in stark contrast to the surrounding land that is proposed to be taken out of Greenbelt, which currently fulfils all five purposes.

3 Land at Down Place Estate has the same designation (AGLV) to adjacent land on site allocation A26, which forms part of the proposed development and is separated by a low rabbit fence. The area proposed to take out of Greenbelt does not
affect the views from the southern slopes of the Hogs Back as protected by trees to the south. There would be an inconsistent application of planning rules to keep Down Place Estate in Green Belt if development was to take place all around.

4. It seems strange that the boundary of site allocation A26 follows the same farm track along its southern edge but suddenly deviates from this line at the very point where a high wall provides a more defensible boundary and screening. The result of this is a contorted boundary around Down Place Estate to omit land not owned by the University of Surrey. This does not appear to be consistent with NPPF (68 and 69).

5. Down Place Estate includes Brownfield land (the footings of army barracks, which were used for accommodation by the local council after the war as well as the site of two former cottages). This again makes Down Place Estate more suitable to be removed from Green belt than any of the green fields / working farmland that form the existing proposed A26 and A26a site allocations.

The diagram overleaf shows the southern part of the existing boundary for site allocation A26 (as proposed by GBC in blue), with a more defensible boundary highlighted in red. If the development of Blackwell Farm goes forward into the Final plan, then modifications to the boundary on the south west corner of site allocation A26 should be made to include Down Place Estate (as indicated by the red dotted line). This would square off the corner of the site allocation A26, provide a more defensible boundary and address the points made above.

----------

6A MM26a The new proposal of using Down Place as the access and exit road to Blackwell Farm should not be allowed, it is far too steep for the purpose, and is bounded on both sides by beautiful trees which should not be removed for road-widening because they contribute greatly to the landscape and have historic interest.

I object to the inclusion of policy A26a (access road to the Blackwell Farm development site) as a separate policy to the Policy A26 (the Blackwell Farm allocation).

----------

4. MM37 The proposed land for an access road between the A31 and Blackwell Farm would harm the landscape.

6. MM37 The proposed land for an access road between the A31 and Blackwell Farm would harm and destroy beautiful trees and result in attracting even more traffic. The road would, as stated by Surrey University to the old SE Dev Agency, not relieve traffic but rather worsen the traffic and congestion. Add 2000-3000 extra cars from the proposed new housing and schools at Blackwell Farm and transport in the whole area will grind to a halt. The proposed access and exit road at Blackwell Farm will be detrimental to the air quality and affect the AQMA at the Street, Compton increasing traffic and pollution. Development which increases traffic at an AQMA is not allowed.

Comment: MM37 - LPMM18/3445  Respondent: University of Surrey (Sir or Madam) 8967233  Agent: Terence O'Rourke (Steve Molnar)  

Guildford Borough Local Plan  
Main modifications  

Comments on behalf of the University of Surrey  

Main modification reference: MM37  

The University of Surrey welcomes MM37 that provides a new policy A26a and a more extensive area of search for the provision of the access road from the A31 to serve the Blackwell Farm allocation (A26). This satisfies the objection by the University to the previous narrow corridor for the route of such a road, and will provide scope for a more appropriate way forward in detailed design of a successful access taking account of the local context.  

We note that item 4 of the requirements under the policy states that:  

"The objective will be to achieve the best landscape and design solution, taking into account the topography, the existing trees, the need for additional landscaping, and the needs of all users, including walkers and cyclists as well as vehicles entering and leaving the site."  

We consider that the wording that the objective is to achieve the "best" landscape and design solution opens up the possibility of uncertainty over what this represents. This is because the term "best" is potentially value laden with differing perspectives, and could lead to difficulty in reaching agreement.  

The term "an appropriate" landscape and design solution, taking into account the matters mentioned, would be preferable as it leaves scope for the planning authority to decide what is appropriate rather than what is "best". This is a more realistic and deliverable task whilst still ensuring that the relevant factors, as listed in the policy, are taken fully into account in arriving at an appropriate solution.

Comment: MM37 - LPMM18/5062  Respondent: Dr Graham Hibbert 8970785  Agent:  

Policy MM37 The proposed land for an access road between the A31 and Blackwell Farm would harm the AONB.  

Attached documents:
SITE SPECIFIC : A35 FORMER WISLEY AIRFIELD, OCKHAM (MM37 & MM47)

1. The addition of land to the South of the appeal site does not mitigate the density issue as much of the new land is constrained by the VOR air traffic control beacon regulations. This prevents construction within a certain radius.

2. Land to the South abuts the Ockham Conservation Area and increases the visibility of the site to and from the Surrey Hills AONB.

3. The biodiversity of the SNCI will be destroyed by the proposed development.

Attached documents:

SITE SPECIFIC : A35 FORMER WISLEY AIRFIELD, OCKHAM (MM37 & MM47)

1. The addition of land to the South of the appeal site does not mitigate the density issue as much of the new land is constrained by the VOR air traffic control beacon regulations. This prevents construction within a certain radius.

2. Land to the South abuts the Ockham Conservation Area and increases the visibility of the site to and from the Surrey Hills AONB.

3. The biodiversity of the SNCI will be destroyed by the proposed development.

4. It is a breach of case law that an Appropriate Assessment and Habitats Regulation Assessment have not been completed.

Attached documents:

Dear Planning Team,

I have given some thought to whether I can be bothered to respond to the latest version of the local plan, as all previous' consultations' seem to have been pretty much a box-ticking exercise, and you have largely gone ahead with what you wanted to do in the first place, regardless of the tens of thousands of objections. But I do not want my silence to be construed as consent, so here goes:

I would like to strongly object to two of the modifications to the local plan, proposed by the inspector.

The first is to increase the area to be taken out of the AONB on the Hog's Back, to accommodate the access road to the huge development at Blackwell Farm. There doesn't seem to be much point in having an NPPF, and AONB's, and a Green Belt, if these are to be simply ignored at the first opportunity. I also see that the terms of reference for the current nationwide review of AONB's includes the statement that no AONB should be reduced in size, so surely this proposed plan will fall foul of that, in addition to all the other planning legislation that the inspector has flouted.

Attached documents:
Policy A26a: Land for access to Blackwell Farm, Hogs Back, Guildford

MM37 – OBJECTION A26a-1

Given the excess number dwellings proposed in the Local Plan (see Objection S2-1 to modification MM2), the equivalent of at least two strategic sites should be removed from the Plan in accordance with Objection S2-3 above. This review should include Site A26a (land for an access road to Blackwell Farm).

Attached documents:

---

MM37 Blackwell Farm Access road

GGG objects to the addition of Policy A26A (Blackwell Farm Access Road). No one has advocated the use in any way of the existing Down Place access road for the new access road to Blackwell Farm, because it is too steep for the purpose, and is bounded on both sides by trees which should not be removed for road-widening because they contribute greatly to the landscape and have historic interest. Proposals did suggest crossing this access road at some point, but were otherwise presented as solutions that specifically avoided damage to the existing Down Place. It is therefore inappropriate now to include the option of using Down Place. The proposed Main Modification Policy A26a Requirement 2 should therefore be reworded to read: “The access road will be a new road which avoids the line of the existing Down Place and its associated tree belts.”

The revised land allocation for the link road between Blackwell Farm and the A31, shown in the mapped part of proposed Main Modification in new Policy A26a, is substantially different from the options presented in writing and orally to the Examination. In particular there is no justification for a land allocation for the road on the north-east side of Down Place on the steeply-rising ground on the A31 side of the sharp bend in Down Place (ie above the 120m AOD contour). There were no proposals considered at the Examination which would have involved road building in this area, or a junction with the A31 taking land north-east of Down Place. The allocated area of search for the new road on the principal slope should be amended so that it is confined to land south-west of Down Place, and additionally be set back from Down Place to avoid damage to the tree belt alongside this road.

GGG objects to the inclusion of policy A26a (access road to the Blackwell Farm development site) as a separate policy to the Policy A26 (the Blackwell Farm allocation). The separation should not be allowed to proceed because the submitted Plan is clear that the Blackwell Farm development cannot proceed without the link road, so the two parts of the scheme are completely linked and separation is entirely unnecessary; if a solution to the link road problem cannot be found, then Blackwell Farm itself cannot be developed; The separation would give the impression that the Blackwell Farm development was entirely outside the Area of Outstanding Natural Beauty, whereas it is 100% dependent on the link road through the AONB; By separating off the link road, the Plan would enable significant parts of the development to proceed without that element of the package: that was not what the submitted Plan proposed.

Attached documents:
MM37. The proposed road from the A31 into the new estate would be a disaster. The Farnham Road is only single lane in each direction and it is always at a standstill every morning and most evenings going into Guildford. To add many hundreds and even thousands of extra vehicles on a road that is over congested most of the time would be totally irresponsible. The impact on the South side of Guildford would reduce it to an area where access to Guildford would be almost impossible. In addition, the new access road from the Hog's Back which forms part of the 'Surrey Hills', would destroy a large area of ANOB, green belt land, destroy numerous ancient trees and woodland and ruin the view to Guildford and beyond. This proposed new road is also just not practical, being part of the flood plain off the slopes off the Hog's Back. Using the Farnham Road as an access cannot be seriously considered. There are several practical possibilities which do not cause the impact and damage to the area.

A short while ago the Council received over 20,000 objections to the Blackwell Farm plan, nearly one-third of the residence of Guildford.

Just how many objections does it take for the Council to listen to its own residence? It seems clear that the 'influence' of the University of Surrey over-ride the wishes and common sense of its own residence!

Attached documents:

**Comment: MM37 - LPMM18/1473  Respondent: Mrs Roshan Bailey 15264065  Agent:**

For the reasons given in my comments on MM36, the development proposed for Blackwell Farm should be removed from the Local Plan. In any case, the land proposed for an access road is inappropriate due to the harm it would cause to the Area of Outstanding Natural Beauty.

Attached documents:

**Comment: MM37 - LPMM18/3690  Respondent: John Burns 15359905  Agent:**

MM37: Blackwell Farm access; a new road widening is inferred. This is unacceptable as it would lead to loss of trees that line the lane right now and thus would impact on the nearby AONB.

Attached documents:

**Comment: MM37 - LPMM18/5789  Respondent: Donna Collinson 15460737  Agent:**

MM37 The proposed land for an access road between the A31 and Blackwell Farm would harm the AONB.

Comment: MM37 - LPMM18/3217  
**Respondent:** Nancy and John Shafee 20778625  
**Agent:**

Our objections to excessive building in these areas remains the same as previously stated.

We object on the following grounds:

A) Surface water is a continual problem in the area with some recent building projects being delayed due to lack of provision for disposing of excess water on site. Ripley Lane and a short section of The Street are frequently flooded and impassable during times of heavy rainfall and this can only be exacerbated by building on land near to or adjoining these roads.

B) The roads are already overcrowded at peak times. Queues build up at the intersection where East Lane, The Drift and Ockham Road South meet. Queues build up even in non-peak times at the southern end of The Street/A246 at the 'Bell & Colvill roundabout'

There is almost constant congestion joining the A3 at with 'Wisley roundabout'

NB - this can only get worse with the inclusion of additional housing at Area 35

C) There is insufficient primary schooling in the village and has been for more than 25 years. Some children have to travel more than four miles for primary schooling

1388 of 2575
There is no guarantee that local children will be allocated secondary schooling at the nearest secondary school in Effingham

D) Already it can take 3 weeks to get an appointment with a chosen GP

It would make more sense to discuss additional housing

AFTER the land has been properly surveyed and resolutions found for diverting surface water

AFTER provisions for schooling and medical needs are addressed

AFTER discussions and a workable plan addressed for infrastructure - in particular roads and drainage

**Attached documents:**

---

**Comment:** MM37 - LPMM18/4259  **Respondent:** Save Hog's Back Campaign (Tom Stevens) 20817537  **Agent:**

We consider that Blackwell Farm (now covered by Policies A26 and A26a) should be the first site to be removed. The reasons being:

- It is the only proposed development site which has a significant impact on the AONB.
- The site currently protects views from the AONB along the Hog’s Back ridge - an important public viewing platform.
- The site cannot be fully built out until after the A3 has been widened, which Highways England states is not certain to happen. Even if the A3 widening scheme was shown to be economically viable (which we consider unlikely), it would be at least another 10 years before 1,500 of the site’s housing allocation could be built.
- Problems related to access to the site have not been resolved. Although the Main Modifications document might address some of the on-site problems relating to the steep gradients on the slopes of the Hog’s Back (by taking much more land within the AONB), it does not address fundamental problems on the local roads:
  - The new junction on the A31 would be over capacity and would fail thereby increasing the existing tailbacks on the Hog's Back at peak morning hours.
  - Additional pressure would be placed on the Tesco roundabout, which would be over capacity once the development is built out. GBC, which has developed the plan, continues to overlook the fact that this junction provides the only access to the hospital’s A&E department and that this access should be kept clear for emergency vehicles. Presumably the local authority has a duty to ensure the safety of future patients/users of the emergency services.
  - There are operational concerns regarding how the proposed 'through vehicle link’ would be controlled to prevent rat running through the new development, how the enforcement would be carried out (and by whom), whether there is a guarantee that this will be in place for the road’s lifetime (ie in perpetuity), and whether any scheme would be effective at removing the potential for ‘rat-running’ between the A31 and the A3 given the wide range of permitted users of the road.

**MM37** – Save Hogs Back objects to the inclusion of Policy A26a (access road to the Blackwell Farm development site) as a separate policy to the Policy A26 (the Blackwell Farm allocation). The two policies are mutually dependent and should not be separated.

**Attached documents:**
**Comment: MM37 - LPMM18/4951  ** **Respondent:** C Davies 20835105  ** **Agent:**

MM37
There is no justification for altering the SNCI boundary.
The SNCI size is drastically reduced despite the whole site qualifying on ecological grounds.
The biodiversity of the SNCI will be destroyed by the proposed development.

I support the representation made by WAG, advised by Richard Harwood.

**Attached documents:**

---

**Comment: MM37 - LPMM18/5217  ** **Respondent:** Diana Elliott 20843393  ** **Agent:**

I also object to policy A26A, which will take more land out of the AONB. I strongly urge that policy A26 should now be dropped, due to the new ONS figures, as this policy will destroy the finest panoramic view of the north side of the Hogs Back between Guildford and Farnham, an 'important' reason why this area was designated an AONB in 1958.

Main Modification: MM38   Number of representations: 8

**Comment:** MM38 - LPMM18/1624  **Respondent:** Peta Malthouse 8596673  **Agent:**

MM38 land set aside at Ash Policy A29: Land to the south and east of Ash and Tongham

The NPPF on this point states

‘The general extent of Green Belts across the country is already established. New Green Belts should only be established in exceptional circumstances, for example when planning for larger scale development such as new settlements or major urban extensions. Any proposals for new Green Belts should be set out in strategic policies, which should:

1. a) **demonstrate** why normal planning and development management policies would not be adequate;
2. b) **set out whether any major changes in circumstances have made the adoption of this exceptional measure necessary:**

I do not believe those requirements are satisfied

1. In summary although I do not object to policies MM38 and MM37 I say they are counterintuitive to your proposal MM45
2. Finally, I am extremely concerned that even though the Planning Inspector expressed views which mirrored points I have made in previous objections….ie that the additional land should be found in the town centre. no such proposals have been forthcoming. Further as the High Street comes under ever increasing pressure that WILL result in closures of traditional shops there appears no desire to review space set aside for more retail space

**The five year build plan**

3. Since the plan was formulated a very real opportunity has presented itself to the Borough Council, i.e. the Govt proposals to allow Local authorities to borrow to build much needed social housing. Such opportunity allows the Borough the luxury of being able to actually deliver additional houses within the first 5 years of the Plan. I hope that those plans are being made now.

The number given at MM2 has not been amended despite new robust figures being supplied by the ONS. This plan is clearly out of date and the figures can no longer be used to justify such a huge intrusion into the greenbelt. On that basis there is more than enough scope to review the alternative of Town Centre provision. Section 2b is clearly out of date and MM3 therefore inadequate. It requires re-examination and, in my view, to fail to do so would be obtuse.

**Attached documents:**

**Comment:** MM38 - LPMM18/1600  **Respondent:** Mr Richard D Jarvis 8599201  **Agent:**

The change is welcome.
4.3. Tier 7: CBGB sites around Ash and Tongham.

As developers active in the area, we are aware that considerable housing has already been allocated here and that this, together with the proximity of Rushmoor and Aldershot, in particular, confirms to me as a developer that this area cannot take any more housing than is already allocated.

Agent: 

Proposed Guildford Local Plan – Main Modifications

Main Modification 38

Policy A29: Land to the South & East of Ash & Tongham (1,750 homes approximately)

Requirement 8: Objection. The proposed text regarding Ash Manor should specify the minimum distance which must be left free of development, between integral parts of the Ash Manor (eg its moat) and future development. For example 200m.

Requirement 9: Objection. In spite of numerous requests, the proposed text regarding a new road bridge and footbridge over the railway south of Ash Station has not been modified to include references to proposed additional off-street parking and proposed cycle routes (on and off the carriageway). If you do not accept this objection at this stage, please let me know what action has been taken, or will be taken, to ensure that the following will be fully taken into account:

a) The new road bridge should have cycle lanes and wide footways for shared use by pedestrians and cyclists. It should be close to the south side of the level crossing (in order to minimise land-take, turning movements, injury accidents, air pollution, noise, buses and lorries in the proposed housing area to the south of Guildford Road A 323).

b) The footbridge should be suitable for older people, for people with disabilities, for mothers with push chairs or prams and for cyclists who wish to take their cycle on a train. So steps should be avoided. People living between Ash Hill Road B341 and the railway, walking or cycling to the south west of the railway (eg to Ash Grange Primary School) will not welcome a long detour to a footbridge south of the Guildford Road A323/Foreman Road junction. Note: An example of a combined footbridge/cycle bridge, without steps, is 2 miles away to the north, at the Lynchford Road A3011/Blackwater Valley Road A331 interchange (at the Guildford Borough boundary).

c) The Borough Council should give some priority to arranging off-street parking for vehicles and cycles, close to the station, to replace the existing car park which has insufficient capacity. Parked vehicles on Foreman Road already cause obstruction and safety risks.

Large numbers of new homes are almost ready for occupation and 100 more people may wish to park at Ash railway station during 2019. This number will increase in 2020 etc. What are your estimates? My letter to you dated 10
September 2014 emphasised the need for an additional off-street car park at Ash railway station, but I am unaware of any plans being made.

d) Safe and attractive cycle routes, on and off the carriageway, leading to and from the railway station, should be provided near to the station and within the proposed housing development.

Requirement 10: Objection. The proposed text regarding all land to the south and east of Ash and Tongham has not been modified to include the provision of safe and attractive cycle routes, on and off the carriageway, to schools, shops, recreation etc. If you do not accept this objection at this stage, please let me know what action has been taken, or will be taken, to ensure that attractive and safe cycle routes will be provided.

Comment: The proposed Local Plan specifies cycle routes regarding the Wisley Airfield site. So you are inconsistent and lacking a sense of purpose by not specifying them for land to the south and east of Ash and Tongham. If the Local Plan does not specify cycles routes on land to the south and east of Ash and Tongham, they may not be provided by developers. This would be contrary to Central Government, GBC and Surrey County Council cycle policies.

Attached documents:

(ii) Modifications to Policy A29

MM38 – Policy A29 – Land to the South and East of Ash and Tongham

2.6 At the Matter 17 session dealing with Policy A29 – Ash and Tongham a number of specific points were discussed in relation to the wording of the policy. The Inspector requested and, the Council agreed, to make a series of changes to the wording of the policy, as follows:

• The reference to ‘rural landscape’ in part (6) of the Policy was to be deleted and replaced with ‘character of the area’ in recognition of the fact that the whole area is a strategic allocation and by definition is no longer rural; and,

• The reference in part (8) of the Policy to views to and from the heritage asset including the approach from White Lane being protected was to be replaced with the standard definition to preserve the setting of the heritage asset as defined in the Legislation.

2.7 Having agree these two points with the Inspector at the hearing session it is somewhat surprising to see that the main modifications seek to reinstate the original points and to completely ignore the Inspector’s request and the position agreed by senior officers and Counsel for the Council.

2.8 It is a matter of fact that the area in the Policy A29 allocation cannot be considered rural because the very act of allocating the land for housing brings the whole area into the urban area of Ash and Tongham. A policy requirement that seeks to protect the ‘rural landscape’ is therefore at odds with the allocation. Furthermore the requirement within the policy at Part (6) that seeks to maintain separation between Ash and Ash Green in the vicinity of Ash Green Road is also at odds with the allocation, which envelopes both sides of Ash Green Road into the urban area of Ash in any event.

2.9 With regard to the Heritage Asset (Ash Manor) the requirement to maintain views to and from the approach from White Lane would actually necessitate the felling of trees and vegetation in order to create a view that does not currently exist. In other words the policy seeks to protect something that is not currently a feature of the setting of the Listed Buildings. This is at odds with the requirements of Legislation and also the position agreed with the Inspector at the
Examination hearing sessions wherein the statutory definition to preserve the setting of the Listed Buildings was to be inserted into the policy.

2.10 The policy wording therefore needs to be amended.

**Comment:** MM38 - LPMM18/5970  **Respondent:** Wyg (David Butcher) 20859777  **Agent:**

The following comments are made to the proposed modifications to Policy A29. The modification reference is MM38.

Comments are as follows on subsection 6:

1. The proposed changes to the policy are considered unnecessary and are objected to. The policy as originally worded is considered to provide sufficient clarity and guidance to the proposed development of Land to the South and East of Ash and Tongham under the allocation;
2. The policy as originally worded provided sufficient guidance on coalescence and protecting the character of Ash Green;
3. Whilst all the changes are objected to, the following sentence is specifically objected to: “Any development as a whole will not be of a size and scale that would detract from the character of the rural landscape.” We consider that this sentence should be deleted, as it is ambiguous and an unnecessary repetition of the avoidance of coalescence achieved by the subsequent wording in the policy on providing a green buffer.

Comments on subsection 8 are as follows:

1. The words “…from White Lane, must be protected” should be amended to “…from White Lane, must be considered.” The sentence is too prescriptive as written and does not allow for the operation of the heritage harm assessment set down in the National Planning Policy Framework and Guidance.

6.0 Comment on other sites proposed.

6.1 Tier 8:

Aarons Hill is part of a large site, which will benefit the Godalming housing market and not Guildford. The land is a clear incursion into very visible Green Belt and countryside. From a political perspective, this site has attraction to Guildford Members because no one in Guildford considers it part of Guildford.

Clandon Golf: this land lies within the AGLV and is a very visible part of the GB. Liddington Hall Farm: this land is relatively self-contained. It is agreed that all 300 units here would overload the local market.

6.2 Tier 10.

In our view there should be no large land allocations in any of the tier 10 sites.

These are all smaller settlements, which do not satisfy the sustainability criteria established within the Plan methodology. The allocations of such large individual sites will overwhelm the villages. If any land should be needed here the site size should be restricted to a size suitable for local developers to build, in the region of 20 units maximum. It would seem that Send Parish area is suffering considerably in these revised allocations, having a large allocation already agreed in its midst (Garlicks Arch). Other villages are not of the size to justify considerable expansion of their boundaries.

6.3 Conclusion.
The broad spatial principles are agreed for the Plan. The MM’s pay limited lip service to these principles. There is little reflection of the ability of Guildford urban area to assimilate more growth from outworn industrial and retail land. Within the recommended Tier 8 sites there is no justification why TPF should have been overlooked.

The allocation of large sites within Tier 10 will impact seriously on deliverability and wider planning and infrastructure constraints.

**Consultation on the Submission Guildford Local Plan 2017 (the Local Plan)**

**Modification 39, Policy 61 – Land at Aaron’s Hill (Policy 61)**

Shackleford Parish Council (SPC) objects to the inclusion in the Local Plan of Policy 61, which allocates Land at Aaron’s Hill for the development of around 200 homes.

The site at Aaron’s Hill lies in Eashing and is currently protected with Green Belt and AGLV status and SPC and Guildford Borough Council both agree that the site is manifestly unsuitable for such a large-scale development; and this is before the development of 262 dwellings on the adjoining half of the field within Waverley Borough is even taken into consideration. Development in the Green Belt is permitted only in ‘exceptional circumstances’ and the Inspector’s inclusion of Policy 61 to help satisfy the unmet housing need of Woking and the now substantially reduced housing needs figures of Guildford Borough is not an ‘exceptional circumstance’. Shackleford Parish includes Eashing within its boundary, and Eashing traffic issues have dominated meetings for the last ten years due to the already insupportable and dangerous volume of traffic and issues with speeding and congestion. The planned development of 262 (and then 200) homes is simply too dense for the site at Aaron’s Hill, and the already struggling roads into Godalming and the small village of Eashing (with its ancient wooden single-track bridge) will not be able to support it. The inclusion of Policy 61 is therefore, **consistent** with the National Planning Policy Framework.

In addition to objecting to the inclusion of the site at Aaron’s Hill on planning grounds, SPC also objects on the basis that the reasoning behind its inclusion is **unsound.** The main modifications have been made to address issues of legal compliance and to make the Local Plan sound. SPC understands that the Local Plan must meet the area’s objective needs and is informed by agreements with other local authorities. However, the inclusion of Policy 61 seeks to force Guildford Borough Council to accept development of rural land, that lacks necessary infrastructure, within the Green Belt, against advice from its own councillors and officers, purely on the plainly unsound basis of: (i) overinflated housing figures; and (ii) unmet housing needs from a different borough.

Waverley Borough Council has earmarked the other half of the Aaron’s Hill site for the development of 262 homes because it has been influenced by the need to provide for the massive and unrealistic housing requirement demanded by the new Waverley Local Plan (such housing need figures are currently the subject of a challenge in the High Court). During the consultation period for the modification to the Guildford Local Plan, the Office for National Statistics has released dramatically reduced housing needs figures for Waverley and Guildford Boroughs. Guildford’s housing need is now far below its own housing target. As the Guildford Local Plan has yet to be adopted, Guildford Borough Council still has the chance to benefit from these new figures and bring the housing requirement down to manageable levels. For the Local Plan to be sound, the inclusion of Policy 61 must be **justifiable** and based on **proportionate** evidence. SPC submits that now the population and housing needs figures have been revised, it would be unsound, unjustifiable and disproportionate for the Planning Inspector to ignore this revision.

Therefore, SPC urges the Inspector to **strike out Policy 61,** and remove any other sites that have been crowbarred into the Local Plan at this late stage to satisfy a housing need which has now been reduced massively. Doing so will provide...
Guildford Borough with a more carefully considered, appropriate, realistic, balanced and sustainable housing allocation for the future.

MM39 – Land at Aaron’s Hill, Godalming

For the reasons set out in our detailed representations to MM2, the proposed allocation of this site is unjustified given the Council’s evidence in the SA Addendum 2018, and is contrary to the Council’s own spatial hierarchy / approach given its failure to allocate the deliverable, more sustainable and sequentially preferable site at Clandon Golf (as an urban extension to Guildford).

As also identified in our representations to MM2, it is also unjustified and unsound to re-categorise the Aarons Hill site from Tier 10 (as it was in the SA Report submitted with the Local Plan) to Tier 8 in the SA Addendum. This illogically and unjustifiably suggests that this urban extension to the small town of Godalming is as sustainable as an urban extension to Guildford (which is 6 times larger and the county town of Surrey) and results in this site being inappropriately favoured in the SA assessment process. Importantly, it results in the unnecessary allocation of this site at the expenses of the significantly more sustainable option at Clandon Golf.

Changes Required

For the reasons set out in detail in our representation to MM2, the revised spatial strategy (and specifically the allocation of the sites identified in MM39, 43, 44 and 45) is unjustified and unsound.

The Council must re-visit the strategy to allocate additional sites to deliver in the first five years of the Local Plan (post- adoption) and base its decisions on clear evidence (most notably the SA Addendum) and its own spatial hierarchy / approach. This will result, on the Council’s own evidence, in the identification of a different development option (and therefore a different suite of sites) to those now proposed. It will also, most importantly, result in a more sustainable distribution of development (on the Council’s own terms).

Policy A61: Land at Aaron’s Hill, Godalming

MM(undefined) – OBJECTION A61-1

Given the excess number dwellings proposed in the Local Plan (see Objection S2-1 to modification MM2), the increase in housing provision following the Planning Inspector’s examination of the Local Plan should be reversed in accordance with Objection S2-4 above. This review should include Site A61 (Land at Aaron’s Hill, Godalming – 200 dwellings).

Attached documents: 

Comment: MM39 - LPMM18/5114  
Respondent: David Arscott 12056033  
Agent: 

I am a Godalming resident and would like to comment on MM39, Policy A61: Land at Aaron’s Hill, Godalming.

This land should not be taken out of the Green Belt for the following reasons:

1. The site will be subjected to intense residential development, as proposed by Ashill Land Ltd for 200 houses, which is unsustainable in terms of:
   - loss of rural heritage;
- erosion of urban edge;
- extensive loss of natural habitats to local biodiversity, including endangered species;
- impact on already heavily trafficked local roads;
- creation of air, noise and light pollution on an elevated part of western Godalming.

2. The character of Godalming is defined by a cluster of distinct communities separated by green space; the use of this site and its adjoining site within Waverley Borough Council's domain, will erode this distinction.

The stated Requirements are inadequate to mitigate these impacts, and the stated Opportunities are meaningless.

With regard to traffic, the attached photograph shows the junction at the bottom of Eashing Lane with the A3100 Portsmouth Road at 08:40 on 11th October 2018. This is an extract from video footage taken by me. There was extensive queuing up Eashing Lane, with traffic also attempting to enter Eashing Lane from the A3100. Students and other pedestrians were having to negotiate this junction from the bus stop at the south of the junction. This, apparently, was a 'good' day for traffic flow. I work with someone who often has to negotiate Eashing Lane and the A3100 early in the morning in order to get into Godalming. There are times when it can take 40 minutes to get from the A3 at Lower Eashing to Godalming. The existing road infrastructure is incapable of safely and conveniently supporting the 462 houses planned for Aarons Hill.

see attachment for photographs mentioned.

**Comment:** MM39 - LPMM18/3565  **Respondent:** Natural England (Marc Turner) 15661921  **Agent:**

**A61 Land at Aaron’s Hill, Godalming**

It is also close to Charterhouse to Easing Site of Special Scientific Interest, Thursley Ash Pirbright and Chobham Special Area of Conservation and Wealden Special Protection Area.

As this site is in very close proximity to the Wealden SPA it therefore must provide an appropriate suite of mitigation to ensure that impacts upon the site are avoided. This is likely to include provision of SANG above the minimum standard of 8 ha per 1,000 persons. All dwellings must also contribute to SAMM. Any direct or indirect impacts on this site should also be avoided or mitigated.

Attached documents:

---

**Comment:** MM39 - LPMM18/4306  **Respondent:** Ashill Land Ltd (Ashill Land Ltd) 15805921  **Agent:** CBRE (Adam Kindred)
CBRE Limited (Planning) (CBRE) acts as planning consultants to Ashill in respect of the land north of Aarons Hill, Godalming (‘the site’ hereafter). CBRE is instructed by Ashill to submit representations to the Main Modifications Consultation on the Guildford Borough Council (GBC) Local Plan.

Ashill welcomes the identification of the Land at Aarons Hill (Draft Site 61) by GBC as providing part of the solution to meeting the requirement for an additional 550 homes in the first five years of the plan. Within this response, we have set out further details to confirm the deliverability of the site within the first five years of the GBC plan along with further details as to why the allocation is sound.

The proposed allocation is sound in accordance with Paragraph 182 of the NPPF. As detailed further below, the identification of the site represents a positive response to the identified need, it is justified when considered against the reasonable alternatives, effective in dealing with a cross-boundary site and consistent with national policy.

Consistent with National Policy - Achieving Sustainable Development

Paragraph 8 of the NPPF is clear that to achieve sustainable development, ‘economic, social and environmental gains should be simultaneously sought through the planning system.’ For the reasons set out below, Draft Site 61 ‘Land at Aarons Hill’ achieves benefits across these criteria and is consistent with national policy.

- **Social Role** – the site is adjacent to a wider area that is designated as a Priority Neighbourhood for Regeneration. The priorities are to drive improvements in the measures of the Index of Multiple Deprivation (Income Deprivation, Employment Deprivation, Education, Skills and Training Deprivation, Health Deprivation and Disability, Crime, Barriers to Housing and Services, Living Environment Deprivation).

The proposed allocation will assist in supporting the vitality and viability of the local primary school which has been presented with the threat of closure. The direct and indirect role of the allocation in helping deliver wider educational improvements in this area represents a clear social gain for the allocation. As evidenced in the current live application for the land in Waverley (REF: WA/2018/1239), the planning application is supported by both the Diocese of Guildford and the Green Oak Primary School.

Development of the site could result in significant localised improvements across a range of IoD measures, in particular the delivery of new affordable housing and provision of open space contributing to the living environment, access to homes, and people’s ability to lead healthier lifestyles. Finally, the scheme will deliver flexible community space as part of its provision. Whilst this could be used for local community events, there may also be the scope to include drop in medical surgeries and health awareness sessions.

The social benefits associated with the allocation is reflected in section 9.4.2 of the Sustainability Appraisal (2018) in which it is stated:

‘the allocation should help to secure the future of the nearby primary school, and it is also noted that the Aaron’s Hill area is somewhat ‘relatively deprived’ in the Waverley/Guildford context.’

- **Environmental Role** – it is important that the environmental opportunities associated with the allocation are considered as a whole. As per the requirements of Draft Allocation 61, development of the site will include the provision of a SANG. A planning application for SANG (REF: 18/P/01958) has been submitted to GBC for approval. The land identified is adjacent to a Biodiversity Opportunity Area (BOA). Consistent with the objectives of Policy ID4, the habitat creation on the SANG will result in biodiversity gains on the site and allow for an extension of the Wealden Greensands BOA. In addition, consistent with Paragraph 81 of the NPPF the provision of SANG in this location will provide opportunities for beneficial access to the Green Belt for recreation.

- **Economic Role** – the allocation will deliver much needed homes to GBC which will help in seeking to rebalance the current affordability pressures and provide homes for people to be able to live and work in the local area. The site is located in close proximity to Godalming Train Station which provides direct connections to Guildford.
Justified – Consideration Against Reasonable Alternatives

The Sustainability Appraisal Addendum (2018) includes a comparison of the site against other reasonable alternative options, namely Clandon Golf (300 Homes) and Liddington Hall (300 Homes).

Relationship with the A3

As discussed during the Examination in Public (EiP) in seeking to identify additional sites, it is important that this does not result in further pressure to the A3. In this respect the allocation at Aarons Hill is justified when considered against the reasonable alternatives. As noted in Paragraph 9.16.1 of the Sustainability Statement Addendum (2018):

*The conclusion is that “the largest of the allocations (Aaron’s Hill, Godalming; 200 homes) is supported, as there is good access from the site to Godalming town centre and train station, and there is also a good bus service available in close proximity...There is also the matter of seeking to avoid worsening of existing traffic congestion, and in this respect it is notable that the Aaron’s Hill site is supported as: “Vehicle trips to/from Aarons Hill to/from the south (Portsmouth direction) will not pass through the Guildford section of the A3. Those travelling to/from the north towards London and the M25 motorway will use the Guildford section of the A3; however, they will be on the mainline carriageway through the A3 Guildford section and would not be leaving or joining the A3 Guildford at its junction.”*

Highways England in their response to the adjacent application in Waverley (REF: WA/2018/1239) have confirmed that the development of 262 units on site would not present issues to the strategic road network. An additional 200 dwellings should not change that conclusion and therefore the scheme is not reliant on the proposed works to the A3.

Green Belt

It is relevant to note that the potential for the Land at Aaron’s Hill to be released from the Green Belt was acknowledged in the GBC Green Belt Study (2014). Whilst the site formed part of a much wider area (F18) that was not considered appropriate for release from the Green Belt, the Council’s evidence base acknowledged that:

*‘The borough boundary is generally physically separated from the settlement boundary within land parcel F18 therefore any development would not be continuous with the settlement boundary, unless future development was brought forward to the west of Godalming within Waverley District (our emphasis)’*

The release of the site from the Green Belt represents an opportunity to establish a more permanent and enduring boundary. In this regard, the conclusions reached by the Inspector in respect of Aarons Hill at Waverley would apply equally to the situation in GBC. As stated:

*‘The site is suitable for removal from the Green Belt: it is not of particularly high landscape quality, being flat and rather featureless, the existing urban edge is rather hard and the site would present the opportunity of establishing a better edge to the built-up area and a better-defined Green Belt boundary.’*

(Waverley Inspectors Report, Paragraph 11)

Drawing upon the conclusions reached above, in qualitative terms the Green Belt at Aarons Hill differs from those considered as part of the reasonable alternatives at Clandon and Liddington. Furthermore, the Aarons Hill allocation offers the opportunity to establish a more robust and enduring Green Belt boundary. The need to establish a more robust and enduring Green Belt boundary in this location is further increased following the draft allocation of the WBC site for residential development.

Social Benefits

As set out above, the allocation of the site is justified in allowing more than just housing and thus results in improvements across social, economic and environmental factors. The opportunity to respond to the identified regeneration needs of the area is a significant consideration when considered against the reasonable alternatives.

2 Green Belt Study (2014) – Volume V Page 31 (footnote)
Effective – Joined Up Approach

Paragraph 182 of the NPPF states that to be effective ‘the plan should be deliverable over its period and based on effective joint working on cross-boundary strategic priorities.’ As detailed in their response to the Regulation 19 Consultation, WBC wrote to GBC to recommend that the GBC part of the Aarons Hill site be allocated for development.3

The site at Aarons Hill is unique with respect to the way in which the administrative boundary crosses the site. The proposed allocation of the site in the GBC Plan is an effective response to a cross-boundary matter.

Positively Prepared – Response to Identified Housing Need

The identification of the Draft Allocation represents a positively prepared approach to meeting housing need within the housing market area (including unmet need from Woking). In respect of the land at Aarons Hill, and particularly the conclusions reached in respect of the Waverley Inspector’s Report, it is apparent that the release of the site is reasonable (in not being a high quality Green Belt site) and is consistent with the principle of achieving sustainable development in generating improvements across social, environmental and economic factors.

Following the EiP new ONS Housing Projection figures have been released by ONS which suggest lower household formation rates compared to the figures released in 2016. It is important to consider the publication of this information in the context of the advice note prepared by ONS themselves (October 2018)4. As stated:

‘Although the latest household projections are lower than the previously published projections, this does not directly mean that fewer houses are needed in the future than thought. This is because the projections are based on recent actual numbers of households and are not adjusted to take account of where homes have been needed in recent years but have not been available. Therefore, if more homes are built, the increased availability of homes may result in more households forming. The opposite is also true – if fewer homes are built then fewer households are able to form.’

Site Deliverability

The deliverability of the site within the early years of the plan is a key requirement for the allocation.

In considering development of the site, the administrative boundary represents a somewhat arbitrary line of separation, following no clear ‘on the ground’ distinction. Accordingly, the technical work undertaken to date has been on a site wide basis including among other things topographical survey work, ground investigations, ecology and tree surveys, archaeological survey, foul and surface water drainage assessment, service capacity checks/diversions, highways assessment, and agricultural land assessment. With regards to agricultural land assessment the land is of relatively low quality and requires significant manual irrigation to make any crop viable, and there is no farming or crop related constraints that would prevent development commencing. Ashill therefore possess a detailed body of technical evidence that could be used in support of an early planning application submission, subject to the support of officers. In the table below, we have included an overview of factors relevant for consideration for the deliverability of the site and a response to each of these.

3 Page 96 - Guildford borough Submission Local Plan Consultation Statement 2017 (December 2017)
4 https://blog.ons.gov.uk/2018/10/19/what-our-household-projections-really-show/

Site Deliverability

<table>
<thead>
<tr>
<th>THEME</th>
<th>RESPONSE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Strategic Highways Network</td>
<td>As set out above, the development of the site will not result on adverse impacts to the A3. Highways England’s response to the WBC application has confirmed that no strategic issues present from the development of 262 homes on site. A further 200 dwellings should not change that conclusion.</td>
</tr>
<tr>
<td><strong>Local Highways Network</strong></td>
<td>Discussions have been held with Surrey County Council (SCC) as local highway authority regarding the deliverability of 200 dwellings on the site, including consideration of the cumulative impact with the 262 dwellings currently proposed on the adjacent area within Waverley Borough. The discussions have been informed by the detailed traffic modelling exercise undertaken and agreed for the Waverley scheme (REF: WA/2018/1239) and SCC agrees that the cumulative traffic impacts are capable of being appropriately mitigated such that traffic impact should not be a barrier to prevent the developments coming forward. There is a significant level of comfort on this point – the level of detail discussed with SCC has been much greater than typically provided when promoting sites through the local plan process.</td>
</tr>
<tr>
<td><strong>SANG</strong></td>
<td>A planning application for SANG has been submitted to GBC. The application has been informed by pre-application engagement with Natural England, following a site visit, who have confirmed that the site identified can meet their requirements for SANG land. Natural England have also confirmed that the proximity of the site to the A3 would not preclude its uses as a SANG. The land identified for use as SANG is owned by the same landowner as the Draft Allocation.</td>
</tr>
<tr>
<td><strong>Land Contamination</strong></td>
<td>The Environmental Pollution Control Officer has responded to the Waverley application to confirm the acceptability of the land contamination report submitted. No pre-commencement works are required in respect of land contamination. The ground investigation covered the whole site providing certainty for a GBC scheme.</td>
</tr>
<tr>
<td><strong>Utilities</strong></td>
<td>Through the preparation and post-submission discussions on the WBC scheme, engagement has been had with all utilities providers. Thames Water are currently undertaking the necessary modelling work for the site. It is also pertinent to note that the response of Thames Water to the WBC Local Plan Part II includes a response from Thames Water to confirm that only minor infrastructure upgrades are required. Further details are provided below.</td>
</tr>
<tr>
<td></td>
<td>A preliminary assessment has been carried out by SSE (April 2018) for supplying the site based upon a predicted electrical demand. Advice is given that, to cope with this demand, on site sub-stations will be required. This can be incorporated into the scheme.</td>
</tr>
<tr>
<td></td>
<td>Thames Water has advised that the existing sewer network can accommodate the predicted flows from the proposed housing, provided a minimum of two separate outfalls are used. In respect of potable water, Thames Water have made that comment and we’re working with them to provide clarity.</td>
</tr>
<tr>
<td><strong>Archaeology</strong></td>
<td>Engagement with SCC has confirmed that on the basis of the evidence submitted and the historic use of the site the potential for significant archaeological assets on the site is low.</td>
</tr>
<tr>
<td><strong>Access</strong></td>
<td>In addition to numerous pedestrian/cyclist accesses, including a direct link to the railway station and town centre, the principal vehicular access is proposed via Eashing Lane. An arrangement that complies with design standards and that offers sufficient capacity is readily achievable. Discussions have been held with SCC and they confirm that an appropriate site access is achievable.</td>
</tr>
<tr>
<td><strong>Ecology</strong></td>
<td>An ecology assessment has been undertaken for the totality of the site. Given the previous intensive agricultural use of the site there is limited biodiversity interest on site, with the more ecologically sensitive areas being located in the WBC part of the site near the Valley Field. Relevant survey work</td>
</tr>
</tbody>
</table>
has been undertaken for the totality of the site and thus there are no seasonal time constraints to the development. The scope of additional survey work required in respect of dormice has been agreed with Natural England.

Masterplan Design

Given the wider site interest and potential, the progression and evolution of the design of the 262 WBC scheme has always been progressed on the basis of ensuring that it did not preclude development coming forward on the GBC side of the site, should GBC release this land from the Green Belt. As part of this process a holistic scheme was presented to Design South East (March 2018) and has received their endorsement, establishing clear principles and a framework for how the site could be developed. We have enclosed a layout showing how a GBC would integrate with the WBC scheme.

Discussions with Delivery Partner

Footnote 11 of the NPPF states ‘to be considered deliverable, sites should be available now, offer a suitable location for development now, and be achievable with a realistic prospect that housing will be delivered on the site within five years and in particular that development of the site is viable.’

Godalming is a hugely desirable place to live and when coupled with the fact that it is relatively constrained by environmental and landscape designations, reduces the development opportunities and therefore makes any large scale housing developments very attractive to the housebuilder market.

In this regard Ashill have engaged the services of JLL to assist them in finding the best development partner to bring forward this exciting opportunity. JLL have prepared a letter which is attached for your information and self-explanatory.

Ashill’s expertise lies in obtaining detailed planning permissions which are attractive, desirable but ultimately easy to build and this will certainly be our approach on this site. Ashill have already prepared an indicative scheme which shows how 200 homes could be delivered on this site (see attached), albeit it is subject to detailed scrutiny and further discussion with your development management colleagues. Given the background work that has already been undertaken, if Ashill obtain comfort from GBC that the site is going to be formally allocated for development then they will engage our full consultant team to prepare a detailed planning application which can be submitted relatively quickly.

Whilst the application is being considered Ashill can begin the process of obtaining a development partner so that the chosen party will be ready to commence development as soon as practically possible. Given the proceeding and the relatively unconstrained nature of the site from a construction point of view we believe that the following timetable is realistic:

- Construction to commence 3 months from receipt of planning permission;
- First units ready for occupation 9 months from commencement;
- Show home ready 6 months after commencement;
- Completion of construction with 36 months of commencement;
- Sales rate expected 5 per month, per sales outlet (one sales outlet in GBC and one sales outlet in WBC);
- On GBC 200 scheme – 120 are private – this means 24 months of Sales; and
- On WBC scheme 183 are private – this means 36 months of sale

The site is deliverable within the first five years of the plan and will directly address the soundness issues identified through the summer hearing sessions. The allocation of the site represents an appropriate solution to the identified issues of soundness when considered in isolation and also against the reasonable alternatives. With the pre-submission version of the Waverley Local Plan Part II document including a residential allocation for 260, allocation of the site in the GBC would result in an enhanced Green Belt boundary in this location and complement the wider development.
As discussed, the allocation presents an opportunity to achieve benefits across all three measures of sustainability. Thus, whilst the site allocation responds to housing need in the first instance, it also delivers benefits across other measures. The proposed Main Modification is sound.

We trust that the above comments are helpful in the context of advancing the Local Plan. We would be grateful if you could confirm receipt of these representations. Should you wish to discuss this matter in more detail, please do not hesitate to contact me.

**Comment:** MM39 - LPMM18/3317  **Respondent:** Obsidian Strategic (Philip Scott) 16976193  **Agent:**

**Guildford Borough Council Submission Local Plan - Main Modifications Consultation**

Dear Sir/Madam,

These representations are submitted by Obsidian Land Promotions Guildford Limited (representor ID 17323713) in relation to Guildford Borough Council's emerging local plan Main Modifications Consultation.

Obsidian Land Promotions Guildford Limited (hereafter referred to as “Obsidian”) has a legal interest as the promoter of the site at Pond Farm, New Pond Road, Guildford including a small portion of land to the east of Furze Lane (hereafter referred to as “the Site”) (see site location plan at Appendix 1). The Site currently falls within the Green Belt and the Surrey Hills Area of Outstanding Natural Beauty (although, the Council has previously accepted that neither of these designations should prevent the site coming forward for redevelopment). It has capacity for c90 – 110 dwellings (including affordable housing). There are no obstacles to the delivery of the site and it can come forward at the beginning of the Plan period, thus making a significant contribution to the Council’s five year housing land supply (see technical documents submitted in support of previous representations). Representations have been made to all previous stages of the local plan process and Obsidian has repeatedly stated its objection to the emerging plan and its underpinning spatial strategy. Given that previous representations are on file and have been heard through the EiP, these will not be repeated. Rather, we wish to comment solely on the Main Modifications, to which we also strongly object.

In the Main Modifications to the emerging local plan, the site at Aaron's Hill, Godalming has been added to the plan as an allocation for residential development. This allocation forms an urban extension to Godalming comprising 200 new homes. The proposed allocation of this site for residential development is a direct response to the Inspector's comments regarding the need to allocate more sites that are available and deliverable within the first five years of the plan period. Whilst we support the Inspector's stance on this matter and the Council's willingness to address this, we object to the proposed allocation of the site at Aaron's Hill.

The proposed site allocation at Aaron's Hill extends an already sprawling settlement further into the countryside. The site itself is located some distance from the centre of Godalming and, as a consequence of the manner in which Godalming has grown, is effectively located within a small settlement between Godalming and Milford. Located at the top of a hill in open landscape, the site is visually prominent and lacks a clearly defensible boundary, presenting issues of future sprawl into open countryside far removed from the centre of the settlement. Additionally, Eashing Road to the west of the site is inherently rural in character. Development of the site will have a significant urbanising effect that will irreversibly change the character and rural setting to the north of Godalming.

As previously highlighted, Obsidian support the principle of amending the submitted local plan to introduce new sites that are deliverable within the first five years of the Plan period and are sustainable. The site at Pond Farm represents a more sustainable extension to an existing settlement than that at Aaron's Hill, whilst having a lesser visual and landscape
impact and demonstrating a clearly defensible boundary. The site was a draft allocation in the emerging local plan (at Regulation 18 stage) which demonstrates the Council's agreement that the site is appropriate for development. Given the uplift in necessary housing supply and the need for sites in the early years of the plan, in addition to no technical justification regarding why the site should not be allocated for residential development, it is considered that the site at Pond Farm should be included as an allocation for residential development in the local plan. Inclusion of the site at Aaron's Hill in the local plan whilst the site at Pond Farm remains unallocated demonstrates the absence of a clear and coherent spatial strategy and is simply unjustified.

We trust our comments will be given full and proper consideration and we would be happy to discuss the site at Pond Farm in further detail should that be helpful.

**Comment:** MM39 - LPMM18/38  **Respondent:** Neil Smith 17253665  **Agent:**

**M39 Policy 61: Land At Aaron's Hill: Site allocated for approximately 200 homes (C3)**

**I OBJECT to Main Modification 39 on two counts.**

1. The site has been removed from the Green Belt.

I object to the removal of Green Belt status from the land between Aaron’s Hill and Halfway Lane.

The whole field between Aaron’s Hill and Halfway Lane is Green Belt land and its openness is important to Godalming and the other communities in the area. It has also been designated as an area of great landscape value.

The revised NPPF states that:

> The Government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence.

The value of the Green Belt is undeniable, hence the emphasis on ‘permanence’. Although, course, the NPPF allows development in ‘exceptional circumstances’. In this case, the exceptional circumstances arise, at least in part, from a requirement by the Inspector that Guildford provides more sites to manage an unmet housing need in Woking borough.

This unmet housing need has been questioned by Guildford Borough Council and others. What makes the situation more unpalatable is that the land adjacent to the Guildford Borough Council site is also subject to development, at least in part as a result of Waverley Borough Council having to satisfy part of Woking’s unmet housing need. I do not understand why the Inspector requires Guildford and Waverley to release Green Belt land for development to accommodate a supposed unmet housing need in the Woking borough. Why does Woking have an unmet housing need and why is Woking Borough Council not required to deal with it? I do not understand why Guildford’s Local Plan is deemed sound in so many respects but runs the risk of being deemed unsound because of problems elsewhere. It would be good if the Inspector could explain simply to the residents in the Guildford and Waverley boroughs why he has instructed the release of the land from Green Belt designation. If it is purely a matter of bureaucratic convenience to help Woking Borough Council overcome a difficulty, this is not enough to justify the application of the ‘exceptional circumstances’ argument.

Further, the scale of the housing need in Guildford and Woking boroughs more generally is being challenged by the CPRE and others. Given the certainties surrounding the question of precise housing need in the boroughs, it seems premature to accept the contention that Green Belt land should be freed for development. Once Green Belt land is developed, it has gone and cannot be reinstated. We are stewards of the Green Belt and, as such, must not let it go lightly.
It is sad to see land removed from the Green Belt; it is even sadder to see Green Belt status removed for reasons that are debatable and certainly far from clear. I worry about the future of our Green Belt if it can simply be spirited away. The political commitment to ‘permanence’ seems to have very little meaning. In this case, will there inevitably one day be another ‘urban extension’ of the Aaron’s Hill field to swallow up more of the surrounding Green Belt?

It is regrettable also that, in the Schedule of Proposed Main Modifications, Sites Summary Table, MM39, Policy 61, the term ‘Godalming Urban Area’ is used, presumably as a description of the location of the site and possibly as a means of making the proposal appear more palatable. If it is a description of the location, it is incorrect. The site lies outside the Godalming Urban Area. Even without the Green Belt protection, the site is a greenfield site of good quality agricultural land, traditionally and currently used for arable farming. It may adjoin an urban area – Aaron’s Hill estate – but it is not part of the urban area.

2 The site is simply not suitable for a major development of an additional 200 homes

There is already a planning application submitted by Ashill for 262 dwellings on the Waverley part of the field between Aaron’s Hill and Halfway Lane. This application that has been met with very strong local opposition, including objections from Godalming Town Council, Shackleford Parish Council and CPRE Surrey Waverley District Committee. Ashill have produced a ‘masterplan’ for the development of the whole field – but it has not been revealed - and the Modification suggests that the Guildford site would allow a further 200 units. A development of 262 dwellings is inappropriate as it will place an unacceptable burden on the local infrastructure and Godalming more generally. A whole field development of 460+ dwellings would be a gross over development and is a step too far.

The debate around the current application by Ashill for Ockford Park indicates clearly the problems that would arise from any major development on the Aaron’s Hill field. It will be easy for developers and landowners to brand opponents of the development of the field as NIMBYS. This is their prerogative but, although there may well be a need for more dwellings in Waverley Borough, this site is simply the wrong place. Successive versions of the NPPF have emphasised how developments should be the right ones and in the right place.

The objections to the Ockford Park application have ranged from threats to flora and fauna on the site, failure to provide adequate protection for a listed building and its gardens, even more congestion in Godalming, inadequate services, amenities and infrastructure (eg problems of finding doctors and dentists locally, as well as pressures on roads) and so on. There are particular challenges facing residents in Lower Eashing and also those who live in the Westbrook Road/New Way area. The problems associated with the development on the Waverley site will certainly be magnified should there be a further major development on the Guildford site.

My particular concern relates mainly to traffic generation and the impact on the local road network.

If one looks at a simple map of the area in a desk-based exercise, the site appears suitable for an urban extension being alongside the Aaron’s Hill estate and near to Godalming Town Centre; however, the reality is very different. If we look more closely and with more care at the road network which would serve the site and the very location and topography of the site, it is clear that there will be significant challenges to existing local communities should any major development go ahead. If a development of 262 dwellings is problematic, then it goes almost without saying a development of an additional 200 dwellings on the Guildford site would be a serious mistake and should be strongly resisted.

There are already substantial pressures on Eashing Lane, the lane which will serve the Aaron’s Hill site. Indeed Eashing Lane is the only public road which will serve the site. The existing problems will certainly become severe should a major development go ahead. Ockford Park will be a huge challenge to the local area. The impact of another major development adjacent to Ockford Park does not bear thinking about!

• Eashing Lane from A283 to Aaron’s Hill

This section of road has long been a rat-run between the A283 and Godalming. There has there been a marked increase in traffic here in recent years, particularly between, say, 0730 and 0930 and between 1600 and 1830 on weekdays. There has also been a noticeable change in the nature of the vehicles using the road, with more and more lorries and vans evident throughout the day. Not only do car drivers regard this as a short-cut between the A3, A283 and Godalming but also it appears to be a preferred route for vans and lorries, presumably with drivers following satnavs. Eashing Lane is
generally wide enough to enable two medium-sized cars to pass reasonably comfortably but lorries and vans pose problems, particularly on the stretch between the A283 and The Hollow. The section from The Hollow to the Rickyard may be a little wider but it has a challenging slope and significant bends. Eashing Lane can be tricky for drivers to negotiate and has become very dangerous for pedestrians – there are no footpaths for much of the Lane - and it is now a no-go area for equestrians. Only the stretch from the Rickyard to Aaron’s Hill is a relatively straight and reasonably flat highway with a footpath but even here there is a a tricky almost blind bend as one approaches Green Oak School from the direction of Eashing Farm.

The junction at the top of The Hollow is very dangerous, particularly when turning right out of The Hollow towards Milford or right from Eashing Lane into The Hollow. Traffic often travels towards The Hollow too fast from both the Milford and Godalming directions. The recent accident at the top of The Hollow on 15 September 2018 involved a car travelling along Eashing Lane from the Godalming direction in collision with a vehicle travelling from the Milford direction and turning left into The Hollow. Near misses are not uncommon here.

If there is a development on the Aaron’s Hill site, there will undoubtedly be an increased volume of traffic using Eashing Lane in both directions simply because of the number of dwellings in Ockford Park and the consequent number of vehicles. An additional 262 dwellings in the area will, at a conservative estimate, mean another 500 cars in the locality (The Schedule of Accommodation set out for Ockford Park indeed provides for 585 parking spaces for 262 dwellings). Many of these vehicles will travel down Easing Lane in the busiest periods with drivers going to work, shopping or on the school run. An additional 200 dwellings will generate another 350+ cars. The prospect of over 850 additional cars in the locality cannot make any sense. It will be a severe challenge to the safety of all those who use the lane.

The traffic analysis supporting the Ockford Park application failed to take account of the flow of delivery vans and lorries throughout the day that has developed as a result of the extension of online shopping and the increased use of the satnav. Many of these vehicles will travel down Easing Lane in the busiest periods with drivers going to work, shopping or on the school run. An additional 200 dwellings will generate another 350+ cars. The prospect of over 850 additional cars in the locality cannot make any sense. It will be a severe challenge to the safety of all those who use the lane.

The traffic analysis supporting the Ockford Park application failed to take account of the flow of delivery vans and lorries throughout the day that has developed as a result of the extension of online shopping and the increased use of the satnav. Many of these vehicles will travel down Easing Lane in the busiest periods with drivers going to work, shopping or on the school run. An additional 200 dwellings will generate another 350+ cars. The prospect of over 850 additional cars in the locality cannot make any sense. It will be a severe challenge to the safety of all those who use the lane.

**Eashing Lane from Aaron’s Hill to the junction with the A3100**

This is already a very busy and challenging stretch of road throughout the day but particularly so at the beginning and end of each working day. The start and the end of the school day in term time makes matters worse. It is not uncommon at the busiest times for traffic trying to reach Godalming to be backed up almost to Green Oak School. The problem is simply one of the volume of traffic using this section of road to access Godalming meeting the flow of traffic along the A3100. Whilst some vehicles naturally emanate from Aaron’s Hill and Ockford Ridge, many use this as part of the rat-run from the A283/A3.

Navigating a motor vehicle along this section of Eashing Lane is never easy because of the cars parked along the side of the road - most of the properties in the lower part of the lane do not have garages or off-road parking. For the most part, cars are parked on the right-hand side of the road (looking down the hill) but often the problem is exacerbated by cars and vans parked on both sides of the road near the junction with the A3100. The effect of the parked cars is to reduce the road to one-and-a-half lanes at best. Whilst cars can usually pass each other with care, meeting a bus, van or lorry in this section of road presents a significant challenge.

Should Ockford Park be developed, the existing difficulties presented on Eashing Lane between Aaron’s Hill/Ockford Ridge and the A3100 will be magnified. It is no good simply constructing Ockford Park or any other estate on theAaron’s Hill field and expecting the existing road network to cope. The tone of the objections of those residents who live in this area is no surprise and easily understood. Vehicles from an additional 200 dwellings will only worsen the situation.

Members of the Godalming community who have objected to the Ockford Park application have time and again pointed out that the A3100 Portsmouth Road into Godalming is often gridlocked, particularly during the morning rush hour and certainly when there are problems on the A3 (which is a regular occurrence). Traffic joining the A3100 not only find it hard to join the road but also contribute to the gridlock. If the Waverley site is developed, the traffic congestion will certainly worsen. If there are also another 200 dwellings on the Aaron’s Hill field, the result is liable to be catastrophic for the flow of traffic into and through Godalming.

**Lower Eashing**
There is already a significant highway problem with traffic travelling through Lower Eashing, a difficulty with which the Surrey Highways Department and Guildford Borough Council are only too well aware. In brief:

- The flow of vehicles into Lower Eashing from the A3 and from Eashing Lane via The Hollow at the start and the end of the working day is significant as a result of the Abbey Mill business complex.
- The flow of traffic into Lower Eashing is increased by the popularity of the Stag on the River pub/restaurant.
- Lower Eashing is used as a rat-run between the A3 and Godalming, a challenge to safety in the village that is exacerbated by the on-street parking which is a particular problem on the south side of Eashing Bridges. Residents also complain of speeding traffic on the north side of Eashing Bridges.
- The on-street parking is particularly difficult at lunch-times and in the evening, especially at weekends, during the summer months, when The Stag is particularly popular. Cars are parked along the road between the traffic lights on Eashing Bridges and The Hollow, often beyond Style Cottage, creating, in effect, a very challenging single carriageway road.
- Eashing Bridges are a valuable National Trust monument but they are already vulnerable to the traffic flow. Over the years, The National Trust has had to repair the bridge on various occasions as the result of damage done by lorries and vans.

Should Ockford Park be developed, traffic using Lower Eashing as a through route between the site and the A3, Elstead and beyond will certainly pose additional problems for the community of Lower Eashing. This point is emphasised in the penultimate paragraph in the letter of objection to Ockford Park submitted by Shackleford Parish Council on 30 August 2018.

I am very concerned that the current problems faced by Lower Eashing and the potential problems following the development of Ockford Park were ignored in the supporting i-Transport traffic analysis, even though they were raised by residents in the Consultation Meeting in May 2018 and acknowledged by jtp in its Design and Access Statement. It is quite understandable that the developers do not want to become involved in an existing problem that has largely been ignored by Surrey County Council. Nevertheless, it is important not only that the problem is acknowledged but also that it will be worsened if more vehicles are driven through Lower Eashing, an undoubted consequence of the development of Ockford Park.

It is undeniable that an additional 200 dwellings on the Aaron’s Hill field will certainly increase the problems facing the residents of Lower Eashing.

- **How hazardous is Eashing Lane?**

The i-Transport traffic assessment supporting the Waverley application concluded that there is little potential danger to safety based on an analysis of accidents along Eashing Lane.

4.8.9 In summary, whilst any accident is regrettable, the PIA data does not identify any significant road safety problems in the local area (albeit there is a modest concentration of collisions involving right turners out of Eashing Lane onto the A283 – three slight accidents).

This analysis and its subsequent conclusions about Eashing Lane are misleading. It focuses on collisions and subsequent injuries. It fails to acknowledge the fact that Eashing Lane between the A283 and Aaron’s Hill, particularly the section from the A283 to Eashing Farm, is dangerous and not just for motorists - pedestrians, cyclists and equestrians now increasingly avoid the lane. It focuses on motorised vehicles and reported incidents. Of course, there are incidents that may not be recorded, for whatever reason, and near-misses. In the context of collisions, it is interesting to note the regular and frequent appearance along Eashing Lane, particularly the stretch between the A283 and The Hollow, of wing mirrors and wheel trims! The recent collision of two vehicles at the top of The Hollow on 15 September 2018 was an accident waiting to happen.

It used to be commonplace for **equestrians** to ride out from Upper Eashing and Lower Eashing to BW124 (on the stretch of Eashing Lane south of the Hollow towards A283), which leads onto the bridleway network beyond the A3 towards Thursley and Elstead) or from Upper Eashing through Lower Eashing to the equestrian bridge (and thence to the bridleway network in Shackleford). This has ceased in the past five years simply because of the dangers posed by the volume and nature of the traffic using Eashing Lane and the road down The Hollow through Lower Eashing.
Fewer pedestrians now use the stretch of Eashing Lane from the A283 to the Hollow. Even though there is no footpath along the lane, it used to be commonplace for pedestrians to use this route to Milford to visit the shops or attend the dentist or doctors’ surgeries. Similarly runners used Eashing Lane as part of a circuit that included the A3100. Pedestrians and runners are now seen much more infrequently because of the increased volume of cars and other vehicles, especially lorries and delivery vans. Probably for the same reason, the public footpath linking Eashing Lane, near the start of BW 124, to Lower Eashing across the field to the west of Eashing Lane is no longer used by walking groups with the frequency that it once was.

The stretch of Eashing Lane between The Hollow and Eashing Farm is hazardous for pedestrians as there is no footpath here. The bends between Dean Cottage and Eashing Farm make this a particularly difficult area. Walking groups occasionally use this part of the Lane en route from Halfway Lane to the public footpath alongside Dean Cottage or to Lower Eashing via The Hollow. This is a very dangerous section of road.

Cyclists continue to use the stretch of road from A283 to Eashing Farm but it can be no joy to do so and there is less evidence of residents choosing to cycle along the Lane. From my own personal perspective, I used to regularly ride a bike along Eashing Lane to Milford. I would no longer consider so doing. It has simply become too dangerous.

Delivery vans and lorries who use Eashing Lane to deliver to the dwellings in Upper and Lower Eashing and as a short cut to and from Godalming are a fact of life and will surely increase in number owing to the demands of the Ockford Park residents for their services. The erosion of the roadsides is testament to the heavy use of the lane. The traffic assessment ignored this point. It is a simple fact that the volume of this sort of traffic will increase and pose additional challenges in an already significantly challenged area.

Eashing Lane has simply become busier and busier in recent years. The great irony is that, in attempting to create a sustainable development at Ockford Park, with opportunities for people to walk and cycle to shops and other facilities (in line with the NPPF guidelines), one is making it even more difficult for residents in the Eashing Lane area to do so.

It is important to note that the validity of the i-Transport traffic assessment has been called into question. There is no doubt among those of us who live in the area that the lane is already dangerous and that any development on the Aaron’s Hill field will increase the dangers.

- **Mitigation measures**

Ashill have suggested mitigation measures in support of their current application but they are totally inadequate. The measures do not address the basic fact that more vehicles – cars, vans and lorries - will use this largely country lane after the development of Ockford Park and create additional challenges to the Eashing Lane community. They may contribute to making the movement of vehicles a little slower but the essential fact remains that the lane will simply be busier.

Probably the most glaring weakness, however, is that the proposed mitigation scheme includes nothing to help the community of Lower Eashing whose current problems will surely be exacerbated by the existence of Ockford Park. This failure to extend mitigation measures to Lower Eashing displays a scant regard for the Lower Eashing community who will undoubtedly see more vehicles travelling through their village. By ignoring Lower Eashing, i-Transport have demonstrated an insecure grasp of the traffic realities in the area or have chosen to ignore what is arguably the most challenging problem.

The problem with any mitigation measures for any major development on the Aaron’s Hill field is simply that Eashing Lane and Lower Eashing will be unable to cope with the additional traffic generated. This point has so far been ignored or glossed over by Ashill.

- **The myth of ‘sustainability’**

Much has been made by Ashill about the sustainability of their Ockford Park scheme – and they will surely do the same should the additional 200 dwellings be agreed. This is not surprising as the NPPF requires this of such developments. Their case was summarised by Ben Boyce, Managing Director of Ashill, at a Guildford Borough Council Special Executive Meeting held on 4 September to discuss Modifications to the Guildford Local Plan.
Mr Boyce largely reiterated what had already been published in the Ockford Park August 2018 newsletter. He said that the site was ‘extremely well located with pedestrian access to the town centre and railway station ... with a wealth of services and amenities within walking distance of the site’. I am, however, left wondering whether the Ashill team really have a secure grasp of the location of the proposed development which rests **above Godalming** or whether they are simply doing their best to promote their scheme by choosing to ignore the glaringly obvious. It may well be that residents will walk (or cycle) **down the hill** towards Godalming Town Centre and the station, weather permitting, but I doubt that they will find it easy to return up the hill by foot or bicycle laden with shopping or at the end of a long day at work. The hill through the Country Park or via Westbrook Road will be taxing except for the fittest – or most determined - members of the Ockford Park community. The option of walking down to the Town Centre via Aarons Hill, Eashing Lane and the A3100 is certainly a non starter. **We need to be realistic** - in most cases the car will be used to go to the Town Centre – certainly to supermarkets – and to the station to pick up commuters (even those who have walked to the station in the morning!). If the weather is inclement, only the hardiest will forsake the car. Of course, buses may be an option but comments already made suggest considerable dissatisfaction with the existing bus service in the area and, in any case, the car is the usual option for those who have one. The whole concept of walking to the shops and to the station is no more than an attempt to emphasise the ‘sustainability’ credentials of the development. There is little doubt that Ockford Park will generate more car movements than Ashill suggests and, therefore, add to the congestion along the A3100 and increase the highway safety hazards along Eashing Lane and in Lower Eashing.

If 262 dwellings in Ockford Park are deemed unacceptable because of the pressure on the road network surrounding the site and the consequent negative impact on the well-being of the residents of the local communities, then an additional 200 dwellings on the Guildford part of the field should not be agreed. The ‘sustainability’ argument is a myth.

On the issue of sustainability more broadly, **‘a wealth of services and amenities within walking distance of the site’ is an interesting observation.** This must refer to Godalming Town Centre which, as explained above, is a trek down a hill from the site and a challenging one uphill. There is very little in terms of ‘services and amenities’ in the Aaron’s Hill/ Ockford Ridge area. Apart from the church, church hall, cemetery and primary school in the Ockford Ridge area, there are few amenities nearby. There is a small newsagent shop on Quarry Hill. The nearest food shops, other than those in Godalming, are in Milford, to which most people will drive. There are two small playgrounds and a skate park. There is no pub/restaurant in the immediate area – the closest are in Shackstead Lane, Godalming, Milford and Lower Eashing. More importantly, however, many of those who have responded to the Ockford Park application complain bitterly that it is already very hard to get doctors’ appointments or see NHS dentists in Godalming. There is indeed a bus service to Aaron’s Hill but residents say that it needs significant improvement and the reality remains that most people will use a car. The ‘sustainability argument’ based on proximity to ‘a wealth of services and amenities within walking distance of the site’ simply does not have any substance. Indeed, the main impact of developing the site will be more pressure on the amenities and services in Godalming which are already overstretched.

One big selling point of the Ockford Park site is that it will help sustain **Green Oak school**, a severely undersubscribed primary school in Franklyn Road which has been threatened with closure by Surrey County Council. The development will ‘help to significantly improve the long term viability of the school’ (August 2018 newsletter). This may be the case but it may not. All will depend on what progress the school makes over the next few years and how the residents of the new development view the school.

The **other community benefits** flagged up by Ashill are a community building (but it is not yet clear what its purpose will be) and a suburban ‘Country Park’ in what is currently an undeveloped natural hillside with open spaces, woods and pathways (but it is not clear who will manage the park in the longer term beyond the initial honeymoon period of the development). The ‘open spaces’ portrayed in the newsletter are illusory if one looks closely at the densely packed ‘masterplan’.

The flaws in the argument that Ockford Park has sustainable credentials are crystal clear and the community benefits are minimal. Far from being sustainable, the development may easily damage the sustainability of the existing Godalming community. The addition of 200 additional dwellings in the Guildford part of the ‘masterplan’ will simply compound the challenges presented by Ockford Park.

**Conclusion**

The revised NPPF (July 2018), 109, p 32 says
It is not surprising, therefore, that the transport assessment supporting the Planning Application for Ockford Park repeatedly emphasised the view that the proposed development will not have a severe impact on the local road network. **This is wrong.**

I do not agree with the final statement of the Executive Summary: ‘There are no traffic or transport-related reasons for refusing planning permission’ (i-Transport Executive Summary, p 3). It is interesting to note that local residents’ concerns over traffic matters dominated the responses to the development in the initial ‘consultation phase’ (acknowledged in the Design and Access Statement p 32) and also the responses to the planning application itself. **I would argue that there are already significant highway safety issues that exist in the Eashing Lane area, including Lower Eashing, and that the proposed development at Ockford Park is in danger of raising the risk to severe. Further, the existing significant congestion along the A3100 will become intolerable.**

If the Guildford part of the field between Halfway Lane and Aaron’s Hill adjoining the proposed Ockford Park is released from the Green Belt and set aside for a development of an additional 200 homes, the risk is raised even further and existing local communities will be put under even greater and unnecessary severe strain. The Ockford Park development is too big and not sustainable. An additional development will simply make matters even worse.

It is sad to note that, in the Schedule of Proposed Main Modifications, MM39, Policy 61, the Requirements do not include a statement that the development should take note of the local road network and the well-being of the Godalming communities. The proposal appears ill thought through and carelessly drafted. Bearing in mind the planning application to develop the Waverley part of the field, MM39 makes no sense whatsoever except perhaps as a means of resolving a numerical exercise in providing more houses (and there is another debate for the planning authorities to be had on what sort of houses are actually needed; genuinely affordable houses for sale or for rent are needed in Guildford and Waverley not the balance which is currently proposed for Ockford Park).

The development of the Aaron’s Hill field makes little sense except as a convenient means of satisfying a debatable housing need. It is unsustainable, removes precious Green Belt and good quality agricultural land, potentially adds an unacceptable level of congestion to the existing road network and threatens the safety and well-being of those who live in the communities in the vicinity of Eashing Lane.

Therefore, I strongly urge the Inspector to re-think his initial proposal to release the Guildford part of the Aaron’s Hill field for development. If he does not do so, I strongly urge Guildford Borough Council to resist this decision, set aside MM39, Policy A61 and reestablish a Green Belt designation for the site.

If he has not already done so, it may be sensible for the Inspector to visit the Aaron’s Hill site and also view Eashing Lane, Lower Eashing, the junction with the A3100 and the Westbrook Road/New Way area, including the lauded walking routes into Godalming, to get a flavour of why so many in the Godalming community are upset by the Ockford Park application and the possibility of an additional 200+ dwellings on the field.

**E. MM39, MM43, MM44 AND MM45: SITE ALLOCATIONS**
28. As outlined under CTI’s response to MM2, the inclusion of these additional greenfield sites within the Green Belt, ahead of unsustainable and poor-quality existing employment sites is an unsound approach that does not conform to the tests of soundness set out in paragraph 182 of the NPPF (2012).

29. CTI therefore consider that the Council should re-evaluate its approach to the allocation of these four additional sites.

Comment: MM39 - LPMM18/5839  Respondent: Thakeham Homes (Sarah Sutcliffe) 17345441  Agent: RPS Planning & Development (Mr Cameron Austin-Fell BA)

MM45 – see MM39

Main Modification 39 (MM39) – Site A61

The Modifications suggest that the greatest contribution to early housing delivery will be made via a constrained site with an uncertain delivery. The Sustainability Appraisal determines Aaron’s Hill as the most appropriate larger site due to its location in relation to Godalming and its relationship to the emerging proposed allocation in the Waverley Local Plan Part 2.

The Waverley Local Plan is not however far advanced, currently at preferred options stage. It cannot therefore be given weight in determining the suitability of the site. The relevant proposed allocation has also been submitted as a planning application, but this is not decided and is currently the subject of several environmental concerns and consultation objections. Adoption of the Waverley Local Plan is not anticipated until late 2019, and prior to approval of the above-mentioned site (if this should be achieved) the comprehensive design requirements of a cross boundary site under separate applications and the delivery of infrastructure across multiple Council’s should only hinder the delivery of the site. The delivery of a site of this scale within the first 5 years of the plan with these delivery constraints is therefore unlikely and its inclusion would make the plan unsound.

Land at Aaron’s Hill, Godalming

This is an additional allocation within the Local Plan Main Modifications and was identified within the LAA (October 2017) as site 2254 and falls within the Green Belt. The Green Belt Study identified the site as within parcel F18 and stated that ‘F18 ‘located to the north east and west of Godalming are generally physically separate from the settlement boundary of Godalming’1 with the Study concluding that overall the parcel was located ‘within high sensitivity Green Belt’2. Furthermore, the Study highlights that the parcel exhibits ‘significant constraints with no PDA’s identified’ and ‘the borough boundary is generally physically separated from the settlement boundary within land parcel F18 therefore any development would not be continuous with the settlement boundary, unless future development was bought forward to the west of Godalming within Waverley District. Therefore it was not considered appropriate to identify a PDA on the borough boundary adjoining Godalming within Guildford Borough’.
Whilst it is appreciated that Waverley Borough has committed to the delivery of residential development at Aaron’s Hill through its Local Plan Part 1 (adopted in February 2018), the constraints of the site itself are still present and the GBC’s evidence does not support the inclusion of the site as a proposed allocation based on an ‘assessment of all reasonable alternatives’. The constraints identified for F18 are as follows:

- River Wey Flood Zone
- SSSI
- AGLV
- Areas of High Archaeological Importance
- Lower Eashing Conservation Area

With regard to the assessment of the site within the SA (2017), the assessment reaffirms the site’s redrated Green Belt and AGLV status. The site scores poorly against the proximity to a district/ local centre, health care facility and secondary school. In addition, page 129 re-iterates that the ‘site is within c.1km of Godalming town centre ‘as the crow flies’ although this is via a public bridleway that is through woodland, step in parts and crosses the railway line’. In addition, the SA discusses that the site is on a hill above the River Wey.

In comparison, the updated SA (2018) fails to fully re-consider Aaron’s Hill although does continue to emphasise the constraints such as heritage, AGLV and flooding. Interestingly despite the conclusions of the SA (2017), paragraph 7.2.1 now states that the site benefits ‘from very good accessibility to Godalming town centre and train station’. Whilst the SA makes continued reference to the Waverley allocation this position was still applicable at the time of the SA (2017) when WBC was sufficiently advanced with its Local Plan and GBC did not wish to proceed with the site at this time.

Given the above, we do not consider that the allocation of the site is justified when considered against all reasonable alternatives on account of the significant environmental constraints on site (with no evidence as to how these would be addressed) alongside poor accessibility of the site to local facilities and public transport. In addition, the allocation of the site undermines the Council’s draft policy P1 which seeks to retain the AGLV until such time a review of the AONB has been undertaken. Any development proposals will need to demonstrate that it will not harm the setting of the AONB or the distinctive character of the AGLV.

In summary, we question how GBC consider the site to be a ‘reasonable alternative’ when other sites outside the AONB and AGLV have been discounted and is a site which will undermine the draft Local Plan and which is not supported by any landscape evidence to demonstrate itself ability to appropriate accommodate development. The proposed allocation is unjustified when considering paragraph 182 of the Framework.

2 Page 542 of LAA

Attached documents:
the site sits adjacent to an Area of Great Landscape Value (AGLV), with limited defensible boundaries. The site also comprises and sits near to two Grade II listed buildings.

LHF does not have these landscape or heritage sensitivities and has the distinct advantage of being closest to Guildford.

Proposed additional housing site A61 should not be included within the Main Modifications to the Plan, particularly at the expense of LHF.

**Comment:** MM39 - LPMM18/5834  **Respondent:** Thakeham Homes (Sir or Madam) 17976417  **Agent:** RPS Planning & Development (Mr Cameron Austin-Fell BA)

**Main Modification 39 (MM39) – Site A61**

The Modifications suggest that the greatest contribution to early housing delivery will be made via a constrained site with an uncertain delivery. The Sustainability Appraisal determines Aaron’s Hill as the most appropriate larger site due to its location in relation to Godalming and its relationship to the emerging proposed allocation in the Waverley Local Plan Part 2.

The Waverley Local Plan is not however far advanced, currently at preferred options stage. It cannot therefore be given weight in determining the suitability of the site. The relevant proposed allocation has also been submitted as a planning application, but this is not decided and is currently the subject of several environmental concerns and consultation objections. Adoption of the Waverley Local Plan is not anticipated until late 2019, and prior to approval of the above-mentioned site (if this should be achieved) the comprehensive design requirements of a cross boundary site under separate applications and the delivery of infrastructure across multiple Council’s should only hinder the delivery of the site. The delivery of a site of this scale within the first 5 years of the plan with these delivery constraints is therefore unlikely and its inclusion would make the plan unsound.

**Policy A61 – MM39**
This relates to land at Aaron’s Hill on the edge of Godalming. This is one of a number of sites that Guildford Borough Council is proposing to allocate in order to deliver more housing in the first five years of the Plan than originally proposed. The first observation is that it will be necessary for Guildford Borough Council to be satisfied that this site is capable of delivering housing in that timescale. If the site is to be brought forward, then it is essential that there is proper integration of the proposals for this site with the adjoining site within Waverley Borough and the Council welcomes the commitment to comprehensive masterplanning in requirement 1. However, it wishes to see an emphasis on infrastructure added into this requirement within the policy. Many of the impacts will be felt by residents of Waverley and so it is imperative that infrastructure contributions are sought to address impacts on either side of the Borough boundary. It will be essential to ensure that any potential cross-boundary impacts are properly addressed and mitigated if this development is to go ahead.

Attached documents:

Comment: MM39 - LPMM18/21  Respondent: Mrs E Komor 20408737  Agent:

The key consideration not even mentioned in your schedule is the impact on the already dire traffic situation on Eashing Lane and Flambard Way, Godalming.

I am disgusted that the decision to ruin the lives of the current residents is even being considered.

Eashing Lane CANNOT COPE with anymore traffic.

Portsmouth Road CANNOT COPE with anymore traffic.

Flambard Way CANNOT COPE with anymore traffic.

The A3 CANNOT COPE with anymore traffic.

When there is an accident on the A3 and traffic is diverted through Milford and Eashing Lane the whole of Godalming is gridlocked.

With this proposed housing plan alongside the Ockford Park Aarons Hill building of 262 homes this would mean 800 more cars on Eashing Lane. THIS WOULD MAKE GODALMING PERMANENTLY GRIDLOCKED.

There needs to be a year study on the current traffic levels on Eashing Lane, Portsmouth Road, Flambard Way, A3 Milford to Guildford to show how bad at rush hour when all the schools and colleges are in term the traffic is. Then apply the impact of the 462 houses being built at Aarons Hill and the traffic chaos that will ensue.

Please provide your traffic analysis regarding your proposed plan.

Comment: MM39 - LPMM18/140  Respondent: Rachael Hogg 20549217  Agent:

Eashing Housing Plan A61

I express my concern and strong objection to the proposed Housing Development Plan at Aaron's Hill Eashing.

The infrastructure plans are inadequate, with insufficient school places and doctors surgery.
The extra traffic would be impossible in Eashing Lane.

Attached documents:

Comment: MM39 - LPMM18/152  Respondent: Mrs Emm Walton 20551713  Agent:

There is not the infrastructure and too many proposed houses.

The area is semi-rural and proposed housing is over-development

Attached documents:

Comment: MM39 - LPMM18/592  Respondent: Mrs Anne-Marie Rosoman 20621153  Agent:

The land proposed to be removed from the Green Belt provides a contrast to the surrounding housing. Development will be damaging in both ecological and environmental terms. The traffic generated will put further strain on the roads around Godalming, which are already too busy. The infrastructure just won't be able to cope.

Attached documents:

Comment: MM39 - LPMM18/606  Respondent: Andrew Baker 20622593  Agent:

I write with reference to the local plan and the current proposal to construct 460 homes under reference A61. We have attended a meeting about the proposal in the past.

It is clear to me that the infrastructure plan is inadequate in most respects. Sufficient provision has not been included for the infrastructure components that are necessary for such a large development in such a rural location.

The traffic implications for Eashing Lane and elsewhere are alarming and have not been properly considered or provided for.

There would, of course, be a significant number of school children and students. The requirement for school and college places appears to have been largely ignored and so also has the need for other essential, local services, such as health and social service requirements.

The proposals, as they stand, would place a huge new burden and an extremely negative effect on the rural spaces South of Godalming. They are ill-thought out and would result in a further serious deterioration of the local environment. They require substantial amendment.

Attached documents:
We should like to register our objection to the change to the Local Plan which will take land to the north of Aarons Hill out of the green belt and with the pending application for 200 houses. This is land which neighbours Waverley Borough Land. The access roads are inadequate for this size of development. There appears to be no consideration of further problems with the infrastructure of services especially the supply of water, electricity and gas or waste.

It is of interest to note that the increased impact of this population will not be beneficial to Guildford but will be detrimental to Waverley. The local schools are Waverley ones. What contribution will be made to these services?

This area has bridleways and public footpaths which are used regularly. At the top of a hill, bordering ANOBs and will detract from the enjoyment of the area by the public.

---

To the planning application committee:

I wish to submit my objection to the proposed development of land in Aarons Hill, 16116, the proposal to take the land out of the green belt.

My objections are:

There will be parking, access and turning issues along Eashing Lane, which is the main access road to development.

There will be increased noise in the residential area.

There will be a threat to wildlife, including a rare species of bat which lives in the proposed area.

---

I wish to object to the above proposal for the above land to be taken out of the Green Belt for its use as housing. Together with the adjoining land which has a planning application for 262no houses, a development of this size is most unsuitable for its location. The reasons are numerous, but can be summarised as follows:-

Eashing Lane is narrow with tight bends, much of it without footpaths.

Towards the A3, the bridge at Eashing is single lane and has a weight limit which makes it totally unsuitable for heavy goods vehicles, plant movements etc, let alone the extra traffic that would be generated by new residents. At times, customers using The Stag use the road as an overflow car park right up to the traffic lights for the bridge which can cause problems for traffic heading towards the A3. Towards Godalming there are often long tailbacks getting on to the A3100 towards Godalming, especially if traffic is waiting to turn right towards Milford. Residents of Eashing Lane have to park on the road, thus making it too narrow for two large vehicles to pass each other.

The proposed development is home to several rare and threatened species which use the proposed site for feeding and breeding, and is close to ancient woodland. For example, I am informed that it is home to Barbastelle bats which are...
protected in the UK under the wildlife and countryside act 1981, and are a Priority Species under the UK Post-2010 Biodiversity Framework.

Building on Green Belt land will reduce habitat and food sources for wildlife. It will also increase pollution, affect climate change and increase the risk of flooding etc, and is a loss of valuable farming land. It will ruin the landscape for future generations and wildlife, and will change the character of Godalming.

Together with the extra traffic generated on the local roads, it is already difficult to obtain appointments for doctors, dentists etc, and this development would make the problem worse.

I strongly request that this land is not taken out of the Green Belt and is not used for housing.

Attached documents:

Comment: MM39 - LPMM18/694  Respondent: Jennifer Isaacs 20625569  Agent:

As a long time resident in Guildford Borough, for well over 50 years, I strongly object to the proposed urbanization of historic Green Belt and Area of Great Landscape Value in order to provide mainly market housing on this site in open countryside. The Inspector’s decision to incorporate this site within Godalming Is opposed by Godalming Town Council whose views should carry more weight than Waverley or Guildford. Guildford cannot justify a decision to reverse its earlier public stance that this site was not suitable for development.

There was wholly inadequate consultation by Waverley regarding this site which was not recommended for development in the Green Belt review. The population in both Waverley and Guildford local to the site is I believe almost wholly opposed to this development apart from those who have a commercial interest.

The site is served by a single public country road and cannot possibly support traffic which will be generated by the site. No theoretical calculation of traffic use can justify a result which will support a conclusion that this is a sustainable site. The decision by Waverley resulted from a questionable decision by the Inspector to require increased housing in Waverley’s OAN failing which he would find Waverley’s Local Plan unsound. Guildford’s Plan does not require the houses at Aaron’s Hill to meet its OAN.

I tried to submit this objection on line but the algorithm you use prevents me from registering as my husband is already registered. The website is very difficult to navigate and there is no clear means of reaching the get involved part of the site.

Attached documents:

Comment: MM39 - LPMM18/715  Respondent: Simon Pugh 20631393  Agent:

The Guildford site comprises less than 50% in area of field in Godalming. Waverley BC has surreptitiously removed from the Godalming portion from the Greenbelt and earmarked it for the building of 262 houses, to great local shock and disapproval. There are numerous practical reasons why the Godalming portion alone would be disastrous to the area, but with the proposed removal of green belt status for the addition of the 200 houses on the Guildford site, the development becomes absurd. The failure by the developers and Waverley Borough Council to consult in a reasonable manner with the residents on any aspect of this developed was compounded by the news of this move by Guildford Borough Council, the announcement of which came after the period of consultation on the Waverley portion had closed.
Few would disagree that building genuinely affordable and available housing in Waverley, Guildford and beyond is a critical requirement for the sustainability of the area. This development is not, however, any part of the answer. The developers claim that a proportion of the proposed housing is ‘affordable’, but 80% of the fair value of any new home on this site greatly exceeds the budget of key workers and young people in the area. Further, those ‘affordable’ homes would revert to market price after 10 years, providing a windfall for the lucky first time buyers. There is an urgent need to secure brownfield sites for the development of public housing and genuine lower cost housing.

I urge those with any responsibility for the addition of this land to the Guildford Plan to visit the site and take serious note of the location and transportation issues in the area. Please approach the site from the three possible directions; that is, up Eashing Lane from Godalming or down Eashing Lane from Milford, and across the ancient one-way only stone bridge in Eashing. However, please do not add to the traffic queues by attempting your journey in the hours when locals are using the roads for travelling and from work, schools, etc. or any other busy time.

You should understand that the spread of Godalming above its valley setting has already exceeded its natural limits. The residential areas of Busbridge, Ockford Ridge and Aarons Hill are served by narrow roads that follow the geographical features defined by excavated paths through the Bargate stone terrain. There are no alternative routes, and no realistic options to increase the traffic flow. These roads are already incapable of handling the school, commuting and recreational traffic Godalming currently enjoys. These unalterable geographic limits alone demand that common sense prevails and the plans on both the Waverley and Guildford sites be rejected, even without factoring in the disastrous environmental damage, safety issues and various other serious concerns that are detailed by the Godalming Community Group and others. We do not intend to expand here, but are happy to do so as required.

Please inform us of any public meeting where this issue will be discussed.

**Comment:** MM39 - LPMM18/753  **Respondent:** Peter Goody 20638145  **Agent:**

I wish to register my objection to the removal of green belt status to farm land on Eashing Lane.

As I understand it the adjacent site on the Waverley borough council side has already lost this status, with the result that an overcrowded housing development of 262 houses is being proposed.

As a result if passed this would create extra traffic and pollution with the loss of valuable wildlife habitat.

The Guildford Borough plan for an extra 200 houses adjacent to a proposed 262 houses would be totally unacceptable on a site which is accessed by one country lane and is already overburdened with traffic.

Attached documents:

**Comment:** MM39 - LPMM18/889  **Respondent:** Cherry Mills 20647393  **Agent:**

I wish to object to the proposal in your Local Plan to remove an area of field at Aaron’s Hill, Godalming from Green Belt protected status, in order to allow the construction of 200 homes. My reasons are:

1. To remove this field from Green Belt will constitute urban sprawl – Refer to your Policy P2 Green Belt point 4.3.11.
2. This is a productive agricultural piece of land.
3. This area has precious flora and fauna and should remain protected. A full, independent, ecology report should be taken into consideration.
4. Any housing proposal for the Guildford half of this field should be considered, in conjunction with the application currently with Waverley Borough Council for 262 houses, as an application for 462 houses.
5. The road infrastructure in this area is not able to cope with the additional traffic that 462 homes would bring. Godalming’s road network is already very overloaded and comes to a standstill when there are any incidents on the A3.
6. The site is on top of a hill which makes it difficult for people to walk or cycle to and from Godalming.
7. The train service to Waterloo is overcrowded at peak times, has only two stopping services per hour at Godalming station. There are not enough spaces in the carpark for current uses so any additional commuters will not be able to park their cars near the station.
8. One principal route to this site would be through the village of Eashing where the bridge over the River Wey could not cope with extra traffic and is a Grade I Listed Monument.
9. A second principal route to and from this site is via Eashing Lane, which leads on to the A283. This is a narrow road where two-way traffic has to slow down to pass. There is no right hand turn at the end of this road on to the A283.
10. There is inadequate public service infrastructure to cope with this additional number of homes – doctor’s surgeries, hospital, ambulance, fire service, police response.
11. There is a Grade II Listed property adjacent to the site – Westbrook – which will be detrimentally affected by any development. Full consideration of the Heritage aspects of any development must be considered.

The water and waste water supply network to the area is very old, already problematic, and will not be able to cope with the increased usage by 462 homes

**Attached documents:**

**Comment: MM39 - LPMM18/961**  **Respondent: Victoria Standen 20658433**  **Agent:**

I would like to voice my strong objection to the proposed development of 462 houses in or adjacent to the Green Belt on Aarons Hill in Godalming.

I live on Eashing Lane, and each morning for 3+ hours, the whole road is jammed right back up to Aarons Hill, down past the Inn on the Lake and through to Godalming town centre. Adding roughly 400-odd new cars (at the very least) into this mix without any provisions for such a huge traffic increase would be an absolute disaster. Myself and my neighbours regularly get our wing mirrors clipped and car doors scratched while parking roadside on Eashing Lane - this kind of damage would increase tenfold along with the extra cars using the road every day.

The Green Belt land at the top of the road, which you want to flatten and replace with houses, is truly cherished by our community, and our local wildlife. It would be a damn shame for yet MORE of our landscape to be marred with new houses, which we do not need. We need the Green Belt land, and so does our local wildlife. I imagine my protestation will fall upon deaf ears and you'll go ahead and build your houses anyway, but I ask that whichever building company you choose can please consider making hedgehog highways (small gaps in garden fences for animals to pass through safely) and bat/bird boxes in the brickwork and eaves of new properties. Sensitive 'dark corridors' and dimmed lighting would also be beneficial to nocturnal animals like bats, dormice and other wildlife. Bellway Homes are real trailblazers to this effect, and you can find more about their wildlife conservation efforts here: [https://www.bellway.co.uk/corporate-responsibility/environment/biodiversity-and-ecology](https://www.bellway.co.uk/corporate-responsibility/environment/biodiversity-and-ecology)

Comment: MM39 - LPMM18/1091  Respondent: Karl Corps 20664161  Agent:

Proposed House Development Aarons Hill Godalming.

I have viewed the proposals for the 200 new dwellings to be built on land that backs onto Aarons Hill. This also needs to be looked at in conjunction with the 262 new homes proposed by Waverley council.

I find this project to be wholly inappropriate for the area, because of the lack of joined up thinking behind the project. The reasons being:

1) Green belt land has been reclassified as a brown field site. The National Planning Policy Framework for the Green Belt states there is a general presumption against inappropriate development, unless very special circumstances can be demonstrated to show that the benefits of the development will outweigh the harm caused to the green belt. The NPPF sets out what would constitute appropriate development in the green belt.

According to the NPPF, there are five stated purposes of including land within the green belt:

- To check the unrestricted sprawl of large built-up areas
- To prevent neighbouring towns from merging into one another
- To assist in safeguarding the countryside from encroachment
- To preserve the setting and special character of historic towns

To assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

It would appear that all of the above has been ignored. The field on which the houses will be sited is still actively farmed. Reclassifying land just to build more and more houses means that once the precedent has been set land will continue to be reclassified.

2) Very limited infrastructure improvements have been included. Godalming’s traffic during peak hours is notoriously bad. Travelling from the top of Eashing lane, next to Green Oaks School, down Eashing Lane, and through the town along the only viable route through the town to the town bridge, a distance of 1.3miles regularly takes over 20 minutes
during morning peak hours. Ashill estates based their traffic surveys on data taken during school half terms or on a Friday. There will obviously be a reduction of traffic during this time. They are manipulating the data for their own benefit.

- Building 200 + 262 more houses, with the associated increase in the number of cars will only add to this time.
- Eashing Lane in both directions is unsuitable for the increased traffic flows. The road is narrow, and at several points the road is not wide enough for traffic to pass in either direction. It is also used as a short cut to Godalming from the A3, especially when there are traffic jams on the A3.
- Godalming’s topography is unsuitable for continued development. The town is situated in a river valley with hills either side. The roads surrounding the town to gain access are narrow and clogged with parked cars that already delay traffic, namely Brighton Road, Shackstead Lane, Eashing Lane and Chalk Road.
- Office buildings in Godalming are being turned into flats to meet housing demand. This means that there are fewer locally available jobs therefore individuals will have to travel to work in other towns, quite often by car.
- Bus services in Godalming have been cut, and trains from Godalming during peak hours are seriously overcrowded, meaning it is highly unlikely an individual will find a seat during peak hours.
- Traffic in Godalming is also delayed because the council are changing traffic lights to the cheapest available, to just save money rather than trying to keep the traffic moving. Rather than having a smart system that can react to traffic flows and people crossing the road, the council has opted for a system that simply works on a timing system the motorist has to wait until the lights go through the whole sequence including the time when all lights are red at a junction to let pedestrians cross.
- Traffic lights are also red during peak hours at junctions to let pedestrians cross when there is nobody at the crossings. Let pedestrians cross, but link the pedestrian crossing to the traffic lights. Don’t stop the traffic for no reason; this simply adds to the traffic problems.

3) Godalming’s proximity to Guildford and Dunsfold means that it is affected by planning decisions taken at these locations. The proposed development of housing on Dunsfold aerodrome, with no improvements in roads or rail, and the lack of improvements to Guildford’s road system or improvements to Guildford train station mean that Godalming and the surrounding roads will become more clogged with traffic.

4) The development has no joined up planning (thinking) behind it. Building houses cannot be done without the corresponding improvements in infrastructure. Yes, there is a lack of housing, but why not regenerate areas of the country that are crying out for investment, rather than cramming more and more into an area that already has serious traffic problems. The majority of houses will be sold at market value, and only a very small proportion will be affordable houses.

5) Individuals, who have bought houses in the vicinity of Aarons Hill, may have done so because of the proximity to the Green Belt boundary and countryside, not to have their vista turned into a housing estate.

6) There are no provisions for Doctors, Dentists etc. 462 houses will put more pressure on local services.

7) This development would appear to be beneficial to two groups, the council so it can say that it has met its housing targets, and the developers who will bank the profits, and the land owner. There would appear to be little consideration for the populace of Godalming.

Comment: MM39 - LPMM18/1231  Respondent: Jim Allen 20674913  Agent:

3. Rows A61 – A64

We note all these sites are further releases of Green Belt lands rather than finding increased capacity in Town Centre sites... this akin to one year’s supply not five years supply (3,520) - noting lack of sewer capacity at just 325 houses in total..

Attached documents:

Comment: MM39 - LPMM18/1438  Respondent: Witley Parish Council (Sarah Nash) 20690785  Agent:

Submission Local Plan: Strategy and Sites - Main Modifications
Policy A61 – Land at Aaron’s Hill, Godalming

On behalf of Witley Parish Council, I would like to raise concern regarding the site referred to A61 in the Guildford Local Plan (Aaron’s Hill).
In particular, Witley Parish Council is concerned about the overall impact of this site in conjunction with the neighbouring Waverley Borough Council planning application WA/2018/1239, as well as the numerous sites around Milford that are included in both Waverley Local Plan Parts 1 & 2. We feel there has not been enough research into the cumulative impact of all of these developments coming forward in a short period of time. The total number of dwellings arising from all three sites is in excess of 800 (200 for site A61, 263 for WA/2018/1239, and 450 for Milford in the Waverley Local Plan). As a neighbouring Parish we would have expected to have been directly consulted on these proposals given the potential material impact on matters such as the road network within our area.

We are particularly concerned about the traffic impact from the Aarons Hill developments. Direct access from the proposed dwellings to the A3 will either go through the village of Eashing, which has a restricted bridge, or along Eashing Lane into the parish of Witley, and join the A283 on the Guildford and Godalming by-pass road. These roads/junctions are not suitable for large volumes of traffic, or heavy goods vehicles, and despite restrictions being placed on previous developments in this area, the lack of enforcement rendered these restrictions meaningless. There appears to be no provision in the proposed development for local amenities such as shops, which will increase traffic movements, as people shop and work elsewhere.

The Guildford Local Plan contains no references to infrastructure improvements either on the strategic road network or local infrastructure network relating to this development. As the incident which occurred on Thursday October 4th showed, only one vehicle needs to break down on the A3 in Guildford and block one lane, to paralyse the A3 back to Milford and subsequently gridlock Godalming, the A3100 and A281 into Guildford. This is far from an isolated occurrence.

Both Aaron’s Hill sites are sites which need to be released from the Green Belt, however when the Witley Neighbourhood Plan enquired about releasing the previously developed land at Secretts from the Green Belt, it was told that it wasn’t possible. The Secretts site would have been preferable to many in the locality.
We feel that the Guildford site, A61, merely transfers the problem of providing infrastructure onto Waverley Borough Council. Guildford Borough Council does not appear to be sharing any of the responsibility for ensuring this is a sustainable development, however will clearly benefit from the resulting S106/CIL monies received, with none likely to be granted to Waverley Borough Council and the neighbouring parishes. Given that the ONS have revised their housing need figures downwards (see https://www.ons.gov.uk/peoplepopulationandcommunity/populationandmigration/populationprojections/bulletins/2016basedhouseholdprojectionsinengland) it brings into question the need for so many houses in Guildford’s Local Plan.

We also recognise the environment concerns relating to rare species highlighted by community groups in those areas, and feel that a thorough independent assessment needs to be undertaken before either of the Aaron’s Hill developments take place.

Should you wish to discuss these matters please do not hesitate to contact me.

MM39. Main Modification to the original Plan and relates to the 200 at Aarons Hill Ref A61

I wish to submit objection to the removal Green belt land for development at Aarons Hill, this currently straddles a further Development proposal with Waverley Borough Council WA/2018/1239

I believe this land is an AGLV & Part of AONB, my understanding is that prime agricultural land is an irreplaceable asset that must be protected for future generations particularly in the rich farming areas of the South East. If farm land is going to be used for future housing developments then I don’t see how this country will be able to provide the essential food/dairy requirements for the future generations, we will have no choice but to import more from neighbouring EU countries. As the global human population continues to rise, more land will need to be committed to agricultural production to meet a rise in demand for food. This has the potential to intensify agricultural activities on land already used for food production

ONS report released very recently contradicts the Housing needs within local authorities, I thinks that these new findings need to be careful considered before adopting this local plan for housing needs

Removing the land for development will do nothing to address affordable housing targets, the unmet housing from Woking, decimate the local wildlife habitat and will create additional traffic & infrastructure challenges for years to come that Godalming will have to deal with not Guildford.

This is a special area in Godalming and is enjoyed by thousands of Waverley residents and members of the public over centuries and to change the classification of this land so that a Developer can submit a proposal will decimate the area

If this is removed, this will open the flood gates to Greenbelt Land removal and give the green light to Developers to submit proposals, I don't see that local residents have a say anymore as to how the local area should be best suited to everyone needs.

What green land will be left if you start building in the countryside.

(Adam Ross)
MM39 – Land at Aaron’s Hill, Godalming

For the reasons set out in our detailed representations to MM2, the proposed allocation of this site is unjustified given the Council’s evidence in the SA Addendum 2018, and is contrary to the Council’s own spatial hierarchy / approach given its failure to allocate the deliverable, more sustainable and sequentially preferable site at Clandon Golf (as an urban extension to Guildford).

As also identified in our representations to MM2, it is also unjustified and unsound to re-categorise the Aarons Hill site from Tier 10 (as it was in the SA Report submitted with the Local Plan) to Tier 8 in the SA Addendum. This illogically and unjustifiably suggests that this urban extension to the small town of Godalming is as sustainable as an urban extension to Guildford (which is 6 times larger and the county town of Surrey) and results in this site being inappropriately favoured in the SA assessment process. Importantly, it results in the unnecessary allocation of this site at the expenses of the significantly more sustainable option at Clandon Golf.

Changes Required

For the reasons set out in detail in our representation to MM2, the revised spatial strategy (and specifically the allocation of the sites identified in MM39, 43, 44 and 45) is unjustified and unsound.

The Council must re-visit the strategy to allocate additional sites to deliver in the first five years of the Local Plan (post-adoption) and base its decisions on clear evidence (most notably the SA Addendum) and its own spatial hierarchy / approach. This will result, on the Council’s own evidence, in the identification of a different development option (and therefore a different suite of sites) to those now proposed. It will also, most importantly, result in a more sustainable distribution of development (on the Council’s own terms).

Comment: MM39 - LPMM18/4534  Respondent: Mr Toby Welburn 20704481  Agent:

I would like to register my opposition to MM39. The conversion of the land in question near Aaron's Hill from green field to housing will cause great harm to the local ecology including a number of protected species, and great harm to the residents of Godalming who already suffer from high levels of traffic congestion and resulting pollution in excess of safe limits.

I think it is in fact green belt land, but you refer to it as 'Godalming Urban Area' - is this an error?

MM39 - Policy A61: Land at Aaron's Hill, Godalming

The following should be added to the requirements for development:

Development of site A61 should not be permitted until the potential impact on local Air Quality, and Transport Infrastructure has been assessed following the completion of any development on the Waverley Borough part of the site.

Attached documents:
Submission Local Plan. Strategy and Sites in Guildford Borough

Main Modifications

MM2 4.1.9.ac

Urban extension to Godalming, 200 homes at Aarons Hill

Although we live in Waverley Borough, our home is only 500 yards from the above field, and we wish to comment on the proposal to allocate this site for housing.

Masterplan

A masterplan is required by Inspector Bore setting out how a high quality development can be achieved both in conjunction with and without development of the Waverley site before the Guildford land can be allocated to housing as a strategic housing site. No such plan has been published and in our view it is essential that this should be achieved before the proposal is progressed. There would need to be much negotiation between the Boroughs before an integrated proposal which is viable could be achieved.

Sustainability

The development is not sustainable. The infrastructure is totally inadequate for such a large number of dwellings on the combined sites. Aarons Hill is not well connected to Godalming town centre. Car access will be required and the road network would need major road widening and alteration to accommodate the huge increase in traffic, which would change the character of this historic country town and beautiful area.

Overall, for the above reasons, we object strongly to the Modification in respect of the Guildford Aarons Hill site.

Thank you for considering our representations.

[Regarding Site A61 Aarons Hill]

Green Belt MM9

This land has been in agricultural use for over 75 years as part of the Metropolitan Green Belt. It has also been within an AGLV. The adjacent bridleway is much used by the local community, providing splendid views, for walkers and cyclists, across open landscape to Blackdown, the Devil’s Punchbowl and, on a clear day, the South Downs on the horizon. Sunsets are spectacular. It has not been demonstrated that there are special circumstances to justify Inspector Bore’s recommendation that it be withdrawn from the Green Belt and AGLV status. Under the 2018 NPPF the Council is required to do a detailed prior assessment of whether the local housing need can be met in other ways including uses of brownfield sites. The NPPF 2018 at paragraph 170 requires planning decisions to recognise “the intrinsic beauty of the countryside”.

Unfortunately, the consultation period on the Main Modifications closes on 23rd October, which is likely to be before the final judgement on the Judicial Review of Waverley Borough Council’s decision to remove their Aarons Hill site from the Green Belt and AGLV in LPP1 and the proposed housing numbers. The outcome of these proceedings could affect issues for the Guildford site.

Attached documents:
Our objections to excessive building in these areas remains the same as previously stated.

We object on the following grounds:

A) Surface water is a continual problem in the area with some recent building projects being delayed due to lack of provision for disposing of excess water on site. Ripley Lane and a short section of The Street are frequently flooded and impassable during times of heavy rainfall and this can only be exacerbated by building on land near to or adjoining these roads.

B) The roads are already overcrowded at peak times. Queues build up at the intersection where East Lane, The Drift and Ockham Road South meet. Queues build up even in non-peak times at the southern end of The Street/A246 at the 'Bell & Colvill roundabout'.

There is almost constant congestion joining the A3 at with 'Wisley roundabout'

NB - this can only get worse with the inclusion of additional housing at Area 35

C) There is insufficient primary schooling in the village and has been for more than 25 years. Some children have to travel more than four miles for primary schooling.

There is no guarantee that local children will be allocated secondary schooling at the nearest secondary school in Effingham

D) Already it can take 3 weeks to get an appointment with a chosen GP

It would make more sense to discuss additional housing

AFTER the land has been properly surveyed and resolutions found for diverting surface water

AFTER provisions for schooling and medical needs are addressed

AFTER discussions and a workable plan addressed for infrastructure - in particular roads and drainage

I write to object to the inclusion of the field in Eashing, currently good quality arable farmland, in the modifications to the draft Local Plan for Guildford.

This site has, I understand, only come forward because of the suggestion by the Inspector considering the draft Local Plan that further housing could be accommodated here. It is now clear, from recent ONS reports, that the housing figures
being demanded of Guildford are too high and need to be revised downwards, and this matter is awaiting the decision of the High Court.

Including this site before the decision of the High Court is itself unsound, as there is no reason why Guildford should be include an unsuitable site for an over-estimation of the required housing numbers.

Guildford has not adequately shown that brown field sites have been explored for new housing development, and the immediate need seems to be for sites within the town with good available transport links. To suggest taking good arable land within the Green Belt and AGLV, with poor or non-existent infrastructure, is irresponsible and shows a lack of understanding of custodianship of our heritage.
